- (fiz-e-o-loj"ik-o-an-atphysiologico-anatomic om'ik). Pertaining to physiology and anatomy.
- physiologist (fiz-e-ol'o-jist). A specialist in the study of physiology.
- physiology (fiz-e-ol'o-je) [Gr. φύσις nature + λόγος discourse]. The science which treats of the functions of the living organism and its parts.

 animal p., the physiology of animals.

 comparative p., the study and comparison of the physi-

ology of animals or plants of various species. general p., the science of the general laws of life and functional activity. morbid p., the study of functions as modified by disease. pathologic p., the study of disordered function or of function in diseased tissues. special p., the physiology of particular organs. vegetable p., the physiology of plants.

physiomedical (fiz"e-o-med'ik-al). Of or relating to physiomedicalism.

physiomedicalism (fiz"e-o-med'ik-al-izm) [Gr. \(\psi\)bus nature + medicalism]. A system of medical treatment in which only plant remedies are used, excluding those which are poisonous.

physionomy (fiz-e-on'o-me) [Gr. φίσις nature + νόμος law]. The science of the laws of nature.

physiopathic (fiz"e-o-path'ik) [Gr. φίσις nature + πάθος disease]. Babinski's term for the nonpsychopathic functional nervous disorders.

physiopathologic (fiz"e-o-path-o-loj'ik). Pertaining to both the physiologic and pathologic conditions.

physiopathology (fiz"e-o-path-ol'o-je) [physiology + pathology]. The science of functions in disease, or as modified by disease.

physiophyly (fiz-e-of'il-e) [Gr. φύσις nature + φῦλυν tribe]. The evolution of bodily functions.

physiopsychic (fiz"e-o-si'kik) [Gr. φbσις nature + ψυχή mind]. Relating to both body and mind.

physiosis (fiz-e-o'sis) [Gr. φυσίωσις a puffing up]. Distention of the abdomen with flatus.

physiotherapy (fiz"e-o-ther'ap-e) [Gr. $\varphi b \sigma \iota s$ nature $+ \theta \epsilon \rho \alpha \pi \epsilon \iota a$ cure]. The use of natural forces, such as light, heat, air, water, and exercise, in the treatment of disease.

physique (fiz-ēk'). Bodily structure, organization, and development.

physocele (fi'so-sēl) [Gr. φῦσα air + κήλη tumor].
 I. A tumor filled with gas. 2. A hernial sac filled with gas. 3. Dilatation of the scrotum with gas.

physohematometra (fi"so-hem"at-o-me'trah) [Gr. $\varphi \hat{v} \sigma a$ air $+a l \mu a$ blood $+ \mu h \tau \rho a$ womb]. The presence of gas and blood within the uterus

physohydrometra (fi"so-hi-dro-me'trah) [Gr. φθσα air + θδωρ water + μητρα womb]. Air or gas and serum in the uterine cavity.

physometra (fi"so-me'trah) [Gr. φῦσα air + μήτρα womb]. Air or gas in the uterine cavity.

physopyosalpinx (fi-so-pi-o-sal'pinx) [Gr. φῦσα air + πύον pus + σάλπιγξ tube]. Presence of pus and gas in the oviduct.

Physostigma (fi-so-stig'mah) [Gr. $\varphi \hat{v} \hat{\sigma} a$ bellows $+ \sigma r i \gamma \mu a$ stigma]. A genus of tropical leguminous plants. The poisonous seed of P. veneno'sum, Calabar bean, a climbing plant of Africa, contains the alkaloids physostigmin and calabarin. Physostigma is a motor depressant, miotic, and antispasmodic, in large doses producing death by paralysis of respiration. It is employed in tetanus, trismus, and other spasmodic affections; as an expectorant in bronchitis, asthma, and emphysema, and as a stimulant in atonic constipation and dilatation of the stomach. Dose of extract, $\frac{1}{16} - \frac{1}{6}$ gr. (0.004–0.01 gm.); of fluidextract, 1–3 min. (0.066–0.2 cc); of tincture, 5–15 min. (0.333–1 cc.).

physostigmin (fi-so-stig'min). A miotic alkaloid from Calabar bean, $C_{15}H_{21}N_3O_3$. Called also eserim. It is highly poisonous, and is used as a miotic. Internal dose, $\frac{1}{128} \frac{1}{64}$ gr. (0.005-0.001 gm.); for external use, $\frac{1}{30-70}$ gr. (0.001-0.003 gm.). The salicylate and sulphate are the salts commonly used. p. salicylate, a compound, $C_{15}H_{21}N_3O_2.C_7H_0O_3$, is used as a miotic in paralysis of accommodation for the purpose of overcoming mydriasis and for reducing intra-ocular tension. Dose, $\frac{1}{30}$ gr. (0.0001 gm.); externally, by instillation, a 0.5 to 1 per cent. solution is employed. p. sulphate, $(C_{15}H_{21}N_3O_2)_2.H_2SO_4 + 7H_2O$, is used in veterinary medicine.

physostigminism (fi-so-stig'min-izm). Poisoning by physostigmin.

physovenin (fi-sov'en-in). A crystalline alkaloid, C₁₄H₁₈N₂O₃, from Calabar beans.

phytagglutinin (fi-tag-lu'tin-in). A phytotoxin which has the power of agglutinating red blood-corpuscles.

phytalbumin (fi-tal-bu'min) [Gr. φυτόν plant + albumin]. Vegetable albumin.

phytalbumose (fi-tal'bu-mōs) [Gr. φυτόν plant + albumose]. An albumose of vegetable origin.

phytase (fi'tās). A ferment, found in the liver and the blood, which splits phytin into inosite and phosphoric acid.

phytin (fi'tin). 1. A phosphorus compound derived from seeds probably [CH.OPO(OH)₂]₆: used as a nutrient. 2. A proprietary digestive and appetizer, said to be the potassium and magnesium salt of anhydro-oxymethylene diphosphoric acid.

phyto- [Gr. φυτόν plant]. A prefix indicating relation to a plant or plants.

phyto-anaphylactogen (fi"to-an-af-il-ak'to-jen). See phytosensitinogen.

phytobesoar (fi-to-be'zor) [Gr. φυτόν plant + bezɔar]. A hair-ball composed of vegetable matter such as skins, seeds, and the fibers of fruit and vegetables. Called also food-ball. See hair-ball.

phytochemistry (fi-to-kem'is-tre) [Gr. φυτόν plant + chemistry]. The study of the chemic processes that take place in plants.

phytocholesterol (fi"to-ko-les'ter-ol). Same as *phytosterol*.

phytodemic (fi-to-dem'ik) [Gr. φυτόν plant + epidemic]. An epidemic attack of any disease of plants

phytogenesis (fi-to-jen'es-is) [Gr. φυτόν plant + γένεσις generation]. The origin and development of plants.

phytogenetic, phytogenic (fi"to-jen-et'ik, fi-to-jen'ik). Phytogenous.

phytogenous (fi-toj'en-us) [Gr. φυτόν plant + γεννάν to produce]. Derived from a plant, or caused by a vegetable growth.

phytoglobulin (fi-to-glob'u-lin) [Gr. φυτόν plant + globulin]. Vegetable globulin.

phytoid (fi'toid) [Gr φυτόν plant + είδος form]. Resembling a plant.

Phytolacca (fi-to-lak'ah) [Gr. φυτόν plant + L. lac'ca lac]. A genus of plants of many species, mostly poisonous. The fruit of P. decan'dra (phytolac'cae fruc'tus), poke berry, also the root of the same (p. ra'dix), poke-root, an alterative, cathartic, emetic, and antirheumatic. They have been used in rheumatism, parasitic diseases of the skin, hemorrhoids, and granular conjunctivitis. Dose of either the fruit or root in substance, 5-30 gr. (0.333-2 gm); of fluidextract of root, 5-30 min. (0.333-2 c.c.); of tincture, 8-60 min. (0.533-4 c.c.).

phytolaccin (fi-to-lak'sin). A concentration prepared from the root of *Phytolac'ca decan'dra*. Dose, 1-3 gr. (0.066-0.19 gm.).

phytolin (fi'to-lin). A proprietary preparation of *Phytolac'ca decan'dra*: said to cure obesity. Dose, 10 min. (0.66 c.c.).

Phytomonas (fi-tom'o-nas). A genus of Bacteriaceæ pathogenic for plants.

phytoparasite (fi-to-par'as-it) [Gr. φυτόν plant + parasite]. Any parasitic vegetable organism or species.

phytopathogenic (fi"to-path-o-jen'ik). Producing disease in plants.

phytopathology (fi"to-path-ol'o-je) [Gr. φυτόν plant + pathology]. 1. The pathology of plants.
2. The pathology of morbid conditions caused by schizomycetes and other vegetable parasites.

phytophagous (fi-tof'ag-us) [Gr. φυτόν plant + φαγείν to eat]. Eating vegetable food,

- phytophosin (fi-tof'o-sin). A calcium salt of inosite phosphoric acid containing 25 per cent. of calcium oxid and 40 per cent. of organic phosphoric acid.
- **phytoplasm** (fi'to-plazm) [Gr. φυτόν plant + πλάσμα thing formed]. Vegetable protoplasm.
- phytoprecipitin (fi-to-pre-sip'it-in). A precipitin produced by immunization with protein substances of plant origin.
- phytoroides (fi-to-roi'dez). A proprietary anti-fat preparation of thyroid extract, phytolacca, Fucus vesiculosus, etc.
- phytosensitinogen (ii" to-sen-sit-in'o-jen) [Gr. φύτον plant + sensitinogen]. A protein substance of vegetable origin capable of inducing anaphylaxis; called also phyto-anaphylactogen.
- **phytosis** (fi-to'sis) [Gr. φυτόν plant]. Any disease of bacterial origin.
- phytosterin (fi-tos'ter-in) [Gr. φυτόν plant + στέαρ fat]. Same as phytosterol.
- phytosterol (fi-to-ste'rol). A sterol, C₂₇H₄₀O, found in plant cells.
- phytotoxin (fi-to-toks'in) [Gr. φυτόν plant + τοξικόν poison]. A toxin derived from a plant, such as abrin, ricin, crotin, and robin.
- phytotrichobezoar (fi'(to-tri-ko-be'zo-ar) [Gr. φυτόν plant + θρίξ hair + bezoar]. See hair-ball.
- phytovitellin (fi-to-vi-tel'in). Vitellin of vegetable origin.
- phytoxylin (fi-toks'il-in) [Gr. φυτόν plant + ξύλον wood]. A substance resembling pyroxylin: used in preparing celloidin sections.
- pia (pi'ah) [L. "tender"]. Same as pia mater.
- pia-arachnitis (pi"ah-ar-ak-ni'tis). Inflammation of the pia and arachnoid; leptomeningitis.
- pia-arachnoid (pi"ah-ar-ak'noid). The pia and the arachnoid considered as forming one organ; arachnopia.
- pial (pi'al). Pertaining to the pia.
- pialyn (pi'al-in) [Gr. $\pi \hat{\iota} a \rho$ fat $+ \lambda b \epsilon \iota \nu$ to loosen]. See *lipase*.
- pia mater (pi'ah ma'ter) [L. "tender mother"]. The innermost and most vascular of the three membranes of the brain (cerebral p.) and the spinal cord (spinal p.).
- piamatral (pi-ah-ma'tral). Pertaining to the pia mater; pial.
- pian (pe-ahn') [Fr.]. The yaws, or frambesia. p.-bois, a disease similar to frambesia, seen in the forest region of Guiana. It is marked by circumscribed swellings on the skin of the legs, on which ulcers form. There are enlargement of the inguinal glands and pains in the legs.
- piano-players' cramp. See professional cramp, under cramp.
- piantic (pe-an'tik) [Gr. πιαντικός fattened]. Fattened for slaughter; a term applied to bacteria which are descended from sensitized parents and are thus more than ordinarily subject to agglutination or lysis.
- piantication (pe-an-tik-a'shun) [see piantic]. The process of making subcultures from a sensitized culture of a particular strain of bacteria. The bacteria of the subcultures are more than ordinarily sensitive.
- piarachnitis (pi-ar-ak-ni'tis). Inflammation of the pia mater and arachnoid; leptomeningitis.
- piarachnoid (pi-ar-ak'noid) [pia + arachnoid].

 The pia and arachnoid considered together as one mass.
- piarhemia, piarhemia (pi-ar-he'me-ah) [Gr. πῖαρ fat+αῖμα blood]. The presence of fat in the blood; lipemia.
- piblokto (pib-lok'to). An Eskimo name for an attack of hysteria among women in Greenland.
- pica (pi'kah) [L.]. A craving for unnatural articles

- of food; a depraved appetite. It is seen in hysteria and chlorosis and in pregnancy.
- Picchini's syndrome (pik-ke'nēz). See under syndrome.
- piceus (pi'se-us) [L. pi'ceus]. Of the nature of pitch.
- pichi (pe'tshe). A Chilian drug, the resinous twigs of Fabia'na imbrica'ta: used in cystitis and gonorrhea. Dose of extract, 5-10 gr. (0.333-0.666 gm.); of fluidextract, 15-150 min. (1-10 c.c.).
- Pick's disease (piks) [Filipp Josef Pick, German dermatologist, 1834-1910]. Erythromelia. P's liniment. See under liniment.
- Pick's disease, syndrome (piks) [Friedel Pick, Prague physician, 1867–1926]. See under disease and syndrome.
- picolin (pik'o-lin) [I.. pix pitch + o'leum oil]. A colorless liquid base, alpha methyl pyridine, C₆H₄-N.CH₃, from coal-tar, oil, etc.
- picraconitin (pik-rak-on'it-in). An alkaloid, C₃₁H₄₅NO₁₀, from aconite.
- picradonidin (pik-rad-on'id-in). A bitter glucosid from Adonis: used like digitalis. Dose, 10-1 gr. (0.006-0.015 gm).
- picramic acid (pik-ram'ik). See acid.
- Picrasma. See Quassia.
- picrate (pik'rāt). Any salt of picric acid.
- picratol (pik'rat-ol). Silver trinitrophenolate, C₆-H₂.(NO₂)₃.OAg: used externally.
- picric acid (pik'rik). See acid.
- picrin (pik'rin) [Gr. πικρόs bitter]. A bitter substance from Digita'lis purpu'rea. Dose, 1-1 gr. (0.016-0.033 gm.).
- picroadonidin (pik"ro-ad-on'id-in). A bitter, amorphous powder from Adonis: tonic and diuretic.
- picrocarmin (pik-ro-kar'min). A stain prepared from picric acid and carmin and used in microscopy. It consists of a mixture of carmin (1 part), ammonia (5 parts), and distilled water (50 parts), to which are added 50 parts of an aqueous solution of picric acid.
- picroformal (pik-ro-for'mal). A saturated solution of picric acid in water, mixed with a 6 per cent. aqueous solution of formal: used as a fixing agent.
- picrol (pik'rol) [Gr. πικρόs bitter]. Potassium diiodoresorcin monosulphonate, (OH)₂.C₆HI₂.SO₂OK, a colorless and odorless, bitter, antiseptic powder: used as a wound dressing like iodoform.
- picronigrosin (pik"ro-ni-gro'sin). A solution of picric acid and nigrosin in alcohol: used as a stain.
- picropodophyllin (pik"ro-pod-o-fil'in). A crystalline principle from Podophyl'lum pelta'tum: medicinally active. It is said to be obtainable from podophyllotoxin also.
- picropyrin (pik-ro-pi'rin). A substance, in inflammable yellow needles, derived from picric acid and antipyrin.
- Picrorrhiza (pik-ro-ri'zah) [Gr. πικρός bitter + δίζα root]. A genus of herbs. The rhizome of P. kuer'va is tonic and antiperiodic. Dose, 10-30 gr. (0.6-2.0 gm.).
- picrosaccharometer (pi"kro-sak-a-rom'et-er).

 An instrument used in estimating diabetic sugar.
- picrosclerotin (pik-ro-skle'ro-tin). A poisonous alkaloid occurring in ergot of rye.
- picrotoxin (pik-ro-toks'in) [L. picrotox'inum, from Gr. πικρόs bitter + τοξικόν poison]. A bitter, poisonous, crystalline principle, C₃₀H₃₄O₁₃, from coc'culus in dicus. It resembles strychnin in action. It is used in chorea, night-sweats, etc., and in an ointment in pediculosis and tinea capitis. Dose, 1½0-30 gr. (0.00054-0.0011 gm.).
- picrotoxinism (pik-ro-toks'in-ism). Poisoning by picrotoxin.

PILL

pidan (pe'dan). Chinese preserved eggs; eggs which have been kept in an infusion of black tea, lime, salt, and wood ashes for about six months.

piebald skin (pi'bawld). A condition in which the pigment of the skin is divided up into patches, or in which it is lacking in certain areas. See leukoderma and vitiligo.

piedra (pi-e'drah) [Sp.]. A disease of bacterial origin in which nodules form on the shafts of the hair. It is caused by the Trichos' poron gigan'teum. p. nos'tras, piedra of the beard.

pier (pēr). Same as abutment.

piesesthesia (pi-e-zes-the'zhe-ah) [Gr. πίεσις pressure + αἴσθησια sensation]. Pressure sensibility; the sense by which pressure stimuli are felt.

piesimeter, piesometer, piezometer (pi-e-sim'-et-er, pi-e-som'et-er, pi-e-zom'et-er) [Gr. $\pi l \epsilon \sigma \iota s$ pressure + $\mu \epsilon \tau \rho \sigma \nu$ measure]. An instrument for testing the sensitiveness of the skin to pressure. **Hales' p.**, a glass tube inserted into an artery for the purpose of ascertaining the blood-pressure by the height to which the blood rises in the tube.

piezesthesia (pi'e-zes-the'ze-ah). Piesesthesia.

piezochemistry (pi-e'zo-kem-is-tre) [Gr. πleσις pressure + chemistry]. That branch of chemistry which deals with the effect of pressure on chemical phenomena.

Piffard's paste (pif'ardz) [Henry G. Piffard, dermatologist in New York, 1842-1910]. See under paste.

pigeon-breast (pij'un). See breast.

pigment (pig'ment) [L. pigmen'tum paint]. 1. Any dye or paint; a paint-like medicinal preparation to be applied to the skin. 2. Any normal or abnormal coloring-matter of the body. bile p., any one of the coloring-matters of the bile; they are bilirubin, biliverdin, bilifuscin, biliprasin choleprasin, bilihumin, and bilicyanin. blood blood p., any one of the pigments derived from hemoglobin; they are hematin, hematoidin, hemosiderin, hematoporphyrin, methemoglobin, and hemofuscin. extraneous p's, those abnormal pigments which enter the body from without. hematogenous p., any pigment derived from the blood or from the blood-pigment. hepatogenous p., bile-pigment formed by disintegration of hemoglobin in the liver. lipochrome p. See lipochrome. malarial p., a pigment formed by the malarial parasite from the pigment of the blood. melanotic p. See melanin. metabolic p., any pigment produced by the metabolic actions of cells. respiratory p's, substances, such as hemoglobin, which take part in the oxidation processes of the animal body

pigmentary (pig'men-ta-re). Pertaining to or of the nature of a pigment.

pigmentation (pig-men-ta'shun). The deposition of coloring-matter; the coloration or discoloration of a part by a pigment. extraneous p., pigmentation caused by coloring-matter introduced from outside of the body. vagabonds' p., pigmentation of the skin due to lice.

pigmented (pig'men-ted). Stained by deposit of pigment.

pigmentolysin (pig-men-tol'is-in). A lysin causing destruction of pigment.

pigmentolysis (pig-men-tol'is-is) [pigment + Gr. λύσις destruction]. Destruction of pigment.

pigmentophage (pig-men'to-fāj) [pigment + Gr. φαγεῖν to eat]. Any pigment-devouring cell, especially such a cell of the hair. Called also chromophage.

pigmentum nigrum (pig-men'tum ni'grum) [L. "black paint"]. The dark coloring-matter which covers the internal surface of the choroid coat of the eye.

Pignet's formula (pin-yās'). See under formula.
pigritis (pi-gri'tis) [L. pi'ger slow]. Sluggishness and inactivity of spirit from alcoholism.

piitis (pi-i'tis). Inflammation of the pia mater.
 Pil., pil. An abbreviation of L. pil'ula, pill, or pil'ula, pills.

pilar, pilary (pi'lar, pil'a-re) [L. pila'ris]. Pertaining to the hair.

pilaster (pil-as'ter). A superfluous ridge or fluting sometimes seen upon the femur.

pilation (pi-la'shun) [L. pila'tio]. A hair-like fracture, as of the skull.

Pilcz reflex, sign (pilts) [Alexander Pilcz, Austrian neurologist, born 1871]. See attention reflex, under reflex, and sign.

Pilcz-Westphal phenomenon (piltz-vest'fahl). See Westphal-Pilcz phenomenon, under phenomenon.

pile (pil) [L. pi'la pillar]. 1. An aggregation of similar elements for generating electricity. 2 An individual hemorrhoid. muscular p., layers of muscular tissue so arranged as to generate an electric current. sentinel p., a hemorrhoid-like formation at the lower end of a fissure of the anus. thermo-electric p., a set of slender metallic bars which, on exposure to heat, generates a current of electricity that moves an index and is made to register delicate changes of temperature. voltaic p., a battery for current electricity made up of a series of metallic disks.

pileous (pi'le-us). Hairy.

piles (pilz). See hemorrhoid.

pileum (pi'le-um) [L. a "hat"]. One of the cerebellar hemispheres.

pili annulati (pi'li an-u-la'ti) [L. "ringed hairs"]. Leukotrichia annularis.

piliganin (pi-lig'an-in) [piligan, a name of the plant which affords it] A yellowish, amorphous, poisonous alkaloid, C₁₅H₂₄N₂O, from Lycopo'dium sauru'rus, a South American plant: emetic, purgative, and convulsant. Dose of hydrochlorate, ½-½ gr. (0.011-0.022 gm.).

pilijanin. Same as piliganin.

pilimictio, pilimiction (pi-li-mik'she-o, pi-li-mik'shun) [L. pi'lus hair + mic'tio micturition].
 Passing of urine containing hair.

pilin (pi'lin). 1. A fabric resembling spongiopilin.
 2. A cosmetic preparation of benzoated and aromatized alcohol.

pill (pil) [L. pil'ula] A small globular or oval medicated mass to be swallowed. A. B. S. p., a laxative pill, each one of which contains \(\frac{1}{2}\) gr. of extract of belladonna, and \(\frac{1}{2}\) gr. of extract of belladonna, and \(\frac{1}{2}\) gr. of extract of belladonna, and \(\frac{1}{2}\) gr. of strychnin. Addison's p., a pill of calomel, digitalis, and squills \(\frac{1}{2}\) Altken's p., a pill containing reduced iron, \(\frac{2}{3}\) gr.; quinin sulphate, \(\frac{1}{2}\) gr. each. p. of \(\frac{1}{2}\) aloe, each pill contains \(2\) gr. (c.13\) gm.) of aloes. Dose, 2 pills. \(\frac{1}{2}\) Anderson's p., the compound gamboge pill. \(\frac{1}{2}\) Asiatic p., one containing arsenous acid and black pepper. \(\frac{1}{2}\) Ballile's p., (Guy's p. \(\frac{1}{2}\) Barker's postpartum p., a laxative pill containing colocynth, hyoscyamus, nux vomica, aloes, ipecac, and podophyllum. \(\frac{1}{2}\) Becquerel's p's, quinin sulphate, \(24\) gr.; extract of digitalis, 3 gr.; colchicum seed, \(8\) gr; to make 10 pills. \(\frac{1}{2}\) Belloste's p., a pill containing mercury, white honey, aloes, black pepper, rhubarb, and scammony. \(\frac{1}{2}\) Blaud's p., a pill of carbonate of iron. \(\frac{1}{2}\) gr.; apill of mercury (blue mass). \(\frac{1}{2}\) Boiragon p's, powdered scammony, \(\frac{1}{2}\) gr.; mild mercurous chlorid, \(\frac{1}{2}\) gr.; compound extract of colocynth, \(\frac{4}{2}\) gr.; aloes, \(8\) gr.; oil of caraway, \(4\) min.; to make \(\frac{1}{2}\) gr.; powdered ipecac, \(\frac{1}{2}\) gr.; \(\frac{1}{2}\) min. of oil of peppermint or fennel \(\frac{1}{2}\) gr.; \(\frac{1}{2}\) min. of oil of peppermint or fennel \(\frac{1}{2}\) gr.; an actively cathartic pill of various composition, often aloetic. \(\frac{1}{2}\) gr. of antimony and potassium tartrate. \(\frac{1}{2}\) gr. of antimony and potassium tartrate.

migraine, made of extract of colchicum and quinin sulphate, 13 gr. each, and powdered digitalis, 3 gr. dinner-p., a pill to be taken with the meals. enteric p., a pill coated with a substance, such as salol, which will not dissolve in the stomach. p. of ferrous carbonate, ferruginous p. See Blaud's p. p. of ferrous iodid, each pill contains ½ gr. of iron. Fothergill's p., a pill of calomel, squill, and digitalis. Francis's triplex p., the compound pill of aloes, mercury, and scammony. **Gross's p.**, quinin sulphate, 2 gr.; strychnin, $\frac{1}{30}$ gr.; morphin sulphate and arsenic trioxid, each $\frac{1}{20}$ gr.; extract of aconite leaves, $\frac{1}{2}$ gr. **Guy's p.**, a pill composed of 1 gr. each of digitalis, squill, extract of hyoscyamus, and blue mass.

Haén's p's, pills composed of 10 gr. aloes, 3 gr.
each of scammony and resin of jalap, 4 gr. of
powdered ginger, 10 gr. of soap, made into 100 pills.

Hall's p., a pill containing 1 gr. each of licorice extract, powdered soap, and molasses. **Heim's** p's. 1. Ipecac, ½ gr.; digitalis, ½ gr.; opium, ½ gr., and extract helenium, q. s. 2. Pills of gamboge. digitalis, squill, antimony, and extract of Pimpinella. Hooper's p's, pills of aloes and myrrh. Janeway's p., compound pill of aloes and podo-phyllin. **Keyser's p.**, antileutic; proto-acetate of mercury, 0.6 gm.; manna, 0.12 gm. Make into 72 pills. **Lady Webster's p.**, a dinner-pill of aloes and mastic. **lapactic p.**, a commercial pill containing aloin, strychnin, and belladonna. Lartigue's p's, pills containing 20 parts of compound extract of colchicum and 1 part extract of digitalis: used in gout Meglin's p's, pills for headache containing extract of hyoscy-amus, extract of valerian, and zinc oxid Muramus, extract or varerian, and zinc oxid in the chison's p., a pill for dropsy containing blue mass, 2 gr.; digitalis, \(\frac{1}{2}\) gr.; and squill, \(\frac{1}{2}\) gr. Niemeyer's p's. 1. A pill of quinin, 1 gr; digitalis, \(\frac{1}{2}\) gr.; and opium, \(\frac{1}{4}\) gr. 2. Same as Addivon's p. p. of phosphorus, each pill contains 1 gr. of phosphorus. Plummer's p., a pill of artifering and colored; pillula artifering comof antimony and calomel; pilulæ antimonii compositæ. Rufus's p., a pill of aloes and myrrh. triplex p., a pill of aloes, 2 gr.; mercurial mass, 1 gr., and resin of podophyllum, ½ gr.: purgative and cholagogue. Twining's p., a pill of calomel, blue mass, and ipecac used in the treatment of dysentery. vegetable cathartic p., a pill of colocynth islan hyoscyamus lentandra and resin colocynth, jalap, hyoscyamus, leptandra, and resin of podophyllum.

pillar (pil'ar) [L. pi'la]. A supporting structure, mostly occurring in pairs, as the pillars of the abdominal ring, fauces, diaphragm, and fornix. p's of the abdominal ring, the columns on each side of the abdominal ring, p. of the diaphragm. Same as crura of diaphragm. p's of the fauces, the folds of mucous membrane on each side of the fauces. p's of the fornix, the anterior and posterior portions of the cerebral fornix behind and in front of the body. Uskow's p's, two folds of the embryo attached to the dorsolateral portion of the body-wall. From these pillars and the septum transversum the diaphragm is formed.

pillet (pil'et). A little pill, or pellet.

pilleus, pilleum (pil'e-us, pil'e-um) [L. for caul]. The membrane which sometimes covers a child's head at birth p. ventric'uli, the portion of the duodenum just beyond the pylorus; also called pars superior duodeni, duodenal bulb, duodenal cap, pyloric cap, and bishop's cap.

pillion (pil-yon'). A temporary artificial leg.

pilocarpidin (pi-lo-kar'pid-in). An isomer of pilocarpin formed by boiling pilocarpin in an alcoholic solution of soda.

pilocarpin (pi-lo-kar'pin). A powerfully sudorific alkaloid, C₁₁H₁₆N₂O₂, from jaborandi. It is a lactone derivative of methyl glyoxaline. Many of its salts have been medicinally employed. Dose of hydrochlorid and of nitrate, $\frac{1}{64}$ gr. (0.001-0.033 gm.).

Pilocarpus (pi-lo-kar'pus) [Gr. πίλος cap + καρπός

fruit]. A genus of rutaceous shrubs of tropical America. See *jaborandi*.

pilocerin (pi-lo-se'rin). A toxic alkaloid, C₃₀H₄₄-N₂O₄, from the cactus, *Pilocereus*.

pilocystic (pi-lo-sis'tik) [L. pi'lus hair + cystic]. Hollow, or cyst-like, and containing hairs: used of certain dermoid tumors.

pilomotor (pi-lo-mo'tor) [L. pi'lus hair + mo'tor mover]. Causing movements of the hair.

pilonidal (pi-lo-ni'dal) [L. pi'lus hair + ni'dus nest]. Having hairs for a nidus.

pilose, pilous (pi'los, pi'lus) [L. pilo'sus]. Having long hairs.

pilosebaceous (pi"lo-se-ba'shus). Pertaining to the hair-glands and sebaceous glands.

pilosin (pi'lo-sin). A crystalline alkaloid, C₁₆H₁₈N₂-O₃, from pilocarpin mother liquors.

pilosis, pilosism (pi-lo'sis, pi'lo-sizm) [L. pi'lus hair]. Excessive or abnormal growth of hair.

pilula (pil'u-lah), pl. pil'ulæ. Latin for pill.

pilular (pil'u-lar). Resembling or pertaining to a pill.

pilule (pil'ūl) [L. pil'ula]. A small pill, or pellet.

pilus (pi'lus), pl. pi'li. Latin for hair.

pimelitis (pim-el-i'tis) [Gr. πιμελή fat + -ιτις in-flammation]. Inflammation of the adipose tissue.

pimeloma (pim-el-o'mah) [Gr. πιμελή fat + -ωμα tumor]. A fatty tumor; lipoma.

pimelopterygium (pim"el-o-ter-ij'e-um) [Gr. πιμελή fat + πτέρυξ wing]. A fatty outgrowth upon the conjunctiva.

pimelorrhea (pim"el-o-re'ah) [Gr. πιμελή fat + bola flow]. Diarrhea with fat in the stools.

pimelorthopnea (pim"el-or-thop-ne'ah) [Gr. πιμελή fat + orthopnea]. Difficulty in breathing while lying down, due to excessive fatness.

pimelosis (pim-el-o'sis) [Gr. πιμελή fat]. 1. Conversion into fat. 2. Fatness, or obesity.

pimeluria (pim-el-u're-ah) [Gr. πιμελή fat + οὖρον urine]. The presence of fat in the urine.

Pimenta (pim-en'tah) [Spanish pimen'ta allspice; L. pigmen'tum spice]. A genus of myrtaceous trees and shrubs of warm regions. The dried fruit of P. officina'lis (Euge'nia pimen'ta), a tree of tropical America, is allspice. It is employed as an aromatic, stimulant, and carminative. Dose, 5-30 gr. (0 333-2 gm.). See aqua pimenta and oil of allspice.

Pimpinella (pim-pin-el'ah) [L]. A genus of umbelliferous plants. The roots of P. mag'na and P. saxif'raga, Burnet saxifrage, are tonic, diuretic, emmenagogue, and carminative. Dose of tincture, ½ dr. (2 c c.). See also anise.

pimpinellin (pim-pin-el'in). A bitter, crystallizable principle, seen in colorless needles, from the root of *Pimpinel'la saxif'raga*.

pimple (pim'pl). A papule or pustule.

pin (pin). In dentistry, a peg or dowel by means of which an artificial crown is fixed to the root of a tooth.

pinacolin (pin-ak'o-lin). A clear, oily principle, dimethyl-butanone, CH₃.CO C(CH₃)₃, with the odor of peppermint, derivable from acetone.

pinapin (pin'ap-in). A preparation of pineapple juice, recommended for use in the treatment of gastric and nasal catarrh.

Pinard's sign (pe-nārz') [Adolphe Pinard, French obstetrician, born 1844]. See sign.

pince-ciseaux (pans-se-zo') [Fr. "forceps-scissors"]. A cutting forceps used in iridotomy.

pincement (pans-maw') [Fr.]. The pinching of the flesh in massage.

pincers (pin'serz). 1. Forceps. 2. The median deciduous incisor teeth in the horse.

pine (pin) [L. pi'nus]. The name of many coniferous trees, chiefly of the genus Pi'nus. The pines afford turpentine, volatile oils, rosin, pitch,

tar, etc. prince's p., Chimophila. white p., Pinus strobus. p. tar. See under !ar.

PINEAL

pineal (pi'ne-al) [L. pinea'lis; pi'neus pine-cone].

1. Shaped like a pine-cone. 2. Pertaining to the conarium or pineal gland. See under gland.

pinealectomy (pi"ne-al-ek'to-me) [pineal gland -Gr. ἐκτομή excision]. Excision of the pineal gland. pinealism (pi'ne-al-izm). Derangement of the secretion of the pineal body.

pinealoma (pi"ne-al-o'mah). A tumor of the pineal gland.

Pinel's system (pe-nelz') [Philippe Pinel, alienist in Paris, 1745-1826]. See under system.

pinene (pi'nēn). A terpene, (CH₃)₂.C.C₆H₇.CH₃, found in turpentine and many essential oils.

pineoblastoma (pi"ne-o-blas-to'mah). containing embryonic pineal-gland cells.

pineoline (pi'ne-o-lin). Ethereal extract of pineneedles: for use in skin diseases.

pinguecula, pinguicula (pin-gwek'u-lah) [L. pin'guis fat]. [B N A] A triangular, yellowish patch on either side of the cornea in old age, due to irritation, which leads to a colloid infiltration.

pinheroin (pin-her'o-in). A proprietary combination of terpin hydrate and heroin.

piniform (pin'if-orm) [L. pi'neus pine-cone + for ma form]. Conic or cone-shaped

pink and senna (pink). See worm-tea.

pink disease. See erythredema.

pink-eye (pink'i). An epidemic, contagious conjunctivitis due to the bacillus of conjunctivitis.

pink-root. See Spigelia.

Pinkus's disease (pin'koos) [Felix Pinkus, German

dermatologist, born 1868. Lichen nitidus. pinna (pin'nah) [L. "wing"]. The projecting part of the ear lying outside of the head. See ear.

pinnaglobin (pin-ag-lo'bin). A respiratory pigment found in Pinna squamosa which contains manganese instead of iron.

pinnal (pin'al). Pertaining to the pinna.

pinocytosis (pi-no-si-to'sis) [Gr. πίνειν to drink + κίττος cell]. The absorption of liquids by cells.

pinol (pi'nol). 1. A substance isomeric with ordinary camphor, derivable from pinene. 2. volatile oil from the leaves of Pi'nus pumil'io.

pinoleum (pin-o'le-um). A proprietary remedy for respiratory catarrh.

pinotherapy (pi-no-ther'ap-e). See peinotherapy. Ping's sign or syndrome. See under sign.

pins and needles. A popular name for paresthesia marked by pricking and tingling sensations in a part.

pint (pint) [L. octa'rius]. A measure of quantity (symbol O); 16 fluidounces (wine measure) or 28.875 cubic inches (473.18 c.c.). The imperial pint is equal to 20 fluidounces. See further under weights and measures.

pinta, pinto (pēn'tah, pēn'to) [Sp. "painted"], Mal de los pintos, or spotted sickness; a con-tagious skin disease resembling psoriasis, occurring in Mexico and other tropical countries. is probably parasitic, and due to various species of Aspergillus, Penicillium, Monilia, etc.

Pinus (pi'nus). See pine.

pinus (pi'nus) [L.]. The pineal gland.

pinuseptol (pi-nu-sep'tol). A proprietary pine oil emulsion: used as an antiseptic.

pin-worm (pin'werm). Same as Oxyuris.

pio-epithelium (pi"o-ep-ith-e'le-um). Epithelium in which fatty matter is deposited.

pionemia, pionemia (pi-o-ne'me-ah) [Gr. πίων fat + αΐμα blood]. The presence of fat or oil in the blood; lipemia.

Pioph'ila ca'sei. The fly whose larvæ are the "cheese-skippers" and a common cause of intestinal myiasis.

Piorkowski's medium (pe-or-koy'skēz) [Max

Piorkowski, German bacteriologist, born 1859]. See under medium,

piorthopnea, **piorthopnea** (pi-or-thop-ne'ah) [Gr. $\pi l\omega \nu$ fat $+ b\rho\theta bs$ upright $+ \pi \nu ola$ breath]. Dyspnea when lying down, due to the accumulation of fats.

pioscope (pi'o-skōp) [Gr. πίων fat + σκοπείν to view]. An instrument for estimating the fat content of milk by comparing its color with the six shades painted on the instrument.

pip (pip). A contagious disease of poultry affecting the eyes, nostrils, and tongue.

pipe-jaw (pīp'jaw). A painful condition of the jaws from carrying a tobacco-pipe in the teeth.

Piper (pi'per) [L. "pepper"], plants producing kava-kava, betel, cubeb, matico, and pepper. 2. See pepper. P. angustifo'lium, matico. P. be'tle, betel leaf. P. ni'grum, black pepper.

perazin (pip-er-a'zin). A crystalline base, di-ethylene diimin, NH(CH₂)4NH, soluble in water, piperazin (pip-er-a'zin). and formed by the action of ammonia on ethylene bromid or chlorid. It is a solvent of uric acid; also an antiluctic and diurctic, and is used in gout, diabetes, and lithemia. Dose of hydrochlorate in 2 per cent. solution, hypodermically, 5 gr. (0.33 gm.); by the mouth, 8 gr. (0.5 gm.).

piperidin (pi-per'id-in). A liquid base, pentamethylene imin, CH₂(CH₂)₄NH, derivable from piperin and from cadaverin. **p. bitartrate**, a crystalline compound recommended as a solvent for uric acid.

piperin (pip'er-in) [L. piperi'num]. A crystallizable, slightly soluble alkaloid, C_bH₁₀N.CO.(CH)₂CH.C₆-H₂.O₂ CH₂, from Piper nigrum: antiperiodic. Dose, 1-5 gr. (0.06-0.33 gm.).

piperism (pi'per-izm) [L. pi'per pepper]. Poisoning by pepper.

piperonal (pi-per'o-nal). See heliotropin.

piperovatin (pi-per-o'vat-in). An alkaloid, C₁₆-H₂₁NO₂, from *Pi'per ova'tum*: it has spastic properties.

pipet, pipette (pe-pet') [Fr. pipette]. I A glass tube used in handling small quantities of liquid or gas. 2. To use the pipet.

pipitzahoac (pip-it"zah-ho-ak") [Mex.]. The root and rhizome of Pere'zia adna'ta, P. frutico'sa, and other Mexican plants cathartic.

pipsissewa (pip-sis'se-wah). See Chimaphila. Piptadenia (pip-tad-e'ne-ah). See niopo-snuff.

piqure (pe-koor') [Fr] Puncture, especially Claude Bernard's diabetic puncture.

piriform (pir'if-orm) [L. pi'rus pear + for'ma shape]. Pear shaped.

piriformis (pir-if-or'mis). See muscles, table of. Pirogoff's amputation, angle, operation (pir-o-gofs') [Nicolai Ivanowitsh Pirogoff, Russian

surgeon, 1810-1881]. See amputation, angle, and

operation.

Piroplasma (pi-ro-plaz'mah) [L. pi'rum pear + Gr. πλάσμα something formed]. A genus of sporozoans, parasitic in the blood-corpuscles of dogs, horses, sheep, and oxen. **P. bigem'inum**, a species causing Texas cattle fever and transmitted by the bite of infected cattle-ticks, Margaropus annulatus. They are pear-shaped bodies, seen usually in pairs in the red corpuscles. P. bo'vis, a species which causes the red-water or hemoglobinuric fever of cattle in Europe. P. cabal'li, a species causing biliary fever in horses in Russia and Siberia. P. ca'nis, a species found in dogs, causing a disease termed malignant jaundice or bilious fever. It is transmitted by a tick, Rhipicephalus sanguinous. P. commu'ne, a species causing an epizoötic of dogs at Columbus, Ohio. P. diver'gens, a species differing from P. bigeminum, but causing a similar disease. P. don-ovan'i. See Leishmania donovani. P. e'qui, a ovan'i. See Leishmania donovani. P. e'qui, a species causing hemoglobinurla and jaundice in horses. Called also Nuttalia equi. P. hom'inis. the blood parasite, thought to cause Rocky Mountain spotted fever, transmitted to man by the bite of the tick, Dermacentor venustus. It is an ovoid body, showing ameboid movement, and occupying the edge of the red blood-cells. See Rickettsia. mu'tans, a species of South Africa, smaller than P. bigeminum. P. o'vis, a species causing a disease in sheep. It is transmitted by the tick, Rhipiceph'alus bur'sa P. par'va, a species causing Rhodesian red-water fever of cattle. It is found also in India and in Japan. Called also Theileria parva.

Piroplasmidæ (pi-ro-plaz'mid-e). A provisional family belonging to the hemosporidia, the type of which is Babesia bigeminum (Russell).

piroplasmosis (pi"ro-plaz-mo'sis). Infection with piroplasma; a condition marked by chronic irregular fever, enlargement of the spleen, bronchitis, edema of the feet, subcutaneous hemorrhage, and dysentery. bovine p. Same as Texas fever. See under fever. equine p. See equine biliary fever, under fever.

Pirquet's reaction (pēr'kāz) [Clemens von Pirquet, Austrian pediatrist, born 1874]. See cutaneous reaction, under reaction

Piscidia (pis-id'e-ah) [L. pis'cis fish + ca'dere to kill. A genus of leguminous trees. The bark of P. erythri'na, Jamaica dogwood, is a mild anodyne. Dose of fluidextract, 15-60 min. (1-4)

piscidin (pis-i'din). A neutral principle from Piscid'ia erythri'na: used as an anodyne and antispasmodic.

piscina (pis-i'nah) [L.]. A bath-tub.

pisco (pis'ko) [the name of a town in Peru]. A variety of brandy made in Peru.

pisiform (pi'sif-orm) [L. pisifor'mis; pi'sum pea + for'ma shape].
1. Like a pea in shape and size.
2. The pea-like bone at the ulnar side of the proximal row of the carpus.

Pistacia (pis-ta'she-ah). See mastic.

Pistia stratiotes (pis'te-ah stra-te-o'tēz) [L.]. A plant of Asia. Called taká panna in India: used there in measles.

pistil (pis'til). The female organ of a flower.

pit (pit). 1. A hollow fovea or indentation. 2. A pock-mark. 3. To indent, or to become indented, by pressure. arm p., the axillary fossa auditory p., a depression on each side of the after-brain of the embryo, forming the labyrinth of the ear. basilar p., a pit in the crown of an incisor tooth above its neck. pterygoid p., a depression on the inner side of the neck of the condyloid process of the mandible for the attachment of the external pterygoid muscle. the stomach, the epigastrium or scrobiculus cordis.

pitch (pitsh) [L. pix]. 1. A dark, lustrous, more or less viscous residue from the distillation of tar and other substances. 2. Natural asphalt of various kinds. 3. The height or acuteness of the voice. black p., naval p., an inflammable substance obtainable from the tar of various species of pine. Burgundy p. [L. pix burgun'dıca], an aromatic, oily resin from A'bies (or Pi'cea) excel'sa, the Norway spruce of Europe much used in plasters. Canada p., a resin from Tsu'ga canaden'sis, the hemlock tree; pix canaden'sis, useful in plasters, etc. hard p., soft p., bituminous substances produced in coal-tar distillation. Jew's p., mineral p., bitumen. liquid p., ordinary wood-tar. Trinidad p., asphalt from Trinidad, British West Indies

pitchblende (pitsh'blend). A black mineral composed principally of uranium oxid. From it are obtained radium and polonium.

pitglandin (pit-glan'din). A proprietary preparation of the anterior lobe of the pituitary body.

pith (pith). To pierce in the spinal cord or brain: a term used in vivisection,

pithecoid (pith'ek-oid) [Gr. πίθηκος ape + είδος forml. Ape-like.

pithiatic (pith-e-at'ik). Pithiatric.

pithiatism (pith-i'at-izm) [Gr. πείθειν to persuade + laros curable]. I A condition which is caused by suggestion and which renders the patient subject to persuasion; a term proposed by Babinski as the equivalent of hysteria. See hysteria. 2. The cure of nervous and mental disorders by persuasion.

pithiatric (pith-e-at'rik). Capable of being cured by persuasion and suggestion.

pithing (pith'ing). Destruction of the brain and spinal cord by thrusting a blunt needle into the spinal canal and cranium: done on animals to destroy sensibility preparatory to experimenting on their living tissues.

pithode (pi'thōd) [Gr. πίθος wine-cask + είδος form]. The nuclear barrel-figure formed in karyokinesis.

pitibulin (pit-ib'u-lin). A proprietary postpituitary extract.

pitnigan (pit'ni-gan). A proprietary extract of the posterior portion of the hypophysis.

pitometer (pit-om'et-er). An instrument for measuring the flow of water in pipes.

pitralon (pit'ral-on). A proprietary preparation of pine tar and halogenized carbohydrates used in the treatment of trichophytoses.

Pitres's sections (pe-tres') [Albert Pitres, phys-

ician in Bordeaux, born 1848]. See section.

pitting (pit'ing). The formation of a depression following pressure on a part, due to edema.

pittylen (pit-i'len). A condensation product of pine-tar and formaldehyd used in skin diseases.

pituglandol (pit-u-glan'dol). A proprietary extract from the infundibular portion of the pituitary body.

pituita (pit-u'it-ah) [L.]. A glutinous mucus or phlegm.

pituitarism (pit-u'it-ar-izm). Disorder of pituitary function.

pituitarium (pit-u-it-a're-um). The U.S.P. name for a powder prepared from the posterior lobe of the pituitary body of cattle; formerly called hypophysis sicca.

pituitary (pit-u'it-a-re). ituitary (pit-u'it-a-re). 1. Pertaining to or secreting a mucus or phlegm. 2. Pertaining to the pituitary body. **p. body**, **p. gland**. See under body.

pituitin (pit-u'it-in). An extract from the posterior lobe of the pituitary body.

pituitol (pit-u'it-ol). An extract of the posterior lobe of the pituitary body.

pituitotrope (pit-u'it-o-trop). A person exhibiting pituitotropism.

pituitotropic (pit-u"it-o-trop'ik). Pertaining to or marked by pituitotropism.

pituitotropism (pit-u"it-o-tro'pism) [pituitary + Gr. $\tau \rho \delta \pi \sigma s$ turning]. Pituitary constitution; a constitution in which the pituitary gland has an abnormally marked influence.

pituitous (pit-u'it-us) [L. pitu-to'sus]. Pertaining to mucus or characterized by its secretion.

pituitrin (pit-u'it-rin). A proprietary preparation of the posterior lobe of the pituitary body. used to promote uterine contractions in inertia uteri, to stimulate peristalsis in intestinal atony, and for its tonic effect upon the bladder. Dose, 10-20 gr. (0.6-1.2 c.c.) hypodermically **p. S**, a proprietary pituitary extract for surgical use, twice the strength of pituitrin.

pituitrism (pit-u'it-rizm). Disorder of pituitary function.

piturin (pit'u-rin). An alkaloid, C₁₂H₁₆N₂, from Dubor'sia hopwood'ii. It is the same as nicotin.

pityriasic (pit-ir-i-a'sik). Pertaining to or affected with pityriasis.

pityriasis (pit-ir-i'as-is) [Gr. πίτυρον bran]. The name of various skin diseases characterized by

branny scales. p. al'ba atroph'icans, a disease with branny desquamation, followed by atrophy of the skin. p. cap'itis. Same as alopecia furfuracea. p. circina'ta, p. macula'ta et circina ta, p. ro'sea, a non-contagious skin disease with reddish, scaly patches, moderate fever, and usually with a short and favorable course. p. circina ta et margina ta, a variety of parasitic origin. Gibert's p., pityriasis rosea. p. grava skin discoloration peculiar to pregida'rum, Hebra's p., pityriasis rubra. p. licheno'des, maculopapular erythrodermia. p. lin'gum, geographic tongue. See under tongue. p. ni'gra, pityriasis with skin pigmentation. p. nos'tras, tinea rodosa. p. pila'ris. Same as keratosis pilaris. p. ro'sea, an inflammatory disease of the skin, marked by rose-colored squamous macules and ring-shaped patches, chiefly upon the trunk; called also p. maculata et circinata and herpes tonsurans maculosus. p. ru'bra, an inflammatory disease of the entire skin, sometimes chronic and often fatal. The skin becomes deep red in color and is covered with white scales. p. ru'bra pila'ris, a form characterized by keratinization of the epidermis, which exfoliates in small shreds. **p. sim'plex**, the ordinary pityriasis; seborrhœa sicca. **p. steatoi'des**, a scurfy condition of the scalp of a moist or greasy form. **p. tabescen'tium**, general seborrhea with wasting of the body. **p. uteri'num**, chloasma uterinum. **p. versic'olor**. Same as *tinea* versicolor.

pityroid (pit'ir-oid) [Gr. $\pi l \tau \nu \rho \rho \nu$ bran $+ \epsilon l \delta \rho s$ form]. Furfuraceous or branny.

Pityrosporum (pit-e-ros'po-rum). A genus of fungi not vet cultivated. They are yeast-like and fungi not yet cultivated. They are yeast-like and produce no mycelium **P. ova'le** may be the cause of pityriasis simplex and also of pityriasis alba.

piutinol (pi-u'tin-ol). A mixture of sulphur, pine oil, glycerin, and alcohol used for preparing sul-

phur baths.

pix (piks), gen. pi'cis [L]. See pitch. p. burgun'dica, Burgundy pitch. See pitch. p. canaden'sis, Capada pitch. p. carbo'nis præpara'ta, prepared coal-tar. p. liq'uida, tar. p. lithan'thracis, coal-tar. p. pi'ni, the U.S. P. name for pine tar. See tar.

pixcresol (piks-kres'ol). An antiseptic, disinfectant,

and deodorant, C₅II₆N.SO **pixine** (piks'in). A proprietary antiseptic and detergent ointment: used in skin diseases and for wounds.

pixol (piks'ol). A disinfectant compound of soap, potash, and tar. It is used as a demulcent in skin diseases, and has been given in influenza.

P. L., p. 1. Abbreviations for light perception.

place, Kiesselbach's (plās). A thin point in the nasal septum where perforation is especially liable to occur.

placebo (plas-e'bo) [L. "I will please"]. A medicine given to please or gratify the patient.

placenta (pla-sen'tah) [L. "a flat cake"]. 1. Any cake-like mass 2 The round, flat organ within the uterus which establishes communication between the mother and child by means of the umbilical cord The placenta is a circular mass, about seven inches in diameter, about one inch in thickness, and weighing about sixteen ounces. It consists of an internal, or fetal, portion, which is a smooth, shining membrane continuous with the sheath of the cord (amnion), and an external, or maternal, portion, which is of a dark red hue, divided by deep sulci into lobes of irregular outline and extent (the cotyledons), which project into depressions in the mucous membrane of the Over the maternal surface of the plauterus. centa is stretched a delicate, grayish, transparent membrane. Around the periphery of the pla-centa is a large vein (the *circular vein*), which returns a part of the maternal blood from the organ, the remainder returning to the maternal

circulation by means of the continuity between the cotyledons and the uterine sinuses. accessory p., a portion of placental tissue distinct from the placenta. p. accre'ta. See adherent p. adherent p., one which adheres so closely to the uterine wall that it is impossible to find any line of cleavage for placental separation. Called also placenta accreta. annular p., one which extends around the interior of the uterus like a ring or belt. battledore p., one with a marginal attachment of the cord. bilobed p., duplex p., one made up of two parts or lobes. p. bip., one made up of two parts or lobes. p. Diparti'ta, bilobed placenta. p. circumvalla'ta, a cup-shaped placenta. cirsoid p., one the vessels of which appear to be varicose. p. dimidia'ta, placenta duplex. duplex p., one made up of two parts or lobes. p. febri'lis, the enlarged spleen seen in malaria. p. fenestra'ta, one which has spots where the placental tissue is lacking fatal p. that part placental tissue is lacking. fetal p., that part of the placenta which comes next to the fetus. fundal p., one which is attached to the fundus in the normal manner. horseshoehorseshoep., a crescentic form of placenta sometimes occurring in twin pregnancy. incarcerated p., a placenta retained by irregular uterine contractions. p. margina'ta, a placenta which is surrounded by an unusual margin of elevated placental tissue. maternal p., that part of the placenta which comes next to the uterine wall. rarely adherent when the rest of the placenta is expelled. p. membrana'cea, an abnormally thin form of placenta. multilobed p., a placenta having more than three lobes. p. obsole'ta, one of two opposed placentas which have no vascular anastomosis. **panduriform p.,** a placenta composed of two halves side by side, resembling a violin in shape. p. præ'via, a placenta which intervenes between the intra-uterine cavity and the inner orifice of the cervical canal. It may lead to fatal hemorrhage. p. præ'via centra'lis, placenta prævia in which the center of the placenta corresponds to the os uteri. p. præ'via mar-gina'lis, placenta prævia in which the placenta comes up to, but does not cover, the os uteri. præ'via partia'lis, placenta prævia in which the os uteri is only partly obstructed. p. reflex'a, a placenta in which the margin is thickened so as to appear "turned up." p. renifor'mis, a kidneyshaped placenta. retained p., a placenta usually either adherent or incarcerated by irregular uterine contractions, and which in consequence fails to be expelled after childbirth. Schultze's p., a placenta which is expelled with the central part ahead of the periphery. spu'ria, a placental exclave which does not take part in the nourishment of the fetus. stone-p., a placenta which contains calcareous or sabulous deposits of greater or less extent. students' a placenta retained in consequence of unskilful manipulation. **succenturiate p.**, an accessory or subsidiary placenta. **p. triparti'ta**, a triple or triply divided placenta. **p. truffée**, a placenta containing small, dark-red infarcts. **velamentous** p., one in which the umbilical cord is attached at one edge. **zonary p.** Same as annular p. **placental** (pla-sen'tal). Pertaining to the placenta.

placentapepton (pla-sen-tah-pep'tōn). prietary preparation of peptone derived from the placenta and used for Abderhalden's optical test for pregnancy.

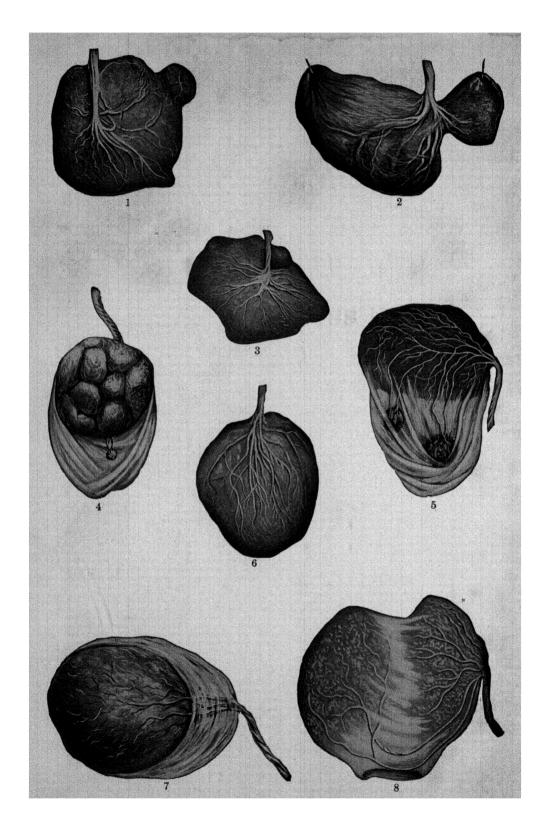

placentation (pla-sen-ta'shun). The manner of formation and attachment of the placenta.

placentin (pla-sen'tin). An extract from the placenta used in Abderhalden's test.

placentitis (plas-en-ti'tis). Inflammation of the placenta.

placentocytotoxin (pla-sen"to-si-to-toks'in). Same as placentolysin.

placentolysin (pla-sen-tol'is-in) [placenta + Gr. λύσις solution]. A lysin formed in the serum of an animal into which have been injected placenta

Anomalies of the Placenta 1, placenta with irregular lobes; 2, placenta in two unequal lobes, 3, irregular placenta, 4, small accessory placenta; 5, placenta succenturiata; 6, "battledore" placenta, oval, 7, placenta with velamentous attachment of cord; 8, placenta with two equal lobes.

cells from another animal. It is destructive to the placenta of animals of the species from which the cells were originally taken.

placentoma (pla-sen-to'mah). A neoplasm derived from a portion of the placenta retained after an abortion.

placentotherapy (pla-sen-to-ther'ap-e) [placenta + Gr. θεραπεία treatment]. The therapeutic use of preparations of the placenta.

placentotoxin (pla-sen-to-tox'in). A naturally occurring synocytotoxin which may cause some of the toxemias of pregnancy.

Placobdel'la catenig'era. A leech found in Europe that attacks man and various animals.

placode (plak'od). A thickened plate of ectoderm forming the anlage of an organ in the embryo, as the ear (auditory p.) or eye (optic p.).

placuntitis (pla"kun-ti'tis) [Gr. πλακοῦς placenta]. Inflammation of the placenta.

placuntoma (pla-kun-to'mah) [Gr. πλακούς placenta + - ωμα tumor]. Placentoma.

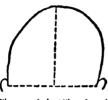

duced by closure of half of the coronal suture.

pladaroma (plad-ar-o'mah). Pladarosis.

pladarosis (plad-ar-o'sis) [Gr. $\pi\lambda a\delta a\rho \delta s$ soft] A soft or flaccid tumor of the eyelid.

plagiocephalic (pla"jeo-sef-al'ik). Characterized by plagiocephaly.

plagiocephalism, pla-giocephaly (pla je-o-sef-al-izm, pla je-o-sefal-e) [Gr. πλάγιος ob- Plagiocephaly (Church and lique + $\kappa \epsilon \varphi \alpha \lambda \dot{\eta}$ head]. An unsymmetric and twisted condition of the head. It is usually pro-

Peterson).

plague (plag) [L pla'ga, pes'tis, Gr. πληγή stroke]. 1. A pestilence or severe epidemic 2 Malignant polyadenitis known as bubonic or oriental plague; an acute febrile and exceedingly fatal epidemic disease produced by Pasteurella pestis. It begins with fever and chills, quickly followed by great prostration similar to that of the typhoid state, and later by swelling of the lymphatic glands, forming buboes in the femoral, inguinal, and cervical regions It is frequently attended with delirium, headache, vomiting, and diarrhea. The plague attacks rats, reptiles, and various animals, but the herbivorous animals are little liable to it The disease is almost always transmitted through the bites of fleas (Xenopsylla cheopis) which have become infected by feeding on plague diseased rats. ambulant p., a form with slight fever, dangerous as a means of spreading the disease; the patient may die of a swift collapse. ambulatory p., pestis minor; a relatively mild form of true or oriental plague. blood p. See nan. bi-uvu. bubonic p. See plague (2d def). cattle-p., a contagious disease of cattle, which sometimes affects sheep and goats, marked by fever and croupous diphtheritic lesions of the intes-tinal tract. The organism of the disease is unknown. Called also rinderpest and contagious typhus of cattle. cellulocutaneous p., plague marked by inflammation and necrosis of the skin and subcutaneous tissues, and often associated with involvement of the lymph-nodes. **defervescing p.**, a form which ends by a crisis. **fowl** a disease of domestic fowls, differing from chicken-cholera, and caused by some unknown organism. The disease occurs in northern Italy, Germany, and France. Called also chickenpest. glandular p. See plague (2d def.). hog-p., an infectious disease of swine hog-cholera. lung an infectious disease of swine hog-cholera. lung

p. See pleuropneumonia (2d def) mild p., larval p., pestis minor a mild form with buboes, but with little constitutional disturbance. Pahvant Valley p. See tularemia. pneumonic p., an extremely fatal form of plague in which the Valley p. bacilli become lodged in the air-cells of the lungs

and produce inflammation. premonitory p., a mild form which sometimes foreruns the typical endemic variety. reindeer p., an epidemic disease among the reindeer of Lapland, which kills thousands of calves and young animals. cadavers show emphysematous edema. septicemic p. bubonic plague with little or no local manisestation, but with severe constitutional symptoms. Siberian p., anthrax. siderating p., a form, often pneumonic and usually fatal, before buboes appear p.-spot, an ecchymosis seen in some cases of bubonic plague, probably due to the bite of vermin. swine p., an infectious disease of swine occurring sporadically and caused by Bacillus (Pasteurella) pestis. The lesions resemble those of hog-cholera, but show greater tendency to pleuritis and pneumonia tarabagan p. See tarabagania. white p., tuberculosis

Planck's constant (planks) [Max Planck, German physicist, born 1858]. See under constant

plane (plan) [L. pla'nus]. A flat surface. Addison's p's, planes used as landmarks in the topography of the thorax and abdomen Aeby's p., a plane through the nasion and basion, perp., a plane through the haston and baston, per pendicular to the median plane of the cranium. auriculo-infra-orbital p., a plane passing through the auricular points and the lowest points of the orbits axiobuccolingual p., a plane parallel with the bony axis of a tooth and passing through the buccal and lingual surfaces. **axio- labiolingual p.**, a plane parallel with the long axis of a tooth and cutting its labial and lingual surfaces. axiomesiodistal p., a plane parallel with the long axis of a tooth and cutting its mesial and distal surfaces. Baer's p., a plane through the upper border of the zygomatic arches. **Blu**menbach's p., a plane parallel with the base of a skull from which the lower jaw has been removed. datum p., a given horizontal plane from which craniometric measurements are made. Daubenton's p., a plane in which are the opisthion and the lower edges of the orbits. **Hensen's p.**, a plane passing through the center of a series of sarcous elements of a muscle-fibril. Hodge's p., a plane passing through the second sacral vertebra and the upper border of the os pubis, and parallel to the plane of the pelvic inlet horizontal p., a plane passing through a tooth at right angles to its long axis. labiolingual p., a plane parallel with the long axis of a tooth and passing through the labial and lingual surfaces Listing's p., a transverse vertical plane which is perpendicular to the anteroposterior axis of the eye, and which contains the center of motion of the eyes; in it also lie the transverse and vertical axes of voluntary ocular rotation. **Meckel's p.**, a plane passing through the auricular and alveolar points mesiodistal p., the plane of a tooth which passes through its mesial and distal surfaces. Morton's p., a plane through the most projecting points of the parietal and occipital protuberances. nuchal p., the outer surface of the occipital bone between the foramen magnum and the superior curved line. occipital p., the outer surface of the occipital bone above the superior curved line. orbital p. I The orbital surface of the maxilla. 2. The plane that passes through the visual axis of each eye popliteal p., the popliteal space. sagittal p., a plane running in an anteroposterior direction. **sternal p.**, the anterior surface of the sternum. **temporal p.**, the depressed area on the side of the skull below the inferior temporal line. **tentorial p.**, a straight line drawn through the tentorium. **visual p.** Same as *orbital p*. (2d def.).

planimeter (pla-nim'et-er) [L. pla'nus plane + Gr. μέτρον measure]. An instrument used in measuring the area of surfaces.

planithorax (plan-ith-o'rax). A diagram of the front and back of the chest.

plankton (plank'ton) [Gr. πλανκτός wandering]. A collective name for the minute free-floating organisms which live in practically all natural waters.

planocellular (pla-no-sel'u-lar). Made up of flat cells.

Planococcus (pla-no-kok'us) [Gr. πλάνη wandering + κόκκος coccus]. A genus of motile bacteria whose cells divide in two dimensions, as in Micrococcus, but which possess flagella.

planoconcave (pla-no-kon'kāv). Flat on one side and concave on the other. See lens.

planoconvex (pla-no-kon'veks). Flat on one side and convex on the other.

planocyte (pla'no-sit) [Gr. πλάνη wandering + κύτος cell]. A wandering cell.

Planorbis (plan-or'bis). A genus of snails. Several species act as intermediate hosts for Schistosoma mansoni. P. bois'syi, in Egypt. P. guadelupen'sis, in Venezuela P. oliva'ceus, in Brazil.

Planosarcina (pla-no-sar'sin-ah) [Gr. πλάνη wandering + sarcina] A genus of motile bacteria whose cells divide in three dimensions, as in Sarcina, but which have flagella.

planotopokinesia (pla''no-top''o-kin-e'ze-ah) [Gr. πλάνη wandering + τόπος place + κίνησις movement]. Disturbance of the power of geometric orientation.

plants (plan'tah) [L.], pl. plan'tæ [B N A]. The sole of the foot.

Plantago (plan-ta'go). A genus of herbs; plantain. The root and leaves of P. ma'jor are astringent, refrigerant, and diuretic. P. psyllium furnishes psyllium seed. See psyllium

plantain (plan'tan). See Plantago.

plantar (plan'tar) [L. planta'ris]. Pertaining to the sole of the foot.

plantaris (plan-ta'ris) [L.]. See muscles, table of.

plantex (plan'tex). A proprietary cancer remedy.
plantose (plan'tōs) An albumin from rape-seeds.
It is nutritive.

planula (plan'u-lah). The embryo in the stage when it consists of the two primary germ layers (ectoderm and endoderm) only. **invaginate p.**, the gastrula.

planum (pla'num) [L]. A plane, a flat surface. p. nucha'le [B N A], the nuchal plane. p. occipita'le [B N A], the occipital plane. p. orbita'le, the orbital plane. p. poplite'um [B N A], the popliteal space. p. sterna'le [B N A], the anterior surface of the sternum. p. tempora'le [B N A], temporal plane.

planuria (pla-nu're-ah) [Gr. πλανᾶσθαι to wander + οὐρον urine] The voiding of urine from an abnormal place.

plaque (plahk) [Fr.]. 1. Any patch or flat area.
2. A blood-platelet. blood-p. See blood-plates, under plate. gelatinoid p., a gelatinous mass containing bacteria occurring on the teeth mucous p., p. muqueuse, condyloma latum. Redlich-Fisher miliary p's, thickened, dark colored areas in the neuroglia reticulum of the brain, seen in cases of senile psychoses.

Plasencia's bacillus (plas-en'se-ahz) [L. Plasencia, pathologist in Havana, died 1923]. See Bacillus influenzæ motilis.

plasm (plazm). See plasma. germ-p. See germ-plasm.

plasma (plaz'mah) [Gr. πλάσσειν to mold].

1. The fluid portion of the blood, composed of the serum and fibrinogen. 2. The lymph deprived of its corpuscles or cells. 3. A glycerite of starch used in preparing ointments. 4. Cytoplasma or protoplasm. albumose p., bloodplasm extracted after the injection of albumoses. citrated p., blood-plasma treated with sodium citrate, which prevents clotting. p. depletion, plasmapheresis. p. mari'num, sea-water diluted until it is isotonic with the blood-plasma. It has been recommended for use in skin diseases, tuberculosis, etc., by intramuscular injection. muscle-

p., a liquid expressible from muscular tissue. It is sometimes injected subcutaneously as a restora tive and stimulant. oxalate p., blood-plasma to which I per cent. of ammonium oxalate has been added. This prevents clotting. peptone p. Same as albumose p. p. removal. See plasmapheresis. p.-rhexis. See plasmatorrhexis. sait p., blood-plasma to which a neutral salt has been added to prevent clotting.

plasma-activation (plaz"mah-ak-tiv-a'shun). The stimulation of cellular metabolism produced by the successful application of non-specific agents such as the injection of foreign protein, of colloid metals, etc. omnicellular p., plasma-activation affecting all the cells of the body.

plasma-cell. See under cell.

plasmacule (plaz'mak-ūl). Any one of a multitude of minute particles said to exist in the bloodplasma

plasmacyte (plaz'mah-sIt) [plasma + Gr. κυτος cell]. Plasma-cell.

plasmacytosis (plaz"mah-si-to'sis). The presence of plasma-cells in the blood.

Plasmahaut (plaz'mah-howt) [Ger.]. The superficial layer of the protoplasm of a cell.

plasmameba (plaz-mam-e'bah). A sporozoan parasite found in the blood-plasm in dengue and thought to cause that disease.

plasma membrane. See under membrane.

plasmapheresis, plasmaphæresis (plaz-mahfe're-sis) [plasma + Gr. açalpeous removal]. Plasma removal, the removal of considerable quantity of blood, separating the corpuscles by centrifugalization, replacing the plasma by Locke's solution, and reinjecting this, together with the centrifugalized cells, into the body (Abel).

plasmase (plas'mās). Fibrin-ferment. See under ferment.

plasmasome (plaz'mas-ōm) [plasma + Gr. σωμα body]. A leukocyte granule.

plasmatic (plaz-mat'ik). Pertaining to or of the nature of the plasma.

plasmatogamy (plaz-mat-og'am-e) [plasma + Gr. γάμος marriage] Union of cells in which the nucleus of each cell is preserved.

plasmatorrhexis (plaz"mat-o-reks'is) [Gr. $\pi \lambda \dot{\alpha} \sigma \mu \alpha$ anything formed $+ \dot{\rho} \dot{\eta} \dot{\xi} \iota s$ rupture] The bursting of a cell due to the pressure exerted from within.

plasmatosis (plaz-mat-o'sis) The liquefaction of the substance of a cell.

plasmeba (plaz-me'bah). Plasmameba.

plasmic (plaz'mik). Rich in protoplasm.

plasmin (plaz'min). Any one of a series of cell-fluids derived from cultures of various bacilli by trituration with quartz and intense pressure. They are stated to have valuable remedial and immunizing qualities. Denia's p., a substance obtained by treating blood with sodium sulphate and then with sodic chlorid.

plasmochin (plas'mo-kin). A synthetic preparation for the treatment of malaria. Dose,

gr. (0.02 gm.).

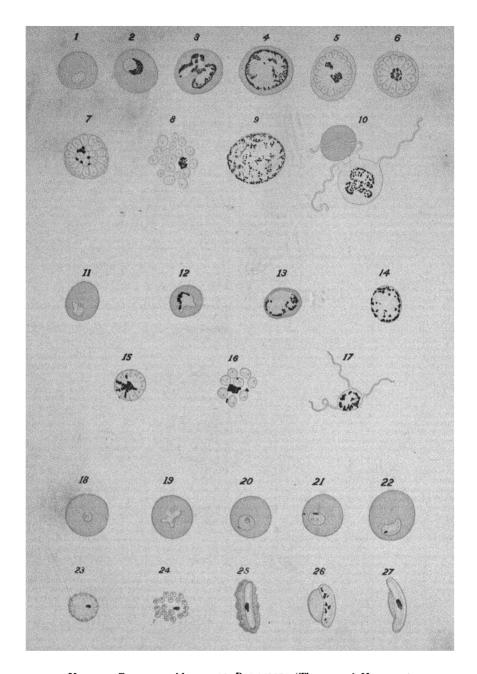

plasmocyte (plaz'mo-sīt) [Gr. πλάσμα plasm + κύτος cell]. A cell-like microorganism of the bloodplasm or blood-cells

plasmocytoma (plaz"mo-si-to'mah). Same as plasmoma, 2d def.

plasmodesma (plaz-mo-dez'mah) [Gr. πλάσμα plasm + δέσμος band]. The protoplasmic material which binds adjacent cells together (Stadnicka).

plasmodia (plaz-mo'de-ah). Plural of plasmodium.
plasmodial (plaz-mo'de-al). Pertaining to a plasmodium.

Plasmodids (plaz-mo'did-e). A family of the Hemasporidia containing three genera: Plasmodium, Hemoproteus, and Proteosoma.

VARIOUS FORMS OF MALARIAL PARASITES (Thayer and Hewetson).

FIGS 1 to 10, inclusive, tertian organisms; FIGS. 11 to 17, inclusive, quartan organisms; FIGS. 18 to 27, inclusive, estivo-autumnal organisms.

FIG 1.—Young hyaline form; 2, hyaline form with beginning pigmentation; 3, pigmented form; 4, full-grown pigmented form; 5, 6, 7, 8, segmenting forms; 9, extracellular pigmented form; 10, flagellate form

FIG. 11.—Young hyaline form; 12, 13, pigmented forms; 14, fully-developed pigmented form; 15, 16, segmenting forms, 17, flagellate form.

Figs. 18, 19, 20.—Ring-like and cross-like hyaline forms; 21, 22, pigmented forms; 23, 24, segmenting forms, 25, 26, 27, crescents.

Plasmodioph'ora bfas'sies. A rhizopod organism which causes a disease of cabbages and tother cruciferous plants, called fingers and toes or stump root.

plasmoditrophoblast (plaz-mo"de-trof'o-blast).
The external layer of the trophoblast, representing the syncytium.

plasmodium (plaz-mo'de-um), pl. plasmo'dia [Gr. πλάσμα plasm + είδος form]. 1. A multinucleate continuous mass of protoplasm. 2. Same as syncytium, placental p. Same as syncytium, 2d def.

Plasmodium (plaz-mo'de-um) [see plasmodium]. A genus of the Plasmodidæ, the malarial parasites. P. bo'vis, a species found in cattle. P. brasilia'num, a species found in monkeys in South America. It is much like *P. malariæ*. **P. ca'nis**, a species found in dogs in India. **P. cynomol'gi**, probably identical with *P. inui* except that Schueffner's dots are present **P. danilews'kyi**, a species found in birds in Italy, India, and Africa. It is of interest because Ross first traced the development in the mosquito with this parasite. P. e'qui, a species found in the horse. P. falcip'arum, the species which causes estivoautumnal malaria in man. It is characterized by the "signet-ring" forms of trophozoites and the "crescent" form of the gametes. P. falcip'arum quotidia/num, the species which causes quotidian estivo-autumnal malaria in man. It produces very minute ring forms of the parasite. Called also P. immaculatum P. in'ui, a species pathogenic for monkeys (Macacus cymologus and M nemestrinus). P. ko'chi, a species pathogenic for chimpanzees and for monkeys. P. kytoplas'tokon, Schiller's supposed protozoan parasite of cancer. P. mala rise, the species which causes quartan malaria in man. It shows the "band-forms" of schizonts and the daisy or marguerite form of the merozoites. The parasite as seen in the blood of man is an irregular mass of protoplasm which may show ameboid activity. It passes part of its life-cycle in the blood of man and part in the body of a mosquito. The cycle of development within the body of the mosquito (sporogony) is as follows: When the mosquito takes blood containing malarial parasites into its stomach the asexual forms (schizonts) are digested and destroyed The sexual forms (the macrogametodestroyed The sexual forms (the macrogameto-cytes and the microgametocytes or crescents) undergo maturation processes and thus become macrogametes and microgametes (flagella). Fer-tilization is accomplished by the latter penetrating and fusing with the former, thus producing a zygote. This elongates and becomes a motile ookinete, penetrates the stomach wall, and encysts (oocyst) and grows into a sporont, which later subdivides into sporoblasts which escape into the body cavity as sporozoites, wander to the salivary glands, and wait for transfer to man. The cycle of development in man (schizogony) is as follows: A sporozoite which is a long slender spindle-shaped organism is introduced by the bite of a mosquito, attaches itself to a red blood-corpuscle, changes its shape to a ring form, thus becoming a trophozoite, and grows rapidly. It develops at the expense of the corpuscle until at maturity as a schizont it nearly fills the corpuecle. It then divides into merozoites which escape into the plasma, enter other red cells, and repeat the cycle. Some merozoites which enter ted cells develop into sexual forms which later become free in the blood-stream as gametes and await transfer to a mosquito. P. ova'le, probably the same as P. vivax minula. P. pith'eci, a species found in the ourang-utang and in chimpanzees. It resembles P. vivax except that man is not susceptible. P. pleurodyn'im, a name given to certain inclusion bodies found in the red blood-cells in cases of epidemic diaphrag-matic pleurodynia. P. præ'éox, the parasite causing malaria of birds. P. richéno'wi, a species found in anthropoid apes. P. ten'ue, a species from cases of malaria in India distinguished by its tenuity and ameboid activity. P. vas'sali, a species found in the squirrel. P. vi'vax, the species which causes the tertian form of malaria in the patient and Schueffner's dots in a parasitized red blood-cell. P. vi'vax minu'ta differs from P. vivax in being smaller and in having only four to ten merozoites.

plasmogamy (plaz-mog'am-e) [Gr. πλάσμα plasm + γάμος marriage]. Cytoplasmic fusion of cells.

plasmogen (plaz'mo-jen) [Gr. πλάσμα plasm + γεννᾶν to produce]. The essential part of protoplasm; bioplasm.

plasmology (plaz-mol'o-je) [Gr. πλάσμα plasm + λόγος treatise]. The study of the most minute particles or ultimate corpuscles of living matter.

plasmolysis (plaz-mol'is-is) [Gr. πλάσμα plasm + λόσις solution]. Contraction or shrinking of the protoplasm of a cell due to the loss of water by osmotic action.

plasmolytic (plaz-mo-lit'ik). Tending toward, pertaining to, or characterized by, plasmolysis.

plasmolyzability (plaz-mo-li-zab-il'it-e). The power of undergoing plasmolysis.

plasmolyzable (plas-mo-li'zab-l). Capable of undergoing plasmolysis.

plasmolyze (plaz'mo-līz). To subject to plasmolysis.

plasmoma (plaz-mo'mah). 1. A mass of plasm-cells resembling a tumor. 2. A myoma made up of plasma cells.

plasmon (plaz'mon). A flour-like food material made from skimmed milk, and consisting of the protein of milk. p. butter, a mixture of plasmon, butter, water, and salt.

plasmoptysis (plaz-mop'tis-is) [Gr. πλάσμα plasm + πτὖειν to spit]. Ejection of protoplasm from a cell through bursting of the cell-wall.

plasmorrhexis (plaz-mor-eks'is) [Gr. πλάσμα plasm + ρηξι splitting]. Same as erythrocytorrhexis.

plasmoschisis (plaz-mos'kis-is) [Gr. πλάσμα plasm + σχίσις fission]. The splitting up of cell-plasm.

plasmosome (plaz'mo-sōm) [Gr. $\pi\lambda$ άσμα something formed $+\sigma$ ωμα body]. τ. The true nucleolus of a cell (Ogata, 1883). 2. Same as Aliman's granules. See under granule

plasmosphere (plaz'mo-sfēr) Same as perisphere.
plasmotomy (plaz-mot'o-me) [Gr. πλάσμα plasm+
τομή to cut]. Reproduction by the separation
from the mother-cell of smaller masses of protoplasm, each containing several nuclei.

plasmotropic (plaz-mo-trop'ik). Pertaining to or causing plasmotropism.

plasmotropism (plaz-mot'ro-pizm) [Gr. $\pi\lambda$ άσμα plasm + $\tau\rho$ όπειν to turn]. Solution or destruction of erythrocytes in the liver, spleen, or marrow, as contrasted with their destruction in the circulation.

plasmozyme (plaz'mo-zīm) [plasma + Gr. ζύμη leaven]. Same as thrombogen.

plasome (plaz'ōm) [Gr. πλάσσειν to form]. The hypothetic unit of living protoplasm. See micelle.

plasson (plas'on) [Gr. πλάσσων forming]. The protoplasm of a cytode, or non-nucleated cell.

-plast [Gr. πλαστός formed]. A suffix denoting any primitive living cell, as, bio plast.

plastein (plas'te-in). An insoluble substance formed by the action of trypsin, pepsin, and autolytic enzymes on proteose solution.

plaster (plas'ter) [L. emplas'trum]. A tenacious preparation for spreading upon the surface of the body. The chief plasters are named from their principal ingredients; as, aconite plaster, ammoniac plaster, arnica plaster, belladonna plaster, capsicum plaster, iron plaster, soap plaster, etc. adhesive p. See rosin p antiseptic p., ordinary adhesive plaster dipped in a hot solution of carbolic acid. p. bandage, a bandage impreg-

fragments of a fractured bone. lateral mesoblastic p., the thickened portion on either side of the mesoblast. medullary p., neural , the plate of epiblast in the embryo that becomes developed into the neural canal. mesial p., the thickening of the mesoblast along each side of the notochord, forming two layers. motorial p. Same as end p. neural p., the thickened plate of ectoderm in the embryo from which the neural tube develops. notochordal p. See head process, under process. oral p., the area in the embryo which is later replaced by the opening between the mouth and the pharynx. or-bital p. r. The process of the frontal bone that forms the roof of the orbit. 2. The plate of the ethmoid bone that forms the greater part of the inner wall of the orbit. 3. The orbital process of the superior maxillary bone. palate p., that part of the palate bone which forms a lateral half of the roof of the mouth. parietal p., the outer layer of the mesial plate Petri p., a Petri dish containing a nutrient medium ready for inoculation with the organism polar p's, pole p's, plate-like bodies at the end of the spindle in certain forms of mitosis. reticular p., a form of nerveending in the ciliary body consisting of very fine reticulations of granular nerve-fiber. **roof** p. See dorsal p. segmental p., a plate of mesoblast on either side of the notochord at the posterior end of the embryo From it the mesoblastic segments are formed. spiral p., the lamina spiralis spring p., a dental plate held in place by the elasticity of the material which abuts against natural teeth **streak p.**, a plate of some culture-medium which has been poured, allowed to solidify, and then has had the infectious material smeared over its surface, usually in parallel streaks **subgerminal p.**, a sheet of protoplasm forming the floor of the segmentation cavity of the ovum. suction p., a dental plate held in place in the mouth by atmospheric pressure. tarsal p., the quasicartilaginous substance which gives firmness to an eyelid. terminal p. See lamina terminalis. trial-p., in dentistry, a thin sheet of soft metal, wax, or other substance fitted to a model and used for the temporary support of artificial teeth while they are being adjusted in the mouth. tympanic p., a bony plate which forms the floor and sides of the meatus auditorius **ventral p**., the unpaired ventral longitudinal zone of the neural tube forming the floor of that tube. Called also floor plate and Bodenplatte. ventrolateral p., either one of a pair of ventrolateral longitudinal zones of the neural tube. From them are developed the ventral gray column of the spinal cord and the motor centers of the brain. Called also basal p. and hypencephalic region. visceral p., the inner layer of the mesial plate. wing p. See dorsolateral p.

plateau (plat-o'). An elevated and level area of land, any elevated area with a flat surface. ventricular p., a level part of the intraventricular curve of blood-pressure corresponding to the contraction of the ventricle.

platelet (plāt'let). Same as blood-plate. See plate.
platiculture (plat'e-kul-chūr). Same as plate-culture.

plating (pla'ting).
1. The act of applying bacterial culture-media to glass plates; the cultivation of bacteria on plates.
2. The application of plates to fractured bones for the purpose of holding the fragments in place.

platinic (plat-in'ik). Containing platinum in its higher valency.

platinode (plat'in-ōd) [platinum + Gr. ôδόs way].
The collecting plate of an electric battery.

platinogold (plat'in-o-gold). Gold-plated platinum foil: used for dental fillings.

platinous (plat'in-us). Containing platinum in its lower valency.

platinum (plat'in-um) [L.]. A heavy, soft, whitish metal, resembling tin: symbol, Pt; atomic weight, 195.2; specific gravity, 21.5. It also occurs as a black powder (p. black) and as a spongy substance (spongy p.). Metallic platinum is insoluble except in nitrohydrochloric acid, and is fusible only at very high temperatures; it is therefore used in the manufacture of chemic apparatus. Platinum black and spongy platinum have a strong affinity for oxygen, and act as powerful oxidizing and calalytic agents. p. chlorid, platinic tetrachlorid, a poisonous substance, PCl4.5H₂O. used as a chemic reagent and in syphilis. Dose, ½ ½ gr. (0 008-0.033 gm.).

Platner's bile. See under bile. **platoscope** (plat'o-skōp). An instrument for viewing plane pictures so as to secure a plastic appear-

Plat'oum sterco'reum. See Chlamydophrys. **platy-** [Gr. $\pi\lambda\alpha\tau\dot{\nu}s$ broad]. A prefix signifying

broad. **platycolous** (plat-is-e'lus) [Gr. $\pi \lambda a \tau \dot{\nu} s$ wide $+ \kappa o \hat{\iota} \lambda o s$ hollow]. Having vertebræ flat in front, or cephalad, and concave caudad

platycephalic, platycephalous (plat-e-sef-al'ik, plat-e-sef'al-us) [Gr. $\pi \lambda \alpha \tau \dot{\nu}$ s wide $+ \kappa \epsilon \varphi \alpha \lambda \dot{\eta}$ head]. Wide-headed; having a breadth-height index of less than 70.

platycephaly (plat-e-sef'al-e). The state of being platycephalic.

platycnemia, platycnemism (plat-ik-ne'me-ah, plat-ik-ne'mizm). Flatness laterally of the upper part of the tibia.

platycnemic (plat-ik-ne'mik) [Gr. πλατύs wide + κνήμη knee] Having the upper part of the tibia flattened laterally.

platycoria (plat-ik-o're-ah) [Gr. πλατύs broad + κόρη pupil]. A dilated condition of the pupil.

platycrania (plat-ik-ra'ne-ah) [Gr. πλατύs wide + κρανίον skull]. Artificial flattening of the skull.

platycyte (plat'is-it) [Gr. πλατύς broad + κύτος cell]. A variety of epithelioid cell found in tubercle nodules, intermediate between a leukocyte and a giant-cell.

platyglossal (plat-e-glos'al) [Gr. πλατύς broad + γλῶσσα tongue] Having a broad, flat tongue.

platyhelminth (plat-e-hel'minth). One of the platyhelminthes.

Platyhelminthes (plat"e-hel-min'thēz) [Gr. πλατύς flat + ἔλμινς worm]. The order of flatworms. It includes the Turbellaria, Nemertea, Trematoda, Cestodaria, and Cestoda

platyhieric (plat"e-hi-er'ik) [Gr. πλατύς broad + lερόν sacrum]. Having a wide sacrum; having a sacral index exceeding 100.

platymeric (plat-im-e'rik) [Gr. πλατύs wide + μῆρος thigh]. Having a broad femur.

platymyoid (plat-im-i'oid) [Gr $\pi \lambda \alpha \tau \dot{\nu}$ s wide $+ \mu \hat{\nu}$ s muscle]. Applied to muscle-cells in which the contractile stratum forms an even lamina.

platyopia (plat-e-o'pe-ah) [Gr. πλατύς broad + ωψ face]. Broadness across the face.

platypellic (plat-e-pel'ik) [Gr. πλατύς wide + πέλλα pelvis]. Having a wide pelvis, i e., a pelvic index below 90.

platypodia (plat-e-po'de-ah) [Gr. πλατύς wide + πούς foot]. Abnormal flatness of the foot.

platyrrhine (plat'ir-in) [Gr. $\pi \lambda \alpha \tau \dot{\nu}$ s wide $+ \dot{\rho}$ is nose]. Having a broad nose; having a nasal index exceeding $51\frac{1}{58}$.

platysma myoides (pla-tiz'mah mi-oi'dēz) [Gr. $\pi \lambda \acute{a} r v \sigma \mu a$ plate $+ \mu \widetilde{v}$ s muscle $+ \epsilon l \delta os$ form]. A superficial muscle of the neck, representing the panniculus carnosus of certain of the lower animals. See muscles, table of.

platysmal (pla-tiz'mal). Pertaining to the platysma myoides muscle.

nated with plaster of Paris. belladonna p., a plaster made of extract of belladonna leaves 30 parts, and adhesive plaster 70 parts: used as an anodyne application. **blistering-p.**, the cerate cantharides p., of cantharides. emplastrum cantharidis; cantharides cerate spread upon rosin capcine p., a proprietary capsicum capsicum p., a rubefacient plaster plaster. plaster. made of oleoresin of capsicum and rubber plaster. court-p., chalybeate p., iron-plaster. court-plaster of isinglass on silk. diachylon p. as lead-p. **Drouot's p.**, a mixture of cantharides, mezereon, and resin. **elastic p.** See rubber p. iron-p., a plaster made of ferric hydrate, olive oil, Burgundy pitch, and lead-plaster. It is a gentle stimulant in affections of the muscles and joints Called also strengtha plaster made of ferric ening p. p. jacket, a thoracic or trunk bandage stiffened with plaster of Paris. lead-p., emplastrum plumbi; a plaster containing lead ovid, olive oil, lard, and water triturated and beiled. It is used for applying to clight wounds boiled. It is used for applying to slight wounds and bruises and in the preparation of other plas-Called also diachylon p. litharge p. Same as lead-p. mercurial p., a plaster containing mercury, oleate of mercury, hydrous woolfat, and lead-plaster used in treating gumma. mull, a piece of mull or muslin treated with medicated gutta-percha: used in skin diseases. mustard-p., emplastrum sinapis, a mixture of powdered black mustard and a solution of rubber, spread on cotton cloth or other fabric. opium p., a plaster containing extract of opium, water, and adhesive plaster: used as an anodyne application. p. of Paris, calcined gypsum, or calcium sulphate: used in making stiff bandages or casts (p. bandage, p. splints, p. jackets) for deformities and fractures. pitch p., a rubefacient plaster made of Burgundy pitch, frankincense, resin, yellow wax, oil of nutmeg, olive oil, and water. **porous p.**, a form of manufactured plaster spread upon muslin pierced with holes. **rosin p.**, a plaster containing rosin, 140 gm.; lead plaster, 800 gm.; yellow wax, 60 gm.; called also emplastrum resinæ, rosin adhesive plaster, and adhesive plaster rubber p., emplastrum elasticum; a mixture of rubber, resins, and waxes with an absorbent powder, such as starch, spread on cotton cloth or other fabric. soap p., a discutient plaster made of dried soap and lead-plaster. spice-p., a plaster containing yellow wax, turpentine, suet, benzoin, olibanum, and the oils of peppermint, nutmeg, and cloves: employed to allay abdominal pains in children. strengthening p. Same as iron-p. Vigo's p., a plaster containing lead-plaster, rosin, yellow wax, olibanum, ammoniac, myrrh, bedellium, saffron, mercury, turpentine, liquid storax, and oil of lavender. warming p., plaster of pitch and canthar-Z. O. p., rubber plaster to which zinc oxid has been added.

plastic (plas'tik) [L. plas'ticus; Gr. πλαστικόs].
 Tending to build up tissues or to restore a lost part.
 plasticity (plas-tis'it-e). The quality of being plastic.

plastics (plas'tiks). 1. Plastic surgery. 2. Plastic materials used in dentistry.

plastid (plas'tid) [Gr. πλάστις formed]. 1. Any elementary constructive unit, as a cell. 2. Any specialized organ of the cell other than the nucleus and centrosome, such as chloroplast or amyloplast. red p., a non-nucleated mammalian adult red blood-corpuscle.

plastidogenetic (plas-tid"o-jen-et'ik). Producing plastids or cells.

plastidule (plas'tid-ūl). The minutest unit of living protoplasm.

plastin (plas'tin). 1. Same as linin. 2. Same as hydloplasm.

plastiosome (plas'te-o-sōm). See mitochondria.
plastochondria (plas-to-kon'dre-ah). Mitochondria.

plastocont (plas'to-kont). Same as chondriocont.
 plastocyte (plas'to-sit) [Gr. πλαστός formed + κύτος cell]. A blood-plate.

plastocytopenia, plastocytopenia (plas"tosi-to-pe'ne-ah) [plastocyte + Gr. πενία poverty]. Decrease in the number of blood-plates below normal.

plastocytosis (plas"to-si-to'sis). Abnormal increase in the number of blood-plates.

plastodynamia (plas"to-di-na'me-ah) [Gr. πλαστός formed + δύναμις power]. Power or ability to develop.

plastogamy (plas-tog'am-e) [Gr. $\pi\lambda\alpha\sigma\tau\dot{o}s$ formed matter + $\gamma\dot{a}\mu os$ marriage]. Conjugation in protozoa, in which the protoplasm of two or more individuals undergoes amalgamation, the nuclei remaining separate. See karyogamy and plasmalogamy.

plastomere (plas'to-mēr). Same as cytomere.

plastosome (plas'to-sōm) [Gr. πλαστός formed + σῶμα body]. One of the stainable granules or threads of the protoplasm. See chondriosome.

plastron (plas'tron). The sternum and costal cartilages.

plate (plāt) [Gr. $\pi \lambda \dot{\alpha} \tau \eta$]. 1. A flattened surface, especially of bone; any flat structure or layer, a lamina. 2. In dentistry, a thin piece of rubber, metal, or other substance for holding false teeth, an artificial denture. alar p. See dorsolateral p anal p., the membrane which closes the anus in the embryo. **approximation p.**, a disk of bone or other material used in intestinal surgery auditory p., the bony roof of the auditory meatus. axial p., the primitive streak of the embryo. basal p. See ventrolateral p. blood-p's, circular or oval disks, from two to three microns in diameter, forming one of the constituents of the blood. They are believed to assist in producing coagulation. Called also hematoblasts, thrombocytes, and blood-platelets bone p., an approximation plate of bone cell p. Same as midbody clinoid p., the portion of the sphenoid bone behind the sella turcica. collecting p., the electronegative element of a galvanic battery, the plate where the hydronomy department of the plate where the hydronomy department. gen and other decomposition products collect. cribriform p., the horizontal plate of the ethmoid bone perforated with foramina which give passage to the filaments of the olfactory nerve from the cranial to the nasal cavity. p.-culture, a bacterial culture in agar or gelatin on a glass plate. cutis p., that part of the somite in which the dermatome develops. deck-p., that fetal structure which produces the pineal organ, the choroid plexus, and the tela choroidea. It is in the median line of the thalamencephalon **dental p.**, a plate of hard rubber, metal, or other material, fitted to the shape of the roof of the mouth, and serving for the support of false teeth. dorsal p., the dorsal longitudinal epithelial zone of the neural tube. called also roof p. and Deckplatte. dorsolateral p., either of the pair of dorsolateral longitudinal zones of the neural tube. From it are developed the dorsal gray columns of the spinal cord and the sensory centers of the brain. Called also alar plate, wing plate, epencephalic region, and Flugel-plate. end-p., the discoid terminal expansion of a motor nerve-branch. epithelial p. See lamina epithelialis. equatorial p., the plate-like collection of chromosomes at the equator of the spindle in karyokinesis. ethmovomerine p., the central part of the ethmoid bone in the fetus. floor-p., the plate that forms the floor of the primitive neural canal of the embryo. See ventral p. foot-p., the flat portion of the stapes. frontal p., a fetal plate of cartilage between the sides of the ethmoid cartilage and the sphenoid bone. frontonasal p., a fetal plate whence the external nose is developed. generating p., the electropositive element of a galvanic battery. gray p. Same as lamina cinerea. Lane p's, steel plates with holes for screws: used in fixing the

- platystaphyline (plat-e-staf'el-in) [Gr. πλάτις broad + σταφυλή palate]. Having a broad, flat palate.
- platystencephalia, platystencephalism, platystencephaly (plat"is-ten-se-fa'le-ah, plat"is-ten-sef'al-izm, plat"is-ten-sef'al-e) [Gr. πλατυστός widest + ἐγκέφαλος brain]. A form of dolichocephalism in which the occiput is very wide and pentagonal, the jaws prognathic: observed among South Africans.
- platystencephalic (plat"is-ten-sef-al'ik). Noting a form of skull observed chiefly in South Africa; dolichocephalus, but broadened toward the occiput, and with jaws of a prognathic type.
- platytrope (plat'et-rop) [Gr. $\pi\lambda\alpha\tau\nu$ s broad + $\tau\rho\dot{\epsilon}\pi\epsilon\nu$ to turn]. Either of two symmetric parts on opposite sides of the body; a lateral homologue.
- Playfair's treatment (pla'farz) [William Smoult Playfair, British physician, 1836-1903]. See under treatment.
- Plectrantus (plek-tran'tus). See patarchur.
- Plectridium (plek-trid'e-um) [dim. of Gr. πληκτρον hammer]. A genus proposed by A. Fisher for the petrichious forms of motile bacilli.
- **plectron**, **plektron** (plek'tron)[Gr. $\pi \lambda \hat{\eta} \kappa \tau \rho \rho \nu$ hammer]. The hammer form assumed by certain bacilli during sporulation.
- plectrum (plek'trum) [L. from Gr. πλῆκτρον hammer] 1. The uvula. 2. The malleus. 3. The styloid process of the temporal bone.
- **pledget** (pled'jet). A small compress or tuft, as of wool or lint.
- **plegaphonia** (pleg-af-o'ne-ah) [Gr. $\pi\lambda\eta\gamma\dot{\eta}$ stroke + aphonia]. Auscultation of the chest during percussion over the larynx or trachea in cases in which the patient cannot or is not allowed to speak. The vibrations produced by the percussion take the place of those of the vocal cords.
- Plehn's granules (planz) [Albert Plehn, German physician, born 1861]. See under granule.
- pleiades (pli'ad-ēz) [A collection of stars in the constellation Taurus]. A mass of enlarged lymphatic nodes.
- pleiapyrin (pli-ap-i'rin). A condensation product of benzamid and phenyl dimethylpyrazolon. An antipyretic and analgesic in doses of 15 gr. (1 gm.).
- **pleiochromia** (pli-o-kro'me-ah) [Gr. πλείων more + χρωμα color]. Increased coloration; especially increased secretion of bile-pigments.
- plejapyrin (plej-ap-i'rin). A colorless, odorless powder, a condensation-product of benzamid and antipyrin, used in migraine. Dose, 15 gr. (1 gm.).
- pleochroic (ple-o-kro'ik) [Gr. πλέων more + χρόα color]. Same as pleochromatic.
- **pleochroism** (ple-ok'ro-izm). The condition of being pleochroic.
- pleochromatic (ple"o-kro-mat'ik) [Gr. πλέων more + χρωμα color]. Exhibiting different colors under different circumstances.
- pleochromatism (ple-o-kro'mat-izm) [Gr. πλέων more $+ \chi \rho \hat{\omega} \mu a$ color]. The property possessed by some crystals of transmitting one color in one position and the complementary color in a position at right angles to the first.
- pleocytosis (ple"o-si-to'sis). Increase of lymphocytes in the cerebrospinal fluid, as in syphilitic disease of the central nervous system.
- pleomastia, pleomazia (ple-o-mas'te-ah, ple-o-ma'ze-ah) [Gr. πλέων more + μαστός or μαζός, breast]. The condition of having several breasts or nipples.
- pleomastic (ple-o-mas'tik) [pleomastia]. Having several breasts.
- pleomorphic, pleomorphous (ple-o-mor'fik, ple-o-mor'fus) [Gr. πλέων more + μορφή form]. Occurring in various distinct forms.

- pleomorphism (ple-o-morfizm). The assumption of various distinct forms by a single organism or species; also the property of crystallizing in two or more forms.
- pleonasm (ple'o-nazm) [Gr. πλεονασμός exaggeration]. An excess in the number of parts.
- pieonectic (ple'o-nek-tik) [Gr. πλεονεξία greediness]. Taking up more than the average amount of oxygen: a term applied to blood which will take up more than 79 per cent. of oxygen. Cf. mesectic.
- pleonexia (ple-o-nek'se-ah) [Gr. πλέων more + ξχειν to have]. Morbid desire for acquisition; morbid greediness.
- pleonosteosis (ple"on-os-te-o'sis) [Gr. πλέων more + δυτέον bone]. Abnormally increased ossification; premature and excessive ossification.
- plerocercoid (ple-ro-ser'koid). The completed larval stage of the tapeworm attained in the muscles of a fish. When eaten it develops into the adult form.
- plesiomorphism (ple-se-o-mor'fizm). Similarity
 in form.
- plesiomorphous (ple"se-o-mor'fus) [Gr. πλησlos near + μορφή form]. Of like or similar form.
- plessesthesia (ples-es-the'ze-ah) [Gr. πλήσσειν to strike + αισθησις feeling]. Palpatory percussion; percussion with one hand against a palpating finger of the other hand.
- **plessigraph** (ples'ig-raf) [Gr. πλήσσειν to strike + γράφειν to write]. A form of pleximeter designed to enable the user to mark out the limits of an area.
- plessimeter (ples-im'e-ter). Same as pleximeter.
 plessimetric (ples-im-et'rik). Pertaining to or
 performed by a pleximeter.
- plessor (ples'ot). Same as plexor.
- plethora (pleth'o-rah, pleth-o'rah) [L.; Gr. πληθωρη fulness]. A condition marked by vascular turgescence, excess of blood, and fulness of pulse. It is attended with a feeling of tension in the head, a florid complexion, and a liability to nosebleed. p. apocop'tica, plethora following amputation in which there is little loss of blood. p. hydræ'mica, increase in amount of blood due to increase in the watery element alone.
- **plethoric** (pleth-or'ik, pleth'or-ik). Characterized by plethora.
- plethysmogram (ple-thiz'mo-gram). A tracing made by the plethysmograph.
- plethysmograph (ple-thiz'mo-graf) [Gr. $\pi\lambda\eta\theta\nu\sigma\mu\delta s$ increase + $\gamma\rho\delta\omega\epsilon\nu\nu$ to record]. An instrument for recording variations in the size of parts and in the blood-supply. **finger p.**, a plethysmograph which registers the change in volume taking place in a single finger. **Franck's p.**, a plethysmograph consisting of an upright glass jar into which the hand and wrist are inserted. **Mosso's p.**, a plethysmograph consisting of a glass tube filled with warm water into which the hand and forearm are placed. The changes in the water level, caused by the changes in volume of the limb, are graphically recorded.
- plethysmography (pleth-iz-mog'raf-e). The recording of the changes in the size of a part as modified by the circulation of the blood in it.
- pleurs (plu'rah), pl. pleu'ra [Gr. πλευρά rib]. The serous membrane that invests the lungs (pulmomonary p., visceral p.), lines the thorax (parietal p., costal p.), and is reflected upon the diaphragm (diaphragmatic p.). There are two pleura, right and left, entirely shut off from each other. The pleura is moistened with a serous secretion which facilitates the movements of the lungs in the chest. cervical p., the pleura that comes up into the root of the neck. mediastinal p., a continuation of the costal pleura covering the side of the mediastinum. perioardial p., that part of the pleura which is fused with the pericardium.

pleuracentesis (plu"rah-sen-te'sis). Same as pleurocentesis.

pleural (plu'ral). Pertaining to the pleura.

pleuralgia (plu-ral'je-ah) [Gr. πλευρά rib + ἄλγος pain]. Pain in the pleura, or in the side.

pleuralgic (plu-ral'jik). Pertaining to or affected with pleuralgia.

pleurapophysis (plu-rap-of'is-is) [Gr. πλευρά rib + apophysis]. A rib, or its homologue.

pleurectomy (plu-rek'to-me) [pleura + Gr. ἐκτομή excision]. Excision of a portion of the pleura.

See Fowler's operation, under operation.

pleurisy (plu'ris-e) [Gr. πλευρῖτις]. A disease marked by inflammation of the pleura, with exudation into its cavity and upon its surface. It may occur as either an acute or a chronic process. In acute pleurisy the pleura first becomes red-dened, and a soft, gray lymph exudes. This is the dry stage. The disease may stop here, or may progress to the second stage, in which a copious exudation of serum occurs (stage of liquid effusion). The inflamed surfaces of the pleura tend to become united by adhesions, which are usually permanent. The symptoms are a stitch in the side, a chill, followed by fever and a dry cough. As effusion occurs there is an onset of dyspnea and a diminution of pain. The patient lies on the affected side. Physical signs: First stage, impaired chest movement, feeble respira-tion, and friction-sound; second stage, dulness on percussion over the fluid, the area of dulness changing with changes of position; effacement of intercostal depressions. No sounds pass through the fluid to the ear when the patient coughs or speaks. Above the liquid increased percussion resonance and a friction-sound are noticed. This disease is differentiated from pneumonia by the less marked dulness, the crepitant râle, the blowing respiration, the thoracic voice, and increased vocal fremitus of the latter disease. acute p., a form marked by sharp, stabbing pain, fever, friction fremitus, and to-and-fro friction-sounds. adhesive p., dry pleurisy. blocked p., pleurisy in which the exudate is imprisoned in a pocket so that it cannot be aspirated. **chronic** p., a dry sero-fibrinous, or purulent form, which is long con-tinued. **chyliform** p., a form in which the effused fluid has a milky appearance. **circum** scribed p., pleurisy in which the inflammation is limited to a portion of the pleura. costal p., inflammation of the pleura which lines the walls of the thorax. diaphragmatic p., a variety limited to parts near the diaphragm. diffuse p., pleurisy in which the inflammation involves the entire surface of the pleura. double p., that form in which both pleuræ are involved. dry p., a variety with comparatively dry fibrinous exudate, usually chronic. encysted p., a form with adhesions which circumscribe the effused material. fibrinous p., the dry and plastic varieties. hemorrhagie p., a variety in which there is a bloody exudate. humid p., bronchitis. ichorous p., empyema with a thin, offensive pus. indurative p., pleurisy marked by thickening and hardening of the pleure, introduction of the pleura. interlobular p., a variety inclosed between the lobules of the lung. latent p., a form attended with but little pain or inconvenience. mediastinal p., a variety that affects the pleural folds about the mediastinum. metapneumonic p., pleurisy characterized by a thick pus and the presence of the pneumonia diplococcus. plastic p., a form characterized by the deposition of a soft, semisolid exudate in a layer. primary p., a form not consequent upon pneumonia or any other disease; generally due to injury or exposure. pulmonary p., inflammation of the pleura which covers the lungs. pulsating p., a form in which the heart's action conveys a perceptible throbbing to the effused fluid purulent p. Same as empyema. secondary p., any pleurisy consequent upon an attack of some other

disease. serofibrinous p., one with a watery exudate which contains flocculi, some fibrin being also deposited. serous p., a form characterized by free exudation of serum. suppurative p., empyema. typhoid p., pleurisy with symptoms of severe prostration. visceral p. Same as pulmonary p. wet p., pleurisy with effusion. p. with effusion, pleurisy marked by serous exudation.

pleurisy-root (plu'ris-e-root). See Asclepias.

pleuritic (plu-rit'ik). Pertaining to or of the nature of pleurisy.

pleuritis (plu-ri'tis). Same as pleurisy.

pleuritogenous (plu-rit-oj'en-us). Causing pleu-

pleurobronchitis (plu"ro-brong-ki'tis). Pleuriev and bronchitis combined.

pleurocele (plu'ro-sēl) [Gr πλευρά rib + κήλη hernia]. Hernia of lung tissue or of pleura.

pleurocentesis (plu"ro-sen-te'sis) [Gr. πλευρά rib + κέντεσις puncture]. Puncture of the pleura; paracentesis of the chest.

pleurocentrum (plu-ro-sen'trum) [Gr. πλευρά side + κέντρον center]. The lateral element of the vertebral column.

pleurocholecystitis (plu"ro-ko-le-sis-ti'tis) [Gr. πλευρά pleura + cholecystitis]. Inflammation of the pleura and the gall-bladder.

pleuroclysis (plu-rok'lis-is) [Gr. πλευρά side + κλύσις washing]. Injection of fluids into the pleural cavity.

pleurocutaneous (plu"ro-ku-ta'ne-us). Pertaining to the pleura and the skin.

pleurodynia (plu-ro-din'e-ah) [Gr. πλευρά rib + δδύνη pain]. Paroxysmal pain in the intercostal muscles. It is a form of muscular rheumatism. epidemic diaphragmatic p., an epidemic disease marked by a sudden attack of pain in the chest or epigastrium, fever of brief duration, and a tendency to recrudescence on the third day; called also devil's grip.

pleurogenic, pleurogenous (plu-ro-jen'ik, plu-roj'en-us) [Gr. πλευρά rib + γεννῶν to produce]. Originating in the pleura.

pleurohepatitis (plu"ro-hep-at-i'tis) [Gr. πλευρά side + ήπαρ liver + -ιτις inflammation]. Hepatitis with inflammation of a portion of the pleura near the liver.

pleurolith (plu'ro-lith) [pleura + Gr. λlθos stone].
A concretion found in the pleura.

pleurolysis (plu-rol'is-is) [pleura + Gr. λύσις loosening]. Same as pneumolysis.

pleuroparietopexy (plu"ro-pa-ri'et-o-pek-se) [pleura + parietal + Gr. $\pi \hat{\eta} \xi_{15}$ fixation]. The operation of fixing the visceral pleura to the parietal pleura, thus binding the lung to the chest wall.

pleuropericarditis (plu"ro-per-e-kar-di'tis). Combined pleuritis and pericarditis.

pleuroperitoneal (plu'ro-per-it-o-ne'al). taining to both the pleura and the peritoneum.

pleuroperitoneum (plu"ro-per-it-o-ne'um). pleura and peritoneum considered as one struc-

pleuropneumonia (plu"ro-nu-mo'ne-ah). 1. Pleurisy complicated with pneumonia. 2. A contagious or infectious pneumonia of cattle, combined with pleurisy, caused by a filtrable virus. Called also pleuropneumonia contagiosa bovum and lung plague.

Pleuropneumonolysis (plu"ro-nu"mo-nol'is-is)
[Gr. πλευρά pleura + πνεῦμων lung + λύσιs destruction]. Removal of the ribs from one side in order to produce collapse of the affected lung for unilateral tuberculosis.

pleuropulmonary (plu-ro-pul'mo-na-re). Pertaining to the pleura and lungs.

pleurorrhea (plu-ro-re'ah) [Gr. πλευρά rib + ροία flow]. A pleural or pleuritic effusion.

924

pleuroscopy (plu-ros'ko-pe) [Gr. pleura + Gr σκοπείν to examine]. Examination of the pleural cavity through an incision in the chest wall.

pleurosoma (plu-ro-so'mah). Pleurosomus.

pleurosomus (plu-ro-so'mus) [Gr. πλευρά side + σωμα body]. A fetus with protrusion of the intestine and imperfect development of the arm of one side.

pleurothotonus (plu-ro-thot'o-nos) [Gr. $\pi \lambda \epsilon \nu \rho \delta - \theta \epsilon \nu$ from the side $+ \tau \delta \nu \sigma s$ tension]. Tetanic $\theta \epsilon \nu$ from the side + $\tau \delta \nu o s$ tension]. bending of the body to one side.

pleurotomy (plu-rot'o-me) [Gr. πλευρά rib + τέμνειν to cut]. Surgical incision of the pleura.

pleurotyphoid (plu-ro ti'foid). Acute pleurisy followed by and complicated with typhoid fever.

pleurovisceral (plu-ro-vis'er-al). Pertaining to the pleura and the viscera.

plevacol (plev'ak-ol). A combination of tricresol, formaldehyd, and aminobenzoyl eugenol. used for filling dental roots and capping amputated pulp.

plexal (pleks'al). Pertaining to a plexus.

plexalgia (pleks-al'je-ah) [Gr. πληξις stroke + ἄλγος pain]. A condition seen in troops after long exposure. It is marked by pains in various parts of the body, fatigue, excitability, and insom-

plexiform (pleks'if-orm) [L. plex'us plait + for'ma form]. Resembling a plexus or network.

pleximeter (pleks-im'et-er) [Gr. πληξις stroke + μέτρον measure]. 1. A plate to be struck in mediate percussion. 2. A glass plate used to show the condition of the skin under pressure.

pleximetric (pleks-im-et'rik). Pertaining to or performed by a pleximeter.

pleximetry (pleks-im'et-re). The use of the plex-

plexometer (pleks-om'et-er). Pleximeter.

plexor (pleks'or). A hammer used in performing percussion.

plexus (pleks'us) [L. "braid"]. A network or tangle, chiefly of veins or nerves. accessory p., that part of the stroma-plexus which lies immediately beneath the anterior limiting membrane of the cornea. annular p., the nervous plexus that incircles the corneal margin. p. anseri'nus, parotid p., a small plexus near the parotid gland. p. anseri'nus ner'vi median'i, bundles from the eighth nerve going to the median nerve. aortic p., nerve-plexuses—(1) on either side and in front of the abdominal and (2) around the thoracic aorta. p. arte'riæ cer'ebri anterio'ris [B N A], a sympathetic plexus from the internal carotid running along the anterior cerebral artery p. arte'riæ cer'ebri me'diæ [B N A], a sympathetic plexus from the internal carotid plexus running along the middle cerebral artery. articula'ris, a small venous plexus near the outer aspect of the temporomaxillary articulation. Auerbach's p., a plexus of the sympathetic nerve between the coats of the intestine. axillary p., a plexus of lymph-nodes and lymph-vessels in the ax-illa basilar p., p. basila ris, the transverse basilar p., p. basila ris, the transverse sinus See under sinus. biliary p., a network of bile-ducts said to be sometimes observable in the liver. brachial p., a great nerve-plexus of the neck and axilla, formed by the union of the anterior branches of the lower four cervical and the first dorsal nerve It supplies the whole upper extremity, and its chief branches are the posterior thoracic, suprascapular, subscapular, internal cutaneous, musculocutaneous, musculospiral, circumflex, median, and ulnar nerves cardiac p., anterior or superficial, a nerve-plexus under the arch of the aorta. cardiac p., deep or great, a plexus situated in front of the tracheal fork. carotid p., external, a nerve-plexus around the external carotid artery. internal, a nerve-plexus on the carotid p., internal, a nerve-plexus on the outer side of the internal carotid. cavernous p. 1. A nerve-plexus situated within the cavernous

sinus. 2. A nerve-plexus at the root of the penis or clitoris derived from the vesical plexus and supplying the corpora cavernosa. **celiac p.**, a nerve-plexus on or near the celiac axis. cervical p., a nerve-plexus opposite the four upper vertebræ, supplying the skin of the neck, shoulder, chest, occiput, and auricle, and sending communicating branches to the facial, pneumogastric, hypoglossal, spinal accessory, and muscular branches to the sternomastoid, plantage of the sternomastoid, plantage of the sternomastoid, plantage of the sternomastoid. tysma, trapezius, scaleni, anterior and lateral recti, and the diaphragm. cervical p., posterior, a nerve-plexus in the posterior cervical region. p. cervicobrachia/lis, the cervical and brachial plexuses together. choroid p., a vascular, fringe-like fold of the pia in the third, fourth, and lateral ventricles. The choroid plexuses secrete the cerebrospinal fluid. choroid p., inferior, the choroid plexus of the fourth ventricle. coccygeal p., a nerve-plexus near the dorsal surface of the coccyx. colic p's, ileo-, middle, and right, parts of the superior mesenteric plexus. colic p., left, a part of the inferior mesenteric plexus. coronary p., anterior, a plexus beneath the arch of the aorta. coronary p., gastric. Same as gastric p. coronary p., posterior, a nerve-plexus at the dorsum of the heart. crural p., a nerve-plexus about the upper part of the femoral artery. Cruveilhier's p. 1. A nerve-plexus of the back of the neck. derived from the great occipital and the first and second cervical nerves. 2. A form of angioma cystic p., made up of a knot of varicose veins. a nerve-plexus near the gall-bladder deferential p., a sympathetic nerve-plexus on the vas deferens and seminal vesteles, derived from the hypogastric plexus. dental p., a nerveplexus around the roots of teeth of lower jaw. diaphragmatic p., a nerve-plexus near the phrenic artery. dorsal p., ulnar, a plexus formed by veins from the little finger and from the third and fourth interdigital clefts. epigastric p. Same as solar p. esophageal p., a nerve-plexus around the esophagus. Exner's p., a layer of nerve-fibers near the surface of the cerebral cortex. extraspinal p., a network of large veins extending the entire length of the vertebral column beneath the multifidus spinæ muscle. facial p., one surrounding a part of the facial artery. femoral p., a nerve-plexus derived from the iliac plexus, sur rounding the femoral artery. fundamental p., the deep stroma-plexus. gangliform p., a plexus from the roots of origin of the inferior maxillary nerve. gastric p., one of the coronary plexuses of the trisplanchnic system. rary piexuses of the trisplaneante system. gastro-troduodenal p., a branch of the celiac plexus. gastro-epiploic p., a portion of the celiac plexus. gastro-epiploic p., left, a nerveplexus near the convex border of the stomach. p. gu'læ, the esophageal plexus. Haller's p., the laryngeal plexus. Heller's p., an arterial network in the submucosa of the intestine hemorrhoidal p's, inferior and superior, plexvenous p., a network of veins surrounding the lower part of the rectum. hepatic p., a sympathetic nerve-plexus near and within the liver. Hovius' p., a venous plexus in the ciliary region connected with Schlemm's canal. hypogastric p., a nerve-plexus before the promontory of the sacrum. hypogastric p., inferior. Same as pelvic p. ileocolic p. See colic p. iliac p., p. ili'acus, the extension of the abdominal aortic plexus along the common iliac artery. inferior rectal p., a plexus of sympathetic nerves connected with the pelvic plexus on either side, near the lower part of the rectum. infra-orbital p., a nerve-plexus situated under the levator labii superioris inguinal p., a lymphatic plexus situated near the end of the long saphenous vein and along the femoral artery and vein in the iliopectineal fossa. ischiadic p.,

the upper part of the sacral plexus. **Jacobson's** p., the tympanic plexus. **jugular** p., a lymphplexus along the internal jugular vein. **laryngeal** p., a nerve-plexus on the outer surface of the inferior constrictor of the pharynx. made up of branches of the sympathetic and external laryngeal nerves. lateral p., the choroid plexus of the lateral ventricles of the brain. Leber's p. Same as Howus' p. p. liena'lis. Same as splenic p. lingual p., a nerve-plexus around the lingual artery. lumbar p., a nerve-plexus in the psoas muscle. lumbosacral p., the lumbar, sacral, and pudendal plex-uses together. p. mag'nus profun'dus, the deep celiac plexus. mammary p., a lymphatic plexus along the internal mammary artery. maxillary p., two plexuses (internal and external) on the maxillary arteries, derived from the external carotid plexus. **Meissner's p.**, a flat layer of pervous masses and fibrils in the submucosa of the stomach and small intestine. mesenteric p., inferior, a plexus surrounding the inferior mesenteric artery. mesenteric p., superior, a plexus that surrounds the superior mesenteric artery. molecular p. Same as Exner's p. myenteric p. Same as Auerbach's p. nasopalatine p., a nerve-plexus near the incisor foramen. nerve-p., the intermingling of two or more nerves. **nervo- protoplasmic p's**, three systems of nerveelements contained in the three principal cortical layers of the brain substance nervous p., an interlacing of various kinds of nerve-fibers. obturator p., a plexus that surrounds the obturator nerve. occipital p., a nerve-plexus around the occipital artery ophthalmic p., a nerve-plexus around the ophthalmic artery and the optic nerve. ovarian p. 1. A nerve-plexus with distribution to the ovaries and the uterine fundus 2. A venous plexus near the ovary. pampiniform p., a network of spermatic veins or of ovarian veins; the spermatic plexus. **pancreatic p.**, a plexus that supplies the pancreas **pancreaticoduodenal p.**, a plexus that sends filaments to the pancreas and duodenum. **Panizza's p's**, two plexuses of the deeper lymph-vessels in the lateral fosse of the frenum of the prepuce **p. parotide'us**. Same as *p. anserinus*. **patellar p.**, a nerveplexus that supplies the region in front of the knee. **pelvic p's**, **right** and **left**, plexuses which supply the viscera and other plexuses of the region in the prepulse of the region of the pelvin plexus of the pelvin which supplies the pharyngeal p. 1 A nerve-plexus which supplies the pharynx, etc. 2. A venous plexus at the side of the pharynx. phren c p., a nerve-plexus which sends filaments to the diaphragm and the suprarenal capsules. **poly-morphic p.**, the most deep seated of the four plevuses of the cerebral cortical substance. **pop**liteal p., a nerve plexus derived from the femoral plexus surrounding the popliteal artery. ary p., the deep stroma-plexus prostatic p., a nerve-plexus that supplies the bladder. prostaticovesical p., a plexus of veins around the prostate and neck of the bladder. pterythe prostate and neck of the bladder. pterygoid p., a venous plexus near the internal maxillary vein. pudendal p. 1. A plexus formed by
the ventral branches of the third and fourth sacral nerves. 2 A venous plexus behind the pubis and surrounding the urethra and neck of the bladder pudendocaudal p., the pudendal and coccygeal plexuses together. pulmonary p., anterior, a nerve-plexus situated before or ventrad to and supplying the root and substance of the lungs, both below and anteriorly. **pulmonary p.**, **posterior**, a nerve-plexus situated dorsad of and supplying the root of the lungs and the lung substance. **pyloric p.**, a nerve-plexus which supplies the region of the pylorus. **Ranvier's p.**See accessory p. **Remak's p.**, Meissner's plexus. **renal p.**, a plexus near the great renal artery. **p. reticula'ris**, a network of vessels situated below the fornix of the brain. **sacral p.**, a nerve-plexus situated ventrad of the sacrum. **sacral lymphatic p.**, a fine network of lymphatic vessels in the hollow of the sacrum.

dendal venous plexus. 2. A nerve-plexus made up of filaments from the inferior maxillary nerve at the foramen ovale. **Sappey's subareolar p.**, a lymphatic plexus situated beneath the areola of the nipple. **solar p.**, a great network of nerves and ganglia on the dorsal aspect of the stomach, formed by the greater and a portion of the lesser splanchis previous and the right. tion of the lesser splanchnic nerves and the right pneumogastric nerve, and giving off nerves to all the abdominal viscera. It has sometimes been called the abdominal brain. spermatic p., a network or plexus of nerves around the spermatic vessels it supplies the testes. sphenoid p., the upper portion of the internal carotid plexus. splenic p., a nerve-plexus derived from the celiac plexus and accompanying the splenic artery. Stenson's p., the venous network around Stenson's duct. stroma-p., a network formed by ramifications of the nerve-fibrils of the cornea within the substantia propria **stroma-p.**, deep, the more deeply seated portion of the stromaplexus. **subclavian p.**, a nerve-plexus from the cervical ganglion accompanying the subclavian artery. **submolecular p.**, a plex clavian artery.

us of the cerebral cortex lying just within Exner's plexus

Meissner's p.

submicectial p., a pica, a p., an arterial plexus beneath the mediastinal pleura. subsartorial p., a nerve-plexus at the posterior border of the sartorius muscle, formed by branches of the obturator, long sapherone nous, and internal cutaneous nerves. subtrapezius p., a nerve plexus situated under the trapezius muscle. suprarenal p's, right and left, nerve-plexuses surrounding the suprarenal capsules. thyroid p's, inferior and superior, nerve-plexuses supplying the larynx, pharynx, and the thyroid region. tonsillar p., a nerve-plexus going to the fauces, tonsil, and the soft palate. tympanic p., a nerve-plexus which supplies the tympanim. uterine p. 1. A nerve-plexus which supplies the cervix and lower part of the uterus 2. A venous plexus between the layers of the broad ligament. uterovaginal p., an extension of the pelvic plexus along the upper part of the vagina and the cervix uteri. vaginal p. 1. The nerve-plexus that supplies the vaginal walls 2. A venous plexus near the outlet of the vagina vascular p., p. vasculo'sus, a network of blood-vessels. venous p., p. veno'sus, a network of veins. vertebral p., a plexus of vertebral p., a plexus of nerves situated around the basilar and vertebral regions. vesical p., a plexus that surrounds the vesof the male corresponding to the pudendal (2) plexus of the female. vidian p., a plexus made up of filaments from the vidian nerve. Walther's arteriosonervous p., the cavernous plexus. plica (pli'kah), pl. pli'ca. Latin for plait or fold.
pli'ca adipo'sse [B N A], folds of fat in the
pleura. p. ala'res [B N A], the alar ligaments.
p. ampulla'ris [B N A], one of the folds of the p. ampuna ris [B N A], one of the folds of the mucous coat lining the ampulla of the fallopian tube. p. aryepiglot/tica [B N A], the aryepiglottic fold. p. axilla/ris anto/rior, the anterior axillary fold. p. axilla/ris poste/rior, the posterior axillary fold. p. cæca/lis [B N A], either of the two folds of peritoneum forming the ascending mesocolon. **p. choroi'dea**, the fetal fold whence the choroid plexus is derived. **p. cilia'ris** [B N A], ciliary fold. See *fold*. **p. circula'res** [kerkrin'gi] [B N A], the transverse folds in the mucous membrane of the intestine. p. conniven'-tes. Same as valvulæ conniventes. p. duodeno-jejuna'lis [B N A]. See duodenojejunal fold, un-der fold. p. epigas'trica [B N A], a line in the

inner surface of the anterior abdominal wall, marking the course of the epigastric artery p. fimbria'ta [B N A], the lobulated fold running

backward and outward from the anterior extremity of the frenulum of the tongue. **p. gastropan-creat'ica** [B N A], the gastropancreatic fold. **p.**

glosso-epiglot'tica [B N A]. See glosso-epiglottic fold, under fold. p. hypogas'trica, a line on the posterior surface of the anterior abdominal wall formed by the lateral ligament of the bladder. p. interdigita'lis, the free border of the web between the fingers. p. i'ridis [B N A], one of numerous minute folds on the posterior surface of the iris. p. lacrima'lis [B N A], Huschke's valve. See valve. p. luna'ta, a fold of conjunctiva at the outer edge of the caruncula lacrimalis. p. neuropath'ica, a curied state of the hair caused by nervous disorder. p. palma'te, the folds of the arbor vitæ uterinus. p. polon'ica [L. "Polish plait"], a matted state of the hair, which becomes covered with crusts and vermin. p. rec'te, transverse folds in the rectal mucosa. p. retro-uteri'na [B N A], Douglas' fold. See fold. p. salpingopalati'na [B N A], the salpingopala-tine fold. p. semiluna'ris [B N A], a fold of mucous membrane at the outer canthus of the eye. p. semiluna'ris co'li, one of Peyer's patches. p. semiluna'ris conjuncti'væ, a small doubling of the conjunctiva on the outer side of the caruncula lacrimalis. p. sigmoi'dea, one of the ridges on the inner surface of the colon. p. sublingua'lis [B N A], the fold on the under surface of the tongue produced by the underlying secretory duct of the sublingual gland. p. synovia'lis [B N A], a synovial fold. p. synovia'lis patella'ris [B N A], a fold of synovial membrane in the knee-joint from below the level of membrane in the knee-joint from below the level of the articular surface of the patella to the intercondyloid notch; called also ligamentum mucosum. **p. transversa'lis rec'ti** [B N A], the valves of Houston. **p. triangula'ris** [B N A], the triangular fold where the glossopalatine arch joins the lateral border of the tongue. **p. tuba'ria** [B N A], any one of the folds of the mucous lining of the fallopian tube. **p. umbilica'lis latera'lis** [B N A]. Same as p. hypogastrica. **p. umbilica'lis me'dia** [B N A]. Same as p. urachi. **p. ura'chi.** a line on the posterior surface of the anura'chi, a line on the posterior surface of the anterior abdominal wall, marking the course of the urachus. p. ureter'ica [B N A], a fold of mucous membrane passing from the opening of the ureter to the median line of the bladder. p. ventricula'ris [B N A], the false vocal cord. p. vesica'lis transver'sa [B N A], a fold of the peritoneum vestib'uli, a ridge on the nasal septum. p. villo'sa [B N A], one of the folds of the mucuos membrane of the stomach in the pyloric region. p. voca'lis [B N A], the true vocal cord.

plicadentin (pli-kah-den'tin) [L. pli'ca fold + dentin]. A modification of the dentin in which the fibers diverge in many lines from the central pulp-cavity of the tooth.

plicate (pli'kāt) [L. plica'tus]. Plaited or folded.

plication (pli-ka'shun). A folding; also the operation of taking tucks in the walls of a hollow organ in order to reduce its size.

plicotomy (pli-kot'o-me) [L. pli'ca fold + Gr. τέμνειν to cut]. Surgical division of the posterior fold of the tympanic membrane.

pliers (pli'erz). Small tong-jawed pincers for bending metals or holding small objects. Various forms are much used in dental work.

Plimmer's bodies, salt (plim'erz) [Henry George Plimmer, English zoologist, 1857-1918]. See under body and salt.

plint, plinth (plint). An apparatus used in therapeutic gymnastics for the patient to sit or lie on.
plocach (plo'kāk). Sheep-cholera.

Plombière's douche (plaw-be-arz') [a French spa]. See under douche.

plombierung (plom-be-ar'ung) [Ger. "plugging"].

The operation of plugging defects in bone, such as osteomyelitis, with preparations of iodoform.

Plotz's bacillus (plots) [Harry Plotz, New York physician, born 1890]. See Fusiformis typhi-exanthematici.

plug (plug). A lumpy mass. Corner's p., a piece of omentum inserted into a duodenal perforation as a temporary measure in cases which cannot be operated on at the time. Dittrich's p's, whitish, brownish, or yellowish masses found in the sputum or in the bronchial tubes in septic bronchitis and in gangrene of the lungs. Ecker's p., a plug of cells in the primitive mouth of the gastrula. Imlach's fat-p., a mass of fatty tissue sometimes found at the mesial angle of the external inguinal ring. Traube's p's. Same as Dittrich's p's.

plugger (plug'er). A dental instrument for condensing and compacting amalgam or other fillings into a tooth cavity.

plumbagin (plum-ba'jin). An irritant substance obtained from the root of Plumba'go zeylan'ica: used as an abortifacient.

plumbago (plum-ba'go). See graphite.

plumbi acetas, and other terms beginning with plumbi. See under lead.

plumbie (plum'bik) [L. plum'bicus leaden]. Pertaining to or containing lead.

plumbism (plum'bizm). Lead-poisoning.

plumboxan (plum-bok'san). A proprietary preparation which, on being treated with steam at a high temperature, gives off oxygen.

plumbum (plum'bum). Latin for lead.

Plummer's disease (plum'erz) [Henry S. Plummer, contemporary American physician]. The development of toxicity (hyperthyroidism) in simple adenoma of the thyroid.

Plummer's pills (plum'erz) [Andrew Plummer, Scottish physician, died 1756]. See pill.

plummet (plum'et). A bullet of lead or metallic antimony formerly swallowed for the relief of obstinate constipation.

plumose (plu'mōs) [L. plumo'sus, Fr. plu'ma feather]. Feathery; resembling a feather.

plumula (plum'u-lah). A set of delicate crossfurrows on the upper wall of the aqueduct of Sylvius.

pluri- [L. plus more]. A prefix meaning more.

pluriceptor (plu-ris-ep'tor) [L. plus more + cap'ere to take]. A receptor which has more than two complementophil groups.

pluricordonal (plu-rik-or'don-al). See under

pluriglandular (plu-rig-lan'du-lar). Pertaining to, derived from, or affecting several glands.

plurigravida (plu-rig-rav'id-ah) [L. plus more + grav'ida pregnant]. A woman pregnant for the third or more time.

plurilocular (plu-ril-ok'u-lar). Same as multi-locular.

plurinuclear (plu-rin-u'kle-ar) [L. plus more + nucleus]. Having several nuclei.

pluripara (plu-rip'ah-rah) [L. plus more + par'ere to bear]. A woman who has borne several children.

pluriparity (plu-rip-ar'it-e). The fact or condition of having borne several children.

pluripolar (plu-rip-o'lar). Having several poles, said of ganglion-cells, etc.

plutomania (plu-to-ma'ne-ah) [Gr. $\pi\lambda$ o \hat{v} ros riches + $\mu a\nu la$ madness]. The insane belief of a patient that he is very rich.

P. M. B. Abbreviation for polymorphonuclear basophil leukocytes.

P. M. E. Abbreviation for polymorphonuclear eosinophil leukocytes.

P. M. N. Abbreviation for polymorphonuclear neutrophil leukocytes.

pnein (pne'in) [Gr. πνειά breath]. A hypothetical substance supposed to be present in the tissues and to act as an accelerator of the oxidizing activities of the tissues.

- pneodynamics (ne"o-di-nam'iks) [Gr. πνείν to breathe + dynamics]. The dynamics of respiration.
- pneogaster (ne'o-gas-ter) [Gr. $\pi \nu e \hat{\nu} \nu$ to breathe + $\gamma a \sigma \tau \dot{\eta} \rho$ the belly]. The respiratory tract of the embryo.
- pneograph (ne'o-graf) [Gr. πνεῖν to breathe + γράφειν to record]. A device for registering the respiratory movements: used for diagnostic purposes.
- pneometer (ne-om'et-er) [Gr. πνεῖν to breathe + μέτρον measure]. A form of spirometer, or device for measuring the air inspired and expired.
- pneophore (ne'o-for) [Gr. πνεῖν to breathe + φορεῖν to carry]. An instrument to aid in effecting artificial respiration.
- pneopneic reflex (ne-o-pne'ik). See under reflex.
 pneoscope (ne'o-sköp) [Gr. πνεῖν to breathe + σκοπεῖν to view]. See pneumograph.
- pneumarthrosis (nu-mar-thro'sis) [Gr. πνεθμα air + άρθροςς joint]. 1. The presence of gas or air in a joint. 2. The inflation of a joint with oxygen for the purpose of aiding roentgenographic examination.
- **pneumascope** (nu'mas-kōp) [Gr. $\pi\nu\epsilon\hat{\imath}\nu$ to breathe + $\sigma\kappa\sigma\epsilon\hat{\imath}\nu$ to view]. An instrument for measuring the movements of the thorax in respiration.
- pneumascos (nu-mas'kos) [Gr. πνεθμα air + άσκος sac]. Pneumoperitoneum.
- **pneumathemia** (nu-math-e'me-ah) [Gr. $\pi \nu \epsilon \bar{\nu} \mu a$ air + $a I \mu a$ blood]. The presence of air or gas in the blood-vessels.
- pneumatic (nu-mat'ik) [L. pneumat'icus; Gr. πνευματικόs]. Of or pertaining to air or respiration.
- pneumatics (nu-mat'iks) The science which deals with the physical properties of gases.
- pneumatinuria (nu"mat-in-u're-ah). Same as pneumaturia.
- pneumatism (nu'mat-izm) [Gr. πνεῦμα breath].
 The doctrine of the Pneumatists.
- Pneumatists (nu'mat-istz). A school or sect of ancient medicine, founded by Athenæus of Attalia, who practised in Rome in the middle of the first century. Their system of medicine was based upon the action and constitution of the pneuma or vital air which passed from the lungs into the heart and arteries and was thence disseminated throughout the body. Other members of this school were Agathinus of Sparta, Archigenes of Apamea, Aratæus of Cappadocia, and Antylus.
- pneumatocardia (nu"mat-o-kar'de-ah) [Gr. πνεῦμα air + καρδία heart]. The presence of air in the heart.
- pneumatocele (nu-mat'o-sēl) [Gr. πνεῦμα air + κήλη hernia]. 1. Hernial protrusion of the lung tissue. 2. A tumor or sac containing gas; especially, a gaseous swelling of the scrotum.
- pneumatodyspnea, pneumatodyspnea (nu"-ma-to-disp-ne'ah) [Gr. πνεῦμα air + dyspnea]. Difficulty in breathing due to emphysema.
- pneumatogram (nu-mat'o-gram) [Gr. $\pi\nu\epsilon\hat{\nu}\mu\alpha$ air $+\gamma\rho\hat{\alpha}\mu\mu\alpha$ writing]. The tracing or record made by a pneumatograph.
- pneumatograph (nu-mat'o-graf) [Gr. πνεθμα air + γράφειν to record]. A device for registering the movements of the chest-wall.
- **pneumatology** (nu-mat-ol'o-je) [Gr. $\pi \nu \epsilon \hat{\nu} \mu \alpha$ air + λόγος treatise]. The sum of what is known regarding gases and air and their therapeutic and other properties.
- pneumatometer (nu-mat-om'et-er) [Gr. πνεῦμα air + μέτρον measure]. A form of spirometer, or instrument for measuring the air inspired and expired.
- pneumatometry (nu-mat-om'et-re). The measurement of the air inspired and expired.
- pneumatophore (nu-mat'o-for) [Gr. πνεθμα air

- + $\varphi \delta \rho \sigma s$ bearingl. An apparatus consisting of a bag with a tube and mouthpiece, which may be attached to the body. The bag contains oxygen, to be breathed by the wearer in rescue work in mines, etc.
- pneumatorachis (nu-mat-or'ak-is) [Gr. πνεθμα air + βάχις spine]. The presence of gas in the vertebral canal.
- pneumatoscope (nu-mat'os-kōp) [Gr. $\pi\nu\epsilon\bar{\nu}\mu\alpha$ air $+ \sigma\kappa\sigma\kappa\epsilon\bar{\nu}\nu$ to see]. I. A device for determining the absence or presence of pus in the air-cells of the mastoid process of the temporal bone. It consists of a sound-receiver placed in the patient's mouth and connected with his ears by tubes. A tuning-fork placed upon the mastoid will be heard longer over a healthy portion than over a diseased portion. 2. An instrument devised by Gabritschewsky for auscultating the percussion of the thorax from the mouth.
- pneumatosis (nu-mat-o'sis) [Gr. πνευμάτωσις].
 The presence of air or gas in an abnormal situation in the body. p. cystoi'des intestina'lis, the presence of gas-containing cysts in the mucous membrane of the intestines.
- **pneumatotherapy** (nu'mat-o-ther'ap-e) [Gr. $\pi \nu \epsilon \hat{v} \mu a$ air + therapy]. The treatment of disease by rarefied or condensed air.
- pneumatothorax (nu"mat-o-tho'raks). Same as pneumothorax.
- pneumaturia (nu-mat-u're-ah) [Gr. πνεθμα air + οδρον urine]. The passage of urine charged with air or gas.
- pneumatype (nu'mat-ip) [Gr. πνεῦμα air + τόπος type] A breath-picture; a deposition of moisture upon a glass surface from the exhaled air: used in the diagnosis of nasal obstructions.
- pneumectomy (nu-mek'to-me) [Gr. πνεύμων lung + ἐκτομή excision]. The excision of lung tissue.
- pneumin (nu'min). Methylene creosote: a tasteless yellowish powder: used in tuberculosis.
- pneumobacillin (nu"mo-bas-il'in). A poisonous substance extracted from the pneumobacillus.
- pneumobacillus (nu"mo-bas-il'us) [Gr. πνεύμων lung + bacıllus]. The Bacterium mucosum capsulatum.
- pneumobacterin (nu-mo-bak'ter-in). See pneumococcus vaccine, under vaccine
- pneumobulbar, pneumobulbous (nu-mo-bul'bar, nu-mo-bul'bus). Pertaining to the lungs and to the oblongata.
- pneumocele (nu'mo-sēl) [Gr. πνεύμων lung + κήλη tumor]. Hernial protrusion of lung tissue through the chest-wall.
- pneumocentesis (nu'mo-sen-te'sis) [Gr. πνεύμων lung + κέντησις puncture]. Surgical puncture of a lung for the purpose of evacuating a cavity.
- pneumocephalus (nu-mo-sel'al-us) [Gr. πνεῦμα air + κεφαλή head]. Air within the cranial cavity.
- pneumochirurgia (nu"mo-ki-rur'je-ah) [Gr. πνεύμων lung + χειρουργία surgery]. The surgery of the lungs.
- pneumochysis (nu-mok'is-is). Pulmonary edema, or serous infiltration of the lung.
- pneumococcal (nu-mo-kok'al). Pertaining to or caused by pneumococci.
- pneumococcemia (nu"mo-kok-se'me-ah). The presence of pneumococci in the blood.
- pneumococcus (nu-mo-kok'us) [Gr. πνεθμων lung + κόκκος berry]. The organism, Diplococcus pneumonia, which causes lobar pneumonia. It is a small, slightly elongated coccus, one end of which is pointed or lance-shaped, and commonly occurs in pairs. Four types or strains are recognized, based on immunity reactions, and distinguished as Types I, II, III, and IV. Types I and II cause about 60 per cent. of all cases of lobar pneumonia. Type III, about 20 per cent. The immunity reactions of these three types are

fairly constant. Type IV is composed of a number of strains differing from one another in serological reactions and rarely found in cases of pneumonia ending fatally. The pneumococcus is also called Diplococcus pneumonia, Micrococcus lanceolatus, Streptococcus pneumonia, and Fränkel's pneumococcus. P. fla'vens, P. guttacer'ci, P. lichenoi'des, lung bacilli found in the contagious pleuropneumonia of cattle.

pneumocolon (nu-mo-ko'lon) [Gr πνεθμα air + colon]. Inflation of the colon as an aid to diagnosis.

pneumoconiosis (nu"mo-ko-ne-o'sis) [Gr. πνεύμων lung + κόνις dust]. Same as pneumonoconiosis.

pneumoderma (nu-mo-der'mah) [Gr. πνεῦμα air + δέρμα skin]. Subcutaneous emphysema; air beneath the skin.

pneumodograph (nu-mod'o-graf) [Gr. $\pi \nu \epsilon \hat{\nu} \mu a$ breath + δδδς way + $\gamma \rho \dot{\alpha} \phi \epsilon \nu$ to write]. An apparatus for registering the degree of respiratory nasal efficiency.

pneumodynamics (nu"mo-di-nam'iks) [Gr. πνεῦμα breath + δύναμις force]. The dynamics of the respiratory process; the study of the forces exerted in the act of breathing.

pneumo-empyema (nu"mo-em-pi-e'mah). Empyema marked by the presence of gas.

pneumo-enteritis (nu"mo-en-ter-i'tis) [Gr. $\pi \nu \epsilon \dot{\nu} \mu \omega \nu$ lung $+ \dot{\epsilon} \nu \tau \epsilon \rho o \nu$ intestine]. Inflammation of the lung and intestine.

pneumo-erysipelas (nu"mo-er-is-ip'el-as). Erysipelas complicated with pneumonia.

pneumogalactocele (nu"mo-gal-ak'to-sēl) [Gr. πνεῦμα air + γάλα milk + κήλη tumor]. A tumor containing gas and milk.

pneumogastric (nu-mo-gas'trik) [Gr. πνεύμων lung + γαστήρ stomach]. Pertaining to the lungs and stomach.
 p. nerve. See nerve.

pneumogram (nu'mo-gram). The tracing or graphic record of respiratory movements.

pneumograph (nu'mo-graf) [Gr. πνεύμων lung + γράφειν to record]. An instrument for registering the respiratory movements.

pneumography (nu-mog'raf-e) [Gr. πνεθμων lung + γράφειν to write]. I. An anatomic description of the lungs. 2. Graphic recording of the respiratory movements. 3 Roentgenologic photography of a part after injection of oxygen; pneumoradiology cerebral p., radiologic examination of the brain after the injection of oxygen or indigocarmin into the cerebral ventricles, pneumoventriculography.

pneumohemopericardium (nu"mo-he"mo-per-e-kar'de-um) [Gr. $\pi \nu \epsilon \hat{\nu} \mu \alpha$ air + $\alpha l \mu \alpha$ blood + pericardium]. The collection of air and blood in the pericardium.

pneumohemothorax (nu"mo-hem-o-tho'raks) [Gr. $\pi \nu \epsilon \hat{v} \mu a$ air $+ a l \mu a$ blood $+ \theta \omega \rho a \xi$ chest]. The presence of air or gas and blood in the pleural cavity.

pneumohydrometra (nu-mo-hi-dro-me'trah) [Gr. $\pi \nu \epsilon \hat{v} \mu a$ air $+ \tilde{v} \delta \omega \rho$ water $+ \mu \dot{\eta} \tau \rho a$ uterus]. A collection of gas and fluid in the uterus.

pneumohydropericardium (nu"mo-hi"dro-pere-kar'de-um) [Gr. πνεῦμα air + ὕδωρ water + pericardium]. A collection of air or gas and serum in the pericardium.

pneumohydrothorax (nu"mo-hi-dro-tho'raks) [Gr. $\pi \nu \epsilon \partial \mu$ a air + $\delta \delta \omega \rho$ water + $\theta \omega \rho a \xi$ chest]. A collection of air or gas and a liquid in the thorax.

pneumohypoderma (nu"mo-hi-po-der'mah) [Gr. $\pi \nu e \hat{\nu} \mu a$ air $+ \dot{\nu} \pi \dot{\sigma}$ under $+ \dot{\delta} \dot{\epsilon} \rho \mu a$ skin]. Escape of air into the subcutaneous tissues.

pneumokidney (nu'mo-kid-ne) [Gr. πνεῦμα air + kidney]. See pneumopyelography.

pneumokoniosis (nu"mo-ko-ne-o'sis). See pneumonoconiosis.

pneumolith (nu'mo-lith) [Gr. πνεύμων lung + λίθος stone]. A pulmonary calculus or concretion.

pneumolithiasis (nu"mo-lith-i'as-is). The presence of concretions in the lungs.

pneumology (nu-mol'o-je) [Gr. πνεύμων lung + λόγοs treatise]. The study of disease of the air-passages.

pneumolysis (nu-mol'is-is) [Gr. $\pi\nu\epsilon b\mu\omega\nu$ lung + $\lambda b\sigma ts$ loosening]. The operation of stripping the pleura from the fascia of the thoracic wall in order to allow the lung to collapse; called also extrapleural p and pleurolysis. In intrapleural p the lung is freed by separating the parietal from the visceral pleura.

pneumomalacia (nu'mo-mal-a'se-ah) [Gr. $\pi\nu\epsilon b-\mu\omega\nu$ lung + $\mu\alpha\lambda\alpha\kappa i\alpha$ softness]. Morbid softness of lung tissue.

pneumomassage (nu"mo-mas-ahzh') [Gr. πνεῦμα air + massage]. Air-massage of the tympanum.

pneumomelanosis (nu''mo-mel-an-o'sis) [Gr. πνεύμων lung + melanosis]. The blackening of the lung tissue by inhaled coal-dust.

pneumometer (nu-mom'et-er). Same as pneuma-

pneumomycosis (nu"mo-mi-ko'sis) [Gr. πνεθμων lung + mycosis]. Any lung disease due to schizo-mycetes.

pneumomyelography (nu"mo-mi-el-og'raf-e) [Gr, πνεύμα air + μύελος marrow + γράφειν to record]. The Roentgen-ray examination after the injection of gas (oxygen) into the spinal canal.

pneumonectasia, pneumonectasis (nu"monek-ta'ze-ah, nu-mon-ek'tas-is) [Gr. πνεύμων lung + ξκτασις extension]. Emphysema of the lungs.

pneumonectomy (nu-mo-nek'to-me). Same as pneumectomy.

pneumonedema (nu"mo-ne-de'mah) [Gr. πνεύμων lung + edema]. Edema of the lungs

pneumonemia (nu-mo-ne'me-ah) [Gr. πνεύμων lung + α Ιμα blood]. Congestion of the lungs.

pneumonia (nu-mo'ne-ah) [Gr. πνευμωνία] flammation of the lungs; especially the disease that the triple of t alcoholic p., the lobar pneumonia of drunkards. anthrax p., anthrax of the lung apex-p.. apical p., croupous pneumonia limited to the apex of the lung aspiration-p., pneumonia due to the inhalation of dust, food, or other foreign material bilious p., lobar pneumonia attended with jaundice bronchial p. Same as catarrhal p. Buhl's desquamative p., caseous pneumonia in which the exudate is composed chiefly of desquamated alveolar epithelium. caseous p. Same as cheesy p. catarrhal p., a variety in which the bronchioles become clogged with a mucopurulent exudate, forming consolidated patches in single lobes, which may extend to large areas occurs especially in children. Called also bronchial , lobular p , and bronchopneumonia. central p., lobar pneumonia beginning in the interior of a lobe of the lung. cerebral p., a pneumonia usually apical and having severe head symptoms. cheesy p., a pneumonia in which the alveoli become filled with necrosed cells and the cut surface looks like cheese. chronic p., a long-continuing form, usually fibrous. contusion p., a pneumonia following an injury. core-p. Same as central p. croupous p. Same as lobar p. deglutition ., pneumonia from the entrance of food into the lungs. Desnos's p., massive pneumonia; spleno-pneumonia. desquamative p., chronic lobar pneumonia with hardening of the fibrous exudate and proliferation of the interstitial tissue and epithelium of the lung. Called also parenchymatous p. and primary indurative p. double p., that which affects both lungs. embolic p., pneumonia due to embolism of a blood-vessel or vessels of the lungs ephemeral p., that in which the signs of pneu-

monia disappear after two days. Called also congestion of the lungs. ether-p., pneumonia occurring after anesthesia by ether. fibrinous p. Same as lobar p. fibrous p., a form characterized by an increase of the interstitial and stromatic elements. See interstitial p. Friedländer's bacillus p., lobar pneumonia caused by Friedländer's bacillus, Bacterium mucosum capsulatum. gangrenous p., gangrene of the lung. hypostatic p., a pneumonia due to dorsal decubitus in weak or aged persons. indurative p. See desquamative p. inhalation p., pneumonia caused by the inhalation of foreign matter, as dust, food, etc. interstitial p., chronic fibrous pneumonia a chronic form of pneumonia with increase of the interstitial tissue and decrease of the proper lung tissue, with induration. Called also *cirrhosis of the lung* and *fibroid phthisis*. larval p., an attack presenting the initial symptoms of the disease only. lobar **p.**, an acute febrile disease produced by the *Diplo*coc'cus pneumo'niæ, and marked by inflammation of one or more lobes of the lung, together with consolidation. It is attended with chill, followed by sudden elevation of temperature, dyspnea, rapid breathing, pain in the side, and cough, with blood-stained expectoration. The symptoms abate after a week. It usually begins in the lower lobe, the lung being at first intensely congested (stage of congestion or engorgement), and afterward becoming red and solid from accumulation of exudate and blood-cells in the alveoli (red hepatization), and later gray (gray hepalization), from degeneration of the exudates, which are finally absorbed. Called also croupous p., fibrinous p., lung fever, and pneumonic fever. lobular p., catarrhal pneumonia. massive p., lobar pneumonia with solidification of the air-cells, bronchi, or even an entire lung. metastatic p., suppurative pneumonia due to metastasis in pyemia. migratory p., pneumonia gradually involving one lobe of the lung after another. parenchymatous p. Same as desquamative p. plague p. Same as pneumonic p. See plague p. Same as pleuropneumonia. pleurogenic p., pleurogenetic p., that which is secondary to pleural disease. pseudopleuritic p. See Desnos's p. purulent p., a form characterized by the formation of pus. secondary p., inflammation of the lungs coming on as a complication of an infectious disease. septic p., a form due to septic poison, and often lobular. stable p., epizoötic pleuropneumonia in horses. Stoll's p., pneumonia with gastrohepatic complications streptococcus p., an epidemic type of pneumonia caused by the Streptococcus hamolyticus. stripe-p., a type in which the affected part takes the form of an upright stripe. superficial p., a form which affects only the parts near the pleura. suppurative p., pneumonia with formation of abscesses in the lungs. terminal p., lobar pneumonia developing during some other disease and hastening a fatal termination. toxemic p., infection of the system with pneumococci without marked lung involvement. traumatic **p.**, inflammation of the lung following a wound of vagus-p., pneumonia with typhoid p., an asthenic form of pneumonia with typhoid symptoms. vagus-p., pneumonia due to injury of the pneumogastric nerve. wandering p. See migratory p white p., indurative syphilitic pneumonia of the newborn; infantile syphilitic pneumonia with a white fatty degeneration of the lung woolwhite, fatty degeneration of the lung. sorters' p., anthrax pneumonia.

pneumonic (nu-mon'ik) [Gr. πνευμονικόs]. Pertaining to the lung or to pneumonia.

pneumonitis (nu-mo-ni'tis). Same as pneumonia.
pneumonocele (nu-mon'o-sēl). Same as pneumo-cele.

pneumonocentesis (nu-mo"no-sen-te'sis). Pneumocentesis.

pneumonochirurgia (nu-mo"no-ki-rur'je-ah).
Surgery of the lung.

pneumonocirrhosis (nu"mo-no-sir-o'sis)[Gr. areb-

μων lung + cirrhosis]. Cirrhosis, or hardening, of a lung.

pneumonococcus (nu-mo-no-kok'us). Same as pneumococcus.

pneumonoconiosis, pneumonokoniosis (numo"no-ko-ne-o'sis) [Gr. πνεύμον lung + κόνις dust]. Lung disease due to the inhalation of minute particles. It is attended by fibroid induration and pigmentation. See alluminosis, anthracosis, byssinosis, chalicosis, ptilosis, siderosis, silicosis, and tabacosis. p. siderot'ica. Same as siderosis.

pneumono-enteritis (nu-mo"no-en-ter-i'tis).
Pneumo-enteritis.

pneumono-erysipelas (nu-mo"no-er-is-ip'e-las).
Pneumo-erysipelas.

pneumonolysis (nu-mo-nol'is-is). Same as pneumolysis.

pneumonomelanosis (nu-mo"no-mel-an-o'sis) [Gr. πνεύμων lung + μέλας black]. Melanosis of the lung tissue.

pneumonometer (nu-mon-om'et-er) [Gr. πνεύμων lung + μέτρον measure]. A form of spirometer.

pneumonomycosis (nu-mo"no-mi-ko'sis). Same as pneumomycosis.

pneumonopaludism (nu-mo"no-pal'u-dizm).
 Pneumopaludism.

pneumonoparesis (nu-mo"no-par'es-is). Pneumoparesis.

pneumonopathy (nu-mo-nop'ath-e) [Gr. πνεύμων lung + πάθος disease]. Any lung disease.

pneumonopexy (nu-mo'no-peks-e). Same as pneumopexy.

pneumonophthisis (nu-mon-of-thi'sis). Pulmonary tuberculosis.

pneumonopleuritis (nu-mo"no-plu-ri'tis). Pneumopleuritis.

pneumonorrhagia (nu-mo-no-ra'je-ah). Pneumorrhagia.

pneumonorrhaphy (nu-mo-nor'af-e) [Gr. πνεύμων lung + ραφή suture]. Suture of the lung.

pneumonosis (nu-mo-no'sis) [Gr. πνεύμων lung + νόσος disease]. Any lung disease.

pneumonotherapy (nu-mo-no-ther'ap-e). Pneumotherapy.

pneumonotomy (nu-mo-not'o-me) [Gr. πνεύμων lung + τέμνειν to cut]. Surgical incision of the

pneumonyssus (nu-mo-nis'us). A mite found in the lungs of monkeys.

pneumo-oxygenator (nu''mo-ok'se-jen-a-tor). An apparatus for administering long inhalations of large quantities of oxygen.

pneumopaludism (nu-mo-pal'u-dizm) [Gr. $\pi\nu\epsilon\dot{b}$ - $\mu\omega\nu$ lung + L. pa'lus swamp]. Disease of the lungs of malarial origin. One form, known as de Bruns' disease, consists of solidification of the upper part of one or both lungs. It is attended with cough and attacks of fever.

pneumoparesis (nu-mo-par'es-is) [Gr. πνεύμων lung + paresis]. A lung disease marked by progressive congestion and infiltration of the vesicles of the lung.

pneumopericardium (nu"mo-per-ik-ar'de-um) [Gr. πνεῦμα air + περικάρδιον pericardium]. The presence of air or gas in the pericardium. It is marked by tympanitic resonance over the precordia and metallic heart-sounds.

pneumoperitoneal (nu"mo-per-it-o-ne'al). Marked by air in the peritoneum: a term applied to Roentgen-ray examination in which the peritoneal cavity is inflated with air or gas injected through a puncture in the abdomen.

pneumoperitoneum (nu"mo-per-it-o-ne'um) [Gr. πνεῦμα air + peritoneum]. 1. The presence of gas or air in the peritoneal cavity. 2. Injection of oxygen or other gas into the peritoneal cavity for radiographic purposes.

pneumoperitonitis (nu"mo-per-it-o-ni'tis) [Gr. πνεθμα air + peritonitis]. Peritonitis with the accumulation of air or gas in the peritoneal cavity.

pneumopexy (nu'mo-peks-e) [Gr. πνεύμων lung + πῆξις fixation]. Surgical fixation of the lung to the thoracic wall.

pneumopleuritis (nu"mo-plu-ri'tis). Inflammation of the lungs and pleura.

pneumopleuroparietopexy (nu"mo-plu"ro-pari'et-o-pek-se) [Gr $\pi \nu \epsilon b \mu \omega \nu$ lung + p leu ra + p a r i et al + Gr $\pi \eta \xi \iota_5$ fixation]. The operation of suturing the lung with its parietal pleura to the margin of a thoracic wound.

pneumoprotein (nu-mo-pro'te-in). A principle derived from the pneumococcus by the action of glycerin and water.

pneumopyelography (nu"mo-pi-el-og'raf-e) [Gr. πνεῦμα air + πύελος pelvis + γράφειν to write]. Pyelography in which oxygen, instead of an opaque solution, is injected into the kidney pelvis.

pneumopyopericardium (nu"mo-pi"o-per-ik-ar-de-um) [Gr. πνεῦμα air + πύον pus + περικάρδιον pericardium]. The presence of air or gas and pus in the pericardium.

pneumopyothorax (nu"mo-pi-o-tho'raks) [Gr. πνεῦμα air + πύον pus + θώραξ thorax]. The presence of air and pus in the pleural cavity.

pneumorachis (nu-mo-ra'kis) [Gr. πνεῦμα air + βάχις spine]. 1. The presence of a ga-eous collection in the spinal cord. 2. The injection of gas into the spinal canal for the facilitation of roent-genologic examination.

pneumoradiography (nu"mo-ra-de-og'raf-e) [Gr. πνεῦμα air + radiography]. Radiography of a part following the injection of oxygen, as in pneumoperitoneum.

pneumorrhagia (nu-mor-a'je-ah) [Gr. πνεύμων lung + ἡηγνύναι to burst forth].
 1. Hemorrhage from the lungs.
 2. Pulmonary apoplexy.

pneumosan (nu'mo-san). A proprietary preparation for use by injection in tuberculosis. It is said to be amylthiotrimethylamin chlorid.

pneumoscope (nu'mo-skōp) [Gr. $\pi\nu\epsilon\hat{\nu}\mu\alpha$ air + $\sigma\kappa\sigma\pi\epsilon\hat{\nu}\nu$ to see]. An instrument for showing the respiratory power.

pneumosepticemia (nu"mo-sep-tis-e'me-ah). Influenzal pneumonia of an extreme and fatal form.

pneumoserosa (nu-mo-se-ro'sah). Injection of air into a joint cavity for roentgenoscopy

pneumoserothorax (nu"mo-se-ro-tho'raks) [Gr. πνεῦμα air + serum + Gr. θώραξ thorax]. The presence of gas and serum in the thoracic cavity.

pneumotherapy (nu-mo-ther'ap-e). 1. Same as pneumatotherapy. 2. The treatment of diseases of the lungs.

pneumothermomassage (nu"mo-ther"mo-masahzh') [Gr. $\pi \nu e \hat{v} \mu a$ air $+ \theta \acute{e} \rho \mu \eta$ heat + massage]. The application to the body of hot condensed air that has been medicated.

pneumothorax (nu-mo-tho'raks) [Gr. $\pi\nu\epsilon\hat{v}\mu\alpha$ air $+\theta\omega\rho\alpha\xi$ thorax]. An accumulation of air or gas in the pleural cavity. The air enters either by an external wound, a lung perforation, from burrowing abscesses, or from the rupture of a superficial lung cavity. Pneumothorax is apt to be of sudden onset, and to be announced by collapse. It is attended with sudden and severe pain and rapidly increasing dyspnea. Percussion shows a wide diffusion of the tympanitic sound over the dilated side. There are no râles, but dulness is present as fluid forms, and fluctuation or succussion, and a metallic echo on strong percussion over the air. When a communication exists with the bronchi, metallic respiration or tinkling is heard. **artificial p.**, pneumothorax induced intentionally by artificial means, as by the injection of nitrogen gas: employed in the treatment of pulmonary tubercu-

losis. Cf. Forlanini treatment, under treatment. valvular p., that which is characterized by an aperture through the pleura which has a slit with a valve-like action.

pneumotomy (nu-mot'o-me). Same as *pneumo-notomy*.

pneumotoxin (nu-mo-toks'in). A toxin produced by the bacteria of pneumonia, and thought to be the cause of the symptoms of lobar pneumonia.

pneumotyphoid (nu-mo-ti'foid). Typhoid with unusual localization of the lesions in the lungs.

pneumotyphus (nu-mo-ti'fus). Pneumonia concurrent with typhoid fever.

pneumouria (nu-mo-u're-ah). Same as pneu-

pneumoventricle (nu-mo-ven'trik-l). Pneumoventriculi.

pneumoventriculi (nu''mo-ven-trik'u-li) [Gr. $\pi \nu \epsilon \hat{\nu} \mu a$ air + ventriculus, ventricle]. Presence of air in the cerebral ventricles

pneumoventriculography (nu"mo-ven-trik-ulog raf-e). Radiography of the cerebral ventricles which have been injected with oxygen after withdrawing a corresponding amount of cerebrospinal fluid.

pneusis (nu'sis) [Gr.]. 1. Respiration. 2. Anhelation.

pneusometer (nu-som'et-er) [Gr. $\pi\nu\epsilon\hat{v}\sigma\iota$ s blowing + $\mu\dot{\epsilon}\tau\rho\sigma\nu$ measure]. A spirometer.

pnigophobia (ni-go-fo'be-ah) [Gr. $\pi\nu i\gamma$ os choking $+ \varphi \delta \beta$ os fear]. Abnormal dread of choking.

Pocill. Abbreviation for L. pocillum, a small cup.
pock (pok). A pustule, especially of smallpox.
p.-marked, scarred or pitted as a result of smallpox.

pocket (pok'et). A sac-shaped cavity. In dentistry, an abnormal space formed between a tooth root and the gum oral p., Rathke's p. Same as Rathke's pouch. See under pouch Seessel's p., a depression in the pharyngeal membrane of the embryo.

pocketing (pok'et-ing). The inclosure of the pedicle in ovariotomy within the edges of the external wound.

Pocul. Abbreviation for L poc'ulum, cup

poculum (pok'u-lum). Latin for cup p. Diog'-enis, Diogenes's cup, the hollowed palm of the hand.

podagra (pod-ag'rah, pod'ag-rah) [L; Gr ποδάγρα; πούς foot + ἄγρα seizure] Gout, more especially gout in the feet.

podagral (pod'ag-ral). Affected with gout.

podagric (pod-ag'rik) [L. podag'ricus; Gr. ποδαγρικόs]. Gouty.

podagrous (pod'ag-rus) [L. podagro'sus]. Gouty.
podalgia (po-dal'je-ah) [Gr. πούς foot + ἄλγος pain]. Pain in the foot, as from gout or rheumatism.

podalic (po-dal'ik) [Gr. $\pi o \theta s$ foot]. Accomplished by means of the feet; footling.

podarthritis (pod-ar-thri'tis) [Gr. πους foot + ar-thritis]. Inflammation of the joints of the feet.

podasteroid (pod-as'ter-oid) [Gr. πούς foot + ἀστήρ star + είδος form]. Having a stellate foot or pedicle.

podelkoma (pod-el-ko'mah) [Gr. πούς foot + ἔλκωμα ulcer] Mycetoma; actinomycosis of the foot

podencephalus (pod-en-sel'al-us) [Gr. πούς foot + έγκέφαλος brain] A monster-fetus the brain of which, without cranium, hangs by a pedicle

podiatrist (po-di'at-rist). One who practices podiatry; a chiropodist.

podiatry (po-di'at-re) [Gr. πούs foot + laτρεῖα healing]. That branch of medicine which has to do with the treatment of diseases of the feet and toes; chiropody.

podobromidrosis (pod"o-brom-id-ro'sis) [Gr. πούs foot + βρωμοs stench + lδρωs sweat]. Fetid perspiration of the feet.

pododerm (pod'o-derm) [Gr. πούs foot + δέρμα skin]. That portion of the skin which is continued downward within the horn capsule of the hoof of an animal.

pododynamometer (pod"o-di-nam-om'et-er). A device for determining the strength of the leg muscles.

pododynia (pod-o-din'e-ah) [Gr. πούς foot + όδύνη pain]. Neuralgic pain of the heel and sole; burning pain without redness in the sole of the foot: seen in tailors.

podogram (pod'o-gram) [Gr. πούς foot + γράμμα mark] A print of, or an outline tracing of, the sole of the foot.

podograph (pod'o-graf) [Gr. πούs foot + γράφειν to write]. An instrument for making a podogram.

podology (po-dol'o-je) [Gr. $\pi o b s$ foot + $\lambda \delta \gamma o s$ treatise]. The study of the feet.

podophyllin (pod-o-fil'in) [L. res'ina podophyl'li].

The purgative yellow resin of Podophyl'lum pel-ta'tum. Dose, \(\frac{1}{3}-\frac{1}{2}\) gr. (0.008-0.033 gm).

podophylloquercitin (pod"o-fil"o-kwer-si'tin). A crystallizable principle from podophyllum: said to have no remedial value.

podophyllotoxin (pod"o-fil-o-toks'in). A poisonous cathartic resin, $C_{20}H_{15}O_{6}(OCH_{3})_{3} + 1_{3}H_{2}O$, from Podophyl'lum pella'tum. Dose, $\frac{1}{60}$ gr. (0 0011-0 006 gm.).

podophyllous (pod-of'il-us) [Gr. πούς foot +φύλλον leaf]. A term applied to the tissues forming the sensitive wall of the hoofs of animals.

Podophyllum (pod-o-fil'um) [Gr. πους foot + φυλλον leaf]. A genus of berberidaceous plants. The rhizome and roots of *P. pella'lum*, May-apple, or mandrake, contain a resin, podophyllun, and a constituent, podophyllatoxin. It is a cholagogue, laxative, and cathartic, and is used in chronic constipation, torpor of the liver, etc. Dose, 5-20 gr. (0.33-1.33 gm.); of abstract, ½-1½ gr. (0.016-0.066 gm); of extract, ½-1½ gr. (0.033-0.1 gm); of fluidextract, 5-30 min. (0.333-2 c.c.); of tincture, 15-60 min. (1-4 c.c.).

podotrochilitis (pod"o-tro-kil-i'tis) [Gr. ποῦς foot + τροχιλεα pulley + -ιτις inflammation]. Inflammation of the navicular bone of the horse's foot.

pcs. For words thus beginning, see those beginning pe.

pæcilocyte (pe'sil-o-sīt). See poikilocyte.

Poehl's test (pēlz) [Alexander Vasilyevich von Poehl, Russian chemist, born 1850]. See tests.

pogoniasis (po-go-ni'as-is) [Gr. πωγωνίας bearded].
 1. Excessive growth of a beard.
 2. The growth of a beard upon a woman.

pogonion (po-go'ne-on) [Gr. πώγων beard]. The most anterior point of the chin in the middle line.

Pogostemon (po-go-ste'mon). See patchouls.

poikilionia (poi-kil-i-o'ne-ah) [Gr. ποικίλος varied + ion]. Variation in the ionic concentration (inorganic content) of the blood.

poikiloblast (poi'kil-o-blast) [Gr. ποικίλος speckled, varied + βλαστός germ]. A large nucleated red blood-cell of irregular form

poikilocyte (poi'kil-o-sit) [Gr. ποικίλος varied + κύτος cell]. A malformed and oversized non-nucleated red blood-corpuscle: seen in the blood of pernicious and other anemias. See blood.

poikilocythemia (poi-kil"o-si-the'me-ah). Poi-kilocytosis.

poikilocytosis (poi"kil-o-si-to'sis). A condition characterized by the presence of poikilocytes in the blood.

poikiloder'ma atroph'icans vascula're. A rare skin disorder of early adult life marked by mild pruritus, telangiectosis, pigmentation, and later capillary hemorrhages and atrophy.

poikilonymy (poi-kil-on'im-e) [Gr. ποικίλος varied + δνυμα name]. The mingling of names or terms from different systems of nomenclature.

poikilopicria (poi-kil-o-pik're-ah, poi-kil'o-pik-re) [Gr. ποικίλος varied + πικός bitter] Variation in the concentrations of the amons of the blood.

poikiloplastocyte (poi-kil-o-plas'to-sīt) [Gr. ποικίλος varied + plastocyte]. An irregularly shaped blood-plate.

poikilothermal, poikilothermic (poi"kil-other'mal, poi"kil-other'mik) [Gr. ποικίλος varied + θερμη heat]. τ. Having a variable body temperature or one which corresponds to the environment. 2. Capable of enduring marked variations of cold and heat.

poikilothermism (poi"kil-o-ther'mizm) The ability of bacteria, plants, and cold-blooded animals to adapt themselves to the temperature of their environment.

point (point) [L. punc'tum]. 1. A small area or spot; the sharp end of an object 2. To approach the surface, like the pus of an abscess, at a definite spot or place. p. of an abscess, the place at which the pus comes nearest to the surface. alveolar p., the central point of the lower edge of the upper alveolar arch. apophysiary p. 1. The midpoint of the lower border of the anterior nares. Called also spinal p and sub-nasal p. 2. See Trousseau's apophysiary p's auricular p., the center of the opening of the external auditory meatus **Barker's p.**, a point one and one-fourth inches above and one and one-fourth inches behind the middle external auditory meatus. It is the proper spot to apply the trephine in abscess of the temporosphenoid lobe. **Boas's p.**, a tender area to the left of the twelfth thoracic vertebra in patients with gastric ulcer **boiling-p.**, the temperature or point on the thermometer at which a liquid will boil. Water boils at 100° C, or 212° F. Brewer's p., the point of the costovertebral angle, tenderness over which points to kidney infection Broca's p., the auricular point. Capuron's p's, the iliopectineal eminences and the sacro-iliac joints. cardinal p. 1. Any one of a set of six points of reference in the eye, or of four in the pelvic inlet. They are—(a) the anterior focus, or anterior focal point, whose rays, coming from the retina and parallel to the axis of the eye, are brought to a focus; (b) the posterior focus, or posterior focal point, on the retina, at which rays converge parallel to the axis, and coming from the front of the eye, (c and d) the principal points, in the anterior chamber, behind the cornea and on the optic axis; (e and f) the nodal points, near the posterior surface of the lens 2 Cardinal p's of Capuron, four points within the pelvic inlet—the two sacroiliac articulations and the two iliopectineal emi-Clado's p., a point of special tenderness in appendicitis, situated at the intersection of the right semilunar line by the interspinal line at the external border of the rectus abdominis muscle. **cold p.**, any point on the surface at which hot bodies are not felt to be hot. **cold-rigor p.**, that point of cold temperature at which the activity of a cell ceases. conjugate p's, conjugate foci. See under foci contact p., the point on the surface of a tooth which touches an adjoining tooth. p. of convergence, the conjugate focus to which the light converges. corresponding p's, points upon the two retines whose impressions unite to produce a single perception **craniometric p**., any one of a numerous set of points of reference assumed for use in craniometry. **critical p**. I. The temperature at or above which a gas can no longer be liquefied by pressure alone. 2. The temperature above which a substance can no longer be retained in liquid form by pressure. deaf p., one of certain points near the ear where a vibrating tuning-fork cannot be heard. de Mussy's p., a point, exceedingly painful on pressure,

on the line of the left border of the sternum, on the line of the left border of the sternum, at the level of the end of the tenth rib: it is a symptom of diaphragmatic pleurisy. dew-p., the temperature at which dew begins to be deposited. disparate p's, points on the retina which are not paired exactly. p. of dispersion, in optics, the virtual focus. p. of divergence, the conjugate focus from which the light proper descel. ceeds. dorsal p., a point, tender on pressure, situated between the spinous processes of the vertebræ at the border of the right scapula at the level of the fourth and fifth intercostal space the level of the fourth and first intercostal space at a distance of about 2 or 3 centimeters from the middle line. It is found in hepatic colic. Called also Pauly's p. p. of election, that point at which any particular surgical operation is done by preference. Erb's p., a point two or three centimeters above the clavicle and without the posterior border of the sternomastoid, at the level of the transverse process of the sixth cervical vertebra; stimulation here contracts various arm muscles. eye-p. 1. An eye-spot or occllus. 2. The bright circle seen at the crossing point or nearest the approximation of the rays above the microscopic ocular. far-p., the remotest point at which an object is clearly seen when the eye at which an object is clearly seen when the eye is at rest. fixation-p., that point on the visual axis at which an object is most clearly seen. focal p. See focus and under cardinal p. freezing-p., the temperature at which a liquid begins to freeze that of water is o° C., or 32° F fusing-p. Same as melting-p. glenoid p., the center of the glenoid cavity of the maxilla. Guéneau de Mussy's p. See de Mussy's p. Halle's p., a point on the surface of the abdomen corresponding to the point where the ureter crosses the pelvic brim. It is the point of intersection between a horizontal line connecting the anterior superior iliac spines and a vertical line projected upward from the pubic spine. hot p., any point on the surface at which cold bodies are not felt to be cold. hystero-epileptogenous p., hysterogenic p., a point on which, if presents the public spine and presents and sure be made, a hysteric or hystero-epileptic attack may be produced identical p's, the corresponding points on the retine of the two eyes. p. of incidence. See refraction. iso-electric p., in colloid chemistry, the hydrogen-ion concentration at which minimum dissociation occurs. itchy p's., a condition in which there are points of itching on the skin. Called also puncta pruritisa. jugal p., the point of the angle formed by the masseteric and maxillary edges of the malar bone. jugomaxillary p., the point at the antero-inferior angle of the malar bone. lacrimal p's, the puncta lacrimalia: the outlets of the lacrimal canaliculi. Lanz's p., a point which indicates the position of the vermiform appendix. It is situated on a line connecting the two anterior superior iliac spines one-third of the distance from the right spine. Lian's p., a point at the junction of the outer and middle thirds of a line joining the umbilicus and the left anterior superior iliac spine, the point of election for paracentesis of the abdomen. See *Munro's p*. malar p., a point on the external tubercle of the malar bone. marginal p's, anaplasma marginale. maximum occipital p., the point in the occipital bone furthest from the glabella. McBurney's p., the point of special tenderness in acute appendicitis, and it is situated about 2 inches from the right anterior superior spine of the ilium, on a line between the latter and the umbilicus. It corresponds with the normal position of the appendix. Méglin's p., the point where the palatine nerve emerges from the great palatine foramen. melting-p., the temperature in degrees at which a solid becomes liquefied by heat. mental p., the pogonion. metopic p., the metopion. Morris's p., a point of special tenderness in chronic appendicitis, situated about 2 inches from the navel in a line running thence to the anterior superior iliac spine. motor p. 1. The point at which a

motor nerve enters a muscle. 2. The point wherever, if galvanic stimulation be applied, it will cause contraction of a corresponding muscle. Munro's p., a point midway between the umbilicus and the left anterior iliac spine: usually selected as the point for performing abdominal puncture. See Lian's p. Mussy's p. See de Mussy's p. nasal p. Same as nasion. near-p., the nearest point at which the eye can distinctly perceive an object; the nearest point of clear vision. near-p., absolute, the near-point for either eye alone with accommodation relaxed. near-p., relative, the near-point for both eyes with the employment of accommodation. **nodal** p's, two points situated on the optic axis of a dioptric system: so related that every incident ray which is directed toward the first point is represented after refraction by a ray coming from the second point, and which has a direction parallel to the incident ray occipital p. 1. The posterior point on the occipital bone. 2. The posterior point on the occipital bone. 2. The pointed posterior end of the occipital lobe of the brain. ossification p., the center of ossification in bone. Pagniello's p., a point painful on light pressure when a finger is drawn over the ninth light pressure when a linger is drawn over the ninth left costal interspace in malarial subjects. **painful p.** See Valleix's p's. **Pauly's p.** See dorsal p. **Piersol's p.**, a point indicating the location of the vesical orifice. **pressure unit** a point on the zygoma just in front of the upper end of the tongue. **pressure p.**, a point of extreme sensibility to pressure. **pressure-arresting p.**, a point at which pressure arrests pressure—arciting p. a point of point at which pressure arrests. spasm. pressure exciting p., a point at which pressure produces spasm. principal p's, two points on the optic axis of the anterior chamber of the eye; lines drawn from these to corresponding points on the object and its image are parallel. reflection p., the point from which a ray of light is reflected. refraction p., the point at which a ray of light is refracted. retromandibular tender p., a point behind the superior extremity of the inferior maxilla below the lobule of the ear and in front of the mastoid process. Pressure on this point elicits extreme pain in meningitis. Robson's p., the point of greatest tenderness in gall-bladder inflammation, situated opposite the junction of the mid-dle and lower third of a line drawn from the right nipple to the umbilicus. **Rolando's p's**, the points at the upper and lower ends of the fissure of Rolando. spinal p. Same as subnasal p. stereo-identical p's, points in space outside of the region within which fusion of double images occurs. subnasal p., the central point of the root of the anterior nasal spine. subtemporal p., the point where the sphenotemporal suture and infratemporal crest intersect.
p. of Suedeck, the portion of the rectum between the last sigmoid artery and the bifurcation of the superior hemorrhoidal artery. Ligation of the latter below this point will lead to gangrene of the rectum. supra-auricular p., a point at the root of the zygoma directly above the auricular point. supraclavicular p., a point above the clavicle and outside of the sternomastoid where the application of a stimulus causes contraction of the biceps, deltoid, brachialis anticus, and supinator longus muscles. **supranasal p.**, the middle point of the transverse supra-orbital line. **supra**orbital p., in neuralgia, a tender spot just above the supra-orbital notch. sylvian p., a point on the surface of the skull from 29 to 32 millimeters behind the external angular process. Trousseau's apophysiary p's, points sensitive to pressure along the dorsal and lumbar vertebræ in certain cases of neuralgia. vaccine-p., a piece of bone or quill one end of which is coated with vaccine lymph. Valleix's p's, pointes douloureux: tender points on the course of certain nerves in neuralgia. vital p., a point in the medulla oblongata, at the respiratory center, puncture of which causes immediate death. Vogt's p., a

A TABLE OF POISONS AND POISONING.

| Daug. | GENERAL SYMPTOMS. | Antidotes and Treatment. |
|--|---|---|
| Acetanilid. Acid, Acetic | Sweating; cyanosis; soft, weak pulse; hemoglobin and hematin in urine. Similar to those caused by the mineral acids. | Heat; stimulants; strychnin; belladonna; oxy- gen inhalations. Alkalies, such as sodium and potassium bicar- |
| (vinégar) | | bonates; magnesia and soap; flaxseed-tea; milk or large quantities of warm water; olive oil. |
| Acid, Carbolic. Creosote. | Gastro-enteritis. Violent vomiting and purging, burning pain over entire abdomen; skin covered with sweat; face pinched and anxious; thready, imperceptible pulse; great dyspnea; coma; contracted pupil; sometimes convulsions; collapse. | The soluble sulphates, chiefly Epsom and Glauber salts; mucilaginous drinks; hot application to the skin, counterirritation over the abdomen; respiratory and cardiac stimulants; strychnin and digitalis; hypodermic injections of ether and dilute sulphuric acid. |
| Acid, Chromic. | Pain in abdomen; purging; vomiting, yellow stains, collapse. | Stomach-pump; chalk, milk, or albumin; muci- laginous drinks. |
| Acid, Hydro- chloric (muri- atic acid). | Violent gastro-enteritis. | Alkalies, soaps, oils, and white of egg. |
| Acid, Hydrocy- anic (prussic acid). | Difficult respiration, expiration being prolonged; slow cardiac action and disturbed cerebration, followed by convulsions, unconsciousness, wild cries, dilated pupils, vomiting, involuntary urination and defection, erection of penis, ejaculation of semen, asphyxia, cyanosis, paralysis, and general collapse. | No known antidote. General stimulation; atro- pin hypodermically; ammonia by inhalation, by the mouth, or intravenously, artificial res- piration; alternate cold and hot douches to the chest. |
| Acid, Nitric. | Violent gastro-enteritis. Tissues stained deep yellow. | Alkalies; chalk, magnesia, whitewash, and soap. |
| Acid, Nitromu- riatic (nitro- hydrochloric acid). | Similar to preceding. Tissues stained yellow. | Similar to preceding. |
| Acid, Oxalic. | Burning in the esophagus, followed by gastric irritation, intense abdominal pain, vomiting of highly acid, greenish, blackish-brown, or bloody mucus, livid surface, cold skin, stupor, collapse, and sometimes convulsions. | salts of potassium and sodium, as they form soluble oxalates. Apply general treatment for |
| Acid, Sulphuric (oil of vitriol). | If protracted, pain in the mouth, throat, and epi- gastrium, violent vomiting, often of blackish matters, cold extremities, clammy skin, sup- pression of the voice; swelling of the parotid glands, profuse salivation, which is sometimes bloody, followed by symptoms of general col- lapse. Tissues affected stained black. | |
| Acid, Tartaric. | Gastro-enteritis. | Alkalies; magnesia, lime, carbonate of sodium or potassium, soap. The after-treatment is that of gastro-enteritis. |
| Aconite. | Tingling in throat and extremities, marked general relaxation, anesthesia of surface, pulse slow, weak, intermittent, respiration shallow, slow, feeble, skin covered with cold sweat; countenance pale, anxious, protrusion of eyes, pupils generally dilated, diplopia; often loss of voice and sight, sometimes gastric burning and convulsions; consciousness may be preserved, body temperature lowered. | ally digitalis. Place patient in prone position and absolute quiet, head lower than feet. Endeavor to wash out stomach, but avoid emetics. External heat, atropin, ammonia, artificial respiration. |
| Alcohol. | General relaxation, stupor, anesthesia, coma; pulse rapid, weak, compressible; skin cool, moist, some unconsciousness, face pallid, body temperature lowered, breathing somewhat stertorous Symptoms resembling opiumpoisoning and apoplexy, sometimes convulsions. | |
| Ammonia. | A local powerful irritant. General gastro-ente- ritis; intense abdominal pain, bloody purg- ing; symptoms of suffocation; convulsions Consciousness is preserved, but stupor or coma may be developed. | edema threatens life, tracheotomy should be instantly performed. Oils, such as linseed, |
| Antimony (tartar emetic). | Weak and slow pulse; skin moist and relaxed, followed by violent gastro-intestinal irritation, vomiting of mucus, bile, watery fluid, and sometimes blood; purging, first of contents of intestines, then mucus, bile, and sometimes blood, followed soon after by peculiar recurater stools. The pulse is then imperceptible at the wrist; the respirations are shallow; the face becomes pinched, livid, and covered with cold sweat; cramps of the leg, accompanied by spots of anesthesia, and great fall of the bodily temperature. The whole symptomatology points to Asiatic cholera, from which the metallic poisoning can only be distinguished by chemical analysis. Sometimes, especially in protracted cases, there may occur tremblings, delirium, unconsciousness, clonic and | infusions of oakbark, galls, etc., followed by ingestion of white of egg. Other measures should consist in placing the patient in a prone position, with the head lower than the feet, general stimulation; application of external heat; ingestion of alcohol, and especially of digitalis hypodermically, as cardiac stimulants; opium, to allay irritation and pain, provided respiration be not feeble. |

A TABLE OF POISONS AND POISONING.—Continued.

| Drug. | GENERAL SYMPTOMS. | ANTIDOTE AND TREATMENT. |
|--|--|--|
| Antipyrin. | Chilliness, profuse perspiration, slight cyanosis, a rash resembling that of measles, headache, nausea, lowering of blood-pressure, respiratory failure. | Stimulants, warmth, atropin, strychnin, inhalations of oxygen, artificial respiration. |
| Apomorphin. | Severe vomiting, delirium, paralysis of motion and sensation, cardiac and respiratory depression. | Stimulants of heart and respiration. |
| Arsenic (arsenous acid; Scheele's green; insect- powder). | Active irritation, accompanied by colicky pains, intense burning of the esophagus and stomach, sense of constitution in the throat and an acrid, metallic taste in the mouth, violent vomiting and purging, matters rejected at first mucous, then bilious, of a yellowish or greensh color. The stools may become finally serous, and not infrequently bloody. Pulse feeble, small, and frequent, respiration rapid, labored, and painful, excessive thirst, suppression of urine, more or less swelling of the face, ice-cold extremities, surface cyanosed, followed by cramps, convulsions, coma, and death. In more or less protracted cases there may appear an eruption upon the skin which is either petechial or urticaiia-like, papular, vesicular, or pustular. | This may be prepared in an emergency by adding ammonia to the tincture of chlorid of iron, and washing the precipitate with water, or Monsel's solution and the so-called dialyzed iron may be employed instead of the tincture. The ferri oxidum hydratum cum magnesia, made by precipitating the solution of the tersulphate of iron by magnesia, is perhaps the best antidote. This should be followed by the administration of castor oil, demulcent drinks, opium, external heat, and stimulants, large draughts of water containing sweet spirit of inter, especially if there be a tendency to suppression of urine |
| Belladonna (atropin). | Dryness of mouth and throat, increased cardiac action, rapid breathing; flushing of face, dilated pupils, wild, talkative delirium, scarlatinous, non-punctated rash, sometimes laryngitis, roughness of voice, with expectoration of minute pearly pellets, then stupor, followed by paralysis, cold extremities, retention of urine. | Exacuation of stomach, early use of catheter, tannic acid, external heat, stimulation by mustard, pilocarpin best physiologic antidote, caffein, physostigma, alternate cold and hot douches, artificial respiration. |
| Bloodroot. Caffein. | See Sanguinaria. Burning in throat, vertigo, nausea, faintness, and numbness, thirst, parched tongue, abdominal pain, tremor, weak pulse, cold skin, collapse. | Emetics, heat, stimulants, atropin, and morphin. |
| Calabar bean (physostig-ma). | Giddiness, muscular tremors, complete muscular relaxation, pupils contracted, respiration slow, irregular, loss of reflexes, vomiting and purging, but both often absent. | Evacuate stomach, atropin best physiologic antidote, external heat, stimulants, artificial respiration. |
| Calçıum (slaked lime). | 1 | Similar to the preceding, with the ingestion of milk and mucilaginous drinks. |
| Camphor. | Burning pain in abdomen, vertigo; prostration, cyanosis, delirium; convulsions, quick, weak pulse; clammy skin; odor of camphor. | Emetics, heat, stimulants, alcohol. |
| Cannabis indi- ca (Indian hemp). | Sense of exhibitantion, peculiar prolongation of time and sense of double consciousness, followed by drowsiness, anesthesia, loss of power, especially of lower extremities; pupils dilated, rapid pulse, slow breathing; sometimes convulsions. | General stimulation, belladonna or atropin; artificial respiration. |
| Cantharides (Spanish flies). | Violent gastro-enteritis, burning sensation in pharynx and esophagus with sense of constric- tion of throat, burning pain in back, bladder, and urethra, priapism, often great thist, ves- ical tenesmus, scanty, bloody urine, some- times sloughing of genital organs, stupor, coma, sometimes violent delirium and tetanic convulsions | No known antidote, evacuate stomach, albuminous or mucilaginous drinks avoid oily substances, opiates to lessen irritation and pain, leeches to epigastiium, anesthetics |
| Carbon Dioxid. | Vertigo, headache, cyanosis, sleepiness; coma. | Artificial respiration, oxygen-inhalations, counter-irritation, electricity. |
| Chloral. | Complete muscular relaxation, followed by sleep and coma, respiration slow, shallow, feeble, labored; pulse slow, then rapid and thready; face white, livid, covered with cold sweat, pupils contracted, then dilated, great fall of body-temperature. | Emetics; strychnin, atropin, digitalis, ammonia, ether, alcohol hypodermically Place patient in prone position, with head lower than feet. Kcep patient roused. Artificial respiration; oxygen by inhalation, external heat. |
| Chloroform. | Stertorous, irregular shallow respiration, dilata- tion of pupils during anesthesia, and a pecu- liar shade or cloud passing over the face of patient, are the most dangerous symptoms. | Remove drug, and immediately invert patient alternate hot and cold douches; hypodermic injections of strychnin, atropin, and digitalis; electricity and artificial respiration. Avoid subcutaneous injections of ether and alcohol; ammonia instead, hypodermically or intravenously. |
| Cocain. | Vertigo, nausea; faintness; small, rapid pulse; slow respiration, dilated pupil; prostration. | Stimulants; artificial respiration, amyl nitrite. |
| Codein. Colchicum. | See Opium. Gastro-enteritis; profuse salivation; nausea, retching, griping, intense abdominal pain, great tenesmus; violent purging; rapid pulse, then slow, sense of prostration and great weakness, skin cold, pale, bedewed with sweat; spasms frequent; muscular pains and convulsions sometimes, collapse. | Emetics and cathartics; tannic acid; warm water freely; also white of egg; albuminous drinks; demulcents; opium. |

A TABLE OF POISONS AND POISONING .- Continued.

| Drug. | GENERAL SYMPTOMS. | Antidote and Treatment. |
|------------------------------|--|---|
| Conium (hemlock). | Giddiness; staggering; disturbed vision, followed by complete muscular relaxation; nausea, sometimes vomiting; frontal headache; ptosis of eyelids; dilated pupils; pulse slow, then increased; sometimes salivation and sweating. | |
| Copper. | Burning pain in stomach; copperish or metallic taste in mouth, followed by gastro-enteritis, vomiting of bluish liquid, stools consist at first of contents of intestines, becoming then glairy, mucous, or bloody, excessive salivation and bronchial secretion, constant expectoration, epileptiform convulsions, delirium; anesthesia; sometimes syncope and jaundice; lessened amount or suppression of urine, which is sometimes black. | Chemic antidote: the yellow prussiate of potassium. Demulcent drinks; oils, white of egg; milk; if no emesis has occurred, emetics and the stomach-pump; opium to aliay irritation and pain. |
| Corrosive Subli- mate. | See Mercury. | , |
| Creosote. Croton Oıl. | See Acid, carbolic. Those of violent gastro-intestinal inflammation. | Mucilaginous drinks; demulcents; opium, general stimulation. |
| Cyanid of Po- tassium. | See Hydrocyanic Acid | |
| Digitalis (fox-glove). | Violent vomiting of mucus and bile, intense headache, disordered vision, vertigo, salivation, pulse slow, full, strong, dicrotic, becoming weak and rapid on patient rising, although heart beats violently, face pale; blue color of sclevotic, pupils dilated, sometimes contracted (?), eyeballs bulging, diarrhea, suppression of urine, pain in back and limbs, consciousness generally preserved, but late in poisoning dehrium, then stupor, convulsions, and coma. | Tannic acid; then emetics or stomach-pump, aconite, best physiologic antidote, but use cautiously. Place patient in horizontal position, in absolute quiet, opium, external heat, especially about abdomen. |
| Ergot. | Not well defined, but often gastric irritation, thirst, and diarrhea, burning pain in feet, dizziness, tingling of fingers, cramps in all extremities, pupils dilated, pulse small, feeble, marked coldness of surface, sometimes convulsions, miscarriage or abortion in pregnant women. | General stimulation, with application of external heat. |
| Ether. | Cyanosis, pulsation of jugular veins, failure of diaphragmatic action, followed by paralysis of thoracic movements, pulse weak and rapid, respiration shallow, stertorous, labored, great fall of body-temperature, dropping of jaw. | abdomen, external heat, frictions, artificial respiration. <i>Avoid</i> subcutaneous injections of ether and alcohol. |
| Formaldehyd (formalin). | Pain, vomiting, the vomitus being blood-stained and having the odor of formaldehyd, cardiac depression. | Emetic, inhalation of ammonia; hot bath, a few drops of ammonia in water, administration of liquer ammoniæ acetatis |
| Gelsemium (yellow jasmine). | Dropping of jaw, ptosis, sense of languor, drowsuness, great muscular relaxation, pulse rapid, feeble, skin moist, cold, face anxious, loss of voice, respiration slow, labored, impaired sensibility, disturbed vision, which is sometimes double; pupils dilated, great fall of body-temperature. | General, especially cardiac, stimulation, ammonia, digitalis; emetics, stomach-pump; atropin, strychnin; external heat. |
| Hyoscyamus (henbane). | See Belladonna. | I am a granting of starch wheat flour or arrow- |
| um iodid). | Violent gastro-enteritis, vomiting, and purging; metallic taste in mouth, marked salivation, pulse rapid and feeble; face deathly pale; total suppression of urine, sometimes swelling of eyelids, laryngeal pain, excessive thirst, high fever, albuminuria, cyanosis, violent excitement, convulsions, and collapse. | root boiled in water, neerly, emerics, applicas |
| Iodoform. | Drowsiness, slight delirium; rapid pulse; high temperature. | |
| Jaborandi (pilo- carpin). | Vertigo, salivation, profuse sweating, purging, vomiting, contracted pupils, pain in eyeball. | Evacuate stomach, stimulants. |
| Lead. | Sweet, metallic taste in mouth, pain in epigastrium, severe gastro-intestinal irritation, matters vomited white, passages black; sometimes constipation, pulse rapid, tense, cord-like, then weak and relaxed; face anxious, pinched, and livid, excessive thirst, cramps in legs, muscular twitching, vertigo, anesthesia; stupor, convulsions, coma; death. | Soluble sulphates, especially sodium and magnesium, best chemical antidotes. Emetics or stomach-pump; mucilaginous or albuminous drinks; application of external heat; opium to allay irritation. |
| Lobelia. | Great prostration, nausea, vomiting, sometimes violent purging; cold sweating, livid face; skin pale; pulse feeble; sometimes burning in fauces and esophagus; muscular tremblings, convulsions, stupor, coma. | Washing out stomach with solutions of tannic acid; opium to allay irritation and pain; alcohol, ammonia, strychnin, digitalis, hypodermically; external heat. |
| | | |

A TABLE OF POISONS AND POISONING .- Continued.

| Daug. | General Symptoms. | ANTIDOTE AND TREATMENT. |
|---|--|---|
| Mercury (bi- chlorid of, or corrosive sub- limate). | Intense gastro-enteritis; metallic, coppery taste in mouth; sense of constriction in throat; burning pain in esophagus and stomach; colicky pains, diarrhea; vomiting; mucous, bilious, bloody; purging serous, mucous, bloody; much straining; breath fetud; pulse small, frequent, irregular, face pinched, anxious; cold extremittes; convulsions, coma, collapse. If somewhat protracted, petechial eruption upon skin; sometimes febrile reaction. | White of egg freely, followed by stomach-pump to wash out stomach; external heat; cardiac and respiratory stimulants. |
| Morphin. Mushrooms. | See Opium. Abdominal pain, nausea, vomiting, cholera-like purging, with bloody stools. | For Amanita muscaria, hypodermic injections of atropin; for A. phalloides, transfusions of fresh blood or of salt-solution; strychnin and nitroglycerin to support the heart's action. |
| Nicotin. Nitrite of Amyl. | See Tobacco. Great muscular relaxation, with progressive loss of reflexes; yellow vision; marked pallor, pupils dilated, pulse slow, almost imperceptible; respiration irregular, sometimes vomiting and epileptiform convulsions. | General stimulation; strychnin hypodermically; alternate hot and cold douches; digitalis; artificial respiration. |
| Nitrite of Ethyl. Nitrite of Potas- slum. Nitrite of Sodi- | Same as preceding. | Same as preceding. |
| um. Nitroglycerin. | "Queer" sensation in head; giddiness, feeling of constriction in throat, severe headache; pulse irregular, dilated pupils, precordial pain; muscular weakness, urine scanty, pigmented, sometimes nausea and loss of consciousness; other symptoms similar to those peculiar to the nitrites. | Atropin; cold to the head; general stimulation; ergotin (?). |
| Oil of Bitter Almonds. | See Hydrocyanic Acid. | |
| Opium. | At first drowsiness, followed by deep sleep; pulse full, slow, and strong; breathing full; skin warm, dry, pupils contracted. Soon after, face reddened, suffused, or distinctly cyanotic; complete loss of consciousness, breathing stertorous, puffing, then marked cyanosis; respiration very slow, difficult, and not deep, but shallow, general relaxation, skin now bedewed with cold, claiming sweat; pulse rapid and feeble; coma, death. | Unload stomach by emetics, such as mustard, ipecac, or sulphate of copper, use stomach-pump; give tunnic acid freely, strong coffee or caffein; external heat. Keep patient awake by shouting in ear, by walking him, by flagellating with wet towels, or by alternate hot and cold douches. Electricity, respiratory stimulants, atropin, strychnin; cardiac stimulants, alcohol, digitalis, attificial respiration. |
| Phosphorus. | Phosphorous taste in mouth; breath laden with odor of drug; burning pain in esophagus, stomach, and abdomen; gastro-enteritis, matters vomited and purged, mucus, bile, blood, luminous in the dark, often constipation; enlarged liver, jaundice, "coffice-grounds" vomit, bile suppressed at this time, muscular twitchings, headache, vertigo, delirium, erotic convulsions, urine scanty, albuminous, unconsciousness, coma. In women pseudomenstrual discharge, miscarriage, abortion. Whole train of symptoms resembles yellow atropky of liver. | Sulphate of copper, old French oil of turpentine; best of all, perhaps, polassium permunganale, acting as a perfect chemic antidote, o2 to 03 per cent. solution; mucilaginous drinks; emetics, purgatives; opium to allay irritation; fats or oils should not be given. |
| Physostigma. | See Calabar Bean. | |
| Pilocarpin, Quinin, | See Jaborandi, Deafness, blindness; erythematous eruptions; epistaxis, symptoms of congestion. | Tannic acid; general stimulation, alcohol, am- monia, strong coffee; artificial respiration. |
| Sabadilla. | See Veratrum Sabadılla. | T |
| Sanguinaria. | Gastro-enteritis; profuse salivation; violent vomiting and purging; faintness, vertigo, disordered vision, coldness, general insensibility; great thirst; pulse slow; great muscular prostration, dilated pupils; clonic convulsions. | Tannic acid (?); general stimulation, atropin, strychnin, digitalis. |
| Savin. | Abdominal pain, vomiting, tenesmus and bloody stools; convulsions, respiratory disturbances; coma; collapse. | Stomach-pump; castor oil; morphin, abdominal poultices. |
| Silver (salts of). | Diarrhea; pains, vomiting of white, cheesy matter, which turns black in sunlight; dizziness, convulsions; paralysis; coma; respiratory disturbance. | Salt and water; milk in large quantities; evacuate stomach. |
| Stramonium | See Belladonna. | |

A TABLE OF POISONS AND POISONING .- Continued.

| Drug. | General Symptoms. | Antidote and Treatment. |
|--|---|--|
| Strychnin. | Sudden muscular rigidity; stiffness of back of neck; uneasy startings, followed by tetanic convulsions; opisthotonos, feet everted; slight touch or breath of air originates convulsions; complete relaxation between convulsions; rissus sardonicus, corners of mouth drawn back; eyes fixed, widely opened; respiration ceases during convulsion; cramp-like muscular contractions, exceedingly painful; face pale; erections of penis; involuntary defecation and urination; consciousness preserved; lockjaw late in poisoning. | Amyl nitrite by inhalation or hypodermically; tannic acid as chemic antidote in draughts of warm water. After stomach is washed out, bromid of potassium by mouth or by rectum, combined with chloral; Calabar bean; artificial respiration. |
| Tobacco. | Great depression, giddiness, with feeling of intense wretchedness and weakness; skin cold, clammy; pulse rapid, running, finally imperceptible, dyspnea; muscular tremblings, sometimes convulsions. | Wash out stomach; respiratory and cardiac stimulants, atropin, strychnin, digitalis, Hoff- man's anodyne; external heat and rubbings. |
| Turpentine. | Gastro-enteritis, generally preceded by giddiness and a kind of intoxication; strangury, bloody, scanty urine, with odor of violets, cyanosis, skin moist or dry; pupils widely dilated, pulse feeble, rapid. | Sulphates, of magnesium especially; demulcent or albuminous drinks; opium |
| Veratrum Saba- dilla (vera- tria). | Marked loss of muscular power, soon deepening into collapse, skin pale, cold, clammy; face pinched; muscular tremors; violent vomiting, sometimes serous purging; pulse rapid, thready; convulsions resembling those of strychnin, sometimes free diuresis; bodytemperature lowered. | Evacuate stomach; general stimulation, caffein or strong coffee, absolute rest, external heat. |
| Veratrum Viride. | General pronounced muscular relaxation; intense nausea, constant retching, hiccough, faintness; vertigo, pulse at first slow, then rapid, often running, almost imperceptible, disordered vision; skin cold, clammy, semunconsciousness; precordial pain (?), often convulsions. | lower than feet, check vomiting, but patient must not be allowed to rise. Laudanum by rectum, alcohol by mouth, digitalis; strych- |
| Zinc Chlorid, Zinc Sulphate. | Pain in the abdomen, nausea, vomiting, and collapse. | the state of the s |

point at the intersection of a horizontal line, two fingerbreadths above the zygoma, with a vertical line a thumbbreadth behind the ascending sphenofrontal process, here trephination may be performed in traumatic meningeal hemorrhage Called also Vogt-Hueter p. Vogt-Hueter p. See Vogt's p Voillemier's p., a point on the linea alba 61 cm. below the line which joins the anterior superior iliac spinous processes; here the bladder may be punctured in obese or edematous patients. Ziemssen's motor p's, the places of entrance of motor nerves into muscles: they are points of election in the therapeutic application of electricity to muscles.

pointes douloureux (pwahnt doo-loo-ruh'). See Valleix's points, under point.

pointillage (pwahn-te-yahzh') [Fr.]. Massage with the points of the fingers.

Poirier's line (pwah-re-āz') [Paul Poirier, surgeon in Paris, 1853-1907]. See line.

Poiseuille's law, space (pwah-zuhiz') [Jean Marie Poiseuille, physiologist in Paris, 1797-1869]. See law and space.

poison (poi'zn) [L. po'tio draft; tox'icum; Gr. τοξικόν]. Any substance applied to the body, ingested, inhaled, or developed within the body, which causes or may cause damage or disturbance of function. acrid p., irritant p., one which produces irritation or inflammation, as the mineral acids, oxalic acid, the caustic alkalis, antimony, arsenic, barium, the salts of copper, some of the compounds of lead, silver nitrate, the salts of zinc, iodin, cantharides, phosphorus, etc. acronarcotic p., acrosedative p., poisons which produce sometimes irritation, sometimes narcotism (or sedation), or both together. They are chiefly derived from the vegetable kingdom. Stramonium and belladonna are examples of the acronarcotic, and aconite an example of the acrosedative poisons. arrow p., a poisonous sub-

stance used by savages on their arrows. **crowd- p.**, the excrementitious matters contained in the respired air in crowded places. **fatigue p.** See fuligue toxin, under toxin. **fugu p.** See fugotoxin. **hemotropic p.**, a poison which has an especial affinity for the red blood-corpuscles. **microbial p.**, a toxin. **morbid p.**, the poison of a specific disease. **muscle-p.** I. A poison that impairs muscular action or function. 2. A toxic albumin formed during muscular action. **narcotic p's**, such as produce stupor or delirium, as opium, hyoscyamus, etc. **ordeal p.** See ordeal bark. **protein p.**, a highly active poison derived from protein and believed to be a constituent of every true protein. **sedative p's**, those which directly reduce the vital powers, as hydrocyanic acid, potassium cyanid, hydrogen sulphid, and other of the poisonous gases. **vascular p.**, a poison which acts by raising or lowering the blood-pressure.

poisoning (poi'zun-ing). The morbid condition produced by a poison. blood-p. See septicemia. crowd-p., poisoning by crowd-poisons. See under poison. food-p. See sitotorism; also allantiasis, botulism, and meat poisoning. forage p., a disease produced in animals, especially horses, as a result of eating moldy or fermented food. Called also cerebrospinal meningitis. garage p., poisoning by carbon monoxid, which accumulates in the air of closed garages when the engine is run. Called also petromorhis. lead p. See plumbism. loco-p. See locoism. meat p., acute, often severe gastro-enteritis, caused by Bacterium enteritidis or some similar organism. sausage p. See allantiasis and botulism. tetra-chlorethane p., a form of poisoning in munition workers from inhalation of the fumes of tetra-chorethane, characterized by toxic jaundice, head-ache, anorexia, and gastro-intestinal disturbance. T. N. T. p., trinitrotoluene p. See trinitroluene.

poison-ivy. See Rhus toxicodendron.

poison-nut. Nux vomica.

poison-oak. See Rhus toxicodendron.

poison-sumac. See Rhus venenata.

Poisson-Pearson formula (pwah-son'per'son). See under formula.

poitrinaire (pwah-tre-nār') [Fr.]. A patient with a chronic disease of the chest.

poke (pōk). See Phytolacca.

poker-back. Spondylitis deformans.

polar (po'lar) [L. pola'ris; po'lus, Gr. πόλος axis]. Of, or pertaining to, a pole.

polarimeter (po-lar-im'et-er) [polar + Gr. μέτρον measure]. A device for measuring the rotation of polarized light.

polarimetry (po-lar-im'et-re). Measurement of the rotation of polarized light.

polariscope (po-lar'is-kōp) [polar + Gr. σκοπεῖν to view]. An instrument for the measurement of polarized light.

polariscopic (po-lar-is-kop'ik). Pertaining to the polariscope or to polariscopy.

polaristrobometer (po-lar"is-trob-om'et-er). A form of polarimeter used for delicate analyses.

polarity (po-lar'it-e). 1. The fact or condition of having poles. 2. The exhibition of opposite effects at the two extremities. 3. The exhibition, by a nerve, of both anelectrotonus and catelectrotonus. dynamic p., the specialization of a nerve-cell with reference to the flow of impulses

polarization (po"lar-iz-a'shun). 1. The production of that condition in light by virtue of which its vibrations take place all in one plane or else in circles and ellipses. 2. The accumulation of bubbles of hydrogen gas on the negative plate of a galvanic battery, so that the generation of electricity is impeded. circular p., that polarization which causes the vibrations all to take place in circles. elliptic p., that which causes the vibrations to move in ellipses. plane p., the production of such a polarization that the light vibrations are all in one plane. rotatory p., that which rotates the plane in which the vibrations take place.

polarize (po'lar-īz). 1. To endue with polarity.2. To put into a state of polarization.

polarizer (po'lar-i-zer). An appliance for polarizing light.

pole (põl) [L. po'lus; Gr. πόλος]. 1. Either extremity of any axis, as of the fetus or eye-lens.
2. Either one of two points which have opposite physical qualities (electric or other). animal p., the point on the surface of an ovum which contains the most active part of the protoplasm, as contrasted with the vegetative p. anterior p., the front or facial end of the anteroposterior axis of the eye-lens. antigerminal p., the pole of an ovum opposite the germinal pole, at which is located the food yolk. **cephalic p.**, the end of the fetal ellipse at which the head of the fetus is situated. frontal p., the most prominent part of the anterior end of each hemisphere of the brain. germinal p., that pole of an egg at which development begins. lower p., the antigerminal pole. negative p., that electrode (cathode) and the associated apparatus of a galvanic battery which are connected with its electropositive element. north p., that point of a magnetic needle which, when it is freely suspended, will point toward the north. nutritive p., the antigerminal pole. occipital p., the posterior end of the occipital lobe of the brain. pelvic p., the end of the fetal ellipse at which the breech of the fetus is situated. placental p, the pole of the chorion at which a domeshaped placenta is located. positive p., that electrode (anode) and the other conducting apparatus of a galvanic battery which are connected with its electronegative element. DOSterior p., the point on the retina where the optic

axis passes; it is usually between the macula lutea and the optic papilla. **south p.**, that point of a freely suspended magnetic needle which points south. **temporal p.**, the prominent anterior end of the temporal lobe of the brain. **twin p.**, that part of a spiral-fibered nerve-cell from which both the straight and spiral fibers spring. **upper p.**, the germinal pole. **vegetative p.**, that pole at the end of an ovum which contains the food-yolk. **vitelline p.**, the antigerminal pole.

Polemonium (pol-e-mo'ne-um) A genus of herbs; Greek valetian. Some species are said to have the medicinal properties, expectorant and diaphoretic.

polemophthalmia (pol-em-of-thal'me-ah) [Gr. πόλεμυς war + ὀφθαλμός eye]. Military ophthalmia; ophthalmia affecting soldiers.

poleozone (po-le-o'zōn). An agent prepared from potassium chlorate by the action of sulphuric acid: a bactericide and oxidizer.

polewort (pol'wert). Eupatorium urticæfolium.

police (po-les'). In medicine, an organization entrusted with matters affecting the public health, called also sandary police.

policeman's disease (po-lēs'manz). Tarsalgia.

policlinic (pol-e-klın'ik) [Gr. πόλις city + κλίνη bed]. A city hospital, infirmary, or clinic. Cf polyclinic.

poliencephalitis (pol"e-en-sef-al-i'tis) [Gr πολιόs gray + encephalitis] Inflammatory disease of the gray substance of the brain p. acu'ta infan'tum, an acute variety seen in children under six years of age, and marked by fever, vomiting, and convulsions. It is usually followed by permanent paralysis of the limbs, which were affected with convulsions. inferior p., bulbar paralysis, posterior p., inflammation of the gray matter of the posterior part of the fourth ventricle superior p., a hemorrhagic inflammation occurring near the third and fourth ventricles and in the gray matter of the upper part of the spinal cord.

polioencephalitis (pol"e-o-en-sef-al-i'tis). Same as *poliencephalitis*.

as potencepnatures.

policencephalomeningomyelitis (pol''e-o-en-sef"al-o-men-ing"go-mi-el-i'tis). Inflammation of the gray matter of the brain and spinal cord and of the meninges covering it.

policencephalomyelitis (pol"e-o-en-sef"al-o-miel-i'tis). Inflammatory disease of the gray matter of the brain and spinal cord.

polioencephalopathy (pol"e-o-en-sef-al-op'athe) [Gr. πολιός gray + ἐγκέφαλος brain + πάθος disease]. Disease of the gray matter of the brain.

poliomyelencephalitis (pol"e-o-mi-el-en"sef-ali'tis) [Gr. πολιός gray + μυελός marrow + ἐγκέφαλος brain]. Poliomyelitis combined with poliencephalitis.

poliomyelitis (pol"e-o-mi-el-i'tis) [Gr. πολιός gray + μυελός marrow]. Inflammation of the gray substance of the spinal cord. acute anterior p., an acute infectious disease affecting children, usually about the period of the first dentition I t comes on suddenly, often with fever, and is attended with motor paralysis and atrophy of groups of muscles, ending in contraction and permanent deformity. It is caused by a filtrable virus, but the mode of transmission of the organism has not yet been definitely determined. Called also infantile paralysis, epidemic infantile paralysis, acute wasting paralysis, essential paralysis of children, Heine-Medin discase, and acute atrophic paralysis. p. anterior, inflammation of the anterior horns of the gray substance of the spinal cord. ascending p., a paralytic affection which is first manifested in the legs and rapidly ascends cephalad The patient may recover with damaged muscles, but involvement of the muscles of respiration and deglutition may prove fatal. chronic p., progressive muscular atrophy. chronic anterior p., muscular atrophy of neck

939

and upper extremities with periods of improvement. **metallic p.,** paralysis and muscular atrophy due to metallic poisoning.

poliomyeloencephalitis (pol"e-o-mi"el-o-ensef-al-i'tis) [Gr. πολιός gray + μυελός marrow + ἐγκέφαλος brain + -ιτις inflammation]. Inflammation of the gray matter of brain and spinal cord, causing infantile cerebrospinal paralysis

poliomyelopathy (pol"e-o-mi-el-op'ath-e) [Gr. πολιός gray + μυελός marrow + πάθος disease]. Any disease primarily affecting the gray matter of the spinal cord.

polioneuromere (pol"e-o-nu'ro-mēr) [Gr. πολιός gray + νεθρον nerve + μέρος part]. One of the primitive segments of the gray matter of the spinal cord.

polioplasm (pol'e-o-plazm) [Gr. πολιός gray + πλάσμα plasm]. The internal, granular protoplasm proper of a cell.

poliosis (pol-e-o'sis) [Gr. πολιός gray]. Premature grayness of the hair.

Polish plait (po'lish). See plica polonica.

Politzer's bag, cone, speculum, test, etc. (pol'its-erz) [Adam Politzer, Austrian otologist, 1835-1920]. See under the nouns.

politzerization (po"lit-zer-iz-a'shun) [Adam Politzer, an Austrian otologist]. The inflation of the middle ear by means of a Politzer bag. See under bag. negative p., suction of secretion from a cavity by means of a Politzer bag

poll (pōl) The back part of the head, especially such part of an animal p.-evil, an abscess behind the ears of a horse.

pollaccine (pol-ak'sin). A pollen vaccine for hayfever.

pollakiuria (pol"ak-e-u're-ah) [Gr πολλάκ s often + οὖρον urine]. Unduly frequent passage of the urine.

pollantin (pol-an'tin). An antitoxin derived from the blood of horses by inoculating them with the toxin of the pollen of certain plants; used in hay-fever (Dunbar and Weichardt, 1903).

pollenogenic (pol"en-o-jen'ik) [pollen + Gr. γεννᾶν to produce] Caused by the pollen of plants.

pollenosis (pol-en-o'sis). Hay-fever.

pollex (pol'eks), pl. pol'lices. Latin for thumb.
p. exten'sus, backward deviation of the thumb.
p. flex'us, permanent flevion of the thumb.
p. pe'dis, the great toe; hallux.
p. val'gus, deviation of the thumb toward the ulnar side.
p. va'rus, deviation of the thumb toward the radial side.

pollinosis (pol-in-o'sis). Hay-fever. See under fever.

pollodic (pol-o'dik) [Gr. πολλοί many + δδός way]. Same as panthodic.

pollopas (pol'o-pas). A glass which is more penetrable than flint glass to ultraviolet and ultrared

pollution (pol-u'shun) [L. pollu'tio]. 1. The act of defiling or making impure 2 The discharge of semen without coition. nocturnal p., the discharge of semen during sleep. self-p., voluntary pollution; masturbation.

polocyte (po'lo-sit) [Gr. πόλος pole + κύτος cell]. See polar body, under body.

polonium (po-lo'ne-um) [L. Polo'nia Poland]. A rare metal resembling bismuth, discovered in 1898 in pitchblende. It has radiant properties like those of radium, but is less active.

poltophagy (pol-tof'aj-e) [Gr. πόλτος porridge $+ \varphi a \gamma \epsilon \hat{\imath} \nu$ to eat]. Thorough chewing of the food so that it becomes reduced to a porridge-like mass.

polus (po'lus) [L. a "pole"]. p. ante'rior len'tis. See anterior pole, under pole. p. poste'rior len'tis. See posterior pole, under pole.

poly (pol'e). A polymorphonuclear leukocyte.

poly- [Gr. πολύς many]. A prefix meaning many.

polyacoustic (pol-e-ak-oos'tik) [Gr. πολύς much + άκουστικός relating to hearing]. Increasing or intensifying sound.

polyadenia (pol"e-ad-e'ne-ah) [Gr. πολύς many + άδήν gland]. Same as pseudoleukemia.

polyadenitis (pol"e-ad-en-i'tis) [Gr. πολύs many + άδήν gland]. Inflammation of several or many glands. malignant p., the bubonic plague.

polyadenoma (pol"e-ad-en-o'mah). Adenoma of many glands.

polyadenomatosis (pol"e-ad-en-o-mat-o'sis). Multiple adenomas in a part.

polyadenosis (pol''e-ad-en-o'sis). Disorder of several glands, particularly of several endocrine glands.

polyadenous (pol-e-ad'en-us) [Gr. πολύς many + άδήν gland]. Having or affecting many glands.

polyæmia (pol-e-e'me-ah). See polyemia.

polyæsthesia (pol-e-es-the'ze-ah). See polyesthesia. polyalcoholism (pol-e-al'ko-hol-izm). Intoxication or poisoning by a mixture of different alcohols.

polyalgesia (pol-e-al-je'se-ah) [Gr. πολύς many + ἄλγησις sense of pain]. A condition in which a single pin-prick feels as if several had been made.

polyarteritis (pol"e-ar-ter-i'tis) [Gr. πολύs many + ἀρτηρία artery + -ιτις inflammation]. Inflammation of several arteries at the same time. p. nodo'sa, a disease marked by the development of nodules in the smaller arteries.

polyarthric (pol-e-ar'thrik) [Gr. πολύς many + δρθρον joint]. Pertaining to or affecting many joints.

polyarthritis (pol"e-ar-thri'tis) [Gr. πολύς many + ἄρθρον joint + -ιτις inflammation]. An inflammation of several joints together. chronic villous p., chronic inflammation of the synovial membrane of several joints. p. des'truens, proliferative arthritis. tuberculous p., pulmonary osteo-arthropathy. vertebral p., disease of the intervertebral substance without caries of the bodies of the vertebræ.

polyarticular (pol"e-ar-tik'u-lar) [Gr. πολύs many
 + L artic'ulus joint]. Affecting many joints.

polyatomic (pol"e-at-om'ik) [Gr. πολύς many + ἄτομον atom]. 1. Composed of several atoms.

2 Having more than two hydroxyl groups.

polyavitaminosis (pol"e-av-i-tam-in-o'sis) [Gr. $\pi o \lambda \acute{v}$ s many + atilaminosis]. A deficiency disease in which more than one vitamin is lacking in the diet.

polyaxon (pol-e-aks'on) [Gr. πολύς many + ἄξων axis] A nerve-cell from the horizontal dendrites of which four or more axons or branches are given off.

polyaxonic (pol-e-ak-son'ik). Having several axons.

polyazin (pol-e-az'in). An organic chemic compound whose molecules contain atoms two or more of which are nitrogen.

polybacterium (pol"e-bak-te're-um). A small oval bacillus thought by some to be the cause of whooping-cough. The ends of the bacillus stain more deeply than the center. See Hemophilus pertussis.

polybasic (pol-e-ba'sik) [Gr. πολύς many + βάσις base]. 1. Noting any acid which has several hydrogen atoms replaceable by a base. 2. Noting any salt of a polybasic acid formed by replacing some or all of its hydrogen atoms by a base.

polyblast (pol'e-blast) [Gr. $\pi o \lambda i s$ many $+ \beta \lambda a \sigma \tau i s$ germ]. Maximow's name for a large mononuclear phagocytic cell with a deeply staining nucleus of irregular form originating from wandering cells of the tissues. Cf. endothelwoyte.

polyblennia (pol-e-blen'e-ah) [Gr. πολύς much + βλέννα mucus]. The secretion of an excessive quantity of mucus.

polycardia (pol-e-kar'de-ah) [Gr. πολύς many + καρδία heart]. Same as tachycardia.

polycentric (pol-e-sen'trik). Having many centers.

polyceptor (pol-e-sep'tor) [Gr. πολύς many + ceptor]. An amboceptor which is capable of binding a number of different complements.

polycheiria (pol-e-ki're-ah) [Gr. πολύς many + χείρ hand]. The condition of having a supernumerary hand.

polychloral (pol-e-klo'ral). See hydronal.

polycholia (pol-e-ko'le-ah) [Gr. πολύς many + χολή bile]. Excessive flow or secretion of bile.

polychrest (pol'e-krest) [Gr. $\pi \circ \lambda b$ s many $+ \chi \rho \eta \sigma \tau \delta s$ useful]. r. Useful in many conditions. 2. A remedy useful in many diseases.

polychromasia (pol-e-kro-ma'ze-ah). Same as polychromatophilia.

polychromate (pol-e-kro'māt). A person who can distinguish many colors.

polychromatia (pol"e-kro-ma'she-ah). Polychro-matophilia.

polychromatic (pol"e-kro-mat'ik) [Gr. πολύs many + χρῶμα color]. Exhibiting many colors.

polychromatophil (pol"e-kro-mat'o-fil) [Gr. πολύs many $+ \chi ρ \hat{\omega} μ α$ color $+ \varphi ι λ ε \hat{\iota} ν$ to love]. τ. Stainable with many kinds of colors or stains. 2. A cell or other element that is stainable with various stains or colors.

polychromatophilia (pol-e-kro"mat-o-fil'e-ah).

1. The quality of being stainable with various stains or tints; affinity for all sorts of stains—a condition seen in the diseased red blood-corpuscle, its normal affinity being for acid stains only. It is characterized by a dirty blue to brownish color of the stained cells.

2. An accumulation of polychromatophils.

polychromatophilic (pol-e-kro"mat-o-fil'ik) [Gr. πολύς many $+ \chi \rho \hat{\omega} \mu a$ color $+ \varphi \iota \lambda \epsilon \hat{\iota} \nu$ to love]. Stainable with various colors or stains.

polychromatosis (pol"e-kro-mat-o'sis). Same as polychromatophilia (2d def.).

polychromemia (pol-e-kro-me'me-ah) [Gr. πολύs many + $\chi \rho \hat{\omega} \mu \alpha$ color + $\alpha I \mu \alpha$ blood]. Increase in the coloring-matter of the blood

polychromia (pol-ik-ro'me-ah) [Gr. πολύς many $+ \chi \rho \hat{\omega} \mu \alpha$ color]. Increased or abnormal pigment-formation.

polychromic (pol-e-kro'mik). Exhibiting several colors.

polychromophil (pol-e-kro'mo-fil). Polychromat-

ophil. polychromophilia (pol"e-kro-mo-fil'e-ah). Poly-

chromatophilia. **polychylia** (pol-e-ki'le-ah) [Gr. πολύς much + κύλος chyle]. Excessive production of chyle.

polyclinic (pol-e-klin'ik) [Gr. πολύς many + κλίνη bed]. 1. Not limited in the range of diseases treated. Cf. policlinic. 2. A hospital and school where diseases and injuries of all kinds are studied and treated clinically.

polyclonia (pol-ik-lo'ne-ah) [Gr. πολύς many + κλόνος clonus]. A disease marked by many clonic spasms, resembling tic and chorea, but distinct from either.

polycoria (pol-e-ko're-ah) [Gr. πολύς many + κόρη pupil]. The existence of more than one pupil in an eye.

polycrotic (pol-e-krot'ik) [Gr. πολύς many + κρότος stroke]. Having several secondary waves to each pulse-beat.

polycrotism (pol-ik'ro-tizm). The fact or quality of being polycrotic.

polycyesis (pol'e-si-e'sis) [Gr. πολύς many + κύησις pregnancy]. Multiple pregnancy.

polycystic (pol-e-sis'tik)[Gr. πολύs many + κύστις cyst]. Containing or made up of many cysts.

polycythemia, polycythemia (pol"e-si-the meah) [Gr. πολύς many + κύτος cell + αίμα blood]. Excess in the number of red corpuscles in the blood. chronic splenomegalio p., a condition marked by the general redness or cyanosis of the skin, polycythemia, high blood-pressure, and enlargement of the spleen. The disease extends over many years, and gradually asthenia, edema, cardiac dilatation, and albuminuria appear. See erythemia. p. hyperton'ica, a condition marked by polycythemia without enlargement of the spleen, but with hypertrophy of the heart and heightened blood-pressure. Called also Geisback's disease. myelopathic p. See erythemia. relative p., relative excess in the number of red blood-corpuscles resulting from loss of the fluid parts of the blood. p. ru'bra, erythemia. p. ve'ra. See erythemia.

polycytosis (pol-e-si-to'sis) [Gr. πολύs many + κύτος cell]. Abnormal increase in the cells of the blood, both erythrocytes and leukocytes, the plasma being reduced in volume.

polydactylism (pol-e-dak'til-izm) [Gr. πολύs many + δάκτυλος finger]. The occurrence of more than the usual number of fingers or toes.

polydipsia (pol-e-dip'se-ah) [Gr. πολύς much + δίψα thirst]. Excessive thirst. p. ebrio'ria, a craving for intoxicant liquors.

polydispersoid (pol-e-dis-per'soid). A colloid in which the disperse consists of particles having different degrees of dispersion.

polyembryony (pol-e-em-bri'o-ne) [Gr. πολύs much + embryo]. The production of more than one individual from a single fertilized egg.

polyemia, polyemia (pol-e-e'me-ah) [Gr. πολίς much + αίμα blood]. Excess in the quantity or amount of blood in the body. p. aquo'sa, excess in the volume of the blood due to the drinking of much water. p. hyperalbumino'sa, an excess of albumin in the blood-plasma. p. polycythæm'ica, that which is characterized by an absolute increase in the number of red corpuscles in the blood. p. sero'sa, a condition in which the amount of blood-serum is increased, sometimes due to the injection of serum into the blood-vessels.

polyerg (pol'e-erg) [see *polyergic*]. A monogenic antiserum which reacts with heterologous antigens.

polyergic (pol-e-er'jik) [Gr. πολύς many + ἔργον work]. Able to act in several different ways.

polyesthesia, polyesthesia (pol'e-es-the'ze-ah) [Gr. πολύς many + αἰσθησις sensation]. A comdition in which a single object seems to be felt in several different places.

polyesthetic (pol'e-es-thet'ik). Pertaining to or affecting several senses or sensations.

polyformin, insoluble (pol-e-for'min). A brown-yellow, amorphous compound of resorcinol and formaldehyd a bactericide. Besides this, other insoluble polyformins can be formed. soluble p., a compound of resorcinol and hexamethylene tetramin, (CH₂)₆N₄ + 2C₆H₄(OH)₂, in white crystals. used in skin diseases, and internally as a diuretic and antiseptic.

Polygala (po-lig al-ah) [Gr. πολύς many + γάλα milk]. A genus of plants (milkworts) of many species. See Senega.

polygalactia (pol"e-gal-ak'she-ah) [Gr. πολύς much + γάλα milk]. An excessive secretion of milk.

polygalin (pol-ig'al-in). A bitter substance, one of the active principles of senega (*Polyg'ala sen'-ega*). Called also polygalic acid. Dose, ½ r gr. (0.016-0.066 gm.).

polyganglionic (pol"e-gang-le-on'ik) [Gr. πολ is many + γ άγγλιον ganglion]. 1. Having or pertaining to several or many ganglia. 2. Affecting several lymphatic glands.

polygastria (pol-e-gas'tre-ah) [Gr. πολύς much + γαστήρ stomach]. Excessive secretion of gastric juice.

polygen (pol'e-jen). 1. An element which is able to combine in two or more proportions. 2. An anti-

- serum which has been produced by the use of more than one antigen.
- polyglandin (pol-e-glan'din). A proprietary pluriglandular extract of thyroid, pituitary, ovary, and testis.
- polyglandular (pol-e-glan'du-lar). Affecting many glands. p. syndrome. See under syndrome.
- polyglobulia (pol"e-glo-bu'le-ah). Polyglobulism.
- polyglobulism (pol-e-glob'u-lizm) [Gr. πολύς much + globule]. Abnormal increase of the red corpuscles of the blood.
- polyglobuly (pol-e-glob'u-le). Polyglobulism.
- polygnathus (pol-ig'na-thus) [Gr. πολύς many + γνάθος jaw]. A double monster-fetus united at the jaws.
- Polygonatum (pol-ig-o-na'tum) [Gr. πολύs many + γόνν knee]. A genus of liliaceous plants called Solomon's-seal. Several of the species are tonic, vulnerary, diuretic, and purgative. in a considerable dose they are cardiant poisons. Dose of fluidextract of *P. biflo'rum*, 10-30 min. (0.66-2 c.c.).
- **Polygonum** (po-lig'on-um) [L.; Gr. $\pi o \lambda b s$ many $+ \gamma \omega \nu l a$ angle]. A genus of plants of many species: many of them are astringent, diuretic, and stimulant. **P. cuspida'tum**, a wild plant of Japan and China possessing purgative properties. *P. hydrop'iper*, waterpepper, or smartweed, is valued in domestic practice. Dose of fluidextract, 10-60 min. (o 666-4 c.c.).
- polygram (pol'e-gram). A tracing made by a polygraph.
- **polygraph** (pol'e-graf) [Gr. πολύs many $+ \gamma \rho \dot{\alpha} \varphi \epsilon \iota \nu$ to record]. Mackenzie's instrument for making simultaneous tracings on the same recording surface of any two of the following: the arterial pulse, the jugular pulse, the apex-beat, and the respiratory movements.
- **polygyria** (pol-e-jir'e-ah) [Gr. πολύς many + γῦρος gyrus] A condition in which there is more than the normal number of convolutions in the brain.
- polyhæmia (pol-e-he'me-ah). Same as polyemia. polyhedral (pol-e-he'dral) [Gr. πολύς many + ξδρα seat, base]. Having many faces or sides.
- polyhidrosis, polyidrosis (pol"e-hid-ro'sis, pol"e-id-ro'sis) [Gr. πολύς much + lδρώς sweat]. 1.
 Excess in the secretion of sweat. 2. Miliary fever, or sweating sickness.
- polyhybrid (pol-e-hi'brid). A hybrid whose parents differ from each other in more than three characters.
- polyhydramnios (pol"e-hi-dram'ne-os) [Gr. πολύς much + ὕδωρ water + ἀμνίον amnion]. Excess in the amount of the liquor amnii in pregnancy.
- polyhydruria (pol''i-hi-dru're-ah) [Gr. πολύς many + ὕδωρ water + οὖρον urine]. Abnormal dilution of the urine.
- polyidrosis (pol-e-id-ro'sis). Polyhidrosis.
- polyinfection (pol-e-in-fek'shun) [Gr. πολύς many + infection]. Infection with more than one organism.
- polykaryocyte (pol-e-kar'e-o-sīt) [Gr. πολύς many + κάρυον nucleus + κύτος cell]. A giant cell containing several nuclei. These cells are now called osteoclasts.
- polylaktol (pol-e-lak'tol). A proprietary lactagogue, being a mixture of iron-somatose with carbohydrates, maltose, and galactose.
- **polyleptic** (pol-e-lep'tik) [Gr. πολύς many + λαμ-βάνειν to seize]. Having many remissions and exacerbations.
- polymastia (pol-e-mas'te-ah) [Gr. πολύς many + μαστός breast]. The presence of more than two mammæ, or breasts: incorrectly used as a synonym of polythelia.
- Polymastigina (pol-e-mas-tig-i'nah). An order of the Flagellata the members of which possess three

- to eight flagella. It includes the trichomonads and Giardia.
- **polymastigote** (pol-e-mas'tig-ōt) [Gr. π ολύς many + μ άστιξ iash]. Having several flagella.
- polymazia (pol-e-ma'ze-ah). Same as polymastia; polymelia (pol-e-me'le-ah) [Gr. πολύs many + μέλος limb]. The monstrosity or variety of teratism exhibited by a polymelus; the presence of supernumerary parts.
- polymelus (pol-im'el-us) [Gr. πολύς many + μέλος limb]. A monster-fetus with more than the normal number of limbs.
- **polymer** (pol'im-er) [Gr. πολύς many + μέρος part]. Any member of a series of polymeric substances.
- polymeria (pol-e-me're-ah) [Gr. πολύς many + μέρος part]. The presence of supernumerary parts or organs of the body.
- polymeric (pol-e-mer'ik). 1. Characterized by polymerism. 2. Concerned with, derived from, or pertaining to, several pigments.
- polymerid (pol-im'er-id). A substance characterized by polymerism; a polymer.
- polymerism (pol-im'er-izm) [Gr. πολύς many + μέρος part]. I. Isomerism in which the molecular weights of members of the series are in numbers which are multiples of each other. 2. Same as polymeria.
- **polymerization** (pol-e-mer-iz-a'shun). Chemical union of two or more molecules of a substance to form a new compound without the elimination of a secondary compound.
- **polymerize** (pol-im'er-īz). To change or to become changed into a polymeric form.
- polymicrobial, polymicrobic (pol"e-mi-kro'be-al, pol"e-mi-kro'bik) [Gr. $\pi o \lambda \dot{\nu}_s$ many + microbe]. Characterized by the presence of various species of microbes.
- polymicrolipomatosis (pol-e-mi"kro-lip-o-mat-o" sis) [Gr. $\pi o \lambda b$; many $+ \mu i \kappa \rho o$; small $+ \lambda i \pi o$; fat]. The presence in the subcutaneous tissue of numerous small fatty tumors.
- **polymicrotome** (pol-e-mi'kro-tōm) [Gr. πολύς many + microtome]. A microtome which cuts several sections at once.
- polymitus (po-lim'it-us) [Gr. πολύς many + μίτος thread]. An animal microorganism, or stage, of various forms, provided with thread-like filaments or with buds, or both. Forms of polymitus have been observed within the Gymnosporidia, the blood-parasites of birds, and of human malaria. The nature and functions are undetermined.
- Polymnia (po-lim'ne-ah) [Gr; one of the Muses]. A genus of composite-flowered plants. *P. uveda'-lia*, leafcup or bearsfoot, is anthelmintic, alterative, and antispasmodic. Dose of fluidextract, 5-10 min. (0.333-0.666 c.c.).
- **polymorph** (pol'im-orf). A polymorphonuclear leukocyte.
- polymorphic, polymorphous (pol-e-mor'fik, pol-e-mor'fix) [Gr. πολύς many + μορφή form]. Occurring in several or many forms.
- **polymorphism** (pol-e-mor'fizm) [Gr. πολύς many $+ \mu \rho \rho \varphi \eta$ form]. The quality or character of being polymorphous; occurrence in various forms.
- polymorphocellular (pol"e-mor-fo-sel'u-lar) [Gr. πολύς many + μορφή form + L. cel'lula cell]. Having cells of many forms.
- polymorphocyte (pol-e-mor'fo-sit). Same as my-elocyte.
- polymorphonuclear (pol"e-mor-fo-nu"kle-ar) [Gr. πολύς many + μορφή form + nucleus]. Having nuclei of many forms, as certain leukocytes.
- polymorphous (pol-e-mor'fus). Polymorphic.
- polymyerial (pol-e-mi-e're-al). A type of arrangement of the muscular system in the Nematoda. The muscle-cells or plates are numerous, irregular, and penetrate into the parenchyma.

polymyoclonus (pol"e-mi-ok'lo-nus) [Gr. πολύς many + μῦς muscle + κλόνος clonus]. 1. A fine or minute muscular tremor. 2. Polyclonia.

polymyositis (pol"e-mi-o-si'tis) [Gr. $\pi o \lambda \dot{v}s$ many $+ \mu \hat{v}s$ muscle]. Inflammation of several or many muscles at once. It is attended by pain, tension, edema, deformity, insomnia, and sweats **p.** hemorrha'gica, inflammation of muscles associated with edema, dermatitis, and the presence of hemorrhages into and between the muscles.

polynesic (pol-e-ne'sik) [Gr. π ολύς many + ν η̂σος island]. Multiple and insular; occurring in many foci.

polyneural (pol-e-nu'ral) [Gr. πολύς many + νεῦρον nerve]. Pertaining to or supplied by several nerves.

polyneuric (pol-e-nu'rik). Having many neurons.**polyneuritic** (pol-e-nu-rit'ik). Pertaining to or affected with polyneuritis.

polyneuritis (pol''e-nu-ri'tis) [Gr. πολύs many + νεῦρον nerve]. Inflammation of many nerves at once, multiple neuritis acute infectious p., a disease beginning with febrile symptoms and followed by suddenly developing wide-spread bilateral paralysis of the face, trunk, and proximal segments of the limbs. p. gallina'rum, a form of polyneuritis seen in fowls after feeding with peeled grain. p. potato'rum, a chronic neuritis resulting from the excessive use of alcoholic stimulants. Called also alcoholic neuritis and pseudotabes

polynuclear (pol-e-nu'kle-ar). 1. Having several nuclei. 2. A leukocyte having several nuclei.

polynucleated (pol-e-nu'kle-a-ted). Same as polynuclear.

polynucleolar (pol-e-nu-kle'o-lar). Having several nucleoli.

polynucleosis (pol''e-nu-kle-o'sis). The presence of a large number of polynuclear cells in the blood or in an exudate.

polynucleotid (pol-e-nu'kle-o-tid). A nucleotid made up of four mononucleotids, q. v. It is a nucleic acid.

polyodontia (pol"e-o-don'she-ah) [Gr πολύς many + δδούς tooth]. The presence of supernumerary teeth.

polyonychia (pol"e-o-nik'e-ah) [Gr. πολύς many + ὄνυξ nail]. The occurrence of supernumerary nails.

polyopia, **polyopsia** (pol-e-o'pe-ah, pol-e-op'se-ah) [Gr. πολύς many + $\delta\psi\iota_{S}$ vision]. The condition in which one object appears as two or more objects. **p. monophthal'mica**, a condition in which an object looked at by one eye appears double.

polyopy (pol'e-o-pe). Polyopia.

polyorchidism (pol-e-or'kid-izm). The presence of more than two testicles

polyorchis (pol-e-or'kis) [Gr. πολ bs many + δρχιs testis]. A person with more than two testicles.

polyorchism (pol-e-or'kizm). Polyorchidism

polyorrhomeningitis (pol-e-or"o-men-in-ji'tis). Same as polyorrhomenitis

polyorrhomenitis (pol-e-or"o-men-i'tis) [Gr. πολύς many + δρδός serum + ὑμήν membrane]. Malignant inflammation of serous membranes; Concato's disease.

polyorrhomenosis (pol-e-or-o-men-o'sis). Polyorrhomenitis.

polyotia (pol-e-o'she-ah) [Gr. $\pi \circ \lambda b$ s many $+ \circ \delta s$ ear]. The presence of more than one ear on one or both sides of the head.

polyp (pol'ip). Same as polypus.

polypapilloma (pol''e-pap-il-o'mah) [Gr. πολύς many + papilloma]. Yaws.

polyparasitism (pol-e-par'is-i-tizm). Infestation by more than one variety of parasite

polyparesis (pol-e-par'es-is) [Gr. πολύς much + παρέσις feebleness]. General paresis.

polypathia (pol-e-path'e-ah) [Gr. πολύs many + παθοs disease]. The presence of several diseases at once.

polypeptid (pol-e-pep'tid). See peptid.

polyperiosti'tis hyperesthet'ica. A chronic disease of the periosteum attended by extreme hyperesthesia of the skin and soft parts.

polyphagia (pol-e-fa'je-ah) [Gr. πολύς much + φαγεῖν to eat].
 1. Excessive or voracious eating.
 Cf. bulimia.
 2. Omnivorousness, craving for all kinds of food.

polyphalangism (pol-e-fal-an'jizm) [Gr. πολ is many + φ άλαγξ phalanx]. Excessive number of phalanges in a finger or toe.

polypharmacy (pol-e-far'mas-e) [Gr. πολύς many + φάρμακον drug] The administration of many drugs together, or of too much medicine.

polyphase (pol'ıf-āz) [Gr. $\pi \circ \lambda bs$ many + phase] Having several phases, containing colloids of several types.

polyphenoloxidase (pol-e-fe"nol-oks'id-ās). An oxidizing enzyme which oxidizes phenols and their amino compounds, but not tyrosin.

polyphobia (pol-e-fo'be-ah) [Gr. πολύς many + φόβος fear]. Morbid dread or fear of many things

polyphrasia (pol-e-fra'ze-ah) [Gr. πολύs much + φράσις speech]. Morbid or insane volubility or loquacity, verbigeration.

polyphyletic (pol"e-fi-let'ik) [Gr. πολύs much + φύλη tribe]. Having several lines of descent. p. theory. See under theory.

polyphyodont (pol-if-i'o-dont) [Gr πολύs many + $\varphi \dot{\nu} \epsilon \iota \nu$ to produce + $\delta \delta o v s$ tooth] Developing several sets of teeth successively throughout life.

polypiform (pol'ip-if-orm). Resembling a polyp. **polyplasmia** (pol-e-plaz'me-ah) [Gr. πολύs much + plusma]. Excessive fluidity of, or excess of, plasma in the blood.

polyplast, polyplastic (pol'e-plast, pol-e-plas'tik) [Gr $\pi o \lambda \dot{v}s$ many $+ \pi \lambda a \sigma \tau \dot{v}s$ molded] 1. Containing many structural or constituent elements. 2. Undergoing many changes of form.

polyplastocytosis (pol-e-plas" to-si-to'sis) [Gr πολύs many + plastocyte]. An increase in the number of blood-plates above normal.

Polyplax (pol'e-plax). A sucking louse of rats and mice. *P. miacan'thus*, a form found but seldom on rats; *P. serra'tus*, a mouse louse, and *P. spinulo'sa*, the common louse of rats

polyplegia (pol-ip-le'je-ah) [Gr. πολύς many + πληγή stroke] Simultaneous paralysis of several muscles.

polypleurodiaphragmotomy (pol-e-plu"ro-di-af-ram-ot'o-me) [Gr. π ολύς many $+ \pi$ λευρά rib + diaphraem + Gr τομή cutting] The operation of resecting several ribs and cutting through the diaphragm for access to the convex aspect of the liver

polyploid (pol'ip-loid). A condition found in some species in which the number of chromosomes in the somatic cells is some multiple (greater than two) of the haploid number. Species may be triploid, tetraploid, pentaploid, hexaploid, heptaploid, or octaploid.

polypnea, polypnea (pol-ip-ne'ah) [Gr. $\pi o \lambda \delta s$ many $+ \pi \nu o \delta a$ respiration]. A rapid or panting respiration.

polypodia (pol-ip-o'de-ah) [Gr. πολύς many + ποῦς foot]. The presence of supernumerary feet.

Polypodium (pol-ip-o'de-um) See penjavar yambi.

polypoid (pol'ip-oid) [polypus + Gr. eldos form].

Resembling a polypus.

polyporous (pol-ip'o-rus). Having many pores.

Polyporus (pol-ip'o-rus) [Gr. $\pi o \lambda \dot{v}$ s many $+ \pi \delta \rho o$ s pore]. A genus of mushrooms, or fungi, of many species See agaric.

polyposis (pol-ip-o'sis). The development of multiple polypi on a part. p. gas'trica, the presence

of multiple polypi on the gastric mucosa. **p. intestina**'lis, a condition in which polypi occur in the intestine and rectum.

polypotome (pol-ip'o-tōm) [polypus + Gr. τέμνειν to cut]. A cutting instrument for removing polypi.

polypotrite (pol-ip'o-trīt) [polypus + L. ter'ere to crush]. An instrument for crushing polypi.

polypous (pol'ip-us). Of the nature of a polypus. polypus (pol'ip-us), pl. pol'ypi [L.; Gr. πολύς many + πούs foot]. A smooth and pedunculated growth from a mucous surface, as of the nose, bladder, rectum, etc. Polypi are either the result of hypertrophy of mucous membrane or else are true tumors. bleeding p., an angioma of the nasal mucosa. blood-p. Same as placental p. bronchial p., a polypus in the bronchial tubes. p. carno'sus, a sarcoma. cellular p., a mucous polypus. p. cys'ticus, p. hydatido'sus, an elongated mucous or polypoid cyst. fibrinous p., an intra-uterine polypus made up of fibrin from retained blood. It may grow from portions of an ovum or from a thrombus at the placental site. **fibrous p.**, a polypus made up mainly of fibrous tissue. **fieshy p.**, a submucous myoma protruding into the uterine cavity. **gelatinous p.** Same as myxoma. **Hoffmann's p.**, a **p.** Same as myxoma. **Hoffmann's p.**, a papillary hypertrophy of the nasal mucosa having something of the appearance of a papilloma. hydatid p., polypus cysticus lipomatous p., a pedunculate lipoma. malignant p., a carcinoma or sarcoma. mucous p. 1 A soft polypus due to local inflammatory hyperplasia of the mucous membrane 2. Λ true myxoma **nasal p.**, a polypus developing in the nasal canal. osseous p., a polypus containing bony tissue. placental p., one derived from a piece of retained placenta. raspberry cellular p., a polypus of the ear made up of berry-like masses with a central pedicle. round-cell p. Same as mucous p. spongy Same as mucous p. tooth p., a polypus growing from the pulp of a carious tooth. **Vas**cular p., a polypoid angioma.

polyradiotherapy (pol"e-ra-de-o-ther ap-e). Treatment with several forms of radiant energy.

polyrrhea, polyrrhea (pol-ir-e'ah) [Gr. πολύς much + ροία flow]. A copious fluid discharge.

polysaccharids (pol-e-sak'ar-idz). A group of carbohydrates which contain more than three molecules of simple carbohydrates combined with each other. They comprise the dextrins, starches, and glycogen; also cellulose, gums, inulin, and pectose.

polysaccharoses (pol-e-sak'ar-o-ses). Polysac-

charids (poi-e-sak ar-o-ses). Polysac

polysarcia (pol-e-sar'se-ah) [Gr. πολύς much + $\sigma \acute{a} \rho \xi$ flesh]. Corpulence or obesity. **p. cor'dis**, cor adiposum.

polysarcous (pol-e-sar'kus). Corpulent; obese; affected with polysarcia.

polyscelia (pol-e-se'le-ah) [Gr. πολύς many + σκέλος leg]. The presence of more than two legs. polyscelus (pol-is'el-us) [Gr. πολύς many + σκέλος

leg] A monster with superfluous legs. **polyscope** (pol'e-skōp) [Gr. πολύs many + σκοπεῖν to view]. Same as diaphanoscope.

polyserositis (pol"e-se-ro-si'tis). General inflammation of the serous membranes.

polysinuitis, polysinusitis (pol''e-sin-u-i'tis, pol''e-si-nus-i'tis) [Gr. $\pi o \lambda bs$ many + sinusitis]. Inflammation of several sinuses at once.

polysolveol (pol-c-sol've-ol). Sodium or ammonium sulphoricinate; a clear, yellow liquid which dissolves large proportions of menthol, phenol, and many other substances.

polysomia (pol-e-so'me-ah) [Gr. πολύς many + $\sigma \hat{\omega} \mu a$ body]. A double or triple condition of the body of a monster-fetus.

polysomus (pol-e-so'mus) [Gr. π ολ θ s many $+\sigma \hat{\omega} \mu \alpha$ body]. A double or triple monstrosity.

polyspermia, polyspermism (pol-e-sper'me-ah,

pol-e-sper'mizm) [Gr. πολύς many + σπέρμα seed].

1. Excessive secretion of semen.

2. The entrance of more than one spermatozoon into the ovum.

polyspermy (pol-e-sper'me). Polyspermia.

polystat (pol'e-stat) [Gr. πολύς many + stat].

An instrument by which the ordinary street current can be transformed so as to furnish galvanic, faradic, and sinusoidal currents.

polystichia (pol-e-stik'e-ah) [Gr. $\pi o \lambda \dot{v}_s$ many + $\sigma \tau \dot{\iota} \chi o_s$ row]. The presence of two or more rows of eyelashes upon a lid.

polysuspensoid (pol-e-sus-pen'soid). A suspensoid in which the particles are of different degrees of dispersion.

polysyphilide (pol-e-sif'il-id). Characterized by many syphilitic lesions.

polythelia (pol-e-the'le-ah) [Gr. πολύs many + $\theta \dot{\eta} \lambda \eta$ nipple]. The occurrence of more than one nipple on a mamma.

polythelism (pol-e-the'lizm). Polythelia.

polytocous (pol-it'o-kus) [Gr. πολύs many + τόκοs birth]. Giving birth to several offspring at one time.

polytrichia (pol-e-trik'e-ah) [Gr. πολύς many + $\theta \rho i \xi$ hair]. Excessive growth or development of the hair.

polytrichosis (pol"e-trik-o'sis). Same as polytrichia.

Polytrichum (pol-it'rik-um) [Gr. πολύς many + θρίξ hair]. A genus of mosses. *P. jumperi'num*, haircap, or juniper moss, is diuretic. Dose of fluidextract, 2-4 fl dr. (8-16 c c).

polytrophia (pol-it-ro'fe-ah) [Gr. πολύς many + τροφή nourishment]. Excessive nutrition.

polytrophic (pol-e-trof'ik). Producing more than one kind of fermentation.

polytrophy (pol-it'ro-fe) Polytrophia.

polytropic (pol-e-trop'ik). Affecting more than one variety of tissue said of certain poisons.

polyuria (pol-e-u're-ah) [Gr. πολύς much + οὖρον urine] Excessive secretion and discharge of urine containing increased amounts of solid constituents p. test. See Albarran's test, under tests.

polyvalent (pol-iv'al-ent). Same as multivalent.

pomade (po-mād') [Fr. pommade] Same as pomatum.

pomatum (po-ma'tum) [L. from *po'mum* apple]. An ointment, especially one for the hair.

pombe (pom'be). A kind of beer made in Africa from millet seed.

pomegranate (pum-gran'et) [L. po'mum grana'tum grained apple] The punicaceous tree, Pu'nica grana'tum, and its fruit. The root-bark (granatum, or cor'tex grana'ta radi'cis) and the bark of the
tree contain pelletierin, isopelletierin, and punicotannic acid, and are useful teniacides, especially
for tapeworm. Dose of decoction, 4 floz. (120
c.c.). The rind of the fruit (grana'ti fruc'tus cor'tex)
is actively astringent, and is used in diarrhea,
leukorrhea, hemorrhage, and relaxation of the
pharynx. See under granatum.

pompholyx (pom'fo-liks) [Gr. πομφόλυξ bubble]. 1. Any skin disease characterized by bullæ. 2. Same as cheiropompholyx.

pomphus (pom'fus) [L.; Gr. πομφόs]. A wheal or blister.

pomum adami (po'mum ad-a'mi) [L. "Adam's apple"]. The prominence on the throat caused by the thyroid cartilage.

ponceau B. Bichrich scarlet.
 p. 3 B, scarlet red.
 Poncet's disease, operation (pahw-sāz') [Antonin Poncet, French surgeon, 1849-1913]. See disease and operation.

Pond. Abbreviation for L. pon'dere, by weight.

ponderable (pon'der-ah-bl) [L. ponderab'ilis; pon'dus weight]. Having weight.

pond-lily. See Nuphar.

Ponfick's shadows (pon'fiks) [Emil Ponfick, German pathologist, 1844-1913]. Phantom corpuscles. See under corpuscle.

Pongamia (pon-ga'me-ah) [Malay pongam]. A genus of leguminous East Indian trees. P. gla'bra affords a fixed oil (kurung oil, punga oil, pongam oil): used in skin diseases and in rheumatism.

Ponndorf's method, vaccine (pon'dorfs) [W. Ponndorf, contemporary German (Weimar) physician]. See under method and vaccine.

ponogen (pon'o-jen) [Gr. $\pi \delta \nu o s$ pain $+ \gamma \epsilon \nu \nu \hat{a} \nu$ to produce]. Any waste material derived from the brain or nervous system.

ponograph (po'no-graf) [Gr. πόνος pain + γράφειν to recordl. An instrument for estimating and recording sensitiveness to pain.

ponopalmosis (po"no-pal-mo'sis). [Gr. πόνος pain + πάλμος palpitation]. Palpitation on effort; Sir Clifford Allbutt's term for soldier's heart or neurocirculatory asthenia.

ponophobia (po-no-fo'be-ah) [Gr. πόνος pain, fatigue + φόβος fear]. 1. Abnormal dread of pain.
 2. Dread of work; morbid laziness.

ponos (po'nos) [Gr. πόνος pain]. See infantile kalaazar, under kala-azar.

pons (ponz) [L. for "bridge"]. 1. Any slip of tissue connecting two parts of an organ. 2. Same as pons p. cerebel'li. Same as p. varolii. hep'atis, a projection, not always present, partially bridging the longitudinal fissure of the liver. p. tari'ni, the floor of the posterior perforated space. p. varo'lii, the organ which connects the cerebrum, cerebellum, and oblongata. It is a broad, transverse band of white fibers arching across the upper part of the medulla oblongata, and on each side contracting to a cord, to enter the cere-bellum as the crus cerebelli. A groove along its middle lodges the basilar artery. Resting against middle lodges the basilar artery. Resting against it, near its posterior border, is the sixth pair of nerves. The upper surface of the pons forms a part of the floor of the fourth ventricle. It is made up of longitudinal fibers from the internal capsule; of longitudinal fibers of the tegmentum; of transverse fibers connecting the two cerebellar hemispheres, and masses of gray matter, the pontine nuclei, including the nuclei of the facial, abducens, and trigeminal nerves and the superior olivary nucleus.

pons-oblongata (ponz-ob-lon-ga'tah). The pons varolii and medulla oblongata considered together. pontibrachium (pon-tib-ra'ke-um).

pontic (pon'tik) [L. pons, pon'tis bridge]. A substitute for a natural tooth.

brachium pontis.

ponticular (pon-tik'u-lar). Pertaining to the ponticulus or propons.

ponticulus (pon-tik'u-lus) [dim. of L. pons bridge]. Same as propons. p. auric'ulæ, a point on the eminentia cochleæ where the retrahens aurem 15 attached. p. hep'atis, the isthmus which joins the spigelian lobe to the right lobe of the liver.

p. promonto'rii, the ridge on the median wall the tympanum connecting the promontory with the pyramid.

pontile, pontine (pon'til, pon'tin). Pertaining to the pons varolii.

pontimeter (pon-tim'et-er) [L. pons, pontis bridge + Gr. μέτρον measure]. An instrument for measuring the bony bridge in mastoid operations.

pontoon (pon-toon') [Fr. ponton; L. pon'to boat].

A loop or knuckle of the small intestine.

pool (pool). A collection of blood in any part of the body due to retardation of the venous circulation. abdominal p., the blood within the abdomen, much increased in shock.

Pool's phenomenon [Eugene Hillhouse Pool, contemporary surgeon in New York]. See under bhenomenon.

pooled serum (poold). See under serum.

poplar (pop'lar). See Populus.
poples (pop'lez). The posterior surface of the knee. poplitæus (pop-lit-e'us) [L., from pop'les ham]. See muscles, table of.

popliteal (pop-lit'e-al) [L. poplita'us; pop'les ham]. Pertaining to the posterior surface of the knee.

popliteus (pop-lit-e'us). See muscles, table of.

poppy (pop'e). The plant Papa'ver somnif'erum whose unripe capsules furnish opium and are used like it. The seeds of poppy furnish a fixed oil, which is used like linseed oil. Dose of extract (extrac'tum papav'eris), 2-5 gr. (0.13-0.3 gm.); of syrup, 1 fl.dr. (4 c c).

populi gemmæ (pop'u-li jem'e). Balm of Gilead buds, the winter leaf; buds of Populus nigra or P.

populin (pop'u-lin) [L. pop'ulus poplar]. Ben salicin, C₂₀H₂₂O₈; a principle from poplar bark.

Populus (pop'u-lus) [L]. A genus of salicaceous trees; the poplars, aspens, and cottonwoods. The bark is tonic, containing populin and salicin, and the leaf-buds of some species, as P. can'di-cans or P. balsamif'era, called balm of Gilead, afford a variety of tacamahac These buds are stimulant, tonic, and vulnerary. Dose of fluid-extract, 15-30 min. (1-2 c.c.), The bark of P. tremuloi'des and other species is tonic and febrifugal. Dose of fluidextract, 60-120 min. (4-8 c.c.). poradenia (pōr-ad-e'ne-ah). Poradenitis.

poradenitis (pōr-ad-en-i'tis) [Gr. πῶρος pore + άδην gland + -ιτις inflammation] A disease of the iliac glands characterized by the formation of small abscesses.

porcidin (por sid-in). A serum for use in swine

A patented preparation porcosan (por-ko'san). containing the bacteria of erysipelas in pure cul-

porcupine disease (por ku-pīn). Ichthyosis.

pore (pōr) [L. po'rus; Gr. πόροs]. Any minute orifice upon a free surface, as the opening of a sweat-gland. birth p. See metraderm. Galen's p., the inguinal canal.

porencephalia, porencephalus (po"ren-sef-a'le-ah, po-ren-sef'a-lus) [Gr. πόρος pore + ἐγκέφαλος brain]. The presence of cysts or cavities in the brain-cortex communicating with the arachnoid spaces and penetrating deeply into the brain, due to arrest of development or to congenital disease that produces atrophy of the brain-matter (Heschl, 1859).

porencephalic (po"ren-sef-al'ik). Porencephalous. porencephalitis (po"ren-sef-al-i'tis). Porencephalia associated with an inflammatory process, such as polioencephalitis.

porencephalous (po-ren-sef'al-us). Affected with porencephalia.

porencephaly (po-ren-sef'al-e). Porencephalia.

poriomania (po"re-o-ma'ne-ah) [Gr. πορεία walking + µavla madness]. Same as ambulatory automatism.

porion (po're-on) [Gr. πόρος pore]. The median point on the posterior edge of the incisive canal.

pork. The flesh of swinc. measly p., pork which contains the larval form (Cysticerus cellulosæ) of Tenia solium, which may infect man if eaten inadequately cooked.

pornography (por-nog'raf-e) [Gr. πόρνη prostitute + γράφειν to write]. 1. The literature or bibliography of prostitution. 2. Obscene writing.

pornolagnia (por-no-lag'ne-ah) [Gr. πόρνη prostitute + λαγνεία lust]. A perverted sexual interest in prostitutes.

porocele (po'ro-sēl) [Gr. πωροs callus + κήλη hernia]. Scrotal hernia with thickening and hardening of the coverings.

porocephaliasis (po"ro-sef-al-i'as-is). Infection with Porocephalus.

porocephalosis (po"ro-sef-al-o'sis). Porocephaliacie

Porocephalus (po-ro-sef'al-us) [Gr. πώρος pore + κεφαλή head]. A genus of worm-like arthropods of the order Linguatulida, which are parasitic in man and animals. P. armilla tus, the adult is found in the lungs and trachea of the python (P. sebæ and P. regius); the larval forms are found in the organs of monkeys, lions, and occasionally in man. P. clava'tus is parasitic in man. P. constric'tus, a larval form infesting the mesentery. P. denticula'tus, the larva of Linguatula rhinaria.

porokeratosis (po"ro-ker-at-o'sis) [Gr. $\pi \hat{\omega}_{POS}$ callus + keratosis]. A skin disease characterized by hypertrophy of the stratum corneum, followed by its centrifugal and progressive atrophy. Called also p. excen'lrica.

poroma (po-ro'mah) [Gr. πώρωμα callus]. An inflammatory induration.

poroplastic (po-ro-plas'tik). Both porous and plastic p. felt, a porous felt which is easily molded into splints and jackets for surgical use.

porosis (po-ro'sis) [Gr. πώρωσις]. 1. Same as 2. The formation of the callus in the boroma. repair of a fractured bone.

porosity (po-ros'it-e). 1. The condition of being porous. 2. A spore.

porotic (po-rot'ik). Favoring the growth of connective tissue.

porotomy (po-rot'o-me) [Gr. πόρος pore + τέμνειν to cut]. Same as meatotomy.

porous (po'rus). Penetrated by pores and open spaces

porphyrin (por'fi-rin). 1. An iron-free derivative from hematin. Cf. hematoporphyrin and mesoporphyrin. 2. An alkaloid, C₂₁H₂₅N₃O₂, from the bark of Alsto'nia constric'ta.

porphyrinuria (por"fir-in-u're-ah). The presence of porphyrin in the urine.

porphyrization (por"fir-iz-a'shun). Pulverization; reduction to a powder: so called because sometimes performed on a porphyry tablet.

porphyrosin (por-fi'ro-sin). An alkaloid from Alsto'nia constric'ta.

porphyruria (por-fir-u're-ah) [Gr. πορφύρα purple + οὐρον urine]. The presence of purpurin (uroerythrin) in the urine.

porrigo (por-i'go) [L]. Ring-worm or other diseases of the scalp. p. decal'vans. Same as alopecia areata. p. favo'sa. Same as favus. p. fur'furans, tinea tonsurans. p. larva'lis, eczema with impetigo of the scalp. p. lupino'sa, favus. p. porrigoph'yta, favus. p. scutula'ta. favus.

Porro's operation (por'ōz) [Eduardo Porro, physician in Milan, 1842-1902]. See operation.

pnysician in Milan, 1842-1902]. See operation.

porta (por'tah) [L. "gate"]. 1. The hilum at which
the vessels and nerves enter a gland. 2. The
foramen interventriculare. p. hep'atis [B N A],
the transverse fissure of the liver; here the portal
vein enters that organ. p. labyrin'thi, the
fenestra rotunda p. lie'nis, the hilum of the
spleen. p. omen'ti, the foramen of Winslow.
p. pulmo'nis, the hilum of the lung. p. re'nis,
hilum of the kidney.

portacid (port-as'id). A dropper for the local application of an acid.

portagion (por-ta'jun). A transmissible disease germ.

portal (por'tal). Pertaining to a porta, especially to that of the liver. p. circulation, system, vein. See circulation, system, vein.

portcaustic (port-kaws'tik) [Fr. porte-caustique]. A handle for holding a caustic substance.

porte-acid (port-as'id). Portacid.

porte-aiguille (port-a-gel') [Fr.]. A surgeon's needle-holder.

porte-caustique (port-ko-stāk'). Portcaustic.

porte-ligature (port-lig'at-ur). Portligature.

porte-meche (port-mesh') [Fr.]. A probe or director with a fork at one end for pushing a tent into a wound or fistula.

porte-nœud (port-ned') [Fr. "knot-carrier"]. instrument for applying a ligature to the pedicle of a tumor.

porter (por'ter). A dark, bitter malt liquor.

Porter's sign, test (por'terz) [William Henry Porter, New York physician, born 1853]. See under sign and tests.

portio (pōr'she-o). Latin for part. p. du'ra ("hard part") [obsolete], the seventh, or facial, nerve, formerly regarded as forming one nerve with the auditory or portio mollis. p. in ter du'ram et mol'lem, p. interme'dia, a fas-ciculus which frequently connects the facial and acoustic nerves, but properly gsbelon to the facial.

p. ma'jor [B N A], the large sensory root of the trigeminal nerve.

p. mi'nor [B N A], the small motor root of the trigeminal nerve.

p. mol'lis ("soft part"), the auditory, or eighth, nerve: so called because formerly regarded as a part of the facial nerve. p. supravagina'lis [cer'vicis] [B N A], the part of the uterine neck immediately above the vagina. p. vagina'lis [B N A], that part of the cervix uteri which protrudes into the vagina

portiplex, portiplexus (pōr'tip-leks, pōr-tip-leks'-us). The plexus which joins the two lateral choroid plexuses, passing through the foramen of

portligature (port-lig'at-ur). An instrument for applying a ligature to a deeply situated part.

porus (po'rus) [Gr. πόρος passage]. Latin for pore or meatus. p. acus'ticus exter'nus [B N A], the outer end of the external auditory meatus. p. acus'ticus inter'nus [B N A], the opening of the internal auditory canal into the cranial cavity. p. Gale'ni, the inguinal canal. p. opti'cus, the opening in the lamina cribrosa of the sclera for the central retinal artery.

Posada'sia spherifor'me. A protozoan organism discovered in Argentina by A. Posadas, claimed as the cause of generalized infectious psorospermosis (1900) and found in appendicitis.

posed (pōsd). Placed. A dental term applied to the position of a tooth. *Malposed* means not in its normal position. normally p., regularly p., in normal position; said of a tooth.

posiomania (po"se-o-ma'ne-ah) [Gr. πόσις drinking + µavla madness]. Dipsomania.

position (po-zish'un) [L. posi'tio]. 1. The attitude or posture of a patient. 2. The situation of the fetus with respect to the mother at delivery. Adams's p., patient stands with heels together, well stretched, bends body forward from hips; head and arms hanging forward. anatomic p., the position of the body standing erect with the palms of the hands turned outward. Bonner's p., flexion, abduction, and outward rotation of the thigh in coxitis. Bozeman's p., the patient is strapped to supports in the knee-elbow position. bread-crumbling p., a position of the hands as if holding a pencil: seen in cer-tain spinal diseases Casselberry's p., a prone position of the patient employed after intubation so that the patient may swallow without danger of fluid entering the tube. **Depage's p.**, a prone position with the pelvis elevated to form the apex of an inverted V, while the trunk and lower limbs form the branches of the V. devent and the property of the V. devent and the patient of the V. devent and the patient of the V. devent and the patient of the V. devent and the V. devent form the branches of the V. dorsal p., the posture of a person lying on his back. Called also supine p. dorsal elevated p., position of patient lying on the back, with shoulders and head elevated: employed in digital examination of genitals. dorsal redumbent p., position of patient on back, with lower limbs flexed and rotated outward: used in vaginal examination, application of obstetric forceps, etc. dorsosacral p. Same as

POSITION

946

POSITION

Sims' position, anterior view.

Sims' position, posterior view.

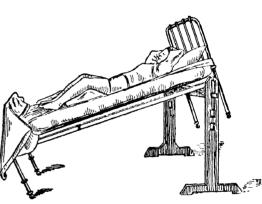

Dorsal recumbent position.

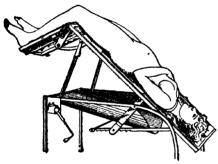

Dorsosacral position, with leg-holder applied.

Knee-chest, or genupectoral, position.

Fowler's position (Macfartane).

Trendelenburg position (Ashton).

Walcher position (Hirst).

Edebohls' dorsal position.

lithotomy p. Duncan's p., the position of the placenta, with its margin presenting at the os for delivery. Edebohls's p., a dorsal position, the right knee and thigh drawn up, legs flexed on the thighs, the thighs flexed on the belly, the hips raised, and the thighs adducted. Called also Simon's p. Elliot's p., position of a patient on the operating table with lower chest elevated by placing a support under the small of the back: used in operations on the gall-bladder. English p., the patient on the left side, the right thigh and knee drawn up. Called also left lateral recumbent p. and obstetric p. first p., in vertex presentation, the occiput pointing to the lest foramen ovale. Called also left occipitocotyloid p. fourth p., the occiput pointing to the left sacro-iliac synchondrosis. Called also left occipito-sacro-iliac p. Fowler's p., the position in which the head of the patient's bed is raised 18 or 20 inches above the level. genucubital p., kneeelbow p., the patient on his knees and elbows, the head on his hands. genupectoral p., knee-chest p., the patient resting on his knees and chest, the arms crossed above the head. jack-knife p., position of patient on back, with the shoulders elevated, legs flexed on thighs, and thighs at right angles to the abdomen: used in passing the urethral sound. Jones's p., acute flexion of the forearm for the treatment of fracture of the internal condyle of the hunerus. **knee-chest p.**See genupcctoral p. **knee-elbow p.** See genucubital p. **lateral recumbent p.** See English p. leap-frog p., a position that may be assumed by the patient in rectal examinations by the finger. lithotomy p., the patient on the back, legs flexed on the thighs, thighs flexed on the belly, and abducted. Called also dorso-sacral p. mento-anterior p., position of the fetus in labor with its chin pointing anteriorly in relation to the mother's body. mentoriorly in relation to the mother's body. mentoiliac p., position of the fetus in labor with its chin pointing to one or other of the iliac fossæ of the mother. **mentoposterior p.**, position of the fetus in labor with its chin pointing postementoposterior p., position riorly **Mercurio's p.**, a position very much like Walcher's position. **obstetric p.** See Eng-See English p. occipito-iliac p., the position of the fetus in labor in which its occiput is toward the groin of the mother. occipitoposterior p., the position of the fetus in labor with its occiput pointing to the sacrum of the mother. Péan's p., a position for operating in which the operator sits between the patient's legs, which rest in hollow supports or hang down over the oper-ator's thighs The operator sits in a high chair and the patient lies on a low table, so that he can bend over the abdomen and look into the peritoneal cavity. **Robson's p.**, position of patient for operation on gall-bladder or bile-ducts: lying on the back with a sand-bag under the holow of the back. **Rose's p.**, the head dependent, as in certain operations on the air-passages. **Samuel's p.**, the position with the patient lying on her back with thighs flexed and knees flexed, the legs being grasped by the patient's hands. This legs being grasped by the patient's hands. position is said to widen the pelvic outlet and to render labor-pains less intense: it is recommended for difficult labor after the head has reached the floor of the pelvis. Schultze's p., the position of the placenta when its center presents for delivery. Scultetus's p., patient lying on an inclined plane with head downward. second p., the occiput pointing to the right fora-men ovale. Called also right occipitocotyloid p. semiprone p. See Sims's p. shoe-andstocking p., a position in which the limb of one side is crossed upon the other. **Simon's p**. Same as *Edebohls's* **p**. **Sims's p**., patient on the left side and the chest, the right knee and thigh drawn up, the left arm along the back. Called also semiprone p. Stern's p., position of the patient supine with the head lowered over the end of the table. In it the murmur of

tricuspid insufficiency is heard more distinctly. third p., in vertex presentation, that in which the occiput presents at the right sacro-iliac synchondrosis. Called also right sacro-iliac p. Trendelenburg's p., the patient on the back on a plane inclined 45°, the legs and feet hanging over the end of the table. Valentine's p., position with the patient supine and the hips flexed by means of a double inclined plane. used in irrigating the urethra. Walcher's p., the patient on the back, with the hips at the edge of the table and the legs hanging down.

positive (poz'it-iv) [L. positi'vus]. Not negative; greater than zero; to be added.

posologic (po-so-loj'ik). Pertaining to doses.

posology (po-sol'o-je) [Gr. πόσος how much + λόγος treatise]. The science of dosage, or a system of dosage.

post- (post-) [L. post after]. A prefix signifying atter or behind.

postabortal (post-ab-or'tal). Occurring after abortion

postaccessual (pōst-ak-sesh'u-al). Occurring after a paroxysm.

postacetabular (pōst"as-et-ab'u-lar). Behind the acetabulum.

postanal (pōst-a'nal). Situated or occurring behind the anus.

postanesthetic (pōst-an-es-thet'ik). After anes-thesia.

postapoplectic (pōst"ap-o-plek'tik). Occurring after an attack of apoplexy.

postaxial (pōst-aks'e-al). Situated or occurring behind an axis.

postbrachial (pōst-bra'ke-al). On the posterior part of the upper arm.

postbrachium (post-bra'ke-um). The posterior brachium of the corpus quadrigeminum.

postbuccal (pōst-buk'al). Behind the buccal region.

postbulbar (post-bul'bar). Behind the medulla oblongata.

postcava (pōst-ka'vah). The ascending vena cava. Pertaining to the post-cava.

postcecal (post-se'kal). Behind the cecum.

postcentral (post-sen'tral). Situated or occurring behind a center.

postcentralis (post-sen-tra'lis). The postcentral fissure. See fissure.

postcerebellar (pöst-ser-e-bel'ar). In the posterior part of the cerebellum.

postcerebral (pōst-ser'e-bral). Behind the cerebrum

postcesarean (pōst-se-za're-an). Following cesarean operation.

postcibal (pōst-si'bal) [L. post after + ci'bum food]. Occurring after the taking of food.

postcisterna (pōst-sis-ter'nah). The cisterna magna.

postclavicular (pōst-klav-ik'u-lar) [L. post after + clavicle]. Situated or occurring behind the clavicle.

postcommissure (pōst-kom'is-ūr). The posterior commissure of the brain.

postcondylar (pōst-kon'dil-ar). Behind or back of a condyle.

postconnubial (post-kon-u'be-al) [II post after + connu'bium marriage]. Occurring or happening after marriage.

postconvulsive (post-kon-vul'siv). Following after a convulsion.

postcordial (pōst-kor'de-al). Back of the heart.
 postcornu (pōst-kor'nu). The posterior horn of the lateral ventricle.

postcribrum (pôst-kri'brum). The posterior perforated space. postcubital (post-ku'bit-al). On the dorsal side of the forearm.

postdevelopmental (post-de-vel-up-men'tal). Occurring after the period of development.

postdiastolic (post"di-as-tol'ik). Occurring after or following the diastole.

postdicrotic (post-di-krot'ik). Occurring after the dicrotic elevation of the sphygmogram.

postdigestive (post-di-jes'tiv). After digestion.

postdiphtheric, postdiphtheritic (post-dif-therik, post"dif-ther-it'ik). Occurring after a diphtheric attack.

postdural (post-du'ral). Behind the dura mater.

postembryonic (post"em-bre-on'ik) [L. post after Gr. Eµβρυον embryo]. Occurring after the embryonic stage.

postepileptic (pōst"ep-il-ep'tik). Occurring after or following an epileptic attack.

(pos-te"re-o-ok-lu'zhun). posterio-occlusion Same as distoclusion.

posterior (pos-te're-or) [L. neut. poste'rius]. Situated behind or toward the rear.

posteroclusion (pos"ter-ok-lu'zhun). distoclusion.

postero-external (pos"te-ro-eks-ter'nal) [L. pos'terus behind + exter'nus outer]. Situated on the outer side of a posterior aspect.

postero-inferior (pos"ter-o-in-fe're-or). Posterior and inferior.

postero-internal (pos"te-ro-in-ter'nal) [L. pos'terus behind + inter'nus inner]. Situated within and to the rear.

osterolateral (pos"te-ro-lat'er-al) [L. pos'terus behind + latera'lis lateral]. Situated behind and posterolateral (pos"te-ro-lat'er-al) [L. to one side.

posteromedian (pos"te-ro-me'de-an) [L. pos'terus behind + me'dius middle]. Situated on the middle of a posterior aspect.

posteroparietal (pos"te-ro-par-i'et-al) [L. pos'terus behind + pa'ries wall]. Situated at the back behind + pa'ries wall]. part of the parietal bone.

posterosuperior (pos"te-ro-su-pe're-or) [L. pos'-terus behind + supe'rior upper]. Situated behind and above.

posterotemporal (pos"te-ro-tem'po-ral) [L. pos'terus behind + tem' pus temple]. Situated at the back part of the temporal bone.

posterula (pos-ter'u-lah) [L.]. The space between the turbinal bones and the posterior nares.

postesophageal (post"e-sof-a'je-al). Situated behind the esophagus.

postethmoid (post-eth'moid). Behind the ethmoid bone.

postfebrile (post-feb'ril) [L. post after + febri'lis febrile]. Occurring as the result of a fever.

postfovea (post-fo've-ah). The fovea posterior.

postganglionic (post"gang-le-on'ik). Posterior to a ganglion.

postgeminum (post-jem'in-um) [L. post after + gem'inus twin]. The posterior corpora quadri-

postgeniculatum, postgeniculum (post"jenik-u-la'tum, pōst-je-nik'u-lum). geniculate body. The internal

postglenoid (post-gle'noid). Situated behind the glenoid fossa.

postgracile (post-gras'il). Behind the slender lobe of the cerebellum.

postgrippal (post-grip'al). Occurring after grip or influenza.

posthemiplegic (pōst"hem-e-ple'jik). Following an attack of hemiplegia.

posthemorrhage (pōst-hem'or-āj). Secondary hemorrhage

posthemorrhagic (post-hem-o-raj'ik). Occurring after hemorrhage.

posthepatic (post-he-pat'ik). Behind the liver. posthetomy (pos-thet'o-me) [Gr. πόσθη prepuce + τέμνων to cut]. Circumcision.

posthioplasty (pos'the-o-plas-te) [Gr. πόσθη fore-skin + πλαστός formed]. Plastic surgery of the prepuce.

posthippocampal (post-hip-o-kam'pal). Behind the hippocampus.

posthitis (pos-thi'tis) [Gr. πόσθη foreskin + -ιτις inflammation]. Inflammation of the prepuce.

postholith (pos'tho-lith) [Gr. πόσθη foreskin + λίθος stone]. A preputial concretion or calculus.

posthumous (pos'tu-mus) [L. pos'tumus coming after]. Occurring after death; born after the father's death.

posthyoid (post-hi'oid). Situated or occurring behind the hyoid bone.

posthypnotic (post-hip-not'ik). Succeeding the hypnotic state.

posthypophysis (post-hi-pof'is-is). The posterior part of the hypophysis or pituitary body.

posticus (pos-ti'kus) [L.]. Posterior.

postinfluenzal (post-in-flu-en'zal). Occurring after influenza.

postinsula (post-in'su-lah). The posterior part of the insula.

postischial (post-is'ke-al). Situated behind the ischium.

postmalarial (post-mal-a're-al). Occurring after

postmastoid (post-mas'toid). Situated behind the mastoid

postmaximal (post-maks'im-al). After a maximum.

postmeatal (post-me-a'tal). Behind a meatus.

postmedian (post-me'de-an) [L. post after + me'dius middle]. Situated or occurring behind a median line or plane.

postmediastinal (post"me-de-as'tin-al). Behind the mediastinum: pertaining to the posterior mediastinum.

postmediastinum (pōst"me-de-as-ti'num). posterior mediastinum.

postmeiotic (pōst-mi-ot'ik) [L. post after + μειείν to decreasel. A term applied to the stage following the reduction of the chromosomes in the mitotic cycle.

postmesenteric (pōst-mes-en-ter'ik). Behind or in the posterior part of the mesentery.

postmortal (post-mor'tal). After death.

postmortem (post-mor'tem). Latin for after death.

postnarial (post-na're-al). Pertaining to the posterior nares.

postnaris (pōst-na'ris). The posterior naris. postnasal (pōst-na'zal) [L. post behind + na'sus nosel. Situated or occurring behind the nose.

postnatal (post-na'tal). Occurring after birth.

postnecrotic (post-nek-rot'ik). After death of a part

postneuritic (post-nu-rit'ik). Occurring after neu-

postnodular (post-nod'u-lar). Behind the nodulus. postoblongata (post"ob-lon-ga'tah). of the oblongata below the pons.

postocular (post-ok'u-lar) [L. post behind + oc'u-lus eye]. Situated or occurring behind the eye.

postolivary (post-ol'iv-a-re). Behind the olivary

postoperative (post-op'er-a-tiv). Occurring after a surgical operation.

postoperculum (post-o-per'ku-lum). That portion of the operculum formed by the supertemporal convolution.

postopticus (post-op/tik-us) [L. post after + op'-

lobes (corpora quadrigemina).

postoral (post-o'ral) [L. post behind + os mouth].

Behind the mouth.

postorbital (post-or'bit-al). Behind the orbit.

postpalatine (post-pal'at-in). Behind the palate or palate-bone.

postpallium (post-pal'e-um). The portion of the cortex of the cerebrum posterior to the fissure of Rolando.

postpaludal (post-pal'u-dal). Postmalarial.

postparalytic (pōst"par-al-it'ik). Following an attack of paralysis.

postpartum (post-par'tum) [L.]. Occurring after delivery or childbirth.

postpeduncle (post-pe'dung-kl). The posterior peduncle of the cerebellum.

postperforatum (post"per-fo-ra'tum). The posterior perforated space.

postpharyngeal (pōst-far-in'je-al). Situated or occurring behind the pharynx.

postpneumonic (post-nu-mon'ik). Following pneu-

postponent (post-po'nent) [L. post after + po'nere to place]. Having a more or less delayed recurrence.

postpontile (post-pon'til) [L. post after + pons bridgel. Situated or occurring behind the pons varolii.

postprandial (post-pran'de-al). Occurring after dinner, or after a meal.

postpubertal (post-pu'ber-tal). After puberty.

postpubescent (post-pu-bes'ent). After puberty. postpycnotic (post-pik-not'ik). Occurring after the stage of pyknosis of a red blood-cell.

postpyramidal (pōst-pir-am'id-al). Situated or occurring behind the pyramidal tract.

postpyramids (post-pir'am-idz). The pyramids of the cerebellum; also the funiculus gracilis of the oblongata.

postramus (pōst-ra'mus) [L. post behind + ra'mus branch]. The horizontal branch of the stem of the arbor vitæ of the cerebellum.

postrolandic (pöst-ro-lan'dik). Situated behind the fissure of Rolando.

postsacral (pōst-sa'kral). Behind or below the sacrum.

postscalenus (pōst-ska-le'nus). The posterior scalenus muscle.

postscapular (post-skap'u-lar). Behind the scap-

postscapularis (pōst"skap-u-la'ris). The infraspinatus muscle.

postscarlatinal (pöst-skar-lat-i'nal). Following scarlatina.

Post sing. sed. liq. Abbreviation for L post sin'gulas se'des liq'uidas, after every loose stool.

postsphenoid (post-sfe'noid). The basisphenoid, pterygoid, and alisphenoid bones together. In infancy they are separate bones, but usually become attached to the sphenoid.

postsplenic (post-splen'ik). Behind the spleen.

poststertorous (post-ster'tor-us). Occurring after stertor has begun in anesthesia.

postsylvian (post-sil've-an). Situated behind the sylvian fissure.

postsyphilitic (pōst-sif-il-it'ik). Following an attack of syphilis.

posttarsal (pōst-tar'sal). Situated behind the tarsus.

posttibial (post-tib'e-al). Behind the tibia.

posttraumatic (post-traw-mat'ik). Occurring after or in consequence of a wound.

posttussis (post-tus'is). Latin for "after coughing.

ticus optic]. Either one of the posterior optic posttyphoid (post-ti'foid). Occurring after typhoid.

postulate (post'u-lat) [L. postula'tum demanded]. Anything assumed or taken for granted. Ehr-lich's p. See Ehrlich's side-chain theory, under theory. Koch's p's. See Koch's law, under theory. lan

postural (pos'tu-ral). Pertaining to posture or position.

posture (pos'tūr) [L. postu'ra]. Attitude or position. See under position.

postuterine (post-u'ter-in). Situated or occurring behind the uterus.

postvaccinal (pōst-vak'sin-al). After vaccination. postvermis (pōst-ver'mis). The vermis inferior of the cerebellum.

postvital (post-vi'tal). After vital; a term applied to staining of a tissue that occurs after death of the tissue which has been previously stained by vital methods.

Pot. Abbreviation for potion and potassa.

potable (po'tah-bl) [L. potab'ilis]. Fit to drink; drinkable.

Potain's apparatus, disease, sign, solution, syndrome (po-tānz') [Pierre Carl Edouard Potain, French physician, 1825-1901]. See the nouns.

potamophobia (pot"am-o-fo'be-ah) [Gr. ποταμός river $+ \varphi \delta \beta$ os fear]. A morbid dread of rivers or of streams and lakes.

potash (pot'ash). 1. Potassium hydrate or hydroxid, KOH; known also as caustic p., or potassa. It is a white, crystalline compound, with powerful alkaline and caustic properties. It is used externally as a caustic for chancres, callus, or fungous growths, poisoned wounds, etc., and in-ternally as an antacid in acidity of the stomach, gonorrhea, lithemia, scrofula, etc. Dose of *li'quor* polas'sa, 10-20 min. (0.66-1.33 c.c.). 2. Potassium carbonate, K₂CO₃. sulphurated p. See potassa sulphurata.

potassa (po-tas'ah) [L.]. See potash (1). p. cum cal'ce, potash with lime, or Vienna paste, a mixture of potassa and lime in equal parts: used as a caustic. p. sulphura'ta, sulphurated potassa. Called also hepar sulphuris, or liver of sulphur: antacid, alterative, and used in throat diseases. Dose, \(\frac{1}{2}\to gr. (0.033\to 0.66 gm.)\).

potassic (po-tas'ik). Containing potash.

potassiocupric (po-tas"e-o-ku'prik). Containing potassium and copper.

potassiomercuric (po-tas"e-o-mer-ku'rik). Containing potassium and mercury. p. iodid, HgI₂.-2KI, in yellow crystals: used in making a test solu-

potassium (po-tas'e-um) [L.]. A metallic element of the alkali group, many of whose salts are used in medicine. It is a soft, silver-white metal, melting at 58°; atomic weight, 39.1; specific gravity, 0.865; symbol, K (kalium). p. acetate, a compound, CH₃.COOK. It is diuretic and purgative, and is used in dropsy, rheumatism, and skin diseases. Dose, 5-60 gr. (0.33-4 gm.).

p. amylate. See maculanin. p. arsenate, K2HAsO4, a stable salt of ortho-arsenic acid: used therapeutically. p. arsenite, a compound whose solution (Fowler's solution, li'quor potas'sii arseni'tis) is one of the most convenient forms for the administration of arsenic. Dose, 2-10 min. the administration of arsenic. Dose, 2-10 min. (0.133-0.666 c.c.). p. aurobromid, an antiseptic agent, AuBr₃KBr + H₂O, in purplish crystals. Hypodermic dose, ½-½ gr. (0.008-0.012 gm.). p. aurocyanid, an agent in colorless crystals, KAu(CN)₂. p. bicarbonate, a transparent, crystalline salt, KHCO₃; used as an antacid and diuretic. Dose, 5-30 gr. (0.333-2 gm.). p. bichromate, p. dichromate, an orange-red, crystaline salt KACO₃. It is a caustic poison and is line salt, K₂Cr₂O₇. It is a caustic poison, and is used as a preservative for tissues. p. bismuth tartrate, a basic salt containing from 64 to 69 per cent. of bismuth. It is used in the treatment of syphilis by intramuscular injections in doses

of 13-3 gr. (0.1-0.2 gm.). p. bisulphate, KHSO₄; laxative and refrigerant. Dose, 1-2 dr. (4-8 gm.). p. bitartrate, cream of tartar, COOH(C.OH)₂COOK, a white, crystalline salt; diuretic, cathartic, and refrigerant. Dose, 1-8 dr. (4-32 gm.). **p. bromid**, a colorless, crystalline body, KBr; sedative and antispasmodic; much employed in epilepsy and in nervous diseases. 5-60 gr. (0.333-4 gm). p. bromsalicylate, white crystals of potassium bromortho-oxybenzoate, OH.C₆Br.CO.OK. used as an antirheumatic in 5-10 gr. doses (0.32-0.65 gm.). p. can-tharidate, a white, crystalline salt, C₁₀H₁₄K₂O₆ + 2H₂O: used in hypodermic injections for tuberculosis. **p. carbonate** (polas'sii carbo'nas), a white, crystalline or granular salt, K₂CO₃. It is used as an antacid, counterirritant, and diuretic. Dose, 2-20 gr. (0.133-1.333 gm). p. chlorate (polas'sii chlo'ras), an explosive, white, crystalline salt, KClO₃: used in diseases of the mouth and throat, as pharyngitis, diphtheria, stomatitis, also for hemorrhoids and proctitis. In large doses it causes destruction of red blood-corpuscles and nephritis. Dose, 2-20 gr. (0.133-1.333 gm.). The lozenges (trochis'ci potas'sii chlora'tis) contain 5 gr. each p. citrate, a white, granular powder, K₃C₆H₅O₇ + H₂O₂ used as a diuretic and refrigerant in rheumature for the prophities of the state of th tism, fevers, bronchitis, etc. Dose, 15-60 gr. (1-4 gm.); of solution (li'quor potas'sii citra'tis), 2-4 fl.dr. (8-16 c.c.); of mixture (mis'tura potas'sii citra'tis), }-1 fl.oz. (16-32 c.c); of potas'sii ci'tras efferves'cens, the effervescent potassium citrate, 30-90 gr. (2-6 gm). p. citrate, effervescent, a dry granular mixture of potassium cicrate (20 per cent.), sodium bicarbonate, tartaric acid, and citric acid which effervesces in water. **p. cobaltoni-trite**, a salt, $K_6Co_2(NO_2)_{12} + 2H_2O$, in small yellow crystals: used in cardiac albuminuria, asthma, heart disease, and dyspepsia. Dose, 12 gr. (0.005 gm.). p. cyanid, a white solid or powder, KCN, extremely poisonous used like hydrocyanic acid. bonate, a reddish salt, K_2COS_2 , serviceable in skin diseases. p. ferricyanid, beautiful deep red crystals, $K_3Fe(CN)_6$, a delicate test for ferrous salts. p. ferrocyanid, a substance, K₄Fe(CN)₆+ 3H₂O, in large yellow tablets or crystals. It is sedative, diaphoretic, and astringent. used in the night-sweats of phthisis. Dose, 5-10 gr. (0.333-0.660 gm) **p. glycerophosphate**, a white, vitreous substance, CH₂OH.CHOH.CH₂O.PO(OK)₂. used in nervous diseases, phosphaturia, and locomotor ataxia. Dose, 3-4½ gr. (0.2-0.3 gm). p. hydrate, p. hydroxid. See caustic potash, under potash. p. hypophosphite, a white, crystalline salt, KH2PO2. used in the treatment of tuberculosis. Dose, 5-10 gr. (0.333-0 666 gm). **p. iodate**, a salt, KIO₃, employed as an alterative, especially in diseases of the mucous surfaces: used like potassium chlorate. Dose, 4-8 gr. (0.25-0.52 gm.).

p. iodid, a colorless, transparent body, KI: much used in syphilis and in a wide range of chronic diseases as an absorbent and eliminating agent. Besides syphilis, potassium iodid is used in chronic poisoning by arsenic or mercury, rheumatism, dropsy, meningitis, locomotor ataxia. brain meningitis, tumors, neuralgia, asthma, bronchitis, and aneurysm. Dose, 2-15 gr. (0.133-1 gm.). Externally it is used in the form of an ointment. p. mercuric iodid, a complex, K₂HgI₄, containing about 25.5 per cent. of mercury. It is used the same as mercuric iodid in dilutions of 1:100 to 1:1000 as a germicide. **p. nitrate**, a white, crystalline salt, KNO₃: used as a diaphoretic, diuretic, and antiseptic. Dose, 5-15 gr. (0.333-1 gm.). **p. nitrite**, a compound, KNO₂: used in angina pectoris, gastralgia, epilepsy, etc. Dose, 3-5 gr. (0.2-0.33 gm.) **p. osmate**, a red, crystalline powder: employed in the treatment of epilepsy, retirer and payralgia. Dose 1 gr. (0.2-0.37) p. permanganate, a dark purple, crystalline salt, KMnO₄. It is an oxidizing agent, antiseptic and disinfectant, and is used for ozena, foul ulcers, diphtheria, scarlet fever, and in-ternally in amenorrhea and dyspepsia. Dose, $\frac{1}{2}$ -2 gr. (0.333-0.133 gm.). p. phosphate, a salt, K_2 HPO4: used in tuberculosis. Dose, 10-30 gr. (0.66-2 gm.). **p. salicylite**, potassium salicyl-aldehyd, OH.C₆H₄ COH, a yellow powder: used as an antirheumatic in 3-15 gr. doses (0.2-1 gm.). **p. silicate**, soluble glass, K₂S₂O₃: used like plaster of Paris in making rigid dressings. p. silicofluorid, an agent recommended for use tartrate, a saline cathartic, COONa(CHOH)₂-COOK. Dose, 2.5 dr. (10 gm.). p. sozoiodolate, a colorless crystalline powder, potassium diodo-paraphenol sulphonate, OH.C₆H₂I₂ SO₂.OK: used as an external antiseptic in rhinitis, otitis, gonorrhea, and skin diseases. **p. succinate**, a compound with hemostatic properties **p. sulphate**, a compound, K₂SO₄; a harsh cathartic: used chiefly in pharmacy. Dose, 15-120 gr. (1-8 gm.). **p.** sulphid, KS, little used at present. Dose, 1-10 gr. (0.066-0 666 gm.). **p. sulphite,** a white, crystalline salt, $K_2SO_3 + 2H_2O$. It is an antiseptic, and is used externally and internally for checking fermentation. Dose, 3-10 gr. (0.2-0666 gm) p. sulphocarbolate, a salt in shining white crystals, C₆H₅O SO₂OK + H₂O antiseptic p. sulphocyanate, KCNS, is found in the saliva. p. tartrate, a compound, K2C4H4O6 + H₂O, or neutral potassium tartrate: it is diuretic, diaphoretic, and cathartic. There are also a diapnoretic, and cathartic. There are also a bitartrate, a borated tartrate, and a potassium and sodium tartrate, all having properties like the neutral tartrate Dose, as diuretic and diaphoretic, 1-2 dr (4-8 gm) as cathartic, \(\frac{1}{2}-1\) oz. (15-30 gm.). **p. tellurate**, a salt in white crystals, K₂TeO serviceable in the night-sweats of theorems of the contract of the salt of the contract of the contrac tuberculosis p. thiocyanate. Same as b. sul phocyanate.

potato-culture (po-ta"to-kul'chūr). A bacterial culture made on potato. See potato culturemedium, under culturemedium.

potency (po'ten-se) [L. poten'tia power]. The power of a medicine, especially the power of a medicine as developed by homeopathic attenuation; also a homeopathically attenuated medicine.

potentia coeundi (po-ten'she-ah ko-e-un'di) [L. "power of coming together"]. The ability to perform the sexual act. p. generan'di, the ability to procreate

potential (po-ten'shal) [L. poten'tia power]. 1. Existing and ready for action, but not yet active. 2. Electric tension or pressure, as measured by the capacity of producing electric effects in bodies of a different state of electrization. When bodies of different potentials are brought into communication, a current is set up between them; if they are of the same potential, no current passes between them.

potentialization, potentiation (po-ten-she-aliz-a'shun, po-ten-she-a'shun). The preparation of the various homeopathic potencies.

potentiometer (po-ten-she-om'et-er). An instrument for the accurate measuring of voltage.

potentize (po'ten-tiz). To make potent; to prepare the various homeopathic potencies

potentor (po-ten'tor). A device for the mechanic treatment of male impotence, especially that which is due to lack of penile erectility.

potio (po'she-o) [L.]. See potion.

potion (po'shun) [L. po'tio draft]. A draft; a large dose of liquid medicine Rivière's p., an effervescing drink produced by combining a solution of citric acid with one of sodium or potassium bicarbonate. Todd's p., tincture of canella, 5; brandy, 40; syrup, 30, and water, 75.

potocytosis (po"to-si-to'sis) [Gr. $\pi \delta ros$ drinking + $\kappa \ell ros$ cell]. The hypothetic action of cells passing fluids through themselves from one place to

another.

951

potomania (po-to-ma'ne-ah) [Gr. πότος drinking + μανία madness]. Delirium tremens.

Pott's aneurysm, disease, etc. (pots) [Percival Pout, English surgeon, 1713-1788]. See aneurysm, disease, etc.

Pottenger's sign (pot'en-jerz) [F. M. Pottenger, contemporary American physician]. See under sign.

potus (po'tus) [L. "drink"]. A potion. p. imperia'lis, imperial drink, a solution of ½ oz. of cream of tartar in 3 pts. of water, sweetened, and flavored with lemon peel.

pouch (powch). Any pocket-like space, cavity, or cecal sac. abdominovesical p., the pouchlike reflection of the peritoneum from the ante-rior abdominal wall to the distended bladder. Broca's p., a pear-shaped sac in the labum majus, having its large extremity directed downward and backward, and its smaller one upward, forward, and outward toward the opening of the inguinal canal. It is composed of elastic fibers, and contains connective tissue and fat. Called also pudendal sac and sac dartoique de la femme. Douglas' p., a sac of the peritoneum which dips down below the posterior surface of the uterus. Called also Douglas' culdesac. enterocelic p., a diverticulum of the enteron of the embryo hairp., the depression in the skin from which the hair grows. Hartmann's p., a pouch at the exit of the gall-bladder into the cystic duct. ileocecal p., the folds of peritoneum at the end of the ileum. laryngeal p., a membranous sac between the superior vocal cord and the thyroid cartilage. Called also sacculus laryngis. Morison's p., a pouch of peritoneum below the liver and to the right of the right kidney. Obturator p. See paravesical p. paracystic p., the lateral part of the uterovesical pouch. pararectal p., the lateral part of Douglas's pouch paravesical p., the lateral part of the utero-abdominal pouch of the side of the the utero-abdominal pouch of the side of the bladder, where the entrance is to the obturator canal called also obturator p. Physick's p's, inflammation of the sacculations between the rectal valves with mucous discharge

Rathke's p., a diverticulum from the embryonic buccal cavity whence the anterior lobe of the pituitary body is developed. recto-uterine p. Same as Doug-las' p. rectovaginal p. Same as Doug-las' p. rectovesical p., the fold of perito-neum that is reflected on the bladder. Seessel's p., an embryonic pouch behind the top of the rudimentary hypophysis. utero-abdominal p. the anterior of the two compartments into which the pelvic cavity is divided by the uterus and broad ligaments. uterovesical p., vesico-uterine p., the fold of peritoneum between the bladder and the uterus. Willis's p., the lesser omentum.

Poulet's disease (poo-lāz') [Alfred Poulet, French physician, 1848-1888]. Rheumatic osteoperiostitis.

poultice (pōl'tis) [L. puls pap; cataplas'ma]. Any soft and moist pultaceous mass applied hot to the surface of a part for the purpose of supplying heat and moisture.

poultogen (pōl'to-jen). A proprietary poultice resembling antiphlogistin.

pounce (powns). Powdered sandarach.

pound (pownd) [L. pon'dus weight; li'bra pound]. A weight of 12 ounces in troy or apothecaries' weight; also 16 ounces in avoirdupois weight. The ordinary pound (avoirdupois) contains 7000 gr or 453.60 gm; the apothecaries or troy pound contains 5760 gr. or 372.96 gm. See weights and measures, table of.

Poupart's ligament (poo-parts') [François Poupart, French anatomist, 1661-1709]. See ligament. poverty (pov'er-te). The state of being poor; the absence or scarcity of requisite substance or elements. emotional p., diminution in the normal emotional qualities of the mind, such as love, sympathy, honor, etc. p. of movement, the relative immobility and stationariness of position seen in subjects of shaking palsy; akinesia.

powder (pow'der). An aggregation of small parof antimony, I part; calcium phosphate, 2 parts. See also Tyson's antimonial p., aromatic p., a powder containing Saigon cinnamon, Jamaica ginger. cardamom seed, and myristica. bleachginger, cardamom seed, and myristica. bleaching p., chlorinated lime. borosalicylic p., a dusting-powder consisting of 4 parts of boric acid and 1 part of salicylic acid: used as a wound dressing. Castillon's p's, 8 parts each of transport to acid and a part of salicylic acid: used as a wound dressing. tragacanth, powdered sago, and powdered salep, 2 parts prepared oyster shell, and 1 part cochineal. One dram is boiled in a pint of milk and used in diarrhea and dysentery. composition p., compound powder of bayberry; a carminative powder containing bark of bayberry root, 60; ginger, 30, and capsicum and clove, each 30 parts. Dose 10-20 gr. (0.6-1.2 gm). compound chalk p. Dose, a powder containing prepared chalk, acacia, and sugar. compound p. of glycyrrhiza contains senna, glycyrrhiza, sulphur, oil of fennel, and sugar. Dose, I dr. (4 gm). compound p. of jalap contains jalap and potassium bitartrate. Dose, 30 gr. (2 gm). compound p. of rhubarb. See Gregory's p. Dalmatian insect p., pyrethrum. **Dover's p.**, pulvis ipecacuanhæ et opii. See opium. **effervescent p.**, a powder to which has been added sodium bicarbonate and tartaric or citric acid. Faynard's p., a hemostatic powder, said to be pulverized beechcharcoal. gray p., mercury with chalk. Greg-ory's p., pulvis rhei compositus, compound powder of rhubarb; contains rhubarb, magnesium oxid, and Jamaica ginger. Dose, 30 gr. (2 gm.). **Hufeland's p.**, magnesium carbonate, 50; rhubarb, 15; sugar with oil of fennel seed, 35. **impal**pable p., a powder so fine that its particles cannot destructive to insects. James's p. Same as pulvis antimonialis. See antimony. Jesuit's p., powdered cinchona. N. C. I. p., a powder compounded of 96 per cent. naphthalene, 2 per cent. creosote, and 2 per cent. iodoform: for use in delousing troops and as a general insecticide. Patterson's p., a mixture of magnesia and bismuth subnitrate. Persian insect p., pyrethrum. seidlitz p., pulvis effervescens compositus, a cathartic preparation consisting of a white paper containing 35 gr. of tartaric acid and a blue paper containing 40 gr. of sodium bicarbonate and 120 gr. of sodium and potassium tartrate. The contents of the two papers are mixed in water and drunk while effervescing. serum-p., a powder of zinc oxid charged with a freshly prepared serum and then dried and sterilized: used as an antiseptic dressing-powder. styptic p., a powder containing alum, acacia, gum, colophony, and sometimes tragacanth and argil. sympathetic p., a powder formerly applied to a weapon, from the belief that its application would heal a wound caused by that weapon. talcum-p., powdered soapstone: used as an application to inflamed surfaces. Tully's p., pulvis morphinæ compositus. See morphin. tutty p., powdered stannic acid: used for polishing teeth.
Tyson's antimonial p., a mixture of 20 gr. of antimony oxid with 180 gr. of calcium phosphate. Dose, 5-10 gr. (0.333-0.666 gm.). Vienna p., potassa with lime. Vigo's p., red oxid of mercury. Vincent's p., 9 parts of boric acid and r part of calcium hypochlorate.

pox (poks). Any eruptive disease: used as a vulgar name for syphilis. camel-p., a disease of camels not unlike small-pox. chicken-p. See varicella. cow-p. See vaccinia. glass p. See amaas. horse-p., an infectious pustular disease of the horse; equine variola. Kaffir p., milk p. See amaas. Samoa p., amaas. sheep-p. See ovinia. small-p. See tariola. swine-p., a

contagious disease of swine resembling small-pox. white p., amaas.

Pozzi's operation, syndrome (pod'zēz) [Samuel Jean Pozzi, gynecologist in Paris, 1846-1918]. See under operation and syndrome.

P. p. Abbreviation for L. punc'tum prox'imum, near-point.

P. p. a. Abbreviation for L. phi'ala pri'us agita'ta, the bottle having first been shaken.

Ppt. Abbreviation for precipitate and prepared.

P. r. Abbreviation for L. punc'tum remo'tum, farpoint.

Pr. Abbreviation for presbyopia and prism; symbol for prasedymium.

practice (prak'tis) [Gr. πρακτική]. The practice of medicine; the branch of medicine treating of the practical recognition and treatment of disease. contract p., the treatment of the members of a lodge, organization, or society for a lump sum, or at so much per head. group p. See group medicine, under medicine.

practique (prak-tek'). A certificate which releases an incoming vessel from quarantine. It is given by the quarantine officer to the master, and when presented to the collector of the port admits the boat to entry.

practitioner (prak-tish'un-er). One who has complied with the requirements and who is engaged in the practice of medicine.

pre-. For words thus beginning, see those beginning pre-.

præcribrum (pre-kri'brum). The anterior perforated space of the brain.

præcuneus (pre-ku'ne-us). The quadrate lobule of the cerebrum.

prægeniculatum (pre"jen-ik-u-la'tum). The external geniculate body.

præoperculum (pre-o-per'ku-lum). The frontal operculum of the brain.

preperforatum (pre-per-fo-ra'tum). The anterior perforated space.

preputium (pre-pu'she-um). See prepuce.

prævermis (pre-ver'mis). The anterior and superior portions of the vermis of the cerebellum.

pragmatagnosia (prag"mat-ag-no'ze-ah) [Gr. πράγμα object + άγνωσία absence of recognition] Inability to recognize objects.

pragmatamnesia (prag"mat-am-ne'ze-ah) [Gr. πρᾶγμα object + ἀμνησία forgetfulness]. Loss of power of remembering the appearance of objects.

Prague maneuver (prahg). See under maneuver.

prairie dock. See Parthenium.

prairie-itch (pra're). See itch.

Prana apparatus (prah'nah). See under apparatus.

praseodymium (pra-se-o-dim'e-um). An element having an atomic weight of 140.9 and the symbol Pr.

prasoid (pra'soid). A solution of globularin and globularetin: for use in acute rheumatism and gout. Dose, 15-20 min. (1-1.33 c.c.).

P. rat. wtat. Abbreviation for L. pro ratio'ne æta'tis, in proportion to age.

Pravaz's syringe (prah-vahz') [Charles Gabriel Pravaz, French physician in Lyons, 1791-1853]. See syringe.

Praxagoras (praks-ag'o-ras). A Greek physician of Cos, who lived about 300 B. C. He seems to have been the first to recognize the difference between arteries and veins.

praxiology (prak-se-ol'o-je) [Gr. πράξις action + λόγος treatise]. The study of conduct.

praxinoscope (praks-in'o-sköp) [Gr. πράξις exercise + σκοπεῖν to view]. An instrument for studying the larynx.

pre- [L. pra before]. A prefix signifying before.

preadult (pre-ad'ult). Prior to adult life.

preagonal, preagonic (pre-ag'o-nal, -ag-on'ik).
Preceding the death agony.

prealbuminuric (pre"al-bu-min-u'rik). Occurring before albuminuria sets in.

preanal (pre-a'nal). Situated in front of the anus.

preantiseptic (pre"an-tis-ep'tik). Pertaining to the time before the discovery of antisepsis.

preaortic (pre-a-or'tik). In front of the aorta.

preaseptic (pre-as-ep'tik). Pertaining to the time before aseptic surgery was practised

preataxic (pre-at-aks'ik). Occurring before the advent of ataxia.

preauricular (pre-aw-rik'u-lar). Situated before an auricle or an auricular structure.

preaxial (pre-aks'e-al). In front of the transverse axis of the body.

prebacillary (pre-bas'il-a-re). Occurring before the entrance of bacilli into the system, or before they become discoverable.

prebacteriologic (pre-bak-te-re-o-loj'ik). Before the development of bacteriology.

prebase (pre'bas). That part of the dorsum of the tongue lying in front of the base.

prebrachium (pre-bra'ke-um). One of the two upper brachia of the corpora quadrigemina.

precancerous (pre-kan'ser-us). Occurring before the development of a cancer.

precapillary (pre-kap'il-a-re). A venule or arteriole.

precarcinomatous (pre-kar-sin-om'at-us). Preceding the development of carcinoma.

precardiac (pre-kar'de-ak). Situated ventrad from
the heart.

precartilage (pre-kar'til-aj). Embryonic cartilaginous tissue.

precava (pre-ka'vah). The vena cava descendens.
precentral (pre-sen'tral). Situated in front of a center.

prechordal (pre-kor'dal). Situated in front of the notochord.

precipitable (pre-sip'it-a-bl). Capable of being precipitated.

precipitant (pre-sip'it-ant). A substance which causes a chemic or mechanic precipitation.

precipitate (pre-sip'it-āt) [L. pracipita're to cast down]. I. To cause a substance in solution to settle down in solid particles. 2. [L. pracipita'-tum.] A deposit made or substance thrown down by precipitation. 3. Hasty; headlong; as precipitate labor. red p., red mercuric oxid, HgO. sweet p., calomel. white p., ammoniated mercury, NH₂HgCl. yellow p., yellow mercuric oxid, HgO.

precipitation (pre''sip-it-a'shun) [L. pracipita'tio].

The act or process of precipitating. group p.,
precipitation of more than one organism by a precipitin.

precipitin (pre-sip'it-in). An antibody which is found in the blood of an animal which has been injected with bacterial culture fluids, blood-serum, or any other foreign protein. The blood-serum of such an animal will produce a precipitate when added to the antigen which has been used in its production. heat p. See coctoprecipitin.

precipitinogen (pre-sip-it-in'o-jen). Any substance which on injection will cause the development of a specific precipitin..

precipitinoid (pre-sip'it-in-oid). A precipitin in which the zymophore group has been weakened or lost so that it cannot cause precipitation, although it still retains its affinity for the antigen.

precipitinophoric (pre-sip"it-in-o-fo'rik). Denoting the active precipitating element or group in a precipitin.

precipitogen (pre-sip'it-o-jen). Same as precipitingen.

precipitogenoid (pre-sip-it-oj'en-oid). A precipitogen which has lost its power of causing precipitation.

precipitoid (pre-sip'it-oid). A precipitin in which the active precipitating group has been destroyed by heat.

precipitophore (pre-sip'it-o-for). The group in a precipitin which causes the actual precipitation.

precipitum (pre-sip'it-um). The precipitate resulting from the action of a precipitin.

preclival (pre-kli'val). In front of the clivus of the cerebellum.

precommissure (pre-kom'ish-ūr). The anterior cornu of the lateral ventricle.

preconscious (pre-kon'shus). In Freudian terminology, the preconscious includes all mental processes which are "out of mind" at the time, but can be recalled with little or no effort.

preconvulsant (pre-kon-vul'sant). Pertaining to that stage of disease which precedes the occurrence of convulsions.

preconvulsive (pre-kon-vul'siv). Preceding a convulsion. said of a stage in epilepsy.

precordia (pre-kor'de-ah) [L. pracor'dia]. The region over the heart or stomach; the epigastrium and lower part of the thorax.

precordial (pre-kor'de-al). Pertaining to the precordia.

precordialgia (pre"kor-de-al'je-ah) [precordia + Gr. ἄλγος pain]. Pain in the precordia.

precordium (pre-kor'de-um). Same as precordia.
precornu (pre-kor'nu). The anterior cornu of the lateral ventricle.

precostal (pre-kos'tal). In front of the ribs.

precranial (pre-kra'ne-al). In the anterior part of the cranium.

precribrum (pre-kri'brum). The anterior perforated space.

precritical (pre-krit'ik-al). Previous to the occurrence of the crisis.

precuneal (pre-ku'ne-al). Situated in front of the cuneus.

precuneate (pre-ku'ne-āt). Pertaining to the precuneus.

precuneus (pre-ku'ne-us) [L. præ before + cu'neus wedge]. The quadrate lobule of the cerebellum.

prediastolic (pre"di-as-tol'ik).

1. Pertaining to the beginning of the diastole.

2. Occurring just before the diastole.

predicrotic (pre-di-krot'ik). Occurring before the dicrotic wave of the sphygmogram.

predigestion (pre-di-jes'tshun). The partial artificial digestion of food before its ingestion.

predisposing (pre-dis-po'zing). Conferring a tendency to disease.

predisposition (pre"dis-po-zish'un) [L. præ before + dispo"nere to dispose]. A diathesis or special tendency toward some particular disease.

predormitium (pre-dor-mish'e-um) [L.]. The light slumber occurring before sound sleep begins. preëclampsia (pre-ek-lamp'se-ah). Threatened eclampsia.

preëpiglottic (pre"ep-ig-lot'ik). Situated or occurring in front of the epiglottis.

prefruptive (pre-e-rup'tiv). Preceding eruption. preflagellate (pre-flaj'el-āt). Preceding the flagellate state: said of protozoa.

preformation (pre-for-ma'shun). See evolution (3).
prefrontal (pre-fron'tal). 1. Situated in the anterior part of the frontal lobe or region. 2. The central part of the ethmoid bone.

preganglionic (pre"gang-le-on'ik). Situated anterior to a ganglion.

pregeminal (pre-jem'in-al). Pertaining to the pregeminum.

pregeminum (pre-jem'in-um). An anterior optic lobe or geminal body.

pregeniculatum (pre"jen-ik-u-la'tum). The external geniculate body.

pregeniculum (pre-jen-ik'u-lum). Same as pregeniculatum.

Pregl's solution (pra'glz) [Fritz *Pregl*, chemist in Prague]. See under solution.

preglobulin (pre-glob'u-lin). A protein derivable from cytoglobulin by decomposition with acids. It is insoluble in water, but soluble in dilute alkaline solutions.

pregnancy (preg'nan-se) [L. præg'nans with child].

The condition of being with child; gestation. In woman the duration of pregnancy is about 280 days, nine calendar or ten lunar months. Pregnancy is marked by cessation of the menses; nausea on arising in the morning (morning sickness); enlargement of the breasts and pigmentation of the nipples; progressive enlargement of the abdo-The absolute signs of pregnancy are balmen. lottement, fetal movements, and sounds of the fetal heart. Called also cyesis, gestation, gravidity, and "being with child" **abdominal p.**, lodgment of the ovum within the abdominal cavity afetal p., false pregnancy. ampullar p., pregnancy in which the ovum has been arrested in the ampulla of the oviduct. bigeminal p., twin pregnancy. **broad ligament p.,** pregnancy taking place within the broad ligament. **cer**vical p., the development of the ovum within the cervical canal. cornual p., pregnancy in one of the horns of a bicornate uterus. ACtopic p. Same as extra-uterine p. entopic p., normal uterine pregnancy. extra-uterine p., development of the ovum outside of the walls of the uterus. fallopian p. Same as tubal p. false p., apparent, but not real, pregnancy. fatty p., false pregnancy with the accumulation of fat in the abdominal wall. gemellary p. Same as twin p. heterotopic p., a double pregnancy, one intra-uterine and the other extrauterine. hydatid p., that which is accompanied with the formation of a hydatid mole. hysteric p., symptoms of pregnancy in hysteric women who are not really pregnant. interstitial p., gestation in that part of the oviduct which is within the wall of the uterus. intraligamentary p., a pregnancy within the broad ligament. intramural p. Same as interstitial p. intraperitoneal p. pregnancy within the peritoneal cavmembrananous p., pregnancy in which the fetus has broken through its membranous envelope and lies in contact with the uterine walls. mesenteric p. Same as tuboligamentary p. mesometric p., a kind of tubal pregnancy in which the tube has ruptured and the embryo occupies a sac formed partly by the expanded tube and partly by the layers of the peritoneum forming the mesometrium. molar p., conversion of the ovum into a mole. multiple p., the presence of more than one ovum in the uterus at the same time. mural p. Same as interstitial p. nervous p. Same as hysteric p. ovarian p., pregnancy occurring within an ovary. ovario-abdominal p., a pregnancy which begins ovarian, but afterward becomes abdominal. parietal p. Same as interstitial p. phantom p., an abdominal enlargement in hysteric women simulating pregnancy. plural p., pregnancy with more than one fetus. pseudo-intraligamentary p., an extra-uterine pregnancy in which a sac has been formed in such a way as to simulate an intraligamentary pregnancy. sarcofetal p., pregnancy with both a fetus and a mole. sarcohysteric **p.**, false pregnancy due to a mole. **spurious p.** Same as false p. **stump p.**, pregnancy at the Same as false p. stump p., pregnancy at the stump remaining after a pelvic operation. tubal p., pregnancy within an oviduct. tubo-ab-dominal p., one occurring partly in the fimbri-

TABLE FOR CALCULATING THE DURATION OF PREGNANCY.

EXPLANATION.—Find in top line the date of menstruation; the figure below will indicate the date when confine ment may be expected—i e., if date of menstruation is June 1, confinement may be expected on March 8, or one day earlier if leap year (DR. ELY).

| January October | | 9 | | 4 | 5 | 6 | | | | | | | | | | | | | 19 26 | | | | | | | | | | | | | November. |

ated end of the oviduct and partly in the abdominal cavity. tuboligamentary p., a pregnancy partly in the tube and partly in the broad ligament. tubo-ovarian p., one occurring partly in the ovary and partly in the oviduct. tubo-uterine p., gestation partly within the uterus and partly in an oviduct. twin p., gestation with twins. unconscious p., pregnancy of which the woman is unaware. utero-abdomutero-abdominal p., pregnancy with one fetus in the uterus and another in the abdominal cavity. utero**ovarian p.**, pregnancy with one fetus in the uterus and another in the ovary. **uterotubal** p. Same as tubo-uterine p.

pregnant (preg'nant) [L. preg'nans]. With child; gravid.

pregonium (pre-go'ne-um). Recess on lower edge of body of the mandible in advance of the angle. pregracile (pre-gras'il). Anterior to the gracile

lobe of the cerebellum.

pregranular (pre-gran'u-lar). Occurring before the granular stage.

pre-hallux (pre-hal'ux). A supernumerary bone of the foot sometimes found growing from the inner border of the scaphoid.

prehemiplegic (pre"hem-ip-le'jik). Forerunning an attack of hemiplegia.

prehensile (pre-hen'sil) [L. prehen'dere to lay hold of]. Adapted for grasping or seizing.

prehension (pre-hen'shun) [L. prehen'sio]. The act of seizing or grasping.

prehepaticus (pre-he-pat'ik-us) [L. præ before + Gr. ήπαρ liver]. A mass of vascular and connective tissue in the embryo which develops into the interstitial tissue of the liver.

prehyoid (pre-hi'oid). In front of the hyoid bone. **prehypophysis** (pre-hi-pof'is-is). The anterior lobe of the hypophysis.

pre-induction (pre-in-duk'shun). An environmental influence on the germ cells of an individual which does not produce a modification until the third generation of his descendants, i. e., in the grandchildren.

preinsula (pre-in'su-lah). The cephalic portion of the insula.

preiotation (pre"i-o-ta'shun) [pre + Gr. lωτα letter i]. The conversion of the initial sound of i into y. prelacrimal (pre-lak'rim-al). In front of the lacrimal sac.

prelaryngeal (pre-lar-in'je-al). In front of the larvnx.

prelimbic (pre-lim'bik). Situated before a limbus. prelipoid (pre-li'poid). Preceding the lipoid state. prelocomotion (pre"lo-ko-mo'shun). The movements of a child made with the intention of moving from place to place before motor coordination is sufficiently developed to enable it to walk.

prelum (pre'lum). Latin for press. p. abdomina'le, the squeezing of the abdominal viscera between the diaphragm and the abdominal wall, as in defecation.

premalignant (pre-mal-ig'nant). Occurring before the development of malignant characters.

premaniacal (pre-ma-ni'ak-al). Preceding an attack of mania.

premature (pre-mat-ūr') [L. præmatu'rus early ripe]. 1. Occurring before the proper time. 2. An infant born before its proper time, but viable.

premaxilla (pre-maks-il'ah). The intermaxillary bone.

premaxillary (pre-maks'il-a-re). 1. Situated in front of the maxilla proper. 2. The intermaxillary

premenstrual (pre-men'stru-al). Occurring before menstruation.

premolar (pre-mo'lar) [L. præ before + mola'ris molar]. 1. Situated in front of the molar teeth. 2. One of the two teeth immediately in front of the molar teeth; a bicuspid tooth. The term is sometimes used erroneously to designate a deciduous molar tooth.

premonitory (pre-mon'it-o-re) [L. præmonito'rius]. Serving as a warning.

premortal (pre-mor'tal). Just before death.

premycosic (pre-mi-ko'sik). Pertaining to a my-

fungal element.

premyelocyte (pre-mi'el-o-sit) [L. pre before + myelocyte]. A cell intermediate in development between a myeloblast and a myelocyte, resembling the myeloblast, but showing a few granules.

prenarcotic (pre-nar-kot'ik). Previous to the occurrence of narcosis.

prenares (pre-na'rēz). The nostrils.

prenatal (pre-na'tal) [L. præ before + nata'lis natal]. Existing or occurring before birth. p. influence, the effect upon the offspring of any condition or activity of the mother during the period of pregnancy.

preoblongata, præoblongata (pre"ob-lon-ga'-tah). That part of the oblongata which lies between the fourth ventricle and the pons.

preoperative (pre-op'er-a-tiv). Preceding an operation.

preoperculum (pre-o-per'ku-lum). The frontal operculum of the brain.

preoptic (pre-op'tik). Situated anterior to the optic lobes.

preopticus (pre-op'tik-us) [L. præ before + op'ticus optic]. Either of the two anterior optic lobes (corpora quadrigemina).

preoral (pre-o'ral) [L. præ before + os mouth]. Situated in front of the mouth.

prepalatal (pre-pal'at-al). Situated in front of the palate.

prepallium (pre-pal'e-um). The portion of the cerebral cortex anterior to the foramen of Rolando.

preparation (prep-ar-a'shun) [L. præpara'tio]. The act or process of making ready. 2. A medicine made ready for use. 3. An anatomic or pathologic specimen made ready and preserved for study. corrosion p., an anatomic preparation made by injecting the parts to be retained and eating away the rest of the tissues with some corrosive substance. Ehrlich-Hata p., salvarsan. Hata p., salvarsan. heart-lung p., an animal prepared for the study of the action of the heart muscle. The perfused fluid flows through an unaltered pulmonic circle.

preparative (pre-par'at-iv). See amboceptor.

preparator (prep'ar-a-tor). Amboceptor. par'tus prepartal (pre-par'tal) [L. præ before + Occurring before, or just previous to, laborl labor

prepatellar (pre-pat-el'ar). Situated in front of the patella.

prepeduncle (pre-pe'dung-kl). The anterior peduncle of the cerebellum

preperforative (pre-per'fo-ra-tiv). Before the occurrence of perforation.

preperforatum (pre"per-fo-ra'tum). The anterior perforated space.

prephthisis (pre-thi'sis). The initial stages of pulmonary phthisis.

preplacental (pre-plas-en'tal). Previous to the formation of the placenta.

prepontile (pre-pon'tīl). In front of the pons.

prepotency (pre-po'ten-se) [L. prapoten'tia]. Power superior to that of the other parent in transmitting inheritable characters to the off-

prepotent (pre-po'tent) [L. præ'potens]. Having superior force; having greater power than the other parent in transmitting inheritable characters to the offspring.

prepubescent (pre-pu-bes'ent). Before puberty. prepuce (pre'pūs) [L. prapu'tium]. The fold of skin covering the glans penis; the foreskin. p. of the clitoris, a fold formed by the labia minora covering the clitoris.

preputial (pre-pu'shal). Pertaining to the prepuce. prepyloric (pre-pi-lor'ik). In front of the pylorus.

cotic disease at a stage prior to the maturity of its prepyramidal (pre-pi-ram'id-al). Situated in front of the pyramid.

> preramus (pre-ra'mus). The vertical branch of the stem of the arbor vitæ of the cerebellum.

> prerectal (pre-rek'tal). Situated in front of the rectum.

> prerenal (pre-re'nal). Situated in front of the kidney.

> prereproductive (pre"re-pro-duk'tiv). Pertaining to childhood, or the stage preceding puberty.

> presbyacusia (pres"be-ak-u'se-ah). Presbycusis. presbyatry (pres'be-at-re) [Gr. πρέσβυς old -

> larpla treatment]. The treatment of diseases of old age.

> presbycusis (pres-be-ku'sis) [Gr. πρέσβυς old + ἄκουσις hearing]. That lessening of the acuteness of hearing which characterizes old age.

presbyope (pres'be-ōp) [Gr. πρέσβυς old + ωψ eye]. One who is presbyopic.

presbyophrenia (pres"be-o-fre'ne-ah) [Gr. πρέσβυς old $+\varphi\rho\hat{\eta}\nu$ mind]. A mental condition often seen in old age, consisting of defective memory, loss of sense of location, and confabulation. Called also Wernicke's syndrome.

presbyopia (pres-be-o'pe-ah) [Gr. πρέσβυς old + ωψ eye]. Long sight and impairment of vision due to advancing years or to old age. It is de-pendent on diminution of the power of accom-modation from loss of elasticity of the crystalline lens, causing the near-point of distinct vision to be removed farther from the eye.

presbyopic (pres-be-op'ik). Pertaining to presbyopia.

presbysphacelus (pres-bis-fas'el-us) [Gr. πρέσβυς old + σφάκελος gangrene]. Senile gangrene.

presbytia (pres-bish'e-ah). Same as presbyopia.

presbytiatrics (pres"be-te-at'riks). Presbyatry. presbytism (pres'bit-izm). Same as presbyopia.

presclerosis (pre-skle-ro'sis). A state of arterial hypertension preceding arteriosclerosis.

presclerotic (pre-skle-rot'ik). Occurring before sclerosis takes place.

prescribe (pre-skrib') [L. præscrib'ere to write before]. To designate in writing a remedy for administration.

prescription (pre-skrip'shun) [L. præscrip'tio]. written direction for the preparation and administration of a remedy. A prescription consists of the heading or superscription—that is, the symbol R or the word Recipe, meaning "take"; the inscription, which contains the names and quantities of the ingredients; the subscription, or directions for compounding; and the signature, usually introduced by the sign S. for signa, "mark," which gives the directions for the patient which are to be marked on the receptacle. shotgun p., a prescription that contains a number of ingredients given with the idea that one or more of them may be effective.

resecretin (pre-se-kre'tin). A substance existing in the mucous membrane of the duodenum from presecretin (pre-se-kre'tin). which, by the action of hydrochloric acid, secretin is split off.

presegmenter (pre-seg-men'ter). A full-grown malarial parasite in the stage in which the pig-A full-grown ment is accumulated into masses just previous to segmentation.

presenile (pre-se'nīl). Pertaining to a condition resembling senility, but occurring in early or middle life.

presentility (pre-sen-il'it-e). Premature old age.

present (pre-zent') [L. præsenta're to show]. To appear first at the os uteri: said of various parts of the fetus.

presentation (pre-zen-ta'shun) [L. prasenta'tio].

1. The appearance in labor of some particular part of the fetal body at the os uteri.

2. That part of the fetal body which first shows itself at

the os in labor. arm-p., prolapse of the arms of the fetus: generally seen in shoulder presentation. breast-p., the presentation of the anterior part of the chest in labor. breech-p., the presentation of the fetal buttock in labor. brow-p., the presentation of the brow in labor. cephalic p., the presentation of any part of the head, including the vertex presentation and face-presentation. face-p., the presentation of the face of the fetus in childbirth. foot-p., foot-ling p., the presentation of the umbilical cord in labor. head-p., the presentation of some part of the fetal head in labor. longitudinal p., polar p., the presentation of either the cephalic or the pelvic end of the fetal ellipse. pelvic p., presentation of the lower end of the fetus, including breech-presentation and foot-presentation. placental p. Same as placenta prævia. polar p., presentation of either pole, cephalic or breech. transverse p., trunk-p., presentation in which the axis of the fetal trunk lies crosswise or transversely; cross-birth. vertex p., the presentation of the upper and back part of the fetal head in labor.

presoiod (pre-so-i'od). A proprietary brand of Pregl's solution.

presphenoid (pre-sfe'noid). The anterior po tion of the body of the sphenoid bone.

presphygmic (pre-sfig'mik). Occurring before
the pulse-wave.

prespinal (pre-spi'nal). Situated in front of the spine.

press-juice. See under juice.

pressinervoscopy (pres"e-ner-vos'ko-pe). Diagnosis of thoracic and abdominal disease by pressure upon the pneumogastric and sympathetic nerves (A. Pinel).

pressor (pres'or). Anything that increases the activity of a function, as a pressor base, a pressor nerve. p.-nerve, an afferent nerve whose stimulation increases the activity of a motor center, or causes vasoconstriction.

ressure (presh'ur) [L. pressu'ra]. Stress or strain, whether by compression, pull, thrust, or shear. after-p., a sense of pressure which lasts for a short period after removal of the actual pressure. arterial p., the pressure of the blood within the arteries. atmospheric p., the pressure exerted by the atmosphere. It is about fifteen pounds to the square inch at the level of the sea. blood-p., the tension in the walls of the blood-vessels derived from the blood-current. blood-vessels delived from the brain-p., the capillary venous pressure in the brain. capillary p., the blood-pressure in the capillaries. diastolic p., arterial pressure during diastole. Donders's p., increase of manometric diastole. pressure with the instrument placed on the trachea on opening the chest of a dead body: due to collapse of the lung. p.-effect, the sum of the changes in any tissue due to abnormal pressure. endocardial p., pressure of blood within the heart. intra-abdominal p., the pressure of the viscera within the abdomen. intracranial p., the pressure in the space between the skull and the brain, i. e., the pressure in the subarachnoidal fluid. intra-ocular p., the pressure or tension of the contents of the eyeball. intrapulmonic p., the air pressure within the lungs. intrathecal p., pressure within a sheath; particularly the pressure of the cerebrospinal fluid within the subarachnoid membrane. thoracic p., the pressure within the thorax, that is, the pressure in the pleural cavity and mediastinal spaces. intraventricular p., the pressure within the ventricles of the heart. negative p., a pressure less than that of the atmosphere. osmotic p., the pressure which brings about diffusion between solutions of different concentration or between a solute and the fluid in which it is dissolved. p.-palsy, palsy due to a continuous

pressure upon a nerve. partial p., the pressure exerted by each of the constituents of a mixture of gases. pulse p., the difference between the systolic and diastolic pressures. p.-sense, that sense by which is perceived and estimated the amount of pressure exerted on a part of the body. solution-p., the force which tends to bring into solution the molecules of a solid contained in the solvent. systolic p., the arterial pressure at the time of systole. venous p., the blood-pressure in the veins.

pressurebolometer (presh"ür-bo-lom'et-er). Pressuresphygmobolometer.

pressuresphygmobolometer (presh"ür-sfig-mobo-lom'et-er). An apparatus for measuring the work of the pulse.

presternum (pre-ster'num). Same as manubrium.
presubiculum (pre-sub-ik'u-lum). The portion of the hippocampal gyrus between the principal olfactory portion and the subiculum.

presuppurative (pre-sup'u-ra-tiv). Occurring before suppuration.

presylvian (pre-sil've-an). Pertaining to the anterior or ascending branch of the sylvian fissure.

presystole (pre-sis'to-le). The interval of time just preceding the systole.

presystolic (pre-sis-tol'ik) [L. præ before + systole]. 1. Pertaining to the beginning of the systole. 2. Occurring just before the systole.

pretarsal (pre-tar'sal). Situated in front of the tarsus.

prethyroid, prethyroideal, prethyroidean (pre-thi'roid, -thi-roi'de-al, -roi'de-an). Situated in front of the thyroid gland or thyroid cartilage. pretibial (pre-tib'e-al). Situated in front of the

pretracheal (pre-tra'ke-al). In front of the trachea. pretuberculosis (pre''tu-ber-ku-lo'sis). Tuberculosis in an incipient and occult stage before any symptoms of the disease have appeared.

pretuberculous (pre-tu-ber'ku-lus). Preceding the development of tubercle.

pretympanic (pre-tim-pan'ik). Situated in front of the tympanum.

preurethritis (pre"u-re-thri'tis). Inflammation of a part of the vulvar follicles before the urethral orifice.

prevalidin (pre-val'id-in). A proprietary camphor ointment used by inunction in phthisis (W. Koch).

preventive (pre-ven'tiv). Same as prophylactic. preventologist (pre-ven-tol'o-jist). See prophylactionist.

preventology (pre-ven-tol'o-je). Preventive dentistry; prophylactodontia.

preventorium (pre-ven-to're-um). An institution for the purpose of checking the spread of disease.

preventriculosis (pre"ven-trik-u-lo'sis) [L. pre in front of + ventric'ulus stomach] Closing of the cardiac opening of the stomach due to the action of the esophageal muscular fibers or of the periesophageal diaphragmatic structures. The term is said to be more accurate than the term "cardiospasm." Called also preventricular stenosis.

prevermis (pre-ver'mis). The superior vermiform process of the cerebellum.

prevertebral (pre-ver'te-bral). Situated ventrad of a vertebra.

prevertiginous (pre-ver-tij'in-us). Having the sense of being pushed from behind.

prevesical (pre-ves'ik-al) [L. præ before + vesi'ca bladder]. Situated in front of the bladder.

Prevost's sign (pra-voz') [Jean Louis Prevost, Swiss physician, born 1838]. See sign.

prezone (pre'zon). Same as prozone.

prezymogen (pre-zi'mo-jen). A substance existing in the cell which becomes converted into zymogen. priapism (pri'ap-izm) [L. priapis'mus; Gr. πριαπισμός]. Persistent abnormal erection of the penis, usually without sexual desire. It is seen in diseases and injuries of the spinal cord, and may be caused by vesical calculus and certain injuries to the penis.

priapitis (pri-ap-i'tis). Inflammation of the penis. **priapus** (pri'ap-us). The penis.

Price-Jones curve or method. See under curve.

prickle-cell (prik'l). See cell. prickly ash. See Xanthoxylum.

prickly-heat (prik'le-hēt). See miliaria and lichen tropicus.

prickly pear. See Opuntia.

Priessnitz bandage or compress (prēs'nits) [Vincent Priessnitz, a Silesian farmer, 1709-1852]. A cold wet compress.

Priestley's mass (prēst'lēz) [Joseph Priestley, English naturalist, the discoverer of oxygen, 1733–1804]. See under mass.

prims vise (pri'me vi'e) [L. "the first passages"].

The alimentary canal.

primal (pri'mal). A hair dye consisting of a solution of paratoluene-diamin with neutral sulphites.

primary (pri'ma-re) [L. prima'rius principal; pri'mus first]. First in order; principal.

primate (pri'māt). An individual belonging to the order Primates.

Primates (pri-ma'tēz) [L. pri'mus first]. The first or highest order of mammals, including man, apes, monkeys, and lemurs.

primerite (pri'mer-it) [L. pri'mus first + Gr. μέρος part]. The anterior part of a cephalont. Cf. deutomerite.

primigravida (prim-ig-rav'id-ah) [L. pri'ma first + gra'vida pregnant]. A woman who is pregnant for the first time.

primipara (pri-mip'ah-rah) [L. pri'ma first + par'-ere to bear]. A woman who has given birth or is giving birth to her first child.

primiparity (pri-mip-ar'it-e). The condition or fact of being a primipara.

primiparous (pri-mip'ar-us). Bearing or having borne but one child.

primite (pri'mīt). Same as protomerite.

primitive (prim'it-iv) [L. primuli'vus]. First in point of time; original.

primordial (pri-mor'de-al) [L. primordia'lis]. Original or primitive; of the simplest and most undeveloped character.

primordium (pri-mor'de-um) [L. "the beginning"]. Same as anlage.

primulin (prim'u-lin) [L. prim'ulus primrose]. r. A crystalline principle from cowslip-root. 2. A primrose-colored azo-dye of wide usefulness in color-printing fabrics by a quasiphotographic method.

princeps (prin'seps) [L. "chief"]. A name of certain arteries See arteries, table of.

principle (prin'sip-l) [L. princip'ium]. 1. A chemic component. 2. A substance on which certain of the properties of a drug depend. active p., any constituent of a drug which helps to confer upon it a medicinal property. immediate p., organic p., proximate p., any one of the more or less complex substances of definite chemic constitution into which a heterogeneous substance can be readily resolved. ultimate p., a chemic element.

element.

Prinos (pri'nos) [Gr. πρινος oak]. A genus or subgenus of aquifoliaceous shrubs, commonly assigned to the genus Ilex (holly). P. verticilla'tus, the black alder, or winterberry, of North America, has a tonic and astringent bark. Dose of fluidextract, 10–30 min. (0.666–2 c.c.).

prism (prizm) [Gr. πρίσμα]. A solid with a triangular or polygonal cross-section. A triangular prism splits up a ray of light into its constituent colors, and turns or deflects light-rays toward its base. Prisms are used to correct deviations of the eyes, since they alter the apparent situation of objects. p.-diopter, a unit for measuring the angle of deviation. It is a prism which will deflect a ray of light r cm. at a plane r meter distant. It is only slightly greater than a centrad. enamelp., any one of the microscopic prisms or columns which make up the enamel of the teeth. Maddox p., two prisms with their bases together: used in testing for torsion of the eyeball. Nicol p., two slabs of Iceland spar cemented together and deflecting a ray of light in such a way that it is split in two, one part (the ordinary ray) being totally reflected and the other (polarized ray) passing through. Risley's p., a prism which rotates in a metal frame marked with a scale: used in testing ocular muscles for imbalance.

pris'ma adamanti'num [B N A]. Enamel prism. See prism.

prismatic (priz-mat'ik). Shaped like a prism; produced by a prism.

prismoid (priz'moid). Resembling a prism.

prismoptometer (priz-mop-tom'et-er) [prism + optometer]. An instrument for testing the eye by means of a revolving prism.

prismosphere (priz'mo-sfēr) [prism + sphere]. A prism combined with a globular lens.

prisoptometer (priz-op-tom'et-er). Same as prismoptometer.

privates (pri'vets). The external genitalia.

privy (priv'e). A small out-house where excreta may be voided.

p. r. n. An abbreviation for Latin pro re na'ta, according as circumstances may require.

pro- [L. pro; Gr. προ before]. A prefix signifying before.

proagglutinoid (pro-ag-lu'tin-oid). An agglutinoid that has a stronger affinity for the agglutinogen than has the agglutinin. p. zone. See under zone.

proal (pro'al) [Gr. $\pi\rho\delta$ before]. Characterized by forward movement.

proamnion (pro-am'ne-on). That part of the embryonal area at the front and side of the head which remains without the mesoderm for some time; the primitive amnion.

pro-antithrombin (pro-an-te-throm'bin). A substance present in blood-plasm and blood-serum which is converted into antithrombin by a reaction with heparin.

proatlas (pro-at'las). A rudimentary vertebra which in some animals lies in front of the atlas: sometimes seen as an anomaly in man.

probang (probang). A flexible rod with a ball, tuft, or sponge at the end: used in diseases of the esophagus or larynx. ball-p., a probang with a ball or bulb at the end. bristle-p., horse-hair p., one with an expansible tuft of bristles or horse-hairs at the end. sponge-p., one which is tufted with sponge at the end.

probe (prob) [L. pro'ba; proba're to test]. A slender, flexible instrument designed for introduction into a wound or cavity for purposes of exploration. Amussat's p., a probe used in lithotrity. Anel's p., a delicate probe for the lacrimal puncta and canals. blunt p., a probe with a blunt end. Bowman's p., one of a set of probes for use on the nasal ducts bullet-p., one used for detecting the presence or determining the locality of a bullet. drum-p., a probe with an attachment which emits a sound when it comes in contact with a foreign body. electric p., one which on contact with a foreign body completes an electric circuit, so that a sound is made. eyed p., one with a slit for a ligature or tape near one end. Fluhrer's p., an aluminum probe for examining gunshot wounds of the brain. Girdner's p., electric

probe. lacrimal p., one designed for use on the tear-passages. Lente's p., a silver probe having a bulb coated with silver nitrate. Lilienthal's p., an apparatus for probing for bullets. It consists of a probe composed of two or four pieces of metal attached to two insulated copper wires which run to a mouthpiece composed of two plates, one of copper and one of zinc. These plates are applied to the side of the tongue and the probe inserted in the wound. If the probe touches a bullet, a distinct metallic taste is perceived. Lucae's p., a probe in a hollow handle and operated by a spring, to apply massage in treating catarrhal otitis media. meerschaum p., a probe with a meerschaum tip, which on contact with a leaden bullet becomes kened. Nélaton's p., a bullet-probe with unglazed porcelain head. scissors-p., darkened. a long, delicate pair of scissors that can be used as a probe. telephonic p. Same as electric p. uterine p., a probe for uterine exploration. as a probe. vertebrated p., a flexible probe made up of jointed links. wire p., a probe of steel wire.

probilin (pro-bi'lin). A preparation of salicylic acid with oleic acid salts, phenolphthalein, and menthol: used in infection of the biliary passages.

procain, procaine (pro'ka-in). Novocain manufactured in the United States. p. hydrochlorid, novocain. p. nitrate, the nitrate of para-aminobenzoyl-diethyl-amino-ethane, NH₂.C₆H₄ CO.O.-(CH₂)₂N(C₂H₃)₂.HNO₃: used like procain.

procatarctic (pro-kat-ark'tik). Predisposing: said of a cause of disease.

procatarxis (pro-kat-arks'is) [Gr.]. 1. A predisposing cause. 2. Predisposition; also the production of a disease partially as a result of predisposition.

procelous, procelous (pro-se'lus) [Gr. πρό before + κοίλος hollow]. Concave anteriorly.

procephalic (pro-sef-al'ik) [Gr. πρό before + κεφαλή head]. Pertaining to the anterior part of the head.

procercoid (pro-ser'koid). One of the larval stages of fish tapeworms

procerus (pro-se'rus). The pyramidalis muscle. process (pros'es) [L. proces'sus]. A slender projecting point

A. B. C. p. See A. B. C. method,
under method. acromion p. Same as acromion.

alar p's, the small wing-like processes
of the crista galli around the foramen cæcum.

alveolar p., the ridge projecting from the lower
surface of the body of the maxilla containing the alveoli of sockets of the upper teeth; the term is also applied to the upper border of the body of the mandible containing the alveoli of the lower teeth. angular p's, internal and external, the two processes which terminate the supra-orbital arch of the frontal bone. apex-p., apical p., a large process from the apex of the cells of the cerebral cortex. articular p., one of the small processes from the upper and lower surfaces of the vertebræ, by means of which the vertebræ articulate with each other. auditory p., the bony tube of the auditory meatus. axis-cylinder p., a nerve-cell process continuous with the axis-cylinder; a neuraxon. See nerve-cell. basilar p., the projection of the occipital bone in front of the foramen magnum articulating with the sphenoid. Beccari **p.**, a method of garbage disposal by reduction by bacterial fermentation in closed cells. **belemnoid** p. See styloid p. Blumenbach's p., the uncinate process. capitular p., the articular process on a vertebra for the head of a rib. caudate p., that portion of the liver which connects the right lobe and the caudate lobe. ciliary p's, the fringe-like processes that encircle the margin of the eye-lens. Civinini's p. See Civinini's spine, under spine. clavate p., a point on the posterior pyramid of the oblongata, near the apex of the fourth ventricle. clinoid p.,

der of the lesser wing of the sphenoid. clinoid p's, middle, two small eminences of the sphenoid bone, one on either side of the pituitary fossa. clinoid p's, posterior, two tubercles of the sphenoid, one at each superior angle of the dorsum epiphyii. cochleariform p., the bony plate which divides the canal of the eustachian the from that of the tensor tympani. condyloid p., the condyle of the lower jaw with its neck. conoid p., the tuberosity of the clavicle. coracoid p., a projection from the anterior and upper edge of the scapula. coronoid p. I. A wide emi-nence at the proximal end of the ulna before the olecranon. 2. A conic prominence ascending from the upper anterior part of the ramus of the lower jaw-bone. 3. The coracoid process. costal p., the anterior root of the transverse process of a cervical vertebra. Deiters's p., a neuraxon, or axis-cylinder process. See nerve-cell. dendritic p., any branched process of a nerve-cell. dental p. Same as alveolar p. ensiform p., the xiphoid process epiphyseal p. Same as epiphysis. ethmoid p., a projection from the upper border of the inferior turbinated bone. falciform p. 1. The upper and outer border of the saphenous opening. 2. The falx cerebri. floccular p., the flocculus. folian p., p. of Folius, the long process, or processus gracilis, of the malleus. frontal p. Same as frontos phenoidal process. frontonasal p., a process of bone in the fetus which develops into the forehead and bridge of the nose. frontosphenoidal p, the ascending process of the malar bone uniting with the external angular process of the frontal bone. funicular p., that portion of the tunica vaginalis which surrounds the spermatic cord. globular p., an eminence at either angle of the nose (in the embryo). Gottstein's basal p., any attenuated basal process connecting the basilar membrane of the organ of Corti with an outer hair-cell. Gowers's intermediate p., the lateral horn of gray substance of the spinal cord.

hamular p. 1. A hook-like process on the lower extremity of the internal pterygoid plate. 2. A hook-like point of the lacrimal bone which unites with the lacrimal tubercle of the upper maxillary bone. head p., an axial strand of cells in the embryo extending forward from the primitive knot; called also notochordal plate infundibular p., the neural portion of the hypophysis cerebri.
Ingrassias's p's, the lesser wings of the sphenoid bone. intrajugular p., a small process from the middle of the jugal notch of both the occipital and temporal bones. jugular p., a process of the occipital bone touching the jugular foramen. lacrimal p., a process of the inferior turbinated bone which joins with the lacrimal bone. lenticular p., one of the processes of the malleus; the orbicular bone. long p. 1. A process which connects the orbiculare to the incus proper. 2. The long, slender process projecting from the anterior surface of the MacLachlan's p. See MacLachlan's malleus method, under method. malar p., the eminence by which the superior maxilla articulates with the malar bone. **mammillary p.**, a tubercle on each superior articular process of the lumbar vertebræ. mastoid p., the conic projection at the base of the mastoid portion of the temporal bone. maxillary D., the bony plate which descends from the ethmoid process of the inferior turbinated bone mental p., a triangular prominence at the lower part of the symphysis of the mandible. **nasal p.**, a part of the lateral wall of the upper jaw-bone. **odontoid p.**, a tooth-like point of the axis which ascends and unites with the atlas. olecranon p. Same as olecranon. olivary p., a small oval point behind the optic groove of the sphenoid bone. orbital p. 1. A process of the palate bone which passes upward and outward. 2. A process which goes inward from the inner surface of the upper jaw-bone, forming part of the floor of the nostril and the roof of the mouth. 3. The end of the long process of the incus.

maxillary bone. **papillary p.**, the rounded left lower angle of the caudate lobe of the liver. **paramastoid p.**, a process which in man is represented by a tubercle on the under surface of the jugular process. paroccipital p., paramastoid process. postglenoid p., a tubercle which separates the glenoid fossa from the auditory process. progressive p., a bodily process which continues after it has ceased to be of use to the body. protoplasmic p., any process of a nerve-cell not continued as an axis-cylinder. See nervecell. pterygoid p. 1. A process of the palate bone, on its posterior edge articulating with the sphenoid bone. 2. A process on either side of the sphenoid bone, descending from the points of junction of the greater wings with the body of the bone. **pterygospinous p.** Same as Civinini's spine. See spine. **pyramidal p.**, the pterygoid process of the palate bone. **Rau's p.**, **ravian p.**, the long process of the malleus. **Riedel's p.**, a strap-shaped process of the liver sometimes developed over the gall-bladder in choldithiasis short p. bladder in cholelithiasis. **short p.**, one of the processes of the malleus; also one of the incus. **sphenoid p.**, one of the processes of the palate bone going upward and inward. **spinous p.** 1. That part of a vertebra which projects backward from the arch, giving attachment to muscles. 2. A backward prolongation from the lower angle of the great wing of the sphenoid bone. 3. Any one of the four spines of the ilium. styloid p. 1. The conic eminence behind the head of the fibula. 2. A projection on the outer part of the distal end of the radius. 3. A long spine extending downward from the lower surface of the temporal bone.
4. An eminence on the inner side of the distal end of the ulna. subgerminal p., outgrowths from the inner surface of the epiblast. superior vermiform p., upper part of median lobe of cerebellum. temporal p., the posterior angle by which the malar bone articulates with the zygomatic process of the temporal bone. **Tomes' p.**, a process from an enamel-cell, around which calcification occurs. **transverse p.**, a process on either side of a vertebra. **trochlear p.**, a bony spine projecting from the outer side of the os calcis and forming the attachment for the external annular ligament. Called also peroneal spine. unciform p., uncinate p. 1. A hooked projection from the ethmoid and one from the unciform bone; also, a hook at the anterior end of the gyrus of the hippocampus. 2. The lesser pancreas. vaginal 1. A ridge on the lower surface of the temporal p. 1. A ridge on the lower surface of the temporal bone partly inclosing the styloid process. 2. A process on the inferior surface of the body of the sphenoid running inward from the base of the pterygoid process. 3. A slip of the peritoneum taken down by the descending testis into the scrotum, where it becomes the tunica vaginalis.

vermiform p. 1. The superior is a median elevated lobe, joining the two hemispheres of the cerebellum. 2. The *inferior* is a projection from the bottom of the valley of the under surface of the cerebellum. 3. The appendix vermiformis. vocal p., the process of the arytenoid cartilage to which the vocal cord is attached. **xiphoid p.**, the pointed process of cartilage, supported by a core of bone, connected with the lower end of the body of the sternum; called also ensiform cartilage or process. zygomatic p., a process of the temporal bone forming a thin, narrow projection, bounding the squamous portion of the temporal bone below; also a long, serrated portion of the malar bone which connects with the foregoing, forming the zygomatic arch, or zygoma.

processus (pro-ses'us). Latin for process or processes. p. accesso'rius [B N A]. Same as anapophysis. p. ante'rior [fo'lii], p. ante'rior mal'lei [B N A], a long process of the malleus. p. az'ygos, the rostrum of the sphenoid bone. p. bre'vis, the short process of the malleus; also the short process of the incus. p. cau-

da'tus [B N A]. See caudate process, under process. p. cliia'res [B N A], the ciliary processes. p. clinoi'deus, the clinoid process. See process. p. cochlearifor'mis [B N A], the cochleariform process. p. e cerebel'lo ad medul'lam, the restiform bodies. p. e cerebel'lo ad pon'tem, the middle peduncles of the cerebellum. p. ecrebel'lo ad tes'tes, the superior peduncles of the cerebellum. p. ferrei'ni, pyramid of Ferrein. p. fronta'lis, the nasal process. p. gra'-cilis, the long process of the malleus. p. of Ingras'sias, the lesser wing of the sphenoid. p. latera'lis mal'lei [B N A], the short process of the malleus. p. pyramida'lis [B N A], the orbicular bone after it has become attached to the malleus. p. pyramida'lis [B N A], the pterygoid process of the palate bone. p. reticula'ris. See under formatio reticularis. p. tuba'rius, a process on the inner pterygoid plate of the sphenoid, supporting the cartilage of the eustachian tube. p. vagina'lis peritonæ'i [B N A]. Same as canal of Nuck. p. vermifor'mis [B N A], the vermiform appendix. See appendix. p. voca'lis [B N A], the vocal process. p. xiphoi'deus [B N A], the xiphoid process.

prochondral (pro-kon'dral). Occurring previous to the formation of cartilage.

prochordal (pro-kor'dal). In front of the notochord.

prochoresis (pro-ko-re'sis) [Gr. προχώρησις advancement]. The propulsion of food through the pylorus or along the alimentary canal.

prochorion (pro-ko're-on). I. The thin zona pellucida of the fertilized ovum when it reaches the uterus. 2. The coating of albuminous matter which the ovum receives as it passes along the oviduct.

Prochownick's diet (pro-kov'niks) [Ludwig Prochownick, German obstetrician, born 1851]. See under diet.

prochromatin (pro-kro'mat-in). The substance composing the true nucleoli; paranuclein.

prochromosome (pro-kro'mo-sōm). Chromosome-like bodies in resting nuclei.

prochymosin (pro-ki'mo-sin). Same as renninogen.
procidentia (pro-sid-en'she-ah) [L.]. A prolapse, or falling down.

procelia (pro-se'le-ah) [Gr. πρό before + κοιλία hollow]. The lateral ventricle of the brain.

proceelous (pro-se'lus) [Gr. $\pi \rho \dot{o}$ before + κοίλος hollow]. Concave on the anterior surface.

procreation (pro-kre-a'shun) [L. procrea'tio]. The act of begetting.

procreative (pro'kre-a-tiv). Concerned in procreation; able to beget.

proctagra (prok'tag-rah, prok-ta'grah) [Gr. πρωκτός anus + ἄγρα seizure]. Pain in and around the anus.

proctalgia (prok-tal'je-ah) [Gr. πρωκτός anus + άλγος pain]. Neuralgia of the lower rectum.

proctatresia (prok-tat-re'ze-ah) [Gr. $\pi \rho \omega \kappa \tau \delta s$ anus + a priv. $+ \tau \rho \eta \sigma \iota s$ perforation]. Imperforation of the anus.

proctectasia (prok-tek-ta'ze-ah) [Gr. πρωκτός anus + ἔκτασις dilatation]. Dilatation of the rectum or of the anus.

proctectomy (prok-tek'to-me) [Gr. πρωκτός anus + ἐκτομή excision]. Surgical removal of the rectum.

proctencleisis (prok-ten-kli'sis) [Gr. πρωκτός anus + ἐγκλείειν to shut in]. Constriction, or stenosis, of the lower rectum.

procteurynter (prok'tu-rin-ter) [Gr. πρωκτός anus + εὐρύνειν to widen]. A bag-like device used in dilating the rectum.

proctitis (prok-ti'tis). Inflammation of the rectum.
epidemic gangrenous p., a disease of the northern part of South America and the Fiji and other

- islands of the South Pacific Ocean, marked by rapidly spreading ulceration of the anus and lower bowel, with bloody discharges, fever, and great prostration.
- **proctocele** (prok'to-sēl) [Gr. πρωκτόs anus + κήλη hernia]. Hernial protrusion of a part of the rectum.
- proctoclysis (prok-tok'lis-is) [Gr. πρωκτός rectum + κλύσις a drenching]. The slow injection of large quantities of liquid into the rectum. Called also Murphy drip. See Murphy's method (2d def.), under method.
- **proctococcypexy** (prok-to-kok'se-pek-se) [Gr. πρωκτός anus + κόκκυξ coccyx + πηγνύναι to fix]. The fastening of the rectum to the coccyx by sutures.
- proctocolitis (prok-to-ko-li'tis). Inflammation of the rectum and colon.
- proctocolonoscopy (prok"to-ko-lon-os'ko-pe).
 Inspection of the interior of the rectum and lower
 colon.
- **proctocystoplasty** (prok-to-sis'to-plas-te) [Gr. $\pi \rho \omega \kappa \tau \delta s$ anus + $\kappa \iota \sigma \tau \iota s$ bladder + $\pi \lambda \iota \sigma \sigma \epsilon \iota \nu$ to form]. A plastic operation on the rectum and bladder.
- **proctocystotomy** (prok"to-sis-tot'o-me) [Gr. πρωκτός anus $+ \kappa \nu \sigma \tau \iota s$ bladder $+ \tau o \mu \dot{\eta}$ cut]. The rectovesical operation for stone in the bladder.
- proctodeum, proctodæum (prok-to-de'um) [Gr. $\pi \rho \omega \kappa \tau \delta s$ anus $+ \delta a l \epsilon \iota \nu$ to divide]. A fold or invagination of the epiblast of the embryo at the point where later the anus is formed.
- proctodynia (prok-to-din'e-ah) [Gr. πρωκτός anus + όδύνη pain]. Pain in or about the anus.
- procto-elytroplasty (prok"to-el'it-ro-plas-te) [Gr. πρωκτός anus + ξλυτρον vagina + πλάσσειν to form]. A plastic operation on the rectum and vagina.
- proctologic (prok-to-loj'ik). Pertaining to proctology.
- proctologist (prok-tol'o-jist). A practitioner skilled in proctology.
- **proctology** (prok-tol'o-je) [Gr. πρωκτός anus + λόγος discourse]. The branch of medicine treating of the rectum and its diseases.
- **proctoparalysis** (prok"to-par-al'is-is) [Gr. πρωκτός anus + paralysis]. Paralysis of the muscles of the anus and rectum.
- proctopexy (prok'to-peks-e) [Gr. πρωκτός anus + πηγνύναι to fix]. The fixation of the rectum to some other part by suture.
- proctophobia (prok-to-fo'be-ah) [Gr. πρωκτός anus + φόβος fear]. The mental state of apprehension common in persons with rectal disease.
- proctoplasty (prok'to-plas-te) [Gr. πρωκτόs anus + πλάσσειν to form]. Plastic surgery of the rectum and anus.
- proctoplegia (prok-to-ple'je-ah) [Gr. πρωκτός anus + πληγή stroke]. Same as proctoparalysis.
- **proctopolypus** (prok-to-pol'ip-us) [Gr. πρωκτός anus + polypus] Polypus of the rectum.
- proctoptoma (prok-top-to'mah). Proctoptosis.
- proctoptosis (prok-top-to'sis) [Gr. $\pi \rho \omega \kappa \tau \delta s$ anus $+ \pi \tau \hat{\omega} \sigma \iota s$ fall]. Prolapse of the anus.
- **proctorrhaphy** (prok-tor'af-e) [Gr. πρωκτόs rectum $+ \dot{ρ}aφη$ seam]. The stitching, or suturation, of the rectum.
- proctorrhea, proctorrhea (prok-tor-e'ah) [Gr. πρωκτός anus + ροία flow]. A mucous discharge from the anus.
- proctoscope (prok'to-skōp) [Gr. πρωκτός anus + σκοπείν to inspect]. A speculum for inspecting the rectum. Tuttle's p., a rectal speculum with an electric light at its extremity and an arrangement for inflating the rectal ampulla.
- proctoscopy (prok-tos'ko-pe) [Gr. πρωκτός rectum + σκοπεῖν to view]. Inspection of the rectum.

- proctosigmoidectomy (prok"to-sig-moi-dek'to-me) [Gr. πρωκτός anus + sigmoid + Gr. ἐκτομή excision]. Excision of the anus and sigmoid flexure.
- proctosigmoiditis (prok"to-sig-moi-di'tis). Inflammation of the rectum and sigmoid.
- proctospasm (prok'to-spazm) [Gr. πρωκτός rectum + spasm]. Spasm of the rectum.
- **proctostasis** (prok-tos'tas-is) [Gr. προκτός rectum + στάσις stoppage]. Constipation due to anesthesia of the rectum to the stimulus of defecation.
- **proctostenosis** (prok"to-sten-o'sis) [Gr. πρωκτός rectum + στένωσις narrowing]. Stricture of the rectum or anus.
- **proctostomy** (prok-tos'to-me) [Gr. πρωκτός anus + στόμα mouth]. The creation of a permanent opening into the rectum.
- **proctotome** (prok'to-tōm) [Gr. πρωκτός anus + τέμνειν to cut]. A knife for proctotomy.
- proctotomy (prok-tot'o-me) [Gr. πρωκτός anus + τέμνειν to cut]. The cutting of an anal or rectal stricture; the opening of an imperforate anus. external p., that done on or near the sphincter. internal p., an incision of the rectum from within above the sphincter.
- **proctotoreusis** (prok"to-to-ru'sis) [Gr. πρωκτός anus + τόρευσις boring]. The making of an artificial anus.
- proctotresia (prok-to-tre'se-ah). Proctotoreusis. proctovalvotomy (prok"to-val-vot'o-me). The operation of cutting the rectal valves.
- procumbent (pro-kum'bent). Lying on the face.
- procursive (pro-kur'siv) [L. procursi'vus]. Characterized by a tendency to run forward.
- procurvation (pro-kur-va'shun) [L. procurva're to bend forward]. A bending forward, as of the body.
- **prodigiosin** (pro-dij-e-o'sin). The red pigment formed by cultures of *Erythrobacillus prodigiosus*.
- prodigiosus toxin (pro-dij-e-o'sus). See toxin.
- **prodromal** (pro-dro'mal). Premonitory; indicating the approach of a disease.
- prodrome (pro'drōm) [L. prod'romus; Gr. πρόδρομοs forerunning]. A premonitory symptom or precursor; a symptom indicating the onset of a disease.
- **prodromic, prodromous** (pro-dro'mik, prod'romus). Prodromal.
- product (prod'ukt). Something produced.
 anaphylactic reaction p. See anaphylactin.
 substitution p., a chemic product obtained
 by substituting for one element in a molecule an
 atom or radical of another substance. Vaughan's split p's, a protein which has been split
 up into a poisonous and a non-poisonous part,
 the former soluble in the menstruum, the latter not. The former is called the "poison";
 the latter, the "residue."
- productive (pro-duk'tiv). Producing or forming, especially producing new tissue.
- **proemial** (pro-e'me-al) [pro'em a prelude]. Introductory; serving as an introduction or indication; prodromal; potentially dangerous, as proemial breast.
- proencephalon (pro-en-sef'al-on). Same as prosencephalon.
- proencephalus (pro-en-sef'al-us) [Gr. πρό before + ἐγκέφαλος brain]. A monster with a part of the brain protruding from a frontal fissure.
- proenzyme (pro-en'zim). Same as zymogen.
- prœotia (pre-o'she-ah). Incorrect form of proje-
- procrythroblast (pro-er-ith'ro-blast) [Gr. πρό before + erythroblast]. Same as hematoblast.
- procrythrocyte (pro-er-ith'ro-sit) [Gr. πρό before + erythrocyte]. Same as hematoblast.

proestrum, procestrum (pro-es'trum) [Gr. πρό before + astrum]. The period just before the occurrence of the estrum in animals.

proferment (pro-fer'ment). Same as symogen.

proferrin (pro-fer'in). Iron nucleoproteid, a brownish powder containing 10 per cent. of organic iron. Dose, 5-10 gr. (0.333-0.666 gm.).

professional (pro-fesh'un-al). Pertaining to one's profession or occupation.

Profeta's law (pro-fa'tahz) [Guiseppe Profeta, Italian physician]. See law.

Profichet's syndrome (pro-fe-shāz') [Georges Charles Profichet, French physician, born 1873]. See syndrome.

profilograph (profil-o-graf) [profile + Gr. γράφειν to draw]. A device for recording the profile of the face.

profilometer (pro-fi-lom'et-er). An apparatus for securing the profile and outlining it on paper.

Proflagellata (pro-flag-el-a'tah). Doflein's name for a proposed group to embrace organisms supposed to be transitional from bacteria to flagellates, *i. e.*, the spirochetes.

proflavine (pro-fla'vin). Diamino-acridine sulphate, CH(NH₂.C₆H₃)₂NH.SO₂.OH, a reddishbrown crystalline powder: used like acriflavin in the treatment of infected wounds.

profondometer (pro-fon-dom'et-er). An apparatus for locating a foreign body by the fluoroscope by obtaining three lines of sight which intersect at the foreign body.

profunda cervi'cis (pro-fun'dah), p. fem'oris. See arteries, table of.

progamous (prog'am-us) [Gr. $\pi\rho\delta$ before $+\gamma\delta\mu\rho\sigma$ marriage]. Previous to fertilization of the ovum. proganol (pro'ga-nol). An organic silver prepara-

tion, silver proteinate, containing 8.3 per cent. of silver.

progaster (pro'gas-ter) [Gr. $\pi\rho\delta$ before $+ \gamma \alpha \sigma \tau \eta \rho$ stomach]. The archenteron.

progastrin (pro-gas'trin). Gastrin that has not been activated.

progenital (pro-jen'it-al). On the external surface of the genitals.

progeria (pro-je're-ah) [Gr. $\pi\rho\delta$ before $+\gamma\hat{\eta}\rho\alpha$ s old age]. Premature old age; specifically a form of infantilism marked by small stature, absence of facial and pubic hair, wrinkled skin, gray hair, and the facial appearance, attitude, and manner of old age (Gilford).

proglossis (pro-glos'is) [Gr. προγλωσσίε]. The tip of the tongue.

proglottid (pro-glot'id). Proglottis.

proglottis (pro-glot'is), pl. proglot'tides [pro-glottis]. Any one of the joints of a tape-worm.

prognathism (prog'nath-izm). The condition of being prognathous; marked projection of the jaw.

prognathometer (prog-nath-om'et-er) [prognath-ism + Gr. μέτρον measure]. An instrument for measuring the form and degree of prognathism.

prognathous (prog'nath-us) [Gr. πρό before + γνάθος jaw]. Having projecting jaws.

prognose (prog-nōs'). To forecast the course and outcome of a disease.

prognosis (prog-no'sis) [Gr. πρόγνωσις foreknowledge]. A forecast as to the probable result of an attack of disease; the prospect as to recovery from a disease afforded by the nature and symptoms of the case.

prognostic (prog-nos'tik). r. Affording an indication as to prognosis. 2. A symptom or sign on which a prognosis may be based.

prognosticate (prog-nos'tik-āt). To state or determine the probable outcome of an attack of disease.

progonoma (pro-gon-o'mah) [Gr. πρό before + γόνος sperm + -ωμα tumor]. A tumor due to misplacement of tissue as the result of fetal atavism to a stage which does not occur in the life-history of the species, but which does occur in ancestral forms of the species.

progression (pro-gresh'un). The act of moving or walking forward. backward p., walking backward: an act seen in certain nervous diseases. cross-legged p., a walk in which the toes are turned in and the foot is placed in front of its fellow. metadromic p., one of the sequelæ of epidemic encephalitis, consisting in the fact that a person who is barely able to walk may have no difficulty in running.

progressive (pro-gres'iv). Advancing; going forward; of a disease, going from bad to worse.

proiodin (pro-i'o-din). A proprietary compound of iodin and milk albumin: used in syphilis, scrofula, etc.

proiotia (pro-e-o'she-ah) [Gr. $\pi\rho\omega i$ early]. Sexual or genital precocity.

projection (pro-jek'shun) [L. pro forward + ja'cer to throw]. 1. A throwing forward, especially the act of referring impressions made on the sense-organs to their proper source, so as to locate correctly the objects producing them. 2. The act of extending or jutting out; also a part that juts out. erroneous p., a misjudging of the position of an object, due to weakness of the eye-muscles.

projectoscope (pro-jek'to-skōp). An apparatus for throwing pictures on a screen by reflected light, projection (pro-i'o-din). An iodin-casein compound,

a yellowish powder: called also lactojod.

prolabium (pro-la'be-um) [L. pro before + la'bium lip]. The exposed red part of the lip.

prolamin (pro-lam'in). Any one of a group of proteins found in cereals. They are soluble in alcohol (70-80 per cent.), but insoluble in water and absolute alcohol. They are also called alcoholsoluble proteins.

prolapse (pro'laps) [L. prolap'sus; pro before + la'bi to fall]. The falling down, or sinking, of a part or viscus; procidentia. p. of the cord, premature expulsion of the umbilical cord in labor. p. of the iris, protrusion of the iris through a wound in the cornea. Morgagni's p., chronic inflammatory hyperplasia of the mucosa and submucosa of the sacculus laryngis.

proleptic (pro-lep'tik). Occurring ahead of the usual time: said of a periodic disease whose paroxysms return at successively shorter intervals.

proleucemia (pro-lu-se'me-ah). Leukanemia, proleukemia (pro-lu-ke'me-ah). Leukanemia.

proleukocyte (pro-lu'ko-sit). Same as leukoblast.
proliferate (pro-lif'er-āt). To grow by the reproduction of similar cells.

proliferating (pro-lif'er-a-ting). Reproducing or multiplying in similar forms; applied to certain cells and morbid cysts.

proliferation (pro-lif-er-a'shun) [L. pro'les off-spring + fer're to bear]. The reproduction or multiplication of similar forms, especially of cells and morbid cysts.

proliferative, proliferous (pro-lifer-a-tiv, prolifer-ous). Characterized by proliferation.

prolific (pro-lif'ik) [L. prolif'icus]. Fruitful; productive.

proligerous (pro-lij'er-us) [L. pro'les offspring + fer're to bear]. Producing an ovum.

prolin, proline (pro'lin). Alpha-pyrrolidin carboxylic acid, C₄H₇(NH).COOH; one of the cleavage products (amino-acids) from the protein molecule (Emil Fischer, 1901).

promegaloblast (pro-meg'al-o-blast). A cell developing from a lymphoidocyte and developing into a megaloblast.

prominence (prom'in-ens) [L. prominen'tia]. A projection. laryngeal p. See prominentia lar-

ymgea. malleolar p., a small projection at the upper extremity of the stria malleolaris, formed by the lateral process of the malleus. spiral p., a portion of the spiral ligament projecting into the scala media along the lower edge of the stria vascularis. styloid p., en eminence on the posterior wall of the tympanic cavity.

prominentia (prom-in-en'she-ah) [L.]. A prominence. p. laryn'gea [B N A]. The laryngeal prominence; the Adam's apple.

promitosis (pro-mit-o'sis). A simple form of cell division seen in tumor cells, in which the nucleolus or karyosome divides as in mitosis, the rest of the division simulating amitosis.

promontorium (prom-on-to're-um) [B N A]. See promontory.

promontory (prom'on-to-re) [L. promonto'rium]. A projecting eminence or process double p., a sacrum in which the second segment is bent backward, forming an angle with the first segment; the second segment is called false p. p. of the sacrum, the upper and projecting part of the sacrum. p. of the tympanum, the prominence on the inner wall of the tympanum formed by the first turn of the cochlea.

promyelocyte (pro-mi'el-o-sit) [Gr. πρό before + myelocyte]. A large uninuclear cell of myeloid origin seen in the blood in certain forms of leukemia Called also granular leukoblast.

pronation (pro-na'shun) [L. prona'tio]. The act of turning the palm of the hand downward.

pronatoflexor (pro-na-to-flek'sor). Both pronator
and flexor.

pronator (pro-na'tor) [L.]. See muscles, table of.
pronaus (pro'na-us) [Gr. πρό before + νάος
temple]. The vestibule of the vagina.

prone (pron) [L. pro'nus]. Lying with the face downward; of the hand, having the palm turned downward.

pronephron, pronephros (pro-nef'ron, pro-nef'ros) [Gr. $\pi\rho\delta$ before $+\nu\epsilon\rho\rho\delta$ s kidney]. The primordial kidney; a structure developing in the embryo before the wolffian body. It forms the anterior section of the wolffian body and opens into the cloaca by the mullerian duct.

pronograde (pro'no-grād) [L. pro'nus bent downward + gra'dı to walk]. Carrying the body in a horizontal position, as distinguished from orthograde: said of quadrupeds.

pronometer (pro-nom'et-er). An instrument for measuring the amount of pronation or supination of the forearm.

pronucleus (pro-nu'kle-us). The nucleus of the egg-element (female p.) or of the sperm-element (male p.) during fertilization of the ovum by the spermatozoön.

procestrum. See proestrum.

proötic (pro-ot'ik) [Gr. $\pi \rho \delta$ before $+ \delta \delta s$ ear]. Situated in front of the ear.

propaesin (pro-pa'es-in). See propäsin.

propagation (prop-ag-a'shun). Reproduction.

propagative (prop'ag-a-tiv). Pertaining to or concerned in propagation.

propalinal (pro-pal'in-al) [Gr. $\pi \rho \delta$ before $+ \pi \delta \lambda \iota \nu$ back]. Having a backward and forward direction or motion.

propane (pro'pān). A volatile liquid or gaseous hydrocarbon, C_3H_8 , from petroleum.

propasin, propassin (pro-pa'e-sin). Paraminobenzoic acid propyl ester, NH₂.C₆H₄.COOC₃H₇, a colorless, crystalline compound: used as a local anesthetic in dermatology and in gastro-intestinal disorders.

prop-cells (prop'selz). See supporting cells, under cell.

propedeutic, propedeutic (pro-pe-du'tik) [Gr. $\pi\rho\delta$ before $+\pi\alpha\iota\delta\epsilon\delta\epsilon\iota\nu$ to teach]. Pertaining to prelimingry instruction.

propedeutics, propædeutics (pro-pe-du'tiks).

Preliminary instruction.

propene (pro'pen). Propylene.

propenyl (pro-pe'nil). Same as glyceryl.

propepsin (pro-pep'sin). Same as pepsinogen.

propeptone (pro-pep'ton). Same as hemialbumose.

propeptonuria (pro-pep-to-nu're-ah). Same as hemialbumosuria.

properitoneal (pro"per-it-o-ne'al). Situated between the parietal peritoneum and the abdominal wall. See under hernia.

prophase (pro'fāz). The first stage in mitosis, including all the processes up to the metaphase or longitudinal splitting of the chromosomes. See mitosis.

prophylactic (pro-fil-ak'tik) [Gr. προφυλακτικός]. Tending to ward off disease; also a remedy so acting. **Haffkine's p.** See Haffkine's vaccine, under vaccine. **typhold p.** See typhoid vaccine, under vaccine.

prophylactodontia (pro-fil-ak"to-don'she-ah).

Preventive dentistry; the branch of dentistry which specializes in preventing dental and oral disease and malformation.

prophylactodontist (pro-fil-ak-to-don'tist). A specialist in prophylactodontia.

prophylaxis (pro-fil-aks'is) [Gr. προφυλάσσειν to guard]. The prevention of disease, preventive treatment. **denţal p.**, prophylactodontia. **oral p.**, the prevention of disease of the mouth and teeth. **serum p.**, prevention of disease by the use of immune sera.

propion (pro'pe-on). Diethyl ketone; **a** mobile fluid, C₂H₅.CO.C₄H₅: sedative and hypnotic. Dose, 8-45 min. (0.5-3 c c.).

propionic acid (pro-pe-on'ik). See under acid.

propionitril (pro-pi-o-ni'tril). Ethyl cyanid.

propionylphenetidin (pro-pi"o-nil-fen-et'id-in). Same as *triphenin*.

proplex, proplexus (pro'pleks, pro-pleks'us). The choroid plexus of the lateral ventricle of the brain.

propol (pro'pol). A proprietary disinfectant for wounds and instruments.

propolisin (pro-pol'is-in). A reddish-brown liquid prepared from beeswax; a vulnerary, antiseptic, and disinfectant.

proponal (pro'po-nal). A colorless, crystalline substance, dipropylmalonylurea, (('3H₇)₂C'(C().-NH)₂CO: used as a hypnotic like veronal. Dose, 3-8 gr. (o 2-0 53 gm.).

propons (pro'pons) [L. pro before + pons bridge]. The delicate plates (al'a pon'tis) of white substance which pass transversely across the anterior end of the pyramid and just below the pons varolii; the ponticulus.

proposote (pro'po-sōt). Creosote phenylpropionate: used in affections of the lung. Dose, 10-20 min. (0.6-1.3 c.c.).

proprioceptive (pro"pre-o-sep'tiv). Receiving stimulations within the tissues of the body.

proprioceptor (pro"pre-o-sep'tor). The apparatus which receives stimulations within the tissues of the body, which are due to the processes within the organism itself. See *receptor* (2d def).

propriospinal (pro-pre-o-spi'nal). Pertaining wholly to the spinal cord.

proptometer (pro-tom'et-er) [Gr. πρόπτωσις pro-trusion + μέτρον measure]. An instrument for measuring protrusion; especially, a scale for measuring the amount of exophthalmos.

proptosis (pro-to'sis) [Gr. πρόπτωσις]. A forward displacement; a projecting.

propulsion (pro-pul'shun) [L. pro forward + pel'-lere to thrust]. Tendency to fall forward in walking; also festination.

propyl (pro'pil). The univalent chemical radical, C₃H₇ or CH₃.CH₂.CH₂. propylamin (pro-pil-am'in). A liquid amin or base, CH₃.CH₂.CH₂.NH₂, derivable from narcotin, etc. It occurs in two forms, normal propylamin and isopropylamin. The former is a colorless liquid, of strong ammoniacal odor, soluble in water, derived from cultures of bacteria of the feces. It has been used as an antirheumatic, sedative, and antispamodic in chorea, hysteria, etc. Dose, 1-5 min. (0.060-0.333 c.c.).

propylene (prop'il-ēn). A gaseous hydrocarbon, CH₃.CH:CH₂, of the olefin series. It has anesthetic properties.

propyrin (pro-pi'rin). Sodium thymobenzoate. pro re nata (pro re na'tah). Latin for according to circumslances.

prorennin (pro-ren'in). Same as renninogen.

prorrhaphy (pro'raf-e) [Gr. $\pi\rho\delta$ forward + $\dot{\rho}\dot{\alpha}\varphi\eta$ suture]. Same as advancement.

prorsad (pror'sad) [L. pror'sum forward]. In a forward direction.

proscolex (pro-sko'leks), pl. *prosco'lices* [Gr. $\pi\rho\delta$ before $+ \sigma\kappa\omega\lambda\eta\xi$ worm]. The embryonic form of a cestode worm just after leaving the egg.

prosecretin (pro-se-kre'tin). The supposed precursor of secretin, thought to be contained in epithelial cells and to be converted into secretin on hydrolysis with acids.

prosector (pro-sek'tor) [L]. One who dissects anatomic subjects for demonstration.

prosencephalon (pros-en-sef'al-on) [Gr. $\pi \rho \delta s$ before $+ \dot{\epsilon} \gamma \kappa \dot{\epsilon} \varphi \alpha \lambda \sigma s$ brain] The forebrain; the anterior part of the anterior cerebral vesicle of the embryo which develops into the cerebral hemispheres, the corpora striata, and the olfactory lobes.

proserozym, proserozyme (pro-se'ro-zīm). See under serozyme.

proso (pro'so). A Russian variety of millet recommended as a table cereal

prosocele, prosocœle (pros'o-sēl) [Gr. $\pi \rho \delta s$ before $+ \kappa o \iota \lambda l \alpha$ a hollow]. The foremost cavity of the brain; the ventricular cavity of the prosencephalon.

prosodemic (pros-o-dem'ik) [Gr. $\pi \rho \delta \sigma \omega$ forward + $\delta \hat{\eta} \mu \sigma_0$ people]. Passing from one person to another instead of reaching a large number at once, through some means such as water-supply: said of a disease progressing in that way.

prosogaster (pros'o-gas-ter) [Gr. πρός before + γαστήρ stomach]. Same as foregut.

prosopagus (pro-sop'ag-us) [Gr πρόσωπον face + πηγύναι to fasten]. A monster-fetus with a twin in the form of a tumor-like mass attached to the face

prosopalgia (pros-o-pal'je-ah) [Gr. πρόσωπον face + άλγος pain]. Neuralgia of the trifacial nerve; tic douloureux.

prosopalgic (pros-o-pal'jik). Pertaining to or affected with facial neuralgia.

prosopantritis (pros"o-pan-tri'tis) [Gr. πρόσωπον face + ἄντρον cavity + -ιτις inflammation]. Inflammation of the frontal sinuses.

prosopectasia (pros"o-pek-ta'zhe-ah) [Gr. $\pi \rho \delta \sigma$ - $\omega \pi \sigma \nu$ face + έκτασις expansion]. Oversize of the face.

prosoplasia (pros-o-pla'se-ah) [Gr. πρόσω forward + πλάσσειν to form].
 1. Abnormal differentiation of tissue.
 2. Development into a higher state of organization or functionating.

prosopodiaschisis (pros"o-po-di-as'kis-is) [Gr. $\pi \rho \delta \sigma \omega \pi \sigma \nu$ face $+ \delta l \alpha$ apart $+ \sigma \chi l \xi \epsilon \iota \nu$ to split]. An operation for opening all of the paranasal sinuses, involving preliminary tracheotomy and hermetic tamponade of the pharynx; a median incision from the root of the nose to the upper lip; bilateral dissection and reflection of the facial flaps; removal of the anterior and internal walls of the antrum, of the anterior and inferior walls of the frontal sinus, of the frontal process, and of the ethmoid.

prosopodiplegia (pros"o-pod-i-ple'je-ah) [Gr. $\pi \rho b \sigma \omega \pi o \nu$ face $+ \pi o b s$ foot $+ \pi \lambda \dot{\eta} \gamma \eta$ stroke]. Paralysis of the face and one lower extremity.

prosopolepsy (pros'o-po-lep-se) [Gr. πρόσωπον face + λαμβάνειν to take]. The reading of character from the features.

prosoponeuralgia (pros"o-po-nu-ral'je-ah) [Gr. πρόσωπον face + neuralgia]. Pain in the nerves of the face.

prosopoplegia (pros"op-o-ple'je-ah) [Gr. πρόσωπον face + πλήγη stroke]. Facial paralysis.

prosopoplegic (pros"o-po-ple'jik). Pertaining to or affected with facial paralysis.

prosoposchisis (pros-o-pos'kis-is) [Gr. $\pi \rho \delta \sigma \omega \pi \sigma \nu$ face $+ \sigma \chi i \sigma \iota s$ cleft]. Congenital fissure of the face.

prosopospasm (pros'o-po-spazm) [Gr. πρόσωπον face + spasm]. Spasm of the muscles of the face.

prosoposternodymia (pros"o-po-ster-no-dim'eah) [Gr. πρόσωπον face + στέρνον sternum + δίδυμος twin]. A double monster-fetus with face joined to face and sternum to sternum

prosopothoracopagus (pros"o-po-tho-rak-op'agus) [Gr. $\pi \rho \delta \sigma \omega \pi o \nu$ face $+ \theta \omega \rho \alpha \xi$ chest $+ \pi \dot{\alpha} \gamma o s$ fixed]. Twin fetuses

joined at the faces, necks, and chests.

prosopotocia (pros"o-poto'se-ah) [Gr. πρόσωπον face + τόκος birth]. Face presentation in labor.

prostaden (pros'tad-en)
[Gr. προστάτης prostate + ἀδήν gland]. A preparation of the prostate glands of bullocks: used in prostatic and other gland hypertrophies.

prostata (pros-ta'tah). A proprietary, dry therapeutic extract of the prostate glands of animals.

Prosopothoracopagus (Gould and Pyle).

prostatalgia (pros-tat-al'je-ah) [prostate + Gr. ἄλγος pain]. Pain in the prostate gland.

prostatauxe (pros-tat-awk'se) [Gr. προστάτης prostate + αὐξή increase]. Enlargement of the prostate.

prostate (pros'tāt) [Gr. προστάτης prostate; πρό before + ἰστάναι to stand]. A gland which in the male surrounds the neck of the bladder and the urethra. It consists of a median lobe and two lateral lobes, and is made up partly of glandular matter, the ducts from which empty into the prostatic portion of the urethra, and partly of muscular fibers which encircle the urethra.

prostatectomy (pros-tat-ek'to-me) [Gr. προστάτης prostate + ἐκτομή excision]. Surgical removal of the prostate or of a part of it.

prostateleosis (pros"tat-el-ko'sis) [prostate + Gr. ελκωσις ulceration]. Ulceration of the prostate.

prostatoria (pros-ta-te're-ah). The abnormal mental and emotional attitude seen in prostatic disease; prostatism.

prostatic (pros-tat'ik). Pertaining to the prostate gland.

prostaticovesical (pros-tat"ik-o-ves'ik-al). Pertaining to the prostate and the bladder.

prostatism (pros'ta-tizm). A morbid state of mind and body due to prostatic disease, especially the condition which results from obstruction to urination due to prostatic hypertrophy. vesical p., a condition of retention of the urine resembling that of prostatic disease, but existing in the absence of any affection of the prostate.

prostatitic (pros-tat-it'ik). Pertaining to prostatitis.

prostatitis (pros-ta-ti'tis). Inflammation of the prostate gland.

- prostatocystitis (pros"ta-to-sis-ti'tis) [prostate + Gr. κόστις bladder + -ιτις inflammation]. Inflammation of the neck of the bladder (prostatic urethra) and the bladder cavity.
- prostatocystotomy (pros-ta''to-sis-tot'o-me) [Gr. προστάτης prostate + κύστις bladder + τέμνειν to cut]. Surgical incision of the bladder and prostate.
- prostatodynia (pros"tat-o-din'e-ah) [prostate + Gr. δδύνη pain]. Pain in the prostate gland.
- prostatomegaly (pros"ta-to-meg'a-le) [prostate + Gr. μεγάλη great]. Hypertrophy of the prostate.
- prostatometer (pros-ta-tom'et-er) [prostate + Gr. μέτρον measure]. An instrument for measuring the prostate.
- prostatomy (pros-tat'o-me) [prostate + Gr. τέμ-νειν to cut]. The operation of cutting into the prostate.
- prostatomyomectomy (pros-ta"to-mi-o-mek'to-me) [prostate + myomectomy]. The surgical removal of a prostatic myoma.
- prostatorrhea, prostatorrhea (pros"ta-tor-re'ah) [prostate + Gr. pola flow]. A gleety or catarrhal discharge from the prostate.
- **prostatotomy** (pros-ta-tot'o-me) [Gr. προστάτης prostate + τέμνειν to cut]. Surgical cutting of the prostate.
- prostatotoxin (pros"tat-o-tok'sin). A toxin formed on injection of an extract of the prostate gland: it is destructive to prostatic cells.
- prostatovesiculectomy (pros"tat-o-ves-ik-u-lek'-to-me). Excision of the prostate and seminal vesicles.
- prostatovesiculitis (pros"ta-to-ves-ik-u-li'tis). Inflammation of the prostate and seminal vesicles. prosternation (pro-ster-na'shun). See camplo-comm.
- >rostheon (pros'the-on) [Gr. προσθέων running forward]. The alveolar point.
- prosthesis (pros'the-sis) [Gr. $\pi\rho\delta$ s to $+\theta\epsilon\sigma$ s a putting]. 1. The replacement of an absent part by an artificial one. 2. An artificial part, such as an eye, leg, or denture. **dental p.**, the art of supplying missing teeth or parts of teeth by artificial substitutes. **paraffin p.**, subcutaneous injection of melted paraffin in order to restore the natural contour of a part. **Sauerbruch's p.**, an artificial limb in which the tissues of the stump are used to secure motion. **Vanghetti's p.**, an artificial limb with a mechanism similar to Sauerbruch's prosthesis.
- >rosthetic (pros-thet'ik). Pertaining to prosthesis.
- prosthetics (pros-thet'iks). A branch of surgery pertaining to artificial organs and parts.
- **Prosthetist** (pros'the-tist). A maker of artificial parts; especially a maker of artificial dentures.
- **prosthion** (pros'the-on) [Gr. πρόσθεν before]. The alveolar point.
- rosthodontia (pros-tho-don'she-ah) [prosthetic + Gr. δδοῦς tooth]. Prosthetic dentistry; the art of making dental appliances and substitutes, such as crowns, bridges, artificial dentures, etc.
- prosthodontist (pros-tho-don'tist). A dentist who
 specializes in prosthodontia.
- prostitution (pros-te-tu'shun). Habitual or professional fornication; promiscuous sexual intercourse for hire.
- prostration (pros-tra'shun) [L. prostra'tio]. Extreme exhaustion or powerlessness. electric p., a condition due to prolonged exposure to electric light, marked by pains in the face, photophobia, and pigmentation of the skin. heat p. See heat exhaustion, under exhaustion. nervous p. Same as neurasthenia.
- protagon (pro'tag-on) [Gr. πρῶτος first + ἄγειν to lead]. A crystalline mass, C₁₀₈, H₂₀₀N₅PO₂₈, which

- separates from an alcoholic extract of brain substance on cooling. It may be a mixture.
- protal (pro'tal) [Gr. πρώτος first]. Congenital: dating from the origin of life.
- protalbumose (pro-tal'bu-mōs). See protoproteose. protamin (pro-tam'in) [Gr. πρῶσος first + amin].

 1. Any one of a series of basic proteins of the most simple composition, occurring in the spermatozoa of fish. They are strongly basic and yield large amounts of diamino-acids. 2. An amin or base, C16H22N9O2, from spermatozoa and from fish-spawn.
- protan (pro'tan). A brown powder, albumin tannate, insoluble in water and acids, being a combination of tannic acid and casein used as an astringent in diarrhea. Dose, 15-30 gr. (1-2 gm).
- protanomalopia (pro" tan-om-al-o'pe-ah) [Gr. πρῶτος first + ἀνώμαλος irregular + ἄψ eye]. A relative green vision in which more than the normal proportion of green is required to equate red to a homogeneous yellow.
- protanope (pro'tan-op). A person affected with protanopia.
- protanopia (pro-tan-o'pe-ah) [Gr. πρῶτος first + anopia]. Von Kries' term for red-blindness, as indicating a defect in the first constituent necessary for color vision. Cf. deuteranopia and tritanopia.
- **protargentum** (pro-tar-jen'tum). A compound of gelatin and silver containing 8 per cent. of silver.
- protargin (pro-tar'jin). The name adopted by the Council on Pharmacy and Chemistry of the American Medical Association for such proprietary preparations as protargol, proganol, and protargentum.
- protargol (pro-tar'gol). A soluble yellowish powder of silver and albumose, strong silver protein, containing 8 per cent. of silver. It is a bactericide and is used in the treatment of eye diseases, wounds, and gonorrhea: employed for injections in a weak solution.
- **Protea** (pro'te-ah) [L.]. A genus of trees of many species from various wet and warm regions; several species are medicinal. **p. juice**, a pectoral or bechic honey derived from the flowers of various species of *Protea*, as *P. mellif'era*.
- proteal (pro'te-al). A proprietary vegetable protein for hypodermic use.
- protean (pro'te-an). r. Assuming different shapes; changeable in form. 2. An insoluble derivative of protein, being the first product of the action of water, dilute acids, or enzymes.
- **proteantigen** (pro-te-an'tij-en). A protein used by injection as an antigen; a proteogen.
- protease (pro'te-ās). An enzyme or ferment that digests proteins.
- protectin (pro-tek'tin). r. Noguchi's term for a substance which develops in blood-serum on standing, and having the effect of protecting the blood-corpuscles against hemolytic action. 2. Thin paper coated on one side with an adhesive caoutchouc plaster: used in surgery.
- protective (pro-tek'tiv) [L. proleg'ere to protect].
 1. Affording defense, immunity, or protection. 2.
 An oiled silk used in surgery for its waterproof qualities.
- proteid (pro'te-id) [Gr. πρῶτος first]. 1. Same as protein. 2. An old and obsolescent name for the supposed essential constituent of all proteins; it is probably identical with alkali-albumin. bacterial p. See under protein.
- proteidic (pro-te-id'ik). Pertaining to a proteid or proteids.
- proteidin (pro'te-id-in). An immunizing bacteriolytic substance developed in the organism by a combination between a bacteriolytic enzyme and any albuminous material. pyocyanase p., the proteidin of Bacillus pyocyaneus: used for protective inoculation against diphtheria.

proteidogenous (pro-te-id-oj'en-us). Giving rise to or producing proteins.

protein (pro'te-in) [Gr. πρῶτος first]. Any one of a rotein (pro'te-in) [Gr. $\pi\rho\hat{\omega}\tau$ os first]. Any one of a group of nitrogenized, non-crystallizable compounds, similar to each other, widely distributed in the animal and vegetable kingdoms, and forming the characteristic constituents of the tissues and fluids of the animal body. They are essentially combinations of α -amino acids and their derivatives. They are formed by plants, the animal organism receiving them in food, assimptions of the property of the state of t imal organism receiving them in food assimilating and metamorphosing them. They all contain carbon, hydrogen, nitrogen, oxygen, and sulphur. Most proteins are coagulable by heat and mineral acids, and are insoluble in ether and alcohol: their solutions are levorotatory. The following classification has been recommended: 1. Simple proteins, or those that yield only a-amino acids or their derivatives on hydrolysis. They are albumins, globulins, glutelins, alcohol-soluble proteins, albuminoids (scleroproteins), histons, and protamins. 2. Conjugated proteins, or those that contain the protein molecule united to some other molecule or molecules otherwise than as a salt. They are nucleoproteins, glycoproteins, phosphoproteins, hemoglobins (chromoproteins), lecithoproteins, lipoproteins 3. Derived proteins, or derivatives of the protein molecule formed by hydrolytic changes. They are proteins, metaproteins, coagulated proteins, proteoses, peptones, and peptids. The most important members of this group are albumin, casein, legumin, fibrin, vegetable fibrin, myosin, syntonin, gluten. alcohol-soluble p., prolamin. bacterial p., a protein formed by the action of bacteria upon tissue, a toxalbumin. bacterial cellular p., a protein that forms part of the substance of a bacterium. Bence-Jones p., a peculiar albuminous substance, found in the urine, frequently, but not exclusively, in cases of multiple myeloma. It coagulates when heated to 60° C and redissolves on boiling. Formerly called Bence-Jones albumose. coagulated p., a protein coagulated by boiling or by chemic agents. compound p., a protein which on hydrolysis yields a simple protein and a non-protein matter. conjugated p. See under protein. defensive p. (Hankin), any protein formed within the body and serving as a protection against disease; any alexin, phylaxin, or sozin. derived p. See under protein. floating p., a protein which does not constitute part of the tissues, but simply circulates in the body and is then excreted. halogen p., one of a group of protein derivatives produced by action of free halogen on protein solutions. Hektoen, Kretschmer, and Welker p., a protein found in urine which resembles Bence-Jones protein in solubility, but differs in its cyrstalline form, in its behavior toward heat, and in its precipitin reactions. immune p's, proteins formed by the combination of albuminous matters of the body with the enzymes of pathogenic bacteria. insoluble p., a substance left behind after the other proteins have been extracted from a cell. iodized p., a protein treated with iodin. native p., unchanged animal or vegetable proteins, especially as they occur in foods. nucleo-p. See nucleoprotein. phospho-p. See phosphoprotein. protective p. Same as desensive p. pyocyanic p., a substance prepared by treating the Pseudomonas pyocyaneus with potassa: used in suppuration.

pyogenic p., the protein portion of a bacterium which is the suppuration-producing element of the bacterium. racemized p., protein so changed by chemical or other agents that it loses more or less of its specific characteristics. **sclero-p**. Same as albuminoid (3d def.). **serum p.**, any protein found in the serum of the blood. **silver p.**, **mild.** See argyrol. silver p., strong. See protargol. simple p. See under protein. p.-sparing, preventing the loss of tissue protein, a power possessed by carbohydrate food. split p. See Vaughan's split product, under product. synthetic p., highly complex polypeptids made in the laboratory.

They show most of the characteristics of native proteins. whole p., protein which has not been split.

proteinic (pro-te-in'ik). Pertaining to protein.

proteinochrome (pro-te-in'o-krōm) [prolein + Gr. $\chi\rho\tilde{\omega}\mu a$ color]. Any one of a series of coloring-matters formed by the action of bromin or chlorin on tryptophane.

proteinochromogen (pro"te-in-o-kro'mo-jen). Same as trybto bhane.

proteinogenous (pro-te-in-oj'en-us). Formed by or from a protein.

proteinol (pro-te'in-ol). A proprietary tonic and stimulant food-preparation.

proteinotherapy (pro-te"in-o-ther'ap-e). Treatment by the injection of foreign protein on the theory that the protein acts as a non-specific antigen.

proteinphobia (pro"te-in-fo'be-ab) [protein + Gr. φόβος fear]. Morbid aversion to protein foods.

proteinum pyocyaneum (pro-te-i'num pi-o-si-a'ne-um). A derivative from cultures of *Pseudo*monas pyocyanea: used as an application to ulcers.

proteinuria (pro"te-in-u're-ah) [protein + Gr. οὐρον urine]. The presence of protein in the urine. Bence-Jones p., the presence in the urine of Bence-Jones protein. See under protein.

protektin (pro-tek'tin). Adhesive silk paper impregnated with india-rubber, used in surgery, etc.

proteoclastic (pro"te-o-klas'tik) [protein + Gr. κλάσις breakage]. Splitting up proteins or the protein molecule.

proteogens (pro'te-o-jens). Preparations of plant acids, non-specific proteins, enzymes, and chlorophyls: used by injection in the treatment of various infections on the theory that they stimulate the formation in the body of red and white corpuscles and of antiferments.

proteol (pro'te-ol). An antiseptic dressing-powder prepared by treating casein with formic acid.

proteolipin (pro"te-o-li'pin). A compound lipin containing a protein radical.

proteolysin (pro-te-ol'is-in). A specific substance causing proteolysis.

proteolysis (pro-te-ol'is-is) [protein + Gr. λύσις solution]. The conversion of proteins into peptones by the action of ferments.

proteolytic (pro"te-o-lit'ik). 1. Effecting the digestion of proteins. 2. Any solvent of the proteins.
proteometabolic (pro"te-o-met-ab-ol'ik). Per-

taining to proteometabolism.

proteometabolism (pro"te-o-met-ab'o-lism). The metabolism of protein.

proteomorphic theory (pro-te-o-mor'fik). See under theory.

proteopectic (pro"te-o-pek'tik). Proteopexic.

proteopepsis (pro"te-o-pep'sis) [protein + Gr. πέψις digestion]. The digestion of protein.

proteopeptic (pro"te-o-pep'tik). Digesting protein; pertaining to the digestion of protein.

proteopexic (pro"te-o-pek'sik). Fixing protein
within the organism.

proteopexy (pro'te-o-pek-se) [protein + Gr. $\pi \hat{\eta} \xi \iota s$ fixation]. The fixation of proteins within the organism.

proteose (pro'te-ōs) [protein + -ose]. A secondary protein derivative, formed by a hydrolytic cleavage of the protein molecule more complete than that which occurs with the primary protein derivatives, but not so complete as that which forms amino-acids. The proteoses are soluble in water and are not coagulated by heat. The primary proteoses are precipitated by half saturation with ammonium sulphate, the secondary, by full saturation.

Proteosoma (pro"te-o-so'mah) [Gr. II $\rho\omega r\epsilon b$ s a many-formed deity $+ \sigma \hat{\omega} \mu a$ body]. A genus of parasite (microzoön) from the blood of birds: probably concerned in the causation of malarial fever in birds.

proteosomal (pro"te-o-so'mal) Pertaining to or caused by proteosoma.

proteosotherapy (pro"te-o-so-ther'ap-e). Treatment by the injection of foreign proteose in the theory that the proteose acts as a non-specific antigen in stimulating the development of antibodies in the organism.

proteosuria (pro-te-o-su're-ah) [proteose + Gr. οὐρον urine]. The presence of proteose in the urine; albumosuria.

proteotherapy (pro"te-o-ther'ap-e). Proteino-therapy.

proteotoxin (pro"te-o-toks'in). Same as anaphylatoxin.

proteuria (pro-te-u're-ah) [protein + Gr. οὖρον urine]. The presence of a protein in the urine.

proteuric (pro-te-u'rik). Pertaining to proteuria.

Proteus (pro'te-us) [L.; Gr. Πρωτεύς a many-formed deity]. A genus of Bacteriaceæ. They are highly pleomorphic, Gram-negative, motile rods which produce amedoid colonies on moist media. They decompose proteins and carbo-hydrates rapidly. **P. fluores'cens, Jäger's** p., the proteus of acute infectious jaundice. P. hom'inis, a species in non-motile rods of various size and shape; the specific cause of rag-sorters' disease. **P. mirab'ilis**, a pathogenic species in motile rods from putrefying substances and from water, it causes a fatal septic poisoning. P. sep'ticus, a pathogenic species from a septic gangrene of the colon; in flexile and mobile bacilli, somewhat curved. P. sulfu'reus, a species from water, in long or short motile rods, often forming long filaments or chains it produces hydrogen sulphid. P. vulga'ris, a pathogenic species from the tissues in certain cases of putrid infection; also from putrefying animal matter, water, meconium, etc.; in highly motile rods, often interlaced and twisted. Called also Bacillus proleus. P. X19, an aerobic Gram-negative bacillus regarded as possibly the causative organism of typhus fever. P. zenk'eri, a pathogenic species from putrefying animal substances in motile rods of various length.

prothæmin (pro-the'min). A proprietary-preparation containing organically combined iron and phosphorus used in anemia, chlorosis, neurasthenia, and general debility.

prothesis (proth'es-is) [Gr. $\pi \rho \delta$ before $+\theta \delta \sigma \iota s$ a placing]. Same as prosthesis.

prothetic (pro-thet'ik). Same as prosthetic.

prothrombase (pro-throm'bās). Thrombogen.

prothrombin (pro-throm'bin) [Gr. πρό before + θρόμβος clot] Same as thrombogen.

prothyl (pro'thil). Protyl.

prothymia (pro-thim'e-ah) [Gr. πρό before + θυμός mind]. Forwardness or alertness of mind and will.

protide (pro'tid). Same as protein

protidtemns (pro'tid-temz). A collective name for the products produced by the digestion of proteins, namely, proteoses, peptones, peptids, and aminoacids.

protiode (pro'ti-öd). Iodoethylglycin, contains about 52 per cent. of iodin. It is used as an iodid.

protiodid (pro-ti'o-did). That one of the series of iodids of the same base which contains the smallest amount of iodin.

Protista (pro-tis'tah) [Gr. πρῶτιστα the very first, from πρῶτος first]. Haeckel's name for a proposed kingdom of organisms including the lowest (unicellar) forms of animals and plants.

protistologist (pro-tis-tol'o-jist). A microbiologist.

protistology (pro-tis-tol'o-je) [*Protista* + λόγος treatise]. The science of protista or animal and plant microorganisms; microbiology.

proto- [Gr. πρῶτος first]. A prefix signifying first.
proto-actinium (pro"to-ak-tin'e-um). A chemical element, the parent of actinium. It is one of the radio-active series; atomic weight, 230; atomic number, 91. Called also ccatantalum.

proto-albumose (pro-to-al'bu-mos). Same as pro-

protobiology (pro"to-bi-ol'o-je) [Gr. $\pi\rho\hat{\omega}ros$ first $+\beta ios$ life $+\lambda \dot{o}\gamma os$ treatise]. The science which deals with the forms of life more minute than bacteria, such as the ultraviruses and bacteriophages.

protobios (pro-to-bi'cs) [Gr. $\pi\rho\tilde{\omega}\tau$ os first $+\beta los$ life]. A name proposed by d'Herelle for organisms only 20 millimicrons in diameter and consisting of only one albuminous micelle.

protoblast (pro'to-blast) [Gr. $\pi\rho\hat{\omega}\tau$ os first $+\beta\lambda\alpha\sigma$ τ os germ]. 1. A cell with no cell-wall; an embryonic cell. 2 The nucleus of an ovum. 3. A blastomere from which a particular organ or part develops.

protoblastic (pro-to-blas'tik). Pertaining to a protoblast.

protobrochal (pro-to-bro'kal) [Gr. $\pi\rho\delta\tau$ os first + $\beta\rho\delta\chi$ os mesh]. Term applied to the first stage in the development of the ovary.

protocaryon (pro-to-kar'e-on) [Gr. πρότος first + κάρνον nucleus]. A cell nucleus formed of a single karyosome in a network of linin.

protochlorid (pro-to-klo'rid). That one of a series of chlorids of the same element which contains the least chlorin.

protochrome (pro'to-krōm). A substance derived from proteins giving reactions identical with uro-chrome.

protocol (pro'to-kol). A written statement of the history and treatment of any particular case, especially one made for a medicolegal purpose.

protocurarin (pro"to-ku-rar'in). The most poisonous of the curare alkaloids.

protocurin (pro-to-ku'rin) A crystalline curare alkaloid, C₂₀H₂₃NO₃, from Strychnos castelnæi.

proto-elastose (pro"to-e-las'tōs). Hemielastin, a product of the digestion of elastin.

proto-erythrocyte (pro-to-er-ith'ro-sit). An erythroblast with deeply staining nucleus.

protogala (pro-tog'al-ah) [Gr. πρῶτος first + γάλα milk]. Colostrum.

protogaster (pro'to-gas-ter) [Gr. πρῶτος first + γαστήρ stomach]. Same as foregut.

protogen (pro'to-jen). 1. Any albuminoid substance whose aqueous solution does not coagulate when heated. 2. A food and therapeutic agent derived by the action of formaldehyd upon egg- or serum-albumin.

protoglobulose (pro-to-glob'u-lōs). Any albumose produced in the digestion of globulin.

protogonocyte (pro-to-go'no-sit). [Gr. $\pi\rho\omega\tau$ os first + gonocyte]. One of the two cells resulting from division of the impregnated ovum.

protogonoplasm (pro-to-go'no-plazm) [Gr. $\pi\rho\hat{\omega}ros$ first $+ \gamma\omega\nu\hat{\eta}$ seed $+ \pi\lambda\hat{\omega}\rho\mu$ plasm]. That part of the extranuclear chromatin of a cell that is concerned in the reproductive energies of the cell. This substance is also called *idiochromidia*.

protohematoblast (pro-to-hem'at-o-blast) [Gr. $\pi\rho\tilde{\omega}\tau$ os first + hematoblast] A cell derived rom a bone-marrow cell which develops into a red blood-corpuscle.

protoiodid (pro-to-i'o-did). Same as protiodid.

protolac (pro'to-lak). A proprietary brand of calcium caseinate.

protoleukocyte (pro-to-lu'ko-sīt) [Gr. πρῶτος first + leukocyte]. A small lymphoid cell seen in red bone-marrow and the spleen. protomedicus (pro-to-med'ik-us). A medieval term for physician in chief.

protomere (pro'to-mēr). Same as micelle.

protomerite (pro-to-me'rit) [Gr. πρῶτος first + μέρος portion]. The anterior portion of certain gregarine protozoa; called also primite. Cf. deutomerite.

protometer (pro-tom'et-er) [L. pro forward + Gr. μέτρον measure]. An instrument for measuring the forward protrusion of the eyeball.

protometrocyte (pro-to-me'tro-sit) [Gr. πρῶτοs first + metrocyte]. The mother-cell of the leukocyte and erythrocyte series of cells.

Protomonadina (pro"to-mon-ad'in-ah). An order of Flagellata the members of which have less than three flagella. It includes the trypanosomes and Leishmania.

protomyosinose (pro"to-mi-o'sin-ōs). One of the two albumoses formed in the digestion of myosin.

proton (pro'ton) [Gr. $\pi \rho \hat{\omega} \tau os$ first]. I. The primitive rudiment of a part; an anlage. 2. A peptone-like body formed by the hydrolysis of a protamin; a tripeptid 3. The unit of positive electricity being equivalent to the electron in charge and to the hydrogen ion in mass.

protonephron, protonephros (pro-to-nef'ron, pro-to-nef'ros) [Gr. $\pi\rho\hat{\omega}\tau$ os first $+\nu\epsilon\varphi\rho$ os kidney]. The primitive excretory organ of the embryo; the pronephros, ϵ metanephros, and mesonephros together.

protoneuron (pro-to-nu'ron) [Gr. πρῶτος first + νεῦρον nerve] A neuron of the first order or one which connects a sense-organ with the central nervous system. See *peripheral sensory neuron*, under *neuron*.

protonic (pro-ton'ik). Pertaining to a proton or anlage.

protonitrate (pro-to-ni'trāt). That one of several nitrates of the same base which contains the least nitric acid.

protonuclein (pro-to-nu'kle-in). A proprietary restorative serum remedy, $C_{29}H_{46}N_{10}P_5O_{39}$, obtained from the lymphoid tissues of animals, and used in various wasting diseases.

protopathic (pro-to-path'ik) [Gr. πρῶτος first + πάθος disease] Primary; idiopathic. p. sensibility. See under sensibility

protopecten (pro-to pek'ten). Same as pectose.

Protophor'mia terræno'væ. The common scavenger fly of Alaska It resembles Lucilia in appearance and habit and is found also in Greenland and northern Europe.

protophyllin (pro-to-fil'in). Chlorophyl hydrid, a colorless substance which is changed into chlorophyl by the action of air or carbon dioxid.

Protophyta (pro-tof'it-ah) [protophyte]. A group of the vegetable kingdom, including the lowest and simplest plants, such as the bacteria.

protophyte (pro'to-fit) [Gr. πρῶτος first + φυτόν plant]. Any unicellular plant or vegetable organism.

protopin (pro'to-pin). An alkaloid, C₂₀H₁₉NO₅, from Eschscholt'zia califor'nica: anodyne and hypnotic. Dose, 40-100 gr. (2.5-7 gm.).

protoplasm (pro'to-plazm) [Gr. $\pi\rho\tilde{\omega}\tau$ os first + $\pi\lambda\tilde{\omega}\sigma\mu\alpha$ plasm| The only known form of matter in which life is manifested. It is a viscid, translucent polyphasic colloid with water as the continuous phase, and it makes up the essential material of all plant and animal cells (Purkinje, 1839). It is composed mainly of proteins, and under the microscope is seen to consist of a network (spongioplasm) containing a fluid matter (hyaloplasm) in the meshes. **functional p**. See kinoplasm.

protoplasmatic (pro"to-plaz-mat'ik). Same as
protoplasmic.

protoplasmic (pro-to-plaz'mik). Pertaining to or consisting of protoplasm.

A medieval **protoplast** (pro'to-plast) [Gr. $\pi \rho \hat{\omega} \tau os$ first $+ \pi \lambda a \sigma \tau os$ formed]. 1. The type or model of some organic being. 2. A cell (Hanstein, 1880).

protoproteose (pro-to-pro'te-ōs). A primary proteose. See under *proteose*.

protopsis (pro-top'sis). Protrusion of the eye.

protosal (pro'to-sal). A colorless oily fluid, the salicylic glycerol formal ester, CH₂O.OC.C₆H₄-(OH)CHO.CH₂ O.CH₂: used as an antirheumatic.

protosalt (pro'to-sawlt). That one of a series of salts of the same base which contains the smallest amount of the substance combining with the base.

protose (pro'tōs). A proprietary food-preparation of vegetable origin.

protospasm (pro'to-spazm) [Gr. πρῶτος first + σπάσμος spasm]. A spasm which begins in a limited area and extends to other parts; the earlier and minor spasm of jacksonian epilepsy.

protostoma (pro-to-sto'mah). See blastopore.

protosulphate (pro-to-sul'fāt). That one of several sulphates of the same base which contains the least amount of sulphuric acid.

protosyphilis (pro-to-sir'il-is). Primary syphilis.

prototoxin (pro-to-toks'in) [Gr. πρῶτος first + toxin]. That portion or constituent of a toxin which has the greatest combining capacity for the anti-toxin. See deuterotoxin, hematotoxin, tritotoxin.

prototoxoid (pro-to-tok'soid) Protoxoid

prototrophic (pro-to-trof'ik) [Gr. πρῶτος first + τροφή nutrition]. Deriving food from inorganic substances. Cf. metatrophic and paratrophic.

prototype (pro'to-tip) [Gr $\pi\rho\hat{\omega}\tau$ os first + $\tau\nu\pi$ os type]. The original type or form after which others are developed.

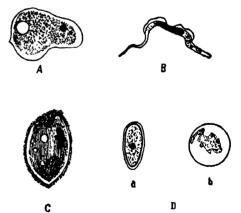

protovertebra (pro-to-ver'te-brah). Same as somute.

protoxeoid (pro-toks'e-oid). Protoxoid.

protoxid (pro-toks'id). That one of a series of oxids of the same metal which contains the smallest amount of oxygen.

protoxoid (pro-toks'oid). Any toxoid which has a greater affinity for the antitoxin than has the toxin. See toxoid.

Protozoa (pro-to-zo'ah), pl of *protozo'on* [Gr. $\pi \rho \hat{\omega}$ τος first + ζ $\hat{\varphi}$ ον animal]. The lowest division of

Types of protozoa. A Sarcodina, represented by Entamaba histolytica of amebic dysentery. B, Mastigophora, represented by Trypanosoma gambiense of African sleeping-sickness. C, Infusoria, represented by Balantidium coli, causative organism of a certain oriental dysentery (redrawn after Leuckart) D, Sporozoa, represented by (a) Coccidium oviforme from liver of rabbit, (b) Plasmodium vivax, of malaria, shown in a red blood-corpuscle (all greatly enlarged). (Herms.)

the animal kingdom including the unicellular organisms. Protozoa are usually separated into four classes: Sarcodina, having pseudopodia;

Mastigophora, having flagella; Sporozoa, having no locomotor organs in the adult stages and reproducing by sporulation; Infusoria, having cilia. coprozoic p. See under coprozoic.

protozoacide (pro-to-zo'as-id). Destructive to protozoa; also any agent destructive to protozoa.

protozo-agglutinin (pro"to-zo-ag-lu'tin-in). agglutinin formed in the blood in protozoal infections which has the power of agglutinating the infecting protozoa.

protozoal (pro-to-zo'al). Pertaining to or caused by protozoa.

protosoan (pro-to-zo'an). Any species or organism of the protozoa. used also adjectively. p. test. See under tests.

protozoiasis (pro"to-zo-i'as-is). Infestation of the body with protozoa.

protozoölogy (pro"to-zu-ol'o-je). The study of protozoa.

protosoon (pro-to-zu'on), pl. protosoa. A primitive organism consisting of a single cell; a protozoan; a unicellular organism.

protozoöphag, protozoöphage (pro-to-zo'o-fag, -fāj) [*protozoa* + Gr. φ á γ ε ι ν to eat]. A cell which has a phagocytic action on protozoa.

protozoötherapy (pro-to-zo-o-ther'ap-e). treatment of diseases caused by protozoa, particularly the chemotherapy of such diseases.

protractor (pro-trak'tor) [L. pro forward + here to draw]. An instrument for drawing bullets or bits of bone from wounds.

protrypsin (pro-trip'sin). A substance convertible into trypsin and believed by some to be a product of the spleen.

protuberance (pro-tu'ber-ans) [L. pro forth A projecting part; an apophysis, tu'ber bulge]. process, or swelling. external occipital p., a prominence at the center of the outer surface of the squamous portion of the occipital bone which gives attachment to the ligamentum nuchæ. internal occipital p., a projection at the center of the inner surface of the occipital bone. laryngeal p., the Adam's apple. mental p., the mental process. See process.

protuberantia (pro-tu-ber-an'she-ah) [L.]. Protuberance.

protyl, protyle (pro'til) [Gr. πρῶτος first + ὕλη principle]. A theoretic substance from which all the chemic elements have been supposed to be derived.

protylin (pro'til-in). A white, tasteless powder, insoluble in water, and containing 2.7 per cent. of phosphorus combined with natural albumin; it is used in goiter, Graves' disease, rickets, osteomalacia, etc.

proud flesh (prowd). An exuberant mass of fungous granulations.

provertebra (pro-ver'te-brah). Same as somite. proving (proo'ving). A homeopathic test of the effects of a drug.

provisional (pro-vizh'un-al). Formed or performed for temporary purposes; temporary; as, provisional callus, provisional canthoplasty.

Prowazek's bodies (pro-vat'sek) [Stanislas Josef Mathias von Prowazek, zoologist in Hamburg,. 1876-1915]. See trachoma bodies, under body.

Prowazek-Greef body (pro-vat'sek-graf) [Pro-wazek; Carl Richard Greef, German ophthal-mologist, born 1862]. Trachoma body.

Prowazekella (pro-wah-ze-kel'ah). Prowazekia.

Prowazekia (pro-wa-zek'e-ah). A genus of flagellate organisms having two nuclei and two flagella. They are found in the feces and urine of man, but are not known to be pathogenic.

prowasekiasis (pro-wah-zek-i'as-is). Infestation with Prowazekia.

proximad (prok'sim-ad). Toward the proximal end or in a proximal direction; the reverse of distad.

proximal (prok'sim-al) [L. prox'imus next]. Nearest the trunk center or median line; opposed to distal.

proximate (prok'sim-āt) [L. proxima'tus drawn nearl. Immediate or nearest.

proximo-ataxia (proks''im-o-at-ak'se-ah). Ataxia affecting the proximal part of an extremity, as the arm, forearm, thigh, or leg. Cf. acro-ataxia.

proximobuccal (prok"sim-o-buk'al). Pertaining to the proximal and buccal surfaces of a tooth.

proximolabial (prok"sim-o-la'be-al). Pertaining to the proximal and labial surfaces of a tooth.

proximolingual (prok"sim-o-lin'gwal). Pertaining to the proximal and lingual surfaces of a tooth.

prozonal (pro'zo-nal) [pro- + zone]. Situated before a sclerozone.

prozone (pro'zon). The more concentrated dilution of serum in which agglutination does not take place.

prozygosis (pro-zi-go'sis). Same as syncephaly. prozymogen (pro-zi'mo-jen). Same as prezymogen. rual (pru'al). A very violent poison from the root of Coptosapel'ta flaves' cens. prual (pru'al).

prune (prūn) [L. pru'num]. The dried fruit of various varieties of Pru'nus domes'tica, or plum.

prune-juice expectoration or sputum (prūn'jūs). See under sputum.

Prunella (pru-nel'ah). A genus of labiate plants. P. vulga'ris, heal-all, is astringent and tonic.

prunin (pru'nin). A concentration prepared from Pru'nus sero'tina: used in thoracic and nervous diseases. Dose, 2-3 gr. (0.132-0.195 gm.).

prunoids (pru'noids). Proprietary laxative tablets, containing prunes, phenolphthalein, and cascara sagrada.

prunol (pru'nol). A preparation of ammonium chlorid, senega, and heroin used for coughs.

prunum (pru'num). Latin for prune.

runus (pru'nus) [L. "plum-tree]. A genus or rosaceous trees and shrubs, including the plums, cherries, and sloes. P. america'na, plum. P. amyg'dala. See almond P. domes'-P. lauro-cer'asus. See cherry Prunus (pru'nus) [L. "plum-tree"]. P. amyg'dala. See almond P. domes'-tica, plum P. lauro-cer'asus. See cherry laurel, under cherry. P. serot'ina, wild cherry. P. spino'sa, a species of plum and its homeopathic preparation. the sloe, or black-thorn.
P. virginia'na. 1. The choke-cherry of North America; its bark has sedative qualities and its fruit is highly astringent 2. The pharmaceutic name of the bark of Pru'nus serot'ina, or wild cherry. It is used as a nervous sedative and expectorant in gastric weakness, general irritability, and coughs. Dose, 1-1 dr (1.95-3 8 gm.); of fluidextract, 30-60 min. (2-4 c.c.); of syrup, 1-4 fl dr (4-16 c.c.).

pruriginous (pru-rij'in-us). Of the nature of prurigo.

prurigo (pru-ri'go) [L.]. A chronic skin disease marked by the development of small, pale papules and intense itching. The papules are deep-seated, and the disease begins in childhood and lasts through life, being usually incurable. p. **estiva'**lis, summer prurigo: a severe relapsing, bullous eruption, occurring in warm weather only. p. a/gria, an extremely severe form of prurigo. agria, an extremely severe form of prurigo. diathetic p., any prurigo which is so completely established as to constitute a diathesis. p. fe'rox, a form characterized by intense itching, large papules, and swollen lymph-glands: an incurable and mainly congenital form. Hebra's p., true or typical prurigo. Hutchinson's p., the prurigo of dentition. p. mi'tis, prurigo of a mild type. p. nodula'ris, a condition marked by the formation on the skin of multiple tumors, accompanied by intense itching. p. sim'plex, a relatively mild form characterized by crops of papules having a tendency to cyclic recurrence.

pruritic (pru-rit'ik). Pertaining to pruritus.

pruritus (pru-ri'tus) [L. from pruri're to itch]. Intense itching. It is a symptom of various skin diseases, and may occur idiopathically as a neurosis. p. a'ni, intense itching at the anus. bath-p. See bath-itch, under itch. Duhring's p., pruritus hiemalis. essential p., pruritus which cannot be attributed to any skin disease. p. hiema'lis, winter-itch: a skin disease peculiar to cold weather. It is unconnected with structural lesions. p. seni'lis, a neurotic itching in the aged, due to degeneration in the skin. symptomatic p., itching which is symptomatic of some other general disease. p. vul'væ, a disease consisting of intense itching of the external genitals of the female.

Prussak's fibers, space (proos'ahks) [Alexander Prussak, Russian otologist, 1839-1897]. See fiber, space.

Prussian-blue (prush'un-blu). Ferric ferrocyanid, $Fe_4(FeCy_6)_3 = Fe_43Fe(CN)_6$.

prussiate (proo'she-at). Same as cyanid.

prussic acid (proo'sik). See hydrocyanic acid, under acid.

psalis (sa'lis) [Gr. ψαλίς arch]. The fornix of the cerebrum.

psalterial (sal-te're-al). Pertaining to the psalterium.

psalterium (sal-te're-um) [L; Gr. ψαλτήρων harp]. Same as lyra.

psammocarcinoma (sam"o-kar-sin-o'mah) [Gr. ψάμμος sand + carcinoma]. Carcinoma containing calcareous matter.

psammoma (sam-o'mah) [Gr. ψάμμος sand]. A small, hard, fibrous tumor of the brain tissue, especially of the dura mater and choroid plexus, containing calcareous matter or brain-sand. Sometimes called Virchow's p.

psammosarcoma (sam"o-sar-ko'mah) [Gr. $\psi \dot{\alpha} \mu \mu o s$ sand + sarcoma]. A sarcoma containing a sandy densit

deposit.

psammotherapy (sam-o-ther'ap-e) [Gr. ψάμμος sand + θεραπεία treatment]. Same as ammotherapy.

psammous (sam'us) [Gr. ψάμμος sand]. Sandy.

pselaphesia, pselaphesis (sel-af-e'ze-ah, sel-af-e'sis) [Gr. ψηλάφησις touching]. The tactile sense.

psellism (sel'izm) [Gr. ψέλλισμα stammer]. Stammering or stuttering.

pseudaconitin (su-dak-on'it-in) [Gr. ψευδής false + aconitan]. A crystalline alkaloid, C₃₆H₄₉NO₁₂, from Aconi'tum fe'rox.

pseudacousis (su-dak-oo'sis) [Gr. ψευδής false + ακουσις hearing]. Same as pseudacousma.

pseudacousma (su-dak-ooz'mah) [Gr. ψευδήs false + ἄκουσμα thing heard]. A subjective sensation as if sounds were altered in pitch and quality.

pseudacromegaly (su-dak-ro-meg'al-e). Enlargement of the features and extremities without disease of the pituitary body.

pseudactinomycosis (su-dak" tin-o-mi-ko'sis). Pseudo-actinomycosis.

pseudagraphia (su-dag-ra'fe-ah). Pseudo-agraphia.

pseudalbuminuria (su"dal-bu-min-u're-ah). Pseudo-albuminuria.

pseudangina (su-dan'jin-ah). See pseudo-angina. pseudankylosis (su''dang-kil-o'sis). A false ankylosis.

pseudaphia (su-da'fe-ah) [Gr. ψευδής false + ἄψη touch]. Defect in the power of perceiving touch.

pseudarrhenia (su-dar-e'ne-ah). Female pseudohermaphroditism.

pseudarthritis (su-dar-thri'tis) [Gr. ψευδής false + ἀρθρῖτις gout]. A hysteric affection of the joints.

pseudarthrosis (su-dar-thro'sis) [Gr. ψευδής false + ἄρθρωσις joint]. A false joint, as that sometimes seen following a fracture.

pseudelminth (su-del'minth) [Gr. ψευδής false + λλμινς worm]. A structure or object that resembles an endoparasitic worm.

pseudencephalus (su-den-sef'al-us) [Gr. ψευδής false + ἐγκέφαλος brain]. A monster-fetus with a vascular tumor in place of the brain.

pseudosthesia, pseudosthesia (su-des-the'ze-ah) [Gr. ψενδής false + αίσθησις sensation]. Any imaginary sensation; a sensation which is felt without any external stimulus, or a sensation which does not correspond to the stimulus that causes it.

pseudinoma (su-din-o'mah) [Gr. ψενδής false + -ωμα tumor]. A spurious or phantom tumor.

pseudiphtheritic (su"dif-the-rit'ik). Simulating diphtheria.

pseudo- [Gr. ψευδήs false]. A prefix signifying false or spurious.

pseudo-aconitin (su"do-ak-on'it-in). Pseudaconitin.

pseudo-acromegaly (su"do-ak-ro-meg'al-e). A condition resembling acromegaly: probably a result of syringomyelia or of syphilitic poisoning.

pseudo-actinomycosis (su"do-ak"tin-o-mi-ko'sis) [Gr. ψευδής false + actinomycosis]. A variety of pulmonary phthisis in which the sputum contains crystalline bodies that resemble the grains of actinomycosis; nocardiosis.

pseudo-agraphia (su"do-ag-ra'se-ah). A condition in which the patient can copy writing, but cannot write except in a meaningless and illegible manner.

pseudo-albuminuria (su"do-al-bu-min-u're-ah). Cyclic albuminuria. See *albuminuria*.

pseudo-alveolar (su"do-al-ve'o-lar). Simulating an alveolar structure.

pseudo-anaphylactic (su" do-an-af-il-ak'tik). Pertaining to pseudo-anaphylaxis.

pseudo-anaphylaxis (su"do-an-af-il-ak'sis) [Gr. ψευδήs false + anaphylaxis] A condition produced in animals by the injection of serum which has been acted on by agar, kaolin, inulin, starch, and other substances. The symptoms produced by such injections resemble those of anaphylaxis.

pseudo-anemia (su"do-an-e'me-ah) [Gr. ψενδής false + anemia]. Marked pallor with no clinical or other evidence of anemia.

pseudo-angina (su-do-an'jin-ah) [Gr. ψευδής false + angina]. False angina; a nervous disorder that simulates angina See angina pectoris vasomoloria.

pseudo-ankylosis (su''do-ang-kil-o'sis). A false ankylosis

pseudo-anorexia (su"do-an-o-reks'e-ah) [Gr. ψευδής false + anorexia]. The rejection of food on account of the distress it causes.

pseudo-apoplexy (su-do-ap'o-pleks-e) [Gr ψευδήs false + apoplexy]. A condition resembling apoplexy, but without cerebral hemorrhage.

pseudo-appendicitis (su"do-ap-en-dis-i'tis). A condition with symptoms simulating appendicitis, sometimes hysteric and sometimes of syphilitic origin, but without affection of the appendix. p. zoöparasit'ica, a condition in which parasites are present in the vermiform appendix.

pseudo-apraxia (su''do-ap-raks'e-ah) [Gr. ψευδής false + apraxia]. A condition of complete general incoherence in which the patient uses everything wrongly.

pseudo-arthrosis (su"do-ar-thro'sis). Same as pseudarthrosis.

pseudo-asthma (su-do-as'mah). Dyspnea.

pseudo-ataxia (su"do-at-aks'e-ah) [Gr. ψευδής false + ataxia]. A condition of complete general incoordination in which the patient exhibits incoordination and ataxic symptoms. See pseudo-tabes.

970

- pseudobacillus (su''do-bas-il'us). An exceedingly small, rod-like poikilocyte, resembling a microörganism.
- pseudobacterium (su"do-bak-te're-um) [Gr. ψευδής false + βακτήριον stick]. A cell that resembles a bacterium: a pseudobacillus.
- pseudobasedow (su-do-bas'e-dow). See base-doid
- pseudoblepsis (su-do-blep'sis) [Gr. ψευδής false + βλέψις sight]. A condition in which objects appear different from what they really are.
- **pseudobulbar** (su-do-bul'bar). Apparently, but not really, due to a bulbar lesion.
- pseudocartilaginous (su"do-kar-til-aj'in-us).
 Composed of a substance resembling cartilage,
 morbid or otherwise.
- pseudocast (su'do-kast). A false cast; a form of urinary sediment resembling true casts, but being accidental formations, taking the shape of casts by adherence to mucous threads, cotton fibers, etc.
- pseudocele, pseudocœle (su'do-sēl) [Gr. ψευδής false + κοιλία hollow]. The fifth ventricle of the brain.
- **pseudocephalocele** (su-do-sel'al-o-sel'). A hernia of the brain not congenital, but due to disease or injury of the skull.
- pseudocerebrin (su-do-ser'e-brin). A compound, C₄₄H₀₂NO₃, formed by the action of baryta on protagon.
- pseudochalazion (su"do-kal-a'ze-on) [Gr. ψευδήs false + chalazion]. An eye lesion resembling a chalazion: it may be sarcomatous or syphilitic.
- **pseudochancre** (su-do-shang'ker). An indurated sore resembling or simulating chancre.
- pseudochorea (su"do-ko-re'ah) [Gr ψευδής false + chorea]. A condition of complete general incoordination, with symptoms like those of chorea.
- **pseudochromatin** (su"do-kro'mat-in). Paranuclein.
- **pseudochromesthesia** (su"do-kro-mes-the'ze-ah) [Gr. ψευδής false + χρῶμα color + αἴσθησις sensation]. A condition in which sounds induce a sensation as of color; color-hearing.
- pseudochromidrosis (su"do-kro-mid-ro'sis) [Gr. ψευδής false + chromidrosis]. Sweating with the presence on the skin of pigment due to the action of bacteria.
- **pseudochromosome** (su-do-kro'mo-sōm). Rod-like Golgi bodies of the spermatocytes.
- pseudochylous (su-do-ki'lus). Resembling chyle, but containing no fat.
- **pseudocirrhosis** (su"do-sir-o'sis) [Gr. ψευδήs false + cirrhosis]. Apparent cirrhosis of the liver, often due to pericarditis. **pericarditic p.** See Pick's syndrome, under syndrome.
- $\begin{array}{ll} \textbf{pseudocodein} \text{ (su-do-ko'de-in).} & A \text{ hypnotic agent,} \\ C_{18}H_{21}NO_{3}, \text{ resembling codein, but less effective.} \end{array}$
- pseudocœle (su'do-sēl). See pseudocele.
- pseudocolloid (su-do-kol'oid). A mucoid sometimes found in ovarian cysts.
- **pseudocoloboma** (su"do-kol-o-bo'mah). A line or scar on the iris giving the appearance of a coloboma.
- pseudoconjugation (su-do-kon-ju-ga'shun). A stage in certain forms of protozoan development in which the two gametocytes instead of actually undergoing conjugation, become inclosed together within one common cyst wall.
- **pseudocoxalgia** (su''do-kok-sal'je-ah). Same as osteochondritis deformans juvenilis.
- pseudocrisis (su-dok'ris-is) [Gr. ψευδής false + κρίσις crisis]. A false crisis; a sudden but temporary abatement of febrile symptoms.
- pseudocroup (su"do-kroop'). Laryngismus stridulus; also thymic asthma.
- pseudocyesis (su"do-si-e'sis) [Gr. ψευδήs false + κύησις pregnancy]. Spurious or false pregnancy.

- pseudocylindroid (su"do-sil-in'droid) [Gr. ψενδήs false + cylindroid]. A shred of mucin in the urine resembling a cylindroid: sometimes of spermatic origin.
- pseudocyst (su'do-sist) [Gr. ψευδής false + cyst].

 An abnormal or dilated space resembling a cyst.
- pseudodementia (su"do-de-men'she-ah) [Gr. ψευδής false + dementia]. An extreme condition of general apathy simulating dementia, but with no actual defect of intelligence.
- **pseudodextrocardia** (su"do-deks-tro-kar'de-ah). A condition in which the heart is displaced to the right, but is not transposed to the right side of the body.
- **pseudodiastolic** (su"do-di-as-tol'ik). Apparently but not truly diastolic.
- pseudodiphtheria (su"do dif-the're-ah) [Gr. ψευδής false + diphtheria]. A sort of diphtheria in which there is developed a false membrane not due to the Klebs-Löffler bacillus.
- **pseudodysentery** (su-do dis'en-ter-e). A condition marked by the symptoms of dysentery, but due to some local irritation and not to the organisms of dysentery.
- pseudo-edema, pseudo-œdema (su"do-e-de'-mah). A puffy state resembling edema.
- **pseudo-embryonic** (su"do-em-bre-on'ik). Apparently, but not truly, embryonic.
- **pseudo-emphysema** (su"do-em-fiz-e'mah). A condition resembling emphysema, but due to temporary blocking of the bronchial tubes.
- pseudo-encephalitis (su"do-en-sef-al-i'tis). A state resembling encephalitis, but due to colliquative diarrhea.
- **pseudo-endometritis** (su"do-en-do-met-ri'tis). A condition simulating endometritis, in which there are changes in the blood-vessels, hyperplasia of the stroma and glands, and atrophy.
- pseudo-ephedrin (su-do-ef'ed-rin). A mydriatic alkaloid, C₁₀H₁₅NO, in fragrant needles from certain species of *Ephedra*.
- pseudo-erysipelas (su"do-er-is-ip'el-as). An inflammatory subcutaneous disease resembling crysipelas.
- pseudo-esthesia (su"do-es-the'ze-ah). Same as pseudesthesia.
- pseudo-exophoria (su"do-eks-o-fo're-ah). An outward tendency of the visual axis excited by diminishing the activity of the accommodative centers.
- **pseudo-exposure** (su-do-ex-po'zhur). A condition in which dental caries has progressed so far as nearly, but not quite, to expose the pulp
- pseudofarcy (su'do-far-se). See lymphangitis epi-
- pseudofever (su-do-fe'ver). A condition of bodily temperature above normal without any discoverable cause.
- pseudofibrin (su-do-fi'brin). Parafibrinogen.
- pseudoflagellata (su"do-flaj-el-a'tah). The tertian parasites in one of their stages: probably gametes.
- pseudofluctuation (su"do-fluk-chu-a'shun). A tremor resembling fluctuation, such as is sometimes seen on tapping lipomata.
- pseudofracture (su-do-frakt'ūr). A spontaneous fracture. See fracture.
- pseudoganglion (su-do-gan'gle-on) [Gr. ψευδής false + γάγγλιον ganglion]. A thickening of a nerve simulating a ganglion. Bochdalek's p. See Bochdalek's ganglion, under ganglion. Cloquet's p. Same as Cloquet's ganglion. Valentin's p. See Valentin's ganglion, under ganglion.
- pseudogeusesthesia, pseudogeusesthesia (su"do-gu-ses-the'zhe-ah) [Gr. ψευδής false + γεῦσις taste + αΙσθησις feeling]. A condition in

which sensations of taste are accompanied by sensations as of color.

pseudogeusia (su-do-ju'se-ah) [Gr. ψευδής false + γεῦσις taste]. A sensation of taste without external stimulus to produce it.

pseudoglanders (su-do-glan'derz). See lymphangitis ulcerosa.

pseudoglioma (su-do-gli-o'mah) [Gr. ψενδής false + glioma]. An exudate in the vitreous simulating glioma of the retina. It is caused by iridochoroiditis.

pseudoglobulin (su-do-glob'u-lin). One of the two proteins (the other being euglobulin) of which globulin consists. It is characterized by not being precipitated by dialysis.

pseudoglottis (su-do-glot'is) [Gr. ψευδήs false + glottis]. The aperture between the false vocal cords.

pseudoglucosazone (su"do-glu-ko-sa'zōn). A crystalline substance sometimes developed in normal urine in testing for sugar.

pseudogonococcus (su"do-gon-o-kok'us). A name given to certain microbes capable of producing urethral irritation.

pseudogonorrhea (su"do-gon-or-e'ah) [Gr. ψευδής false + gonorrhea]. Non-specific urethritis.

pseudohallucination (su"do-hal-oo-sin-a'shun).
A hallucination brought about by the exercise of memory and imagination.

pseudohemoglobin (su-do-hem-o-glo'bin). A compound of hemoglobin once thought to exist.

pseudohemophilia (su"do-hem-o-fil'e-ah). See hemogenia.

pseudohemoptysis (su"do-he-mop'tis-is). Spitting of blood which comes from some other source than the lungs or bronchial tubes.

pseudohermaphroditism (su"do-her-maf'rod-itizm). Spurious hermaphroditism.

pseudohernia (su-do-her'ne-ah). An inflamed sac or gland simulating strangulated hernia.

pseudoheterotopia (su"do-het-er-o-to'pe-ah). Displacement of gray or white matter of the brain or cord, produced by unskilful manipulation in the autopsy.

pseudohydronephrosis (su"do-hi"dro-nef-ro'sis). A paranephric cyst.

pseudohydrophobia (su''do-hi-dro-fo'be-ah). See Aujeszky's disease, under disease.

pseudohyoscyamin (su"do-hi-os-i'am-in). An alkaloid, $C_{17}H_{23}NO_3$, from *Duboi'sia myoporoi'-des:* antispasmodic and sedative. Hypodermic dose, $2\frac{1}{10}0^{-1}$ 0 gr. (0 0005-0 000 gm.).

pseudohypertrophic (su"do-hi-per-trof'ik). Characterized by apparent, but not real, hypertrophy.

pseudohypertrophy (su"do-hi-per'tro-fe). False hypertrophy; increase of size without true hypertrophy. muscular p., pseudohypertrophic paralysis. See paralysis.

pseudo-icterus (su-do-ik'ter-us). Pseudojaundice. pseudo-ileus (su-do-il'e-us). An attack resembling ileus, but due to paralysis of the bowels.

pseudo-influenza (su"do-in-flu-en'zah). An affection resembling influenza, and due to a bacillus resembling, but not identical with, that of true influenza. The name is also given to epidemic grippe.

pseudo-ion (su-do-i'on). One of the electrically charged particles of a colloidal solution.

pseudo-isochromatic (su"do-i-so-kro-mat'ik). Seemingly of the same color throughout: applied to solutions for testing color-blindness, containing two pigments which will be distinguished by the normal eye, but not by the colorblind. Cf. anisochromatic.

pseudojaundice (su-do-jawn'dis). Skin discoloration caused by blood-changes and not due to liver disease. ke'me-ah). A term used for a group of conditions resembling one another in showing enlargement of the lymph-glands and in characteristics which resemble the conditions present in leukemia, but without leukemic blood-findings. The term includes aleukemic lymphadenosis, aleukemic mvelosis, Hodgkin's disease, Kundrat's lymphosarcoma, multiple myeloma, and tuberculosis and syphilis of the lymph-glands. p. cu'tis, pseudoleukemia with the development of skin-lesions. infantile p., anemia in young children, usually without much leukocytosis, and due to rachitic tendencies. Called also von Jaksch's disease. p. lymphat'ica, non-splenic leukemia, a state associated with Hodgkin's disease and also with lymphomatous tumors of the kidneys and intestines in children. myelogenous p., myelomatosis.

pseudoleukocythemia (su"do-lu-ko-si-the meah). Same as *pseudoleukemia*.

Pseudolimax (su-do-li'max). See Iodamæba buetschlvi.

pseudolipoma (su"do-lip-o'mah). Localized edema simulating lipoma. They occur in hysteria and certain lesions of the nervous system. Called also neuropathic edema.

pseudologia, pseudology (su-do-lo'je-ah, su-dol'o-je) [Gr. ψευδής false + λόγος discourse]. The writing of anonymous letters to people of prominence, to one's self, etc.

pseudolupus (su-do-lu'pus) A disease which closely simulates lupus: believed to be due to the presence of an oldium

pseudoluxation (su-do-luk-sa'shun). Partial dislocation of a bone.

pseudolymphocyte (su-do-lim'fo-sit). A leukocyte resembling a small lymphocyte, and having a nucleus that stains deeply and is inclosed by a layer of protoplasm which contains neutrophil granules.

pseudolyssa (su-do-lis'ah). Lyssophobia.

pseudomalaria (su"do-mal-a're-ah). A disease resembling malaria in its symptoms, but due to toxic metabolites or ptomains.

pseudomamma (su-do-mam'ah). A structure resembling a nipple, or even a complete mamma, sometimes found in ovarian dermoids.

pseudomania (su-do-ma'ne-ah) [Gr. ψευδής false + μανία madness]. 1. False or pretended madness. 2. Insanty in which the patient accuses himself of crimes which he has not committed.

pseudomasturbation (su"do-mas-tur-ba'shun). See peotillomania.

pseudomegacolon (su"do-meg'ah-ko-lon). Dilatation of the colon in adults. Cf. megacolon.

pseudomelanosis (su''do-mel-an-o'sis) [Gr. ψευδήs false + melanosis]. A staining of the tissue after death with pigments from the blood.

pseudomembrane (su-do-mem'brān). A false membrane. See *membrane*.

pseudomembranous (su-do-mem'bra-nus). Marked by or pertaining to false membrane.

pseudo-Ménière's disease. A middle-ear disease with vertigo.

pseudomeningitis (su"do-men-in-ji'tis). Pial inflammation with symptoms resembling meningitis.

pseudometaplasia (su''do-met-ah-pla'se-ah) [Gr. ψευδής false + mctaplasia]. Histologic accommodation

pseudomnesia (su-dom-ne'zhe-ah) [Gr. ψευδής false + μνῆσις memory]. A condition in which the patient seems to remember things which have never occurred.

Pseudomonadaces (su-do-mo-nad-a'se-e). A systematic family under the order Eubacteriales. The members are short, rod-shaped organisms usually motile by means of polar flagella. They form no spores and are usually Gram-negative.

972

Pseudomonas (su-dom'o-nas) [Gr. ψeυδής false + μονάς monad]. 1. A genus of bacteria having cells with polar flagella. 2. A genus of the Bacteriaceæ. They are saprophytic and produce a green, blue, or yellowishgreen water-soluble pigment which diffuses throughout the medium. P. serugino'sa, Bacillus pyocyaneus; the organism which produces green pus. P. aquat'ilis, a non-pathogenic form from water. P. cyano'genes, the "bacillus of blue milk"; actively motile rods that produce a blue pigment. Called also Bacillus lactis cyanogenes. P. fluores'cens, a non-pathogenic organism that produces a soluble pigment. Several varieties have been named according to the pigment produced: P. fluorescens longus produces a yellow pigment; nivalis, a green pigment; non-liquifaciens, a greenish, fluorescent pigment; putudus, a yellow pigment, and lenuis, a greenish-yellow pigment. P. plica'ta, a species from water which is often grouped in twos, fours, eights, etc. P. protea-fluorescens, a multiform species from the viscera of diseased fowls P. pyocya'nea, a small, Gram-negative, motile organism found in green pus. It produces a green pigment, soluble in chloroform, called pyocyanin Called Bacillus pyocyaneus and bacillus of blue pus. P. synxan'-tha, the "bacillus of yellow milk"; a form that produces a lemon-yellow pigment.

pseudomorphin (su-do-mor/fin). See dehydro-morphin.

pseudomotor (su-do-mo'tor). Producing movements which are not normal.

pseudomucin (su-do-mu'sin). A variety of mucin found in ovarian cysts.

pseudomycosis sarcinica (su"do-mi-ko'sis sarsin'e-kah). A disease of the lungs believed to be caused by Sar'cina virchow'ii.

pseudomyopia (su''do-mi-o'pe-ah). Defective vision, not myopia, which causes the patient to hold objects nearer than normal to the eyes, thus simulating myopia.

pseudomyxoma (su"do-miks-o'mah). A colloid growth developed upon the peritoneum, often secondary to an ovarian dermoid cyst. p. peritonæ'i, the presence in the peritoneal cavity of colloid matter from a ruptured ovarian cyst or a ruptured mucocele of the appendix.

pseudonarcotic (su"do-nar-kot'ik). Sedative and apparently, but not directly, narcotic.

pseudonarcotism (su-do-nar'kot-izm). A hysteric condition simulating narcotism.

pseudonavicella (su"do-nav-is-el'ah) [Gr. ψευδήs false + L. navicel'la boat]. A form of spore or stage of growth seen in certain protozoa.

pseudoneoplasm (su-do-ne'o-plazm) [Gr. ψευδής false + neoplasm]. 1. A temporary formation resembling a tumor. 2. A phantom tumor.

pseudoneuroma (su"do-nu-ro'mah) [Gr. ψευδήs false + neuroma]. A tumor on a nerve simulating a neuroma; false neuroma.

pseudonuclein (su-do-nu'kle-in). Same as paranuclein.

pseudonucleolus (su'do-nu-kle'o-lus) [Gr. ψευδήs false + nucleolus]. A node formed by the intersection of chromatin threads.

pseudonucleus (su-do-nu'kle-us). A net-knot.

pseudonystagmus (su"do-nis-tag'mus). Nystagmus occurring as symptomatic of other diseases.

pseudo-ochronosis (su"do-ok-ron'o-sis). Ochronosis produced artificially.

pseudo-optogram (su-do-op'to-gram). An optogram in which the rods strip off from the illuminated spot and only the cones remain.

pseudo-osteomalacia (su"do-os-te-o-mal-a'sheah). Rachitic contraction of the pelvis, giving the pelvis the appearance of osteomalacia.

pseudoparalysis (su"do-par-al'is-is). False paralysis: apparent loss of muscular power, without true paralysis, marked by defective coördination of movements or by repression of movement on account of pain. p. ag'itans, paralysis agitans. arthritie general p., a condition resembling general paresis, dependent on intracranial atheroma in arthritic persons. congenital atonic p., amyotonia congenita. Parrot's p., pseudoparalysis of one or more of the extremities in infants caused by osteochondritis of the epiphysis. syphilitic p., syphilitic inflammation of the epiphyses of the bones, producing impairment of motion.

pseudoparaphrasia (su"do-par-ah-fra'zhe-ah) [Gr. ψευδής false + paraphrasia]. Complete general incoherence in which the patient calls everything by a wrong name.

pseudoparaplegia (su"do-par-ap-le'je-ah). Paralysis of the lower limbs in which the reflexes are normal.

pseudoparasite (su-do-par'as-It) [Gr. ψευδής false + parasite]. A facultative parasite; also anything resembling a parasite.

pseudoparesis (su-do-par'es-is). A hysteric or other condition simulating paresis.

pseudopelade (su-do-pe'lad). A variety of alopecia resulting in the formation of small white cicatrices.

pseudopelletierin (su''do-pel-e-ti'er-in) [Gr. ψευδής false + pelletierin]. An alkaloid, CH₃ C₅-H₈N(CH₂)₂CO, from the root-bark of Pu'nica grana'tum, or pomegranate.

pseudopepsin (su-do-pep'sin). A proteolytic enzyme secreted by certain glands of the stomach. It can act in a feebly alkaline as well as in acid media.

pseudopeptone (su-do-pep'tōn). Same as ovomucoid.

pseudopericardial (su''do-per-e-kar'de-al). Seeming to arise from the pericardium, but not really doing so.

pseudoperitonitis (su''do-per-it-o-ni'tis). Peritonism

pseudophlegmon (su-do-fleg'mon) [Gr. ψευδής false + phlegmon]. A swollen and reddened state of the skin which follows irritative lesions of the nerves. **Hamilton's p.**, a circumscribed swelling which may become red and indurated, but never suppurates.

pseudophotesthesia (su"do-fo-tes-the'ze-ah). The perception of light on receipt of an abnormal stimulus, such as irritation of the schneiderian membrane.

pseudophthisis (su-dof'this-is) [Gr. ψευδής false + phthisis]. A wasting disease not of the nature of tuberculosis.

pseudoplasm (su'do-plazm). A new-growth which disappears spontaneously.

pseudoplegia (su-do-ple'je-ah) [Gr. ψευδής false + πληγή stroke]. Hysteric paralysis or pseudoparalysis.

pseudopneumococcus (su"do-nu-mo-kok'us). A coccus from acute lobar pneumonia much larger than the pneumococcus, and otherwise distinguishable from it.

pseudopneumonia (su"do-nu-mo'ne-ah). A condition marked by the symptoms of pneumonia, but without any lesions in the lungs.

pseudopod (su'do-pod). Same as pseudopodium.

pseudopodiospore (su-do-po'de-o-spor) [pseudo-podium + spore]. A spore having pseudopodia like an ameba. Called also amebula.

pseudopodium (su-do-po'de-um) [Gr. ψευδής false + πούς foot]. A temporary protrusion of the ectosarc of an ameba, serving for purposes of locomotion.

pseudoporencephaly (su"do-po-ren-sef'al-e). A condition resembling porencephaly, but without idiocy or even impairment of the intellect.

pseudoprotein (su"do-pro'te-in). A protein which is lacking in one or more of the essential aminoacids, for example, gelatin.

pseudopsia (su-dop'se-ah) [Gr. ψευδής false + δψις vision]. False or depraved vision; pseudoblepsia.

pseudopterygium (su"do-ter-ij'e-um) [Gr. ψευδήs false + pterygium]. A kind of pterygium encroaching upon the conjunctiva from any direction, following injuries of the margin of the cornea.

pseudoptosis (su-do-to'sis) [Gr. ψενδής false +πτῶσις fall]. A condition simulating a ptosis.

pseudopunicin (su-do-pu'nis-in). Pseudopelletierin:

pseudorabies (su-do-ra'be-ēz) [Gr. ψευδήs false + rabies]. Hydrophobophobia or lyssophobia.

pseudoreaction (su"do-re-ak'shun). A clumping or other bacterial reaction not due to the presence of the typhoid bacillus.

pseudoreduction (su"do-re-duk'shun). The apparent halving of the chromosome number by synapsis.

pseudoreminiscence (su"do-rem-in-is'ens). Same as confabulation.

pseudorheumatism (su-do-ru'mat-izm). A condition resembling rheumatism, due to some non-rheumatic disease, as gonorrhea.

pseudoscarlatina (su"do-skar-lat-i'nah). A febrile cofidition with an eruption like that of scarlet fever, but due to septic poisoning.

pseudosclerosis (su"do-skle-ro'sis) [Gr. ψευδής false + σκλήρωσις hardening]. A condition with the symptoms, but without the lesions of disseminated sclerosis. Westphal's p. See Westphul's neurosis, under neurosis.

pseudosmallpox (su"do-smal'pox). Amaas.

pseudosmia (su-doz'me-ah) [Gr. ψευδής false + όσμή odor]. A delusion as to smell.

pseudosolution (su''do-so-lu'shun). Solutions which do not act according to the usual physical laws of solutions. The term is sometimes applied to colloidal solutions.

pseudostoma (su-dos'to-mah) [Gr. ψευδής false + στόμα mouth]. An apparent communication between stained epithelial cells.

pseudostrophanthin (su''do-stro-fan'thin). A poisonous glucosid, C₄₀H₀₀O₁₆.H₂O, from Strophanthus hispidus. Its action is upon the heart.

pseudostructure (su-do-struck'tshur) [Gr. ψευδής false]. Reticular substance. See under substance.

pseudosyphilis (su-do-sif'il-is). A condition marked by ulcers and eruption resembling those of syphilis, but yielding to non-specific treatment.

pseudotabes (su-do-ta'bēz) [Gr. ψευδήs false + L. ta'bes wasting]. A condition marked by the symptoms of tabes dorsalis, but distinguished from it by its tendency to become completely cured, by tenderness on pressure of muscles, and by absence of Argyll-Robertson pupil. Called also pseudoataxia, neurotabes, and peripheral tabes. diabetic p. See tabes diabetica. p. mesenter'ica, an hysteric pseudotabes, chiefly of young women.

pseudotetanus (su-do-tet'an-us). Persistent muscular contractions resembling tetanus, but not associated with the presence of Clostridium tetani.

pseudotextoma (su"do-tex-to'mah) [pseudotextoma]. A neoplasm composed of partially differentiated tissue cells. Cf. textoma.

pseudothrill (su'do-thril). A symptom that simulates a true thrill.

pseudotoxin (su-do-tok'sin). A poisonous extract from belladonna leaves.

pseudotrachoma (su''do-trak-o'mah). A disease of the eye and limb resembling trachoma.

pseudotrichiniasis (su"do-trik-in-i'as-is). Pseudotrichinosis.

pseudotrichinosis (su"do-trik-in-o'sis) [Gr. ψευδήs false + trichinosis]. A term for acute disseminated myositis, from the resemblance of the appearances to those of trichinosis; dermatomyositis.

pseudotropin (su-dot'ro-pin). A dark-brown, syrupy, liquid base: a decomposition-product of tropin.

pseudotubercle (su-do-tu'ber-kl). A tubercle resembling that of tuberculosis, but not due to the tubercle bacillus.

pseudotuberculoma (su"do-tu-ber-ku-lo'mah). A tumor resembling in structure a tuberculoma. p. silicot'icum, a pseudotuberculoma due to the presence in the tissue of silica.

pseudotuberculosis (su"do-tu-ber-ku-lo'sis). The term applied to a number of diseases occurring in man, sheep, cattle, horses, rabbits, and other rodents all of which are probably nocardial infections. See nocardiosis p. hom'inis streptoth'rica, a disease of man closely resembling tuberculosis, but due to a streptothrix.

pseudotumor (su-do-tu'mor). See phantom-tumor, under tumor.

pseudotyphoid (su-do-ti'foid) [Gr. ψευδής false + typhoid]. Spurious typhoid fever; a disease showing the symptoms of typhoid fever, but without the characteristic lesions of that disease and without typhoid bacilli.

pseudovacuole (su-do-vak'u-ōl). A round space within certain red blood-corpuscles containing an animal microorganism.

pseudovariola (su-do-var-i'o-lah). A condition marked by an eruption resembling that of smallpox. See amaas.

pseudoventricle (su-do-ven'trik-l). The fifth ventricle of the encephalon.

pseudovermicule, pseudovermiculus (su-dover'mik-ūl, su''do-ver-mik'u-lus). A state in the development of the plasmodium of pernicious malaria. It is a gregarine-like body developing in the intestine of the mosquito. See Plasmodium malaria.

pseudovomiting (su-do-vom'it-ing). Regurgitation of matter from the stomach.

pseudoxanthin (su-do-zan'thin). 1. A leukomain, C₄H₅N₅O, from muscular tissue; also an isomer of xanthin from uric acid. 2. A compound, C₅H₄N₄O₂, from uric acid.

pseudoxanthoma (su"do-zan-tho'mah). A disease resembling xanthoma. p. elas'ticum, a rare skin disease marked by small papules, individual or confluent, or massed into plaques, thickening of the skin where the lesions exist, and exaggeration of the normal creases and folds of the skin. The histologic features are masses of swollen and degenerated elastic fibers with degeneration of the collagen fibers in the lower and middle layers of the dermis. Called also elastoma and nævus elasticus.

pseudozoöglea (su"do-zo-og-le'ah). A clump of bacteria not disintegrating readily in water, arising from imperfect separation or more or less fusion of the components, but not having the degree of compactness and gelatinization seen in zooglea.

psicain (si'ka-in). A synthetic cocain tartrate, C_{17} - $H_{21}O_4N.C_4H_6O_6$; the acid tartrate of d- ψ -cocain. It is more active and less toxic than cocain used as a local anesthetic in solution of from 0 2 to 20 per cent.

psiconal (si'ko-nal). A proprietary combination of psicain and adrenalin in physiologic salt solution: used as a local anesthetic in ³/₄ per cent. solution.

psilosis (si-lo'sis) [Gr. ψίλωσις a stripping]. 1.
 Falling out of the hair. 2. See sprew.

psilothin (sil'o-thin) [Gr. ψίλωθρον depilatory]. An improved dropax or depilatory plaster.

psilothron (sil-o'thron). A depilatory.

psilotic (sil-o'tik). Pertaining to psilosis.

psittacosis (sit-ak-o'sis) [L. psit'tacus; Gr. ψιττα-κός parrot]. A contagious influenza of parrots communicable to man, and marked by pulmonary disorder and high fever. It is caused by Bacterium psittacosis.

psoas (so'as) [Gr. ψόα loin]. The name of the loin muscles. See muscles, table of.

psodymus (sod'im-us) [Gr. ψόα loin + δίδυμος twin]. A monster with two heads and bodies, but single at and below the loins.

psoitis (so-i'tis) [Gr. ψόα loin muscle]. Inflammation of a psoas muscle or of its sheath.

psomophagia (so-mo-fa'je-ah) [Gr. ψωμός morsel + φαγεῖν to eat]. Thorough chewing of the food.

psomophagy (so-mof'aj-e). Psomophagia.

psora (so'rah) [Gr. ψώρα]. 1. Scabies or the itch. 2. Psoriasis.

psorelcosis (so-rel-ko'sis) [Gr. ψώρα itch + ἔλκωσις ulceration]. Ulceration due to scabies.

psorenteria (so-ren-te're-ah). Abnormal prominence of the closed follicles of the intestine.

psorenteritis (so''ren-ter-i'tis) [psora + enteritis]. A condition of the bowels peculiar to Asiatic cholera.

psoriasic (so-re-as'ik). Same as psoriatic.

psoriasiform (so-re-as'if-orm). Resembling psoriasis.

psoriasis (so-ri'as-is) [Gr. ψωρίασις]. A skin disease of many varieties, characterized by the formation of scaly red patches on the extensor surfaces of the body. **p. annula'ris**, psoriasis in ring-shaped patches. Called also p. circinala. **p. bucca'lis**. See leukoplakia buccalis. **p.** circina'ta. See p. annularis. p. diffu'sa, a form in which there is more or less coalescence of large contiguous lesions. Bakers' itch, grocers' itch, and bricklayers' itch belong to this variety. p. gutta'ta, a form occurring in small, distinct, and irregular patches. p. gyra'ta, a form with patches having a serpentine arrangement. p. invetera'ta, a form with confluent lesions and with thickening and hardening of the skin. p. lin'guse. Same as leukoplakia buccalis. p. nummula'ris, psoriasis in circular patches which resemble small coins. p. ostea'cea, psoriasis complicated by joint affections. p. palma'ris, a syphiloderm of the palms or soles. **p. puncta'ta**, a variety in which the lesions consist of minute, red, pinheadshaped papules, often surmounted with pearly scales. p. rupioi'des, psoriasis with rupia-like p. universa'lis, a form with lesions over the whole body.

psoriatic (so-re-at'ik). 1. Pertaining to, affected with, or of the nature of, psoriasis. 2. A person affected with psoriasis.

psoric (so'rik). Pertaining to or affected with scabies.

psorinum (so-ri'num). A homeopathic preparation of itch-pus.

psorocomium (so-ro-ko'me-um) [Gr. ψώρα itch κομεῖν to care for]. A hospital for psoriasis.

psoroid (so'roid). Resembling scabies.

Psorophora (so-rof'o-rah) A genus of mosquitos, the larvæ of which prey on the larvæ of other kinds of mosquitos.

psorophthalmia (so-rof-thal'me-ah) [Gr. ψωροφθαλμία]. A form of ulcerative marginal blepharitis.

Psoroptes (so-rop'tēz). A genus of itch mites. P. commu'nis causes sheep scab, Texas itch of cattle, and mange in horses, dogs, and other animals. P. cunic'uil causes otocariasis in rabbits.

psorosperm (so'ro-sperm) [Gr. ψωρός rough, scabby + σπέρμα seed]. Any parasitic myxosporidian animal microörganism.

psorospermia (so-ro-sper'me-ah), pl. psorosper'mia. The spore of a psorospermic organism; Rainey's corpuscle.

psorospermial, psorospermic (so-ro-sper'me-al, so-ro-sper'mik). Of the nature of a psorosperm.

psorospermiasis (so"ro-sper-mi'as-is). Psorospermosis.

psorospermosis (so"ro-sper-mo'sis). A morbid state due to the presence of psorosperms.

psorous (so'rus) [Gr. $\psi\omega\rho\delta s$]. Affected with psora, or itch.

P. S. P. Abbreviation for phenol sulphonephthalein test.

psychalgalia (si-kal-ga'le-ah). Same as algopsychalia.

psychalgia (si-kal'je-ah) [Gr. ψυχή soul + ἄλγος pain]. 1. A pain of mental or hysteric origin, such as neurasthenic headache, clavus hystericus, etc. 2. Pain attending or resulting from a mental operation called also mind-pain or soul-pain.

psychalia (si-ka'le-ah) [Gr. ψυχή soul]. A morbid state of mind in which voices seem to be heard and images to be seen. Called also mentalia.

psychanalysis (si-kan-al'is-is) [Gr. ψυχή soul + analysis]. The method of eliciting from nervous patients an idea of their past emotional experiences and the facts of their mental life, in order to discover the mechanism by which a pathologic mental state has been produced, and to furnish hints for psychotherapeutic procedures.

psychanopsia (si-kan-op'se-ah) [Gr. ψυχή soul + aν not + όψις vision]. Psychic blindness. See under blindness.

psychasthenia (si-kas-the'ne-ah) [Gr. $\psi v \chi \dot{\eta}$ soul + asthenia]. A functional neurosis marked by states of pathologic fear or anxiety, obsessions, fixed ideas, tics, feelings of inadequacy, selfaccusation, and peculiar feelings of strangeness, unreality, and dispersonalization (Janet).

psychataxia (si-kat-aks'e-ah) [Gr. $\psi v \chi \dot{\eta}$ soul + ataxia]. Disordered mental condition marked by inability to fix the attention, agitation, etc.

psyche (si'ke) [Gr. ψυχή soul] 1. The mind. 2. The cerebrospinal nervous system.

psycheclampsia (si-kek-lamp'se-ah) [Gr. ψυχή mind + ἐκλάμπσις a flashing]. Acute mania.

psycheism (si'ke-izm) [Gr. $\psi \psi \chi \dot{\eta}$ soul]. Hypnotism. **psychiater** (si-ke-a'ter). Same as *psychiatrist*.

psychiatric (si-ke-at'rik). Pertaining to psychiatry.

psychiatrics, **psychiatry** (si-ke-at'riks, si'ke-at-re) [Gr ψυχή mind + laτρεία healing] The recognition and treatment of mental disorders.

psychiatrist (sik-i'at-rist). An expert in psychiatry.

psychic, psychical (si'kik, si'kik-al) [Gr. ψυχικόs]. Pertaining to the mind.

psychics (si'kiks). Psychology.

psychinosis (si-kin-o'sis) [Gr. ψνχή soul + νδσοs disease]. A functional nervous disease.

psychism (si'kizm). The theory that there is a fluid diffused through all living beings, animating all alike.

psychlampsia (si-klamp'se-ah) [Gr. ψυχή soul + λάμψις a shining]. Mania considered as a discharging phenomenon of perverted brain activity.

psychoalgalia (si''ko-al-ga'le-ah). See algopsy-chalia.

psycho-analysis (si"ko-an-al'is-is). See psychanalysis.

psycho-asthenics (si"ko-as-then'iks) [Gr. ψυχή soul + a not + σθένοs strength]. The study of the feeble-minded.

psycho-auditory (si-ko-aw'dit-o-re). Pertaining to the consciousness and intelligent perception of sound.

psychobiology (si"ko-bi-ol'o-je). That branch of biology which considers the interactions between body and mind. psychocatharsis (si''ko-kath-ar'sis) [Gr. ψυχή soul + κάθαρσις purging]. See catharsis, 2d def.

psychochrome (si'ko-krōm) [Gr. ψυχή mind + χρῶμα color]. A subjective mental association between any bodily sensation and some particular color.

psychochromesthesia (si-ko-krōm-es-the'ze-ah) [Gr. $\psi v \chi \eta$ mind $+ \chi \rho \hat{\omega} \mu a$ color $+ a l \sigma \theta \eta \sigma \iota s$ sensation]. The condition in which auditory stimuli produce sensations or associated sensations of color.

psychocoma (si-ko-ko'mah) [Gr. $\psi v \chi h$ mind + comal. Melancholic stupor.

psychocortical (si-ko-kor'tik-al). Pertaining to the mind and to the cortex of the brain.

Psychodidæ (si-ko'did-e). The moth midges; a family of small flies without ocelli and with the body densely covered with coarse hairs.

psychodometry (si-ko-dom'et-re) [Gr. ψυχή mind + οδός way + μέτρον measure]. The measurement of the rate of mental action.

psychodynamics (si"ko-di-nam'iks) [Gr. ψυχή The science of mental mind + δυναμίς power] action.

psycho-epilepsy (si"ko-ep-il-ep'se). A functional neurosis with symptoms closely resembling those of true epilepsy.

psychogalvanic reflex (si"ko-gal-van'ik). under reflex.

psychogenesis (si-ko-jen'es-is) [Gr. ψυχή mind + γένεσις origin]. The development of the mind.

psychogenia (si-ko-je'ne-ah). A disease due to faulty psychic activity.

psychogenic (si-ko-jen'ik). Originating in the mind; psychic.

psychogenous (si-koj'en-us). Psychogenic.

psychognosis (si-ko-gno'sis) [Gr. ψνχή soul + γνωσιs knowledge]. Sidis' term for the study which will enable the examiner to gain a complete knowledge of the patient's soul, chiefly by means of hypnosis or hypnoidal states.

psychognostic (si-kog-nos'tik). Pertaining to psychognosis.

psychogram (si'ko-gram) [Gr. ψυχή mind+γράμμα a writing]. A visual sensation associated with a mental idea as of a certain number which appears visualized when it is thought of.

psychograph (si'ko-graf) [Gr. ψυχή soul + γράφειν to write]. An instrument for recording unconscious movements of the hand.

psychokinesia (si"ko-kin-e'ze-ah) [Gr. ψυχή soul κίνησις motion]. Explosive cerebral action, due to defective inhibition.

psychokym (si'ko-kim). A psychic process conceived physiologically, that something which flows through the central nervous system and which is *at the basis of psychic processes.

psycholagny (si ko-lag-ne) [Gr. ψυχή mind + λαγνεῖα lust]. Sexual enjoyment produced by mental and imaginary sexual acts.

psycholepsy (si-ko-lep'se) [Gr. ψυχή mind + λαμβάνειν to seize upon]. A condition in which the mental or psychologic attention is lowered.

psychology (si-kol'o-je) [Gr ψυχή mind + λόγος discourse]. That branch of science which treats of the mind and mental operations. the mind and mental operations. abnormal p., the study of derangements or deviations of mental functions. analytic p., psychology by intro-spective methods, as opposed to experimental psychology. animal p., the study of the mental activity of animals. child p., the study of the development of the mind of the child. comparative p., the study of the mental action of animals. criminal p., the study of the mental action of criminals. experimental p., the study of the mind and mental operations by the employment of experimental methods. genetic p., that branch of psychology which deals with the development of mind in the individual and with its evolution in

the race. **physiologic p.**, that branch of psychology which applies the facts taught in neurology to show the relation between the mental and the neural. social p., that branch of psychology which treats of the social aspects of mental life.

psychometer (si-kom'et-er). An instrument used in psychometry.

psychometry (si-kom'et-re) [Gr. ψυχή mind + μετρον measure]. Measurement of the time consumed in mental operations.

psychomotor (si-ko-mo'tor) [Gr. ψυχή mind + L. mo'tor mover]. Pertaining to or causing voluntary movements.

psychoneurosis (si"ko-nu-ro'sis) [Gr. ψυχή mind + νεῦρον nervel Any one of a group of border-land disorders of the mind which are not true insanities. The term includes hysteria, neurasthenia, and psychasthenia. defense p., a psychosis or neurosis whose symptoms are due to the attempt to repress a painful idea. The idea is excluded from the mind, but remains in subconsciousness, where it acts as a cause of disturbance. The term includes hysteria as well as various neuroses and psychoses. p. maid'ica, pellagra.

psychonomy (si-kon'o-me) [Gr. $\psi v \chi \dot{\eta}$ soul + νόμος lawl. The science of the laws of mental ac-

tivity.

psychonosema (si"ko-no-se'mah) [Gr. ψυχή soul + νόσημα illness]. Any mental disorder.

psychonosis (si-ko-no'sis) [Gr. ψυχή soul + νόσος disease]. Any disease or affection caused by mental or moral agents.

psychoparesis (si-ko-par'es-is) [Gr. ψυχή mind + πάρεσις weakness]. Weakness of mind.

psychopath (si'ko-path). A person affected with a psychoneurosis, a person under the influence of some abnormal instinct.

psychopathia (si-ko-pa'the-ah). Same as psychopathy. p. sexua'lis, mental disease marked by perversion of the sexual feelings.

psychopathic (si-ko-path'ik). Pertaining to mental disease.

psychopathist (si-kop'ath-ist). An alienist.

psychopathology (si'ko-path-ol'o-je) [Gr. ψυχή mind + pathology]. The pathology of mental disorders, the science of the pathologic working of the mind.

psychopathosis (si-ko-path-o'sis). term for any mental disease of the psychopathic group.

psychopathy (si-kop'ath-e) [Gr. ψυχή mind + πάθος affection]. Any disease of the mind; insanity.

psychophysical (si-ko-fiz'ik-al). Pertaining to the mind and its relation to physical manifestations.

psychophysics (si-ko-fiz'iks) [Gr. ψυχή mind + φυσικός natural]. The science of the relations of mental processes to their causation and manifestations; experimental psychology.

psychophysiology (si"ko-fiz-e-ol'o-je) [Gr. ψυχή mind + physiology]. The physiology of the mental organs or apparatus.

psychoplasm (si'ko-plazm). Same as protyl.

psychoplegia (si-ko-ple'je-ah) [psychoplegic]. sudden attack of mental weakness.

psychoplegic (si-ko-ple'jik) [Gr. ψυχή mind + πληγή stroke]. An agent that lessens cerebral activity or excitability.

psychopneumatology (si"ko-nu-mat-ol'o-je) [Gr. ψυχή mind + πνεύμα breath + λόγος treatise]. The study of the interactions of mind, body, and soul.

psychoreaction (si"ko-re-ak'shun) [Gr. ψυχή soul + reaction]. See Much's reaction, under reaction.

psychorhythmia (si-ko-rith'me-ah) [Gr. ψυχή mind + $\partial \nu \partial \mu \delta s$ rhythm]. A condition in which there is involuntary repetition of the various mental actions.

psychorrhagia (si-kor-a'je-ah) [Gr.]. The deathstruggle.

psychorrhea (si-ko-re'ah) [Gr. ψυχή mind + ροιά flow]. A mental condition characterized by an overabundance of theories and ideas with vitiation of instinct, reason, and common sense, resulting in an incoherent stream of thought.

psychosensorial (si"ko-sen-so're-al). Psychosen-

psychosensory (si-ko-sen'so-re). Pertaining to the conscious perception of sensory impulses to the mind and to sensation.

psychosin (si-ko'sin). A galactosid, C23H45N7O, resulting from the decomposition of phrenosin. On hydrolysis it yields galactose and sphingosin.

psychosis (si-ko'sis) [Gr. ψυχή soul]. 1. Any disease or disorder of the mind; any disorder characterized by mental aberration. 2. Any thought process. anxiety p., a functional disorder of the mind characterized by anxiety and depression. Cheyne-Stokes p., a condition resembling cardiac asthma, with intense motor agitation, sometimes seen along with the onset of Cheyne-Stokes respiration in chronic heart disease. exhaustion p., mental disorder due to some exhausting or depressing occurrence, as an operation. febrile p., infection-exhaustion psychosis. infection-exhaustion p., confusional insanity. See insanity. involutional p., mental disorder coming on in the aged. Korsakoff's p., a psychosis, usually based on chronic alcoholism, marked by disturbance of orientation, susceptibility to external stimulation and suggestion, falsification of memory, and hallucinations. The signs of polyneuritis (wrist-drop, etc.) are usually present. Called also polyneuritic psychosis, cerebropathia psychica tox-emica, and chronic alcoholic delirium. manicdepressive p., manic-depressive insanity. p. polyneurit'ica. Same as Korsakoff's p. senile p., mental disorder in old persons. situation p., a transitory mental disorder caused by an unbearable situation over which the patient has no toxic p., mental disorder due to toxemia. zoophil p., a psychosis marked by insane affection for or interest in animals.

psychosomatic (si"ko-so-mat'ik) [Gr. ψυχή mind $+ \sigma \hat{\omega} \mu a$ body]. Having bodily symptoms of a psychic or mental origin.

psychotechnics (si-ko-tek'niks) [Gr. ψυχή soul τέχη art]. The employment of psychologic methods in studying sociologic and other problems.

psychotherapeutics, psychotherapy (si"ko-ther-ap-u'tiks, si-ko-ther'ap-e) [Gr. ψυχή soul + therapy]. 1. Psychiatry. 2. Mental therapeutics, mind-cure, or cure by making mental impressions or suggestions.

psychotic (si-kot'ik). Pertaining to or caused by psychosis.

psychotrin (si'ko-trin). An alkaloid, C₂₈H₂₆N₂O₄.-4H2O, of ipecac.

psychro-algia (si-kro-al'je-ah) [Gr. ψυχρός cold + άλγος pain]. Painful psychro-esthesia.

psychro-esthesia (si"kro-es-the'ze-ah) [Gr. ψυχρός cold $+ al\sigma\theta\eta\sigma\iota s$ feeling]. A state in which a part of the body, though warm, seems cold.

psychrometer (si-krom'et-er) [Gr. ψυχρός cold + μέτρον measure]. An apparatus for measuring atmospheric moisture by the difference in reading of two thermometers one with a dry bulb and one with a wet bulb. sling p., a convenient and re-liable instrument in which the thermometers are swung through the air to facilitate evaporation from the wet bulb.

psychrophilic (si-kro-fil'ik) [Gr. ψυχρός cold φιλεῦν to love]. Fond of cold: said of bacteria which develop best between 15° and 20° C. See also mesophilic and thermophilic.

psychrophobia (si-kro-fo'be-ah) [Gr. ψυχρός cold + φόβος fear]. Insane or morbid dread of cold. psychrophore (si'kro-for) [Gr. ψυχρός cold +

φέρειν to bear]. A double catheter for applying cold to the urethra.

psychrotherapy (si-kro-ther'ap-e) [Gr. ψυχρός cold + θεραπεία treatment]. The treatment of disease by the application of cold.

psyctic (sik'tik) [Gr. ψύχειν to cool]. Cooling.

psydracium (si-dra'se-um) [Gr. ψυδράκιον blister]. An old name for a pustular skin disease.

psylla (sil'ah). A proprietary preparation of psyllium.

psyllium (sil'e-um). The plant Planta'go psyll'ium, whose seed is used as a mild laxative. Dose, 1-4 dr. (4-15 gm.).

Pt., pt. Abbreviation for pint and symbol for platinum.

ptarmic (tar'mik). Same as sternutatory.

ptarmus (tar'mus). Spasmodic sneezing.

Ptelea trifolia'ta (te'le-ah) [L.] A shrub of North America, hop-trefoil: used homeopathically.

ptelein (te'le-in). An extract from the root-bark of Pte'lea trifolia'ta: a stimulant and tonic.

Pteridophyta (ter-id-of'it-ah) [Gr. πτερls wing + φυτόν plant]. A division of the plant kingdom including the ferns.

pteridophyte (ter'id-o-fit). One of the Pteridophyta.

pterion (te're-on) [Gr. πτερόν wing]. A point at the junction of the frontal, parietal, temporal, and great wing of the sphenoid bones; about 1½ inches (3 cm.) behind the external angular process of the orbit.

pternalgia (ter-nal'je-ah) [Gr. πτέρνα heel + ἄλγος pain]. Pain in the heel.

Pterococcus aphyl'la (te-ro-kok'us) [Gr. πτερόν wing + κόκκος berry]. A polygonaceous plant of Siberia its fruit is edible; the root affords a good tragacanth, which is eaten.

pterygium (te-rij'e-um) [Gr. πτερύγιον wing]. A patch of thickened conjunctiva extending over a part of the cor-nea. The membrane is usually fan shaped, with the apex toward the pupil and the base toward the inner can-thus. Unless checked, it tends to spread over the eyeball. congenital p. See epitarsus.

Pterygium (Woolf).

pterygoid (ter'ig-oid) [Gr. πτέρυξ wing + είδος form]. Shaped like a wing.

pterygomaxillary (ter"ig-o-maks'il-a-re). Pertaining to a pterygoid process and the upper iaw.

pterygopalatine (ter"ig-o-pal'at-in). Pertaining to a pterygoid process and to the palate bone.

 ptilosis (ti-lo'sis) [Gr. πτίλωσιs].
 1. A falling out or loss of the eyelashes.
 2. A form of pneumoconiosis caused by inhaling the dust from ostrich feathers.

ptisan (tiz'an) [L. ptis'ana; Gr. πτισάνε]. Sweetened barley-water, or other similar preparation: a decoction or medicinal tea.

P. T. O. Abbreviation for Ger. Perlsucht tuberculin original, or Klemperer's tuberculin.

ptomain, ptomaine (to'ma-in) [Gr. πτωμα carcass]. Any one of a class of bases formed under the action of bacteria or of metabolism by the splitting of carbon dioxid from an amino-acid. The ptomains are amins; some are toxic and some have a powerful effect on blood-pressure. Called also animal alkaloid, putrefactive alkaloid, and cadaveric alkaloid.

ptomainemia, ptomainemia (to"ma-in-e'me-ah) [ptomain + Gr. alua blood]. The presence of ptomains in the blood.

ptomainotoxism (to"ma-in-o-tok'sism). Poisoning by a ptomain.

ptomatin (to'mat-in). Same as ptomain.

ptomatopsia (to-mat-op'se-ah) [Gr. $\pi\tau\hat{\omega}\mu\alpha$ corpse $+\delta\psi\iota_{S}$ vision]. Inspection of dead body; autopsy.

ptomatopy (to-mat'op-c). Ptomatopsia.

ptomatropin (to-mat'ro-pin) [ptomain + atropin].
A ptomain from putrid sausages and the viscera of corpses of those dead from typhoid fever. It has effects somewhat like those of atropin.

ptosed (tost). Affected with ptosis; prolapsed.

ptosis (to'sis) [Gr. πτῶσις fall]. 1. A paralytic drooping of the eyelid. 2. The prolapse of an organ or part. abdominal p. Same as splanchnoplosis. p. adipo'sa, false p., an apparent ptosis caused by a fold of skin and fat hanging down below the border of the eyelid. Horner's p., moderate ptosis of an eye, with retraction of the eyeball, miosis, and flushing of the affected side of the face, due to lesions of the cervical sympathetic. p. lipomato'sis, ptosis produced by lipoma of the eyelid. morning p. See waking p. p. sympath'ica, ptosis associated with miosis, vasomotor facial paralysis, and diseases of the cervical sympathetic system. visceral p., splanchnoptosis. waking p., temporary paralysis of the upper lid on awakening from sleep.

ptotic (to'tik). Pertaining to or affected with ptosis.
P. T. R. Abbreviation for Ger. Perlsucht Tuberculin Rest, a tuberculin prepared from bovine bacilli in the same manner as Koch's new tuberculin.

ptyalagogue (ti-al'ag-og) [Gr. πτύαλον spittle + άγωγός leading]. Same as sialogogue.

ptyalectasis (ti-al-ek'tas-is) [Gr. $\pi\tau b \alpha \lambda o \nu$ saliva + $\xi_{\kappa\tau\alpha\sigma\iota s}$ distention] Dilatation of one of the ducts of the salivary glands.

ptyalin (ti'al-in) [Gr πτύαλον spittle]. An enzyme occurring in the saliva which converts starch into maltose and dextrose.

ptyalinogen (ti-al-in'o-jen) [ptyalin + Gr. γεννᾶν to produce]. A hypothetic substance which is supposed to exist in the cells of the salivary glands, and to be intermediary in the formation of ptyalin.

ptyalism (ti'al-izm) [Gr. πτυαλισμός]. Excessive secretion of saliva, salivation. **mercurial p**. See salivation.

ptyalith (ti'al-ith) [Gr. $\pi \tau b a \lambda o \nu$ spittle + $\lambda l \theta o s$ stone]. A salivary calculus.

ptyalize (ti'al-īz). To increase or stimulate the secretion of saliva.

ptyalocele (ti-al'o-sēl) [Gr. πτύαλον spittle + κήλη tumor]. A cystic tumor containing saliva. sublingual p. See ranula.

ptyalogenic (ti"al-o-jen'ik) [Gr. πτυαλον saliva + γεννάν to produce]. Formed from or by the action of saliva, as, ptyalogenic calculus.

ptyalogogue (ti-al'o-gog). Sialogogue.

ptyalolith (ti'al-o-lith). Ptyalith.

ptyalolithiasis (ti"al-o-lith-i'as-is). The presence of salivary calculi.

ptyalorrhea (ti-al-o-re'ah) [Gr. πτύαλον saliva + βοιά flows). An abnormally copious flow of saliva.

ptyalose (ti'al-os). Maltose produced by the action of ptyalin on starch.

ptyocrinous (ti-ok'rin-us) [Gr. $\pi\tau bo\nu$ fan $+ \kappa \rho l\nu \epsilon \nu$ to separate]. Elaborating secretion in the form of granules which are eventually extruded said of unicellular glands, as goblet-cells, which secrete in this way. Cf. diacrinous.

ptyophagon (ti-o-fa'gon) [Gr. πτύαλον saliva + φαγεῖν to eat]. A proprietary sputum disinfectant.

puberal (pu'ber-al) [L. pu'ber of marriageable age]. Pertaining to puberty.

pubertas (pu'ber-tas). Latin for puberty. p. præ'cox, pathologically early sexual maturity.

puberty (pu'ber-te) [L. puber lus]. The age at which the reproductive organs become functionally operative. It occurs between twelve and seventeen years of age, and is indicated in the male by change of voice and seminal discharge, and in the female by the occurrence of menstruation.

pubes (pu'bēz) [L.]. 1. The hair on the external genitalia, or the region covered by it. 2. The pubic bone.

pubescence (pu-bes'ens). 1. Puberty. 2. Downiness; lanugo.

pubescent (pu-bes'ent) [L. pubes'cens becoming hairy]. 1. Covered with down or lanugo. 2. Arriving at the age of puberty.

pubetrotomy (pu-be-trot'o-me) [pubes + etrotomy]. Section of the os pubis and of the lower abdominal wall.

pubic (pu'bik). Pertaining to the pubes or os

publiotomy (pu-be-ot'o-me) [publis + Gr. τέμνειν to cut] The operation of cutting through the public bone lateral to the median line. Called also hebotomy and hebosteotomy.

pubis (pu'bis) [L]. The pubic bone; os pubis, or pubes.

pubofemoral (pu-bo-fem'or-al). Pertaining to the os pubis and femur.

puboprostatic (pu"bo-pros-tat'ik). Pertaining to the os pubis and prostate gland.

pubotibial (pu-bo-tib'e-al). Pertaining to the pubes and tibia.

pubovesical (pu-bo-ves'ik-al). Pertaining to the pubes and bladder.

puccin (puk'sin). A principle from Sanguina'ria canaden'sis.

puces (pu'sēz). Scabies.

pudenda (pu-den'dah), pl. of puden'dum [L.]. The external genital organs.

pudendal (pu-den'dal). Pertaining to the pudenda.

pudendum (pu-den'dum), pl. puden'da [L. pude're to be ashamed]. The external genital parts, especially of the female. p. mulie'bre [B N A], the vulva.

pudic (pu'dik) [L. pu'dicus]. Pertaining to the pudenda.

puericulture (pu-er'ik-ult-ur) [L. pu'er boy + cultu'ra culture]. The art of rearing and training children.

puerile (pu'er-il) [L. *pueri'lis*; *pu'er* boy]. Pertaining to childhood or to children; childish.

puerilism (pu'er-il-izm) [L pu'er boy] A condition in which the patient's mind seems to return to its state when a child.

puerpera (pu-er'per-ah) [L. pu'er boy + par'ere to bear]. A woman in childbed.

puerperal (pu-er'per-al) [L. puerpera'lis]. Pertaining to childbirth.

puerperalism (pu-er'per-al-izm). A diseased condition incident to childbirth.

puerperant (pu-er'per-ant). A puerperal woman. **puerperium** (pu-er-pe're-um) [L.]. The period

or state of confinement, childbed.

puff (puf). A short, blowing, auscultation sound.

veiled p., a faint, muffled pulmonary murmur.

puffball (puf'bawl). See Lycoperdon.

pugil, pugillus (pu'jil, pu-jil'us) [L. pugil'lus]. A handful.

pujos blancos (poo'hōs blahnk'ōs) [Sp. "white straining"]. A Chilian dysentery with white discharges.

pukatein (pu-kat'e-in). A crystalline alkaloid, C₁₇-H₁₇NO₃, from Laurelia novæ-zelandiæ.

puke-weed. Lobelia.

pulegone (pu'leg-on). A volatile oil, a menthene, CH₂C₆H₇O:C(CH₃)₂, from pennyroyal oil.

Pulex (pu'leks), pl. pu'lices [L. "flea"]. A genus of fleas which are parasitic on man and on dogs, cats, and badgers. P. cheo'pis. See Xenopsylla cheopis. P. duge'si, a flea found in Mexico which much resembles P. irritans, but has a longer rostrum. P. ir'ritans, the common flea of Europe, is parasitic in the skin of man, its bite producing itching. P. pen'etrans, the chigo or jigger-flea. See chigger. P. serrat'iceps. See Ctenocephalus canis.

pulicicide, pulicide (pu-lis'is-īd, pu'lis-īd) [L. pu'-lex flea + ca'dere to kill]. Anything which will destroy fleas.

Pulicides (pu-lis'id-e). A family of the Hemiptera which includes most of the fleas. Four genera are important to man: Pulex, Ceratophyllus, Ctenocephalus, and Xenopsylla.

pullulate (pul'u-lat). To germinate.

pullulation (pul-u-la'shun) [L. pullula're to sprout].
The act or process of budding or of sprouting; germination.

Pulm. Abbreviation for L. pulmen'tum, gruel. pulmo-aortic (pul"mo-a-or'tik). Pertaining to the lungs and the aorta.

pulmoform (pul'mo-form). Guaiaform.

pulmometer (pul-mom'et-er) [L. pul'mo lung + me'trum measure]. A form of spirometer for measuring the capacity of the lungs for air.

pulmometry (pul-mom'et-re). The measurement of the lung capacity.

pulmonal (pul'mo-nal). Pulmonary.

pulmonary (pul'mo-na-re) [L. pulmona'rius]. Pertaining to the lungs.

pulmonectomy (pul-mo-nek'to-me). Same as pneumonectomy.

pulmonic (pul-mon'ik). r. Pertaining to the lungs; pulmonary. 2. Pertaining to the pulmonary artery.

pulmonin (pul'mo-nin). A dry therapeutic extract of calves' lungs: used in pulmonary diseases.

pulmonitis (pul-mo-ni'tis). Inflammation of the lungs; pneumonia.

pulmotor (pul'mo-tor) [L. pul'mo lung + mo'tor mover]. An apparatus for producing artificial respiration by forcing oxygen into the lungs, and, when they are distended, sucking out the air.

pulmozym (pul'mo-zīm). A therapeutic preparation of lung tissue.

pulpation (pul-pa'shun). The process or state of reduction to a pulp.

pulp (pulp) [L. pul"pa]. Any soft, juicy animal or vegetable tissue. In dentistry, the dental pulp. p. canal, that part of the pulp-cavity which is within the root of a tooth. p.-cavity, the space within a tooth containing the dental pulp. p.-chamber, that portion of the pulp cavity which is contained within the crown portion of a tooth. dead p., non-vital pulp. dental p., dentinal p., the soft, vascular tissue occupying the pulp chamber and the root canals of a tooth, composed of nerves, blood-vessels, and connective tissue. devital p., devitalized p., non-vital pulp. digital p., the soft cushion on the palmar or plantar surface of the distal phalanx of a finger or toe. exposed p., the condition in which the denture covering the dental pulp is absent. mummified p., dental pulp affected with dry gangrene. non-vital p., dental pulp which is dead. punctured p., exposed pulp. splenic p., the dark, reddish-brown substance which fills up the interspaces of the trabeculæ of the spleen. p.-stone. See nodule, pulp. tooth p., dental pulp. vaccine p., the semisolid material of smallpox vaccine as it is taken from the calf before it has been ground with glycerin. vertebral p., the soft

central portion of an intervertebral disk. vital p., dental pulp which is alive.

pulpa (pul'pah) [L. "flesh"]. Pulp. p. den'tis [B N A], dental pulp.

pulpal (pul'pal). Pertaining to the pulp.

pulpalgia (pul-pal'je-ah) [pulp + Gr. άλγος pain]. Pain in the dental pulp; pulpitis.

pulpation (pul-pa'shun). Pulpefaction.

pulpectomy (pul-pek'to-me) [pulp + Gr. ἐκτομή excision]. Removal of the dental pulp from a tooth.

pulpefaction (pul-pe-fak'shun) [L. pul'pa pulp + fa'cere to make]. Conversion into pulp.

pulpiform (pul-pif-orm). Resembling pulp.

pulpitis (pul-pi'tis). Inflammation of the dental pulp.

pulpless (pulp'les). Having the pulp removed said of teeth.

pulpotomy (pul-pot'o-me) [pulp + Gr. τομή a cut]. Incision into the pulp of a tooth.

pulpy (pul'pe). Soft or pultaceous.

pulque (pul'ke). A fermented drink made in Mexico and Central America from the juice of agave or maguey.

pulsate (pul'sat). To beat rhythmically, as the heart

pulsatile (pul'sa-tīl). Characterized by a rhythmic pulsation.

pulsatilla (pul-sat-il'ah). The ranunculaceous flowering herb, Anemo'ne pulsatil'la; also A. praten'sis. It contains anemonin and anemonic acid. It is alterative, depressant, and useful in inflammations, as orchitis, epididymitis, otitis media, dysmenorrhea, asthma, bronchitis, etc. Dose of tincture or fluidextract, 1-5 min. (0.066-0.333 c.c.); in substance, 2-3 gr. (0.133-0.18 gm.). American p., Anemone ludovicia'na. European p., A. praten'se.

pulsation (pul-sa'shun) [L. pulsa'tio]. A throb or rhythmic beat, as of the heart. suprasternal p., arterial pulsation in the region of the suprasternal notch, due to dilatation of the aortic arch or to aneurysm.

pulse (puls) [L. pul'sus stroke]. The expansion and contraction of an artery which may be felt with the finger. The pulse is usually felt on the radial artery at the wrist, though it may be felt over the temporal, carotid, ulnar, brachial, femoral, and other arteries. The pulse-rale or number of pulsations of an artery a minute in the adult is varied from 67 to 72. **abdominal p.**, the pulse seen in emaciated persons over the abdominal particle and the adult is about a second of the pulse seen in emaciated persons over the abdominal particle. aorta. abrupt p., a pulse which strikes the finger rapidly; a quick pulse. allorhythmic p., a pulse marked by irregularities in rhythm. anacrotic p., one with two or more expansions to a beat. anadicrotic p., a pulse in which the ascending limb of the tracing has two notches, angry p. Same as wiry p. arachnoid p., a thread-like pulse: a small, feeble, tremulous pulse. ardent p., a pulse which appears to strike the finger at a single point. p.-area, the surface above the wrist-joint at which the radial pulse is commonly felt. auriculovenous p., jugular pulsation in which the wave due to the auricle precedes the ventricular contraction. also normal venous p. and negative venous p. Bamalso normal venous p. and negative venous p. Bain-berger's bulbar p., a pulsation observable in the bulbus of the jugular vein and synchronous with the systole. It occurs in tricuspid inade-quacy. bigeminal p., a pulse in which two beats follow each other in rapid succession, each group of two being separated from the following by a longer interval. bisferious p. See pulsus bis-forms hither p.. Bamberger's pulse. canbulbar p., Bamberger's pulse.

Corrigan's pulse. cap ilse. can-capillary firiens. non-ball p. p., an intermittent filling and emptying of the skin capillaries. caprisant p. See goatleap p. catacrotic p., one which makes

a break in the line of descent of the sphygmogram. catadicrotic p., one with a pri-mary and secondary expansion in the line of descent of the sphygmogram. catatricrotic p., one which produces three breaks in the line of descent of the sphygmogram. centripetal venous p., a venous pulse caused by an impulse passed from the arteries through the capillaries and venules into the larger veins. p.-clock, an old device for determining the pulse-rate. collapsing p. Same as Corrigan's p. convulsive p., a pulse which is unequal in force and rhythm. cordy pulse with a full expansion, followed by a sudden collapse. It occurs in a ortic regurgitation. Called also water-hammer p. coupled p., bigeminal pulse.
p.-curve. Same as sphygmogram. decurtate
p., a pulse which gradually tapers away in strength
like the tail of a mouse. Called also mouse-tail p. and myurous p. deficient p., a pulse marked by an occasional lack of a beat, due to failure of the heart to contract. dicrotic p., one having two marked expansions in one beat of the artery. It is seen in cases of lowered arterial the artery. It is seen in cases of lowered arterial tension. dropped-beat p., intermittent pulse. elastic p., a full pulse which gives an elastic feeling to the finger. entoptic p., the subjective sensation of seeing in the dark a flash of light at each heart-beat. epigastric p. Same as the property of the property o abdominal p. febrile p., a pulse characteristic of fever. With the onset of fever it is full and bounding, but becomes weak and feeble as the fever subsides. filiform p. Same as thready p. formicant p., a small, nearly imperceptible pulse. frequent p., one which is faster in rate than normal. full p., one with a copious volume of blood. funic p., the arterial tide in the umblood. funic p., the arterial tide in the umbilical cord. gaseous p., a very soft, full pulse. goat-leap p., an irregular and bounding pulse. guttural p., a pulse felt in the throat. hard p., one which is characterized by very high tension. high-tension p., one characterized by a gradual impulse, long duration, slow subsidence, and a firm, cordy state of the artery between the beats. hyperdicrotic p., one whose sphygmogram shows an aortic notch below the base line: a sign of extreme exhaustion. infrequent p., one which is abnormally slow in rate or in the count to a minute. intermittent p., one in which various beats are dropped. irregular p., one in which various beats are dropped. irregular p., one in which the beats occur at irregular intervals. jerky p., a pulse in which the artery is suddenly and markedly distended. jugular p., a pulsation of the jugular vein. Kussmaul's p. See paradoxic p. locomotive p. Same as Corrigan's p. long p., one in which the stroke is markedly prolonged. lowtive p. Same as Corrigan's p. long p., one in which the stroke is markedly prolonged. low-tension p., a pulse with a sudden onset, short duration, and quick decline, and which is easily obliterated by pressure. mitralized p., the irregularity of the pulse often seen in mitral disease. Monneret's p., a full, slow, and soft pulse characteristic of jaundice. monocrotie p., a pulse without dicrotism. mouse-tail p. See decurtate p. myurous p. See decurtate p. nail-p., the circulation and pulsation of blood under the nails; it is usually determined by the onychograph. negative p., normal venous under the nails; it is usually determined by the onychograph. negative p., normal venous p., auriculovenous pulse. paradoxic p., one that is weaker during inspiration, as in some cases of adherent pericardium. Called also Kussmaul's p. pathologic p., positive venous p., ventricular venous pulse. pistol-shot p., a form in which the arteries are subject to sudden distention and collapse. polycrotic p., one with several secondary pulse-waves. pulmonary p., the second sound of the heart as heard over the pulmonary valve. quadrireminal p., one with a monary valve. **quadrigeminal p.**, one with a pause after every fourth beat. **quick p.**, one with a pause after every fourth beat. **quick p.**, one which strikes the finger smartly and Jeaves it quickly; a frequent pulse is also termed quick. Called also short p. **Quincke's p.**, a perceptible nail-pulse; alternate flushing and blanching of the

nails, due to aortic insufficiency. radial p., that which is taken at the radial artery. p. rate. See under rate. respiratory p. r. A pulsation observed even in health in the superficial cervical veins after rapid exercise. 2. Same as paradoxic p. retrosternal p., a venous pulse perceptible just above the suprasternal notch. Riegel's p., a pulse which is diminished in size during expiration. running p., a pulse with but small excursions, and those being irregular. shabby p., a peculiar feeble and ill-defined pulse due to a weak heart and relaxed vascular tension. sharp p. Same as jerky p. short p. See quick p. sixty-six p., a pulse rate of sixty-six per minute; such a pulse is regarded by some as infrequent p., also one of a prolonged systole and diastole. soft p., a pulse of low tension. strong p., one that is hard or wiry. tense p., a pulse that is hard and full, but without wide excursions. thready p., one that is very fine and scarcely perceptible. trembling p., tremulous p. Same as running p. tricrotic p., one that is marked by three abnormally distinct sphygmographic waves to the pulsebeat. trigeminal p., one with a pause after every third beat. trip-hammer p., Corrigan's pulse. undulating p., a pulse giving the sensation of successive waves. unequal p., a pulse in which some of the beats are strong and others weak. vaginal p., arterial pulsation sometimes perceptible in the vagina in pregnancy or inflammatory disease. venous p., the pulsation which occurs in a vein. It is usually taken at the right jugular vein just above the sternoclavicular junction. ventricular venous p., jugular pulsation in which the auricular wave disappears or coincides with the period of ventricular systole. Called also positive venous p. or pathologic venous p. vermicular p., a small rapid pulse giving to the finger a sensation of worm-like movement. vibrating p. Same as Jerky p. water-hammer p. Same as Corrigan's p. wiry p., a small, tense pulse.

pulse deficit. The difference between the heart rate and the pulse rate.

pulse rate. See under rate.

pulsellum (pul-sel'um) [L.]. A posterior propelling flagellum.

pulsiloge (pul'sil-ōj). An obsolete form of pulse-

pulsilogram (pul-sil'o-gram). An obsolete instrument for ascertaining the pulse-rate.

pulsimeter (pul-sim'et-er) [L. pul'sus pulse + me'-trum measure]. An apparatus for measuring the force of the pulse.

pulsometer (pul-som'et-er) [L. pul'sus pulse + Gr. $\mu\ell\tau\rho\rho\nu$ measure]. An apparatus for measuring the rate of flow of the blood.

pulsus (pul'sus). Latin for pulse. p. abdomina'lis, a soft pulse often felt in abdominal diseases.
p. altern'ans, a pulse in which there is regular
alternation of weak and strong beats. It is a
variety of cardiac arhythmia indicating lesion of
the myocardium. p. bigem'inus. Same
as bigeminal pulse. p. bister'iens, p. bifer'iens, a dicrotic pulse in which the waves are of
nearly equal height. p. cap'risans, goatleap pulse. p. ce'ler, a swift, abrupt pulse.
p. celer'rimus, a water-hammer pulse. p.
cor'dis, the apex-beat of the heart. p. deb'ilis, a weak pulse. p. defic'iens, a pulse
showing occasional intermittence from failure of
the ventricle to contract. p. dele'tus, absence
of pulse, seen in aortic aneurysm. p. du'plex,
dicrotic pulse. p. for'micans, formicant pulse.
p. heterochron'icus, an arhythmic pulse. p.
inter'cidens, p. intercur'rens, a pulse in
which there is an extra beat. p. mag'nus, a
large, full pulse. p. monoc'rotus, monocrotic
pulse. p. oppres'sus, a pulse which appears to
be pushing its way through a contracted artery.

p. paradox'us, a paradoxic pulse (q. v. under pulse). p. par'vus, a small pulse. p. pseudo-intermit'tens, a pulse showing an occasional intermittence, owing to a feeble contraction of the ventricle. p. ra'rus, a slow pulse due to prolongation of the heart's pause. p. tar'dus, an abnormally slow pulse due to a prolongation of the systole or diastole. p. trigem'inus, trigeminal pulse. p. undulo'sus, a pulse characterized by a series of waves. p. vac'uus, an extremely weak pulse. p. vano'sus, venous pulse.

pultaceous (pul-ta'shus) [L. pulta'ceus]. Like a pulp or poultice.

pulv. An abbreviation for L. pul'vis powder.

pulverflator (pul'ver-fla-tor). A proprietary apparatus for blowing powders.

pulverin (pul'ver-in). See barilla.

pulverization (pul"ver-i-za'shun) [L. pul'vis powder]. The reduction of any substance to powder.

pulverulent (pul-ver'u-lent) [L. pulverulen'tus]. Powdery; dust-like.

pulvinar (pul-vi'nar) [L. "cushion"]. The posterior and inner part of the optic thalamus, embedded within the crus cerebri. p. epiglot'tidis. See cushion of the epiglottis.

pulvinate (pul'vin-āt) [L. pulvi'nus cushion]. Shaped like a cushion.

pulvis (pul'vis), pl. pul'veres. Latin for powder. p. aëroph'orus, p. aëroph'orus an'glicus. See effervescent powder. p. aëroph'orus lax'ans, p. effervescens compos'itus. See seidlitz powder. p. antimonia'lis. See James' powder. See also under powder. p. cine'reus, hydrargyrum cum creta. p. cutico'lor [L. "skin-colored powder"], oxid of zinc (2 gm), magnesium carbonate (3 gm), white bole (3 gm.), red bole (2 gm), rice-starch (10 gm.): used in skin diseases. p. gummo'sus, a powder made of licorice, gum arabic, and sugar: used as an excipient. pulvola (pul-vo'lah). A proprietary epipastic or

dusting-powder: said to be a powdered oil. pumex (pu'meks) [L. "foam"]. See pumice.

pumice (pum'is) [L. pumer]. Spongy volcanic lava: used as a polishing material, especially in powdered form. Called also rotten stone.

pump (pump). An apparatus for drawing or forcing fluids or gases. air-p., a pump for exhausting or forcing in air. Alvegniat's p., a mercurial air-pump: used in measuring the free gaseous constituents of the blood. breast-p., a pump for abstracting milk from the breast. dental p., an apparatus for removing saliva from the mouth in dental operations. stomach-p., a pump for removing poisons from the stomach.

pumpkin (pump'kin). See pepo.

puna (poo'nah). Mountain sickness.

Puna'ria ascochin'gæ. A plant of Sierra Chiga (Argentina), regarded as a specific in asthma and mountain sickness.

punched-out edges. The characteristic feature of the deep ulcers of subcutaneous syphilitic gummata.

puncta (punk'tah). Plural of Latin punc'tum point. See punctum.

punctate (punk'tāt). 1. [L. punc'tum point].

Resembling or marked with points or dots. 2.

The fluid obtained by an exploratory puncture.

punctiform (punk'tif-orm) [L. punc'tum point + for'ma shape]. Like a point; located in a point. In bacteriology, said of very minute colonies.

punctograph (punk'to-graf) [L. punc'tum point + Gr. γράφειν to write]. An instrument for the radiographic localization of foreign bodies in the tissues.

punctum (punk'tum), pl. punc'ta. Latin for point. p. cm'cum. Same as blind-spot. p. coxa'le, the highest point of the crest of the ilium. punc'ta doloro'sa, painful points in the course

of nerves affected with neuralgia. Called also Valleix's points. p. ischid'icum, the lower part of the crest of the ilium. punc'ta lacrima'lia [B N A], the outlets of the lacrimal canaliculi in the edges of the eyelids near the inner canthi. p. lu'teum, the macula lutea. p. nasa'le infe'rius, the rhinion. p. prox'imum. Same as nearpoint. punc'ta prurit'ica. See itchy points, under point. p. remo'tum. See far-point. p. sa'liens, the vascular expansion in the embryo forming the primitive heart. punc'ta vasculo'sa, minute red spots which mark the cut surface of the white substance of the brain. They are caused by blood from divided vessels.

punctumeter (punk-tum'et-er) [L. punc'tum point + Gr. μέτρον measure]. An instrument for measuring the range of accommodation.

punctura (punk-tu'rah) [L.]. Puncture. p. explorato'ria, exploratory puncture.

puncturatio (punk-tu-ra'she-o). The act of puncturing.

puncture (punk'tūr) [L. punctu'ra]. 1. An act of piercing. 2. A wound made by a pointed instrument. Bernard's p., puncture on a definite point of the floor of the fourth ventricle causing artificial diabetes. cistern p., puncture of the cisterna magna through the occipito-atlantoid ligament. Corning's p. Same as Quincke's p. diabetic p. Same as Bernard's p. epigastric p. See Marfan's method, under method. exploratory p., the piercing of a cavity or tumor and the removal of some portion of the contents for the purpose of examination. heat p., elevation of the temperature of the animal body produced by puncturing the base of the brain intracisternal p., cistern puncture. Kronecker's p., puncture of the inhibitory nerve-center of the heart by means of a long fine needle. lumbar p. See Quincke's p. Marfan's epigastric p. See Marfan's method, under method. Quincke's p., the tapping of the spinal membranes in the lumbar region, chiefly for the purpose of obtaining cerebrospinal fluid for examination. spinal p. Same as Quincke's p. ventricular p., puncture of a cerebral ventricle for the purpose of withdrawing fluid.

punctured (punk'tūrd). 1. Pierced. 2. Caused by a prick or thrust.

pungent (pun'jent) [L. pun'gens pricking]. Sharp or biting; somewhat acrid.

punica (pu'nik-ah). See pomegranate.

punicin (pu'nis-in). Same as pelletierin.

punktograph (punk'to-graf). Same as puncto-graph.

P. U. O. Abbreviation for "Pyrexia of unknown origin"; an English designation for trench fever (q. v.).

pupa (pu'pah) [L. "a doll"]. The second stage in the development of an insect, between the larva and the imago.

pupil (pu'pil) [L. pupil'la girl]. The opening at the center of the iris of the eye for the transmission of light. Argyll-Robertson p., one which is miotic and which responds to accommodation effort, but not to light. artificial p., one made by iridectomy. bounding p., a pupil which shows alternating dilatation and contraction. Bumke's p., dilatation of the pupil following a psychic stimulus. It does not occur in dementia præcox. cat's-eye p., one with a narrow vertical aperture. Hutchinson's p., one dilated upon one side. keyhole p., a pupil with a coloboma on one side of the margin. Okew's p's, a condition in which one of the visual axes is deviated upward and the other downward. pin-hole p., one which is extremely contracted. skew p's, a condition in which one of the ocular axes deviates upward and the other downward. stiff p., Argyll Robertson pupil.

pupillary (pu'pil-a-re). Pertaining to the pupil.

pupillometer (pu-pil-om'et-er) [L. pupil'la pupil + me'trum measurel. An instrument for measuring the width or diameter of the pupil.

pupillomotor (pu-pil-o-mo'tor). Pertaining to the

movement of the pupil. Von Hess instrupupilloscope (pu-pil'o-skop). ment for measuring reactions of the pupil.

pupilloscopy (pu-pil-os'ko-pe) [L. pupil'la pupil + Gr. σκοπεῖν to inspect]. Same as skiascopy.

pupillostatometer (pu-pil"o-stat-om'et-er) [L. pupil'la pupil + Gr. στατός placed + μέτρον measure]. An instrument for measuring the distance between'the pupils.

pural (pu'ral). Powdered wood-charcoal saturated with menthol and with carbolic and benzoic acids. It is burned as a disinfectant and for the relief of whooping-cough.

Purdy's solution (per'dez) [Charles Wesley Purdy, American physician, 1846–1901]. See 1846-1901]. See solution.

pure (pur) [L. pu'rus]. Free from mixture of other matters. A reagent is chemically pure when it contains no other chemicals that might interfere with its action.

purgacion (poor-gah-se-on') [Sp.]. A Peruvian term for gonorrhea.

purgatin (pur'ga-tin). The diacetyl ester of anthra-purpurin, C₆H₄(CO)₂.C₆H(O CO.CH₃)₂.OH, a yellowish-brown powder, insoluble in cold water and dilute acids, but somewhat soluble in hot water, alcohol, and ether. It is the purgative principle of nearly all vegetable cathartics, and is used as a Dose, 24 gr. (1.5 gm). Called also laxative. purgatol.

purgation (pur-ga'shun) [L. purga'tio]. Catharsis; purging effected by a cathartic medicine.

purgative (pur'gat-iv) [L. purgati'vus]. 1. Cathartic; causing evacuations from the bowels. 2. A cathartic medicine. Purgatives are divided, chiefly according to the severity of their action, into several classes-drastic, simple, saline, hydragogue, cholagogue, and laxative. Among the drastic purgatives are colocynth, croton oil, jalap, scammony, and gamboge. The simple purgatives are aloes, castor oil, rhubarb, senna, etc. Under the head *suline* are magnesium sulphate, sodium sulphate, potassium citrate, potassium tartrate, and sodium phosphate. Hydragogues include potassium bitartrate, elaterium, and gamboge. Cholagogues comprise calomel, blue pill, iridin, podophyllin, etc.

purgatol (pur'gat-ol). Purgation.

purge (purj) [L. purga're]. 1. To relieve of fecal matter. 2. A purgative remedy or dose.

purgen (pur'jen). A name for phenolphthalein. purgerine (pur'jer-in). A proprietary aromatic syrup of senna laxative.

purging-nut (purj'ing). See Curcas.

puriform (pu'rif-orm) [L. pus pus + for ma form].

Resembling pus. The term is applied to the contents of cold abscesses which resemble pus.

purin, purine (pu'rin) [L. pus]. An organic compound, C₅H₄N₄, the fundamental form of the purin bases (q. v.) which are derived from it by substitution. *Methyl purins*, alkaloids formed from purin by substituting methyl groups, usually in positions 1, 3, or 7. The principal ones are caffein, which is 1, 3, 7-trimethyl purin and the dimethyl purins, theobromin (1, 3), and theophyllin (3, 7). Purin bases or purin bodies are modified forms of purin found in the urine. Some of the oxy- and amino-purins are constituents of or derived from nucleic acid, for example, 6-amino purin is adenin, 6-oxypurin is hypoxanthin, 2-amino 6-oxypurin is guanin, 2, 6-dioxypurin is xanthin and 2, 6, 8-tri-oxypurin is uric acid. The purin bases are some-times called alloxur bases or bodies. smino p., a purin in which one or more amino groups have been substituted. p. nuclease, an enyzme which causes the hydrolysis of purin nucleotids so as to

liberate the purin base. It has been found in the pancreas.

purinase (pu'rin-ās). An enzyme which brings about changes, such as oxidation and diamination. in purins.

purinemia (pu-rin-e'me-ah) [purin + Gr. alua blood]. The presence of purin bases in the blood.

purinemic (pu-rin-e'mik). Pertaining to or affected with purinemia.

purinometer (pu-rin-om'et-er) [purin + Gr. μέτρον measure]. An apparatus for estimating the quantity of purin-bodies in the urine.

puritas (pu'rit-as). An antiseptic preparation of sodium borate, carbolic acid, eucalyptus, etc.

Purkinje's cells (pur-kin'jez) [Johannes Evangelista Purkinge, Hungarian physiologist, 1787-1850]. See cell. **P's fibers**, reticulated moniliform fibers in the subendocardial tissue. **P's figures**, sets of dark lines on a yellowish background, seen by candle-light in the eye and produced by the retinal vessels. **P's vesicle**. See vesicle.

Purkinje-Sanson's images (pur-kin'je-san'sonz). See image

puro (pu'ro). The expressed, concentrated, and sterilized juice of beef.

puroform (pu'ro-form). A proprietary antiseptic and disinfectant preparation.

purohepatitis (pu"ro-hep-at-i'tis) [pus + hepatitis]. Suppurative inflammation of the liver.

puromucous (pu-ro-mu'kus). Consisting of or containing pus and mucus; mucopurulent.

puron (pu'ron). A compound, C₅H₈N₄O₂, obtained by electrolysis of uric acid.

puronal (pu'ro-nal). A proprietary compound of acetanilid (97.6 per cent.) and bismuth oxyiodid (2.4 per cent.): antiseptic.

purple, visual (pur'pl). Same as rhodopsin Stewart's p., 1 gr. of iodin in 1 oz of vaselin.

purpura (pur'pu-rah) [L. "purple"]. A disease characterized by the formation of purple patches on the skin and mucous membranes, due to sub cutaneous extravasation of blood. p. abdomina'lis, Henoch's purpura. p. angioneurot'ica, a disorder marked by cutaneous hemor rhages, hyperesthesia, angioneurotic edema, and gastric crisis. p. annula'ris telangiecto'-.des, a skin affection of young males marked by ar eruption of the lower limbs below the knees, which is at first telangiectatic, then purpuric, and finally atrophic. The appearance of the eruption is preceded by rheumatic pains. p. bullo'sa, pemphigus hæmorrhagicus. p. ful'minans, a form of purpura marked by rapid development and great prostration, often resulting in death within twentyfour hours. p. hæmorrha'gica, a severe form of purpura with copious hemorrhages from the mucous membranes and severe constitutional symptoms. Called also morbus maculosus werlhofii, land scurvy, and Werlhof's disease. Henoch's p., an obscure disease seen chiefly in children, marked by a purpuric eruption complicated with intesti-nal disturbances, such as pain, diarrhea, and vomiting, rheumatism and swelling of the joints, hemorrhages from mucous membranes, and often by splenomegalia. Called also p. nervosa. p. iod'ica, a purpuric eruption usually on the lower extremities, sometimes accompanying the use of iodids. Landouzy's p., a form with grave systemic disturbances. p. maculo'sa. Same as acne scorbutica. malignant p., cerebrospinal fever. p. nervo'sa. Same as Henoch's p. p. pulico'sa, the formation of purplish spots, or taches bleudires, due to the bites of insects. p rheumat'ica, purpura with severe pains and fever. Called also peliosis rheumatica. p. seni'-lis, a purpuric eruption on the legs of old or debilitated persons. p. sim'plex, purpura with slight or trifling symptoms. p. symptomat'ica, a purpuric eruption seen in eruptive fevers. p. ur'ticans, purpura associated with the formation of wheals and with itching. vesical p., a hemorrhagic eruption on the mucous membrane of the bladder, occurring in Werlhoff's disease.

purpurate (pur'pu-rat). A salt of purpuric acid.purpuric (pur-pu'rik). Of the nature of, pertaining to, or affected with, purpura.

purpuriferous (pur-pu-rif'er-us) [L. pur'pura purple + fer're to bear]. Producing a purple pigment.

purpurin (pur'pu-rin). 1. Same as uroerythrin.
2. An acid dye, C₆H₄(CO)₂.C₆H(OH)₃: used as a nuclear stain.

purpurinuria (pur"pu-rin-u're-ah). The presence of uroerythrin in the urine; porphyrinuria.

purpuriparous (pur-pu-rip'ar-us) [L. pur'pura purple + par'ere to produce]. Same as purpuriferous.

purpurogenous (pur-pu-roj'en-us) [L. pur'pura purple + Gr. γεννῶν to produce]. Producing the visual purple.

purring (pur'ing). Having a tremulous quality, like the pur of a cat

pursianin (pur-si'an-in). A brown, oily liquid glucosid from Rham'nus purshia'na: laxative.

puru (poo'roo). The native name in the Malay States for frambesia.

purulence, **purulency** (pu'ru-lens, pu'ru-len-se)
[L. purulen'tia]. The condition or fact of being purulent.

purulent (pu'ru-lent) [L. purulen'tus]. Consisting of or containing pus; associated with the formation of or caused by pus.

puruloid (pu'ru-loid). Resembling pus; puriform.
purupuru (poo-roo-poo-roo'). A contagious skin disease endemic in parts of Brazil, in which the skin gradually becomes whitened. It is believed to be of microbic origin.

pus (pus), pl. pu'ra [L. gen. pu'ris]. A liquid inflammation product made up of cells (leukocytes) and a thin fluid called liquor puris. anchovy-sauce p., the brownish pus seen in amebic abscess of the liver. blue p., pus with a bluish tint, produced by Bacil'lus pyocya'neus. p. bo'num et laudab'ile. See laudable p. cheesy p., thick, nearly solid pus. curdy p., pus mixed with cheesy flakes. green p., pus having a greenish tint. ichorous p., a thin, acrid pus, often having an ill smell, secreted by unhealthy surfaces. itch p. See psorinum. laudable p., p. laudan'dum, a creamy yellow, inodorous pus, secreted by a healthy granulating surface, and regarded as indicative of less danger than other varieties. p.-organisms, microorganisms chiefly found in the pus of furuncles; generally, Staphylococ'cus pyog'enes au'reus. p.-pan, a receptacle for escaping pus. p.-poultice, a mass of pus formerly allowed to remain on a sore, with the idea that it was the natural dressing of such a lesion. sanious p., bloody pus, often ichorous and ill smelling. p.-tube. Same as pyosalpinx.

Pusey's emulsion (pu'zēz) [William Allen Pusey, American dermatologist, born 1865]. See under emulsion.

pustula (pust'u-lah). Latin for pus'tule. p. malig'na, anthrax.

pustulant (pus'tu-lant). 1. An agent that causes pustulation. 2. Causing pustulation.

pustular (pus'tu-lar). Pertaining to or of the nature of a pustule; consisting of pustules.

pustulation (pus-tu-la'shun). The formation of pustules.

pustule (pus'tul) [L. pus'tula]. A small elevation of the cuticle filled with pus or lymph. compound p., one which is made up of more than one chamber. malignant p., true anthrax. postmortem p., a pustule resulting from infection in handling a cadaver. primary p., one formed without any previous lesion. second-

ary p., one which is preceded by a vesicle or papule. simple p., one which consists of a single cavity.

pustuliform (pus'tu-lif-orm) [L. pus'tula pustule + for'ma shape]. Resembling a pustule.

pustulocrustaceous (pus"tu-lo-krus-ta'shus).
Pustular and having a crust or scab.

pustulo-ulcerating (pus"tu-lo-ul'ser-a-ting). Pustular and ulcerating.

putamen (pu-ta'men) [L. "shell"]. [B N A] The outer and darker part of the lenticular nucleus.

Putnam type (put'nam) [James Jackson Putnam, Boston neurologist, born 1846]. See under type.

putrefaction (pu-tre-fak'shun) [L. putrefac'tio]. The decomposition of animal or vegetable matters effected largely by the agency of microörganisms, and resulting in the production of various solid, liquid, and gaseous matters, some of which have a foul odor. Among the products of putrefaction are amido-acids, fatty acids, ptomains, the final decomposition of which results in the formation of ammonia and ammonium compounds, hydrogen, sulphureted hydrogen, merkaptans, nitrogen, carbon dioxid, methane, and water.

putrefactive (pu-tre-fak'tiv) Pertaining to or of the nature of putrefaction.

putrescence (pu-tres'ens). Putridity; partial or complete rottenness.

putrescent (pu-tres'ent) [L. putres'cens decaying]. Rotting; undergoing putrefaction.

putrescin (pu-tres'in). A liquid, poisonous, and ill-smelling ptomain, NH₂(CH₂)₄NH₂, or tetramethylene-diamin, from decaying animal tissues and from cultures of the comma-bacillus and the bacteria of the feces. It is produced from the amino-acid, ornithin, by the loss of CO₂. It is thought to be one of the causes of the symptoms of cholera.

putrid (pu'trid) [L. pu'tridus]. Characterized by putrefaction; rotten or corrupt.

putrilage (pu'tril-āj) [L. putrila'go]. Putrescent or putrid matter.

putromain (pu-tro-ma'in). Any poison produced by the decomposition of food within the living body.

putty, Horsley's (put'e). A compound of wax, vaselin, and phenol: used in controlling hemorrhage from the diploë.

Puzos' method (pu-zōz') [Nicholas Puzos, accoucheur in Paris, 1686-1753]. See under method.

pysemia (pi-e'me-ah). See pyemia.

pyarthrosis (pi-ar-thro'sis) [Gr. πύον pus + ἄρθρον joint]. Suppuration within a joint cavity.

pyathea (pi-ath'e-ah). See penjavar yambi.

Pycnanthemum (pik-nan'the-mum) [Gr. πυκυδs dense + δυθεμου bloom]. A genus of labiate American plants, called basil and mountain mint; aromatic and carminative; resembling pennyroyal and spearmint in taste and smell.

pycnemia (pik-ne'me-ah). See pyknemia.

pycno-. For words thus beginning, see under pykno-.

pyecchysis (pi-ek'kis-is) [Gr. πύον pus + ἐκ out + χεῖν to pour]. The effusion of purulent matter.
 pyelectasia (pi-el-ek-ta'se-ah). Pyelectosis.

pyelectasis (pi-el-ek'tas-is) [Gr πύελος pelvis + ἔκτασις distention]. Dilatation of the renal pelvis.
 pyelic (pi-el'ik). Pertaining to the pelvis of the kidney.

pyelitic (pi-e-lit'ik). Pertaining to or affected with pyelitis.

pyelitis (pi-el-i'tis) [Gr. πυελος pelvis]. Inflammation of the pelvis of the kidney. It may be due to renal calculus, to extension of inflammation from the bladder, or to stagnation of the urine. It is attended by pain and tenderness in the loins, irritability of the bladder, remittent

fever, bloody or purulent urine, diarrhea, vomiting, and a peculiar pain on flexion of the thigh. calculous p., that which is caused by calculi. hemorrhagic p., that which is attended with hemorrhage. suppurative p., a form with development of pus which causes abscess of the kidney, or pyonephrosis.

pyelocystitis (pi''el-o-sis-ti'tis) [Gr. $\pi b \epsilon \lambda o s$ pelvis $+ \kappa b \sigma \tau \iota s$ bladder $+ -\iota \tau \iota s$ inflammation]. Inflammation of the renal pelvis and of the bladder.

pyelocystostomosis
 (pi"el-o-sis"to-sto-mo'sis)
 (Gr. πύελος pelvis + κύστις bladder + στόμα mouth]. The surgical formation of a communication between the renal pelvis and the bladder.

pyelogram (pi'el-o-gram) [Gr. πύελος pelvis + γράμμα mark]. Pyelograph.

pyelograph (pi'el-o-graf). A radiograph of the kidney and ureter.

pyelography (pi-el-og'raf-e) [Gr. $\pi b \epsilon \lambda o s$ pelvis + $\gamma \rho d \varphi \epsilon \iota \nu$ to draw]. Radiography of the kidney and ureter after the structures have been filled with a solution of silver salt.

pyelolithotomy (pi''cl-o-lith-ot'o-me) [Gr. $\pi b \epsilon \lambda$ os pelvis + $\lambda i \theta os$ stone + $\tau o \mu \eta$ cutting]. The operation of excising a renal calculus from the pelvis of the kidney.

pyelometer (pi-el-om'et-er) [Gr. πύελος pelvis + μέτρον measure]. Same as pelvimeter.

pyelometry (pi-el-om'et-re) [Gr. πύελος pelvis + μέτρον measure]. 1. Measurement of the renal pelvis. 2. Pelvimetry.

pyelon (pi'el-on) [Gr. πθελος pelvis]. A colloidal silver iodid preparation used as a contrast medium in pyelography.

pyelonephritis (pi''el-o-nef-ri'tis) [Gr. $\pi b \epsilon \lambda o s$ pelvis + $\nu \epsilon \varphi \rho \delta s$ kidney + $-\iota \tau \iota s$ inflammation]. Inflammation of the kidney and its pelvis. **p. bacillo'sa bo'vum**, an inflammatory purulent or diphtheric inflammation of the renal pelvis in cows, usually occurring shortly after parturition. It is caused by a bacillus.

pyelonephrosis (pi"el-o-nef-ro'sis) [Gr. πύελος pelvis + νεφρός kidney]. Any disease of the kidney and its pelvis.

pyeloplasty (pi'el-o-plas-te) [Gr. πύελος pelvis + πλάσσειν to form]. A plastic operation on the pelvis of the kidney.

pyeloplication (pi"el-o-pli-ka'shun) [Gr. πὐελος pelvis + L. pli'ca fold]. Reduction in size of a dilated renal pelvis by infolding its walls by Lembert sutures.

pyeloscopy (pi-el-os'ko-pe) [Gr. πύελος pelvis + σκοπεῖν to view]. Roentgen-ray examination of the pelvis of the kidney.

pyelotomy (pi-el-ot'o-me) [Gr. π ύελος pelvis + τ ομή cutting]. Incision of the pelvis of the kidney.

pyemesis (pi-em'es-is) [Gr. πύον pus + ξμεσις vomiting]. Vomiting of purulent matter.

pyemia, pyemia (pi-e'me-ah) [Gr. πίον pus + alμa blood]. A general septicemia in which secondary foci of suppuration occur and multiple abscesses are formed. The condition is marked by fever, chills, sweating, jaundice, and abscess in various parts of the body. Called also metastatic infection. arterial p., a form due to the dissemination of emboli from cardiac thrombosis. cryptogenic p., that in which the source of infection is in a deep tissue. otogenous p., that which originates in disease of the ear. portal p., suppurative pylephlebitis.

pyemic (pi-e'mik). Pertaining to or marked by pyemia.

pyemid (pi-e'mid). Any metastatic skin affection developing in the course of pyemia.

pyencephalus (pi-en-sef'al-us) [Gr. πίον pus + έγκέφαλος brain]. Abscess of the brain.

pyenin (pi'en-in). Paranuclein.

pyesis (pi-e'sis). Same as pyosis.

pygal (pi'gal) [Gr. πυγή rump]. Pertaining to the buttocks.

pygalgia (pi-gal'je-ah) [Gr. πυγή rump + ἄλγος pain]. Pain in the buttocks.

Pygiopsyl'la aha'læ. The common rat flea of China and Japan.

pygodidymus (pi-go-did'im-us) [Gr. πυγή rump + δίδυμος twin]. A monster-fetus with double hips and pelvis.

pygomelus (pi-gom'el-us) [Gr. πυγή rump + μέλος limb]. A monster-fetus with a supernumerary limb or limbs attached to or near the buttock.

pygopagus (pi-gop'ag-us) [Gr. πυγή rump + πηγνύναι to fix]. A twin fetal monster joined at the buttocks.

pyic (pi'ik). Of or pertaining to pus.

pyin (pi'in) [Gr. $\pi \dot{\nu}o\nu$ pus]. An albuminoid mucuslike substance found in pus, and separated from it by adding sodium chlorid and filtering.

pyknemia (pik-ne'me-ah) [Gr. πυκνός thick + alμa blood]. Thickening of the blood.

pyknocardia (pik-no-kar'de-ah) [Gr. πυκνός frequent + καρδία heart]. Same as tachycardia.

pykno-epilepsy (pik-no-ep'il-ep-se). Pyknolepsy.

pyknohemia (pik-no-he'me-ah). Pyknemia.

pyknolepsy (pik'no-lep-se) [Gr. πυκνός frequent + epilepsy]. Recurring epileptiform attacks in children, resembling petit mal, but not of an epileptic nature.

pyknometer (pik-nom'et-er) [Gr. $\pi\nu\kappa\nu\delta s$ thick + $\mu\epsilon\tau\rho\sigma\nu$ measure]. 1. An instrument for measuring the thickness of parts of objects. 2. An instrument for determining the specific gravity of the urine.

pyknomorphic, pyknomorphous (pik-no-mor'fik, pik-no-mor'fus) [Gr. πυκνός compact + μορφή
form]. Having the stainable elements compactly
arranged; a term applied to certain nerve-cells.

pyknophrasia (pik-no-fra'ze-ah) [Gr. πυκνός thick + φράσις speech]. Thickness of speech.

pyknosis (pik-no'sis) [Gr. πόκνωσις condensation]. A thickening; especially degeneration of a cell in which the protoplasmic substance becomes more dense and the size of the cell smaller.

pyknosphygmia (pik-no-sfig'me-ah) [Gr. πυκνός frequent + σφυγμός pulse]. Same as tachycardia.

pyknotic (pik-not'ik) [Gr. πυκνωτικόs]. 1. Serving to close the pores. 2. Pertaining to pyknosis.

pyla (pi'lah) [Gr. $\pi b \lambda \eta$ gate]. The passage from the third ventricle to the sylvian aqueduct.

pylar (pi'lar). Pertaining to the pyla.

pylemphraxis (pi-lem-fraks'is) [Gr. πύλη gate + ξμφραξις stoppage]. Obstruction of the portal vein.

pylephlebectasis (pi''le-fle-bek'tas-is) [Gr. π ύλη gate $+ \varphi \lambda \dot{\epsilon} \psi$ vcin $+ \ddot{\epsilon} \kappa \tau a \sigma \iota s$ dilatation]. Dilatation of the portal vein.

pylephlebitis (pi'le-fle-bi'tis) [Gr. π ύλη gate + φ λέψ vein + $-\iota \tau \iota s$ inflammation]. Inflammation of the portal vein. It usually results from intestinal disease. Suppurative pylephlebitis is marked by symptoms of pyemia. adhesive p., inflammation of the portal vein producing thrombosis; pylethrombosis.

pylethrombophlebitis (pi-le-throm"bo-fleb-i'tis) [Gr. $\pi i \lambda \eta$ gate $+ \theta \rho \delta \mu \beta \omega \sigma is$ thrombosis $+ \varphi \lambda i \psi$ vein $+ - \iota \tau \iota s$ inflammation]. Thrombosis and inflammation of the portal vein.

pylethrombosis (pi"le-throm-bo'sis) [Gr. πύλη gate + thrombosis]. Thrombosis of the portal vein.
 pylic (pi'lik) [Gr. πύλη gate]. Pertaining to the portal vein.

pylometer (pi-lom'et-er) [Gr. $\pi b \lambda \eta$ gate $+ \mu \dot{\epsilon} \tau \rho \rho \nu$ measure]. An instrument for measuring obstruction at the entrance of the bladder.

pylon (pi'lon). A temporary artificial leg.

pyloralgia (pi-lo-ral'je-ah) [Gr. πυλωρός pylorus + älyos pain]. Pain in the region of the pylorus.

pylorectomy (pi-lo-rek'to-me) [Gr. πυλωρός py-lorus + ἐκτομή excision]. Excision of the pylorus. pyloric (pi-lor'ik). Pertaining to the pylorus.

pyloristenosis (pi-lor"is-ten-o'sis) [Gr. πυλωρός pylorus + στένωσις narrowing]. Stenosis, or narrowing, of the caliber of the pylorus.

Inflammation of the py**pyloritis** (pi-lo-ri'tis). lorus.

pylorodilator (pi-lo"ro-di'la-tor). An instrument for dilating the pylorus for pylorospasm or stric-

pylorodiosis (pi-lo"ro-di-o"sis) [Gr. πυλωρός pylorus + δίωσις pushing asunder]. The operation of dilating a stricture of the pylorus by the fingers, which are either inserted through a gastrotomy incision (Loreta's method) or invaginated in the anterior stomach-wall and thrust through the pyloric canal (Hahn's method).

pylorogastrectomy (pi-lor"o-gas-trek'to-me). Excision of the pyloric pocket in cases of bilocular stomach; excision of the pyloric portion of the stomach.

pyloroplasty (pi-lo'ro-plas-te) [Gr. $\pi\nu\lambda\omega\rho\delta$ s pylorus + $\pi\lambda\dot{\alpha}\sigma\epsilon\iota\nu$ to form]. A plastic operation for the repair of a lesion of the pylorus; especially the operation of enlarging the caliber of a strictured pylorus by dividing the strictured portion longitudinally, stretching the pylorus so that the longitudinal cut becomes a horizontal one, and stitching the edges of the wound in its new position.

pyloroptosis (pi"lor-op-to'sis) [Gr. πυλωρός pylorus + πτῶσις falling]. Displacement of the pyloric end of the stomach.

pyloroscopy (pi-lor-os'ko-pe) [Gr. πυλωρός pylorus $+ \sigma \kappa o \pi \epsilon \hat{\imath} \nu$ to view]. Inspection of the pylorus.

pylorospasm (pi-lo'ro-spazm) [Gr. πυλωρός pylorus + σπασμός spasm]. Spasm of the pylorus or of the pyloric portion of the stomach.

pylorosteno'sis. Same as pyloristenosis.

pylorostomy (pi-lor-os'to-me) [Gr. πυλωρός pylorus + στόμα mouth]. The formation of an opening through the abdominal wall into the pyloric end of the stomach for alimentary purposes.

pylorus (pi-lo'rus) [Gr. πυλωρός; πύλη gate + ούρος guard]. The distal or duodenal aperture of the stomach; the aperture by which the stomach enters into the duodenum. It is surrounded by a fold of mucous membrane which contains circular muscular fibers.

pyo- [Gr. πύον pus]. A prefix signifying relation to pus.

pyocele (pi'o-sēl) [Gr. $\pi b o \nu$ pus $+ \kappa \dot{\eta} \lambda \eta$ hernia]. Distention of a cavity or tube with pus due to retention; as an accumulation of pus in the scrotum.

pyocelia (pi-o-se'le-ah) [Gr. πbον pus + κοιλία cavity]. Pus in the abdominal cavity.

pyocephalus (pi-o-sef'al-us) [Gr. πύον pus + κεφαλή head]. The presence of purulent fluid in the cerebral ventricles.

pyochezia (pi-o-ke'ze-ah) [Gr. πύον pus + χέζειν to defecate]. Presence of pus in the stools.

pyococcic (pi-o-kok'sik). Produced by pus-forming cocci.

pyococcus (pi-o-kok'us). Any pus-forming coccus.

pyocolpocele (pi-o-kol'po-sēl) [Gr. $\pi b \sigma \nu$ pus + $\kappa \delta \lambda \pi \sigma s$ vagina + $\kappa \eta \lambda \eta$ tumor]. A tumor of the vagina containing pus.

pyocolpos (pi-o-kol'pos) [Gr. πύον pus + κόλπος vaginal. A collection of pus within the vagina.

pyoctanin (pi-ok'tan-in). See pyoktanin.

pyoculture (pi'o-kul-tūr) [Gr. πύον pus + culture]. A method of making comparative bacteriologic tests of pus from a suppurating lesion. Pus is collected from the wound in a pipet and part of it plated on peptonized bouillon, the remainder bein left in the pipet; both are placed in the incubate and examined after twenty-four hours. If there more abundant development of bacteria in the pi than in the culture the pyoculture is positive, an indicates a struggle between the body and the in vading bacteria which needs therapeutic aid from without.

pyocyanase (pi-o-si'an-as). Any enzyme derive from cultures of Pseudomonas pyocya'neus. It destructive to Pseudomonas pyocya'neus, and the bacilli of anthrax, diphtheria, typhoid, and plagu Its injection is said to confer immunity again

pyocyanic (pi-o-si-an'ik) [Gr. πύον pus + κύανο blue]. Pertaining to blue pus or to the Pseud monas pyocya'neus.

pyocyanin (pi-o-si'an-in) [Gr. $\pi bo\nu$ pus + $\kappa ba\nu$ blue]. A ptomain, $C_{14}H_{14}NO_2$, the colorin matter of blue pus, produced by the *Pseudomon* pyocya'neus.

pyocyanobacterin (pi-o-si"an-o-bak'ter-in). bacterial vaccine, under vaccine.

pyocyanogenic (pi"o-si-an-o-jen'ik). Producii pyocyanin.

pyocyanolysin (pi"o-si-an-ol'is-in). A lysin fro cultures of Bacullus pyocya'neus.

pyocyst (pi'o-sist) [Gr. $\pi io\nu$ pus + cyst]. A cy containing pus.

pyocyte (pi'o-sīt) [Gr. $\pi \dot{\nu} o \nu$ pus $+ \kappa \dot{\nu} \tau o s$ cell].

pus-corpuscle. It is regarded as a leukocyte. pyodermatitis (pi"o-der-mat-i'tis). Derm Dermatit from pyogenic infection.

pyodermatosis (pi"o-der-mat-o'sis) [Gr. πυον p + dermatosis]. Any skin disease of pyogen origin.

pyodermia (pi-o-der'me-ah). Any purulent sk disease due to a staphylococcus or streptococcu p. circumscrip'ta, an infected scratch of the skin.

pyodermitis (pi"o-der-mi'tis). Any pustular sk inflammation; a pyodermia.

pyofecia (pi-o-fe'se-ah) [Gr. πύον pus + fece Pus in the feces.

pyogenesis (pi-o-jen'es-is) [Gr. $\pi bo\nu$ pus + $\gamma \epsilon \nu \epsilon o$ production]. The formation of pus.

pyogenic (pi-o-jen'ik). Producing pus.

pyogenin (pi-oj'en-in). A compound, C₆₃H₁₂₈N O19, derived from the body of pus-cells.

pyogenous (pi-oj'en-us). Caused by pus.

pyohemia, pyohæmia (pi-o-he'me-ah). pyemia.

pyohemothorax (pi"o-hem-o-tho'raks) [Gr. πυ pus + αίμα blood + θώραξ chest]. A collection of pus and blood in the pleural cavity.

 pyoid (pi'oid) [Gr. πύον pus + είδος form]. 1. R sembling pus.
 2. A pus-like substance from ra or granulating surfaces, but free from bacter and non-toxic.

pyoktanin (pi-ok'tan-in) [Gr. πύον pus + κτείνε to kill. A trade name for methyl violet. is an indicator with a PH range of from 0.1 to 3. being blue or green at 0.1 and violet at 3.2. It used as a stain in microscopy. It is employed as germicide in suppuration of the conjunctiv lacrimal apparatus, nose, throat, and ear; also cystitis, gonorrhea, diphtheria, etc., in 1:10 solution. Called also blue p. Dose, 73-15; (0.5-1 gm.). **ethyl-p.**, a pyoktanin said to be far more active antiseptic than either of the oth varieties. yellow p., auramin.

pyolabyrinthitis (pi"o-lab-ir-in-thi'tis) [Gr. πω pus + labyrinth]. Suppuration in the labyrinth of the ear.

pyoluene (pi-o-lu'ēn). Oxymethylallylsulphoca bamid: used as a bactericide.

pyometra (pi-o-me'trah) [Gr. $\pi bo\nu$ pus $+ \mu \eta \tau \rho a$ womb]. An accumulation of pus within the uterus.

pyometritis (pi"o-met-ri'tis) [see *pyometra*]. Suppurative inflammation of the uterus.

pyometrium (pi-o-me'tre-um). Same as pyometra.
pyonephritis (pi"o-nef-ri'tis) [Gr. πίον pus + nephritis]. Purulent inflammation of the kidney.

pyonephrolithiasis (pi"o-nef-ro-lith-i'as-is) [Gr. $\pi bo\nu$ pus + $\nu \epsilon \varphi \rho bs$ kidney + $\lambda b \theta s$ stone]. The presence of stones and pus in the kidney.

pyonephrosis (pi"o-nef-ro'sis) [Gr. $\pi bo\nu$ pus + $\nu \epsilon \varphi \rho \delta s$ kidney]. The presence of pus in the pelvis of the kidney.

pyo-ovarium (pi"o-o-va're-um). Abscess of an ovary.

pyopericarditis (pi"o-per-ik-ar-di'tis). Purulent inflammation of the pericardium.

pyopericardium (pi"o-per-ik-ar'de-um) [Gr. πύον pus + pericardium]. The presence of pus in the pericardium.

pyoperitoneum (pi"o-per-it-o-ne'um) [Gr. $\pi bo\nu$ pus + peritoneum]. Pus in the peritoneal cavity. pyoperitonitis (pi"o-per-it-o-ni'tis). Suppurative

inflammation of the peritoneum.
 pyophagia (pi-o-fa'je-ah) [Gr. πbον pus + φαγεῖν to eat]. The swallowing of pus.

pyophthalmia, pyophthalmitis (pi-of-thal/me-ah, pi"of-thal-mi'tis) [Gr. πύον pus + ophthalmitis].
 Purulent inflammation of the eye.

pyophylactic (pi"o-fi-lak'tik) [Gr. πύον pus + φυλακτικόs guarding] Serving as a defense against purulent infection. See membrane.

pyophysometra (pi"o-fi-so-me'trah) [Gr. $\pi b \omega \nu$ pus $+ \varphi b \sigma a$ air $+ \mu \eta \tau \rho a$ womb]. A collection of pus and gas in the uterus.

pyoplania (pi-o-pla'ne-ah) [Gr. πύον pus + πλάνος wandering]. Wandering of pus from one part to another.

pyopneumocholecystitis (pi"o-nu"mo-ko-lesis-ti'tis) [Gr. $\pi vo\nu$ pus $+ \pi \nu \epsilon \hat{v} \mu a$ air + cholecyst]. Distention of the gall-bladder with pus and gas.

pyopneumocyst (pi-o-nu'mo-sist) [Gr. $\pi \hat{v}$ ον pus + $\pi \nu \epsilon \hat{v}$ μα air + cyst]. A cyst containing pus and gas.

pyopneumopericardium (pi"o-nu"morper-e-kar'de-um) [Gr. $\pi bo\nu$ pus $+ \pi \nu \epsilon \hat{\nu} \mu a$ air + peri-cardium]. The presence of pus and gas in the pericardium.

pyopneumoperitoneum (pi"o-nu"mo-per-it-one'um). The presence of pus and gas in the peritoneal cavity

pyopneumoperitonitis (pi"o-nu"mo-per-e-to-ni'-tis) [Gr. $\pi \dot{\nu} o \nu$ pus $+ \pi \nu \epsilon \hat{\nu} \mu a$ air + peritonitis]. Peritonitis with the presence of pus and gas in the peritoneal cavity.

pyopneumothorax (pi"o-nu-mo-tho'raks) [Gr. $\pi \dot{\omega} \nu p$ pus $+ \pi \nu \epsilon \dot{\nu} \mu a$ air $+ \theta \dot{\omega} \rho a \xi$ chest]. A collection of pus and air or gas in the pleural cavity.

pyopoiesis (pi"o-poi-e'sis) [Gr. πύον pus + ποιείν to make]. The formation of pus.

pyopoietic (pi-o-poi-et'ik). Producing pus.

pyoptysis (pi-op'tis-is) [Gr. πύον pus + πτύσις spitting]. Spitting of purulent matter.

pyopyelectasis (pi"o-pi-el-ek'tas-is) [Gr. πboν pus + πbελος pelvis + ἔκτασις dilatation]. Dilatation of the renal pelvis with purulent fluid.

pyorrhea, pyorrhea (pi-or-c'ah) [Gr. πίον pus + pola flow]. A discharge of pus. p. alveola'-ris, a purulent inflammation of the dental periosteum, with progressive necrosis of the alveoli and looseness of the teeth (Fauchard, 1746). Called also Riggs' disease, gingivitis expulsiva, cementoperiostitis, and gingivopericementitis.

pyorrheal (pi-o-re'al). Pertaining to pyorrhea, especially pyorrhea alveolaris.

pyorrhocide (pi-or'o-sid). A proprietary preparation for the treatment of pyorrhoea alveolaris.

pyorubin (pi-o-ru'bin). A bright red, water-soluble, non-fluorescent pigment produced by Pseudomonas (Bacillus) pyocyaneus.

pyosalpingitis (pi"o-sal-pin-ji'tis) [Gr. $\pi i \omega \nu$ pus $+ \sigma \dot{\alpha} \lambda \pi \iota \gamma \xi$ tube]. Purulent salpingitis.

pyosalpingo-oöphoritis (pi"o-sal-pin"go-o"of-o-ri'tis). Inflammation of the ovary and oviduct, with the formation and accumulation of pus.

pyosalpingo-oöthecitis (pi"o-sal-pin"go-o"othe-si'tis). Pyosalpingo-oophoritis.

pyosalpinx (pi-o-sal'pinks) [Gr. πίου pus + σάλπιγξ tube]. A collection of pus in an oviduct.

pyosapremia, pyosapræmia (pi"o-sap-re'me-ah) [Gr. $\pi i \omega \nu$ pus $+ \sigma a \pi \rho \delta s$ rotten $+ a l \mu a$ blood]. Infection of the blood with purulent matter.

pyosepthemia, pyosepthæmia (pi"o-sep-the'-me-ah). Same as pyosepticemia or septicopyemia.

pyosepticemia, pyosepticæmia (pi"o-sep-tis-e'-me-ah). Pyemia combined with septicemia.

pyoseroculture (pi-o-se'ro-kul-tur). A culture made by implanting pus into blood-serum.

pyosin (pi'o-sin). A compound, C₅₇H₁₁₀N₂O₁₅, derived from the plasma of pus-cells.

Dyosis (pi-o'sis) [Gr. πίον pus]. Suppuration. Corlett's p., impetigo contagiosa bullosa. Manson's p., pemphigus contagiosus. p. palma'ris, a disease of children in the East Indies marked by the formation on the palms of numerous pustules. p. trop'ica, a disease occurring in Ceylon characterized by yellow or blackish lesions on the body, covered with a crust, which on removal leave a granulating ulcer. Called also Kurunegala ulcer.

pyospermia (pi-o-sper'me-ah) [Gr. πύον pus + σπέρμα seed]. Presence of pus in the semen.

pyostatic (pi-o-stat'ik) [Gr. πίον pus + στατικόs halting].
 1. Arresting suppuration.
 2. An agent that arrests the formation of pus.

pyotherapy (pi-o-ther'ap-e) [Gr. $\pi bo\nu$ pus $+ \theta \epsilon \rho a \pi \epsilon \hat{i} a$ treatment]. Treatment with pus.

pyothorax (pi-o-tho'raks) [Gr. πύον pus + θώραξ chest]. Empyema; an accumulation of pus in the thorax.

pyotoxinemia (pi-o-tok-sin-e'me-ah) [Gr. πlov pus $+ loxin + a i \mu a$ blood]. Presence in the blood of the toxins of pus-forming organisms.

pyoureter (pi"o-u-re'ter). An accumulation of pus in a ureter.

pyoxanthin (pi-o-zan'thin) [Gr. πύον pus + ξανθός yellow]. A brownish-red pigment derivable by oxidation from pyocyanin.

pyoxanthose (pi-o-zan'thōs) [Gr. $\pi b o \nu$ pus + $\xi a \nu \theta b s$ yellow]. A yellow pigment produced by the oxidation of pyocyanin in blue pus exposed to air.

pyracetosalyl (pi-ras"e-to-sal'il). A preparation of antipyrin and aspirin. antineuralgic. Dose, 8 gr. (0.5 gm.).

pyraconitin (pi-rak-on'it-in). A compound derived from aconitin, resembling the latter in physiologic action.

pyraloxin (pir-al-oks'in). Pyrogallol oxid; a brown-black powder used in ointments in various skin diseases. Internal dose, 7½-15 gr. (0.5-1 gm.).

pyramid (pir'am-id) [Gr. πυραμίs]. I. Any coneshaped eminence upon an organ. 2. The petrous
bone. 3. An eminence on the ventral surface of the
medulia oblongata produced by the pyramidal
tract. anterior p's. See p's of the medulia
oblongata. p. of the cerebellum, a conic
projection, the central portion of the inferior
vermiform process. p. of Ferrein, any one of
the intracortical prolongations of the malpighian
pyramids. Lalouette's p., the third lobe of
the thyroid body; an occasional prolongation of
the upper portion of the thyroid gland. usually
on the left of the median line. p. of light, a
triangular reflection seen upon the membrana

988

tympani. Malacarné's p., the posterior end of the pyramid of the cerebellum. p. of Malpighi, any one of the conic, striated masses which form the medulla of the kidney, the apices projecting into the calices. p's of the medulla oblongata, the two anterior and two posterior columns within the medulla oblongata: the posterior ones are the gracile fasciculi. posterior p's. See p's of the medulla oblongata. renal p. Same as p. of of the medulla oblongata. renal p. Same as p. of Malpighi. p. of the thyroid, the third lobe of the thyroid body; Lalouette's pyramid. p. of the tympanum, the hollow elevation in the inner wall of the middle ear which contains the stapedius. p. of the vestibule, the anterior end of the crista vestibuli. Wistar's p's, the sphenoid cornua, or sphenoturbinal bones.

pyramidal (pi-ram'id-al) [L. pyramida'lis]. Shaped like a pyramid.

pyramidale, os pyramidale (pir"am-id-a'le). The pyramidal bone; the cuneiform bone of the

pyramidalis (pir"am-id-a'lis). See muscles, table of.

pyramidon (pir-am'id-on). Same as amidopyrin. bicamphorate is used in doses of 1-5 gr. (0.06-0.3 gm.). p. test. See under tests.

pyramis (pir'am-is) [L.]. A pyramid. See pyramid. pyran (pi'ran). An antineuralgic and antirheumatic preparation of benzoic acid, salicylic acid, and thymol.

rantin (pi-ran'tin). An antipyretic agent, ethoxyphenylsuccinimid, (CH₂CO)₂N.C₆H₄.O.C₂pyrantin (pi-ran'tin). H₅, in colorless, shining prisms. Daily dose, 15-45 gr. (1-3 gm.).

pyranum (pir'an-um). Pyrenol.

pyrazin (pi'ra-zin). A volatile compound, N(CH:-CH)2N, with the odor of heliotrope.

pyrazol (pi'ra-zol). A crystalline basic substance, C₃H₄N₂: its derivatives are paralyzants of the central nervous system. See phenylmethylpyrazol.

pyrasolon (pi-raz'o-lon). An antipyretic substance, CO.CH₂.CH.N.NH, resembling antipyrin, but less effective.

pyremia (pi-re'me-ah) [Gr. $\pi \hat{v} \rho$ fire $+ a l \mu a$ blood]. The presence of a normal amount of carbonaceous matter in the blood.

pyrenemia, pyrenemia (pi-re-ne πυρήν fruit-stone + αίμα blood]. (pi-re-ne'me-ah) [Gr. blood]. The presence of nucleated red corpuscles in the blood.

pyrenin (pi'ren-in) [Gr. πυρήν fruit-stone]. Same as paranuclein.

pyrenoid (pi'ren-oid) [Gr. $\pi \nu \rho \dot{\eta} \nu$ fruit-stone + $\epsilon l \delta o s$ form]. One of the refringent bodies seen in the chromatophores of certain protozoa; amyloplast.

pyrenol (pi're-nol). A white powder, sodium thymol-benzoyl-oxybenzoate, used in respiratory diseases and in rheumatism. Dose, 10-20 gr. (0.65-1.32 gm.).

 pyrenolysis (pi-re-nol'is-is) [Gr. πυρήν fruit-stone
 + λύσις solution]. The breaking down of the nucleolus of a cell.

pyretherapy (pi-re-ther'ap-e) [Gr. πῦρ fever + therapy]. Treatment designed to benefit the patient through the production of fever.

pyrethron (pi'reth-ron). A neutral ester from Pyrethrum.

Pyrethrum (pi-re'thrum) [Gr. πυρεθρον]. A genus of composite-flowered plants. The root of Anacy'clus pyre'thrum, or pellitory, is sedative and sialagogue, and is used in neuralgia, toothache, and headache. P. car'neum and P. ro'-seum furnish Persian insect-powder. P. partheseum furnish Persian insect-powder. P. parthe-nium, or feveriew, is a bitter tonic, and is used like camomile. Dose, $\frac{1}{2}$ -1 fl.dr. (2-4 c.c.).

pyretic (pi-ret'ik) [Gr. πυρετός fever]. Pertaining to or of the nature of fever.

pyreticosis (pi"ret-ik-o'sis). Any febrile affection.

yretin (pir'et-in). A proprietary analgesic and antipyretic compound, C₁₁H₁₀NaBrN₂. Dose, 3-8 pyretin (pir'et-in). gr. (0.104-0.518 gm.).

pyretogen (pi-ret'o-jen). A substance which excites fever.

pyretogenesis (pi"ret-o-jen'es-is) [Gr. πυρετός fever + γένεσις production]. The origin and causation of fever.

pyretogenetic, pyretogenic (pi"ret-o-jen-et'ik, pi"ret-o-jen'ik). Same as pyretogenous.

pyretogenin (pi-re-toj'en-in) [Gr. πυρετός fever + γεννῶν to generate]. A base, derivable from certain bacterial cultures: said to produce fever in animals when injected into them.

pyretogenous (pi-ret-oj'en-us). Producing or causing fever.

pyretography (pi-ret-og'ra-fe) [Gr. πυρετός fever + $\gamma \rho \dot{\alpha} \varphi \epsilon \iota \nu$ to write]. A description of fever.

pyretology (pi-ret-ol'o-je) [Gr. πυρετός fever + λόγος discourse]. The sum of what is known regarding fevers; the science of fevers.

pyretolysis (pi-ret ol'is-is) [Gr. πυρετός fever + Abous loosing]. 1. Reduction of fever. 2. Lysis which is hastened by fever.

Pyretophorus (pi-re-tof'o-rus). A genus of mosquitos. P. costa'lis transmits malaria and filariasis in Africa.

pyretotyphosis (pi"ret-o-ti-fo'sis) [Gr. πυρετός The delirium of fever + τύφωσις delirium]. fever.

pyrexia (pi-reks'e-ah), pl. pyrex'iæ [Gr. πυρέσσειν to be feverish]. A fever, or a febrile condition; abnormal elevation of the body temperature. **Pel**-Ebstein p. See Pel-Ebstein symptom, under symptom.

pyrexial, pyrexic (pi-reks'e-al, pi-reks'ik). Pertaining to pyrexia; febrile.

pyrexy (pi'rek-se). Pyrexia.

pyricit (pir'is-it). A grayish powder, a mixture of sodium bisulphate and borofluorid, used as a sterilizing mixture for apparatus, vessels, etc.

pyridin (pir'id-in). r. A colorless, liquid, basic coaltar derivative, (CH)_bN derived also from tobacco and various organic matters. It is an antispasmodic, cardiac stimulant, and antiseptic, and has been used in asthma by inhalation, in diphtheria, and in gonorrhea. Dose, 2-10 min. (0.133-0.666 c.c.). 2. Any one of a large group of substances homologous with normal pyridin. p. tannate, is used as an intestinal astringent and uric-acid solvent.

pyridina (pir-id-i'nah). Pyridin.

pyridizin (pi-rid'iz-in). An isomeric variety of pyrimidin.

pyriform (pir'if-orm) [L. pyrifor'mis; py'rus pear + for'ma shape]. Pear-shaped.

pyriformis (pir-if-or'mis) [L. "pear-shaped"]. The pyramidalis muscle. See muscles, table of.

pyrimidin (pi-rim'id-in). An organic compound, a metadiazin, C₄H₄N₂, which is the fundamental form of the pyrimidin bases. These are mostly oxy- or amino-derivatives, for example, 2, 6-dioxypyrimidin is uracil, 2-oxy, 6-aminopyrimidin is cytosin and 2, 6-dioxy, 5 methyl pyrimidin is thymin. Some of these are constituents of nucleic acid.

pyro- [Gr. $\pi \hat{v} \rho$ fire]. A prefix meaning fire or heat; in chemistry, produced by heating.

pyro-arsenic acid (pi"ro-ar-sen'ik). See acid.

pyrobetulin (pi-ro-bet'u-lin). A patented prepara-tion of the bark of white birch (Bet'ula al'ba), to be burned in disinfectant pastils.

pyroborate (pi-ro-bo'rāt). Any salt of pyroboric acid.

pyroboric acid (pi-ro-bor'ik). See acid.

pyrocain (pi'ro-ka-in). Guaiacol benzylic ester-C₆H₄(O.CH₈).OCH₂.C₆H₈, a colorless, crystalline substance: used by cataphoresis to produce local anesthesia.

- pyrocatechin (pi-ro-kat'ek-in) [Gr πῦρ fire + cat-echu]. Oxyphenol; a crystallizable substance, C₂H₄(OH)₂, obtained by distilling catechu, etc., and sometimes found in the urine. It is an anti-pyretic, and is used like resorcinol. Dose, 1-2 gr. (0.066-0.13 gm.). Called also catechol.
- pyrocatechinuria (pi"ro-kat"ek-in-u-re'ah) [pyro-catechin + Gr. οὐρον urine]. The occurrence of pyrocatechin in the urine. Called also brenz-catechinuria.
- **pyrodextrin** (pi-ro-deks'trin). A brown, tasteless substance produced by the action of heat upon starch.
- pyrodin (pir'o-din) [Gr. πῦρ fire]. A crystalline, poisonous compound, acetyl phenylhydrazin, C₆H_b.NH.NH.CO.CH_b: used as an antipyretic and like chrysarobin in skin diseases. Dose, ½-3 gr. (0.033-0.2 gm.). See also hydracetin.
- pyroferrin (pi-ro-fer'in). A tonic preparation of iron pyrophosphate, phosphoric acid, and strychnin.
- **pyrofistine** (pi-ro-fis'tin). A proprietary antiseptic dressing-paste.
- pyroform (pi'ro-form). A compound of bismuth oxylodid and pyrogallol, used in skin diseases.
- pyrogallic acid (pi-ro-gal'ik). See pyrogallol.
- pyrogallol (pi-ro-gal'ol). Pyrogallic acid, C₆H₃-(OH)₃, or trioxybenzene, a poisonous solid product of the dry distillation of gallic acid, acting by causing destruction of the blood-corpuscles. It is used as a reducing agent and in skin discases.
- **pyrogen** (pi'ro-jen) [Gr. $\pi \hat{\nu} \rho$ fire $+ \gamma \epsilon \nu$ to produce]. A fever-producing substance; a hypothetical substance believed to exist in bacteria and to cause fever when present in the body.
- pyrogenetic (pi"ro-jen-et'ik). Pyrogenic.
- **pyrogenic** (pi-ro-jen'ik) [Gr. πῦρ fire + γεννᾶν to produce]. Inducing fever; also caused by or due to fever.
- **pyrogenous** (pi-roj'en-us) [see *pyrogenic*]. Producing fever.
- pyrojapaconitin (pi"ro-jap-ak-on'it-in). An alkaloid, C₃₂H₄₅NO₂, formed by heating japaconitin.
- **pyroligneous** (pi-ro-lig'ne-us) [Gr. $\pi \hat{v} \rho$ fire + L. lig'num wood]. Pertaining to the destructive distillation of wood **p. acid**, wood vinegar.
- pyrolin (pi'ro-lin). A disinfectant preparation of magnesium acetate.
- pyrolysis (pi-rol'is-is) [Gr. $\pi \hat{v}\rho$ fire $+ \lambda \hat{v}\sigma_{15}$ solution]. Decomposition of organic substances under the influence of a rise in temperature.
- **pyromania** (pi-ro-ma'ne-ah) [Gr. $\pi \hat{\nu} \rho$ fire $+ \mu a \nu l a$ madness]. An insane propensity for incendiarism; also an insane desire to visit fires.
- **pyrometer** (pi-rom'et-er) [Gr. $\pi \hat{v} \rho$ fire + μέτρον measure]. An instrument for measuring the intensity of heat too great for the use of a thermometer.
- pyrone (pi'ron). A principle, CO(CH)₄O, found in opium, from which several other constituents are derived by substitution.
- pyronin (pi'ro-nin). A dye used in histology. The pyronins are methylated diamin xanthins. p. B, a basic dye, the tetra-ethyl-pyronin chlorid, (C₂-H₃)₂N.C₆H₃(O)CH.C₆H₃.N(C₂H₆)₂Cl. p. G, a basic dye, the tetra-methyl-pyronin chlorid, (CH₃)₂-N.C₆H₃(O)CH.C₆H₃N(CH₃)₂Cl.
- pyronixis (pi-ro-niks'is) [Gr. #Op fire + pofes piercing]. Same as ignipuncture.

- pyrophobia (pi-ro-fo'be-ah) [Gr. πῦρ fire + φόβος fear]. Insane dread of fire.
- pyrophosphate (pi-ro-fos'fāt). Any salt of pyrophosphoric acid.
- pyrophosphoric acid (pi"ro-fos-for'ik). See acid. Pyroplasma (pi-ro-plaz'mah). Piroplasma.
- pyropuncture (pi'ro-punk-chur) [Gr. πῦρ fire + puncture]. Puncture with hot needles.
- pyrosal (pi'ro-sal). Antipyrin acetyl salicylate, C₂-H₂O₅.C₁₁H₁₂N₂O, a substance in leaflets or needles: used in polyarthritis, influenza, pleuritis, and hemicrania. Dose, 7½ gr. (0.5 gm.).
- pyrosis (pi-ro'sis) [Gr. πύρωσις burning]. Heartburn; a burning sensation in the esophagus and stomach, with sour eructation, due to acid dyspepsia.
- **Pyrosoma** (pi-ro-so'mah) [Gr. $\pi \hat{v} \rho$ fire $+ \sigma \hat{\omega} \mu a$ body]. Same as *Piroplasma*.
- pyrothen (pi'ro-then). A proprietary disinfectant containing 60 parts of 60 per cent. sulphuric acid and 15 parts of fuming sulphuric acid.
- pyrotic (pi-rot'ik) [Gr. πυρωτικόs]. Caustic; burning.
- pyrotoxin (pi-ro-tok'sin) [Gr. πῦρ fire + τοξικόν poison]. 1. A toxin developed during a fever. 2. An exceedingly poisonous liquid obtained from the interstitial fluids of many bacteria, even if ordinarily non-pathogenic: injected, it causes fever and wasting.
- pyroxylin (pi-roks-il'in) [L. pyroxyli'num; Gr. πῦρ fire + ξύλον wood]. Gun-cotton; cotton treated with nitric and sulphuric acids, so as to be converted into various nitrocompounds of cellulose probably mostly the hexanitrate, C₁₂H₁₄(O.NO₂)₆O₄. The pyroxylinum of the pharmacopeia is soluble gun-cotton, or collodion cotton, made up chiefly of the tetranitrate, and the pentanitrate of cellulose, which, dissolved in ether or in glacial acetic ether, forms collodion.
- **pyrozole** (pi'ro-zōl). A proprietary antiseptic coal-tar derivative.
- **pyrozone** (pi'ro-zōn). A proprietary preparation of hydrogen dioxid: used in 3 to 5 per cent. solution as an antiseptic and hemostatic. **caustic p.**, a 25 per cent. solution of pyrozone.
- **pyrrol** (pir'ol). A liquid, basic, cyclic substance, (CH)₄NH, obtained in the destructive distillation of various animal substances. **p. tetra-iodid.** Same as *iodol*.
- pyrrolidin (pir-rol'id-in). A simple base, tetramethylene imin, (CH₂)₄NH, which may be obtained from tobacco or prepared from pyrrol.
- pyrrolin (pir'o-lin). An oily liquid, C₄H₆NH, formed by the action of acetic acid and zinc dust on pyrrol.
- Pyrus (pi'rus). See apple.
- Pythagoras (pi-thagoras). A famous Greek philosopher, born in Samos about 532 B. C., who exercised an early and lasting influence upon medicine.
- pythogenesis (pi-tho-jen'es-is) {Gr. πίθειν to rot + γένεσις origin].
 I. The origination of a process of decay or decomposition.
 Generation from filth.
- pythogenic, pythogenous (pi-tho-jen'ik, pi-thoj'en-us) [Gr. πίθειν to rot + γεννῶν to produce]. Caused by putrefaction or filth.
- pyuria (pi-u're-ah) [Gr. πύον pus + οὖρον urine]. The presence of pus in the urine. miliary p., the presence in the urine of miliary bodies consisting of pus-cells, blood-cells, and epithelium.
- pyxol (pix'ol). An antiseptic preparation of softsoap and a cresol.

Q

988

Q. Abbreviation for electric quantity.

qcepo (ksa'po). The tubercle type of dermal leishmaniasis.

Q. d. Abbreviation for L. qua'ter in di'e, four times a day.

Q. h. Abbreviation for L. qua'qua ho'ra, every hour.

Q. 1. Abbreviation for L. quan'tum li'bet, as much as you please.

Q. P. Abbreviation for quanti-Pirquet reaction. See under reaction.

Q. p. Abbreviation for I. quan'tum pla'ceat, at will.

Q. Q. H. Abbreviation for L. qua'que quar'ta ho'ra, every fourth hour.

Qq. hor. Abbreviation for L. qua'que ho'ra, every hour.

Q. R. S. group. See under group and electrocardiogram.

Q. s. Abbreviation for L quan'tum suf'ficit, as much as will suffice.

Qt., qt. Abbreviation for quart.

quack (kwak). A charlatan; an ignorant or fraudulent empiric.

quackery (kwak'er-e). The practice and methods of a quack; charlatanry.

quader (kwa'der) [Ger: "square"]. The precuneus, or quadrate lobule.

quadrangular (kwod-rang'u-lar) [L. quadri- four + an'gulus angle] Having four angles.

quadrant (kwod'rant) [L. qua'drans quarter]. 1. One-quarter of a circle; that portion of the circumference of a circle that subtends an angle of 90°. 2. Any one of four corresponding parts or quarters, as of the abdominal surface. Wilder's q., an area on the ventral surface of the cerebral crus of a cat.

quadrantanopsia (kwad-ran-tan-op'se-ah) [quadrant + anopsia]. Blindness in one-quarter of the visual field.

quadrate (kwod'rāt) [L. quadra'tus squared]. Square or squared; four-sided.

quadratipronator (kwod-ra"te-pro-na'tor). The pronator quadratus muscle.

quadratus lumbo'rum (kwod-ra'tus). See muscles, table of.

quadri- [L. quat'tuor four; in combination, quadri-]. A prefix signifying four, or fourfold.

quadribasic (kwod-rib-a'sik). Having four replaceable atoms of hydrogen.

quadriceps (kwod'ris-eps) [L. quadri- four + ca'put head]. Four-headed See muscles, table of. q. su'ræ [L. "four-headed muscle of the calf"], the gastrocnemius, soleus, and plantaris considered as one muscular body.

quadriceptor (kwod-ris-ep'tor) [L. quadri- four + ceptor]. An intermediary body having four combining groups.

quadricuspid (kwod-re-kus'pid) [L. quadri-four + cus'pis point]. Having four cusps; a tooth with four cusps.

quadrigeminal (kwod-re-jem'in-al) [L. quadrigem'inus]. Fourfold, or in four parts; forming a group of four. See corpora quadrigemina.

quadrigeminum (kwod-re-jem'in-um), pl. quadrigemina [L. "fourfold"]. Same as corpus quadrigeminum.

quadrilateral (kwod-ril-at'er-al) [L. quadri- four + la'tus side]. Having four sides.

quadripara (kwod-rip'ah-rah) [L. quadri- four + pa'rere to bear]. A woman who has borne four children.

quadriparity (kwod-rip-ar'it-e). The condition of having borne four children.

quadriparous (kwod-rip'ar-us). Having borne four children.

quadriplegia (quad-rip-le'je-ah). Paralysis of all four limbs.

quadripolar (kwod-rip-o'lar). Having four poles, as a cell.

quadrisect (kwod'ris-ekt) [L. quadri-four + seca're to cut]. To cut into four parts.

quadrisection (kwod-ris-ek'shun) [L. quadri- four + sec'tio cut]. Division into four parts.

quadritubercular (kwod"ri-tu-ber'ku-lar). Having four tubercles or cusps.

quadriurate (kwod-re-u'rāt) [L. quadri- four + urate]. Any hyperacid urate, like those of the human urine.

quadrivalent (kwod-riv'al-ent) [L. quadri- four + vale're to be worth]. Having a chemic valence or combining power of four.

quadroon (kwod-roon') [Sp. cuarteron]. The offspring of a white person and a mulatto.

quadruped (kwod'ru-ped) [L quadru four + pes foot]. Four footed; a four-footed animal.

quadrupl. Abbreviation for L quadruplica'to, four times as much.

quadruplet (kwod'ru-plet) [L. quad'rupulus four-fold]. Any one of four children born at one birth. quale (kwa'le). The quality of a thing, especially

the quality of a sensation or other conscious process. **qualimeter** (kwol-im'et-er) [L. qua'lis of what sort

qualiffied (kwol-im et-er) [1]. quality of what sort $+ \mu \epsilon \tau \rho \rho \nu$ measure] An instrument for measuring the hardness of roentgen rays.

qualitative, qualitive (kwol'it-a-tiv, kwol'it-iv) [L. qualitati'vus] Pertaining to quality.

quantimeter (kwon-tim'et-er) [L quan'tus how much + Gr. μέτρον measure]. An apparatus for measuring the quantity of roentgen rays generated by a tube.

quanti-Pirquet reaction. See under reaction. quantitative, quantitive (kwon'tit-a-tiv, kwon'tit-iv) [L quantitati'vus]. Pertaining to quantity.

quantivalence (kwon-tiv'al-ens) [L quan'tus how much + vale're to be worth] Chemic valence; the atomic or combining power of an element or radical, expressed in the number of atoms of hydrogen with which it can combine.

quantivalent (kwan-tiv'al-ent). Pertaining to or possessing quantivalence.

quantum kwan'tum) [L. "as much as"]. The elemental unit of radiant energy according to the quantum theory, q. v. under theory. q. of light, a quantity of light (radiant energy) equivalent to the frequency of the light times 6.55×10^{-27} erg. sec.

quantum libet (kwon'tum li'bet). Latin for as much as you please.

quantum sufficit (kwon'tum suf'fis-it). Latin for as much as suffices.

quarantine (kwor'an-tēn) [Ital. quaranti'na]. 1. A period (usually of forty days' duration) of detention of ships or persons coming from infected or suspected ports. 2. The place where persons are detained for inspection. 3. To detain or isolate on account of suspected contagion. 4. Restrictions placed on the entrance to and exit from the place or premises where a case of communicable disease exists. land q., quarantine against persons approaching by land from an infected region. shotgun q., forcible quarantine not legally authorized.

quart (kwort) [L. quar'tus fourth]. The fourth part of a gallon (946 c.c.). See weights and measures, table of.

quartan (kwor'tan) [L. quarta'nus, pertaining to the fourth]. 1. Recurring every third (fourth) day. 2. A variety of intermittent fever of which

- the paroxysms recur on every third day. **double q.**, a quartan fever of which the recurrences are alternately severe and relatively mild. **triple q.**, a fever in which the paroxysms occur every day because of infection with three different groups of quartan parasites.
- quartein (kwar'te-in) [L. quar'tus fourth]. A name proposed for vitamins because they form a fourth group of food stuffs necessary to animal life (the other groups being carbohydrates, proteins, and fats).
- quarter (kwor'ter). The part of a horse's hoof lying between the heel and the toe. false q., a cleft in the quarter of a horse's hoof from the top to the bottom. fifth q., the fat, hide, and other less valuable parts of a slaughtered animal.
- quarter-cast (kwor'ter-kast). Cut in the quarter of the hoof.
- quarter-crack (kwor'ter-krak). See sand-crack.
- quarter-evil (kwor'ter-e-vil). Blackleg, or symptomatic anthrax See under anthrax.
- **quartile** (kwar'til) [L. quar'tus one-fourtb]. The middle term of each half of a series of variables.
- quartipara (kwor-tip'ah-rah) [L. quar'tus fourth + par'ere to produce]. A woman who has borne four children.
- quartiparous (kwor-tip'ar-us). Having given birth to four children.
- quartisternal (kwor-tis-ter'nal) [L. quar'tus fourth + ster'num sternum] Pertaining to the fourth sternebra, or bony segment of the sternum opposite the fourth intercestal space.
- quartonol (kwor'to-nol). A proprietary preparation of sodium, calcium, and quinin and strychnin glycerophosphates.
- quartz lamp. See under lamp.
- quassaïn (kwos'sah-in). A preparation of soap and quassia a strong insecticide.
- quassation (kwas-sa'shun) [L. quasa'tio]. The crushing of drugs, or their reduction to small pieces.
- Quassia (kwosh'e-ah) [after Quassi, a negro who used it as a remedy]. A genus of simarubaceous tropical plants. Q. ama'ra, of South America, affords the true and original quassia wood. The wood of Q (Picras'ina) excel'sa, a tree of tropical America, contains quassin, and is a tonic and stomachic. It is used in dyspepsia, atonic diarrhea, and as an enema in the irritation caused by pin-worms. Dose of extract, 1-3 gr. (0.066-0.2 gm); of fluidextract, 5-10 min. (0.33-0.66 c.c.); of tincture, 30-60 min. (2-4 c c). Jamaica q., Picrasma excelsa. Surinam q., Quassia amara.
- **quassin**, **quassiin** (kwos'sin, kwos'se-in). A bitter tonic principle, $C_{32}H_{42}O_8$, from quassia wood. Dose, $\frac{1}{30}-\frac{1}{3}$ gr. (0 0022-0 022 gm.).
- Quat., quat. Abbreviation for L quat'uor, four.
- quaternary (kwat-er'nar-e) [L. quaterna'rius, from quat'tuor four]. Fourth in order; also containing four elements.
- Quatrefages's angle (katr'fazhs) [Jean Louis Quatrefages de Bréau, French naturalist, 1810-1802]. See angle.
- quebrabunda (kweb-rah-boon'dah). A tropical disease of horses and swine not unlike beriberi. Called also straddling disease.
- quebrachamin (kwe-brah'tsham-in). A base, or amin, from quebracho bark.
- quebrachin (kwe-bra'tshin). An alkaloid, $C_{21}H_{26}$ N_2O_3 , from quebracho bark; the same as yohimbin. Its hydrochlorid is employed in dyspnea. Dose, $\frac{1}{2}-\frac{1}{2}$ gr. (0.05-0.1 gm.).
- quebracho (kwe-brah'tsho) [Sp. and Port. "axbreaker"; L. aspidosper'ma]. The bark of Aspidosper'ma quebra'cho-blan'co, a South American tree, also known as white q. It is an antiperiodic, astringent, tonic, and antasthmatic, and is used in asthma and heart disease. Dose of extract,

- 2-8 gr. (0.133-0.533 gm.); of fluidextract, 5-60 min. (0.333-4 c.c.); of tincture, 1-4 fl.dr. (4-16 c.c.); of wine (vinum aspidospermatis), 1-4 fl.dr. (4-16 c.c.).
- quebrachoform (kwe-brah'tsho-form). A compound like tannoform, made from quebracho bark.
- Queckenstedt's sign. See under sign.
- queen-of-the-meadows (kwēn). See Eupatorium. queen's-delight, queen's-root (kwēnz-de-līt', kwēnz-root). See Stillingia.
- quenuthoracoplasty (kwe-nu-tho'rak-o-plas-te) [Quénu a surgeon in Paris + thoracoplasty]. Quénu's operation of dividing the ribs to promote retraction of the chest wall in empyema.
- querciform (kwer'sif-orm). Tannoform made with oak tannin.
- quercin (kwer'sin) [L. quer'cus oak]. A bitter, crystallizable carbohydrate, $C_0H_6(O_0H)_6$, from oak-bark and acorns.
- quercitannoform (kwer-sit-an'o-form). A variety of tannoform prepared with quercitannic, instead of gallotannic, acid.
- quercite (kwer'sit). A kind of sugar, CH₂(CHOH,-CHOH)₂CHOH, from acorns.
- quercitrin (kwer-sit'rin) [L. quer'cus oak + citri'nus yellow]. A glucosid and yellow pigment, C₃₆H₃₈O₂₀, from the bark of Quer'cus tincto'ria: astringent and tonic.
- Quercus (kwer'kus) [L. "oak"]. See oak.
- quercynol (kwer'sin-ol). A proprietary medicine composed of extract of white-oak bark, with cyanol and extract of hyoscyamus: used in vaginal wafers.
- querulent (kwer'u-lent) [L. queror to complain]. A person with inadequacy marked by abnormal fretfulness and suspiciousness, a feeling of being misunderstood, or slighted or ill treated, opposition to every suggestion, and dissatisfaction with things as they are.
- Quevenne's iron (ke-venz') [Théodore Auguste Quevenne, French physician, 1805-1855]. Reduced iron. See under iron.
- quick (kwik). Pregnant, and able to feel the fetal movements.
- quickening (kwik'en-ing). The first recognizable movements of the fetus in utero.
- quicklime (kwik'līm). Calcic oxid; caustic or unslaked lime.
- **quicksilver** (kwik'sil-ver). Mercury or hydrargyrum.
- quietol (kwi'et-ol). A proprietary nerve tonic and sedative, being propylvaleryldimethylamino-iso-butyl hydrobromid. Dose, 7 gr. (0.5 gm).
- quigila (kwij'il-ah). An infectious disease resembling leprosy, occurring in Brazil; perhaps ainhum.
- Quillaia, Quillaja (kwil-a'yah) [Chilian quillai]. A genus of rosaceous trees. The bark of Q. sapona'ria, or soap-bark, is sternutatory, detergent, diuretic, and febrifugal. It is used for coryza, bronchitis, dropsy, and for making emulsions. Dose, \(\frac{1}{2}-\frac{1}{2}\) fl.dr. (0.97-1.94 c.c.); of tincture, I fl.dr. (4 c.c.).
- quina, quinaquina (ke'nah, ken-ah-ke'nah) [Sp and Peruv.]. Cinchona bark.
- quinacetin sulphate (kwin-as-e'tin). An anodyne and antipyretic salt, $(C_{37}H_{31}NO_2)_2H_2SO_4.H_2O$.
- quinacol (kwin'ak-ol). A chemical combination of quinin with guaiacol used in the treatment of tuberculosis and other respiratory troubles
- quinaldin (kwin-al'din). A liquid antiperiodic derivative, alpha-methyl-quinolin, C₂H₆N(CH₃), of anilin and paraldehyd.
- quinalgen (kwin-al'jen). Same as analgen.
- quinamicin (kwin-am'is-in). An artificial alkaloid, $C_{19}H_{24}N_2O_2$, from quinamin.
- quinamidin (kwin-am'id-in). An artificial alkaloid isomeric with quinamicin, prepared from quinamin.

quinamin (kwin-am'in). A crystallizable alkaloid, C₁₀H₂₄N₂O₂, from various cinchona barks.

quinaphthol (kwin-af'thol). Same as chinaphthol. quinaseptol (kwin-as-ep'tol). Same as diaphtol. quinate (kwi'nāt). Any salt of quinic acid.

quinbi, quinby (kwin'be). A proprietary iodobismuthate of quinin, containing 20 per cent. of bismuth, in a 10 per cent oily suspension. Intra-

muscular dose, 3 c.c. to 0.3 gm. of the drug. quince (kwins) [L. cydo'nius]. A rosaceous tree or shrub, Py'rus cydo'nia, and its fruit. The seed (cydo'nium) affords a mucilage which is used as a demulcent.

Quincke's capillary pulse, puncture (kwink' Ez) [Heinrich Irenæus Quincke, physician in Kiel, 1842-1922]. See pulse and puncture.

quinetum (kwi-ne'tum). A mixture of the sulphates of the cinchona alkaloids: a cheap substitute for quinin sulphate.

quinhydrone (kwin'id-rōn). A combination of quinone and hydroquinone, $C_{60}H_6O_2$. $C_6H_4O_2$.

quinia (kwin'e-ah). Same as quinin.

quinic acid (kwin'ik). See under acid.

quinicin (kwin'is-in). A bitter oily alkaloid, isomeric with quinin, which may be obtained from cinchona or which may be prepared from quinin or from quinidin by heating them.

quinidamin (kwin-id-am'in). An alkaloid, C₁₉H₂₄-N₂O₂, from cinchona.

quinidin (kwin'id-in). Conquinin, beta-quinin, an alkaloid, $C_{20}H_{24}N_2O_2 + 2H_2O$, from cinchona. It is isomeric with, and its taste, appearance, uses, and dose are the same as those of quinin, although its effect on the cardiac muscle is more pronounced, depressing excitability and conduction in the auricular muscle. It is used in the treatment of auricular fibrillation and other cardiac arhythmias in the form of the sulphate or bisulphate. q. sulphate, (C₂₀H₂₄O₂N₂)₂H₂SO₄ + 2H₂O, is used like quinidin. Dose, 3-6 gr. (0.2-0.4 gm.) three times a day. q. tannate, a yellowishwhite powder, given in nephritis, diarrhea, and dyspepsia. Dose, 1\frac{1}{4}-12 gr. (0.1-0 8 gm.).

quinimel (kwin'im-el). A preparation for disguising the taste of bitter medicines.

quinin, quinine (kwin'in, kwin-ēn', or kwi'nîn) [L. quini'na]. The most important of the many alkaloids of cinchona bark, $C_{20}H_{24}N_{2}O_{2} + _{3}H_{2}O_{3}$; a white minutely crystalline or amorphous powder, odorless, and having a bitter taste. It is soluble in 750 parts of cold water, but is freely soluble in ether, alcohol, and chloroform. Ouinin is a stimulant to the nervous system, causing congestion of the brain, vertigo, tinnitus, and deafness. It is a cardiac and circulatory depressant, and increases the number of the leukocytes, at the same time arresting their migration. In large doses it depresses the respiration, decreases the reflex excitability of the spinal cord, and lowers the temperature in fever. It has marked antiseptic properties. In overdoses it causes destruction of the blood-corpuscles and fever (quinin fever), with erythematous eruption on the skin, deafness, dizziness, and temporary blindness, ending in death from failure of respira-tion. Quinin is used in malarial fever and all forms of malarial poisoning; as an antipyretic in typhoid fever, pneumonia, and other fevers; as a tonic in conditions of debility and exhaustion, anemia, and convalescence; as a stimulant to uterine contraction in labor; locally in the form of spray in rhinitis, whooping-cough, and hay-fever. Dose, 1-30 gr. (0.065-2 gm.). q. acetylsalicylate. See xaxaquin. q.-amblyopia, paralysis of the retina from the action of quinin on the retinal bloodvessels. q. and urea hydrochlorid. See q. hydrochlorocarbamid. Q. arsenite, a white, crystalline powder, $C_{20}H_{24}N_2O_2.H_3AsO_3 + 2H_2O$: antiperiodic. Dose, $\frac{1}{12}$ gr. (0.005-0.03 gm.). Q. bisulphate, a colorless, crystalline cinchona salt, $C_{20}H_{24}O_2N_2.H_2SO_4 + 7H_2O$. It is much more soluble than the ordinary sulphate. q. borate, an amorphous or crystalline antiseptic and antian amorphous or crystaline antiseptic and anti-pyretic. Dose, 7½-15 gr. (0.5-1 gm.). **q. chlo-**rocarbonic ester, an antipyretic in color-less crystals, CO.Cl.C₂₀H₂₃N₂O₂; patented. **q.** chocolate, a pastil containing quinin hydro-chlorid and chocolate, in which the taste of the quinin is nearly concealed. **q. dihydrochlorid**, and chocolate, a pastil containing quining the containing crystalline substance, C₂₀H₂₄N₁O_{2.2}HCl, in white needles: used hypodermically for whooping-cough. q. dihydrochlorid carbamate, a double salt in colorless crystals, (C₂₀H₂₄N₂O₂).HCl + (CONH₂)₃-HCl. q. eosolate, a salt, C₉H₇S₃O₁₂.(C₂₀H₂₄N₂-O₂)₃: used as an antimalarial, antiseptic, and antipyretic. Dose, 5-10 gr. (0.3-0.6 gm.). q. ethyl carbonate. See euchinin. q. ferri-chlorid, an agent in brown scales or powder; hemostatic. **q. glycerophosphate,** a CH₂OH.CHOH.CH₂O.PO.(OH)₂(C₂₀H₂O₂N₂)₂ 4H2O, in colorless needles and soluble in water and alcohol. It is used as a nervine in neurasthenia, malnutrition, and neuralgia of malarial origin. Dose, 1½ gr. (0.1 gm.). q. hydriodate, a nervous sedative and antineuralgic, C₂₀H₂₄N₂O₂,HI. Dose, 1-1½ gr. (0.06-0.1 gm.). q. hydrobromid, a salt, C₂₀H₂₄O₂N₂.HBr + H₂O, esteemed for hypodermic administration. q. hydrochlorid, a white salt, C₂₀H₂₄O₂N₂.HCl + 2H₂O, resembling the sulphate in taste, uses, and dosage. **q. hy-drochlorocarbamid**, quinin and urea hydrochlorid, C₂₀H₂₄O₂N₂.HCl.CO(NH₂)₂HCl + 5H₂O, a crystalline compound soluble in water: used in a 1 per cent. solution subcutaneously as a local anesthetic; has also been used hypodermically in cholera. Dose, 10–15 gr. (0.05–1 o gm.). Called also urea-quinin. q. hydrochlorosulphate, a salt in colorless crystals: suitable for hypodermic use. q. hydroiodate, a nervous sedative and antineuralgic agent, C₂₀H₂₄N₂O₂,HIO₂₀. Dose, 1–11 gr. (0.06–0 r gm.). q.-hydroquinon hydrochlorid, an agent in delicate needles, antipyretic. q. iodohydroiodate, a brown powder, C20H24-N₂O₂,I.HI.: antisyphilitic. **q. lactate**, a white powder suitable for hypodermic use. **q. lygo**sinate, a yellow powder, insoluble in water, formed by the combination of quinin and lygosin used as a dusting-powder. q. nucleinate, a preparation used by intramuscular injection in syphilis. q. phosphohydrochlorid, a crystalline substance, $C_{20}H_{24}N_1O_2$.HCl.2H₃PO₄.3H₂O: antiperiodic, and used for the relief of nervous headaches. **q. salicylato**, a salt, $C_{20}H_{24}N_2O_2$.C, $H_6O_3 + H_2O_4$. in slender white needles: antipyretic and antirheu-Dose, 13-8 gr. (0.1-0.5 gm.). q. silicomatic. Dose, 1½-8 gr. (0.1-0.5 gm.). **Q. 811100- fluorid**, a crystalline antiseptic and antipyretic. **Q. sulphate** [L. quini'ne sul' phas], a white, crystalline salt, (C₂₀H₂₄N₂O₂)₂,H₂SO₄ + 7H₂O, more largely used as a remedy than any other of the cinchona alkaloidal salts. It is soluble in 740 parts of cold and 30 parts of boiling water, and in 3 parts of boiling alcohol. Dose, 1-30 gr. (0.066-2 gm.). q. tannate, a yellowish powder: used in whooping-cough and diarrhea. Dose, 3-8 gr. (0.2-0.5 gm.). q.-urethan, a combination of quinin hydrochlorid and urethan: antiperiodic, and suited for subcutaneous use. q. valerianate, a nervous stimulant and antispasmodic. Dose, 1-3 gr. (0.066-0.194 gm.).

quinindiglycol sulphate. See insipin.

quininephytin (kwin-in-ef'it-in). A yellow crystalline tonic and antiperiodic, quinin anhydro-oxymethylenediphosphate. Dose, 5-8 gr. (0.3-0.5 gm.).

quininism (kwin'in-izm). Same as cinchonism.

quininurethane (kwin-in-u'reth-an). A compound of quinin hydrochlorate and urethane: used subcutaneously like quinin.

quiniobismuth (kwin"e-o-biz'muth). A compound of quinin and bismuth, the iodobismuthate of quinin: used for the treatment of syphilis. Dose, 4-5 gr. (0.2-0.3 gm.).

quiniretin (kwin-ir-e'tin). A yellowish, floccu-

991

lent substance isomeric with quinin and derived from it, but not an alkaloid.

quinisal (kwin'is-al). A proprietary quinin bisalicylosalicylate for the treatment of coryza and influenza.

Quinlan's test (kwin'lanz). See under tests.

quinochloral (kwin-o-klo'ral). A product of the treatment of quinin with chloral a bitter, oily liquid, neutral to test-paper, and said to be a safe antiseptic. Dose, I-15 min. (0.066-I c.c.).

quinoform (kwin'o-form). A compound of formaldehyd and quinin.

quinoidin (kwin-oi'din). Same as chinoidin.

quinol (kwin'ol). Hydroquinon.

quinolin (kwin'o-lin). Chinolin; a tertiary amin or alkaloid, C₆H₄(CH)₃N, derivable from quinin, coal-tar, and various other sources. It is a yellowish, aromatic liquid: antiseptic, antipyretic, and antiperiodic. q. rhodanate, q. sulphocyanate, a strongly bactericidal agent in white crystals, C₁₀H₃N₂S. q. salicylate, a white powder, C₉-H₇NC₇H₄O₃: antiseptic and antifebrile. Dose, 8-15 gr. (o.5-1 gm.). q. sulphosalicylate, a white, crystalline substance, used as an antiseptic. q. tartrate, an antiseptic and antifebrile agent, C₉H₇NC₇H₆O₃; a white powder. Dose, 8-15 gr. (o.5-1 gm.).

quinoliv (kwin'o-liv). A proprietary preparation of quinin sulphate and olive oil.

quinology (kwin-ol'o-je). The sum of knowledge concerning trees of the genus Cincho'na and other quinin-producing plants, their culture, products, and derivatives, and the uses of the same.

quinone (kwin'ōn). 1. A substance, CO(CH.CH)₂-CO, in golden-yellow crystals, obtained by oxidizing quinic acid. 2. Any benzene derivative in which two hydrogen atoms are replaced by two oxygen atoms.

quinopropylin (kwin-o-pro'pil-in). An antiperiodic substance homologous with quinin.

quinopyrin (kwin-o-pi'rin). See chinopyrin.

quinoral (kwin-o'ral). See chinoral.

quinosol (kwin'o-sol). 1. Same as chinosol. 2. Same as cresochin.

quinotoxin (kwin-o-tok'sin). Quinidin.

quinotropin (kwin-o-tro'pin). A proprietary uricacid solvent, a compound of quinin and urotropin.

quinovatin (kwin-o'vat-in). Aricin.

quinovin (kwin-o'vin). A bitter glucosid, C₃₀H₄₈-O₈, from cinchona.

quinoxin (kwin-oks'in). Nitrosophenol, C₆H₄-(NO)OH; a colorless, crystalline substance prepared from the phenols by the action of nitrous acids.

Quinq. Abbreviation for L. quin'que, five.

Quinquaud's disease, sign (kang-kôz') [Eugene Quinquaud, French physician, 1841-1894]. See disease, sign.

quinquecuspid (kwin-kwe-kus'pid) [L. quin'que five + cus'pis point]. Having five cusps; a tooth having five cusps.

quinquetubercular (kwin''kwe-tu-ber'ku-lar). Having five tubercles or cusps.

quinquina (kin-ke'nah). Same as cinchona.

quinquivalent (kwin-kwiv'al-ent) [L. quin'que five + va'lens able]. Capable of combining with five atoms of hydrogen.

quinsy (kwin'ze) [L. cynan'che sore throat]. Acute suppurative tonsillitis. See tonsillitis. lingual q., suppurative inflammation of the lingual tonsil. Quint. Abbreviation for L. quin'tus, fifth.

quintan (kwin'tan) [L. quinta'nus of the fifth]. Recurring every fourth (fifth) day.

quintessence (kwin-tes'ens) [L. quin'tus fifth + essen'tia essence]. The highly concentrated extract of any substance.

Quintin serum, treatment (kan-tan') [René Quintin, contemporary French physician]. See serum and treatment.

quintipara (kwin-tip'ar-ah) [L. quin'tus fifth + par'ere to produce]. A woman who has borne five children.

quintisternal (kwin-tis-ter'nal) [L. quin'lus fifth + sternum]. Noting the fifth bony portion of the sternum, or the part above the ensiform cartilage and adjacent to the fifth intercostal space.

quintuplet (kwin'tu-plet) [L. quin'tuplex fivefold].

Any one of five born at one birth.

quinuclidin (kwin-u'klid-in). The bridged piperidin ring, CH(CH₂)₆N, found in the cinchona alkaloids.

quionin (kwi'o-nin). A tasteless quinin preparation; a mixture of various cinchona alkaloids, mainly cinchonidin: used like quinin.

quitenidin (kwi-ten'id-in). An alkaloid, C19H22-

N₂O₄, formed by oxidizing quinidin.

quitter, quittor (kwit'or). A fistulous sore on the quarters or the coronet of a horse's foot. **simple** q., local inflammation resulting in a slough, with formation of pus immediately above the hoof. **skin** q., a very painful ulcer of the skin above the hoof. **subhorny** q., inflammation beginning at the coronary band and extending beneath the hoof and producing pus-formation in the sensitive tissue. **tendinous** q., a condition in which the inflammation of quitter has extended into the tendons of the leg and the ligaments of the joint.

quiz (kwiz). 1. Informal instruction by questions and answers. 2. To instruct by questions and answers.

quiz-master. See quizzer.

quizzer (kwiz'er). One who holds and conducts a quiz. Called also quiz-master.

quoad vitam (kwo'ad vi'tam). Latin for "so far as life is concerned." A term used with reference to prognosis.

Quotid. Abbreviation for L. quotid'ie, daily.

quotidian (kwo-tid'e-an) [L. quotidia'nus daily].

1. Recurring every day.

2. A form of intermittent fever with daily recurrent paroxysms. double q., a fever having two daily paroxysms.

quotient (kwo'shent). A number obtained as the result of division. albumin q., the amount of albumin in the blood divided by the amount of albumin present. blood q., the number obtained by dividing the amount of hemoglobin in a specimen of the blood by the number of erythrocytes contained in it: it indicates the percentage of hemoglobin in the erythrocytes. caloric q. the quotient obtained by dividing the heat evolved (expressed in calories) by the oxygen consumed (expressed in milligrams) in a metabolic process. **D** q., the ratio of glucose to nitrogen in the urine. growth q., that portion of the entire food energy which is utilized for the purpose of growth. intelligence q., the measure of intelligence obtained by dividing the patient's mental age, as ascertained by the Binet-Simon scale, by his actual age. protein q., the number obtained by di-viding the quantity of globulin of the blood-plasma by the quantity of albumin. respiratory q., the ratio between the volume of carbon dioxid expired and the volume of oxygen inspired in a given time.

q. v. Abbreviation for L. quan'tum vis, as much as you like, and for quod vi'de, which see.

992

B. An abbreviation for Réaumur, remotum (farpoint), respiration, right, and Behnken's unit of Roentgen irritation.

R.

R. A symbol for L. rec'ipe, take.

Ra. The chemical symbol of radium.

Raabe's test (rah'bez) [Gustav Raabe, German physician, born 1875]. See under tests.

rabelaisin (rab-el-a'is-in). A poisonous glucosid from Rabelais'ia philippinen'sis, a plant of the Philippine Isles: a heart stimulant.

rabetting (rab'et-ing) Interlocking of the denticulated broken surfaces of a fractured bone.

rabiate (ra'be-āt). Affected with rabies.

rabiator (ra'be-a-tor). A person or animal affected with rabies.

rabic (ra'bik). Pertaining to rabies.

rabid (rab'id) [L. rab'idus]. Affected with rabies, or hydrophobia.

rabies (ra'be-ēz) [L. ra'bere to rage]. A specific infectious disease of certain animals, especially dogs and wolves, communicated to man by direct inoculation, as by a bite of an infected animal, and believed to be due to a microorganism which is as yet undiscovered. After an incubation period of from one to six months the disease begins with malaise, depression of spirits, and swelling of the lymphatics in the region of the wound. There are choking and spasmodic catching of the breath, succeeded by increasing tetanic spasms, especially of the muscles of respiration and deglutition, which are increased by attempts to drink water or even by the sight of water. There are usually also fever mental derangement, vomiting, profuse secretion of a sticky saliva, and albuminuria. The disease is generally fatal, death occurring in from two to five days. Called also hydrophobia and lyssa. r. cani'na, canine madness; the rabies of dogs. dumb r., rabies in which paralysis is an early symptom. r. feli'na, the rabies of cats furious r., a form in which there is very pronounced excitement. paralytic r., rabies in which paralysis is a marked symptom—usually an ascending spinal paralysis sullen r., dumb rabies. tanacetic r., a condition like rabies produced in rabbits by the intravenous injection of the oil of tansy.

rabietic (ra-be-et'ik). Pertaining to or affected with rabies.

RaBr₂. Radium bromid.

race (ras). 1. An ethnic stock, or division of mankind; in a narrower sense, a national or tribal stock; in a still narrower sense, a genealogic line of descent; a class of persons of a common lineage.

2. A class or breed of animals, a group of individuals having certain characters in common, due to a common inheritance.

3. [L. ra'dix root.] A root or rhizome; especially one of ginger.

racemation (ra-se-ma'shun). Racemization.

raceme (ra-sēm') [L. race'mus a bunch of grapes].

1. A form of inflorescence in which the individual flowers are borne on stalks which spring from a long central stem. 2. An optically inactive form of a compound consisting of equal amounts of dextro- and levorotary forms of optical isomers.

racemic form (ra-se'mic). Same as raceme, 2d def. racemization (ra-se-mi-za'shun). The making of an optically active substance inactive by changing it into a racemic form. This is usually done by heating.

racemose (ras'e-mos) [L. racemo'sus]. Resembling a bunch of grapes on its stalk.

rachial (ra'ke-al). Rachidial.

rachialbuminimeter (ra"ke-al-bu-min-im'et-er) [Gr. δάχις spine + albuminimeter]. An apparatus for measuring the albumin in a specimen of the cerebrospinal fluid.

rachialbuminimetry (ra''ke-al-bu-min-im'et-re).
The measurement of the amount of albumin in the spinal fluid.

rachialgia (ra-ke-al'je-ah) [Gr. δάχις spine + άλγος pain]. Pain in the vertebral column.

rachianalgesia (ra"ke-an-al-je'ze-ah) [Gr. ράχις spine + αν negative + άλγος pain]. Rachianesthesia.

rachianesthesia (ra''ke-an-es-the'ze-ah) [Gr. βάχις spine + anesthesia]. Spinal anesthesia; anesthesia produced by the injection of the anesthetic into the spinal canal.

rachicentesis (ra''kis-en-te'sis) [Gr. βάχις spine + κέντησις puncture]. Puncture into the spinal canal.

rachidial (ra-kid'e-al). Pertaining to the spine. rachidian (ra-kid'e-an) [Gr. βάχις spine]. Per-

taining to the spine. **rachigraph** (ra'kig-raf) [Gr. βάχις spine + γράφειν

rachigraph (ra'kig-rat) [Gr. $\dot{\rho}\dot{\alpha}\chi_{15}$ spine + $\gamma\rho\dot{\alpha}\varphi_{64}\nu$ to write]. An instrument for recording the outlines of the spine and back.

rachilysis (ra-kil'is-is) [Gr. βάχις spine + λύσις loosening]. Mechanic treatment of a curved vertebral column by combined traction and pressure.

rachiocampsis (ra"ke-o-kamp'sis) [Gr. βάχις spine + κάμψις curve]. Curvature of the spinal column.

rachiocentesis (ra"ke-o-sen-te'sis) [Gr. βάχις spine + κέντησις puncture]. Spinal puncture.

rachiochysis (ra-ke-ok'is-is) [Gr. ράχις spine + χύσις a pouring]. The effusion fo a fluid within the vertebral canal.

rachiococainization (ra"ke-o-ko-ka-in-iz-a'-shun) [Gr. βάχις spine + cocainization]. Spinal cocainization.

rachiocyphosis (ra"ke-o-si-fo'sis). Same as kyphosis.

rachiodynia (ra"ke-o-din'e-ah) [Gr. βάχις spine + δδύνη pain]. Pain in the spinal column.

rachiokyphosis (ra"ke-o-ki-fo'sis). Same as kyphosis.

rachiometer (ra-ke-om'et-er) [Gr. βάχις spine + μέτρον measure] An instrument for measuring curvatures of the vertebral column.

rachiomyelitis (ra''ke-o-mi-el-i'tis) [Gr. βάχις spine + μυελός marrow + -ιτις inflammation]. Inflammation of the spinal cord.

rachioparalysis (ra'ke-o-par-al'is-is) [Gr. βάχις spine + paralysis]. Paralysis of spinal muscles.

rachioplegia (ra"ke-o-ple'je-ah) [Gr. βάχις spine + πληγή stroke]. Spinal paralysis.

rachioscoliosis (ra"ke-o-sko-le-o'sis) [Gr. βάχις spine + scoliosis]. Lateral curvature of the spine.

rachiotome (ra'ke-o-tōm) [Gr. βάχις spine + τέμνειν to cut]. An instrument for cutting the vertebræ.

rachiotomy (ra-ke-ot'o-me) [Gr. ῥάχις spine + τομή cut]. The cutting of the vertebral column in surgery or in obstetrics.

rachiotropacocainization (ra"ke-o-tro-pa-ko"-ka-in-i-za'shun). Spinal cocainization with tro-pacocain

rachipagus (ra-kip'ag-us) [Gr. βάχις spine + πάγος fixed]. A double fetal monster joined at the vertebral column.

rachis (ra'kis) [Gr. βάχις spine]. The vertebral column.

rachischisis (ra-kis'kis-is) [Gr. βάχις spine + σχίσις cleft]. Congenital fissure of the spinal column. r. partia'lis, fissure of the spinal column of limited extent; merorachischisis, r. poste'rior, spina bifida. r. tota'lis, fissure of the spinal column throughout its entire length; holorachischisis.

- rachistovainization (ra-kis-to-va"in-iz-a'shun). Injection of stovain into the spinal canal for the production of local anesthesia.
- rachitic (ra-kit'ik). Pertaining to or affected with rickets.
- rachitis (ra-ki'tis) [Gr haxlītis]. I. Formerly, inflammatory disease of the vertebral column. 2. In modern use, the same as rickets. r. foeta'lis annula'ris, the formation before birth of annular thickenings on the long bones. r. foeta'lis micromel'ica, a deficient lengthwise growth of the bones of the fetus.
- rachitism (rak'it-izm). A tendency to rickets.
- rachitome (rak'it-ŏm) [Gr. βάχις spine + τέμνειν to cut]. A cutting instrument used in opening the spinal canal.
- rachitomy (rak-it'o-me) [Gr. βάχις spine + τέμνειν to cut]. The surgical or anatomic opening of the vertebral canal.
- racial (ra'shal). Pertaining to a particular race of mankind.
- raclage, raclement (rahk-klahzh', rahkl-mah')
 [Fr.]. Destruction or removal by rubbing.
- Rad., rad. Abbreviation for L. ra'dir, root.
- radal (ra'dal). A 20 per cent. solution of protargol: used as a prophylactic for gonorrhea.
- radectomy (rad-ek'to-me) [L. ra'dix root + Gr. έκτομή excision]. Excision of a portion of the root of a tooth.
- radesyge (rah-de-se'geh) [Dan. "scab-sickness"]. An ulcerative skin disease formerly prevalent in Scandinavia.
- radia (ra'de-ah). The second stage of a distoma, when it ceases to be a sporocyst and has not yet become a cercaria.
- radiability (ra-de-ab-il'it-e). The property of being readily penetrated by the x-ray.
- radiable (ra'de-ab-l). Capable of being examined by the x-ray.
- radiad (ra'de-ad). Toward the radial side.
- radial (ra'de-al) [L. radia'lis]. 1. Pertaining to the radius or to a radius. 2. Radiating; spreading outward from a common center. goose-neck r., a radial artery which feels like a goose-neck owing to calcification.
- radian (ra'de-an). In ophthalmometry, an arc whose length equals the radius of its curvature. It is an arc of 57.205°.
- radiant (ra'de-ant) [L. ra'dians]. 1. Diverging from a common center. 2. Any radio-active substance. r. matter, matter in a condition of extreme tenuity or ultragaseous state; gas exhausted to about one-millionth of its original density, so that it has lost its original properties and has acquired new, particularly luminous, ones.
- radiate (ra'de-āt) [L. radia're, radia'tus]. 1. To diverge or spread from a common point. 2. Arranged in a radiating manner.
- radiatio (ra-de-a'she-o). Latin for radiation. r. cor'poris callo'si | B N A|, the radiation of the fibers of the corpus callosum in the medullary center of each cerebral hemisphere. r. cor'poris stria'ti | B N A|, the extension of fibers from the thalamus and hypothalamus to the cerebral cortex. r. striothalam'ica. See striothalamic radiation, under radiation.
- radiation (ra-de-a'shun) [L. radia'tio]. 1. Divergence from a common center. 2. A structure made up of divergent elements. 3. Treatment with radium or other radio-active matter. 4. A French military term for the honorable discharge of soldiers and their return to civil life on account of infirmity or disease. 5. Giving off electromagnetic waves such as those of light or particulate rays, such as the alpha or beta rays: also the rays thus given off. acoustic r., auditory r., a bundle of fibers in the posterior part of the internal capsule, being the final neurons in the auditory path.

- electromagnetic r. See electromagnetic waves, under wave. r. of Gratiolet. Same as optic r. occipitothalamic r. Same as optic r. optic r., a strand of fibers continuous with those of the corona radiata, and derived mainly from the pulvinar, geniculate bodies, and optic tract. pyramidal r., the fibers extending from the pyramidal tract to the cortex. sensory r's, the thalamocortical tracts. striothalamic r., a fiber-system which joins the thalamus to the hypothalamic region. tegmental r., fibers radiating from the posterior part of the internal capsule and going to the cerebral cortex. thalamic r., a tract of fibers from the optic thalami radiating into the hemisphere. thalamotemporal r. Same as accoustic r.
- radical (rad'ik-al) [L. radica'lis]. 1. Directed to the cause; going to the root or source of a morbid process. 2. A group of atoms which enters into and goes out of chemical combination without change, and which forms one of the fundamental constituents of a molecule. acid r. 1. The electronegative clement which combines with hydrogen to form an acid. 2. All of the acid except the hydroxyl group. alcohol r., all of the alcohol molecule except the hydroxyl group (—OH). color r. See chromophore.
- radiciform (rad-is'if-orm) [L. ra'dix root + for'ma shape] Shaped like a root; shaped like the root of a tooth.
- radicle (rad'ik-l) [L. radic'ula]. 1. Any one of the smallest branches of a vessel or nerve. 2. Same as radical (2d def).
- radicotomy (rad-ik-ot'o-me) [L. ra'dix root + Gr. τομή a cutting]. Division of nerve roots.
- radicula (rad-ik'u-lah). Latin for radicle.
- radiculalgia (rad-ik-u-lal'je-ah) [L. radic'ula a little root + Gr. āλγos pain]. Neuralgia of the nerve-roots.
- radicular (rad-ik'u-lar). Of or pertaining to a radicle or root.
- radiculectomy (rad-ik-u-lek'to-me) [L. radic'ula rootlet + Gr. ἐκτομή excision]. Excision of a rootlet, especially, resection of spinal nerve-roots.
- radiculitis (rad-ik-u-li'tis) [L. radic'ula a little root + Gr. -1715 inflammation]. Inflammation of the root of a spinal nerve, especially of that portion of the root which lies between the spinal cord and the intervertebral canal.
- radiectomy (ra-de-ek'to-me) [L. ra'dix root + Gr. ξκτομή excision]. Excision of the root of a tooth.
- radio-actinium (ra"di-o-ak-tin'e-um). A substance formed by the disintegration of actinium. It gives off alpha rays and disintegrates into actinium x.
- radio-action (ra"de-o-ak'shun). Same as radioactivity.
- radio-active (ra"de-o-ak'tiv). Giving off chemically active rays; having the property of radio-activity. See radio-active elements, table of, p. 994.
- radio-activity (ra"de-o-ak-tiv'it-e). Spontaneous decomposition of an atom accompanied by the emission of alpha, beta, or gamma rays. induced r., temporary radio-activity in a substance from being in the field of influence of a radio-active substance.
- radio-anaphylaxis (ra"de-o-an"af-il-ak'sis). Anaphylactic sensitization to the x-ray or other form of radiant energy.
- radiobe (ra'de-ōb) [L. ra'dius ray + Gr. βlos life]. One of the peculiar microscopic condensations of sterilized bouillon produced by radium, discovered by J. B. Burke, which, by their appearance and the way in which they divide, have suggested the similar phenomena of bacteria.
- radiobicipital (ra"de-o-bi-sip'it-al). Pertaining to the radius and the biceps muscle of the arm.
- radiocarpal (ra"de-o-kar'pal). Pertaining to the radius and carpus.

TABLE OF THE RADIO-ACTIVE ELEMENTS

| The second secon | | | | | |
|--|-------------------------------|---------------------|--------------------|-------------------|-------------------------|
| Atomic weight. | Uranium- radium series. | Actinium series. | Thorium series. | Atomic number. | Rays emitted. |
| 238.17 | Uranium I | | | 92 | a |
| 234 | Uranium X1 | | ٠., | 90 | β β, γ β |

radiochemistry (ra"de-o-kem'is-tre). The branch of chemistry which treats of radio-active phenomena.

radiochroism (ra"de-o-kro'izm) [radiant + Gr. χρόα color]. The capacity of a substance to absorb certain radio-active and Roentgen rays

radiochrometer (ra"de-o-krom'et-er) [L. radium ray + Gr. χρωμα color + μέτρον measure]. An instrument for measuring the penetrating power of x-rays according to the Benoist scale.

radiocinematograph (ra"de-o-sin-e-mat'o-graf). An apparatus combining the moving picture camera and the x-ray machine, making possible moving pictures of the internal organs.

radiode (ra'de-ōd). An instrument for the therapeutic application of radium.

radiodermatitis (ra"de-o-der-mat-i'tis) [L. ra"-dius ray + dermatitis]. Dermatitis caused by exposure to x-rays.

radiodiagnosis (ra"de-o-di-ag-no'sis). Diagnosis by means of x-rays and x-ray photographs.

radiodiaphane (ra"de-o-di'af-ān). An instrument for performing transillumination by means of radium.

radiodigital (ra"de-o-dij'it-al) [L. ra'dius radius + dig'itus finger]. Pertaining to the radius and to the fingers.

radiodontia (ra''de-o-don'she-ah) [L. ra'dius ray + Gr. 6800s tooth]. That department of dentistry which deals with the making and interpretation of radiograms of the teeth and surrounding structures.

radiodontist (ra"de-o-don'tist) [L. ra'dius ray + δδοῦς tooth]. A specialist in dental radiography,

radio-element (ra"de-o-el'e-ment). Any chemical element having radio-active properties.

radiogenol (ra''de-o-je'nol). An emulsion of insoluble radio-active minerals, intended for injection into tumors, etc.

radiogram (ra'de-o-gram). Same as skiagraph.

radiograph (ra'de-o-graf) [L. ra'dius ray + Gr. γράφειν to record]. Same as skiagraph.

radiography (ra-de-og'raf-e). Skiagraphy; photography with the Rontgen rays.

radiohumeral (ra"de-o-hu'mer-al). Pertaining to the radius and humerus.

radiolead (ra"de-o-led'). Radium G.

radiology (ra-de-ol'o-je). The study of radioactivity and radio-active substances.

radiolucency (ra''de-o-lu'sen-se). The property of being pervious to the x-ray, but yet offering some resistance.

radiolucent (ra-de-o-lu'sent) [L. ra'dius ray + lu'cere to shine]. Permitting the passage of radiant energy, yet offering some resistance to it; nearly, but not entirely, transparent to the x-ray.

radiolus (ra-de'o-lus) [L. dim. of ra'dius ray]. A probe, staff, or sound.

radiometer (ra-de-om'et-er). An apparatus for measuring the penetrating power of the x-rays.

radiomicrometer (ra"de-o-mi-krom'et-er) [radius ray + Gr. μ [kos small + μ [et μ]0 ν measure]. An instrument for detecting minute changes of radiant energy.

radiomuscular (ra"de-o-mus'ku-lar). Going from the radial artery or nerve to the muscles.

radion (ra'de-on). One of the radiant particles thrown off by a radio-active substance.

radioneuritis (ra"de-o-nu-ri'tis). A form of neuritis seen in operators after long-continued working with x-rays.

radiopacity (ra"de-o-pas'it-e). The property of being radiopaque.

radiopalmar (ra"de-o-pal"mar). Derived from the radial artery and supplying the palm.

radiopaque (ra-de-o-pāk'). Opaque to the x-ray; not permitting the passage of radiant energy.

radioparency (ra"de-o-par'en-se). The property of being radioparent.

radioparent (ra"de-o-par'ent). Permitting the passage of x-rays, transparent to the x-ray.

radiopelvimetry (ra"de-o-pel-vim'et-re). Measurement of the pelvis by x-ray examination.

radioplastic (ra-de-o-plas'tik) A term used to designate a method of making a plaster image of an organ, such as the heart, from roentgenoscopic measurements.

radiopraxis (ra"de-o-praks'is) [L. ra'dius ray + Gr. πρâξις practice]. Use of rays of light, electricity, etc., in treatment of disease.

radioreceptor (ra"de-o-re-sep'tor). A receptor for the stimuli which are excited by radiant energy, such as light, heat, and cold.

radio-rem (ra'de-o-rem). An apparatus designed for the production of radio-active drinking-water by impregnating the water with radium emanation emitted from radium sulphate which is contained in fired porous clay.

radioscope (ra'de-o-skop) [L. ra'dius ray + Gr. σκοπεῖν to view]. An instrument for detecting or studying x-rays or other forms of radio-activity.

radioscopy (ra-de-os'ko-pe) [L. ra'dius ray + Gr. σκοπεῖν to examine]. The examination of the deep structures of the body by means of Roentgen rays.

radiosensibility (ra"de-o-sen-sib-il'it-e). Sensibility to irradiation.

radiosensitive (ra"de-o-sen'sit-iv). Sensitive to, or destroyable by, radiant energy, as radium, x-ray, or other electric radiations.

radiostereoscopy (ra"de-o-ster-e-os'ko-pe) [L. γa'dius ray + Gr. στερεός solid + σκοπεῖν to

view]. The inspection of the interior organs by means of the Roentgen rays.

radiotellurium (ra"de-o-tel-u're-um). Same as polonium.

radiotherapeutics (ra"de-o-ther-ap-u'tiks). Radiotherapy.

radiotherapy (ra"de-o-ther ap-e) [L. ra'dius ray + Gr. θεραπεία cure]. The treatment of disease by Roentgen rays, radium rays, polonium rays, etc.

radiothorium (ra"de-o-tho're-um). A body found in pitchblende from Colorado. It is a disintegration product of thorium and resembles the latter in properties. It gives off a disintegration product known as thorium X.

radiotorium (ra"dè*o-to're-um). A hermetically sealed room in which patients, for therapeutic purposes, breathe the gases arising from the disintegration of radium.

radiotoxemia (ra"de-o-toks-e'me-ah). Toxemia produced by a radio-active substance, or resulting from radio-active treatment.

radio-ulnar (ra"de-o-ul'nar). Pertaining to the radius and ulna.

radium (ra'de-um) [so called from its radiant quality]. A rare metal, discovered in 1899 in pitchblende. Metallic radium is unstable in air, the chlorid, bromid, sulphate, and carbonate being the salts used. It is a spontaneous source of radiation, and maintains a temperature of from 2° to 5° F. above the stirrounding atmosphere. Its atomic weight is 226, symbol, Ra. Radium salts emit, besides heat and light, three distinct kinds of radiation, which are distinguished as α-, β-, and γ-rays, and also a radio-active gas called radium emanation. The γ-rays are similar to x-rays, passing through many substances opaque to light. The β-rays are similar to cathode rays, and have less penetrating power than γ-rays. The α-rays have very slight penetrating power. Radium rays have been used in the treatment of lupus and other skin diseases, as well as in sarcoma and carcinoma. See radio-active elements, table of, p. 994. r. emanation. See emanation.

radiumization (ra"de-um-iz-a'shun). Application of radium rays to a part.

radiumologist (ra-de-um-ol'o-jist). A practitioner who specializes in treatment by radium.

radius (ra'de-us) [L. "spoke"]. I. A line radiating from a center. 2. The bone on the outer or thumb side of the forearm. r. car'vus. See Madelung's deformity, under deformity. r. fix'us, a straight line from the hormion to the inion.

radix (ra'diks), pl. radi'ces. Latin for root. r. ante'rior [B N A], the anterior or motor root of a spinal nerve. r. ar'cus ver'tebræ [B N A], the pedicle of a vertebra. r. bre'vis gan'glii cilia'ris [B N A], the motor root of the ciliary ganglion. r. cerebal'li, the posterior peduncle of the cerebellum. r. den'tis [B N A], the root of a tooth. r. latera'lis trac'tus op'tici [B N A], lateral root of the optic tract. r. lin'guæ [B N A], the root of the tongue. r. lon'ga gan'glii cilia'ris [B N A], the sensory root of the ciliary ganglion. r. media'lis trac'tus op'tici [B N A], medial root of the optic tract. r. mesenceph'ali, the mesencephalic root of the trigeminus nerve. r. mesenter'ii [B N A], the base of the mesentery of the small intestine at the posterior parietal peritoneum. r. mol'lis gan'glii cilia'ris [B N A], the soft root of the ciliary ganglion. r. moto'ria, the smaller and motor root of the trigeminal nerve. r. na'si [B N A], the root of the penis. r. pi'li [B N A], a hair-root. r. poste'rior [B N A], the posterior or sensory root of a spinal nerve. r. pulmo'nis [B N A], the root of the lung. r. senso'ria, the sensory root of the trigeminal nerve. r. trigem'ini, the root of the trigeminal nerve. r. un'guis, root of the nail.

radon (ra'don). Radium emanation.

radzygo (rad'zi-ge). See radesyge.

raffinase (raf'in-ās). An enzyme which splits up raffinose.

raffinose (raf'in-os). Same as melitose.

raffe (rah'fl). An eruptive disease of cattle in northern France.

rag-pickers' disease. See rag-sorters' disease, under disease.

ragwood (rag'wed). See Ambrosia.

ragwort (rag'wert). See Senicio.

Raillie'tia au'ris. A mite which lives in the ears of cattle.

railway-spine (ral'wa-). See spine.

rain-boil. An endemic ulcer prevalent in India in the rainy season; Scinde boil.

Rainey's corpuscles (ra'nēz) [George Rainey, English anatomist, 1801-1884]. See corpuscle.

raisins (ra'zns) [L. pas'sulæ; u'væ pas'sæ]. Dried grapes. Corinthian r., true currants.

råle (rahl) [Fr. "rattle"]. Any abnormal respiratory sound heard in auscultation, and indicating some pathologic condition. Rales are distinguished as dry or moist, according to the absence or presence of fluid in the air-passages, and are classified according to their location as bronchial, cavernous, laryngeal, pleural, tracheal, and vesicular. amphoric r., a large, musical, and tinkling râle produced by the splashing of fluid in a cavity connected with a bronchus. atelectatic r., a non-pathologic râle which is dissipated by deep breathing or coughing Such râles are frequently heard in those who breathe feebly and superficially, when on deep inspiration the moist walls of the unexpanded alveoli are suddenly forced apart by the entering air; after a few deep inspirations such râles become lost. These râles are best observed at the margins or borders of the lung and are sometimes known as marginal or border râles, border r. See atelectatic r. bubbling r.. a moist râle, finer than a subcrepitant râle, heard in bronchitis, in the resolving stage of croupous pneumonia, and over small cavities. cavernous r., a hollow and metallic râle caused by the alternate expansion and contraction of a pulmonary cavity during respiration. It is heard in the third stage of pulmonary tuberculosis. clicking r., a small, sticky sound heard in inspiration, and caused by the passage of air through softening matter in the smaller bronchi. It occurs in the early stages of pulmonary tuberculosis. collapse r., a fine crepitant râle heard over collapsed lung tissue; also at the base of the healthy lung of a bedridden patient: due to incomplete expansion of the airvesicles. consonating r., a clear, ringing sound produced in bronchial tubes that are surrounded by consolidation tissues: heard in tua clear, ringing berculous pneumonia. crackling r. Same as subcrepitant r. crepitant r., a very fine rale, resembling the sound produced by rubbing a lock of hair between the fingers or by particles of salt thrown on fire. It is heard at the end of inspiration in the early stages of croupous pneumonia. dry r., a rale produced by the presence of viscid secretion in the bronchial tubes or by thickening of the walls of the tubes. It has a whistling, musical, or squeaking quality. Dry râles are heard in asthma and bronchitis. extrathoracic r., a rale produced in the larynx or trachea. gurgling r., a very coarse rale re-sembling the bursting of large bubbles. They are heard over large cavities that contain fluid, and in the trachea in the death-rattle. **guttural r.**, a râle produced in the throat. **Hirtz's r.**, a moist, subcrepitant, metallic râle indicative of tuberculous softening. **r.** in'dux, a crepitant râle heard in the stage of beginning consolidation in pneumonia. laryngeal r., a râle produced in the larynx. marginal r. See atelectatic r. metallic r. Same as consonating r. moist r., a rale produced by the presence of liquid

in the bronchial tubes. mucous r. (r. muqueux), a modified subcrepitant râle resembling the sound produced by blowing through a pipe into soapy water. It is caused by the bursting of viscid bubbles in the bronchial tubes: heard in emphysema of lungs. pleural r., a pleural friction-sound. r. re'dux, r. de retour, an unequal crackling sound produced by air passing through fluid in a bronchial tube: heard in the resolution stage of pneumonia. sibilant r., a hissing sound resembling that produced by suddenly separating two oiled surfaces. It is produced by the presence of a viscid secretion in the bronchial tubes or by thickening of the walls of the tubes: heard in asthma, bronchitis, and in the beginning of tuberculosis of the lungs. Skoda's r., a bronchiale râle heard through consolidated tissue in pneumonia. **sonorous r.**, a small, moist sound resembling the cooing of a dove, produced by the passage of air through mucus in the capillary bronchial tubes. heard in capillary bronchial tubes. lary bronchitis and asthma. subcrepitant r., a fine, moist râle heard in conditions that are associated with liquid in the smaller tubes, as in bronchitis, pulmonary edema, and phthisis in the early stages. Called also crackling r. tracheal r., a râle produced in the trachea. vesicular r., a crepitant râle. whistling r., a sibilant râle.

Ralfe's test (ralfs) [Charles Henry Ralfe, English physician, 1842–1896]. See under tests.

ramal (ra'mal). Pertaining to a ramus; branching. ramaninjana (ram"an-in-jah'nah). A form of palmus, or jumping disease, prevailing in Madagascar.

Rambotham's hook (ram'both-amz). A hook with a concave cutting edge, used for decapitating a fetus.

R. A. M. C. Abbreviation for Royal Army Medical Corps.

Ramdohr's suture (rahm'dörz) [Cæsar A. von Ramdohr, American surgeon, 1855-1912]. See under suture.

ramex (ra'meks) [L.].
 r. A hernia.
 varicocele.
 rami (ra'mi). Plural of ramus.
 r. communican'-tes, bundles of nerve-fibers connecting the spinal cord with the sympathetic ganglia.

ramification (ram"if-ik-a'shun) [L. ra'mus branch + fa'cere to make].
1. Distribution in branches.
2. A branch or set of branches.
3. The manner of branching.

ramify (ram'if-i) [L. ra'mus branch + fa'cere to make].
1. To branch; to diverge in various directions.
2. To traverse in branches.

ramisection (ram-is-ek'shun) [L. ramus + sec'tio a cutting]. The operation of cutting the rami communicantes of the sympathetic (sympathetic ramisection): done for the relief of spastic paralysis.

Rammstedt operation (rahm'stet). See under operation.

ramogen (ram'o-jen). A proprietary sterile modified milk preparation.

ramollissement (rah-mol-ēs-maw'). French for softening.

Ramón y Cajal's cells, stain (rah-mōn'e ka-hal') [S. R. Ramón y Cajal, Spanish histologist, born 1852]. See Cajal's cell, under cell, and stains, table of.

ramose, ramous (ra'mos, ra'mus) [L. ra'mus branch]. Branching; having many branches.

rampart, maxillary (ram'part). A ridge or mound of epithelial cells seen in that portion of the jaw of the embryo which is to become the alveolar border.

Ramsden's ocular (rams'denz) [Jesse Ramsden, English optician, 1735-1800]. See under ocular.

ramulus (ram'u-lus). A small branch or terminal division.

ramus (ra'mus), pl. ra'mi [L.]. 1. A branch, as of an artery, bone, nerve, or vein. 2. Any constant

branch of a fissure or sulcus of the brain. r. anastomot'icus, nerve-fibers running from one nerve to another and frequently carrying sensory fibers to a motor nerve, or vice versa. r. anasto-mot'icus peronæ'us [B N A], the communicans peronæi nerve. See Nerves, table of. r. auricula'ris va'gi [B N A], Arnold's nerve. r. com-mun'icans, a branch connecting a spinal nerve with a sympathetic ganglion r. exter'nus ner'vi accesso'rii, a fetal branch of the spinal accessory nerve. r. interfunicula/ris, one of the branches which connect the two chains of the sympathetic nervous system. r. internodia'lis, one of the branches which connect the ganglia the sympathetic nervous system. ischio**pubic r.**, the descending ramus of the pubic bone together with the ramus of the ischium. r. of the ischium, the narrower projecting part of the bone. r. of the jaw, the ascending branch at each end of the lower jaw-bone. r. mandib'uli, the ramus of the jaw. r. meninge'us va'gi [B N A], the recurrent branch of the vagus. r. of the pubis, one of the parts of the pubis forming the boundary of the obturator foramen.

rancid (ran'sid) [L. ran'cidus]. Having a musty, rank taste or smell. The term is applied to fats that have undergone decomposition, with the development of fatty acids.

rancidity (ran-sid'it-e). The quality of being rancid.

Randia (ran'de-ah) [after Isaac Rand]. A genus of tropical rutaceous trees and shrubs. The fruit of R. dumeto'rum, of Africa and India (emetic nut), is a powerful emetic. Dose of tincture, 15-60 min. (1-4 c.c.).

Randolph's test (ran'dolfs) [Nathaniel Archer *Randolph*, American physician, 1858–1887]. See under *tests*.

range of accommodation (rānj). The alteration in the refractive state of the eye produced by accommodation. It is the difference in diopters between the refraction by the eye adjusted for its far-point and that when adjusted for its nearpoint. Called also amplitude of accommodation and breadth of accommodation.

Range'lia vital'ii. A blood parasite causing the disease nambi-uvu in dogs.

ranine (ra'nin) [L. rani'nus; ra'na frog]. Pertaining to a frog, to a ranula, or to the lower surface of the tongue.

Ranke's angle (rahn'kez) [Hans Rudolph Ranke, Dutch anatomist, 1849-1887]. See angle.

Ranke's formula (rahn'kez) [Karl Ranke, contemporary German chemist]. See formula.

Ransohoff's operation (ran'so-hofs) []oseph Ransohoff, surgeon in Cincinnati, 1853-1921]. See operation.

ranula (ran'u-lah) [L. dim. of ra'na frog]. A cystic tumor beneath the tongue, due to obstruction and dilatation of the sublingual or submaxillary gland or of a mucous gland. pancreatic r., a retention-cyst of the pancreatic duct.

ranular (ran'u-lar). Pertaining to or of the nature of ranula.

Ranvier's nerve, node, etc. (rahn-ve-āz') [Louis Antoine Ranvier, French pathologist, 1835-1922]. See nerve, node, etc.

Raoult's law (rah-ōlz') [Francois Marie Raoult, French physicist, 1830-1899]. See under law.

rape (rāp) [L. rap'tus]. Coitus without the consent of the woman or against her will.

raphania (raf-a'ne-ah) [L. raph'anus; Gr. βάφανος radish]. A chronic poisoning ascribed to the seeds of wild radish and resembling ergotism (Linnæus). It is attended with spasms of the limbs.

raphé, rhaphé (ra'fe) [Gr. ραφή seam]. A ridge or furrow that marks the line of union of the halves of various symmetric parts. r. anococcy'gea, a fibrous septum extending from the anus to the coccyx. r. cor'poris callo'si, a

linear furrow along the median line of the upper side of the callosum, and a similar ridge on the lower side. r. medul'læ oblonga'tæ [B N A], the line of union of the two halves of the medulla oblongata. r. pal'ati [B N A], the middle ridge of the palate. r. palpebra'lis latera'lis [B N A], the external tarsal ligament. r. pterygomandibula'ris [B N A], the pterygomaxillary ligament. r. scro'ti [B N A], the cord-like elevation upon the skin of the scrotum, dividing it into halves. Stilling's r., the fibers uniting the pyramids on the anterior surface of the oblongata.

raphidiospore (ra-fid'e-o-spor). See exotos pore.

rap'tus melanchol'icus. An attack of frenzy or agitation occurring in a patient with melancholia.

rarefaction (rar-e-fak'shun) [L. rarefac'tio]. The condition of being or becoming less dense; diminution in density and weight, but not in volume.

rarefying osteitis (rar'e-fi-ing). See osteitis.

Ras. Abbreviation for L. rasu'ræ, shavings.

Rasa'hus bigutta'tus. A bug found in Cuba, Panama, and South America, which sometimes bites man.

rascota (ras-e'tah). Transverse markings across the skin of the wrists, on the palmar surface.

Rasch's sign (rahshs) [Hermann Rasch, German obstetrician, born 1873]. See under sign.

rash (rash). A temporary eruption on the skin, anilin r., a skin inflammation due to anilin poisoning. antitoxin r., a skin eruption frequently following the administration of diphtheria antitoxin. astacoid r., a reddish eruption in small-pox resembling in color the shell of a boiled lobster. black currant r., the peculiar appearance of the skin in xeroderma pigmentosum. canker r., a popular name for scarlatina. caterpillar r., a local eruption attributed to poisoning by the hairs of caterpillars. crystal r., sudamina. drug-r., a rash due to medication Called also medicinal r. flannel r., a reddish eruption caused by the irritation of flannel underclothing. gum-r. See strophulus. heat r., miliaria rubra. hydatid r., an urticarial eruption which sometimes follows tapping or rupture of a hydatid cyst. medicinal r. See drug-r. mulberry-r., a peculiar eruption of typhus, looking like that of measles. nettle-r. Same as urticaria. nickle r., a rash sometimes occurring in refiners of nickle. rose-r. Same as roscola **serum-r.**, the rash that somefollows the injection of antitoxic sera. tonsillotomy r., an eruption on the neck and body after tonsillectomy. tooth-r. Same as strophulus. wildfire r. Same as strophulus volaticus.

rasion (ra'zhun) [L. ra'sio]. The rasping of drugs with a file.

rasmosin (ras'mo-sin). A resin-like derivative from the root of Cimicif'uga racemo'sa: tonic, antispasmodic, and antirheumatic. Dose, 1-5 gr. (0.06-0.3 gm.).

Rasmussen's aneurysm [Fritz Waldemar Rasmussen, Danish physician, 1834-1881]. See aneurysm.

raspatory (ras'pat-o-re) [L. raspato'rium]. A file or rasp for surgeon's use; a xyster.

raspberry (raz'ber-e). See under Rubus.

rasura (rah-su'rah). Latin for scrapings or filings.

rat (rat). A rodent commonly found about human habitations. Rats not only cause great economic loss, but their bite causes rate-bite fever; they harbor at least eleven different species of intestinal parasites that may be transmitted to man, such as tapeworms, round worms, and trichinæ; they assist in the transmission of plague, dysentery, and Weil's disease to man; and they help to keep alive bedbugs and fleas when the latter have no access to human blood. albino r.

See white r. black r., Mus (Rattus) rattus, the English black rat and the one most responsible for transmitting plague to man by means of its flea (Xenopsylla cheopis). It is smaller than the brown rat, has longer ears and tail, and is glossy black in color. brown r., Mus (Rattus) norvegicus; also called the barn rat, gray rat, Norway rat, sewer rat, and wharf rat. It is larger than the black rat, has a brownish-gray color, and short ears and tail. Egyptian or roof r., Mus alexandrinus. white r., an albino form of Mus rattus or of Mus norvegicus which is much used as a laboratory animal. wwood r., a rat of the genus Neotoma. They are hosts of Lamus protracts.

rat-bite fever. See under fever.

rat-tails (rat'tālz). A swollen condition of the hair-papillæ over the flexor tendons of a horse's leg, due to lichen.

ratanhia, ratany (rat-an'e-ah, rat'an-e) [Pg. ratan'ha]. Same as krameria.

ratanhin (rat'an-in). Same as surinamin.

rate (rāt). The measure of a thing by its ratio or relation to some standard. basal metabolic r. See basal metabolism, under metabolism. r., the relation of the number of births during a year to the population of that year. This is the crude birth rate. The refined birth rate is the ratio of births to the female population; the true birth rate is the ratio of births to the female population of child-bearing age, i. e., between fifteen and forty-five years of age. case r. Same as morbidity r. case fatality r., the percentage of cases of sickness which terminate fatally. death r., the ratio of the total number of deaths in a community to the population, generally figured in terms of number of deaths per 1000, 10,000, or 100,000 of population. fatality r., the number of deaths per 100 cases of a specific disease. Called also lethality r. heart r., the rate of the contrac-tions of the ventricles of the heart. It usually corresponds to the pulse-rate, but occasionally some of the ventricular contractions fail to produce peripheral pulse waves, so that the pulse at the wrist is less in rate than that of the heart. This difference is called pulse deficit. lethality r. See case fatality r. morbidity r., the proportion of cases of a given disease occurring during the year per 1000, 10,000, or 100,000 of population. pulse r., the rate of the pulse beat. The normal rate is 72 for men and 80 for women. sickness r. Same as morbidity r. still-birth r. See natimortality.

Rathke's pocket or pouch (raht' kēz) [Martin H. Rathke, German anatomist, 1793–1860]. See under pouch.

raticide (rat'is-id). A substance that will kill rats; a rat poison.

ratin (rat'in). Λ preparation of living bacteria of the paratyphoid enteritidis group, pathogenic to rats used as a rat exterminator.

ratio (ra'she-o). Latin for proportion. absorption-r., the ratio between the coefficient of extinction of a solution and the amount of lightabsorbing matter in that solution. birth-death r. See vital index, under index. cell-color r., the result obtained by dividing the percentage of red cells by the percentage of hemoglobin. curative r., the fraction of the minimal lethal dose of a drug that is therapeutically effective; called also therapeutic r. D:Nr., the ratio between the dextrose and the nitrogen of the urine. hand-r., the ratio of the length of the hand to its width. karyoplasmic r., nucleoplasmic ratio. keto-genic-antiketogenic r., the proportion between substances that form glucose in the body and those that form fatty acids mendelian r., a ratio of r to 3 seen in the grandchildren of a cross between two races differing by some one characteristic. nucleoplasmic r., the ratio of nuclear to cytoplasmic volume. nutritive r., the ratio between the digestible protein and the

digestible fats and carbohydrates in a ration in stock feeding. **therapeutic r.** See curative r. **ation** (ra'shun) [L. ra'tio proportion]. A fixed daily allowance of food or drink.

ational (rash'un-al) [L. rationa'lis reasonable]. Accordant with reason; based upon reasoning and not upon simple experience.

ationale (rash-o-na'le). A rational exposition of principles; the logical basis of a procedure.

atsbane (rats'ban). White arsenic; arsenous anhydrid, As₂O₃.

attlesnake (rat'l-snāk). Same as Crotalus.

lattus (rat'us). A genus of small rodents; the rats. See rat.

Lau, process of (row) [Johann J. Rau (Ravius), Dutch anatomist, 1658-1719]. See process.

Lauber's layer (row'berz) [August Rauber, German anatomist, born 1845]. See layer.

aucedo (raw-se'do). Latin for hourseness.

auchfuss's triangle (rowsh'foos) [Charles Andreyevich Rauchfuss, physician in St. Petersburg, 1835-1916]. Same as Grocco's sign. See sign.

susch (rowsh) [Ger. "intoxication"]. Light general anesthesia with ether only to the point where, if questioned sharply, the patient will not reply. Called also ether rausch.

auschbrand (rowsh'brahnt) [Ger.]. Symptomatic anthrax. See under anthrax.

auvolfia (raw-vol'fe-ah). See ophioxylin.

avius's process (ra've-us). See Rau, process of. **ay** (rā) [L. ra'dius spoke]. A line of light or of heat. A ray is a more or less distinct or isolated portion of radiant energy, while the word rays is a very general term for any form of radiant energy, whether vibratory or particulate. actinic r., a light ray which produces chemic changes. In general, light rays become more actinic as one passes from the red through the spectrum to the wiolet and even into the ultraviolet. alpha r's, a r's, helium nuclei which have been ejected from radio-active substances. Owing to their high velocity (one-tenth that of light) their kinetic energy is so great that a single alpha particle produces a microscopic flash of light when it hits a spinthariscope; when it hits another atom (as of nitrogen) it may cause it to disintegrate. anode r's. Same as positive r's. astral r., one of the rays of an astrosphere. Becquerel r's, rays emitted from uranium discovered by Becquerel in 1806. **beta** $\mathbf{r}'\mathbf{s}$, $\boldsymbol{\beta}$ $\mathbf{r}'\mathbf{s}$, electrons ejected from radio-active substances with velocities which may be as high as 0.98 of the velocity of light. Blondlot r's. See n r's. canal-r's, positive rays in a vacuum tube; so-called from having been first obtained by allowing the discharge from the anode to pass through a perforated (canalized) cathode. cathode-r's, streams of electrons given off from the cathode of a vacuum tube in which an electric discharge takes place. They move in a straight line unless deflected by a magnet. By striking on solids they generate Roentgen rays. characteristic r., when a metallic surface is exposed to x-rays a secondary radiation, called its characteristic ray, is emitted which is nearly homogeneous as to wave length and is approximately proportional to the reciprocal of the square of the atomic weight of the metal. chemical r. Same as actinic r. convergent r., a ray which is approaching a focus. It may be produced by passage through a convex lens or by reflection from a concave mirror. cosmic r's. See Millikan r's. delta r's, secondary beta rays produced in a gas by the passage of alpha particles. direct r., primary ray. divergent r's, rays coming from a source nearer than infinity. Finsen r's. See Finsen light, under light. r.-fungus. Same as actinomyces. gamma r's, γ r's, electromagnetic waves of great penetrative power which are emitted from radio-active substances. They are similar to Roentgen rays, but of much shorter wave length, even as short as o.or of an Angstrom unit, and are usually associated with beta rays. glass-r's, the rays formed in an x-ray tube by the cathode rays striking the glass wall of the tube, so called to distinguish them from the x-rays originating at the Goldstein's r's, rays formed when anticathode. x-rays pass through some transparent medium. Called also s r's. hard r's, x-rays of short wave length and great penetrative power. heat r's. See radiant heat, under heat. hertzian r's, electromagnetic waves similar to a light wave, but having a greater wave length. They are the waves used in wireless transmission of signals, speech, etc. ir's, an alleged form of radiant emanations allied to n rays, and given off from the brain during certain psychic processes. incident r. See refraction. indirect r's, rays formed at the surface of the glass of the tube. Lenard r's, cathode rays after they have issued from a Crookes tube through a window of platinum foil. medullary r., any cortical extension of a bundle of tubules from a malpighian pyramid of the kidney. Millikan r's, electromagnetic waves which reach the earth from unknown cosmic sources. They are similar to the gamma rays of radium, but their wave length (0.0007 to 0.0004 of an Angstrom unit) is fifty times as short and their penetrating power (6 feet of lead) is correspondingly greater. minin r's, rays generated by passing incandescent light through dark blue glass. nr's, an alleged form of radiation, the identity of which is not well established. Called also *Blondlot r's*. A variety of n rays (called n' rays) differs from n rays in diminishing the luminosity of light and of faintly surfaces. Nieuenglowski's r's, luminous rays given out by substances which have been exposed to the sun. paracathodic r's, rays formed by the impaction of cathode rays against a body (the anticathode) in their path. parallel r's, rays which come from a source at an infinite distance. Divergent rays may be made parallel by means of a convex lens or a concave mirror. polar r. Same as astral r. positive r's, positively charged atoms emitted from a (heated) anode and given a high velocity in a vacuum by the electric field. If they are then passed through a magnetic field or a combination of magnetic and electric fields they are deflected from their course and their mass can in this way be determined. **primary r.**, a ray given off directly from a radio-active substance. **refracted** See refraction. B r's. See Goldstein's r's. Roentgen r's, electromagnetic vibrations or waves set in motion when electrons, moving at high velocity, impinge on certain substances, especially the heavy metals. They are able to penetrate most substances, to affect a photographic plate, to bring about chemical reactions, and to produce changes in living matter. They are generated by passing a current of high potential through a highly exhausted vacuum tube (Coolidge tube) and are used in taking photographs called skiagrams or shadowgraphs of various parts of the body. They thus reveal foreign bodies therein, calculi, bullets, etc., or the condition of the invisible parts, such as fractures, as well as the function of such organs as the heart, stomach, intestines, etc. They are also used in treating various diseased conditions, such as lupus, cancer, eczema. Called also x-rays. Sagnac r's, secondary betarays formed when gamma-rays are reflected from a metal surface. secondary r., a ray formed when a primary ray strikes against matter. soft r's, Roentgen rays of long wave length and little penetrative power. ultraviolet r's., those invisible rays of the spectrum which are beyond the violet rays. They vary in wave length from 4000 to 200 Angstrom units. x-r's, the name given by Roentgen to the rays now known as Roentgen ravs.

rayage (ra'ej). The dosage of any form of radiant energy.

Rayer's disease (ra-yāz') [Pierre François Rayer, French physician, 1703-1867]. Xanthoma.

Raygat's test (ra'gats). See under tests.

raying (ra'ing). Exposure to the action of x-rays or any other kind of radio-activity.

Raymond type of apoplexy (ra-mon') [Fulgence Raymond, French neurologist, born 1844]. See under type.

Raynaud's disease (ra-nōz') [Maurice Raynaud, French physician, 1834-1881]. See under disease.

Rb. A symbol of rubidium.

R. C. P. Abbreviation for Royal College of Physicians.

R. C. S. Abbreviation for Royal College of Surgeons.

R. D. Abbreviation for reaction of degeneration.

R. D. A. The right dorso-anterior position of the fetus at delivery.

R. D. P. The right dorso posterior position of the fetus.

R. E. Abbreviation for radium emanation and right eye.

re- [L.]. A prefix signifying back, again, contrary, etc.

react (re-akt'). r. To respond to a stimulus. 2. To enter into chemical action with.

reactant (re-ak'tant). The original substance entering into a chemical reaction.

reaction (re-ak'shun) [L. re again + ag'ere to act]. 1. Opposite action, or counteraction; the response of a part to stimulation. 2. The phenomena caused by the action of chemical agents; a chemical process in which one substance is transformed into another substance or substances. [Specially named reactions not defined here will be found under tests] **Abderhalden's r.**, a serum reaction based upon the hypothesis that when a foreign protein gets into the blood the body reacts by elaborating a ferment which causes disintegration of the protein. Such a ferment is called a protective ferment (Abwehrfermente) and is specific for the particular protein which caused its forma-tion. This reaction was first applied to the diagnosis of pregnancy on the principle that in the blood of pregnant women there is present a pro-teolytic ferment which will cause cleavage of placental albumin and placental peptone. The same principle is applied to the diagnosis of cancer because the blood of cancer patients contains a ferment which digests coagulated cancer protein. Similarly, in dementia præcox, the brain becomes degenerated and furnishes to the blood substances which excite the formation of a ferment capable of decomposing proteins of human brain. This is the Abderhalden-Fauser reaction. The same principle has also been applied to the diagnosis of syphilis, tuberculosis, and the acute infections. Abderhalden-Fauser r. See under Abderhal-Abden's r. Abelen's r., a reaction for ascertaining the presence of salvarsan in the urine. From 7 to 8 c.c. of urine are acidulated with 2 or 3 drops of 0.1 per cent. solution of hydrochloric acid; 3 or 4 drops of 10 per cent. sodium nitrite solution are added, and then 2 or 3 drops of a 10 per cent. alkaline resorcin solution, and, finally, an excess of sodium hydroxid. abortin r. See abortin test, under tests. accelerated r., when a biologic reaction such as serum sickness appears in a shorter time than usual it is said to be accelerated.

acetic-acid r. See Rivalta's r. acetonitril r. See acetonitril test, under tests. acid r., the turning of blue litmus-paper red: a test for the presence of acids. Acree-Rosenheim r. See See Adamunder tests. Adamkiewicz's r. kiewics test, under tests. agglutination r. See agglutination and Widal's test, under tests. alkaline r., the turning of red litmus blue: an indication of the presence of an alkali. allergie r.

See cutaneous r. (2d def.). alpha-naphthol r. See Molisch's lest, under lests. amphicrotic r., amphotoric r., a combination of acid and alkaline reactions indicated by the alteration of the color of both the blue and red litmus by the same reagent. amphigenous r. Same as amphoteric anaphylactic r., the reaction which occurs in anaphylactic shock. anaphylactoid r., pseudoanaphylaxis. anatoxin r., an intradermic reaction in which anatoxin is used. antalgic r., a bodily reaction or response having the purpose of avoiding pain. antigen r. of Debré and Paraf, a complement-fixation reaction for the diagnosis of urinary tuberculosis, using for antigen the patient's urine, for antibody known tuberculosis serum, and testing the complement against a hemolytic serum of sheep's corpuscles and antisheep serum. antigen-antibody r., the little understood reaction which occurs when antigen encounters its specific antibody. See immunoantitryptic r., the reaction produced by the blood upon mixtures of trypsin and casein solutions. Such reaction is modified by various diseased conditions, such as cancer, tuberculosis; also by the pregnant condition. Ascoli's r. Same as miostagmin r. associative r., a reaction in which the response is withheld until the idea presented has suggested an associated idea. Austrian's r., an ophthalmic reaction for typhoid fever by the use of an antigen prepared from a mixed culture of a large number of different strains of typhoid bacilli. axon r. See chromatolysis. bacteriolytic r., the reaction which brings about specific bacteriolysis. Bareggi's r., the formation in a test-tube of an unretracted clot, with but little serum, from the blood of typhoid fever; but if the blood be taken from a patient with tuberculosis, the clot retracts with the separation of much serum. **Bechterew's** r., in cases of tetany the minimum of electric current needed to arouse muscular contraction needs to be diminished at every interruption or change of density in order to prevent tetanic contraction. Bence-Jones r., the precipita-tion of albumose by nitric acid, followed by its redissolving on boiling and being precipitated again on cooling. Beyerinck's r. Same as cholera r. Bittorf's r., in renal colic the pain produced by squeezing the testicle or pressing the ovary radiates to the kidney. biuret r. See biuret test, under tests. Brieger's cachesia. r. See cachexia r. cachexia r., increase in the antitryptic power of the blood-serum seen in malignant disease and other diseases characterized by cachexia. Calmette's r. See ophthalmic r. Cammidge's r. See pancreatic r. Cannizzaro's r., the reaction which aldehyds undergo when brought in contact with animal tissue; one molecule of the aldehyd is reduced to the corresponding alcohol and another molecule is simultaneously oxidized to the corresponding acid. bamino r., alpha-amino-acids unite with CO2 in the presence of alkalis or alkaline earths to form salts of carbamino-carboxylic acids. This reaction is used in studying the course of protein digestion. See formol titration, under method. Chantemesse's r., the ophthalmic reaction for typhoid fever. See ophthalmic r. cholera r., cholera red r., a red color developing on the addition of concentrated sulphuric acid to a culture of cholera vibrio. coagulation r. See Hirschfeld-Klinger r. coagulo-r., a test for syphilis based on the fact that syphilitic sera inhibit the coagulation of the blood by interference with thrombia production more than do normal sera; called also Hirsch-feld-Klinger r. complement-fixation r. See fixation of complement. compluetie r. Same as Wassermann r. conglutination r., a characteristic clumping reaction obtained by a mixture of conglutinin, bacteria, fresh complement, and a specific immune serum from which the agglutinins have been removed by absorption. See congis-tinin. conjunctival r. See ophthalmic r. comsensual r., a reaction that takes place independently of the will. coupled r., a series of linked reactions. cutaneous r., cuti-r. r. An inflammatory or irritative reaction on the skin, occurring in certain infectious diseases, on the application to or injection into the skin of a preparation of the organism causing the disease Such reactions occur in tuberculosis, glanders, typhoid fever, leprosy, syphilis, diphtheria, and tinea. See the following reactions or tests: Deehan's r., Lautier's test, Lignière's test, Moro's r., Noguch's luetin r., pallidin r, Pirquet's r., Schick's test, typhoidin test.

2. A reaction produced by applying to an abrasion or by injecting into the skin a solution of a protein or a pollen to which the patient is sensitive. Deehan's typhoid r., a cutaneous test for typhoid fever in which the reagent is 4,000,000,000 typhoid bacilli in 1 c.c. of physiologic salt solution. r. of degeneration, the reaction to electric stimulation of muscles whose nerves have degenerated. It consists of a loss of response to a faradic stimulus in a muscle, and to galvanic and faradic stimulus in a nerve. Galvanic irritability of the muscle is increased. r. of degeneration, franklinic, a form of reaction elicited by static electricity and similar to the reaction produced by the faradic current. depotr., a red reaction of the skin around the point of entrance of the needle in the subcutaneous tuberculin test. dermotuberculin r. Same as Pirquet's r. desmoid r. (for gastric secretion and motility), a bag of rubber tissue containing methylene-blue and iodoform, and tied with a string of soft cat-gut, is administered to the patient: normal gas-tric juice will digest the string and liberate the stain, which will appear in the urine after five or six hours. **Detre's r.**, a differential reaction between infection with bovine and human tuberculosis, made by simultaneous cutaneous inoculation with a filtrate of human and one of bovine bacilli. Called also differential cuti-reaction. diazo-r. See Ehrlich's r. Dochez and Avery's r. See precipilin r. egg-yellow r., a yellow foam appearing in Ehrlich's reaction before the addition of ammonia; believed to indicate acute pneumonia. Ehrlich's diazo r., a reaction of a pure pink or red color resulting from the action of diazobenzenesulphonic acid and ammonia upon certain aromatic substances found in the urine in some conditions. This reaction has diagnostic value in typhoid fever and measles and prognostic value in tuberculosis. **electric r.**, a reaction, such as muscular contraction, caused by the application of electricity to the body. **electronic** r., a flushing on some part of the body produced by stimulation of the depressor nerve between the third and fourth dorsal spines. used as a splanchnodiagnostic test in cancer, syphilis, tuberculosis, etc. (Abrams). endothermal r., endothermic r., a chemical reaction which is accompanied by the absorption of heat. **epiphanin r.**, a reaction for the determination of antibodies in the blood-serum, especially in the serodiagnosis of syphilis. The technic depends on a change of reaction to phenolphthalein in a neutralized solution. A mixture of the suspected solution and of an extract from a syphilitic organ are made as follows o.1 c.c. of a 10 per cent. solution of the serum in physiologic salt solution is mixed with 0.1 c.c. of an alcoholic extract of a syphilitic fetal liver. To this is slowly added r c.c. of decinormal sulphuric acid and 1 c.c. of an exactly equivalent solu-tion of barium hydroxid. On the addition of a drop of phenolphthalein solution the fluid turns red if the serum is from a syphilitic, while there is no change in tint with the serum of a non-syphilitic person (J. A. M. A.). erythrocyte sedimentation r., when fresh citrated blood is allowed to stand in a column, the erythrocytes settle down, leaving a clear plasm above. The extent and velocity of this sedimentation vary widely under various physiologic and pathologic conditions. r. of exhaustion, reaction to electric stimulation

seen in conditions of exhaustion. In it the reaction normally produced by a certain current can only be reproduced by an increase in the current. **exo**thermal r., exothermic r., a chemical reaction during which heat is evolved. fatigue r., rise of temperature on muscular effort: seen in persons with active tuberculosis. Fauser r. See Abderhalden-Fauser r. Felix-Well r. See Weil-Felix r. Ficker's r., the clumping of dead typhoid bacilli by the blood-serum of persons affected with typhoid fever. fixation r., fixation of the complement. fever. fixation r., fixation of the complement. flaginac r., an indication of the presence of Bacilus coli in water, consisting of flow fluorescence in glucose neutral broth, ag or acid and gas with lactose, in or indol in broth, ac or acid and clot in milk. flocculation r. See Sachs-Georgi test, under tests. Flora's r. Same as Flora's sign. See sign. Florence's r. See Florence's test, under tests. focal r., the reaction that occurs at or about the site of an infection or the point of an injection. It may be induced by the injection of a specific agent, such as tuberculin, mallein, of a specific agent, such as tuberculin, mallein, or a specific agent, such as tuberculin, manient, or a bacterial vaccine, or by the use of non-specific agents. **formol r.** See *formalin test*, under *tests*. **Fornet's r.**, a reaction for syph-The serum of the patient is treated with the serum taken from a paretic. If syphilis is present, a flocculent ring will appear at the line of contact of the two serums. **Freund's r.**, the serum of non-cancerous persons destroys cancer cells, while that of cancer patients has no lytic effect. Freund-Kaminerr., Freund's reaction. fuchsinophil r., certain substances when stained in fuchsin retain the stain on being treated with picric acid alcohol. furfurol r., a red color produced when furfurol is brought in contact with anilin. Gangi's r., 3 or 4 c c of hydrochloric acid are poured into a test-tube and to this are added 4 or 5 c.c. of the liquid to be tested. If the liquid is an exudate, a white caseous disk forms at the line of contact with the acid, and this gradually extends into the serous fluid as a thick, shiny, white or greenish mass. If the liquid is a transudate only a thin disk forms. Gerhardt's r. See Gerhardt's test, under tests. Ghilarducci's r., contraction of the muscles of a limb when the active electrode is placed on a part somewhat removed from them. Gmelin's r. See Gmelin's test, under tests. Goetsch's skin r. (for hyperthyroidism). In this test 8 minims of a 1.1000 solution of epinephrin are diluted with an equal quantity of sterile water and injected hypodermically into the arm. There is formed at once an area of blanching around the point of injection, and about the margin of this usually a red areola, gradually shading off into the surrounding tissue. In about half an hour the center of the white area becomes bluishgray to lavendar, and at the end of about a half hour to two hours the red areola takes on the bluish or lavender color, while that in the center This lavender areola remains for disappears. about four hours from the time of injection and is the most characteristic part of the test Accom-panying the local reaction there may be an increase in pulse-rate, with palpitation of the heart and an exaggeration of the tremor and nervous and an exaggeration of the tremor and nervous symptoms in general gold r. See Lange's test, under test. group r. See group agglutination, under agglutination. Gruber's r., Gruber-Widal r. (for typhoid fever): Dilutions of the patient s serum 1:20, 1.40, and higher if desired are made. To each dilution is added an equal volume of a twenty-four-hour bouillon culture of Recterium tubescent. In the magazarante ture of Bacterium typhosum. In the macroscopic method these mixtures are made in test-tubes, are incubated in a water-bath at 55° C. for two hours, and then read. The flocculation and precipitation can be seen with the unaided eye or with a hand lens. In the microscopic method a small drop of each mixture is mounted as a hanging drop and otherwise the microscopic method as a hanging drop and the microscopic method where we have mixtured the mixture is mounted as a hanging drop and the mixture is mixtured in the m observed under the microscope. Gubler's r., the formation of a brown color on gradually adding nitrosonitric acid to urine; seen in hemapheic

jaundice. Hecht-Weinberg-Gradwohl modification of the Wassermann r., the natural antisheep amboceptor and the natural hemolytic complement found in the patient's fresh serum are utilized instead of the antisheep-rabbit amboceptor and guinea-pig complement of the regular test.

hemiopic pupillary r., reaction in certain
cases of hemianopia in which the stimulus of light thrown upon one side of the retina causes the iris to contract, while light thrown on the other side arouses no response. Called also Wernicke's r. Henle's r., the medullary cells of the adrenals stain dark brown on treatment with chromium Hermann-Perutzr. Same as Perutzr. Herxheimer's r., an inflammatory reaction produced in syphilitic tissues following the ingestion of salvarsan, mercury, or other specific treatment. Hirschberg's r., an infectious disease resembling typhoid fever, but not due to organisms of the typhoid group **Hirschfeld-Klinger r.** See phoid group coagulo-r immunity r., any reaction or response on the part of a patient or an animal organism to bacterial and other infections; such, for instance, is the Widal test, the Noguchi reaction, etc. indophenol r. See indophenol test, under tests. intracutaneous r., a reaction following an injection into the substance of the skin; the most common form is the reaction following such an injection of tuberculin. Jarisch-Herxheimer r., increase of syphilitic symptoms sometimes following the initial dose of an arsphena-Jolly's r., failure of response to faradic stimulation in a muscle, the power of voluntary contraction as well as the response to galvanic stimulation being retained. Kiutsi-Malone r., a modification of the Abderhalden test made without the use of dialyzing thimbles, and with the employment of a secret preparation, "nin-sern" Klausner's r., the formation of a flocculent precipitate when distilled water is added to fresh blood-serum in certain stages of syphilis and other infectious diseases. Koch's r., tuberculin reaction. Koler r. Same as Adamkiewicz's test. Kottmann's r. See Kottmann's lest, under lests. Krauss's precipitin r., an agglutination test for typhoid fever by the use of a mixture of extract of typhoid bacilli and typhoid serum Landau's r. See Landau's test, under tests. Lange's r. See Lange's test, under tests. Lieben's r. See Lieben's test, under Lignieres's r. See Lignieres's test, under lignin r., a color reaction given by wood cellulose, consisting of a yellow color with aniline salts and a red color with a solution of phloroglucinol in concentrated hydrochloric acid. local r., a reaction similar to a focal reaction occurring at the point of injection. **Loewi r.**, dilatation of the pupil following the instillation into the eyes of a solution of adrenalin said to occur in diabetics. Löwenthal's r., the agglutinative reaction in relapsing fever. luetin r. See Noguchi's luetin r. Malmejde r. See Malmejde's test, under tests. Malone-Kiutsi r. See Krutsi-Malone r. Mandelbaum's r. (for the detection of typhoid carriers and the differentiation of recent and old cases), a drop of blood is transferred to a suitable medium, which is slightly inoculated with typhoid bacilli. If it is a recent case of typhoid, the bacilli arrange themselves in chains or threads or else in clusters, and are all immovable, due to the ag-glutinating power of the serum. If the blood is that of a person who has had typhoid years before, there is a tendency to the formation of the chains, but some of the bacilli will remain isolated and movable. Called also fadenreaction. Marchi's r., failure of the myelin sheath of a nerve to become discolored when treated with osmic acid. Millon's r. See Millon's test, under tests. miostagmin, miostagminic r., a blood-serum test to confirm the diagnosis of malignant tumors, syphilis, typhoid, etc., based on the fact that when the antibodies of a disease and its corresponding antigens are brought together, there is a lowering of the surface tension

of the mixture. This surface tension is measured by counting the number of droplets which fall in a minute from a special pipet called a stalagmometer. Taking distilled water as a standard, the greater the number of drops a minute, the lower is the surface tension. If the diluted blood-serum of a cancer or typhoid patient is exposed to the action of the corresponding antigen, the surface tension of the mixture will be lowered. See rhinoreaction. Molisch's Moeller's r. See rhinoreaction. Molisch's r. See Molisch's test, under tests. Morelli's r., to a testtube filled with a saturated aqueous solution of corrosive sublimate three or four drops of pleural fluid are added. If a yellowish dense clot forms, which adheres to the side of the tube or falls to the bottom in a mass, the fluid is an exudate. If the clot breaks up into flakes, the fluid is a transudate.

Moritz-Weisz r. See Moritz-Weisz test, under tests Moro's r., an eruption of pale or red papules on a cutaneous area after the application of an ointment of 5 c.c. of old tuberculin and 5 gm. of anhydrous wool-fat. mouse-tail r., stiffening of the tail in rats and mice following the administration of a small dose of morphin. Much's r., Much-Holzmann r., inhibition of the hemolytic action of cobra venom on the red blood-corpuscles seen in dementia præcox and manic-depressive insanity. Called also psychoreaction. myasthenic r., decrease in faradic excitability of muscle, as in periodic paralysis. myotonic r., an increase in faradic excitability, as in congenital myotonia. Neisser's r., a general reaction sometimes following an initial dose of arsphenamin, characterized by transitory increase of headache in cerebral syphilis and of the lightning pains in tabes. **neurotonic r.**, muscular contraction persisting after the stimulus which produced it has ceased. neutral r., a reaction that indicates the absence of both alkaline and acid properties. ninhydrin r., a reaction for the detection of peptone or amino-acid in a test for pregnancy as fol-lows. About 1 gm. of coagulated placental tissue, which on boiling with water yields no compounds which react with ninhydrin, is placed in a diffusion cell and covered with from 2 to 3 c.c blood-serum and the mixture dialyzed in 20 c.c. distilled water. The contents of the cell and the outer fluid are covered with a layer of toluol. Dialysis is continued from twelve to sixteen hours at a temperature of 37° C. in the incubator. To 10 c.c. of the dialysate 2 c.c. of a 1 per cent. aqueous solution of ninhydrin (triketo hydrindene hydrate) are added. The mixture is heated and kept at the boiling-point for just one minute. If the serum is derived from a pregnant woman, a blue coloration of the dialysate occurs. This coloration is absent if the serum is from a person who is not pregnant (Jour. A. M. A.) **nitritoid r.**, nitritoid crisis. See under crisis. **Noguchi's r.** 1. A modification of the Wassermann reaction. This latter Noguchi modifies as follows "(1) He prepares the antigen by extracting a lipoid substance from the liver and heart of dogs and cows. (2) Instead of using sheep's corpuscles in the hemolytic series, he employs human corpuscles, owing to the fact that a certain percentage of human sera tested produced hemolysis of the sheep's corpuscles. (3) In his test, therefore, he obtains the hemolytic amboceptor by immunizing rabbits with washed normal human corpuscles. (4) Another important improvement in the technic is the preservation of the specific antigen and the hemolytic amboceptor, which rapidly lose their strength in solution, in a dried form by soaking measured strips of filter-paper (0.5 mm. square) with each. His test is carried out as follows: A strip of antigen filter-paper is brought in contact with a definite quantity of the human serum to be tested, and fresh guinea-pig's serum added, the whole being suspended in isotonic salt solution. This is allowed to stand at incubator temperature, and then the hemolytic series added by taking a strip of the hemolytic amboceptor paper and a

definite quantity of washed normal human bloodcorpuscles." 2. A reaction seen in general paralysis and tabes. To 1 c.c. of the cerebrospinal fluid is added 0.5 c.c. of a solution of 10 per cent. butyric acid in normal salt solution. This is heated, and then there is added o.i c.c. of a 4 per cent. sodium hydroxid solution. This is again heated. In about three hours the tube is examined. In tabes and general paralysis a characteristic flocculent precipitate forms, which gradually settles so that after twentyfour hours there is a bulky precipitate at the bottom of the tube, the supernatant fluid being clear. The test indicates an increased amount of globulin in the cerebrospinal fluid. Noguchi's luctin r. (1909), a cutaneous reaction for syphilis. A drop of lutein is injected into the skin of the arm. No reaction occurs in a non-syphilitic person, but in one affected with syphilis there forms, in from six to twenty-four hours, a distinct papule surrounded by a bluish-red halo. See *luctin*. Nonne-Apelt r., 2 c.c. of cerebrospinal fluid are mixed with an equal quantity of a neutral saturated solution of ammonium sulphate and compared after three minutes with another tube containing spinal fluid only; if there is no difference or only a faint opalescence the reaction is said to be negative. If there is an opalescence or turbidity the reaction is said to be positive phase r, which indicates an excess of globulin in the fluid and points to nervous disorder. A normal fluid treated with heat and acetic acid only becomes turbid and is called positive phase 2. ophthalmic r., local reaction of the conjunctiva following instillation into the eye of toxins of typhoid fever and tuberculosis. The reaction is much more severe in persons affected with these diseases than in the healthy or those affected with some other disease. Called also Calmette's ophthalmoreaction. oxydase r., the formation of dark-blue granulations in myeloid cells when treated with alpha-naphthol and dimethyl-paraphenylendiamin. Pagano's r., a tuberculin re-action following application of the tuberculin to the urinary meatus. pain r., dilatation of the pupil on a feeling of pain. pallidin r., a cutaneous reaction for syphilis made by applying pallidin, which is an extract of lung affected with infantile syphilitic pneumonia, to the skin. A positive reaction consists of the development of a slightly raised inflammatory papule surrounded by a zone of erythema. pancreatic r. (for ascertaining the presence of pancreatitis or malignant disease of the pancreas), two specimens of urine, one of which is treated with mercuric chlorid, are boiled with hydrochloric acid for ten minutes, and after the excess of acid has been neutralized with lead carbonate, are examined by the phenylhydrazin test. The difference in the amount of deposit yielded by the two specimens indicates the presence of pancreatic disease. Called also Cammidge's r. paraserum r., paragglutination; agglutination of strains of typhoid and dysentery bacilli with those of paratyphoid, Bacillus coli, mutable cholera, and other infections. percutaneous r. era, and other infections. percutaneous r. Same as Moro's r. r.-period, r.-time, the time that elapses between stimulation and the consequent reaction. peroxidase r. See Good pasture's stain, under stain. Perutz r., a reaction for the serodiagnosis of syphilis: the patient's blood-serum is inactivated and 0.4 c.c. of it is drawn off with a pipet. To this is added 0.2 c.c. of each of the two following solutions: (1) sodium glycocholate, 2.0; cholesterin, 0.4; 95 per cent. alcohol, 50; or, this solution being diluted with water, 1: 20 parts, (2) a 2 per cent. aqueous solution of sodium glycocholate. The whole is shaken vigorously. If syphilis is present, fine flakes appear in the fluid. Petzetaki's r. See Petzetaki's test, under tests. Pfaundler's r. Same as Mandelbaum's r. Pfaundler's r. Pfeiffer's r., a mixture of a culture of cholera spirillum with diluted agglutinating cholera serum is injected into the peritoneal cavity of an animal; if, after twenty-five minutes, some of the mixture is withdrawn, the spirilla will be found to have been

killed. phrenie r., lesion of the diaphragm as a result of streptococcal and gonorrheal infection. Pietrowski's r. Same as biuret r. Pirquet's r., a local inflammatory reaction of the skin following inequality with transcription to since the second of the skin following inequality with transcription to since the second of the skin following inequality. lowing inoculation with tuberculosis toxins. It is more marked in tuberculous subjects than in normal ones. Called also scarification test. Porges-Hermann-Perutz r. Same as Perutz r. Porges-Meier r. See Porges-Meier test, under tests. psychogalvanic r., variations in the electric current passed through the body when the subject undergoes emotional disturbance of any kind. precipitin r., equal volumes of clear urine are mixed with antipneumococcus sera of Types I, II, and III, and incubated for an hour. A cloudy to and III, and incubated for an hour. A cloudy to heavy flocculent precipitate indicates a positive reaction. Called also Dochez and Avery's r. puncture r., swelling and redness at the point where tuberculin is injected subcutaneously: diagnostic of tuberculosis. quanti-Pirquet r., the Pirquet reaction applied with a view of the amount or activity of the tuberculous infection. recurrent r. See revivescence. reversible r., a chemical reaction which occurs in either direction; a reaction in which the products react to reform the factors of the reaction. . Rickenberg's r., the absorption of blood-platelets by trypanosomes in immune serum. Rivalta's a reaction for distinguishing fluids of transudation and exudation. The technic is as follows: 50 c.c. of distilled water are put in a test tube and one drop of a 50 per cent. solution of acetic acid is added. To this one drop of the fluid removed by puncture or otherwise is added. The latter slowly drops to the bottom, and when coming in contact with the acidulated water, assumes the form of a bluish-white ring which broadens out and becomes honey-combed. This ring may become striated by numerous bluishwhite lines. These opalescent and lactescent stripes occur only when the fluid has an inflammatory origin; in other words, when it is an exudate. The precipitate dissolves in an excess of acetic acid, which differentiates it from mucin. Roger's r., the existence of albumin in the sputum, indicating tuberculosis. Rosenbach's r., the formation of a deep-red color when concentrated nitric acid containing a small amount of nitrous acid is gradually added to boiling urine. It points to an increase in the putrefactive processes of the intestine. Rumpf's traumatic r. See Rumpf's sign (1st def.), under sign. Russo r., a reaction of the uring of typhoid patients on adding 4 drops of a solution of methylene-blue to 15 c c. of urine. In the first stage of typhoid the urine becomes light green; at the height of the disease, an emerald color; and during the decline, a bluish color. Sachs-Georgi r. See under tests. r. of Salomon and Saxl. See sulphur r. Schardinger's r., a reaction of oxidation or reduction made possible by a simultaneous and compensating reaction of reduction or oxidation. Cf. Cannizzaro's reaction. This reaction is used to distinguish between fresh milk and milk which has been heated. The milk is treated with aldehyd and methylene-blue or indigo blue; if the milk is fresh the dye is reduced to a colorless compound. Schick r. See Schick test, under tests. Schönbein's r., iodin is set free when potassium iodid and sulphate of iron are added to a solution of hydrogen peroxid. **Schultz-**Charlton r., when blood-serum from a normal person is subcutaneously injected into a scarlet fever patient, a blanching of the skin at the site of the injection occurs. Serum from scarlet fever patients does not produce this reaction. sedimentation r. See erythrocyte sedimentation r. Seifert's r. Same as epiphanin r. seroanaphylactic r., an anaphylactic reaction produced by the use of blood-serum. sero-enzyme r., Abderhalden's reaction. serum r., seroreaction. Sgambati's r., a reaction of the urine seen in peritonitis. The test-tube is filled to one-third

with urine, and then, as it is held very slanting, 2 or 3 c.c. of nitric acid is poured down the wall, a drop at a time, so that, without mixing with the urine, it settles to the bottom of the tube. In about a minute, the zone of contact between the acid and the urine shows-above the orange yellow halo visible in normal urine—another, a grayish blue halo that spreads upward. The light must fall on the tube against a light background. After chloroform has been added and the tube has been agitated, it is set aside for the chloroform to settle. The grayish-blue tint gradually enanges to a ruo, red, which is permanent. **Sigma r.**, a flocculation reaction for the diagnosis of syphilis. **skin r.** See culancous r. **small-drop r.** See miostogmin r. **Smith's r.**, anaphylaxis. **Strauss's r.**, when material containing virulent glanders bacilli The gravish-blue tint gradually changes to a ruby material containing virulent glanders bacilli is inoculated into the peritoneal cavity of male guinea-pigs, scrotal lesions develop. sulphur r.. a reaction in the urine of cancer patients: 150 c.c. of albumin-free urine are diluted with 100 c.c. of water and mixed with 150 c.c. of Salkowsky's mix-ture of barium salts. The mixture is filtered, and to 300 c.c. of the filtrate are added 30 c.c. of hydrochloric acid, specific gravity 1.12, and the mixture boiled on an asbestos mat for fifteen minutes and then left on the water-bath until the precipitate settles clear, being kept always covered with a small funnel. It is then very carefully filtered and 200 c.c. of the filtrate are heated on the asbestos mat for fifteen minutes with 3 c.c. of perhydrol and poured into a conic glass. After from four to seven hours a positive reaction will be indicated by the precipitate of barium sulphate contaminated with coloring-matter which settles to the bottom. Called also r. of Salomon and Saxl. Targowla r., a reaction for the presence of syphilis based on the fact that a mixture of normal cerebrospinal fluid with elixir paregoric produces a colloidal suspension, while if the spinal fluid is syphilitic a precipitate is formed. thread-r. See Mandelbaum's r. toxin-antitoxin r. See immunoreaction. traumatic r., a muscular reac-tion seen in traumatic neuroses, in which, after the cessation of a vigorous faradic stimulation, the muscle will exhibit a characteristic fluctuating movement (myokymia). tryptophan r., the appearance of a violet color on the addition of bromin water to filtered gastric contents: said to indicate the presence of gastric cancer. tuberculin r., febrile symptoms appearing in a tuberculous person in response to injections of tuberculin. See tuberculin test, under tests. tubing r., a reaction following the injection of arsphenamin through new rubber tubing. urochromogen r. Same as Moritz-Weisz test See under tests Voges-Proskauer r., a reaction to detect the presence of acetyl-methyl-carbinol and thus to distinguish between the colon group and the aërogenes group of bacteria. One c.c. of a 50 per cent. solution of potassium hydroxid is added to a twenty-four-hour dextrose broth culture of the organism in question and allowed to stand for twenty-four hours at room temperature. An eosin pink color at the top of the tube shows the presence of acetyl-methyl-carbinol. A yellow color may be produced by the sugar only. The reaction can be hastened by heating and shaking. von Pirquet's r. See Pirquet's r. Wassermann r., a test for syphilis based on the fixation of complement, q. v., under fixation. The antibody is the unknown sought in the patient's serum; many things may be used as antigen; and there are numerous modifications of the original test. See fixation of complement. Wassermann r., provocative, a Wassermann reaction preceded by the administration of salvares of the second s tion of salvarsan. This procedure may result in a positive reaction in a patient who had previously given negative results. Weil-Felix r., agglutination in the blood-serum of typhus patients of a bacillus (Weil-Felix bacillus) of the proteus group from the urine and feces. Weisz's r. See Moritz-Weisz test, under tests. Wernicke's r. See hemiopic

pupillary r. Widal's r., the clumping of bacilli, as in Widal's test. See Widal's test, under tests. Wildbols r., a few drops of the patient's own urine are injected intradermically, when a local reaction follows if the patient is tuberculous. Wolff-Calmette r. See ophthalmic r. Wolff-Eisner r., ophthalmic reaction. xanthroproteic r. See Mulder's test, under tests.

reactivate (re-ak'tiv-āt). To make active again; especially the restoring of the activity to immune serum that has had its activity destroyed.

reactivation (re-ak-tiv-a'shun). The restoration of the activity to an inactivated serum by the addition of complement.

reactivity (re-ak-tiv'it-e). The process or property of reacting.

Reading bacillus (red'ing). See under bacillus.

reagent (re-a'jent) [L. re again + ag'ere to act].

Any substance employed to produce a chemic reaction. acid molybdate r. See Folin's acid molybdate reagent. Acree-Rosenheim r., commercial formalin, I part; water, 6000 parts. al-kaline copper tartrate r. See Folin's alkaline copper tartrate reagent. Almén's r., to 5 grains of tannic acid in 240 c.c. of 50 per cent. alcohol add IO c.c. of 25 per cent. acetic acid. amino-acid r., an 05 per cent. solution of the sodium salt of beta-naphthaquinone sulphonic acid freshly prepared. Barfoed's r. See Barfoed's test, under pared. Barfoed's r. See Barfoed's test, under tests. Benedict-Hopkins-Cole r., 250 c.c. of a saturated solution of oxalic acid are added slowly to 10 gm. of powdered magnesium kept cool. Filter, acidify with acetic acid, and make up to I liter. **Bertrand's r.** A. Copper solution: Copper sulphate, 40 gm., to I liter of water. B. Alkaline solution: Rochelle salt, 200 gm., sodium hydroxid, 150 gm., to 1 liter of water. C. Iron solution: Ferric sulphate, 50 gm., sulphuric acid, 200 gm., to 1 liter of water. D. Permanganate solution: Potassium permanganate, 5 gm., to I liter of water. By heating the alkaline copper solution (made from Solutions A and B) with glucose, cuprous oxid is formed. This is treated with the ferric sulphate solution, and the ferrous sulphate so formed is titrated with the solution of potassium permanganate. Bial's r., orcinol potassium permanganate. Bial's r., orcinol 1.5 gm., fuming hydrochloric acid 500 gm., ferric chlorid (10 per cent.) 20-30 drops. biuret r. See Gies's biuret r. Black's r., 5 gm of ferric chlorid and 0.4 gm. of ferrous chlorid dissolved in 100 c.c. of water. Blum's r. See Blum's test, under tests. Boas's r. See Boas's test, under tests. Bruecke's r., 50 gm. of KI, 120 gm. of HgI₂, water up to 1000 c.c. Cross and Bevan's r., two parts of concentrated hydrochloric acid and 1 part of ring chlorid by weight used for dissolving celluristics. of zinc chlorid by weight. used for dissolving cellulose. diazo r., a reagent consisting of two solutions which are mixed just prior to the test in the proportion of 25 c.c. of A to 0.75 c.c. of B. Solution A: sulphanilic acid, 1 gm.; distilled water, 1000 c.c. Solution B: sodium nitrite, 0.5 gm.; distilled water, 1000 c.c. tilled water, 100 c.c. dinitrosalicylic acid r. See Sumner's reagent. Edlefsen's r., an alkaline permanganate solution for testing for sugar in the urine. Ehrlich's diago r. Solution A: Dissolve 5 gm. of sodium nitrite in 1 liter of distilled water. Solution B: Dissolve 5 gm. of sulphanilic acid and 50 c.c. of HCl in 1 liter of distilled water. For use mix 1 part of A with 50 to 100 parts of B. Erd-man's r., a reagent for testing for alkaloids, consisting of nitric and sulphuric acids. Esbach's r., a mixture of a 1 per cent. aqueous solution of picric acid and a 2 per cent. solution of citric acid; used in quantitative estimation of albumin in urine. Exton's r., dissolve 200 gm. of Na₂SO₄.-10H₂O in 800 c.c. of water. Cool and add 50 gm. sulphosalicylic acid. Make up to 1 liter. Folin's r., boil 100 gm. of sodium tungstate and 80 c.c. of 85 per cent. orthophosphoric acid in 750 c.c. of water for two hours. Cool and dilute 1 liter. Folin's acid molybdate r., dissolve 150 gm. of sodium molybdate in 300 c.c. of water. Filter and

add 2 to 3 drops of bromin and shake. Later add 225 c.c. of 85 per cent. phosphoric acid and 150 c.c. of 25 per cent, sulphuric acid. Aërate off the bromin, add 75 c.c. of 90 per cent. acetic acid, and dilute to 1 liter. Folin's alkaline copper tartrate r., dissolve 12 gm. of Merck's sodium tartrate (or 15 gm. of Rochelle salt), 7 gm. of anhydrous sodium carbonate, and 20 gm. of sodium bicarbonate in 600 c c. of water. Dissolve 5 gm. of copper sulphate in 200 c.c. of water. Mix the solutions and dilute to 1 liter. Folin's sugar r. Solution A: Dissolve 5 gm. copper sulphate in 100 c.c. of hot water, cool, and add 60 to 70 c.c. of glycerol. Solution B. Dissolve 125 gm. of anhydrous potassium carbonate in 400 c.c. of water. Mix 1 part of Solution A and 2 parts of Solution B just before using. Folin-McEllroy r., dissolve 100 gm. of sodium pyrophosphate, 30 gm. of disodium phosphate, and 50 gm. of dry sodium carbonate in I liter of water. Dissolve 13 gm. of copper sulphate in 200 c.c. of water and pour into the first solution. **Fröhde's r.** See *Frohde's test*, under tests. **Frohn's r.** See *Frohn's test*, under tests. general r., a reagent that indicates the general class of bodies to which a substance belongs. Gies's biuret r., add 25 c.c. of a 3 per cent. solution of copper sulphate to each liter of 10 per cent. potassium hydroxid. Hager's r., a reagent for detecting sugar in the urine, consisting of iron ferrocyanid and caustic potash. **Haine's r.**, copper sulphate, 2, caustic potash, 7 5; glycerin, 15, distilled water, 150. **Ilosvay's r.**, a reagent used as a test for nitrites. It is prepared by treating a mixture of 0.5 gm. of sulphanilic acid and 150 c.c. of dilute acetic acid with o 1 gm of naphthylamin, and then with 20 c.c. of boiling water. The sediment produced by this reaction is dissolved in 150 c.c. of dilute acetic acid. The suspected substance is heated with this reagent to 80° c.c. of the sediment produced with this reagent to 80° c.c. of the sediment , when a red color is formed if nitrites be present Lloyd's r., a specially fine preparation of fullers earth obtained by elutriation used to absorb alkaloids from solutions. Mayer's r. See Mayer's test, under tests. Meyer's r., phenolphthalein, 0.032; decinormal sodium hydroxid, 21, with enough water to make 100 parts used in testing for blood, which even in minute quantities gives the solution a purple color. Millon's r. (1849). See Millon's test, under tests Nessler's r., an aqueous solution of 5 per cent. of potassium iodid, 2.5 per cent. of mercuric chlorid, and 16 per cent. of potassium hydroxid: used as a test for ammonia. Nylander's r. See Nylander's test, under tests. Obermayer's r., a solution of 2 gm. of ferric chlorid in 1 liter of hydrochloric acid. Penzoldt's r. See Penzoldt's test, under lests percutaneous r. See Moro's r. Porges-Meier r. See under tests. Sahli's r., mix equal Sahli's r., mix equal parts of a 48 per cent. solution of potassium iodid and an 8 per cent. solution of potassium iodate. Scheibler's r., a reagent made by boiling sodium tungstate with half as much phosphoric acid and water, precipitating with barium chlorid, dissolving in hot dilute hydrochloric acid, treating with sul-phuric acid, and evaporating. Schiff's r., a reagent for testing for the presence of aldehyds, prepared by dissolving 0.25 gm. of fuchsin in 1000 c.c. of water and decolorizing by passing sulphur dioxid into it. In the presence of aldehyd the blue color is restored. Schweitzer's r., a solution of hydrated cupric oxid in ammonia: used as a solvent for cellulose **Soldaini's r.** See *Soldaini's test*, under *tests*. **special r.**, one which determines the presence of some particular substance. **Spieg**ler's r. See Spiegler's test, under tests. splenic r., any drug or stimulus which causes the spleen to contract. Stokes's r., a solution containing 2 per cent. of ferrous sulphate and 3 per cent. of tartaric acid. For use add ammonium hydroxid to a small portion until the precipitate redissolves, thus forming ammonium ferrotartrate. Sumner's r., to 10 gm. crystallized phenol add 24 c.c. of 10 per cent. NaQH and dilute to 100 c.c. To 6.9 gm. of

sodium bisulphite add 60 c.c. of the alkaline phenol solution. To this add a solution containing 300 c.c. of 4.5 per cent. NaOH, 255 gm. NaKC4HQO. 4H2O, and 880 c.c. of 1 per cent. dinitrosalicylic acid. Tanret's r., for albumin in urine, etc.: mercuric chlorid, 1.35 gm.; potassium iodid, 3.32 gm.; acetic acid, 20 c.c.; distilled water, to make 80 c.c.; it gives a white precipitate with albumin. trichophytin r. See trichophytin test, under tests. Uffelmann's r. See Uffelmann's test, under tests. Weichardt's r. Same as epiphamin r. Weisz's r. See Moritz-Weisz test, under tests.

reagin (re'aj-in). A complement-fixing antibody. See antibody.

real focus, image, etc. See focus, image, etc.

realgar (re-al-gar') [Arabic rahy al-ghar powder of the mine]. Arsenic disulphid, As₂S₂: a pigment.

reamer (re'mer). A dental instrument for enlarging holes.

reamputation (re"am-pu-ta'shun). The repeated performance of an amputation.

reapers' keratitis (re'perz). See keratitis.

reargon (re'ar-gon). A combination of silver and glucosids for use in gonorrhea.

reattachment (re-at-atsh'ment) r The replacing of a dental crown or bridge 2 The reattachment to the alveolus of a tooth that has been loosened or replanted.

Réaumur's thermometer (re-o-merz') [René Antoine Ferschault *Réaumur*, French natural philosopher, 1683-1757]. See *thermometer*.

rebasing (re-ba'sing). The repairing or altering of the base of an artificial denture.

rebaudin (re-baw'din). A very sweet principle found in Eupatorium rebaudianum.

rebreathing (re-bre'thing). The breathing of fresh oxygen by the patient during the administration of an anesthetic for the purpose of securing rapid elimination of the anesthetic from the system.

recalcification (re-kal''sif-ik-a'shun). The restoration of lime-salts to the bodily tissues.

Recamier's operation (ra-kam-e-āz') [Joseph Claude Anselme *Recamier*, French gynecologist, 1774-1852] Uterine curettage.

receiver (re-se'ver). 1. A vessel for collecting a gas or a distillate. 2. A woman's menstrual napkin, or pad.

receptaculum chyli (re-sep-tak'u-lum ki'li) [L. "receptacle of the chyle"]. An expansion at the lower end of the thoracic duct at the point where it passes in front of the body of the second lumbar vertebra; Pecquet's cistern.

receptor (re-sep'tor). 1. A supposed group of atoms of the cell molecule which has the power of combining with and anchoring the haptophore groups of toxins, of amboceptors, or of cells. Receptors may remain attached to the cell or may be cast off into the serum. In either case they retain their combining powers. See *Lhr-lich's side-chain theory*, under *theory*. 2. Sherrington's name for the peripheral apparatus which receives a stimulation. See exteroceptive, interoceptive, and proprioceptive contact r., a sense organ adapted to respond to impressions from obiects in contact with the body. distance r., a sense organ which responds to impressions from objects remote from the body, as the ears and eyes. dominant r., an unknown substance or sub-stances located at the site of action of a drug which by combining with the drug enable it to exert its physiologic action. r. of the first order, a receptor which possesses a haptophore group only, and therefore serves only as a connecting link between the toxin and the tissues. This order of receptors includes only the antitoxins. gustatory r., the receptors for the sense of taste; the taste buds. pressure r., a receptor for stimuli of pressure or touch; a touch corpuscle. r. of the second order, a receptor which possesses

both a haptophore group for anchoring or holding the foreign toxin, and a zymophore group for its digestion. This group includes the agglutinis, the precipitins, and the opsonins. **secondary r's**, unknown substances, other than the dominant receptor, located at points other than the site of action which combine with a drug and so lessen its combination with the dominant receptor and its physiologic activity. **sessile r.**, a receptor which cannot be given off to form an antibody. **r. of the third order**, a receptor which possesses two combining groups only, a haptophore group for combining with the foreign toxin, and a complementophile group which combines with the complement that carries the zymotoxic element. This group includes the lysins.

recess (re-ses) [L. reces'sus]. A small empty space or cavity. Arlt's r., a small sinus occasionally present in the lower part of the lacrimal cochlear r., a depression on the inner wall of the vestibule of the labyrinth between the two limbs of the crista vestibuli. duodenojejunal r., a recess between the duodenojeiunal and duodenomusocolic folds at the left side of the elliptic r. Same as fossa spinal column. hemielliptica. epitympanic r., the upper part of the tympanic cavity which lodges the head of the malleus and the body of the incus. Called also tympanic attic and aditus ad antrum. Hyrtl's r. Called also aditus ad antrum. infundibular r., the cavity of the infundibulum. lateral r., the widest part of the fourth ventricle under the cerebellum. optic r., a recess in the floor of the third ventricle in front of the infundibulum. paracolic r., any one of the pockets that frequently exist at the left edge of the descending mesocolon. pharyngeal r., Rosenmuller's fossa. **pineal r.**, the cavity in the third ventricle separating the habenula into two parts. **piriform r.**, the sinus piriformis. **Rosenmuller's r.**, Rosenmuller's fossa. See *fossa*. **spheno-ethmoid r.**, the recess below the roof of the nasal fossa and between the cribiform plate of the ethmoid bone and the body of the sphenoid. **spheric r.** Same as fossa hemispharica. **suprapineal r.**, a recess in the posterior part of the third ventricle above the pineal recess. supratonsillar r., the space above and in front of the tonsils and between the pillars of the fauces triangular r., the recess of the third ventricle. utricular r., the utricle.

recession (re-sesh'un). The act of drawing away. In dentistry the retraction of the gum margin and underlying tissue away from the neck of a tooth, resulting in exposure of the cementum.

recessive characteristics (re-ses'iv). See Mendel's law, under law.

recessus (re-ses'us). Latin for cavity or recess. r. ante'rior [B N A], a passage from the fenestra rotunda leading to the scala tympani. r. cotug'ni, r. cotun'nii, a sac of the dura into which the ductus endolymphaticus leads. r. epitympan'icus [B N A], the epitympanic recess. r. fastig'ii, a recess in the roof of the fourth ventricle. parieta'lis, a cavity of the coelom which develops into pleural and part of the peritoneal cavities. r. pharyn'geus [B N A], a fossa in the nasopharynx on each side of the eustachian tubes; Rosenmüller's fossa. r. poste'rior, a deep portion of the interpeduncular fossa toward the pons. r. preop'ticus, a recess in front of the optic chiasm. r. superior sacci omen'ti, a fetal diverticulum between the vena cava and the intestinal canal. r. vestib'uli, a fold in the wall of the auditory vesicle which develops into the vestibule of the ear. recidivation (re-sid-iv-a'shun). The relapse of

a disease.

recipe (res'ip-e) [L.]. 1. The Latin for take:
used at the head of a physician's prescription,
and usually indicated by the symbol R. 2. A
prescription or formula.

recipient (re-sip'e-ent). The person who receives

the blood in transfusion. universal r., a person who can receive blood of any "type" without precipitation or agglutination of the cells.

recipiomotor (re-sip"e-o-mo'tor) [L. recip'ere to receive + mo'tor mover]. Pertaining to the reception of motor impressions.

reciprocal proportions, law of (re-sip'ro-kal). See Walton's law, under law.

Recklinghausen's canals, disease (rek'linghow-zenz) [Friedrich Daniel von Recklinghausen, German pathologist, 1833-1910]. See canal, disease.

reclination (rek-lin-a'shun) [L. reclina'tio]. One of the operations for cataract: a turning of the lens over on its back.

Reclus's disease (ra-klez') [Paul Reclus, French surgeon, 1847-1914]. See disease.

recoil-atom (re-koil'-at-om). See under atom.

recompression (re-kom-presh'on). See caisson disease, under disease.

recrement (rek're-ment) [L. recremen'lum]. The saliva or other material which, after secretion, is reabsorbed into the blood.

recrementitious (rek"re-men-tish'us). Of the nature of a recrement.

recresal (rek're-sal). A refreshing drink resembling lemonade which contains sodium acid phosphate and may be used for administering phosphoric acid.

recrudescence (re-kru-des'ens) [L. recrudes'cere to become sore again] The recurrence of symptoms after a temporary abatement.

recrudescent (re-kru-des'ent) [L. recrudes'cens].
Breaking out afresh.

Rect. Abbreviation for L. rectifica'tus, rectified.

rectal (rek'tal). Pertaining to the rectum.

rectalgia (rek-tal'je-ah) [rectum + Gr. ἄλγος pain]. Same as proctalgia.

rectectomy (rek-tek'to-me) [rectum + Gr. ἐκτομή excision]. Excision of the rectum.

rectification (rek"tif-ik-a'shun) [L. rectifica'tio].

1. The act of making straight, pure, or correct.

2. Redistillation of a liquid to purify it.

rectified (rek'tif-id). Refined; made straight. rectischiac (rek-tis'ke-ak). Pertaining to the rectum and the ischium.

rectitis (rek-ti'tis). Inflammation of the rectum; proctitis epidemic gangrenous r., a fatal disease endemic among the natives of the damp regions of the northern part of South America. Called also bicho and caribi.

recto-abdominal (rek"to-ab-dom'in-al). Pertaining to the rectum and abdomen. r-a. examination, bimanual examination with one hand in the rectum and the other on the abdomen.

rectocele (rek'to-sel). Same as proctocele.

rectoclysis (rek-tok'lis-is). Same as proctoclysis.

rectococcygeal (rek"to-kok-sij'e-al). Pertaining to the rectum and the coccyx.

rectococcypexy (rek-to-kok'se-peks-e). Same as proctococcypexy.

rectocolitis (rek"to-ko-li'tis). Same as colo-

rectocystotomy (rek"to-sis-tot'o-me). Same as proctocystolomy.

rectone (rek'tôn). A proprietary nutrient suppository.

rectopexy (rek'to-peks-e). Same as proctopexy.

rectophobia (rek-to-fo'be-ah) [rectum + Gr. φ6βος fear]. A morbid foreboding peculiar to patients with rectal disease.

rectoplasty (rek'to-plas-te). Proctoplasty.

rectoromanoscope (rek"to-ro-man'o-skōp). A speculum for examining the sigmoid flexure through the rectum.

rectoromanoscopy (rek"to-ro-man-os'ko-pe) [rectum + s-romanum sigmoid + Gr. σκοπεῖν to see]. Infection of the rectum and sigmoid; proctosigmoidoscopy.

rectorrhaphy (rek-tor'af-e) [rectum + Gr. ραφή suture]. Same as proctorrhaphy.

rectosanol (rek-to-sa'nol). A proprietary suppository of eucain, stovain, and adrenalin for hemorrhoids.

rectoscope (rek'to-skop). Same as proctoscope.

rectoscopy (rek-tos ko-pe). Same as procloscopy.

rectosigmoid (rek-to-sig'moid). The portion of the intestinal tract made up of the terminal 2 inches of the sigmoid and the proximal 1.5 of the rectum.

rectostenosis (rek"to-sten-o'sis) [L. rec'tum + stenosis]. Stenosis, or stricture, of the rectum.

rectostomy (rek-tos'to-me) [rectum + Gr. στόμα mouth]. The operation of forming a permanent opening into the rectum for the relief of stricture of the rectum.

rectotome (rek'to-tom). Same as proclotome.

rectotomy (rek-tot'o-me). Same as proclolomy.

recto-urethral (rek"to-u-re'thral). Pertaining to the rectum and urethra.

recto-uterine (rek-to-u'ter-in). Pertaining to the rectum and uterus.

rectovaginal (rek-to-vaj'in-al). Pertaining to the rectum and vagina. See fistula.

rectovesical (rek-to-ves'ik-al). Pertaining to the rectum and bladder.

rectum (rek'tum) [L. "straight"]. The lower, or distal, part of the large intestine, extending from the sigmoid flexure of the colon (opposite the left sacro-iliac symphysis) to the anus, being from six to eight inches long. Its mucous membrane is gathered into transverse folds which serve to support the feces. encysted r., sacciform disease of the anus; a rectum whose mucous membrane forms pouches.

rectus (rek'tus) [L. "straight"]. See muscles, table of. lateral r., a rare muscle consisting of a few fibers running from the lower ribs to the ilium, and supracostally over the thorax.

recumbent (re-kum'bent). Lying down.

recuperation (re"ku-per-a'shun) [L. recupera'tio]. The recovery of health and strength.

recurrence (re-kur'ens) [L. re- again + cur'rere to run]. The return of symptoms after a remission.

recurrent (re-kur'ent) [L. recur'rens returning].
1. Running back, or toward the source. 2. Returning after intermissions.

recurvation (re-kur-va'shun) [L. recurva'tio]. A backward bending or curvature.

red. A red dye or stain. alizarin r. S, alizarin water-soluble r., a dye used as a stain. It is sodium alizarin sulphonate, C₆H₄.(CO)₂C₃H(OH)₂.-SO₂ONa. anilin r. Same as basic fucksin. bordeaux r., cerasin. bromphenol r., an indicator, dibromphenol sulphon-phthalein, (C₆H₂-Br₂OH)₂C.C₆H₄.SO₂.ONa. Cosar r. Same as bluish cosin. cerasin r., sudan III. chlorphenol r., an indicator, dichlorphenol-sulphon-phthalein, (C₆H₂Cl₂OH)₂C.C₆H₄.SO₂.ONa: used in the determination of hydrogen-ion concentration. cholera r. See cholera red test, under tests. Congo r. See Congo r. corallin r., the pararosanilin salt of pararosolic acid. cotton r., Congo red. cotton r. 4 B, benzopurpurin 4 B. cresol r., an indicator, ortho-cresol-sulphon-phthalein, (CH₃.C₆H₃.OH)₂C.C₆H₄.SO₂.ONa: used in the determination of the hydrogen-ion concentration. It has a PH range of 7.2 to 8.8, being yellow at 7.2 and red at 8.8. dianil r. 4 C, dianin r. 4 B, benzopurpurin 4 B. direct r., Congo red. direct r. 4 B, benzopurpurin 4 B. fast r. amaranth. fast r. B or P, cerasin. magdala r., a basic dye used for staining connective tissue. It is a mixture of monamino- and

diamino-naphthosafranins. The diamino commethyl r. See under methyl. naphthaline r., magdala red. naphthol r., amaranth. neutral r., a dye, dimethyl-diamino-toluphenazinc-hydrochlorid, (CH₃)₂N. C₆H₃. N₂C₆H₂(CH₃). NH2HCl. As an indicator it has a PH range of 6.8 to 8, being red at 6.8 and yellow at 8. oil r., sudan III. oil r. IV, scarlet red. orange r., the red oxid of lead, Pb₂O₄: used as a pigment. phenol r., phenol-sulphonphthalein. scarlet r., a red, fat-soluble azo dye, toluyl-azo-toluyl-azo-beta-naphthol. CH₃.C₆H₄.N: N.C₅H₃(CH₃).N: N -C₁₀H₆.OH. It has a marked power of stimulating the proliferation of epithelial cells and so is used in a 4-8 per cent. ointment in treating burns and ulcers. scarlet r. sulphonate, the sodium salt of azo-benzene-disulphonic acid azobeta-naphthol, $C_6H_4(SO_2.ONa)N_2.C_5H_3(SO_2.ONa)N_2.C_{10}H_6OH$. It is used the same as scarlet red. **Senitol r.**, a dye, C_2H_5 . $NC_9H_6(CH)_3$. $C_9H_6N(I)$. C_2H_5 , with a highly selective germicidal action on staphylococci. It is also used to sensitize photographic plates to red rays of light. sudan r., magdala red. toluylene r., the base, the chlorid of which is neutral red. tony r., sudan III. trypan r. See trypanroth. vital r., a dye, disodium sidulphonaphthol azotetramethyl triphenyl methane. It is introduced directly into the circulation by venipuncture for the purpose of estimating the volume of the blood in the body by determining the concentration of the dye in the blood-plasma. wool r., amaranth.

red fever. See swine erysipelas, under erysipelas.

red mite. See bête rouge.

red spider. See Bryobia prætiosa.

red-puccoon. Sanguinaria.

Red. in pulv. Abbreviation for L. redac'tus in pul'verem, reduced to powder.

redecussate (re-dek-us'āt). To form a secondary decussation.

redia (re'de-ah) [named after F. Redi, Italian naturalist, 1626-1698]. The second larval stage of certain trematode worms.

Redig. in pulv. Abbreviation for L. rediga'tur in pul'verem, let it be reduced to powder.

redintegration (red-in-te-gra'shun) [L. redinte-gra'tio]. 1. The restoration or repair of a lost or damaged part. 2. That type of psychic process in which a part of a complex stimulus provokes the complete reaction that was previously made to the complex stimulus as a whole (Hollingworth).

redintol (red'in-tol). A proprietary paraffin preparation: used as a dressing for burns.

redislocation (re-dis-lo-ka'shun). Dislocation recurring after reduction.

redressment (re-dres'ment) [Fr. redressement]. 1. A second or repeated dressing. 2. Replacement of a part or correction of a deformity. r. force, forcible correction of a deformity; especially a procedure for the immediate correction of knock-knee.

reduce (re-dus') [L. re- again + du'cere to lead]. 1. To restore to the normal place or relation of parts, as, to reduce a fracture. 2. In chemistry, submit to reduction.

reduced (re-dust'). 1. Returned to the proper place or position, as, a reduced fracture. 2. Restored to a metallic form, as, reduced iron.

reducible (re-du'sib-l). Permitting of reduction.

reducin (re-du'sin). A leukomain, $C_{12}H_{24}N_6O_9$, from urochrome.

reductase (re-duk'tās). An enzyme that has a reducing action on chemic compounds. Shardinger's r., a reductase in milk which reduces methylene-blue, especially in the presence of formaldehyd.

reduction (re-duk'shun) [L. reduc'tio]. 1. The correction of a fracture, luxation, or hernia. 2. In chemistry, the subtraction of oxygen from or the

addition of hydrogen to a substance, or more generally, the loss of positive charges or the gain of negative charges. r. of chromosomes, miosis; joining of the chromosomes in pairs so that their number is reduced to one-half—a process that co-curs in the fertilized cell. r. en masse, reduc-tion of a strangulated hernia included in its sac, so that the strangulation is not relieved.

reduction-division. See reduction of chromo-

reduction-phase. See under phase.

redundant (re-dun'dant). More than necessary. reduplication (re-du-plik-a'shun) [L. reduplica'-tio]. 1. A doubling back. 2. The recurrence of paroxysms of a double type.

Reduviidæ (re-du-vi'id-e). A family of winged hemipterous insects called "assasin bugs" because they prey on other insects. It includes Arilus, Conorhinus (Lamus), and Riduvius.

Reed's bacillus, operation [Charles A. L. Reed, gynecologist in Cincinnati, born 1856]. See bacillus and operation.

Rees's test (rez') [George Owen Rees, English physician, 1813-1889]. See under tests.

refine (re-fin'). To purify or free from foreign

reflected (re-flek'ted). Caused by nervous transmission to a center, and thence by a motor nerve to the periphery.

reflection (re-flek'shun) [L. reflex'io]. 1. A turning or bending back; a bending back upon its course. 2. In physics, the turning back of a ray of light, sound, or heat when it strikes against a surface that it does not penetrate. The ray before reflection is known as the incident ray; after reflection it is the reflected ray.

reflector (re-flek'tor). A device for reflecting light

reflectoscope (re-flek'to-skop). A form of reflecting lantern.

reflex (re'fleks) [L. reflex'us]. 1. Reflected. reflected action or movement. **abdominal r's**, contractions about the navel on sharp downward friction of the abdominal wall. It indicates that the spinal cord from the eighth to the twelfth dorsal nerve is intact. abdominocardiac r., any reflex in the heart produced by stimulating the abdominal sympathetic. Cf. Livierato's sign and Prevel's sign, under sign. Abrams's r., reflex contraction of the lung following stimulation of the chest wall Abrams's heart-r., contraction of the myocardium, with reduction in the area of cardiac dulness, which results when the skin of the precordial region is irritated. It is observed with the fluoroscope. accommodation r., the dilatation or contrac-Achilles's tion of the pupil in accommodation. r. See tendo achillis r. acromial r., slight reflexion of the forearm with slight internal rotation of the hand on tapping the acromion or coracoid process: seen in certain conditions.

adductor r., on tapping the tendon of the adductor magnus with the thigh in adduction, contraction of the adductors results. analysis of the adductors results. r., contraction of the anal sphincter on irritation of the skin of the anus. ankle-r., ankleclonus: pressure on the sole with flexion of the foot causes clonic contraction of the tendo Achillis. anticus r. See Piotrowski's sign, under sign. r.-arc, an afferent nerve, a nerve-center, an efferent nerve, and a muscle. Aschner's r. Same as oculocardiac r. attention r. of pupil, alteration of size in the pupil when the attention is suddenly fixed. Called also Pills's r. auditory r., any reflex caused by stimulation of the auditory nerve; especially momentary closure of both eyes produced by a sudden sound. audito-oculogyric r., a turning of both eyes in the direction of a sudden sound. aural r., any reflex connected with the auditory apparatus. Aural re-

flexes of compensation are—(1) Those of the labyrinthine escapement; (2) those of vasomotor compensation; (3) those of tympanic compensation, and (4) those of tubotympanic compensation. auriculopalpebral r. Same as Kirsch's r. Babinski's r. (1808), extension of the toes instead of flexion on stimulating the sole of the foot: it occurs in lesions of the pyramidal tract, and indicates organic, as distinguished from hysteric, hemiplegia. **Bechterew's r.** 1. Plantar. Plantar flexion of the foot or tapping the dorsum: seen in certain organic nervous affections. 2. Deep. Passive flexing of the toes and foot in a plantar direction is followed by flexion in a dorsal direction and by flexive movements of the knee and hip. 3. Hypogastric. Contraction of the muscles of the lower abdomen on stroking the skin of the inner surface of the thigh. 4. Pupil. Dilatation of the pupil on exposure to light: sometimes seen in tabes and general paralysis. Tickling of the mucosa of the nasal cavity with a feather or piece of paper produces contraction of the facial muscles upon the same side of the face; called also nasal r. Bechterew-Mendel r., tapping of the toe tendons produces extension of the great toe. biceps r., contraction of the biceps muscle of the arm when its tendon is tapped. This reflex is normal, but when greatly increased it indicates the same disease as increased knee-jerk. bone r., a reflex elicited by stimulus applied to a bone. bregmocardiac r., pressure upon the bregmatic fontanel slows the action of the heart. Brissaud's r., contraction of the tensor fasciæ femoris muscle on tickling the sole. Brudzinski's r. See Brudzinski's sign, under sign. bulbocavernous r., a tap on the dorsum of the penis retracts the bulbocavernous portion. bulbomimic r., in coma from apoplexy, pressure on the eyeball causes contraction of the facial muscles on the side opposite to the lesion; in coma from toxic causes the reflex occurs on both sides. Called also facial r. and Mondonesi's r. Buzzard's r., the patellar reflex obtained by striking the tendon of the quadriceps muscle while the patient sits with the toes pressed against the floor. cardiac r., reduction in the size of the area of cardiac dulness caused by irritation of the skin of the precordial region. r.-center. center. Chaddock r., stimulation below the external malleolus produces extension of the great toe: it occurs in lesions of the pyramidal tract. chemical r., the bodily process produced by the action of a hormone. chin-r., a stroke on the lower jaw causes a clonic movement; chinclonus, or jaw-jerk. choked r., in skiascopy, absence of movement of the retinal illumination on reaching the point of reversal. **ciliary r.**, the movement of the pupil in accommodation. **cilio-spinal r.**, stimulation of the skin of the neck dilates the pupil. cochleo-orbicular r., cochleopalpebral r., contraction of the orbicularis palpebrarum muscle when a sharp, sudden noise is made close to the car; does not occur in total deafness from labyrinthine disease. conditional r., conditioned r., a reflex which is gradually induced and developed in the body by training and association, and which is subject to various forms of inhibition (Pavloff, 1911). conjunctival r., closure of the eyelid when the conjunctiva is touched. consensual r. Same as crossed r. consensual light r., stimulation of one eye by light produces a reflex response in the opposite pupil. contralateral r., a reflex of the leg on one side when passive flexion of the leg on the other side is made: seen in tuberculosis and epidemic meningitis. **corneal r.**, irritation of the con-junctiva closes the lids. Called also *eyelid-closure* r. corneomandibular r., movement of the lower jaw toward the side opposite the eye whose cornea is lightly touched, the mouth being open. cranial r., any reflex whose paths are connected directly with the brain. cremasteric r., stimulation of the skin on the front and inner side of the thigh retracts the testis on the same side;

shows soundness of cord between first and second lumbar nerves. **crossed** r., stimulation upon one side of the body makes a reflex on the other side. **cuboidodigital** r. See *Mendel's* r. **cutaneous** r., a reflex in which stimulation of the skin causes wrinkling. cutaneous pupillary r., dilatation of the pupil on pinching the skin of the cheek or neck. dartos r., the patient stands with his feet wide apart and the examiner suddenly applies cold to the perineum; the dartos muscle undergoes ver-micular contraction. **Davidson's r.**, a light seen through the pupil when an electric light is held in the mouth. deeper r., any reflex elicited by irritating a deep structure. defense r., contraction and extension motions in a paralyzed limb produced by plantar flexion of the toes. **delayed**r., a reflex which occurs some time after the stimulus provoking it has been received. depressor r., a reflex to stimulation resulting in decreased activity of the motor center. digital r. See Hoffmann's sign (2), under sign. direct r., a contraction on the same side as that of the stimulation of the stimulati ulation. direct light r., when a ray of light is thrown upon the retina through the pupil there is immediate contraction of the sphincter iridis, reducing the size of the pupillary aperture. dorsal r., contraction of the back muscles in response to stimulation of the skin along the erector spinæ. dorsocuboidal r. See Mendel's r. elbow r., triceps reflex. **emergency light r.,** excessive stimulation of the retina by light produces contraction of the pupils, closure of the eyelids, and lowering of the eyebrows. epigastric r., a withdrawal or spasm of the skin of the epigastrium caused by stimulating its surface or that of the fifth and sixth intercostal spaces near the axilla. erector spinæ r., contraction of the erector spinæ muscle on irritation of the skin along its border. eyeball-heart r. See oculocardiac r. eyelid-closure r. See corneal r. facial r. See bulbomimic r. fascial r., a reflex elicited by a sudden tap over a fascia faucial r., irritation of the fauces causing vomiting. femoral r., irritation of the skin on the upper anterior aspect of the thigh flexes the foot and first three toes and extends the knee. front-tap r., a tap on the skin muscles of the extended leg contracts the gastrocnemius. gastrocolic r., a wave of peristals in the colon induced by the entrance of food into the empty stomach. gastro-iliac r., opening of the ileocecal valve induced by the presence of food in the stomach. Gault's cochleopalpebral r. See cochleo pal pebral r. Geigel's r., a reflex in the female corresponding to the cremasteric reflex in the male. **genital r.**, any reflex irritability due to disorder of the genital organs. Gifford's r., contraction of the pupil when an effort is made to close the lids, which are held apart. gluteal r., a stroke over the skin of the buttock contracts the glutei muscles. Gor-don's r. See paradoxic flexor r. Haab's r., bilateral pupillary contraction when the patient sits in a darkened room, and without accommodation or convergence directs his attention to a bright object already within the field of vision. Called also cerebral cortex r. heart r. See Abrams's heart-r. Hirschberg's r., tickling of the sole at the base of the great toe causes adduction of the foot.

Hughes's r. See virile r. (2d def.). humoral
r. Same as chemical r. hypochondrial
r., sudden inspiration caused by quick pressure beneath the lower border of the ribs.

hypothenar r., a reflex elicited by pressure on the pisiform bone. indirect r. Same as crossed r. infraspinatus r., obtained by tapping a certain spot over the shoulder-blade, on a line bisecting the angle formed by the spine of the bone and its inner border; outward rotation of the arm occurs, with simultaneous straightening of the elbow. inguinal r. Same as Geigel's r. inscapulæ r., a stimulus applied between the scapulæ contracts the scapular muscles. Called also scapular r. inverted radial r., a flexion

of the fingers without movement of the forearm, produced by tapping the lower end of the radius; believed to indicate disease of the fifth cervical segment of the spinal cord. iris-contraction r. Same as pupillary r. Jacobson's r., a reflex seen in cerebral spastic paralysis of the upper extremities: the patient rests his forearm upon the examiner's hand, with the thumb directed upward, the fingers slightly extended. A blow is then struck on the lower edge of the radius on the extensor side. If flexion of the fingers results, paralysis is indicated. jaw-jerk r., clonic contraction of the inferior maxilla and other muscles of mastication, causing jerky motions of the lower jaw on striking the lower jaw with a downward blow while it hangs passively open. It is seen only rarely in health, but is very noticeable in sclerosis of the lateral columns of the cord. Joffroy's r., twitching of the gluteal muscles on pressure against the nates in spastic paralysis. Kisch's r., closure of the eye as a result of tactile or thermal stimulation of the deepest part of the external auditory meatus and tympanum. knee-jerk r., the patellar reflex reflex contraction or clonic spasm of the quadriceps muscle, produced by sharply striking the ligamentum patellæ when the leg hangs loosely flexed at right angles. It is seen normally in health, but is absent in locomotor ataxia, multiple neuritis, lesions of the lower portion of the spinal cord, lesions of the anterior gray horns of the cord, meningitis, infantile paralysis, pseudohypertrophic paralysis, atrophic paralysis, diabetes, etc., and is increased in spinal irritability, lesions of the pyramidal tract, cerebral tumors, sclerosis of the brain and cord, etc. Kocher's r., contraction of the abdominal muscle on compression of the testicle. lacrimal r., secretion of teals elicited by touching the conjunctiva over the cornea. laryngeal r., irritation of the fauces and larynx causes cough. lid-r. Same as corneal r. light-r. r A luminous image reflected from the membrana tympanı. 2. A circular spot from the membrana tympani. 2. A circular spot of light seen reflected from the retina with the retinoscopic mirror. lip r., a reflex movement of the lips of sleeping babies which occurs on tapping near the angle of the mouth. Called also mouth phenomenon. Loven r., general vaso-dilatation of an organ when its afferent nerve is stimulated. This secures a maximal supply of blood to the organ. lumbar r. Same as dorsal r. lung r., reflex dilatation of the subjacent lung tissue from local irritation of the skin, as by cold or continued percussion. It may be suffi-cient to obscure slight degrees of percussion dulness. mandibular r., jaw-jerk reflex. mass r., a re-flex exhibited by the entire area controlled by the portion of the spinal cord which has been injured. McCarthy's r., contraction of the orbicularis oculi muscle on tapping the supra-orbital nerve. McCormac's r., percussing the patellar tendon produces adduction of the opposite leg. Mendel's dorsal r. of foot, a reflex elicited by percussing the dorsum of the foot. In normal persons it causes dorsal flexion of the second to fifth toes; in certain organic nervous conditions there is plantar flexion of the toes. Called also Mendel-Bechterew r, cuboidodigital r., and dorso-cuboidal r. Mondonesi's r., bulbomimic reflex. motor r., a reflex brought about by stimulation upon the periphery of the motor mechanism.

muscular r., a reflex movement due to the stretching of a muscle. myenteric r., contraction of the intestine above and relaxation between the contraction of the intestine above and relaxation between the intestine above and relaxation to the intestine above. low a portion of the intestine that is irritated. nasal r. 1. Irritation of the schneiderian membrane provokes sneezing. 2. Bechterew's r., 5th def. obliquus r., stimulation of the skin below Poupart's ligament contracts a part of the external oblique muscle. oculocardiac r., a slowing of the rhythm of the heart following compression of the eyes. A slowing of from 5 to 13 beats per minute is normal; one of from 13 to 50 or more is exaggerated; one of from 1 to 5 is dimin-

ished. If ocular compression produces accelera-tion of the heart, the reflex is called *inverted*. oculo-cephalo-gyric r., the reflex by which the movements of the eye, the head, and the body are directed in the interest of visual attention. Onanoff's r., contraction of the bulbocavernosus muscle on compressing the glans penis: said to be indicative of dementia præcox. Oppenheim's r. Same as Oppenheim's sign, see under sign. palatal r., palatine r., stimulation of the palate causes swallowing. palmar r., tickling the palm flexes the fingers. palm-chin r., when the thenar eminence is rapidly and vigorously irritated with a needle, the muscles of the chin on the same side are drawn up. **paradoxic flexor r.**, extension of the great toe on pressure or irritation of the deep flexor muscles of the calf of the leg indicative of motor tract disturbance. Called also Gordon's r. patellar r., knee-jerk, or Westphal's sign: a stroke on the tense patellar tendon contracts the quadriceps and jerks the foot. patellar r., paradoxic, a stroke on the patellar tendon, the patient lying on his back, contracts the adductor muscles, while forcible flexion and sudden relaxation of the leg contract the anterior muscles. pathologic r., one which is not normal, but is the result of a pathologic condition, and may serve as a sign of disease. **penis-r.** Same may serve as a sign of disease. **penis-r.** Same as bulbocavernous r. **perception r.**, a reflex movement occurring when a perception is formed in consciousness. **periosteal r.**, a tap on the bones of the leg or forearm causes muscular contraction. It occurs is disease of the leg or server is disease of the leg or server is disease. contraction. It occurs in disease of the lateral column of the spinal cord. **peroneal r.**, a stroke on the tense peroneal muscles or when the foot is turned in causes reflex movements. pharyngeal r., a stimulus applied to the pharynx causes swallowing. Piltz's r. See attention r. plantar r., irritation of the sole contracts the toes platysmal r., the act of nipping the platysma myoides contracts the pupil. pneocardiac r., modification of the circulation on injecting irri-tating vapor into any part of the air-passages. pneo-pneic r., modification of the respiratory rhythm on injecting irritating vapor into any part of the air-passages. pressor r., a reflex to stimulation resulting in increased activity of a motor center. psychic r., a reflex aroused by a stored-up impression of memory, such as the secretion of saliva at the sight or thought of good tasting food psychocardiac r., increase in the pulse-rate on recalling an individual emotional experience. psychogalvanic r., decreased electric resistance of the body as a result of mental or emotional agitation. pupillary r., contraction of the pupil on exposure of the retina to light. pupillary r., paradoxio, stimulation of the retina by light dilates the pupil. radial r., flexion of the forearm with sometimes flexion of the fingers as well, following tapping on the lower end of the radius. **rectal r.**, the process by which the accumulation of feces in the rectum excites defecation. red r., a luminous red appearance seen upon the retina. Remak's r., plantar flexion of the first three toes and sometimes of the foot, with extension of the knee on stroking of the upper anterior surface of the thigh: it indicates interruption of the conducting paths of the cord. reno-renal r., reflex pain or anuria in a sound kidney in cases where the other kidney is diseased.

Roger's r., salivation or irritation of the esopha-Rossolimo's r., on stroking the plantar surface of the great toe, extension or abduction of the toe occurs in lesions of the pyramidal tract. scapular r. Same as interscapular r. scap-ulohumeral r., adduction with outward rota-tion of the humerus produced by percussing along the inner edge of the scapula. Schäffer's r., flexion of the foot and toes on pinching the Achilles tendon at its middle third: seen in organic hemiplegia. scrotal r., a slow, vermicular contraction of the dartos muscle obtained by stroking the perineum or by applying a cold object to it.

senile r., a gray reflection from the pupil of aged people due to hardening of the lens. sexual r., the reflex of erection and ejaculation produced by stimulation of the genitals. silk r. See shot-silk retina, under retina. skinr. Same as platysmal r. skin-pupillary r., dilatation of the pupil produced by irritation of the skin of the neck. **Snellen's** r., unilateral congestion of the ear upon stimulation of the distal end of the divided auriculocervical nerve. sole-r. Same as plantar r. spinal r., any re-flex whose arc is connected with a center in the spinal cord. Stookey r., with the leg semiflexed at the knee, the tendons of the semimembranous and the semitendinosus muscles are tapped: flexion of the leg results. Strümpell's r., leg movement with adduction of the foot produced by stroking the thigh or abdomen. superficial r., any reflex provoked by a superficial stimulation. supinator longus r., tapping of the tendon of the supinator longus produces flexion of the forearm. supra-orbital r., McCarthy's r. suprapatellar r., with the leg extended the index-finger of the examiner is crooked above the patella and is struck. The result is a kick-back of the patella. suprapubic r., stroking the abdomen above Poupart's ligament causes deviation of the linea alba toward the side that is stroked. supra-umbilical r. Same as *epigastric r.* tarsophalangeal r., dorsal flexion of the second and third or second and fifth toes on tapping the dorsum of the foot in the region of the cuboid or external cuneiform bone. said to indicate some central organic lesion of the motor nervous system. ten'do achil'lis r. (Gowers, 1879), contraction of the calf muscles excited by a blow upon the Achilles tendon, producing a flexion of the foot. tendon-r., a deep reflex. tibio-abductor r., tapping of the tibia on the inner side of the leg results either in homolateral abduction of the leg or crossed adduction from side to side. toe-r., strong flexion of the great toe flexes all the muscles of the lower extremity It is seen in pathologic states in which there is increased knee-jerk. **tonic r.**, the passing of an appreciable period of time after the occurrence of a reflex before relaxation. **triceps r.**, extension of the forearm on tapping of the triceps tendon at the elbow while the forearm hangs limp at right angles to the arm. tyr., the instinctive movement to grapple the mother's body when a very young infant is suddenly startled. unconditioned r., a reflex which is fixed and invariable. Cf. conditioned urinary r., desire to urinate on accumulation of the urine in the bladder to a certain amount. vaccinoid r., a slight cutaneous reaction to vaccination in a person partially immune to smallpox. vagus r., abnormal sensitiveness to pressure over the course of the vagus nerve: seen in a lung affected with tuberculosis vascular r., constriction of an artery produced by peripheral irritation. vesical r., desire to urinate produced by moderate distention of the bladder. virile r. I Same as bulbocavernous r. 2. A reflex in the flaccid penis elicited by pulling upward the foreskin or glans penis, when a sudden downward jerk results. Called also Hughes's r. visceral r., that in which the stimulus is set up by some state of an internal organ. visceromotor r., contraction of abdominal muscles due to a stimulus from one of the viscera. viscorosensory r., a region of sensitiveness to pressure on some part of the body due to disease of some internal organ. viscorotrophic r., degeneration of any peripheral tissue as a result of chronic inflammation of any of the viscera. tered-silk r., a peculiar appearance, like that of watered silk, visible upon the retinas of children. Weiss's r., a curved reflex seen with the ophthalmoscope on the fundus of the eye to the nasal side of the disk: believed to be indicative of myopia.

Westphal's pupillary r., contraction of the pupil associated with closure or attempted closure of the eye. wrist-clonus r., extreme extension of the hand causes a local jerking movement.

zygomatic r., lateral motion of the lower jaw to the percussed side on percussion over the zygoma.

reflexa (re-fleks'ah). Same as decidua reflexa.

reflexogenic (re-fleks-o-jen'ik) [reflex + Gr. γεννᾶν to produce]. Producing or increasing reflex action.

reflexograph (re-fleks'o-graf) [reflex + Gr. γράφειν to write]. An instrument for graphically recording a reflex.

reflexology (re-fleks-ol'o-je). The science or study of reflexes.

reflexometer (re-fleks-om'et-er) [reflex + Gr. μέτρον measure]. An instrument for measuring the force necessary to produce myotatic contraction.

reflexophil (re-fleks'o-fil) [reflex + Gr. φιλεῖν to love]. Characterized by activity of reflexes.

reflux (re'fluks) [L. re- back + flux'us flow]. A backward or return flow.

réforme (ra-form'). A French military term for the enforced retirement of soldiers for physical disability or unworthiness to serve.

refract (re-frakt') [L. refrin'gere to break apart].

1. To cause to deviate.

2. To ascertain errors of ocular refraction.

refracta dosi (re-frak'tah do'si) [L.]. In repeated and divided doses.

refraction (re-frak'shun). 1. The act or process of refracting. 2. The deviation of light in passing obliquely from one medium to another of different density. The deviation occurs at the surface of junction of the two media, which is known as the refracting surface. The ray before refraction is called the *incident ray*; after refraction it is the *refracted ray*. The point of junction of the incident and the refracted ray is known as the point of incidence. The angle be-tween the incident ray and a line perpendicular to the refracting surface at the point of incidence is known as the angle of incidence; that between the refracted ray and this perpendicular is called the angle of refraction. The sine of the angle of incidence divided by the sine of the angle of refraction gives the relative index of refraction. double r., that in which the incident ray is divided into two refracted rays, so as to produce a double image. Double refraction is produced by Iceland spar. See Nicol prism, under prism. by Iceland spar. See Nicol prism, under prism. dynamic r., refraction of the eye when using its utmost accommodative power. index of r., the refractive power of a medium as compared with that of air, which is assumed to be 1. ocular r., the refraction of light produced by the media of the normal eye and resulting in the focusing of images upon the retina static r., the refraction of the eye when its accommodation is paralyzed.

refractionist (re-frak'shun-ist). One skilled in refracting the eye.

refractive (re-frak'tiv). Pertaining to or subserving a process of refraction; having the power to refract.

refractivity (re-frak-tiv'it-e). The quality of being refractive; the power or ability to refract.

refractometer (re-frak-tom'et-er) [refraction + Gr. μέτρον measure]. 1. An instrument for measuring the refractive power of the eye. 2. An instrument for determining the indices of refraction of various substances.

refractometry (re-frak-tom'et-re). The measurement of refracted power with the refractometer.

refractory (re-frak'to-re) [L. refracto'rius]. Not readily yielding to treatment.

refractoscope (re-frak'to-skōp). An apparatus for auscultation of chest sounds so arranged that the listener is able to focus down upon a sound in a manner analogous to focusing a microscope.

refracture (re-frak'chur). The operation of breaking over again a bone which has been fractured and has united with a deformity. refrangibility (re-fran-jib-il'it-e). Susceptibility of being refracted; the quality of being refrangible. refrangible (re-fran'jib-l). Susceptible of being

efrangible (re-fran'jib-l). Susceptible of being refracted.

refresh (re-fresh'). To freshen or make raw again; to denude of an epithelial covering.

refrigerant (re-frij'er-ant) [L. refrig'erans]. 1. Relieving fever and thirst. 2. A cooling remedy. The refrigerants consist of cooling, acidulous drinks and evaporating lotions.

refrigeration (re"frij-er-a'shun) [L. refrigera'tio].
The therapeutic reduction of a high temperature.
See also refrigerator treatment, under treatment.

refringent (re-frin'jent) [L. refrin'gens]. Same as refractive.

refusion (re-fu'shun) [L. refu'sio]. The temporary removal and subsequent return of blood to the circulation.

regard, plane of (re-gard'). A plane that passes through the center of rotation and the point of fixation in the eye. point of r., the point at which the eye is directly looking.

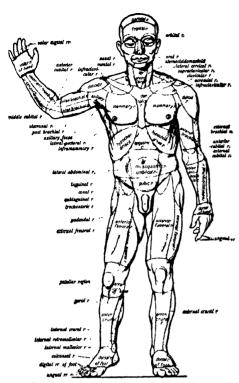

regeneration (re-jen-er-a'shun) [L. re- again + genera're to beget]. The renewal or repair of injured tissue.

regenerin (re'jen'er-in). A proprietary compound of iron and manganese with ovolecithin This compound may be mixed with arsacetin and lithium cacodylate to produce arsenic-regenerin. These preparations are used in conditions of anemia and faulty nutrition.

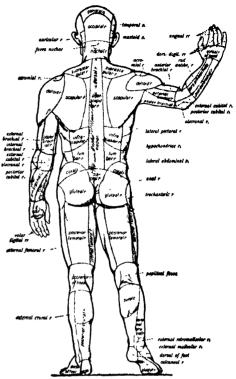

regimen (rej'im-en) [L. "guidance"]. The systematic regulation of the diet and habits for some special purpose.

regio (re'je-o). Latin for region. The various regions of the body, named according to the B. N. A. nomenclature, can be seen by consulting the figures on p. 1011.

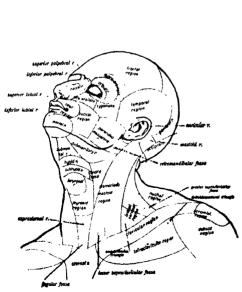

region (re'jun) [L. re'gio]. Any particular part of the body, usually one marked out by arbitrary boundary lines. abdominal r's. See abdomen. r. of accommodation, the space including all points to which the eye can be adjusted by accommodation anal r. Same as ischiorectal r. antebrachial ulnar r., the ulnar aspect of the forearm. antebrachial volar r., corresponds to the palmar surface of the forearm. anterior brachial r., corresponds to the inner or anterior aspect of the arm below the deltoid and above the elbow. aulic r., a region about the aqueduct of Sylvius. axillary r., the axilla and its borders. basilar r., the base of the skull. Broca's r. Same as Broca's convolution. See under convolution. ciliary r., the part of the eye occupied by the ciliary body and its adjuncts. clavicular r's, right and left, the parts of the surface just above the clavicles. cubital r., anterior, the palmar aspect of the elbow. cubital r., posterior, the dorsal aspect of the elbow surrounding the olecranal region. deltoid r., the upper or proximal part of the anterior aspect of the upper arm. digital volar r., the palmar aspect of the fingers. ecphylactic r., a region of infection that cannot be protected by the defensive agencies of the body on account of the virulence of the infection. encephalic r. See dorsolateral plate, under plate. epigastric r., the median part of the surface of the abdomen, between the hypochondriac regions. extrapolar r., that region of the body which lies outside the influence of the poles in electrotherapy. genito-urinary r., the anterior part of the princel space. gluteal r., the buttock. hypencephalic p. See ventrolateral plate, under plate. hypochondrisc r's, right and left, the uppermost regions of the abdominal surface on either side of the epigastric region. See hypogastric r., a region of the lowest part of the abdomen, between the inguinal regions. See abdomen. iliac r. Same as inguinal

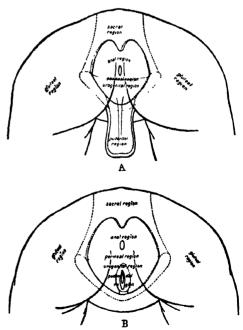

Regions of the human body: Anterior view.

Regions of the human body: Posterior view.

Regions of the head and neck.

Perineal regions: A, Male perineum; B, female perineum.

infra-axillary r., a triangular area on either side below the axilla. infraclavicular r., an area on either side of the sternum below the clavicle. inframammary r., inframammary r., the area situated below either mamma above the lower border of the twelfth rib. infrascapular r., the area on either side of the vertebral column and below the scapula. infraspinous r., an area below the spine of the scapula on either side. inguinal r's, right and left, the groins; spaces on either side of the hypogastric region. interscapular r., the space between the scapulæ on both sides of the vertebral column. ischiorectal r., the area of the surface between the ischium and the rectum on either side. lumbar r's, right and left, the abdominal area on either side of the umbilical region. mammary r., a space on either side of the chest between the third and sixth ribs. motor the ascending frontal and parietal convolutions of the cerebrum. Called also rolandic r. occipital r., the outer surface of the head, covering the occipital bone. olecranal r., the olecranal r., the surface of the point of the elbow over the olecranon. olfactory r., the upper part of the cavity of the nose or of either nostril where the sense of smell is principally situated. opticostriate r., the basal ganglia and the capsule. parietotemporal r. See sensory r. perineal r. See perineum. precordial r., a part of the anterior surface of the body covering frontal r., the part of the stomach. prethe heart and the pit of the stomach. cerebrum in front of the precentral fissure. pterygomaxillary r., a facial area whose external landmarks are the zygoma and the prominences of the lower jaw. respiratory r., the nasal cavity below the olfactory region. rolandic cavity below the olfactory region. rolandic r. See motor r. scapular r., a portion of the back, on either side, covering the scapula. sensory r., the sensorium commune; a part of the cerebral cortex on either side of the motor region. Called also parietotemporal r. r's of the skull. See under area. stomach-lung r., the circular tympanic space under the left lung. sub-auricular r., the space below the ear. subicular r., the anterior part of the temporosphenoidal lobe. subthalamic r., a portion of the tegmentum beneath the optic thalamus. superior maxillary r., the part of the face occupied by the superior maxillary bone with its attached muscles, nerves, and vessels. supraclavicular r., a region above either clavicle. supraspinous r., a region above the spine of the scapulæ. tegmental r., the upper surfaces of the crus cerebri and the corresponding parts of the pons and oblongata. trabecular r., that region of the embryonic skull from which the sphenoid bone is developed. umbilical r., the medial abdominal region, above the hypogastric region and between the lumbar regions. volar r. of the hand, the palmar aspect of the hand.

regional (re'jun-al). Pertaining to a region or to regions.

regression (re-gresh'un) [L. regres'sio a return].

1. A return of symptoms. 2 Retrograde metamorphosis. 3. In biology, the tendency in successive generations toward mediocrity. See Dalton's law of regression, under law.

regressive (re-gres'iv). Characterized by regression.

regular (reg'u-lar) [L. regula'ris; reg'ula rule].

1. Normal or conforming to rule.
2. Menstruating at the proper intervals. r. school, the school of medical practice and teaching which is based upon the principles accepted by the great body of physicians and founded upon experience and scientific investigation, without strict adherence to any one theory of therapeutics.

regulation (reg-u-la'shun) [L. reg'ula rule]. 1. The act of adjusting or state of being adjusted to a

certain standard. 2. In biology, the adaptation o form or behavior of an organism to changed conditions.

regulin (reg'u-lin). A preparation of agar-agar and extract of cascara sagrada: used in constipation by adding it to food.

Reg. umb. Abbreviation for L. re'gio umbili'ca region of the navel.

regurgitant (re-gur'jit-ant) [L. re- back + gur gita're to flood]. Flowing back or against the normal direction.

regurgitation (re-gur-jit-a'shun) [L. re- back + gurgita're to flood]. 1. The casting up of un digested food. 2. A backward flowing of the blood through the left auriculoventricular opening, due to imperfect closure of the mitral valve.

Rehfuss's test and **tube** (ra'sus) [Martin E Rehfuss, contemporary Philadelphia physician] See under tests.

Reichel's duct (ri'kelz) [Friedrich Paul Reichel. German obstetrician, born 1858]. See duct.

Reichert's cartilage (ri'kerts) [Karl B Reichert, German anatomist, 1811-1884]. See cartilage.

Reichmann's disease (rik'manz) [N. Reichmann contemporary physician in Warsaw]. See disease.

Reid's base-line (rēdz) [Robert William Reid, Scotch anatomist, born 1851]. See base-line, under line.

Reil, island of (ril) [Johann Christian Reil, anatomist in Halle, 1758-1813]. See island.

reimplantation (re"im-plan-ta'shun). Replacement of a part that has been taken out, as a tooth or an ovary.

reinfection (re-in-fek'shun). A second infection by the same or a similar virus.

reinforcement (re-in-fors'ment). The increasing of force or strength. r. of reflex, the increasing of a reflex response by causing the patient to perform some mental or physical concentration while the reflex is being elicited

reinoculation (re"in-ok-u-la'shun). An inoculation that follows a previous one with the same virus.

Reinsch's test (rin'shez). See under tests

reintubation (re-in-tu-ba'shun) Intubation performed a second time

reinversion (re-in-ver'shun). Restoration to its normal place of an inverted organ, especially restoration of an inverted uterus.

Reisseissen's muscles (rīs'i-senz) [François Daniel Reisseissen, German anatomist, 1773-1828]. Minute fibers of smooth muscle in the bronchioles.

Reissner's membrane (ris'nerz) [Ernst Reissner, anatomist in Berlin, 1824-1878]. See membrane.

Reiter's disease (ri'terz). See under disease

rejuvenescence (re"juven-es'ens) [L. re- again + juvenes'cere to become young]. A renewal of youth or of strength.

relapsable (re-lap'sa-bl). Liable to relapse.

relapse (re-laps') [L. relap'sus]. The return of a disease after its apparent cessation. intercurrent r., a relapse occurring before the temperature has reached a normal level.

relapsing fever (re-lap'sing). See fever.

relax (re-laks'). A popular term for diarrhea.

relaxant (re-laks'ant) [L. relaxa're to loosen]. r. Causing a lessening of tension. 2. An agent that lessens tension.

relaxation (re-laks-a'shun). 1. A lessening of tension. 2. A mitigation of pain.

relief (re-lef') [L. releva'tio]. The mitigation or removal of pain or distress.

relieve (re-lev') [L. releva're to lighten]. To mitigate or remove pain or distress; to give relief to.

religiosus (re-lij-e-o'sus) [L.]. The rectus superior oculi.

reluxation (re-luks-a'shun). Same as redislocation.

Remak's band, fibers, ganglion, plexus, etc. (ra-maks') [Robert Remak, German neurologist, 1815-1865]. See band, fiber, ganglion, plexus, etc.

Remak's reflex, sign, type (ra-maks') [Ernest Julius Remak, German neurologist, 1849-1911]. See reflex, sign, and type.

remedial (re-me'de-al) [L. remedia'lis]. Curative; acting as a remedy.

remedy (rem'ed-e) [L. reme'dium]. Anything that cures, palliates, or prevents disease. concordant r's, a homeopathic term for remedies of similar action, but of dissimilar origin. Durande's r., a remedy for gall-stones: essence of turpentine, 10 parts; sulphuric ether, 15 parts. Ehrlich-Hata r. See salvarsan. inimic r's, a homeopathic term for remedies whose actions are antagonistic. tissue-r's, the twelve remedies which, according to the biochemic school of homeopathy, form the mineral bases of the body.

Remijia (re-mij'e-ah). A genus of rubiaceous shrubs. R. peduncula'ta and R. purdiea'na furnish cuprea bark and the derivatives of cuprein.

remineralization (re-min"cr-al-iz-a'shun). The restoration of mineral elements, as to the human body.

remission (re-mish'un) [L. remis'sio]. A diminution or abatement of the symptoms of a disease; also the period during which such diminution occurs. Legroux's r's, long remissions which sometimes occur during the course of pulmonary tuberculosis.

remittence (re-mit'ens). Temporary abatement, without actual cessation, of symptoms.

remittent (re-mit'ent) [L. remit'tere to send back].

1. Having periods of abatement and of exacerbation.

2. A fever characterized by remissions. See fever.

ren (ren), pl. re'nes. Latin for kidney. r. mo'bilis, movable kidney.

renaden (ren'ad-en) [L. ren kidney + Gr. άδήν gland]. A therapeutic extract of the kidneys of animals used in chronic diseases of the kidney. Daily dose, 90-120 gr. (6-8 gm.).

renadesin (ren-ad-e'sin). A proprietary styptic and anesthetic ointment containing adrenalin and benzamin lactate.

renaglandin (ren-ag-lan'din). A preparation of the suprarenal glands: used as a hemostatic.

renal (re'nal) [L. rena'lis]. Pertaining to the kidney.

renatone (ren'at-ōn). A proprietary preparation of digitalis, triticum, buchu, etc.: used as a diuretic and urinary disinfectant.

Renaut's layer (ren-öz') [Joseph Louis Renaut, French physician, 1844-1917]. See under layer.

renculin (ren'ku-lin). An albuminoid said to exist in the suprarenal bodies.

renculus (ren'ku-lus). Reniculus.

Rendu's method, tremor (ron-dooz') [Henri Jules Louis Marie Rendu, French physician, 1844-1902]. See method and tremor.

renes (re'nez). A therapeutic extract of the kidneys of pigs or sheep.

renicapsule (ren'e-kap-sūl) [L. ren kidney + cap'-sula capsule]. A suprarenal capsule.

renicardiac (ren-e-kar'de-ak) [renal + cardiac].
Pertaining to the kidneys and heart.

reniculus (ren-ik'u-lus), pl. renic'uli. One of the lobules composing the kidney, and consisting of a pyramid and its inclosing cortical substance.

reniform (ren'if-orm) [L. ren kidney + for'ma form]. Shaped like a kidney.

renin (ren'in). A therapeutic extract prepared from the kidneys of animals.

reniportal (ren-e-por'tal) [L. ren kidney + por'ta

gate]. Pertaining to the portal system of the kidneys.

renipuncture (ren'e-punkt-yur) [L. ren kidney + punctu'ra puncture]. Surgical incision or puncture of the capsule of the kidney: done for relief of albuminuric pain.

rennet (ren'et). The dairyman's name for an extract of calves' stomachs. It contains rennin and is used for curdling the milk in cheese making.

rennin (ren'in). The milk-curdling ferment found chiefly in the gastric juice, but occurring also in pancreatic juice, the testis, and other organs, as well as in plants. Called also chymosin.

renninogen (ren-in'o-jen). The proenzyme existing in the gastric glands, which, after secretion, is converted into rennin. Called also prorennin, prochymosin, chymosinogen, and pexinogen.

renninum (ren-i'num). Rennin.

rennogen (ren'o-jen). See renninogen.

renocutaneous (re"no-ku-ta'ne-us). Pertaining to the kidneys and skin.

renoform (ren'o-form). A hemostatic in nasal surgery prepared from the adrenals.

renogastric (re-no-gas'trik). Pertaining to the kidney and stomach.

renography (re-nog'raf-e) [L. ren kidney + Gr. γράφειν to write]. The study of the kidney by radiography.

reno-intestinal (re"no-in-tes'tin-al). Pertaining to the kidney and intestine.

renopulmonary (re-no-pul'mon-a-re). Pertaining to the kidney and lung.

renunculus (re-nung'ku-lus). Same as reniculus.
reoxidation (re-oks-id-a'shun). The act of taking up oxygen again, as the hemoglobin of the blood.

Rep. Abbreviation for L. repeta'tur, let it be repeated.

repand (re-pand') [L. re back + pan'dus bent].
Wrinkled or wavy said of bacterial cultures.

repellent (re-pel'ent) [L. repel'lere to drive back].

1. Capable of dispersing a swelling.
2. An agent or remedy which causes a swelling or tumor to disappear.

repeller (re-pel'er). An instrument used in labor of animals to push back the fetus until the head and limbs can be properly placed for normal delivery.

repercolation (re"per-ko-la'shun) [L. re- again + percola're to filter]. A second or repeated percolation with the same materials.

repercussion (re-per-kush'un) [L. repercus'sio rebound]. 1. The driving in of an eruption or the scattering of a swelling. 2. Ballottement.

repercussive (re-per-kus'iv). An agent causing repercussion; a repellent.

replantation (re-plan-ta'shun). Same as reimplantation.

repletion (re-ple'shun) [L. reple'tio]. The condition of being full.

reposition (re-po-zish'un) [L. reposi'tio]. Replacement in the normal position.

repositor (re-poz'it-or). An instrument used in returning displaced organs to the normal position.

reproduction (re-pro-duk'shun) [L. re- again + produc'tio production]. The production of off-spring by organized bodies. asexual r., reproduction which takes place without the union of individual or germ cells of two different sexes. It includes cell division, budding, fission, spore formation, and parthenogenesis. cytogenic r., reproduction in which the new individual proceeds from a single germ cell or zygote. asual r., reproduction by means of ova and spermatozoa or by the fusion of the nuclei of two cells. somatic r., reproduction in which the new individual proceeds from a multicellular fragment produced by fission or budding.

reproductive (re-pro-duk'tiv). Subserving or pertaining to the production of offspring.

repullulation (re-pul-u-la'shun). Renewed growth by sprouting.

repulsion (re-pul'shun) [L. re- back + pel'lere to drive]. The act of driving apart or away; a force which tends to drive two bodies apart. It is the opposite of attraction.

resacetin (re-sas'e-tin). A derivative of oxyphenylacetic acid.

resaldol (re-sal'dol). A brown astringent powder, dioxy-benzoyl-ortho-benzoic acid ethyl ester, composed of resorcin and saloform used as an intestinal antiseptic in diarrhea, leukorrhea, and tuberculosis of the intestine. Dose, 5-15 gr (0.3-1 gm.).

resalgin (re-sal'jin). A substance, antipyrin resorcylate, (C₁₁H₁₂N₂O₂)₂C₇H₆O₄, in crystalline needles, derived from antipyrin and potassium β-resorcylate.

resection (re-sek'shun) [L. resec'tio]. Excision of a part of an organ; especially, excision of the ends of bones and other structures forming a joint. submucous r., window r., excision of a portion of a deflected nasal septum after first laying back a flap of mucous membrane, which is replaced after the operation.

resene (res'ēn). Any one of a class of resin derivatives.

reserve air (re-zerv'). See air.

reserve, alkali. The amount of alkali radical available in the body to neutralize acid; the reservoir of alkali contained in the blood-plasma and blood-corpuscles, as sodium bicarbonate, dipotassium phosphate, and the alkaline salts of protein.

reservoir (rez'er-vwoir). A lymphatic cistern or other cavity for storage. **Pecquet's r.**, the receptaculum chyli. **r. of virus**, the source from which a host becomes parasitized For instance, a person having sexual malarial parasites in his blood is a reservoir of virus.

resident (res'id-ent). Same as intern.

residual (re-sid'u-al) [L resid'uus]. Remaining or left behind. r. air. See air.

residue (rez'id-u) [L resid'uum, from re-back + sid'ere to sit]. A remainder, that which remains after the removal of other substances. cancerr., the water-soluble portion of cancer-cells left after splitting off the toxic radicals by heating the cancer-cells in a 2 per cent. solution of sodium hydroxid in absolute alcohol. typhoid r., the substance remaining after treating a pure culture of typhoid bacilli with alcohol, ether, and sodium hydroxid: it is used as a remedy and an immunizing agent in typhoid fever.

residuum (re-zid'u-um) [L.]. A residue or remainder. r. ru'brum, desiccated ox-blood used in anemia. sporal r. See sporenrest.

resilience (re-sil'e-ens) [L. resili're to leap back]. Elasticity; the property of returning to the former shape after compression.

resilient (re-sil'c-ent) [L. resil'iens]. Elastic; returning to its proper shape or size after compression or dilatation.

resin (rez'in) [L. resi'na]. 1. Any one of a class of inflammable, amorphous vegetable substances of many kinds, obtained from plants and trees. True resins are insoluble in water, but are readily dissolved in alcohol, ether, and volatile oils. The chief resins are common resin, or rosin, Canada pitch, Burgundy pitch, caoutchouc, mastic, and resins of copaiba, japal, guaiac, dammar, ipomœa, and podophyllum. 2. Same as rosin. acaroid r. (from Acarois, a former generic name of the plant producing it), a yellow resin from Xanthorrhwa has'tilis, a liliaceous tree of Australia: tonic and stimulant. Dose, 6-12 gr. (0.4-0.8 gm.). acaroid r., red, a similar product of X. austra'lis. guaiace, r., guaiacum. gum-r., any concrete

vegetable juice containing resin, gum, a volatile oil, and extractive material.

resina (rez-i'nah). See resin.

resineon (rez-in'e-on). A volatile oil distilled from rosin: antiseptic.

resinoid (rez'in-oid). 1. Resembling a resin. 2.
A substance resembling a resin. 3. A dry therapeutic precipitate prepared from a vegetable tincture.

resinol (rez'in-ol). 1. Same as retinol. 2. A proprietary antiseptic: used in diseases of the skin and mucous membranes as a local application.

resinotannol (rez"in-o-tan'ol). Any resin alcohol which gives a tannin reaction.

resinous (rez'in-us) [L. resino'sus]. Of the nature of a resin.

resistance (re-zis'tans) [L. resisten'tia]. The opposition by a conductor to the passage of an electric current. acid alcohol r., the power of a bacterium to resist the action of acid and alcohol. r.-coil, a coil of wire in a circuit placed there to increase the resistance. essential r., internal r., resistance to a galvanic current which resides in the cells of a battery. external r., extraordinary r., that which pertains to that part of the circuit which is outside of the battery-cell or cells. peripheral r., the resistance to the passage of the blood through the small blood-vessels, especially the capillaries. vital r., the resistance of the individual to the untoward affects of bacteria, infections, fatigue, etc.

resol (re'sol). A proprietary wood-tar and potashsoap preparation. disinfectant.

resoldol (re-sol'dol). A condensation-product of saloform and resorcinol. It is insoluble in water and acids, but freely soluble in alkalis used as an intestinal tonic and astringent. Dose, 5-15 gr. (0.333-1 gm).

resolution (rez-o-lu'shun) [L. resolu'tio]. The subsidence of an inflammation; the softening and disappearance of a swelling.

resolve (re-zolv') [L. resol'vere]. 1. To restore to the normal state after some pathologic process 2. To separate a thing into its component parts.

resolvent (re-solv'ent) [L. resolvens dissolving].

1. Promoting resolution or the dissipation of a pathologic growth.

2. An agent that causes resolution.

resolving power (re-zol'ving). The power of a lens for giving distinct and separate images of the fine details of an object.

resonance (rez'on-ans) [L. resonan'tia]. 1. The prolongation and intensification of sound produced by the transmission of its vibrations to a cavity, especially a sound elicited by percussion. Decrease of resonance is called dulness; absence of resonance flatness. 2. A vocal sound as heard in auscultation. amphoric r., a sound resembling that produced by blowing over the mouth of an empty bottle. bandbox r., the extremely resonant sound elicited by percussion in cases of emphysema of the lungs. bell-metal r., a peculiar sound heard in pneumothorax when a coin placed on the chest-wall is struck by another cough-r., a peculiar auscultatory sound elicited by coughing. cracked-pot r., a peculiar sound elicited by percussion over a pulmonary cavity that communicates with a bronchus. hydatid r., a peculiar sound heard in the combined auscultation and percussion of a hydatid cyst. osteal r., the sound elicited by percussion over a bony structure. skodaic r., increased percussion resonance at the upper part of the chest, with flatness below it. tympanic r., the drum-like reverberation of a cavity filled with air. tympanitic r., the peculiar sound elicited by percussing a tympanitic abdomen. vesicular r., the normal pulmonary resonance. vesiculotympanic r., a resonance partly vesicular and partly tympanic. vocal r., the sound of ordinary speech

as heard through the chest wall. whispering r., the auscultatory sound of whispered words heard through the chest wall. wooden r., vesiculotympanic resonance.

resonant (rez'on-ant). Giving a vibrant sound on percussion.

resonator (rez'on-a-tor). An instrument used to intensify sounds. Oudin r., a device for increasing the tension of an electric current.

resopyrin (res-o-pi'rin). A derivative of resorcin and antipyrin, $C_{11}H_{12}N_2O + C_6H_4(OH_2)$: in minute rhombic crystals.

resorbin (re-sor'bin). A mixture of almond oil, wax, soap, gelatin, and lanolin: used as a demulcent vehicle for drugs that are to be applied by inunction, and also as a basis for ointments.

resorcin (re-zor'sin). A whitish, crystalline diatomic phenol, $C_0H_4(OH)_2$: isomeric with hydroquinon and pyrocatechin, and produced by fusing sodium benzene disulphonate with sodium hydroxid. It is soluble in water, ether, alcohol, chloroform, etc., and is used as an antiseptic and antipyretic, in a 2 per cent. solution for spraying the throat in whooping-cough and hay-fever, and in ointments for skin diseases Dose, 2-10 gr. (0.133-0.666 gm.). **r. monoacetate**, euresol.

resorcinism (re-zor'sin-izm). Chronic poisoning by resorcin.

resorcinoform (re-zor-sin'o-form). A compound of resorcin and formaldehyd, used as an antiseptic.

resorcinol (re-zor'sin-ol). 1. Resorcin. 2. An antiseptic preparation of resorcin and iodoform. used as an antiseptic dressing. r.-antipyrin. See resopyrin. hexyl r. See hexylresorcinel. r.-phthalein. Same as fluorescein.

resorcinum (re-zor-si'num) Resorcin.

resorcylalgin (re-zor-sil-al'jin). Same as resalgin.
resorption (re-sorp'shun) [L. resorbe're to suck up]. The removal by absorption of excreted matters. In dentistry, the gradual destruction of the dentin and cementum of a tooth root by lytic or phagocytic action.

resorpyrin (re-zor-pi'rin). Resopyrin.

resosalyl (re-so-sal'il). A proprietary antiseptic preparation for use as a gargle, wash, etc.

respirable (res'pir-ab-l). Suitable for respiration.

respiration (res-pir-a'shun) [L. respira'tio]. act or function of breathing; the act by which air is drawn in and expelled from the lungs, including inspiration and expiration. Inspiration is performed by the contraction and descent of the diaphragm, elevation of the ribs by contraction of the external intercostal and levatores costarum muscles, by the elevation of the upper ribs by the scaleni and other muscles, and depression of the lower ribs by the muscles of the abdomen. Expiration is performed by the recoil of the ribs, which are also drawn in by the internal intercostal muscles, and by the upward forcing of the abdominal contents through the action of the abdominal muscles. Respiration supplies the blood with oxygen, which is taken in on inspiration, and removes from it carbon dioxid, water, and various organic matters, which are given off in expiration. Respiration occurs about seventeen times to the minute, the rate varying between thirteen and twenty-five in health. The quantity of air taken in and expelled by an ordinary respiration (tidal air) is 500 c.c. In a forced inspiration additional air (complemental air) can be taken in to the amount of about 1500 c.c.; and in forced expiration, about 1500 c.c. of additional air (supplemental air, reserve air) can be expelled. About 1600 c.c. of air (reserve air) sidual air) remains in the lungs after the fullest possible expiration. The quantity of air that can be expelled after the fullest possible inspiration represents the vital or respiratory capacity.

abdominal r., that which is chiefly kept up by the abdominal muscles and the diaphragm. sent r., that in which the respiratory sounds are suppressed. accelerated r., that which exceeds twenty-five respirations every minute. amphoric r., that which is characterized by amphoric resonance, or a quality like that of the sound produced by blowing over the mouth of an empty jar. It is heard over phthisical or bronchiectatic cavities, in pneumothorax, in compression of lung from effusion. artificial r., that which is maintained by artificial means. Among the methods of making artificial respiration are the following of making artificial respiration are the following. Buist's method is employed in asphyxiation of the newborn, and consists of holding the babe alternately on the stomach and back. Method of Marshall Hall: Put the body prone, gently press on the back, then removing the back pressure, turn the body on its side and press a little more, repeating this formula sixteen times every minute. It is known as the method of prone or postural respiration, or "ready method. Howard's method: Place the body supine, with a cushion under the back, so that the head is lower than the abdomen; the arms are held over the head, forcible pressure is made with both hands inward and upward, over the lower ribs, about sixteen times in a minute. Schäfer's method: Patient prone with forehead on one of his arms: straddle across patient with knees on either side of his hips, and pass with both hands firmly upon the back over the lower ribs; then raise your body slowly, at the same time relaxing the pressure with your hands. Repeat this forward and backward movement about every five seconds. Silvester's method: Patient supine. The arms are pulled firmly over the head to raise the ribs, and kept there until air ceases to enter the chest. The arms are brought down to the chest, and are pressed against it for a second or so after air ceases to escape. formula is repeated sixteen times in a minute. Biot's r. See meningitic r. Bouchut's r., respiration in which inspiration is shorter than expiration seen in children with bronchopneumonia. bronchial r. Same as tubular r. bronchocavernous r., that which is intermediate in character between bronchial and cavernous. It is heard over a lung cavity with solidified lung tissue adjacent to it. bronchovesicular r., a variety intermediate between the bronchial and vesicular forms. cavernous r., a respiration marked by a peculiar prolonged hollow resonance, usually due to a cavity in the lung. It is heard in the same conditions as is amphoric respiration. cerebral r. Same as Corrigan's r. Cheyne-Stokes r., a type characterized by rhythmic variations in intensity—occurring in cycles. It is seen especially tensity—occurring in cycles. It is seen especially in coma from affection of the nervous centers. Each cycle consists of a gradual decrease in the intensity of the respiratory movements, followed by total cessation for a space of from five to forty seconds this in turn is followed by gradual increase of respiratory movements until they reach a maximum and become dyspneic in character. cog-wheel a form with a peculiar jerky inspiration; breathing in which the expiratory and inspiratory sounds are not continuous, but are split into two or more separate sounds. Called also interrupted r. Corrigan's r., a shallow and frequent blowing respiration in a low fever. costal r., that which is performed now tever. **COSTAI** r., that which is performed mainly by the rib muscles. **cutaneous** r., the exhalation of vapors and absorption of oxygen by the skin. **diaphragmatic** r., that which is mainly performed by the diaphragm. **diminished** r., that in which the respiratory sounds are partly suppressed. **divided** r., respiration marked by a pause between the inspiratory and expiratory sounds heard on auscultation in emphysical states. expiratory sounds heard on auscultation in emphyforced r., that which takes in more air than is needed. granular r., a vesicular respiration, giving a sound as if the air were passing through a tube with an uneven surface. harsh

r. Same as bronchovesicular r. indefinite r., a respiratory sound so feeble or so confused that it is difficult to assign to it a definite character. internal r. See lissue r. interrupted r., that in which the sounds are not continuous. jerky r. Same as cog-wheel r. Kussmaul's r., air hunger. See under hunger. labored r., that which is performed with difficulty. meningitic r., short and rapid breathing interrupted by pauses of ten to thirty seconds; occurring in healthy persons during sleep it has no important significance, but in meningitis it is regarded as an unfavorable sign. metamorphosing r. Same as broncho-cavernous r. nervous r. Same as broncho-r. physiologic r. Same as metabolism. puerile r., that in which the breathing-sounds are more intense than those of normal adult respiration and resemble those of childhood.
rude r. Same as bronchovesicular r. Seitz's metamorphosing r., a variety of bronchial respiration consisting of an inspiratory murmur, beginning as a tubular bronchial sound and ending as either a cavernous or an amphoric tone. slow r., that in which there are less than twelve respirations in each minute. **stertorous** r., that which is accompanied by abnormal snoring sounds. **supplementary** r Same as puerile. r. **thoracic** r., respiration performed by the intercostal and other thoracic muscles. Cf. abdominal r. tissue r., the exchange of gases between the tissues and the blood. tubular r., that which has high-pitched sounds, not unlike those made by blowing through a tube. It is heard in phthisical and pneumonic consolidation of lung, compression of lung, and sometimes over lung infiltrated with morbid growth. vesicular r., the natural breathing of a sound and healthy adult person. **vesiculocavernous r.**, cavernous respiration with a vesicular quality. It indicates a cavity surrounded by healthy lung tissue. vicarious r., increased action in one lung when that of the other lung is diminished. wavy r. Same as cog-wheel r.

respirator (res'pi-rā-tor). An apparatus to qualify the air that is breathed through it.

respiratory (res'pi-rā-tō-re) [L. re- again + spira're to breathel. Pertaining to respiration.

respirazone (res-pir-a'zōn). A proprietary remedy for asthma, hay-fever, and croup.

respirometer (res-pir-om'et-er). An instrument for determining the character of the respiratory movements.

respiton (res'pit-on). A preparation of asclepias and berberis, used in skin diseases and catarrhal conditions.

response (res-pons') [L. respon'sum answer]. An action or movement due to the application of a

rest (rest). 1. Repose after exertion. 2. A fragment of embryonic tissue that has been retained within the adult organism; called also embryonal, epithelial, and fetalr. adrenalr. Same as supra-renal r. r.-cure, the treatment of disease by prolonged rest, chiefly imped, with isolation, full diet, massage, and electricity. embryonal r., epithelial r., fetal r. See rest (2d def.). occlusal r., a metallic part extending from a partial denture which engages on the whole or a part of the occlusal surface of a tooth to aid in supporting the denture. suprarenal r., an accessory suprarenal body; a suprarenal exclave.

rest-atom. See under atom.

restbacillus (rest-bas-il'us). Tubercle bacillus after removal of the portions that are soluble in water, a 10 per cent. salt solution, alcohol, and ether.

restbite (rest'bit). The occlusion of the teeth when the jaw is at rest.

rest-cure. See Weir-Mitchell treatment, under treatment.

restibrachium (res-te-bra'ke-um), pl. restibra'chia

[L. res'tis rope + bra'chium arm]. A restiform body: an inferior peduncle of the cerebellum. Called also myelobrachium.

restiform (res'tif-orm) [L. res'tis rope +

form]. Shaped like a rope. See under body.
restis (res'tis), pl. res'tes [L. "rope"]. Same as restibrachium.

restitu'tio ad in'tegrum [L.]. Complete return to health.

restitution (res-tit-u'shun) [L. restitu'tio]. 1. An act or process of restoration. 2. The rotation of the presenting part of the fetus outside of the vagina.

restonal (res'to-nal). A proprietary stimulant antipyretic and analgesic.

restoration (res-to-ra'shun). 1. A return to health. 2. Replacement in the normal position.

restorative (res-to'ra-tiv). 1. Promoting a return to health or to consciousness. 2. A remedy that aids in restoring health, vigor, or conscious-

restraint (re-strant'). The forcible confinement of a violently insane person. chemic r., the quieting of a violently insane person by means of

resublimed (re-sub-limd'). Subjected to repeated processes of sublimation.

resultant (re-zul'tant). Any one of the products of a chemical reaction.

resupination (re"su-pin-a'shun) [L. resupina're to turn on the back]. 1. The act of turning upon the back or dorsum. 2. The position of one lying upon the back.

resuscitation (re"sus-it-a'shun) [L resuscita'tio]. The restoration to life or consciousness of one apparently dead.

retainer (re-tan'er). In dentistry, an appliance for retaining in place teeth whose malposition has been adjusted.

retamin (ret'am-in). An alkaloid, C₁₅H₂₆N₂O, from the bark and twigs of Ret'ama spharocarp'a.

retardation (re-tar-da'shun) Delay, hindrance psychomotor r., underactivity of both mind and body. r. of thought, delay in thinking in which either the process of thought is set in motion slowly (initial r), or the thought or action once having started is performed slowly (executive r.).

retching (ret'shing). A strong involuntary effort to vomit; vomiturition.

rete (re'te), pl. re'tia [L." net"]. A net or meshwork of nerve-fibers, and especially of vessels acromial r., a rete under the deltoid muscle which establishes a communication between the acromial artery and the posterior circumflex and suprascapular arteries. articular r., a rete vasculosum in or around a joint. bipolar r., a rete mirabile, whose vessels reunite into a single trunk. carpal r., anterior and posterior, two retia formed by the anterior and posterior carpal arteries and other nearby arteries. epidermal r., the rete mucosum. r. halle'ri. Same as r. testis. r. malpig'hii, the rete mucosum. r. mirab'ile, a network of anastomosing bloodvessels, chiefly from a single trunk. When the vessels remain separate, it is called unipolar r. mirabile: when they require to form a single mirabile; when they reunite to form a single trunk, bipolar r. mirabile. r. mirab'ile conjuga'tum, r. mirab'ile gem'inum, a plexus of arteries and veins together. r. mirab'ile sim'plex, a plexus of arteries only, or of veins only.

r. muco'sum, the innermost layer of the epidermis. See under skin. r. na'si, a venous plexus in the inferior turbinated bone. neu-ral r., anterior and posterior, any one of a series of arterial plexuses within the spinal canal situated ventrad and dorsad of the cord, and communicating above and below with the spinal arteries. r. olec'rani, a meshwork formed by branches of four or more arteries near the olecranon. patellar r. 1. A network

of arterial branches which surrounds the patella, coming from the various arteries of the knee.

2. A venous plexus which also surrounds the patella. r. tes'tis [B N A!, the network made up of the vasa recta in the mediastinum testis. unipolar r., a rete mirabile whose vessels do not reunite into a single trunk. r. vasculo'sum [B N A], a network of vessels formed by anastomoses between small arteries just before they become capillaries. r. veno'sum dor'si pe'dis, a venous plexus of the dorsum of the foot, communicating with the superficial venous arch.

retention (re-ten'shun) [L. reten'tio]. The persistent keeping within the body of matters normally excreted.

retial (re'te-al). Pertaining to or of the nature of a rete.

reticula (re-tik'u-lah) [L. "a little net"]. A fibrous network connected with the lateral edge of the posterior gray horn of the cord.

reticular (re-tik'u-lar) [L. reticula'ris]. Pertaining to or resembling a net.

reticulated (re-tik'u-la-ted). Same as reticular. reticulin (re-tik'u-lin). An albuminoid substance from the connective fibers of reticular tissue.

reticulitis (re-tik-u-li'tis). Inflammation of the reticulum of a ruminant animal.

reticulocyte (ge-tik'u-lo-sit) [reticulum + Gr. κύτος cell]. A red blood-cell showing a reticulum under vital staining.

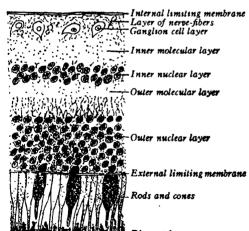

reticulocytosis (re-tik"u-lo-si-to'sis). Reticulosis. reticulo-endothelial system (re-tik"u-lo-en-do-the'le-al). See endothelial system, under system.

reticulosis (re-tik-u-lo'sis). A condition in which the blood contains more than the normal percentage of reticulocytes.

reticulum (re-tik'u-lum), pl. retic'ula [L. dim. of re'te net]. 1. A network, especially a protoplasmic network of cells or of their nuclei. 2. The second division of the stomach of a ruminant animal. Ebner's r., a network of cells in the seminiferous tubules.

retiform (ret'if-orm) [L. retifor'mis; re'te net + for'ma form]. Resembling a network.

retina (ret'in-ah) [I.]. The innermost tunic and perceptive structure of the eye, formed by the expansion of the optic nerve, and covering the back part of the eye as far as the ora serrata. It consists of ten layers, named, from within outward, as follows: (1) The membrana limitans in-

Section of retina of the eye (Hill).

terna; (2) the nerve-fiber layer; (3) the layer, of ganglion-cells; (4) the inner molecular, or plexiform, layer; (5) the inner nuclear layer; (6) the outer molecular, or plexiform, layer; (7) the outer nuclear layer; (8) the membrana limi-

tans externa; (9) the layer of rods and cones (called also Jacob's membrane and bacillary layer); and (10) the pigmentary layer. This last layer consists of pigmented epithelial cells, and is continued forward over the inner surface of the ciliary body, and is known as the pars ciliaris ret'ina. The various layers are connected transversely by fibers of connective tissue (sustentac-ular fibers of Miller). The layer of rods and cones forms the percipient element of the retina and is connected by nerve-fibers with the nervefiber layer, which join to form the optic nerve. In the center of the posterior part of the retina is the mac'ula lu'tea, the most sensitive portion of the retina; and in the center of the macula lutea is a depression, the forea centralis, from which the rods are absent. About 10 inch inside the fovea is the point of entrance of the optic nerve and its central artery (central artery of the retina). At this point the retina is incomplete and forms the blind spot. coarctate r., a funnel-shaped condition of the retina caused by a fluid exudation between the retina and the choroid. ard r., a retina of a variegated or mottled appearance, due to retinitis pigmentosa. lower r. the lower half of the retina. nasal r., the nasal half of the retina. shot-silk r., an opalescent effect, as of changeable silk, sometimes seen in the retinas of young persons. temporal r., the outer half of the retina. tigroid r., the striped or spotted retina of retinitis pigmentosa. upper r., the upper half of the retina.

retinaculum (ret-in-ak'u-lum), pl. relinac'ula [L. "halter"]. 1. A structure which retains an organ or tissue in its place. 2. A tenaculum for operations on hernia. Barry's r., any one of a set of filaments within the graafian follicles. r. cap'sulæ articula'ris cox'æ, one of the longitudinal folds of the cervical portion of the capsular ligament of the hip. r. cu'tis. 1. One of the bands of connective tissue attaching the corium to the subcutaneous tissue. 2. One of the folds of skin around a joint. r. of the ileocecal valve, a ridge on the internal surface of the cecum at either end of the opening of the ileocecal valve. r. ligamen'ti arcua'ti, a short external lateral ligament of the knee-joint. r. morgag'ni, a ridge formed by the coming together of segments of the ileocecal valve. Called also r. of ileocecal valve. r. peroneo'rum infe'rius, a band across the peroneal tendons on the outside of the calcaneum. r. peroneo'rum supe'rius, the external annular ligament of the ankle. r. ten'dinum, an annular ligament of the ankle or wrist. Weitbrecht's r., any one of a set of ligaments attached to the great trochanter.

retinal (ret'in-al). Pertaining to the retina.

retinitis (ret-in-i'tis). Inflammation of the retina. It is marked by impairment of sight, perversion of vision, edema, and exudation into the retina, and occasionally by hemorrhages into the retina. r. albuminu'rica, that which is associated with kidney disease. apoplectic r., that which is characterized by extravasations of blood within the retina. circinate r., a form characterized by brilliant white spots arranged in a wreath-like form near the macula or disk. diabetic r., retinitis occurring in diabetes. gravidic r., retinitis occurring along with the albuminuria of pregnancy. r. hamorrha'gica, retinitis marked by profuse retinal hemorrhage. Jacobson's r., syphilitic retinitis. Jensen's r., retinochoroiditis juxtapapillaris. leukemic r., a variety seen in leukemia, and marked by hemorrhage and paleness of the retina. Called also splenic r. metastatic r., retinitis caused by the location of septic emboli in the retinal vessels. r. pigmento'sa, a form marked by progressive retinal sclerosis with pigmentation and atrophy. It is attended by contraction of the field of vision and hemeralopia. There are star-shaped de-

posits of pigment in the retina, and the retinal vessels become obliterated. proliferating r., a form attended with the development of dense masses of connective tissue, which extend from the retina into the vitreous. r. puncta'ta albes'-cens, a variety characterized by the presence of minute white spots in the fundus. punctate r., a form marked by the presence of a number of white or yellowish spots scattered over the fundus. serous r., simple inflammation of the superficial layers of the retina. solar r., retinitis due to exposure to sunlight. splenic r. See leukemic r. striate r., a form marked by the presence of gray or yellowish streaks just back of the retinal vessels. suppurative r., retinitis due to pyemic infection.

retinoblastoma (ret"in-o-blas-to'mah). A tumor arising from retinal germ cells.

retinochoroid (ret"in-o-ko'roid). Pertaining to the retina and the choroid.

retinochoroiditis (ret"in-o-ko-roid-i'tis). Inflammation of the retina and choroid. r. juxtapapilla'ris, a condition seen in young healthy subjects marked by a small inflammatory area on the fundus close to the papilla. Called also Jensen's retinitis.

retinocystoma (ret"in-o-sis-to'mah). Glioma of the retina.

retinoid (ret'in-oid). 1. Resembling the retina.
2. [Gr. ρητίνη resin + είδος form]. Resembling a resin.

retinol (ret'in-ol). A liquid hydrocarbon, C₂₀H₃₂, obtained by distilling pitch or resin. It is a solvent and antiseptic, and has been used in gonorrhea. Dose, 8 min. (0.5 c.c.). Called also rosinol and codol.

retinopapillitis (ret"in-o-pap-il-i'tis). Inflammation of the retina and the optic papilla.

retinoscope (ret'in-o-skōp). An instrument for performing retinoscopy.

retinoscopy (ret-in-os'ko-pe) [retina + Gr. σκοπεῖν to examine]. Skiascopy; determination of the refractive state of the eye by observing the movements of lights and shadows across the pupil when light is thrown onto the retina from a moving mirror. Called also shadow-test.

retort (re-tort') [L. retor'ta bent back]. A longnecked globular vessel used in distillation.

retractile (re-trak'til) [L. retrac'tilis]. Susceptible of being drawn back.

retraction (re-trak'shun) [L. retrac'tio, from re-back + tra'here to draw]. The act of drawing back; the condition of being drawn back.

retractor (re-trak'tor) [L]. 1. An instrument for drawing back the edges of a wound. 2. Any retractile muscle. See muscles, table of. Emmet's r., a self-retaining vaginal speculum.

retrad (re'trad) [L. re'tro backward]. Toward a posterior or dorsal part.

retrahens aurem (ret'ra-henz aw'rem) [L. "drawing back the ear"]. See muscles, table of.

retrenchment (re-trensh'ment). A procedure in plastic surgery consisting in the removal of redundant tissue and the production of cicatricial contraction

retro- [L. re'tro backward]. A suffix signifying backward.

retro-auricular (re"tro-aw-rik'u-lar). Situated behind the auricle.

retrobronchial (re-tro-brong'ke-al). Behind the bronchi.

retrobuccal (re-tro-buk'al). Pertaining to the back part of the mouth.

retrobulbar (re-tro-bul'bar) [L. re'tro back + bul'bus bulb]. Situated or occurring behind the pons or behind the eyeball.

retrocardiac (re-tro-kar'de-ak). Behind the heart. retrocatheterism (ret"ro-kath'e-ter-izm). Pass-

ing of a catheter through a suprapubic opening downward through the urethra to the external meatus.

retrocecal (re-tro-se'kal). Behind the cecum.

retrocedent (re-tro-se'dent) [L. retroce'dens going back]. 1. Going back, or returning. 2. Disappearing from the surface and affecting some interior organ.

retrocervical (re-tro-ser'vik-al). Behind the cervix uteri.

retrocession (re-tro-sesh'un) [L. retroces'sio]. 1. A going backward. 2. The translation of a disease from the surface to some interior organ.

retroclavicular (re-tro-klav-ik'u-lar). Behind the clavicle.

retroclusion (re-tro-klu'zhun) [L. re'tro back + clau'dere to close]. Closure of a bleeding artery by means of a pin passed over, behind, and under the vessel.

retrocolic (re-tro-kol'ik). Behind the colon.

retrocollic (re-tro-kol'lik) [L. rc'tro backward + col'lum neck]. Pertaining to the back of the neck.

retrocollis (re-tro-kol'lis) [L. re'tro backward + col'lis neck]. Spasmodic wry-neck in which the head is drawn directly backward.

retrocursive (ret-ro-ker'siv) [L. ret'ro back + curro to run]. Marked by stepping backward, as retrocursive epilepsy.

retrodeviation (re"tro-de-ve-a'shun). A general term inclusive of retroversion, retroflexion, retroposition, etc.

retrodisplacement (re"tro-dis-plās'ment). A backward displacement.

retrodural (ret-ro-du'ral). Behind the dura mater. retro-esophageal (re"tro-es-of-a'je-al). Situated or occurring behind the esophagus.

retroflexed (re'tro-flekst) [L. re'tro backward + flex'us bent]. Bent backward; in a state of retroflexion.

retroflexion (re-tro-flek'shun) [L. retroflex'io].

The bending of an organ so that its top is thrust back

retrogasserian (ret-ro-gas-e're-an). Pertaining to the posterior root of the gasserian ganghon, as retrogasserian neurotomy.

retrograde (re'tro-grād) [L. re'tro backward + gra'di to go]. Going backward; retracing a former course; catabolic r. embolism, embolism in which the embolus has passed in a direction opposite to that of the blood-stream.

retrography (re-trog'raf-e) [L. re'tro backward + Gr. γράφειν to write]. Same as mirror-writing.

retrogression (ret-ro-gresh'un) [L. re'tro backward + gra'di to walk]. 1. Degeneration. 2. Catabolism.

retro-infection (ret-ro-in-fek'shun). Infection of the mother by the fetus in utero.

retro-insular (re-tro-in'su-lar) [I.. re'tro backward + insu'la island]. Situated or occurring behind the insula.

retro-iridian (re"tro-i-rid"e-an). Behind the iris.

retrojection (re-tro-jek'shun) [L. re'tro backward + ja'cere to throw]. The washing out of a cavity by an injected fluid.

retrojector (re-tro-jek'tor). An instrument used in washing out the uterus.

retrolabyrinthine (ret"ro-lab-er-in'thēn). Behind the labyrinth of the ear.

retrolingual (re-tro-ling'wal). Behind the tongue. retromammary (re-tro-mam'a-re) [L. re'tro back + mam'ma breast]. Situated or occurring behind the mammary gland.

retromandibular (ret"ro-man-dib'u-lar). Behind the mandible or lower jaw.

retromastoid (re-tro-mas'toid). Situated behind the mastoid process.

- **retromorphosis** (re"tro-mor-fo'sis) [L. re'tro backward + Gr. μόρφη form]. Retrograde metamorphosis.
- retronasal (re-tro-na'zal) [L. re'tro behind + na'sus nose]. Situated or occurring behind the nose.
- retro-ocular (re-tro-ok'u-lar) [L. re'tro back + oc'ulus eye]. Situated or occurring behind the eye.
- retroperitoneal (re"tro-per-it-o-ne'al) [L. re'tro back + perstoneum]. Situated behind the peritoneum.
- **retroperitoneum** (re"tro-per-it-o-ne'um). The retroperitoneal space.
- retroperitonitis (re"tro-per-it-o-ni'tis). Inflammation in the retroperitoneal space.
- retropharyngeal (re"tro-far-in'je-al) [L. re'tro back + pharyngeal]. Situated or occurring behind the pharynx.
- retropharyngitis (re"tro-far-in-ji'tis). Inflammation of the posterior part of the pharynx.
- retropharynx (re-tro-far'inks). The posterior part of the pharynx.
- **retropituitol** (ret"ro-pit-u'it-ol). A proprietary fluid extract from the posterior lobes of the pituitary glands of young oxen.
- retroplacental (re"tro-pla-sen'tal). Situated or occurring behind the placenta.
- **retroplasia** (re''tro-pla'se-ah) [L. re'tro backward + Gr. πλάσις formation] Retrograde metaplasia, degeneration of a tissue or cell into a more primitive type.
- retroposed (re-tro-pōzd') [L re'tro backward + pos'ttus placed]. Displaced backward.
- retroposition (re"tro-po-zish'un). 1. Backward displacement. 2. Reposition.
- retropulsion (re-tro-pul'shun) [L. re'tro back + pel'lere to drive]. 1. A driving back, as of the fetal head in labor. 2. A tendency to walk backward, as in some cases of locomotor ataxia.
- retrorectal (re-tro-rek'tal). Behind the rectum.
- retrospection (re-tro-spek'shun) [L. re'tro backward + spic'ere to look]. Morbid exercise of the memory.
- retrostalsis (re-tro-stal'sis). Reversed or backward peristaltic action.
- retrosternal (re-tro-ster'nal) [L. re'tro back + sternum]. Situated or occurring behind the sternum.
- retrosymphyseal (re"tro-sim-fiz'c-al). Behind the symphysis.
- retrotarsal (re-tro-tar'sal). Situated behind the tarsus of the eye.
- retro-uterine (re-tro-u'ter-in) [L. re'tro back + u'terus womb]. Situated or occurring behind the uterus.
- retrovaccination (re"tro-vak-sin-a'shun). The inoculation of a heifer with vaccine virus from a human subject; also vaccination with virus obtained from a cow which has been previously thus inoculated.
- retrovaccine (ret-ro-vak'sēn). Vaccine virus obtained by inoculating a calf with vaccine virus from a human subject.
- retroversioflexion (re"tro-ver-se-o-flek'shun).
 Retroversion combined with retroflexion.
- retroversion (re-tro-ver'shun) [L. retrover'sio; re'tro back + ver'sio turning]. The tipping of an entire organ backward.
- retroverted (re-tro-ver'ted). In a condition of retroversion.
- retrusion (re-tru'zhun) [L. reback + tru'dere to shove]. Malposition of a tooth in which it occupies a position posterior to the line of occlusion.
- Retzius's cavity, fibers, ligament, space, veins, etc. (ret'ze-us) [Anders Adolf Retzius, Swedish anatomist, 1796-1860]. See the nouns.

- Retzius's foramen, striæ (ret'ze-us) [Magnus Gustav Retzius, Swedish histologist, 1842-1919]. See foramen and stria.
- reunient (re-un'yent) [L. re- again + uni're to unite]. Effecting the union of divided parts.
- reuniol (re-u'ne-ol). An alcohol from oil of geranium, especially from a kind brought from the island of Réunion. It has a rose-like odor.
- Reuss's test (rois'ez). See under tests.
- revaccination (re"vak-sin-a'shun). A second vaccination.
- revellent (re-vel'ent) [L. re- back + vel'lere to draw]. Causing revulsion; revulsive.
- **Reverdin's operation** (ra-vehr-danz') [Jacques Louis *Reverdin*, surgeon at Geneva, 1842-1908]. See operation.
- reversion (re-ver'shun) [L. re-back + ver'sio turning] In genetics, inheritance from some remote ancestor of a character which has not been manifest for several generations. Cf alavism.
- revertose (re-ver'tos). A disaccharid formed by the action of maltase on very concentrated solutions of glucose.
- Revilliod's sign (ra-ve-yōz') [Henri Revilloids contemporary Swiss physician]. See under sign.
- revivescence (re-vi-ves'ens) [I.. revives'cere to revive] 1. The renewal of vital activities. 2. The reappearance of a local (cutaneous) reaction on the subcutaneous administration of tuberculin to a patient who has previously had a diagnostic (cutaneous) tuberculin test. Called also recurrent reaction
- revivification (re-viv"if-ik-a'shun) [L. re- again + v'sus alive + fa'cere to make]. The paring or refreshing of diseased surfaces to promote their union.
- revolute (rev'o-lūt). Turned back or curled back.
 revulsant (re-vul'sant) [L. revul'sans]. Same as
 revulsave.
- **révulseur** (re-vul-ser') [Fr.]. An instrument used in the performance of baunscheidtism.
- revulsion (re-vul'shun) [L. revul'sto; from re-back + vel'lere to draw]. The derivation of blood from a diseased part to another part.
- revulsive (re-vul'siv) [L. re- back + vel'lere to pull]. 1 Effecting a revulsion. 2. A derivative agent or medicine.
- rexotan (rek'so-tan). Methylene-tannin-urea, used in intestinal catarrh.
- R. F. A. Abbreviation for right fronto-anterior position of the fetus.
- R. F. P. An abbreviation for right frontoposterior position of the fetus.
- Rh. The chemical symbol of rhodium.
- rhabditic (rab-dit'ık) Pertaining to Rhabditis.
- Rhabditis (rab-di'tis) [Gr. ράβδος rod]. A genus of minute nematode worms of the family Anguilulidæ, living mostly in damp carth, but occasionally found in man. R. genita'lis sometimes occurs in the urinary organs. R. hom'inis, a viviparous parasite found in the feces of school children in Korea. R. intestina'lis and R. niel'lyi also infest the human subject. R. pel'lis, a species once found in the vagina.
- rhabdium (rab'de-um) [Gr. βάβδος rod]. A voluntary muscle-fiber.
- rhabdoid (rab'doid) [Gr. βάβδος rod + είδος form]. Rod-shaped.
- rhabdomyoblastoma (rab"do-mi"o-blas-to'mah) [Gr. $\dot{\rho}\dot{\alpha}\dot{\rho}\delta\sigma$ rod $+\mu\nu$ s muscle $+\beta\lambda\dot{\alpha}\sigma\tau\sigma$ s cell $+\omega\mu$ a tumor]. A tumor the cells of which tend to differentiate into striated muscle-cells.
- rhabdomyochondroma (rab"do-mi"o-kon-dro'-mah). A mixed chondroma and rhabdomyoma.
- rhabdomyoma (rab"do-mi-o'mah) [Gr. ράβδος rod + myoma]. A myoma composed of striated muscular fibers: called also myoma striocellulare.

rhabdomyomyxoma (rab"do-mi"o-mik-so'mah). A myxoma and rhabdomyoma.

rhabdomyosarcoma (rab"do-mi"o-sar-ko'mah).
A combined sarcoma and rhabdomyoma.

rhabdonema (rab-do'ne-mah). Same as rhabditis,

rhabdophobia (rab-do-fo'be-ah) [Gr. ραβδος rod + φόβος fear]. Morbid dread of a stick or of a beating.

rhachialgia (ra-ke-al'je-ah), and other words in rhach-. See rachialgia, etc.

rhachisan (ra'ke-san). A proprietary food for rickets, made of cod-liver oil, iodin, lecithinnuclein, manna, etc.

rhacoma (ra-ko'mah) [Gr. ρακόειν to rend]. 1. An excoriation or rent of the skin. 2. A pendulous scrotum.

rhæbocrania (re-bo-kra'ne-ah) [Gr. ἡαιβόs crooked + κρανίον skull]. Torticollis, or wry-neck.

rhæboscelia (re-bo-se'le-ah) [Gr. ραιβός crooked + σκέλος leg]. Bow-leg, or knock-knee.

rhæbosis, rhebosis (re-bo'sis) [Gr. ραιβός (rooked]. Crookedness of the legs or of any normally straight part.

rhagades (rag'ad-ēz) [Gr. pl. of ραγάς rent]. Clefts, chaps, or excoriations in the skin, especially those of the anus.

rhagadiform (rag-ad'if-orm) [Gr. ραγάς rent + L. for'ma shape]. Fissured; containing cracks.

rhagiocrin (raj'e-o-krin). A clasmatocyte.

Rham. cat. Abbreviation for Rham'nus cathar'tica.
rhamnin (ram'nin). A proprietary fluidextract of Rham'nus fran'gula: it is aperient.

rhamnose (ram'nōs). A methylpentose, CH₃-(CHOH)₄CHO, sometimes found in the urine; it is dextrorotatory.

rhamnosid (ram'no-sid). A glucosid which on hydrolysis yields rhamnose.

rhamnoxanthin (ram-no-zan'thin). A crystalline principle from Rham'nus fran'gula: said to be identical with cascarin.

Rhamnus (ram'nus) [L.; Gr. ῥάμνος]. A genus of rhamnaceous trees and shrubs, often with a purgative bark and fruit. Among them are R. cathar'tica, or buckthorn; R. purshia'na, cascara sagrada (q. v.), and R. fran'gula. See cascara sagrada and Frangula. R. calijo'nica, California buckthorn or coffee-tree is used in rheumatism. R. cro'ceus is a species of buckthorn with edible red fruit, the excessive use of which tinges the skin red.

rhaphania (raf-a'ne-ah). See raphania.

Rhaphanus (raf'an-us) [L. "radish"]. A genus of cruciferous plants: radishes; also the homeopathic preparation of the root of the black garden radish, R. sati'va.

rhaphé (ra'fe). Same as raphé.

rhapontic (rah-pon'tik) [Gr. βâ rhubarb + ποντικόν Pontic]. 1. Pertaining to rhubarb. 2. Rhubarb.

rhatany (rat'an-e) [Pg. ratan'hia]. Same as Krameria. Peruvian r., Krameria triandra. Savanilla r., Krameria ixina.

Rhazes (ra'zēs). An Arabian physician, 850-932 A. D., the author of nearly 200 medical writings, most of which have been lost.

rheadin (re'ad-in). A principle, C₂₁H₂₁NO₆, from opium.

rheantin (re-an'tin). A proprietary antigonococcic vaccine for inoculation through the gastro-intestinal tract.

rhebocra'nia. See rhabocrania.

rhebosce'lia. See rhæboscelia.

rhebo'sis. See rhabosis.

rhegma (reg'mah) [Gr. $\dot{p}\dot{\eta}\gamma\mu a$ rent]. A rupture, rent, or fracture.

rhein (re'in) [L. rhe'um rhubarb]. See chryso-phonic stid, under acid.

rhembasmus (rem-baz'mus) [Gr. δεμβασμός]. τ. Mental wandering or distraction. 2. Wavering or morbid indecision.

rhenium (re'ne-um). A chemical element, atomic number 75, dissolved in solutions of certain minerals.

rheobasis (re-ob'as-is) [Gr. βέος current + βάσις step]. The minimum potential of electric current necessary to produce stimulation (L. Lapicque, 1000).

rheochord (re'o-kord) [Gr. ρέος current + χορδή chord]. Same as rheostat.

rheometer (re-om'et-er) [Gr. βέος current + μέτρον measure]. I. See galvanometer. 2. An instrument for measuring the velocity of the blood-current.

rheonome (re'o-nōm) [Gr. ρέος current + νέμειν to distribute]. An apparatus for determining the effect of irritation on a nerve.

rheophore (re'o-fōr) [Gr. δέος current + φόρειν to carry]. Same as electrode.

rheoscope (re'o-skōp) [Gr. βέος current + σκοπείν to view]. An instrument for detecting the presence of an electric current.

rheoscopic frog (re-o-skop'ik). See frog.

rheostat (re'o-stat) [Gr. βέος current + iστάναι to place]. An appliance for regulating the resistance in an electric current.

rheotachygraphy (re"o-tak-ig'raf-e) [Gr. δέος current $+ \tau a \chi \dot{v}$ s swift $+ \gamma \rho \dot{a} \varphi \epsilon \iota \nu$ to record] The photographic record of the curve of variation in experiments upon the electromotive action of muscles.

rheotaxis (re-o-tak'sis) [Gr βέσς current + τάξις arrangement]. The phenomenon of a body moving in a direction contrary to the current of the fluid in which it lies.

rheotome (re'o-tōm) [Gr. βέος current + τέμνειν to cut]. A device in a faradic battery for interrupting the current.

rheotrope (re'o-trōp) [Gr. βέος current + τρέπειν to turn]. An instrument for reversing an electric current.

rheotropism (re-ot'ro-pizm) [see rheotrope]. Rheotaxis

rhestocythemia, rhæstocythemia (res"to-sithe'me-ah) [Gr. ραίειν to break, ruin + κύτος cell + αίμα blood]. The occurrence of broken-down red corpuscles in the blood.

Rheum (re'um) [L.; Gr. ρ̂ῆον]. A genus of cathartic polygonaceous plants. See rhubarb.

rheum, rheuma (rūm, rum'ah) [Gr. ρεῦμα flux].

Any watery or catarrhal discharge. epidemic
r., influenza. salt-r., eczema.

rheumacilate (ru-mas'il-āt). Methyl salicylate: a proprietary remedy for rheumatism.

rheumagon (ru'mag-on). A proprietary remedy for rheumatism and gout. It contains sodium iodid and phosphate, and is used externally and internally in rheumatism and syphilis. Dose, 30 min. (2 c.c.).

rheumapyra, rheumatopyra (ru-map-i'rah, ru"-mat-o-pi'rah) [Gr. $\dot{\rho}$ εῦμα flux + π ῦρ fire]. Acute rheumatism; rheumatic fever.

rheumarthritis, rheumarthrosis (ru-mar-thri'-tis, ru-mar-thro'sis) [Gr. ρεθμα flux + ἄρθρον joint]. Rheumatism of the joints.

rheumasan (ru'mas-an). A preparation of salicylic acid and superfatted soap: used as an application in gout.

rheumatalgia (ru-mat-al'je-ah) [Gr. ρεῦμα flux + άλγος pain] Chronic rheumatic pain.

rheumatic (ru-mat'ik) [Gr. ρευματικόs]. Pertaining to or affected with rheumatism.

rheumatin (ru'mat-in). 1. A proprietary antilithic and sorbefacient remedy containing sodium iodid and sodium phosphate. 2. A salicylate of the salicylic acid ester of quinin; a tasteless white powder, slightly soluble in water, and used in rheumatism. Dose, 15-30 gr. (1-2 gm.). Called also saloquinin salicylate.

rheumatisant (ru-mat'iz-ant). A person subject to rheumatism.

rheumatism (ru'mat-izm) [L. rheumatis'mus; Gr. φευματισμός]. A constitutional disease marked by inflammation of the connective-tissue structures of the body, especially the muscles and joints, and attended by pain in the joints or muscles. It is usually recurrent, and is often due to exposure. apoplectic r., rheumatism associated with cerebral apoplexy. articular r., acute, an infectious disease of uncertain causation, attended with fever, sour sweat, scanty, highcolored urine containing a large amount of urea, and swelling of the joints from exudation into their cavities and infiltration around them. The symptoms pass from one joint to another, and recurrence is apt to take place. The inflammation may spread to other structures or organs, especially to the heart. Called also inflammatory r., acute rheumatic arthritis, and rheumatic fever. articular r., chronic, a form of chronic joint inflammation attended by moderate pain and producing progressive deformity by a combined hypertrophy and atrophy of cartilage and bone and nodular ossification of the soft structures. Called also rheumatoid arthritis, arthritis deformans, osteo-arthritis, and chronic r. Besnier's r., chronic arthrosynovitis. cerebral r., acute rheumatic fever marked by chorea, delirium, convulsions, and coma. gonorrheal r., acute articular rheu-matism associated with gonorrheal urethritis, and frequently producing ankylosis of the joints. r. of the heart, rheumatism affecting the heart, due to spread of acute articular rheumatism, and producing valvular disease. Heberden's r., rheumatism of the finger-joint, marked by the formation of nodosities. inflammatory r. See articular r., acute MacLeod's capsular r., a rheumatoid arthritis with effusion into the synovial capsules, bursæ, and sheaths. muscular r., a painful affection of the voluntary muscles and their fibrous structures. It may or may not be attended with constitutional symptoms. nodose r. Articular rheumatism with the formation of nodules in the region of the joints. 2. Arthritis deformans. subacute r., a mild but obstinately protracted form of rheumatism. trench r., a painful myositis of the back and legs affecting soldiers in the trenches. tuberculous r., an in-flammatory state of the joints due to the toxins of tuberculosis. visceral r., that which involves a viscus, more commonly the heart or pericardium.

rheumatismal (ru-mat-iz'mal). Pertaining to or of the nature of rheumatism.

rheumatocelis (ru"mat-o-ke'lis) [rheumatic + Gr. κηλίς spot]. Purpura rheumatica.

rheumatoid (ru'mat-oid) [Gr. ρεῦμα flux + εἶδος form]. Resembling rheumatism. r. arthritis, chronic articular rheumatism. See rheumatism.

rheumatol (ru'mat-ol). A proprietary liniment for rheumatism

rheumatopyra (ru"mat-o-pi'rah). Same as rheumapyra.

rheumatosis (ru-mat-o'sis). Any disorder attributed to rheumatic origin.

rheumic (ru'mik). Pertaining to a rheum or flux. rhexis (rek'sis) [L.; Gr. βηξιs]. The rupture of an organ or a vessel

rhigoleue (rig'o-lēn) [Gr. ρεγος cold]. A light, inflammable petroleum distillate composed of butane and other volatile hydrocarbons. It evaporates rapidly, producing a lowering of the temperature of the surface from which it evaporates. It is used as a local freezing anesthetic for minor surgical operations.

rhinal (ri'nal) [Gr. pls nose]. Pertaining to the nose.

rhinalgia (ri-nal'je-ah) [Gr. βίς nose + ἄλγος pain]. Pain in the nose.

rhinalgin (ri-nal'jin) [Gr. βls nose + ἄλγος pain]. An antiseptic and analgesic preparation of alumnol, oil of valerian, menthol, and cocoa-butter: used in affections of the nose and eyes.

rhinalum (ri-nal'um). A proprietary alum preparation for diseases of the nose.

rhincospasm (ring'ko-spazm). A spasmodic snoring during waking hours.

rhinedema, rhincedema (ri-ne-de'mah) [Gr. pls nose + edema]. Edema of the nose; dropsy of the nose.

rhinencephalia (ri"nen-sef-a'le-ah) [Gr. ρίς nose + ἐγκέφαλος brain]. A monstrosity with a nose like a proboscis.

rhinencephalon (ri-nen-sef'al-on) [Gr. βls nose + εγκέφαλος brain]. The olfactory portion of the brain.

rhinencephalus (ri-nen-sef'al-us). Rhinocephalus.

rhinenchysis (ri-nen'kis-is) [Gr. βls nose + ἐγχεῖν to pour in]. Injection of a medicinal fluid into the nose.

rhinesthesia (ri-nes-the'ze-ah) [Gr. ρls nose + αἴσθησις sensation]. The sense of smell.

rhineurynter (rin-u-rin'ter) [Gr. ρίς nose + εὐρὐνειν to widen]. A dilatable rubber bag for distending a nostril.

rhinion (rin'c-on) [Gr. pulov nostril]. The lower end of the suture between the nasal bones.

rhinism (ri'nizm) [Gr. pls nose]. The so-called nasal quality of voice.

rhinitis (ri-ni'tis) [Gr. Als nose]. Inflammation of the mucous membrane of the nose. acute catarrhal r., coryza, or cold in the head; an acute congestion of the mucous membrane of the nose, marked by dryness, followed by increased mucous secretion from the membrane, impeded respiration through the nose, and some pain.

atrophic r., a chronic form marked by wasting of the mucous membrane and the glands. r. caseo'sa, rhinitis with a caseous, gelatinous, and fetid discharge. chronic catarrhal r., a form characterized by hypertrophy and later by atrophy of the mucous and submucous tissues. croupous See fibrinous r. fibrinous r., a form characterized by the development of a false membrane. Called also croupous r. gangrenous r., cancrum nasi. hypertrophic r., a form in which the mucous membrane thickens and swells. membranous r., chronic rhinitis with the formation of a membranous exudate. pseudomembranous r., a form in which the inflamed region is covered with an opaque exudation. purulent r., chronic rhinitis with the formation of pus. scrofulous r. Same as tuberculous r. r. sic'ca, a variety of atrophic rhinitis in which the secretion is entirely absent. syphilitic r., a variety caused by syphilis, and marked by ulceration, caries of the bone, and a fetid discharge. tuberculous r., a variety due to tuberculosis, and attended with ulceration, caries of the bone, and ozena. vasomotor r., hay-fever.

rhino-antritis (ri"no-an-tri'tis) [Gr. his nose + antrum + Gr. - tris inflammation]. Inflammation of the nasal cavity and the antrum of Highmore.

rhinobyon (ri-no'be-on) [Gr. μls nose + βυξιν to plug]. A nasal tampon.

rhinocanthectomy (ri"no-kan-thek'to-me). Same as rhinommectomy.

rhinocaul (ri'no-kawl) [Gr. δls nose + καυλός stalk]. The peduncle of an olfactory bulb.

rhinocele (ri'no-sel). See rhinocele.

Rhinoceph'alus annula'tus. Same as Boöphilus boris.

rhinocephalus (ri-no-sef'al-us) [Gr. ρls nose + κεφαλή head]. A monster-fetus with a nose like a head.

- rhinochiloplasty (ri-no-ki'lo-plas-te) [Gr. δls nose $+ \chi \epsilon \hat{l} \lambda os$ lip $+ \pi \lambda \hat{a} \sigma \sigma \epsilon \nu$ to form]. Plastic surgery of the nose and lip.
- rhinocletsis (ri-no-kli'sis) [Gr. ρίς nose + κλείσις closure]. Obstruction of the nasal passages.
- rhinocole (ri'no-sēl) [Gr. ρις nose + κοιλία hollow].
 The ventricle of the olfactory lobe of the brain.
- rhinoculin (ri-nok'u-lin) A proprietary anesthetic ointment for use in hay-fever.
- rhinodacryolith (ri-no-dak're-o-lith) [Gr. ρls nose + δάκρυον tear + λίθος stone]. A lacrimal concretion in the nasal duct.
- rhinodynia (ri-no-din'e-ah) [Gr. ρls nose + ὀδύνη pain]. Pain in the nose.
- rhinogenous (ri-noj'en-us) [Gr. ρls nose + γεννᾶν to produce]. Arising in the nose.
- rhinokyphectomy (ri"no ki-fek'to-me) [Gr. δls nose + κθφος hump + ἐκτομή excision]. A rhinoplastic operation for rhinokyphosis by intranasal excision of the kyphosis or hump.
- rhinokyphosis (ri"no-ki-fo'sis) [Gr. \(\beta \)!s nose + \(\kappa \) \(\beta \) to sumply. A nose which has a high protruding bridge.
- rhinol (ri'nol). A proprietary snuff for hay-fever and coryza, containing borated suprarenin, cocain, and antiseptics.
- **rhinolalia** (ri-no-la'le-ah) [Gr. μls nose + λαλιά speech] A nasal quality of voice due to some disease or defect of the nasal passages. r. aper-ta, that which is caused by undue patency of the posterior nares. r. clau'sa, that which is due to undue closure of the nasal passages.
- rhinolaryngitis (ri"no-lar-in-ji'tis). Inflammation of the mucous membrane of the nose and larvnx.
- rhinolaryngology (ri"no-lar-in-gol'o-je) [Gr. ρls nose + λάρυγξ larynx + λόγος treatise]. The sum of knowledge concerning the nose and larynx and their diseases.
- **rhinolin** (ri'no-lin). A disinfectant and analgesic proprietary remedy.
- rhinolite, rhinolith (ri'no-lit, ri'no-lith) [Gr. δίς nose + λίθος stone]. A nasal stone or concretion.
 rhinolithiasis (ri''no-lith-i'as-is) A condition
- **rhinolithiasis** (ri"no-lith-i'as-is) A condition associated with the formation of rhinoliths.
- rhinologist (ri-nol'o-jist). An expert in the knowledge and treatment of diseases of the nose.
- rhinology (ri-nol'o-je) [Gr. ρίς nose + λόγος treatise]. The sum of knowledge regarding the nose and its diseases.
- rhinomanometer (ri"no-man-om'et-er) [Gr. pis nose + manometer]. A manometer for measuring the amount of nasal obstruction.
- rhinometaplasty (ri-no-met'ap-las-te). Rhinoplasty.
- **rhinometer** (ri-nom'et-er) [Gr. ρίς nose + μέτρον measure]. An instrument for measuring the nose or its cavities.
- rhinomiosis (ri"no-mi-o'sis) [Gr. ρls nose + μείωσις diminution]. Operative reduction of the size of the nose.
- rhinommectomy (ri-nom-ek'to-me) [Gr. ρίς nose + δμμα eye + ἐκτομή excision]. Excision of the inner canthus of the eye.
- rhinonecrosis (ri"no-ne-kro'sis) [Gr. pls nose + necrosis]. Necrosis of the nasal bones.
- rhinopharyngeal (ri"no-far-in'je-al). Same as nasopharyngeal.
- rhinopharyngitis (ri"no-far-in-ji'tis). Inflammation of the nasopharynx. r. mu'tilans. See gangosa.
- rhinopharyngocele (ri"no-far-ing'o-sēl). A tumor, usually an aerocele, of the nasopharynx.
- rhinopharyngolith (ri"no-far-ing'o-lith) [Gr. ρls nose + φάρυγξ pharynx + λlθος stone]. Calculus of the nasal pharynx.
- rhinopharyna (ri-no-far'inks). Same as naso-pharynx.

- rhinophonia (ri-no-fo'ne-ah) [Gr. βls nose + φωνή voice]. A nasal twang or quality of voice.
- rhinophyma (ri-no-fi'mah) [Gr. ρls nose + φῦμα growth]. A nodular swelling and congestion of the nose.
- rhinoplasty (ri'no-plas-te) [Gr. μls nose + πλάσσειν to form]. The formation of a new nose out of tissue derived from another part. Carpue's r., Indian rhinoplasty. dactylocostal r., the use of the finger and a costal cartilage to furnish material for plastic repair of the nose. English r., that in which a nose is formed out of flaps from the cheeks. Indian r., the formation of a nose from a flap taken from the forehead. Italian r., tagliacotian r., the making of a nose out of the flesh of the arm.
- rhinopolypus (ri-no-pol'ip-us) [Gr. pls nose + polypus]. A nasal polypus.
- rhinoptia (ri-nop'she-ah). Internal strabismus.
- rhinoreaction (ri-no-re-ak'shun). The nasal tuberculin reaction; an exudation appearing on the nasal mucous membrane after the application thereto of a solution of tuberculin in patients affected with tuberculosis. Called also Moeller's reaction.
- rhinorrhagia (ri-nor-a'je-ah) [Gr. λίς nose + ληγνύναι to burst forth]. Nose-bleed, epistaxis.
- **rhinorrhaphy** (ri-nor'af-e) [Gr. $\dot{\rho}$ ls nose + $\dot{\rho}\alpha\varphi\dot{\eta}$ suture]. An operation for epicanthus performed by excising a fold of skin from the nose and closing the opening with sutures.
- rhinorrhea, rhinorrhea (ri-nor-e'ah) [Gr. ols nose + ola flow] The free discharge of a thin nasal mucus. **cerebrospinal r.**, discharge of cerebrospinal fluid through the nose.
- rhinosalpingitis (ri"no-sal-pin-ji'tis) [Gr δίς nose + σάλπιγξ tube + -ιτις inflammation]. Inflammation of the nasal mucosa and the custachian tube.
- rhinosclerin (ri-no-skle'rin). A preparation derived from cultures of the bacillus of rhinoscleroma: used in treating that disease.
- rhinoscleroma (ri"no-skle-ro'mah) [Gr. ρls nose + σκλήρωμα a hard swelling]. A form of indurated growth of the skin and mucous membrane of the nose. The growth is of the nature of granulation tissue, and forms hard patches or nodules, which tend to increase in size and are painful on pressure. The disease is ascribed to the presence of the Bacterium rhinoscleromatis.
- rhinoscope (ri'no-skôp) [Gr. ρίς nose + σκοπεῖν to view]. A speculum for use in nasal examinations.
- rhinoscopic (ri-no-skop'ik). Pertaining to rhinoscopy.
- rhinoscopy (ri-nos'ko-pe). The examination of the nasal passages, either through the anterior nares (anterior r.) or through the nasopharynx (posterior r.). median r., examination of the nasal cavity and the openings of the ethmoid cells, etc., by means of a long nasal speculum.
- rhinosporidiosis (ri"no-spo-rid-e-o'sis). The condition produced by Rhinosporidium in the nasal cavity.
- Rhinosporid'ium kineal'yi. A sporozoan parasite found in tumors of the septum nasi of natives of India. R. seebe'ri, a species which causes a form of nasal polypus.
- rhinostegnosis, rhinostenosis (ri"no-steg-no'sis, ri"no-sten-o'sis) [Gr. δίς nose + στήγνωσις, στένωσις obstruction]. Obstruction of a nasal passage.
- Rhipicephalus (ri-pis-ef'al-us) [Gr. ριπις fan + κεφαλή head]. A genus of cattle-ticks, species of which are the agents in transmitting the piroplasma of cattle fever and other disease. R. annula'tus. Same as Margaropus annulatus. R. appendicula'tus, the brown tick, transmits the Piroplas'ma par'vum of East African Coast fever. R. bur'sa transmits the Piroplas'ma o'vis, which causes icterohematuria of sheep.

- R. sanguin'eus, the brown dog tick, a species found on many domestic animals. It transmits *Piroplasma canis* and *Hæmogregarina*. R. si'mus, the black pitted tick, a species which transmits the *Piroplas'ma par'vum* (*Theile'ria par'va*) of East African Coast fever.
- rhizagra (ri-zag'rah) [Gr. ρίζα root + ἄγρα seizure]. An ancient forceps for the roots of teeth.
- Rhizobium (ri-zo'be-um) A genus of bacterial organisms. They are minute, aërobic, motile rods found in nodules on the roots of plants with which they are symbiotic and without which the plants do not thrive. They are able to "fix" atmospheric nitrogen. R. radicic'ola, the organism that causes the formation of root nodules on the leguminous plants.
- rhizodontropy (ri-zo-don'tro-pe) [Gr. $\dot{\rho}$ is a root + $\dot{\rho}$ oos tooth + $\tau\rho$ o $\pi\dot{\eta}$ pivot]. The fixation of an artificial crown upon the natural root of a tooth.
- rhizodontrypy (ri-zo-don'trip-e) [Gr. $\dot{\rho}$ i $\dot{\gamma}a$ root + $\dot{\delta}\delta\dot{\rho}\dot{\nu}s$ tooth + $\tau\rho\dot{\nu}\pi\eta$ hole]. The perforation of the root of a tooth for the discharge of morbid fluids.
- Rhizog'lyphus parasit'icus. A mite which lives on the ground in India and causes sore feet.
- rhizoid, rhizoidal (ri'zoid, ri-zoi'dal) [Gr. μίζα a root + είδος form]. Root-like; resembling a root.
- rhizome (ri-zōm') [L. rhizo'ma; Gr. ρίζωμα rootstem]. The subterganeous root-stalk of a plant.
- **rhizomelic** (ri-zo-mel'ik) [Gr. $\beta l \zeta a$ root $+ \mu \ell \lambda os$ limb]. Pertaining to or involving the hip- and shoulder-joints.
- Rhizomu'cor parasit'icus. A parasitic mold found in the sputum of a woman with a disorder resembling phthisis.
- rhizoneure (ri'zo-nūr) [Gr. ρίζα root + νεθρον nerve]. A nerve-cell which forms a nerve-root.
- rhizoplast (ri'zo-plast) [Gr. βίζα root + πλαστός formed]. The root of the flagellum of a protozoan, extending to the nucleus.
- Rhizopoda (ri-zop'o-dah) [Gr. ρίζα root + ποῦς foot]. A subdivision of the Sarcodi'na, having lobose or reticulate pseudopodia, and including the amebæ.
- Rhizopus (ri-zo'pus). A genus of the Mucoraceæ. R. ni'ger has been found in mycosis of the nose, ear, tongue, and lungs.
- rhizotomist (ri'zot'o-mist). In Greek medicine, a vagrant gatherer of medicinal herbs and simples.
- rhizotomy (ri-zot'o-me) [Gr. ρίζα root + τομή a cut]. Surgical division of the posterior roots of the spinal nerves for pain or paralysis. Called also Dana's operation.
- rhodagen (ro'da-jen). See rodagen.
- rhodallin (ro-dal'in). Same as thiosinamin.
- rhodalzid (ro-dal'zid). A proprietary albuminsulphocyanate preparation: used for treating caries, gout, arteriosclerosis, etc.
- rhodamin (ro'dam-in). A dye similar to pyronin, but with a hydroxy-phenyl group attached to the central carbon atom. **r**. **B**, a tetra-ethyl rhodamin derivative, (C₂H₅)₂N.C₅H₃ OC(C₃H₄.-COOH)C₃H₃.N(C₂H₅)₂Cl. **r**. **S**, a tetra-ethyl succinein, (C₂H₅)₂N.C₆H₃OC(C₂H₄.COOH)C₆H₃N-(C₂H₅)₂Cl.
- rhodan (ro'dan). A salt of sulphocyanic acid found in the nasal secretion.
- rhodane (ro'dān). Sodium rhodanid: used in the pains of tabes, arteriosclerosis, etc.
- Rhodesian fever (ro-de'zhan). See under fever.
- rhodinol (ro'din-ol). A compound, C₁₀H₁₈O, forming artificial or synthetic oil of rose.
- rhodium (ro'de-um) [Gr. βόδιος rosy]. A hard and rare metal of the platinum group; atomic weight, 102.9; symbol, Rh; also its homeopathic trituration.
- Rhod'nius prolix'us. A South American bug

- which is capable of transmitting Trypanosoma cruzi.
- Rhodococcus (ro-do-kok'us) [Gr. βόδον rose + coccus]. A genus of Coccaceæ. They are aërobic, Gram-positive, saprophytic, and produce a red pigment. **R. ag'llis**, highly motile cocci producing a rosy pigment. **R. cinnaba'reus**, a species that forms a brick-red pigment. **R. ro'seus**, nonmotile cocci forming rose-colored pigment.
- rhodocyte (ro'do-sit) [Gr. ρόδον rose + κύτος cell]. A red blood-corpuscle.
- rhodogenesis (ro-do-jen'es-is) [Gr. δόδον rose + γένεσις production]. The restoration of the purple tint to rhodopsin after it has become bleached by the action of light.
- rhodophane (ro'do-fān) [Gr. δόδον rose + φανό! bright]. A red pigment, or chromophane, from the retinal cones of birds and fishes.
- rhodophylactic (ro"do-fi-lak'tik). Tending to preserve or restore the retinal purple; pertaining to rhodophylaxis.
- rhodophylaxis (ro"do-fi-lak'sis) [Gr. βόδον rose + φυλαξις defense]. The supposed property of the retinal epithelium of protecting and increasing the power of the retinal purple to regain its colorafter bleaching.
- rhodopsin (ro-dop'sin) [Gr. δόδον rose + δψε vision]. The visual purple: the pigment of the outer segment of the retinal rods.
- rhombencephalon (rom-ben-sef'al-on) [Gr. δόμ βος rhomb + ἐγκέφαλος brain]. The portion o the brain situated below the isthmus: it include the medulla oblongata and cerebellum.
- rhombo-atloideus (rom"bo-at-loi'de-us). Se muscles, table of.
- rhomboccele (rom'bo-sēl) [Gr. ρόμβος rhomb + κοιλός hollow]. The terminal distention of th canal of the spinal cord.
- rhomboid (rom'boid) [Gr. δόμβος rhomb + είδο form]. Shaped like a rhomb, or kite.
- rhomboideus (rom-boid'e-us). See muscles, table of rhomnol (rom'nol). A proprietary nucleic aciderivative of the thymus gland of the calf: use in tuberculosis, diabetes, neurasthenia, etc.
- rhonchal, rhonchial (rong'kal, rong'ke-al). Per taining to, or of the nature of, a rhonchus.
- rhonchus (rong'kus) [L.; Gr. ἀόγχος snore]. I rattling in the throat; also a dry, coarse râle i the bronchial tubes, due to a partial obstruction See râle.
- rhotacism (ro'tas-izm) [Gr. μωτακίζειν to misus the letter r]. The incorrect use or overuse c r-sounds, stammering.
- rhotanium (ro-ta'ne-um). A gold-palladium allo said to possess the same physical qualities a platinum.
- rhubarb (ru'barb) [L. rhabar'barum wild rhu barb; Gr. \$\hat{pa}\$ rhubarb]. The purgative and as tringent root of Rhe'um officina'le (also calle rhubarb) and of several other species of the sam genus. Rhubarb contains chrysophanic acic tannic acid, and other principles. It is laxative cholagogue, astringent, and a gastric tonic, an is used in constipation from intestinal indigestion diarrhea, and hemorrhoids. Dose of drug (rheum in substance, 2-30 gr. (0.133-2 gm.); of extract 5-15 gr. (0.333-1 gm.); of fluidextract, 15-45 mir (1-3 c.c.); of syrup, also of aromatic syrup, 1-fl.dr. (4-16 c.c.); of tincture, 1-8 dr. (4-32 c.c.); of aromatic tincture, 30-75 min. (2-5 c.c.); of sweet tincture (linctu'ra rhe'i dul'cis), 1-4 fl.dr. (4-1 c.c.); of wine, 1-2 fl.dr. (4-8 c.c.); of missu'ra rhe el so'da, 1 dr.-1 oz. (4-30 c.c.); of compound pil (containing also aloes and myrrh), 2 pills; of pul vis rhe'i compos'itus (Gregory's powder), 20-60 g. (1.33-4 gm.).
- Rhuphos (ru'fos). A physician of Ephesus wh practised at the beginning of the second centur

A. D. He wrote numerous works, of which but few have survived.

Rhus (rus) [L., gen. rho'is]. A genus of anacardiaceous trees and shrubs, many of them poisonous. R. aromat'ica, a shrub of North America, is tonic and stimulant in incontinence of urine and hematuria. Dose of fluidextract of root-bark, 5-30 min. (0.3-2 c.c.); of solid extract, 1-5 gr. (0.066-0.333 gm). R. diversilo'ba is poison oak. B. gla'bra, sumac, a non-poisonous species, is astringent and refrigerant, and is used in aphthæ and pharyngitis. Dose of fluidextract, 30-60 min. (2-4 c.c.). R. toxicoden'dron, or poison-ivy, a poisonous species of sumac. The leaves or juice, when applied to the skin, cause a severe dermatitis and internal poisoning used principally for rheumatism and in homeopathic practice. Dose of fluidextract, \(\frac{1}{10}\)-1 min. (0 006-0 066 c.c.); of tincture, 1-6 min. (0 066-0 4 c.c.). R. venena'ta, swamp-sumac, or poison-sumac, is poisonous. R. vernicif'era is the poisonous lacquer plant of Iapan and China.

rhusin (ru'sin). A powdered concentration prepared from the bark of *Rhus gla'bra*: astringent. Dose, 1-2 gr. (0.06-0.13 gm.).

rhyostomaturia (ri"o-sto-mat-u're-ah) [Gr. ρυάς fluid + στόμα mouth + οὖρον urine]. The excretion of urinary elements by the salivary glands.

rhyparia (ri-pa're-ah) [Gr. ρυπαρία filth]. Sordes; also filth.

rhypophagy (ri-pof'aj-e) [Gr. δύπος filth + φαγεῖν to eat]. The eating of filth.

rhypophobia (ri-po-fo'be-ah) [Gr. δύπος filth + φόβος fear]. Morbid dread of filth; rupophobia.

rhythm (rithm) [L. rhythmus; Gr. ρυθμός]. A measured movement; the recurrence of a motion at regular intervals. cantering r., a heart rhythm resembling the cantering of a horse. It is marked by the occurrence of a third sound between the normal heart-sounds. Called also bruit de galop and Traube's murmur. coupled r., an abnormal relation between the pulse and heart-beat in which every other beat of the heart produces no ulse at the wrist. gallop r., cantering rhythm. idioventricular r., an automatic rhythm developed in the ventricles of the heart in complete heart-block. nodal r., heart rhythm initiated by the auriculoventricular node of the heart. pendulum r., alternation in the rhythm of the heartsounds in which the diastolic sound is equal in time, character, and loudness to the systolic sound, the beat of the heart resembling the tick of a watch. It is indicative of commencing weakness of the heart. reversed r., a condition of cardiac rhythm in which the ventricular beat immediately precedes the auricular beat. sinus r., normal heart rhythm originating in the sino-auricular node. ventricular r., the ventricular contractions which occur in cases of complete heart-block.

rhythmeur (rith-mer'). A device for making rhythmic interruptions of the current in an x-ray machine.

rhythmic (rith'mik). Characterized by rhythm.

rhythmophone (rith'mo-fon) [Gr. $\dot{\rho}\nu\theta\mu\dot{\phi}s$ rhythm $+\varphi\omega\nu\dot{\eta}$ voice]. An instrument for magnifying the sounds of the heart-beat.

rhythmotherapy (rith-mo-ther'ap-e) [Gr. $\delta \nu \theta \mu \delta \sigma$ rhythm + $\theta \epsilon \rho a \pi \epsilon (a$ treatment]. The use of rhythm in treating disease, as the beating of time in treating stammering.

rhytidectomy (rit-id-ek'to-me) [Gr. δυτίς wrinkle + έκτομή excision]. Excision of wrinkles; a plastic operation for the removal of wrinkles.

rhytidosis (rit-id-o'sis) [Gr. ρυτίδωσις; ρυτίς wrinkle]. A wrinkling of the cornea; one of the signs of approaching death.

rib (rib) [L. cos'ta]. Any one of the twenty-four bones, each of which extends from a vertebra to or toward the sternum. The vertebral extremity of a rib is called the head; the contracted part

which adjoins it forms the neck; at the back of the rib is the tubercle; farther outward the bone bends forward, producing the angle, from which proceeds the body, which passes forward and downward to the sternal extremity. cervical r., a supernumerary rib occurring in the cervical region. false r's, the five lower ribs on either side, so called because they are not directly connected with the sternum. floating r., a rib of either of the two lowest pairs, connected only with the vertebræ. slipping r., abnormal mobility of the lower intercostal joint. Stiller's r., a preternaturally movable tenth rib. true r's, the seven upper ribs on either side, which are connected with the vertebræ and the sternum. Called also vertebrosternal r's. typhoid r., osteomyelitis of a rib occurring as a sequel of typhoid fever. vertebral r. Same as floating r. vertebrocostal r's, the three false ribs connected with the vertebræ and the costal cartilages. vertebrosternal r's. See true r's. Zahn's r's. See lines of Zahn.

Ribbert's theory (rib'erts) [Moritz Wilhelm Hugo Ribbert, German pathologist, 1855-1920]. See theory.

Ribera's method (re-ba'rahz) [José Ribera y Sans, Spanish surgeon, 1853-1912]. See method.

Ribes's ganglion (rebz) [François Ribes, French surgeon, 1800-1864]. See ganglion.

ribose (ri'bōs). An aldo-pentose, CH₂OH(CHOH)₃-CHO. It is a constituent of some of the nucleic acids and may sometimes be found in the urine.

rice (ris). The cereal plant, Ory'za sati'va; also its seed or grain. The grain consists mainly of starch, and is used as a food and a dusting-powder.

rice-body. See corpus oryzoideum.

rice-water stools. See under cholera.

Richardson's sign (ritsh'ard-sunz) [Sir Benjamin Ward Richardson, London physician, 1828-1896]. See sign.

Richet's aneurysm (re-shāz) [Didier Dominique Alfred Richet, French surgeon, 1816-1891]. A fusiform aneurysm.

Richet's bandage, fascia (re-shāz') [C. Robert Richet, French physiologist, born 1850]. See bandage, fiscia.

Richter's hernia (rish'terz) [August Gottlob Richter, surgeon in Gottingen, 1742-1812]. See hernia.

ricin (ri'sin) [L. ric'inus castor-oil plant]. 1. A poisonous principle or phytotoxin from the seed of the castor-oil plant, Ric'inus commu'nis It resembles the bacterial toxins in that injection into animals causes the production of an antitoxin.

2. A proprietary castor-oil preparation.

ricinin (ris'in-in). A crystallizable alkaloid, CH₃O-(CN)C_bH₂ON.CH₃, from the seeds of the castor-oil plant.

Ricinus (ris'in-us) [L. "tick"]. A genus of euphorbiaceous plants. The seeds of R. commu'nis, or castor-oil plant, afford castor oil (o'leum ric'ini). See castor oil, under oil. The leaves of the castor-oil plant are galactagogue. Dose of fluidextract, 60 min. (4 c.c.). A proprietary purgative fluidextract of the seeds is also prepared. Dose, 15-60 min. (1-4 c.c.).

rickets (rik'ets) [L. rachi'tis (q. v.): originally a distinct word, but now assimilated in meaning to the English word]. A constitutional disease of infancy (Glisson, 1650) in which the bones become soft and flexible from retarded ossification, due to deficiency of calcium salts. The disease is marked by bending and distortion of the bones under muscular action, by the formation of nodular enlargements on the ends and sides of the bones, by delayed closure of the fontanels, pain in the muscles, sweating of the head, and degeneration of the liver and spleen. There are often nervous affections, feverishness, convulsions, etc. Cold

pressed cod-liver oil and sunlight seem to have specific curative properties in rickets. acute r., infantile scurvy. adult r., a disease resembling rickets affecting adults. fat r., a form in which the infant is plump and seems well nourished. fetal r. See achondroplasia. hemorrhagic r., infantile scurvy. See scurvy. late r., adult rickets. lean r., rickets with wasting and progressive emaciation. scurvy r., infantile scurvy. tardy r., a disease of adults somewhat like rickets.

Ricketts's organism (rik'ets) [Howard Taylor Ricketts, American pathologist, 1871-1910]. See Rickettsia and organism.

Rickettsia (rik-et'se-ah) [Howard Taylor Ricketts]. A group of bacteria-like microorganisms which are parasitic in the arthropods, highly adapted to their hosts, and are grown with difficulty on artificial media. Some are thought to be pathogenic. corroden'tia is found extracellularly in the stomach of the dust louse (Psocidæ) and is not known to be pathogenic. R. ctenoceph'ali, a form found in the celomic fluid of the cat flea (Ctenocephalus felis). R. kai'ro, a form found in Egypt in lice. Probably not pathogenic. R. lectula'ria, a non-pathogenic form resembling R. prowazeki, found in the bedbug (Cimex lectularius). R. meloph'agi, a form found extracellularly in the intestine of the sheep louse or tick (Melophagus ovinus). It is not pathogenic and has been cultivated on glucose blood-agar. R. nippon'ica, an organism which may possibly be the cause of tsutsugamuchi disease. R. pedic'uli, a general term for the extracellular forms found in lice. R. prowazek'i is found in the cpithelial cells of the digestive tract of lice which have bitten typhus fever patients. It is regarded as the possible cause of typhus fever. R. quinta'na, an organism found extracellularly in the intestine of lice which have bitten trench fever patients and regarded as the possible cause of trench fever. R. ricket'tsi. Same as Dermacentronexus rickettsi. R. ro'cha li'ma, a form found intracellularly in the intestine of lice. Probably not pathogenic. R. ruminan'tium, the causative organism of heart-water disease of sheep. R. trichodec'tæ, a form found in the louse, Trichodectes pilosus. R. Same as R. quintana. wolhyn'ica.

rickety (rik'et-e). Affected with rickets.

Ricord's chancre (re-korz') [Philippe Ricord, French physician, 1800-1889]. See chancre.

rictal (rik'tal). Pertaining to a fissure.

rictus (rik'tus) [L.]. A fissure or cleft; also a gaping, as of the mouth.

Rideal-Walker coefficient (rid'e-al-waw'ker) [Samuel Rideal, English chemist, born 1863; J. F. Ainslie Walker, contemporary English chemist]. See under coefficient.

Ridell's operation (rid'elz). See under operation. riders' bone (riderz). See under bone. r. tendon. See under tendon.

ridge (rij). A crest or elevated border. basal r., a U-shaped ridge at the base of the posterior surface of the crown of a tooth: called also cingulum. bicipital r's, the edges of the bicipital groove. buccocervical r., a ridge in the buccal surface of a deciduous molar tooth near the cervix. buccogingival r., a ridge on the buccal surface of a deciduous molar tooth. deltoid r. Same as crest, deltoid. dental r's, the projecting borders of the dental groove. epicondylic r's, the two ridges dividing the anterior and posterior faces of the humerus, starting from the condyles. gastrocnemial r., a ridge on the posterior surface of the femur for the attachment of the gastrocnemius muscles. gluteal r., a ridge on the anterior surface of the femur for the attachment of the gluteus maximus muscle. interosseous r., a ridge along the entire length of the inner surface of the fibula. linguogingival r., a ridge on the lingual surface of the incisor and canine teeth near the gums. marginal r's, the

ridges on the outer margins of the occlusal surfaces of molars or bicuspid teeth. mylohyoid r., mylohyoid line. See line. oblique r., the ridge running obliquely across the occlusal surface of upper molar teeth. pectoral r., the external bi-cipital ridge. pronator r., the ridge on the an-terior surface of the ulna, which marks the extent of the attachment of the pronator quadratus.

pterygoid r., a ridge at the angle of junction of
the temporal and infratemporal surface of the
great wing of the sphenoid bone. superciliary
r., supra-orbital r., the prominence of the
frontal bone over the supra-orbital arch. supplemental r., an abnormal ridge on the surface of a tooth. supracondylar r. Same as epicondylic r. tentorial r., a ridge on the upper inner surface of the cranium to which the tentorium is attached. transverse r., a transverse ridge extending across the occlusal surface of a molar tooth. trapezoid r., an oblique ridge on the superior surface of the clavicle for the attachment of the trapezoid ligament. triangular r., a ridge on the occlusal surface of a molar tooth from the point of a cusp to the center of the crown. wolfian r., a prominence in the embryo which develops into the wolffian body.

ridgel, ridgil (rid'gel, -gil). Ridgling.

ridgling (rij'ling). A man or animal with one testicle removed.

Ridley's sinus (rid'lēz) [Henry Ridley, English anatomist, 1653-1708]. See sinus.

Riedel's disease, lobe (re'delz) [Bernhard Moritz Carl Ludwig Riedel, surgeon in Jena, 1846–1916]. See under disease and lobe.

Rieder's cells (re'derz) [Hermann Rieder, German pathologist, born 1858]. Polymorphonuclear lymphoidocytes.

Riegel's pulse, symptom, test-meal (re'gelz) [Franz Riegel, German physician, born 1843-1904]. See pulse, symptom, and test-meal.

Riga's disease (re'gahz) [Antonio Riga, Italian physician]. See under disease.

Rigal's suture (re-galz') [Joseph Jean Antoine Rigal, French surgeon, 1707-1865]. See suture.

Riggs's disease (rigz) [John M. Riggs, American dentist, 1810–1885]. See disease.

rigidity (rij-id'it-e) [L. rigid'itas; rig'idus stiff]. Stiffness or inflexibility, chiefly that which is abnormal or morbid. anatomic r., rigidity of the cervix uteri in labor, without pathologic condition of the cervix, so that it dilates to only a limited extent, beyond which uterine contractions are of no avail. cadaveric r., rigor mortis. cerebellar r., stiffness of the body and limbs, due to a lesion of the middle lobe of the cerebellum. clasp-knife r., spastic extension of the leg with a motion like that of a clasp-knife. decerebrate r., a condition of marked tonus in the extensor muscles of an animal in which the cerebrum has been cut across, resulting in a rigid state of the body. hemiplegic r., rigidity of the paralyzed limbs in hemiplegia. pathologic r., rigidity of the cervix uteri in labor from some disease. postmortem r., rigor mortis. spasmodic r., rigidity of the cervix uteri due to spasmodic contraction.

rigor (ri'gor) [L.]. r. A chill. 2. Rigidity. acid r., coagulation of the protein of muscle produced by acids. heat r., rigidity of muscles induced by heat. r. mor'tis, the rigidity or stiffening which follows after death, due to coagulation of the muscle-plasm. r. nervo'rum, tetanus. r. tre'mens, paralysis agitans. water r., a condition of rigor in a muscle caused by immersing it in water.

rima (ri'mah) [L. pl. ri'ma]. A crack, chink, or fissure. r. cornea'lis [B N A], corneal cleft. See cleft. r. glot'tidis [B N A], the chink between the vocal cords. r. o'ris [B N A], the opening of the mouth. r. palpebra'rum [B N A], the slit between the eyelids. r. puden'di [B N A].

the space between the labia majora. r. respirato'ria, the space behind the arytenoid cartilages. r. vestib'ulæ [BNA], the false glottis. r. voca'lis, rima glottidis.

rimal (ri'mal). Pertaining to a rima.

rimmose (rim'os) [L. ri'ma crack]. Marked by cracks and fissures.

rimula (rim'u-lah), pl. rim'ulæ [L.]. fissure, especially of the cord or brain. A minute

rinderpest (rint'er-pest) [Ger. Rinder cattle + pest plague]. The cattle-plague. See under plague.

Rindersuche (rint'er-soosh-e) [Ger.]. Hemorrhagic septicemia in cattle.

Rindfieisch's cells, folds (rint'flish-ez) [Georg Eduard Rindflessch, German physician, born 1836]. See cell and fold.

ring (ring) [L. an'nulus]. Any circular or annular organ or area. In chemistry, a collection of atoms arranged in a ring. Abbe's r's, catgut rings for supporting the ends of intestine to be stitched together. abdominal r., external, an opening in the aponeurosis of the external oblique muscle for the spermatic cord or for the round ligament. abdominal r., internal, an aperture in the transverse fascia for the spermatic cord or for the round ligament. auricular r., the ring surrounding the opening between the auricle and ventricle of the primitive vertebrate heart. It is represented in the mammalian heart by the auriculoventricular node. Bandl's r., a ring-shaped thickening of the uterus during labor, just above the internal os, and marking the lower limit of the contractile portion of the uterus. benzene-r. (Kekulé, 1865), the closed hexagon of carbon atoms in benzene (C_6H_6) , from which the different benzene compounds are derived by replacement of the hydrogen atoms. **Brokaw r.**, a ring of rubber tubing threaded with catgut strands and employed in intestinal anastomosis. bronchial r's, the cartilaginous rings of the bronchi. Cabot's See Cabot's ring-bodies, under body. Cannon's r., a tonic contraction ring often visible in the right half of the transverse colon. carbocyclic r. See carbocyclu. ciliary r., a ring of tissue in front of the ora serrata, comprising part of the ciliary body, and giving attachment to the ciliary processes and muscle. con-junctival r., a ring at the junction of the cornea with the conjunctiva. contraction-r. Same as Bandl's r. coronary r. See coronary cushion, under cushion. crural r. Same as femoral r. Döllinger's r., an elastic ring around the circumference of the cornea formed by a thickening of Descemet's membrane femoral r. ral r., the abdominal opening of the femoral canal, normally closed by the crural septum and peritonormally closed by the crutal r. glaucomatous r., a light yellowish ring around the optic disk in glaucoma, indicating atrophy of the choroid. heterocyclic r. See heterocyclic. homocyclic r., a chemical ring in which all the members are atoms of the same element. inguinal r. Same as abdominal r. isocyclic r. See isocyclic. Löwe's r., a ring in the visual field caused by the macula lutea. Lower's r's, the rings of tendon around the four orifices of the heart. Lusk's r., Bandl's ring. lymphoid r., the ring-like series of lymphoid tissue formed by the lingual, faucial, and pharyngeal tonsil. Maxwell's r., a ring resembling Löwe's, but smaller and fainter. mitroaortic r., a band of muscle surrounding both the mitral and aortic orifices of the heart in a single ring.

Müller's r., a muscular ring surrounding the junction of the cervical canal and the body of the uterus at an advanced stage of pregnancy. Newton's r's, the colored rings seen on the surface of thin, transparent membranes, as soap-bubbles, due to chromatic aberration. Ochsner's r., a ring of mucous membrane around the opening of the pancreatic duct. retraction-r. Same as Bandl's r. Schröder's r., Bandl's ring. spermatorrheal r., a ring worn on the penis to

prevent erections. tympanic r., the bony ring forming part of the temporal bone at the time of birth, and developing into the tympanic plate. umbilical r., the aperture in the abdominal wall by which the umbilical cord communicates with the fetus. Vossius's lenticular r., a ring of opacity in the crystalline lens caused by a force which presses the pupillary margin against the lens. Waldeyer's tonsillar r., the ring of adenoid tissue formed by the lingual, pharyngeal, and faucial tonsils.

ring-bone (ring'bon). A bone-like callus on the pastern bone of a horse, resulting from inflammation. Frequently it extends into the interphalangeal joints, causing lameness. When the joint is not involved, the condition is sometimes called false ring-bone. low r. See buttress foot, under foot.

Ringer's mixture or solution (ring'erz) [Sydney Ringer, English physiologist, 1835-1910]. See mirture

ringolin (ring'o-lin). ngolin (ring'o-lin). A preparation of cod-liver oil, glycerin, balsam of Peru, and zinc oxid: used as a vehicle for skin applications.

ringworm (ring'wurm). A contagious disease of the skin of man and domestic animals marked by the formation of ring-shaped pigmented patches covered with vesicles or scales. The disease is due covered with vesicles or scales. The disease is due to either of two parasitic fungi, Microsporon audouini or a variety of Trichophyton. See tinea. black-dotted r., a tropical form caused by Trichophylon lonsurans. r. of the body. See tinea truchophylina. Bowditch Island r., tinea imbricata Burmese r., tinea imbricata crusted r. cata. Chinese r., tinea imbricata. crusted r., favus. honey-comb r., favus. hypertro-phic r., granuloma trichophyticum. Indian r., tinea imbricata. oriental r., tinea imbricata, perhaps also eczema marginatum. r. of the scalp. See linea lonsurans. Tokelau r., tinea imbricata.

Rinné's test (rin'ez) [Friedrich Heinrich Rinné. German otologist, 1819-1868]. See under tests.

riodine (ri'o-din). A proprietary 66 per cent. solution in oil of an iodin product of castor oil containing about 17 per cent. of iodin. It is used like other fatty iodin compounds. Dose, 6-18 gr. (0.4-

Riolan's muscle, nosegay (re'o-lanz') [Jean Riolan, French physician, 1578-1657]. See muscle, nosegay.

ripa (ri'pah) [L. "bank"]. A line marking the reflec-tion of the ependyma of the ventricles of the brain

over a tela or a plexus.

riparian (ri-pa're-an). Pertaining to the ripa: marginal.

Ripault's sign (re-pōz') [Louis Henry Antoin Ripault, French physician, 1807-1856]. See sign.

risiccol (ris'ik-ol). A proprietary powder containing 50 per cent. castor oil, 40 per cent. magnesia usta, and 1 per cent. flavoring material.

Risley's prism (riz'lēz) [Samuel D. Risley, oph-thalmologist in Philadelphia, born 1845]. See under prism.

risorius (ri-so're-us) [L.]. See muscles, table of.

ristin (ris'tin). Ethyleneglycol monobenzoate: used in scabies.

risus (ri'sus). Latin for laughter. r. cani'nus, r. sardon'icus, a grinning expression produced by spasm of the facial muscles.

Ritter's disease (rit'erz) [Gottfried Ritter von Rittersheim, German physician, 1820–1883]. 1. Dermatitis exfoliativa infantum. 2. Winckle's disease.

Ritter's law, tetanus (rit'erz) [Johann Wilhelm Ritter, German physicist, 1776-1810]. See law and tetanus.

Ritter-Rollet phenomenon (rit'er-ro-la') [Johann Wilhelm Ritter, German physicist, 1776-1810; see Roller]. See under phenomenon.
rivalry, retinal (ri'val-re). The apparent alter-

nate displacement of two figures by each other when viewed together, one by each eye.

Rivalta's disease, reaction (re-val'tahz) [Sebastiano *Rivalta*, contemporary Italian veterinarian]. See *disease* and *reaction*.

rivanol (ri'van-ol). A chemical disinfectant, 2-ethoxy-6, 9-diamino-acridine hydrochlorid, NH₂-C₆H₃(N).C(NH₂).C₆H₃.O.C₂H₅. It is used in the treatment of wounds infected with and of cellulitis caused by streptococci. Its disinfectant activity is increased by the presence of blood-serum.

Riva-Rocci sphygmomanometer (re-vah-ro'-tshe) [Scipione *Riva-Rocci*, contemporary Italian physician], See *sphygmomanometer*.

Riverius' potion (re-ve're-us). See Rivière's potion, under potion.

Rivière's potion (re-ve-airz') [Lazare Rivière, French physician, 1589-1655]. See under potion.

Riviere's sign (riv-ērz') [Clive Riviere, British physician, contemporary]. See under sign.

Rivini, ducts of (re-ve'ne) [August Quirinus Rivinus, anatomist in Leipsic, 1652-1723]. See under duct.

rivulose (riv'u-lōs) [L. ri'vus brook]. Marked by wavy lines. said of bacterial colonies.

ri'vus lacrima'lis. Same as lacus lacrimalis.

rixolin (riks'o-lin). A mixture of oil of camphor and light petroleum.

riziform (riz'if-orm). Resembling grains of rice.

R. M. A. An abbreviation for right mento-anterior position of the fetus.

R. M. P. An abbreviation for right mentoposterior position of the fetus.

R. N. Abbreviation for Registered Nurse. See under nurse.

R. O. A. An abbreviation for right occipito-anterior position of the fetus.

roach (rotsh). See Blatta.

roaring (rōr'ing). A condition in the horse marked by a rough sound on inspiration and sometimes on expiration. It is due to some obstruction in the respiratory tract or to paralysi sof the vocal cords.

rob (rob). A jelly, confection, or thick syrup, as of mulberries: sometimes variously medicated. elderberry-r., a purgative extract prepared from the fruit of Sambu'cus ni'gra and S. eb'ulus, elder shrubs of Europe.

Robert's pelvis (rob-airz') [Cesar Alphonse Robert, French surgeon, 1801-1862]. See pelvis. Roberts's test (rob'erts) [Sir William Roberts,

Roberts's test (rob'erts) [Sir William Roberts, English physician, 1830–1899]. See under lests.

Robertson's pupil (rob'ert-sunz). See Argyll-Robertson and pupil.

robin (ro'bin). A phytotoxin from the bark of Robin'ia pseudaca'cia, a locust tree of North America.

Robin's myeloplax (ro-baz') [Charles Philippe Robin, French anatomist, 1821-1885]. The osteo-clasts.

robinol (ro'bin-ol). A proprietary preparation of glycerophosphates.

Robinson's circle (rob'in-sonz) [Fred Byron Robinson, American anatomist, 1857-1910]. See under circle.

Robinson's disease (rob'in-sonz) [Andrew R. Robinson, dermatologist in New York, 1845–1924]. See disease.

Robiquet's paste (rob-e-kaz') [Pierre Jean Robiquet, French physician, 1780-1840]. See paste.

roboline (rob'o-lin). A proprietary preparation of quinin, strychnin, phosphoric acid, tea, and wild cherry: a stimulant and tonic.

roborant (rob'o-rant) [L. rob'orans strengthening].

1. Conferring strength; strengthening.

2. A proprietary nutrient preparation.

roborin (ro'bor-in) [L. ro'bor strength]. A proprietary tonic prepared from beef blood.

Rochelle salt (ro-shel'). Potassium and sodium tartrate, KOOC(CHOH)2COONa.

rod (rod). A straight, slim piece of matter: specifically, one of the rod-like bodies of the retina. r. bipolars, bipolar nerve-cells of the inner muscular layer of the retina which are specially connected with the rod visual cells. The bipolar cells connected with the cone element are called cone bipolars. Corti's r's, rod-like bodies in a double row which form the arches of Corti. r. ellipsoid, the outer longitudinally striated portion of the inner rod section. Sometimes called lenticulal body. enamel-r's, the parallel hexagonal prisms forming the enamel of teeth. r. epithebodv. r. epithelium, epithelium the cells of which exhibit a peculiar rod-like striation. r.-fibers, the attenuated fiber-like bodies of the rod visual cells which unite the nuclei of the latter, within the outer nuclear layer of the retina, with the retinal rods. germinal r., a sporozoite. r.-granules. See under granule. r's of Heidenhain, the rod-like cells of the renal tubules. König's r's, a series of steel bars each of which dox r's, a set of parallel cylindric glass rods used in testing for heterophoria. Reichmann's r., a short ivory rod with circular grooves and intervening projections, like the handle of an ivory knitting needle. It is used in auscultatory per-cussion of the stomach. The rod is firmly pushed down over the stomach at a right angle to its surface, and is gently stroked with the fingers. The stethoscope is applied over the organ and the pitch observed. When the rod passes beyond the limits of the stomach, a change in pitch occurs. retinal r's, highly specialized cylindric neuroepithelial cells containing rhodopsin; with the visual cones they form one of the layers of the retina. r.-segments. See under segment.

rodagen (ro'daj-en). A preparation of the milk of goats from which the thyroids have been removed: used in exophthalmic goiter.

rodent ulcer (ro'dent). See ulcer.

Rodman's operation (rod'manz) [William L. Rodman, Philadelphia surgeon, 1854-1916]. See operation.

rodonalgia (ro-do-nal'je-ah) [Gr. ῥόδον rose + άλγος pain]. Erythromelalgia.

Roederer's ecchymoses, obliquity (ra'der-erz)
[Johann Georg Roederer, German obstetrician, 1727-1763]. See ecchymosis and obliquity.

Roentgen rays (rent'gen) [Wilhelm Konrad von Roentgen, German physicist, 1845–1923]. See under ray.

roentgenism (rent'gen-izm). 1. The therapeutic application of Roentgen rays. 2. The ill effect of the Roentgen rays; disease induced by misuse of Roentgen rays.

roentgenization (rent-gen-iz-a'shun). Exposure or subjection to the action of Roentgen rays.

roentgenize (rent'gen-iz). To apply the Roentgen rays.

roentgenkaters (rent"gen-kah'terz) [Ger.]. See roentgen intoxication, under intoxication.

roentgenocardiogram (rent" gen-o-kar' de-ogram). A polygraphic tracing of cardiac pulsation made by the Roentgen rays.

roentgenogram (rent-gen'o-gram). A Roentgenray photograph.

roentgenograph (rent'gen-o-graf). r. A Roentgen-ray photograph. 2. To make a Roentgen-ray photograph.

roentgenography (rent-gen-og'raf-e). Photography by the Roentgen rays.

roentgenologist (rent-gen-ol'o-jist). A physician who devotes himself to diagnosis and treatment by the Roentgen rays.

roentgenology (rent-gen-ol'o-je) [Roentgen rays + Gr. λόγος treatise]. The study of the Roentgen rays.

roentgenometer (rent-gen-om'et-er). A skiameter.
roentgenometry (rent-gen-om'et-re). Measurement of the penetrating or therapeutic power of the
x-rays.

roentgenoscope (rent-gen'o-sköp). A fluoroscope; an apparatus for examining the body by means of the fluorescent screen excited by the Roentgen rays.

roentgenoscopy (rent-gen-os'ko-pe) [Roentgen rays + Gr. σκοπεῖν to view]. Examination by means of Roentgen rays; fluoroscopy.

roentgenotherapy (rent-gen-o-ther ap-e) [Roentgen rays + Gr. θεραπεία treatment]. Therapeutic use of the Roentgen rays.

roentgram, roentogram (rent'gram, rent'ogram). A Roentgen-ray photograph.

roentography (ren-tog'ra-fe). The making of roentgenograms; skiagraphy.

roetheln (ret'eln). See rotheln.

Roffo's test (rof'oz). See under tests.

Roger's bacillus (ro-zhāz') [C. A. Roger, French physician, born 1860]. See bacillus.

Roger's disease, reaction, symptom (ro-zhāz')
[Henri Louis Roger, French physician, 1811-1892].
See disease, reaction, symptom.

Roger-Josué test (ro-zha-zho-zu-a') [H. L. Roger and Otto Josué, French physician, born 1869]. See blister test, under tests.

Rogers's sphygmomanometer (roj'erz) [Oscar II. Rogers, physician in New York, born 1857]. See sphygmomanometer.

roka (ro'kah). A tree of Arabia and Africa, Trichil'ia emet'ica: it affords various remedial products.

Rokitansky's disease, tumor, etc. (ro-kit-an'-skēz) [Karl Freiherr von Rokitansky, pathologist in Vienna, 1804–1878]. See disease, tumor, etc.

rolandic (ro-lan'dik). Described by or named in honor of Luigi Rolando, Italian anatomist, 1773-1831, as the rolandic area, convolution, fissure, etc. See under area, convolution, fissure, etc.

rolandometer (ro-lan-dom'et-er). An instrument for determining the positions of the various fissures of the surface of the brain.

roll-culture (rol'kult-ūr). See under culture.

roll, iliac. A mass shaped like a sausage, located in the left iliac fossa and produced by induration of the walls of the sigmoid fossa. Called also sigmoid sausage

roller (rol'er). A cylinder of cotton, linen, or flannel rolled up for surgeons' or dressers' use. massage r., a proprietary apparatus for use in electric massage.

Roller's central nucleus (rol'lerz) [Christian Friedrich Wilhelm Roller, German neurologist, 1802-1878]. See under nucleus.

Rollet's chancre (roi-yāz) [Joseph Rollet, French physician, 1824-1894]. Mixed chancre.

Rollet's stroma (rol'ets) [Alexander Rollet, Austrian physiologist, 1834-1903]. See stroma.

Rollier's treatment (rol'yāyz') [A. Rollier, Swiss physician]. See under treatment.

romanopexy (ro-man'o-pek-se) [L. roma'num the sigmoid + Gr. πηξις fixation]. Sigmoidopexy.

romanoscope (ro-man'o-skōp). A speculum for examining the sigmoid flexure.

Romanovsky's method or stain (ro-man-of'-skēz) [Dimitri Leonidov Romanovsky, Russian physician, born 1861]. See under stain.

Romberg's disease, sign (rom'bergz) [Moritz H. Romberg, physician in Berlin, 1795-1873]. See disease and sign.

Rombergism (rom'berg-izm). Romberg's sign.

Römer's experiment, serum (re'merz) [Paul

Römer, professor in Greifswald, 1876-1916]. See experiment and serum.

Rommelaere's sign (rom-el-a-erz') [Guillaume Rommelaere, Belgian physician, born 1836]. See sign.

rongeur (raw-zhār') [Fr.]. A form of gouge-forceps or nippers.

röntography, etc. See roentography, etc.

roof (roof). See tegmen.

root (root) [L. ra'dix]. 1. The descending axis of a plant or any one of its branches. 2. That portion of an organ (such as a hair or nail) that is buried in the tissues. 3. A nerve-root; the part of a nerve adjacent to the center with which it is connected; in spinal and cranial nerves, the part of the nerve between the cells of origin or termination and the ganglion. American spikenard r., Aralia. angelica r., angelica anterior r., one of two masses of nerve-fibers given off from the spinal cord and uniting to form a spinal nerve composed of motor fibers Called also motor r. beth r., Trillium. blood r., sanguinaria. burdock r., Lappa r.-canal, the socket of the root of a tooth, a part of an alveolus. canker r., Coptis. r.-cells, cells of the nerve-roots. cowslip r. primulm. Culver's r., leptandra deadly deadly nightshade r., belladonna. dorsal r. See posterior r. East India r., Galangal. facial r., the root of the facial nerve, consisting of fibers from the nucleus of the facial to the facial colliculus and thence to the ventral surface of the lower portion of the pons ink-berry r., Phytolacca. kuth r. See Saussurea lappa lady slipper kuth r. See Saussurea lappa r., Cypripedium. life r., Senecio. lily of the valley r., Convallaria liquorice r., Glycyrrhiza. motor r. See anterior r. mouth r., musk r., sumbul. nerve-r., a bundle Coptis of nerve-fibers given off from the spinal cord which joins with another similar bundle to form a spinal nerve. olfactory r. See olfactory stria, under stria orange r., Hydrastis Oregon grape r., Berbens orris r. See Florentme vris, under iris. papoose r., caulophyllum. pellitory r., pyrethrum. pink r., Spigelia. pleurisy r., asclepias. poke r., Phytolacca. posterior r., a nerve-root containing sensory fibers queen's r., Stillingia. spignet r., Araha squaw r., caulophyllum stump r., Plasmodiophora. caulophyllum stump r., Plasmodiophora. unicorn r., aletris ventral r. Same as unterior r. wild yam r., yam r., Dioscorra. yellow jasmin r., Gelsemium r.-zone. See

rootstock. See rhizome.

R. O. P. An abbreviation for right occipitoposterior position of the fetus.

ropy (ro'pe). Sticky and stringy.

rosa (ro'zah). Latin for rose. r. gal'lica. See under rose.

rosacea (ro-za'se-ah). See acne rosacea. r. hy-pertroph'ica, pachydermatosis.

rosanilin (ro-zan'il-in). A basic dye, triamino-tolyl-diphenyl-methane chlorid or mono-methyl fuchsin, CH₃(NH₂) C₆H₃.C(C₆H₄ NH₂)C₆H₄.NH₂.-Cl. It can be used in place of fuchsin in Endo medium and as a stain. r. acetate, a substance used as a red dye. r. hydrochlorid, fuchsin. r. trisulphonic acid, acid fuchsin.

rosary, rachit'ic (ro'za-re). The row of head-like nodules which appear on the ribs at their junction with the cartilages in rickets.

rose (roz) [L. ro'sa]. Any plant or species of the genus Ro'sa. The petals of pale r. (Ro'sa centifo'lia) are used in making rose-water and cold-cream (unguen'tum a'quæ ro'sæ). The petals of red r. (Ro'sa gal'lica) are used in making confec'tio ro'sæ, mel ro'sæ, extractum ro'sæ flu'idum, and syru'pus ro'sæ. The flowers of Ro'sa damasce'na afford the oil of r., or attar of roses (o'leum ro'sæ). r.-cold, hay-fever coming on at the time of the blooming of roses, and attributed to the inhalation of roses.

pollen. **bengal r.**, a dye, the dichlor- or the tetrachlorerythrosin. NaO.(C₆HI₂.O)₂C.C₆H₂Cl₂COONa. **damask r.**, the Ro'sa damasce'na: its flowers afford the oil or attar of roses (o'leum ro'sa). **dog-r.** (Ro'sa cani'na) produces a fruit or hip used in pharmacy. **pale r.**, the flowers of Ro'sa centifo'lia, whose petals are used in preparing rosewater and cold-cream. **red r.**, the flowers of Ro'sa gal'lica: from the petals the confection of roses is prepared. The fluidextract is a mild astringent. Dose, $\frac{1}{2}$ -2 fl.dr. (2-8 c.c.); of syrup, 1-2 fl.dr. (4-8 c.c.).

Rose's position (ro'zez) [Frank Atcherly Rose, British surgeon]. See under position.

Rose's position, tetanus (ro'zez) [Edmund Rose, physician in Berlin, 1836-1903]. See position and lelanus.

Rose's test (ro'zez) [Joseph Constantin Rose, German physician, 1826–1893]. See under tests.

rosein (ro'ze-in). Fuchsin.

rosemary (rōz'ma-re). See Rosmarinus. marshr., the plant Stat'ice limo'nium: a strong astringent.

Rosenbach's disease, law, sign, test (ro'zenbahks) [Ottomar Rosenbach, physician in Berlin, 1851-1907]. See under disease, law, sign, tests.

Rosenbach's streptothrix, tuberculin (ro'zen-bahk) [F. J. R. Rosenbach, German physician, 1843-1923] See streptothrix, tuberculin

Rosenberger's stain (ro'zen-ber-gerz) [Randal Rosenberger, Philadelphia bacteriologist]. See under stains, table of.

Rosenheim's enema (ro'zen-hīmz) [Theodor Rosenheim, contemporary German physician] See enema.

Rosenmüller's body, organ (ro'zen-me-lerz)
[Johann Christian Rosenmuller, anatomist in Leipzig, 1771-1820] See body, organ.

Rosenthal's canal (ro'zen-tahlz) [Isidor Rosenthal, German physiologist, born 1836]. See canal.

Rosenthal's test (ro'zen-talz) [S. M. Rosenthal, American physician]. See under tests.

Rosenthal's vein (ro'zen-tahlz) [Friedrich Christian Rosenthal, anatomist in Greifswald, 1780-1829]. See win.

roseola (ro-ze'o-lah) [L.]. Any rose-colored rash; specifically, epidemic r., or rubeola. r. cholerica, an eruption sometimes seen in cholera. epidemic r. Same as rubeola. r. feb'rilis, a non-pathognomonic erythema occurring in simple and malarial fevers. idiopathic r., roseola occurring independently of any other disease. r. infan'tilis, the rose-rash of infants, chiefly occurring in infantile febrile conditions. symptomatic r., roseola occurring as a symptom of some eruptive fever. Syphilitic r., an eruption of rose-colored spots in early secondary syphilis. Called also syphilitic exanthem and macular syphilid. r. typho'sa, the eruption of typhoid or typhus fever. r. vacci'nia, a rash sometimes occurring after vaccination.

roseolus (ro-ze'o-lus). Of the nature of a roseola, or rash.

Roser's sign (ro'zerz) [Wilhelm Roser, German surgeon 1817-1888]. See under sign.

roset, rosette (ro'zet). Same as spirem. r. of Golgi. Same as sporocyst.

rosin (ro'zin) [L. res'ina]. Colophony; the resinous substance that remains after the distillation of the oil of turpentine from the fresh pitch of pine wood. It is chiefly abietic acid anhydrid, C44-H804. It is used as an adhesive and stimulant addition to plasters.

rosinol (ros'in-ol). Retinol.

Rosmarinus (ros-mar-i'nus) [L. "sea-dew"]. A genus of labiate plants. R. officina'lis, or common rosemary, affords the fragrant volatile oil

of rosemary. Dose of oil, 1-2 min. (0.066-0.13 c.c.); of spirit (spiritus rosmari'ni), 1-2 fl.dr. (4-8 c.c.).

rosolic acid (ro-zol'ik). See acid.

Ross's bodies (ros'ez) [Edward Halford Ross, contemporary English pathologist]. See under body.

Ross's test (ros'ez) [Hugh Campbell Ross, English pathologist, 1875–1926]. See under tests.

Rossbach's disease (ros'bahks) [Michael Joseph Rossbach, German physician, 1842–1899]. Gastroxynsis.

Rossel's test (ros-elz') [Otto Rossel, contemporary Swiss physician]. See under tests.

Rossiella (ros-e-el'ah). A genus of piroplasma-like organisms parasitic in the blood of certain animals. R. ros'si is found in the jackall in British East Africa.

rostellum (ros-tel'um), pl. rostel'la [L. "little beak"]. A small beak or hook-like process; especially the hook-bearing part of the head of an endoparasitic worm.

rostral (ros'tral) [L. rostra'lis, from ros'trum beak].

1 Pertaining to or resembling a rostrum; having a rostrum or beak.

2. Directed toward the front end of the body; opposed to caudal.

rostrate (ros'trāt) [L. rostra'tus beaked]. Having a beak-like process.

rostriform (ros'trif-orm) [L. ros'trum beak + for'ma form] Shaped like a beak.

rostrum (ros'trum), pl. ros'tra [L. "beak"]. A beak-like appendage or part. r. cor'poris callo'si [B N A], the anterior and lower end of the corpus callosum r. sphenoida'le [B N A], the beak of the sphenoid bone the part which articulates with the vomer.

rot (rot). 1. Decay. 2. A disease of sheep, and sometimes of man, caused by Distoma hepaticum drosera-r., inherited phthisis of young children, said by some homeopathists to be curable by drosera. foot-r. of cattle, a form of necrosis of the foot in cattle caused by infection with the Bacullus necrophorus. foot-r. of sheep, a disease of the feet of sheep, marked by decay of the hoof and an offensive discharge, thought to be due to soft, wet pastures grinders' r. See grinders' phthisis, under phthisis. liver r., a disease of sheep caused by the liver fluke, Fasciola hepatica. potters' r. See potters' phthisis, under phthisis.

rotary, rotatory (ro'ta-re, ro'ta-to-re). Marked by or produced by rotation.

rotate (ro'tāt). To turn around; to twist.

rotation (ro-ta'shun) [L rota'tio, ro'tare to turn]. The process of turning around an axis: movement of a body about its axis, called the axis of r. In dentistry, the rotation of a malturned tooth in its central axis into a normal position. r.-joint, a lateral ginglymus. specific r., the arc through which a substance rotates the plane of polarization.

rotator (ro-ta'tor). A muscle which revolves a part on its axis.

rotato'res spi'næ [L. "turners of the spine"]. See muscles, table of.

Rotch's sign [Thomas Morgan Rotch, physician in Boston, 1848-1914]. See sign.

Roth's vas aberrans (rōts) [Moritz Roth, Swiss physician, 1839-1914]. See vas aberrans.

Roth-Bernhardt disease (röt-bern'hart) [Vladimir K. Roth, Russian neurologist, born 1848; Martin Bernhardt, neurologist in Berlin, born 1844]. See disease

rötheln (ret'eln) [Ger.]. Same as rubella.

rotlauf (rot'lauf) [Ger.]. Swine erysipelas. See under erysipelas.

rotterin (rot'er-in) [L. rotteri'num]. A disinfectant mixture of citric acid and thymol, of each, 13 gr.; salicylic acid, 10 gr.; boric acid, 45 gr.; zinc

phenolsulphonate and zinc chlorid, of each, 75 gr.: to be dissolved in 4 quarts of water.

Rottlera (rot'ler-ah). See Kamala.

rottlerin (rot'ler-in). A yellowish, crystalline coloring-matter, (C₁₁H₁₀O₃)₃, from kamala. Called also mallotoxin.

rotula (rot'u-lah) [L. dim. of ro'ta wheel]. 1. The patella. 2. Any disk-like bony process. 3. A troche or lozenge.

rotulad (rot'u-lad). Toward the patella, or the patellar aspect.

rotular (rot'u-lar). Pertaining to the patella.

rotz (rots) [Ger.]. Glanders in horses.

rouget du porc (roo-zha' du pork') [Fr.]. Same as swine ervsibelas.

Rouget's bulb, cells (roo-zhāz') [Antoine D. Rouget, French physiologist]. See bulb and cell.

Rougnon-Heberden disease (roo-nyon') [Nicholas François Rougnon, French physician, 1727-1799; William Heberden]. Angina pectoris. rouleau (roo-lo'), pl. rouleaux [Fr. "roll"]. A

roll of red blood-corpuscles.

round ligament (rownd). See ligament. r.worm. See Ascaris.

roup (roop). An infectious respiratory disease of poultry, marked by formation of a grayish-yellow exudate on the respiratory mucous surfaces; sometimes called avian diphtheria and swelled head.

Rous's sarcoma [Francis Peyton Rous, American physician, born 1879]. See under sarcoma.

Roussel's serum, sign, etc. (roo-selz') [Theophile Roussel, French physician, 1816-1903]. See serum, sign, etc.

routinism (roo-tēn'izm). Extreme medical conservatism: the use of an unvarying course in the treatment of disease.

Roux's operation (rooz) [Philibert Joseph Roux, Paris surgeon, 1780-1854]. See serum.

Roux's serum, spatula, stain (rooz) [Pierre Paul Emile Roux, French bacteriologist, born 1853]. See serum, spatula, and stain.

Rovsing's sign (rov'sings) [Thorkild Rovsing, surgeon in Copenhagen, 1862-1927]. See sign.

and Geraghty's test Rowntree (roun'tre: ger'ah-te) [Leonard George Rownlree, American physician, born 1883; John T. Geraghty, Baltimore physician, 1876–1924]. The phenolsulphone-phthalein test. See phenolsulphone-phthalein.

R. Q. Abbreviation for respiratory quotient.R. R. Abbreviation for Riva-Rocci sphygmomanometer.

R. S. A. An abbreviation for right sacro-anterior position of the fetus.

R. S. B. Abbreviation for Regimental Stretcher Bearer.

R. S. P. An abbreviation for right sacroposterior position of the fetus.

R. T. Abbreviation for reading test.

Ru. Symbol for ruthenium.

rubber-dam (rub'er-dam). A sheet of indiarubber used by dentists in mouth work.

rubber tissue (rub-er tish'u). Gutta-percha in sheets: used in surgery.

rubedo (ru-be'do) [L.]. Blushing or other redness of the skin.

rubefacient (ru-be-fa'shent) [L. ru'ber red + fa'cere to make]. 1. Reddening the skin. 2. An agent that reddens the skin.

rubella (ru-bel'ah). 1. Epidemic roseola; rötheln, or German measles; an acute exanthematous febrile disease not unlike measles. After an incubation period of from one to three weeks the disease begins with slight fever and catarrhal symptoms, sore throat, pains in the limbs, and the appearance of an eruption of red papules similar to those of measles. but lighter in color, not arranged in crescentic masses, and disappearing without desquamation

within a week. See exanthemata, table of. 2. Measles. r. scarlatino'sa. Same as fourth disease. See under disease.

rubeola (ru-be-o'lah) [L. ru'ber red]. 1. Measles. 2. Rubella. r. scarlatino'sa. See fourth disease under disease.

ruber (ru'ber). Latin for red; the red nucleus.

rubescent (ru-bes'ent) [L. rubes'cere to become red]. Reddish; becoming red.

Rubia (ru'be-ah) [L.]. See madder.

rubidiol (ru-bid'e-ol). A solution in oil of rubid-ium and potassium iodohydrargyrate: used ex-ternally as a resolvent.

rubidium (ru-bid'e-um) [L. ru'bidus red]. A rare metallic alkaline element; atomic weight, 85.45; symbol, Rb. r. and ammonium bromid, a substance, RbBr + 3NH₄Br: used like potassium bromid. Dose, 20-30 gr (1333-2 gm). **r.** bromid, a binary compound, RbBr: used like potassium bromid. Dose, 5-60 gr. (0.333-4 gm). **r.** chlorid, a substance, RbCl; said to increase the arterial tension. Dose, 2-5 gr. (0.133-0.333 gm.). **r.** iodid, a binary compound, RbI, partly soluble in water: valued in treating diseases of the soluble in water valued in treating diseases of the eye, pharynx, and skin. Dose, 4-8 gr. (0.25-0.5 gm.). r. tartrate, a salt, RbC₄H₆O₆. used in cardiac neuroses. Dose, 3-5 gr. (0.18-0.333 gm.).

rubiginous, rubiginose (ru-bij'in-us, ru-bij'in-ōs) [L. rubi'go rust]. Having a rusty, brownish color: said of sputum.

rubigo (ru-bi'go). Latin for rust.

rubijervin (ru-bij-er'vin). A crystalline alkaloid, C₂₆H₄₃NO₂.H₂O, from white hellebore.

rubin (ru'bin). Same as fuchsin.

Rubin's test (ru'binz) [I. C. Rubin, contemporary New York physician] See under tests.

Rubinat water (ru'bin-at). See under water.

Rubner's test (roob'nerz) [Max Rubner, physiologist in Berlin, born 1854]. See under tests.

rubor (ru'bor) [L. "redness"]. Redness due to inflammation.

rubreserin (ru-bres'er-in). A crystalline alkaloid, C₁₃H₁₆N₂O₂, formed by the oxidation of eserolin.

rubric (ru'bric). Red; specifically, pertaining to the red nucleus.

rubrol (ru'brol). A proprietary remedy for gonorrhea, used by injection.

rubrospinal (ru-bro-spi'nal). Pertaining to the red nucleus and the spinal cord.

Rubus (ru'bus) [L.]. A genus of rosaceous plants, including the blackberries, raspberries, brambles, dewberries, and cloudberries. The root-barks of R. canaden'sis, trivia'lis, and villo'sus, species of blackberry, are tonic and astringent, and used in diarrhea Dose of fluidextract and of syrup, 10-60 min. (0 666-4 c.). The fruits of R. ide'us and R. trisc'us and R. strigo'sus, red raspberries, are used in pharmacy.

rubyl (ru'bil). A double iodid of quinin and bismuth in 10 per cent. oily suspension. Intramuscular dose in the treatment of syphilis, 3 c.c., equivalent to 0.30 gm. of the drug.

Ruck's tuberculin [Karl von Ruck, American

physician, 1849-1922]. See tuberculin. ructus (ruk'tus) [L.]. The belching of wind; eructation.

Rudbeckia (rud-bek'e-ah) [after O. Rudbeck, 1630-1702, and O. Rudbeck, Jr., 1660-1740]. A genus of composite-flowered herbs of North America. The cone-flower, R. lacinia'ta, thimble-weed, is a diuretic and tonic. Dose of fluidextract, 15-60 min. (1-4 c.c.). R. hir'ta, a composite-flowered plant of North America; also its homeopathic prepa-

rudimentary (ru-dim-en'ta-re). Imperfectly developed.

rue (roo) [L. Ru'ta]. The rutaceous herb, Ru'ta grave'olens. The volatile oil (o'leum ru'ta) from the leaves is an irritant poison, and is used as an aborti-The rutaceous herb, Ru'ta facient and emmenagogue. Dose of fluidextract,

15-30 min. (1-2 c.c.); of oil, 1-5 min. (0.066-0.333 c.c.). goat's r. See Galega.

Ruffini's organs (roo-fe'nëz) [Angelo Ruffini, con-

timin's organs (roo-fe'nëz) [Angelo Ruffini, contemporary Italian anatomist]. See under organ. ruflopin (ru-fe-o'pin). A red-yellow, crystalline substance, C₁₄H₈O₄, derivable from opianic acid, and isomeric with rufigallic acid.

rufous (ru'fus) [L. ru'fus red]. Dull red; also having reddish hair and a ruddy complexion.

ruga (ru'gah), pl. ru'gæ [L.]. A ridge, wrinkle, or fold. r. gas'trica. See r. of the stomach. r. palati'na, any one of the transverse ridges extending outward on both sides of the raphé of the palate. r. of the stomach, wrinkles which appear on the surface of the mucous membrane of the stomach when the muscular coat contracts. r. of the vagina, small transverse folds of the mucous membrane of the vagina extending outward from the columns.

Rugby knee (rug'be). Schlatter's disease.

rugine (roo-zhēn'). A raspatory.

rugitus (ru'jit-us) [L. "roaring"]. Rumbling in the intestines.

rugose, rugous (ru'gōs, ru'gus) [L. rugo'sus].
Characterized by wrinkles.

rugosity (ru-gos'it-e) [L. rugos'itas]. 1. The condition of being rugose; roughness. 2. A fold, wrinkle, or ruga.

Ruhmkorff coil (room'korf) [Heinrich Daniel Ruhmkorff, German electrician, 1823-1887]. See coil.

rule, Anstie's. A rule used in connection with life-insurance examination: the maximum amount Inte-insurance examination: the maximum amount of absolute alcohol which can be taken by an adult without injury is 1½ oz. daily. This is equivalent to about 3 oz. of whisky, brandy, gin, or rum; about 4 glasses of sherry or other strong wine, to 1 pint of claret, champagne, or other light wine; to 3 glasses of strong ale or porter; or 5 glasses of beer or light ale. **Cowling's r.**, the dose of a drug for a child is obtained by dividing the adult dose by the fraction obtained by dividing the adult dose by the fraction obtained by dividing the adult dose by the fraction obtained by dividing the adult dose by the fraction obtained by dividing the adult dose by the fraction obtained by dividing the adult dose by the fraction obtained by dividing the adult dose by the fraction obtained by dividing the adult dose by the fraction obtained by dividing the adult dose by the fraction obtained by dividing the dose of a due to the ing the adult dose by the fraction obtained by dividing the child's age by 24. Gibson's r., in pneumonia, if the pulse-rate in millimeters of mercury does not fall below the pulse-rate, the prognosis is good; if it does, prognosis is bad. His's r., reckon the duration of pregnancy from the first day of the missed menstruation. Jackson's r., after epileptic attacks, simple nervous processes are more quickly recovered from than complex ones. Liebermeister's r., in febrile tachycardia the pulse-beats increase at the rate of about eight to every degree centigrade of temperature. phaser., a homogeneous chemical substance of n components is capable of n + r modifications of phase; e. g, the phases of H_2O are ice, water, and steam. A heterogeneous chemical system of p coexistent phases and c variable components has p + 2-cdegrees of freedom or variations of phase, i. e., the sum of its coexistent phases and its possible changes of phase exceeds the number of its components by 2. Schütz's r., the amount of substrate decomposed in the same time interval by varying enzyme concentrations is not always proportional to the concentration of the enzyme, but is often proportional to the square root of this quantity. van't Hoff's r., the velocity of chemical reactions is increased twofold or more for each rise of 10° C. in temperature. Young's r. See Young's rule.

rum (rum). An alcoholic spirit distilled from the refuse of sugar-making. bay-r., spiritus myrciæ, a cosmetic and hair-dressing; an alcoholic solution of the oil of Myr'cia a'cris. cherry-r., rum in which cherries have been put.

rumen (ru'men) [L. "gullet"]. The first stomach of a ruminant, or cud-chewing animal. Called also paunch.

rumenitis (ru-men-i'tis). Inflammation of the rumen.

rumenotomy (ru-men-ot'o-me) [rumen + Gr. τομή

cut]. The operation of cutting into the rumen of an animal for the purpose of removing foreign bodies or impacted food or for evacuating gases.

Rumes (ru'meks) [L.]. A genus of polygonaceous plants; dock The root of R. cris'pus, yellow dock, is astringent, tonic, and popularly esteemed as a cholagogue. Dose, \(\frac{1}{2}-1\) dr. (\(\text{r-3.8 gm.}\)); of fluidextract, \(\text{15-60 min.}\) (\(\text{1-4 c.c.}\)).

rumicin (ru'mis-in). 1. Chrysophanic acid. 2. A proprietary preparation of Ru'mex cris' pus. Dose, 2-4 gr. (0.13-0.26 gm.).

rumin (ru'min). A proprietary dry concentration prepared from Ru'mex cris'pus. Dose, 3 gr. (0.10 gm.).

ruminant (ru'min-ant). 1. Chewing the cud. 2. One of the order of animals which have a stomach with four complete cavities (1, rumen; 2. reticulum; 3, omasum; 4, abomasum), through which the food passes in digestion. The division includes oxen, sheep, goats, deer, and antelopes.

rumination (ru-min-a'shun) [L. rumina'tio]. The casting up of the food to be chewed a second time; particularly the regurgitation of food after almost every meal, part of it being vomited and the rest swallowed: a condition seen in infants. See merycism.

Rummo's disease (room'ōz) [Gaetano Rummo, Italian physician, died 1918]. Cardioptosis.

rump (rump). The gluteal region, or buttock.

Rumpel-Leede phenomenon or sign (room'pelle'den) [Theodor Rumpel, German physician, 1862-1923, C. Leede, German physician, born 1882]. See under phenomenon.

Rumpf's symptom (roompfs) [Theodor Rumpf, German physician, born 1851]. See symptom.

Runeberg's formula, type (roo'ne-bergs) [Johan Wilhelm Runeberg, Finnish physician, 1843–1918]. See formula and type.

runround (run'rownd). Paronychia following the circumference of the nail.

rupia (ru'pe-ah) [Gr. βύπος sordes]. An eruptive disease of the skin in which ill-conditioned bullæ or vesicles are formed, which become scabby. It is almost always a manifestation of tertiary syphilis.

rupial (ru'pe-al). Pertaining to, resembling, or due to, rupia.

rupioid (ru'pe-oid). Resembling rupia.

rupophobia (ru-po-fo'be-ah) [Gr. ρίνποs filth + φόβοs fear]. An insane or morbid dread of filth.

rupture (rup'tshur). 1. Forcible tearing or breaking of a part. 2. A hernia.

ruscol (rus'kol). A preparation of bismuth and birch tar: used in erysipelas, eczema, etc.

Rusconi's anus (roos-ko'nēz) [Mauro Rusconi, Italian biologist, 1776-1849]. The blastopore.

rushes (rush'ez). Waves of contractile activity running from one end of the intestine to the other and serving to transport the intestinal contents. Called also peristaltic rushes

Russell's bodies [William Russell, contemporary physician in Edinburgh]. See under body.

Russell effect (rus'el) [W. J. Russell, British physicist] See under effect.

russol (rus'ol). A tincture of colchicum and capsicum, containing mustard oil and oil of wintergreen: used in rheumatism.

Russo's reaction (roos'ōz) [Mario Russo, contemporary Italian physician]. See reaction.

rust (rust). 1. Iron oxid or hydroxid, forming a reddish deposit on metallic iron where the latter has been exposed to moisture; also a similar deposit on other metals that have been exposed to dampness. 2. A fungous disease of plants characterized by the formation of rust-like spots on them.

Rust's disease, phenomenon [Johann Nepomuk Rust, German surgeon, 1775-1840]. See disease and phenomenon.

Ruta (ru'tah) [L.]. See rue.

rutsecarpin (ru-te-kar'pin). A crystalline alkaloid, C₁₈H₁₃N₃O, from *Evodia rutsecarpa*.

ruthenium (ru-the'ne-um). A rare, very hard metallic element; symbol, Ru; atomic weight, 101.7.

rutidosis (ru-tid-o'sis) [Gr. purls wrinkle]. Shriveling or wrinkling of the cornea; rhytidosis.

rutin (ru'tin). A crystalline substance from rue.

rutonal (ru'to-nal). A proprietary sedative phenylmethyl-malonyl-urea, C₆H₆(CH₃)C(CO.NH)₂CO, similar to luminal, but less toxic and slower in its action; used in epilepsy in daily doses of 0.3 gm., gradually increased to 0.4 gm. or even to 0.7 gm. rutting (rut'ing). The sexual excitement in the female of animals. See estrus.

ruttle (rut'l). An old popular name for a rattling in the throat.

Ruysch's membrane, muscle, tube, vein (rish'iz) [Frederic Ruysch, Dutch anatomist, 1638– 1731]. See under membrane, muscle, tube, vein.

Ryan's skin test (ri'anz) [A. H. Ryan, American physician]. See under tests.

rye (n). The cereal plant, Seca'le cerea'le, and its nutritious seed. spurred r. See ergot.

rye smut. Ergot.

rypia (ri'pe-ah). Same as rupia.

rytidosis (ri-tid-o'sis). Same as rutidosis.

S

8. An abbreviation for Latin se'mis half, sig'na mark, and sinis'ter left; also the symbol for sulphur, sen, or sive.

σ. Symbol for one-thousandth part of a second.

8. A. Abbreviation for L. secun'dum ar'tem, according to art.

Sa. Chemical symbol of samarium.

8. A. L. Abbreviation for L. secun'dum ar'tis le'ges, according to the rules of art.

sabadilla (sab-ah-dil'ah) [Spanish cebadilla; ce-beda barley]. The poisonous seed of Vera'trum sabadil'la, a melanthaceous plant of Mexico. It contains veratrin, and is emetocathartic. It is used to destroy parasites.

sabadillin (sab-ad-il'in). Cevadillin.

sabadin (sab'ad-in). A white, crystalline alkaloid, C₂₉H₅₁NO₅, from sabadilla.

sabadinin (sab-ad'in-in). A crystallizable principle, C₂₇H₄₈NO₈, from sabadılla.

sabal (sa'bal). The U. S. P. name for the fruit of Sereno'a. See Serenoa.

Sabatier's suture (sah-bah-te-āz') [Raphael Bienvenu Sabatier, French surgeon, 1732-1811]. See under suture.

Sabbatia (sab-a'she-ah) [after L. Sabbati, an Italian botanist]. A genus of gentianaceous herbs of many species: called American centaury: used like gentian. S. angula'ris, American centaury, is a good tonic and stomachic, and is valued in the treatment of intermittent and remittent fevers. Dose of fluidextract, 30-60 min. (2-4 c.c.) S. campes'tris is recommended for dyspeptic sick-headache. Dose of fluidextract, \(\frac{1}{2}\)-1 fl.dr. (1-4 c.c.) S. elliot'tii, Elliott's centaury, or quinin-flower, is a tonic and antiperiodic. Dose of the fluidextract, 30-60 min. (2-4 c.c.)

sabbatin (sab'at-in). An antiperiodic and antipyretic preparation of Sabba'tia elliot'tii.

saber-legged (sa'ber-legd). Having the angle of the hock more acute than normal, so that the hind feet stand well under the body: said of horses.

saber-shin. A tibia with a marked anterior convexity, seen in hereditary syphilis.

sabina (sab-i'nah). Latin for savin.

sabromin (sa-bro'min). Calcium dibrombehenate, Ca(C₂₁H₄₁Br₂.COO)₂, a proprietary preparation containing 28.5 per cent. of bromin and used like other bromin preparations. Dose, 5-20 gr. (0.3-1.2 gm.). Called also *calbroben*.

sabulous (sab'u-lus) [L. sabulo'sus; sab'ulum sand]. Gritty or sandy.

sabulum (sab'u-lum) [L. "fine sand"]. Same as acervulus.

saburral (sab-ur'al) [L. sabur'ra sand]. Pertaining to or of the nature of sordes, or of foulness of the stomach.

sac (sak) [L. sac'cus; Gr. σάκκος]. Any bag-like organ. abdominal s., a serous sac in the embryo which develops into the abdominal cavity.

air-s., any one of the air-cells of the lungs.

allantoic s. See allantois. aneurysmal

s., the dilated coats of an artery in a saccuconjunctival s., the sac lated aneurysm. formed between the bulbar and palpebral conjunctivæ. s. dartique de la femme, Broca's pouch. dental s., dentinal s., the vascular sac inclosing the enamel-organ and dentinal papillæ. dural s., the process of dura mater at the caudal end of the spinal cord. embryonic s., the blastodermic vesicle. endolym phatic s. See sacculus endolymphaticus. gestation s., the sac that incloses the embryo in ectopic pregnancy. hernial s., the pouch of peritoneum which incloses the protruding intestine in a case of hernia. Hilton's s., a laryngeal pouch. lacrimal s., the dilated upper end of the lacrimal duct Lower's s's, sacculated portions of the external jugular vein at exit of the vein from the skull. omental s., the pouch formed between the ascending and descending portions of the great omentum. pleural s., the cavity of the plcura. pudendal s. See Broca's pouch, under pouch. salt s., a small sac made of gauze and containing salt, one or more of which are packed into a wound, the object being to produce drainage of the wound by the osmotic action of the salt. serous s., the sac made up of the pleura, pericardium, and peritoneum. tear-s's, the lacrimals. yolk-s., the umbilical vesicle.

saccapelo (sak-ah-pe'lo). A proprietary depilatory.

saccate (sak'āt) [L. sacca'tus]. 1. Shaped like a sac. 2. Contained in a sac.

saccharamid (sak-ar-am'id). An amid, COOH-(CHOH)₄CO.NH₂, of saccharic acid.

saccharascope (sak'ar-as kōp) [Gr. σάκχαρον sugar + σκοπείν to view]. A fermentation saccharimeter. See saccharimeter.

saccharate (sak'ar-āt). A salt of saccharic acid.

saccharated (sak'ar-a-ted) [L. sacchara'tus, from sac'charum sugar]. Sugary; charged with or containing sugar.

saccharephidrosis (sak"ar-ef-id-ro'sis) [Gr. σάκχαρον sugar + ἐφιδρώσις sweating]. The discharge of sugar in the sweat.

saccharid (sak'ar-id). One of a series of carbohydrates, including the sugars. The saccharids are divided into monosaccharids, disaccharids, trisaccharids and polysaccharids **s. group**, a hypothetic group, C₆H₁₀O₆, from which the ditri, tetra-, and polysaccharids derive their names.

sacchariferous (sak-ar-if'er-us) [L. sac'charum sugar + fer're to bear]. Containing or yielding sugar. saccharification (sak"ar-if-ik-a'shun) [L. sac'-charum sugar + fa'cere to make]. Conversion into sugar.

saccharimeter (sak-ar-im'et-er) [L. sac'charum sugar + mc'trum measure]. A device for estimating the proportion of sugar in a solution. It is either a polarimeter, indicating the proportion of sugar by the number of degrees through which it rotates the plane of polarization, or a hydrometer, indicating the proportion of sugar by the specific gravity of the solution Einhorn's s., a form of fermentation saccharimeter. fermentation s., a saccharimeter in the form of a bent graduated tube and closed at one end. The amount of sugar in the urine is indicated by the gas which collects at the closed end when yeast is added to the urine. Lohnstein's s., an instrument for performing a quantitative fermentation test of sugar in the urine.

saccharin (sak'ar-in). 1. An intensely sweet, crystalline substance, orthosulphobenzoic acid

imid, C₆H₄CO NH. It is said to be 280 times as sweet as cane-sugar. It is used in place of care sweet is dispeted and less for the purpose of

saccharine (sak'ar-īn) [L. sacchari'nus]. Sugary; of a sweet taste.

saccharinol (sak-ar'in-ol). See saccharin.

saccharobacillus (sak"ar-o-bas-il'us). Same as Bacillus pasteurianus.

saccharobiose (sak"ar-o-bi'ōs). Same as disac-charose.

saccharogalactorrhea, saccharogalactorrhoa (sak"ar-o-gal-ak-tor-e'ah) [Gr. $\sigma\dot{\alpha}\kappa\chi\alpha\rho\rho\nu$ sugar $+\gamma\dot{\alpha}\lambda\alpha$ milk $+\dot{\rho}ol\alpha$ flow]. The secretion of milk containing an excess of sugar.

saccharolytic (sak"ar-o-lit'ik) [Gr. σάκχαρον sugar
 + λόσις dissolution]. Capable of chemically splitting up sugar.

saccharometabolic (sak"ar-o-met-ab-ol'ik). Pertaining to the metabolism of sugar.

saccharometabolism (sak"ar-o-met-ab'o-lism). The metabolism of sugar.

saccharometer (sak-ar-om'et-er). Same as saccharimeter.

Saccharomyces (sak-ar-om'is-ēz) [Gr. σάκχαρον sugar + μύκης fungus]. Pl. saccharomyce'tes. A genus of ascomycetous fungi; the yeasts. They are oval or spheric, unicellular organisms which are distinguished by gemmation or budding, the presence of ascospores and absence of mycelial threads.
 S. al'bicans, a pathogenic species caus-

ing thrush in the mouth in white, oval, spheric, or cylindric cells, sometimes forming long filaments. S. an'ginæ was found in a case of tonsillitis. S. apicula'tus, a species from fermenting fruit; its oval cells are joined at the ends. S. blanchar'di, a species that was

Saccharomyces (Rivas).

found as a gelatinous mass weighing about 2 pounds in the peritoneal cavity. **Busse's s.**, a form discovered in a patient with degenerated nodules in the bones and internal organs. **S. capillit'ii**, a species from the scalp, with spheric cells said to cause pityriasis capitis. S. cerevis'ise, a species with oval or spheric cells, from brewer's yeast: it causes alcoholic fermentation. S. coprog'enus, a form from decomposing feces, in short chains of oval or spheric cells. S. ellipsoid'eus, a form from wine-yeast, forming elliptic cells, solitary or in branching chains: it causes alcoholic fermentation in wines. S. epider'mica. Same as Cryptococcus epidermidis. exig'uus, a form in beer-yeast: the cells are elliptic and solitary, or in branching chains. it causes late fermentation in beer. S. galactic'olus, a species from milk, with oval or elliptic cells. it produces a fermentation in milk. S. glu'tinis, a non-pathogenic species from air, potatoes, and the skin in seborrhea; its cells are cylindric, oval, or spheric it forms a rosy pigment. S. granulo-mato'sus, a variety producing granulomatous tumors in pigs. S. guttula'tus, a species which is able to change glucose into alcohol. It is patho-genic for rats and guinea-pigs. S. hansen'ii, changes sugars into oxalic acid. S. hom'inis, a species occurring in chronic infectious pyemia. is pathogenic for animals. S. Lemonnie'ri, a pathogenic fungus found in bronchitis (Sartory and Lasseur, 1915). S. litho'genes, a species from the lymph-glands of an ox suffering from carcinoma of the liver pathogenic to animals. S. mesenter'icus, a species which causes a fermentation in fruit acids it is found in fermenting ruits. **8. mycoder'ma**, a species from fermenting liquors and diabetic urine, in which it produces a slight fermentation seen in cylindric, oval, or elliptic cells, forming branched chains S. neofor'mans, regarded by some as the germ of cancer. S. pastoria'nus, a species from fermenting wine and beer, cells oval or clavate. S. ru'brum, a Brazilian species causing a para-psoriasic affection (Magalhaes, 1914). S. sub-cuta'neus tumefa'ciens, a species found in a myxoma of the thigh: pathogenic for animals. S. tumefa'ciens al'bus, a species discovered in certain cases of pharyngitis mice, guinea-pigs, and rabbits. pathogenic for

Saccharomycetes (sak"ar-o-mi-se'tēz). A family of Ascomycetes, the members of which are usually unicellular and contain granules and ascospores.

saccharomycetic (sak"ar-o-mi-set'ik). Due to the presence of yeast-fungi.

saccharomycetolysis (sak"ar-o-mi-set-ol'is-is) [saccharomyces + Gr. λύσις solution]. The splitting up of saccharomyces.

saccharomycesis (sak"ar-o-mi-ko'sis). 1. Any disease condition due to a yeast-fungus. 2. A skin disease in which nodules are seen filled with saccharomyces. See lumbhangus chraoptra.

saccharomyces. See lymphangilis epizootica.

saccharorrhea, saccharorrhea (sak"ar-o-re'ah) [Gr. σάκχαρον sugar + ροία flow]. Diabetes
mellitus, or glycosuria.

saccharosan (sak'ar-o-san). A form of anhydrosugar

saccharose (sak'ar-ös) [L. sac'charum sugar]. Ordinary cane-sugar or beet-sugar, $C_{12}H_{22}O_{11}$. It is a disaccharid, crystallizing in prisms, soluble in water, and turning the plane of polarization to the right. By boiling with acids and by the action of certain enzymes it is hydrolyzed and converted into dextrose and levulose. It is extensively used as a food and as a sweetening agent, and is much employed in pharmacy, forming the basis of syrups, electuaries, confections, etc. The name is extended to all the members of a series of substances having the same chemic formula. They are glucosids of the monosaccharids.

saccharosuria (sak"ar-o-su're-ah) [saccharose + Gr. οδρον urine]. The presence of saccharose in the urine.

saccharum (sak'ar-um) [L.; Gr. σάκχαρον]. 1.
 Sugar, especially cane-sugar, or saccharose. 2.
 A genus of graminaceous plants. S. officina'rum, sugar-cane, affords a large part of the commercial

supply of sugar. See under sugar. s. acer'num, s. canaden'se, maple sugar. s. lac'tis, sugar of milk; lactose. s. us'tum, caramel.

saccharuria (sak-ar-u're-ah) [Gr. σάκχαρον sugar + ούρον urine]. The presence of sugar in the urine.

sacciform (sak'sif-orm) [L. sac'cus sac + for'ma form]. Shaped like a sac or bag.

saccular (sak'u-lar). Shaped like a sac.

sacculated (sak'u-la-ted) [L. saccula'tus]. Characterized by sacculation or by saccules.

sacculation (sak-u-la'shun). r. A sacculus, or pouch. 2. The quality of being sacculated, or pursed out with little pouches.

saccule (sak'ūl) [L. sac'culus]. 1. A little bag or sac. 2. That one of the two divisions of the membranous labyrinth of the vestibule of the ear which communicates with the ductus cochlearis. Called also sacculus proprius and vestibular saccule. laryngeal s. See pouch, laryngeal.

sacculocochlear (sak"u-lo-kok'le-ar). Pertaining to the sacculus proprius and to the cochlea.

sacculus (sak'u-lus), pl. sac'culi [L.]. r. A little bag filled with herbs or medicines, to be worn upon the body. 2. Any saccule, pouch, or bursa. 3. See saccule (2d def.). s. commu'nis, the utricle of the ear: the larger of the two main divisions of the membranous labyrinth. s. endolymphat'-icus, a subdural lymph-space within the cranium, communicating by means of the endolymphatic duct with the membranous labyrinth of the ear. s. lacrima'lis, the lacrimal sac; a dilatation at the upper end of the lacrimal duct. s. laryn'gis. See pouch, laryngeal. s. pro'prius, the saccule of the ear; the smaller of the two divisions of the membranous labyrinth. s. vestib'uli. Same as saccule (2d def.).

Saccus (sak'us), pl. sac'ci [L.; Gr. σάκκος]. A sac or pouch. **s. endolymphat'icus** [B N A]. See sacculus endolymphaticus. **s. lacrima'lis** [B N A], the lacrimal sac. See sac.

Sachs-Georgi test [Hans Sachs, German bacteriologist, born 1877; Walter Georgi, German bacteriologist, 1889–1920]. See under tests.

Sachsse's solution, test (zahk'sez) [Georg Robert Sachsse, German chemist, 1840–1895]. See solution and tests.

sacra media (sa'krah me'de-ah) [L.]. The middle sacral artery.

sacrad (sa'krad). Toward the sacrum, or sacral aspect.

sacral (sa'kral) [L. sacra'lis]. Pertaining to or situated near the sacrum.

sacralgia (sa-kral'je-ah) [sacrum + Gr. ἄλγος pain].
Pain in the sacrum.

sacralization (sa"kral-is-a'shun). Exaggerated development of the transverse processes of the fifth lumbar vertebra until they look like parts of the sacrum.

formula to indicate a child in normal nutrition, in which s stands for sanguis (blood), cr for crasitudo (fat), t for turgor (water content), and m for musculus (musculature). The a after each of these letters represents the normal. By changing the vowels the intensity of any of the four qualities may be indicated: i indicating excessive, e abundant, a medium or normal, o reduced, and u slight. For instance, so would indicate reduced hemoglobin; cra, medium amount of fat; ta medium turgor; mu, very weak musculature; i. e., socralamu = a moderately anemic, well-nourished, fairly roundedout child of weak muscular development.

sacrectomy (sa-krek'to-me) [sacrum + Gr. ἐκτομή excision]. Excision of the sacrum for cancer of the rectum; Kraske's operation.

sacriplex (sa'krip-leks). The sacral plexus.

sacro-anterior (sa''kro-an-te're-or). Having the sacrum directed forward.

sacrococainization (sa''kro-ko-ka-in-iz-a'shun). Injection of cocain into the spinal canal, the needle being introduced into the sacrolumbar space at the first sacral vertebra.

sacrococcygeal (sa"kro-kok-sij'e-al). Pertaining to the sacrum and coccyx.

sacrococygeus anti'cus (sa''kro-kok-sij'e-us).
The curvator coccygis muscle.

Sacrococcyx (sa-kro-kok'siks). The sacrum and coccyx together.

sacrocoxalgia (sa"kro-koks-al'je-ah). Same as sacrocoxitis.

sacrocoxitis (sa"kro-kok-si'tis) [sacrum + L. co'xa hip]. Inflammation of the sacro-iliac joint.

sacrodynia (sa-kro-din'e-ah) [sacrum + Gr. δδύνη pain]. Pain in the sacral region.

sacro-iliac (sa-kro-il'e-ak). Pertaining to the sacrum and ilium.

sacrolumbalis (sa"kro-lum-ba'lis) [L.]. See muscles, table of.

sacrolumbar (sa-kro-lum'bar) [sacrum + L. lum'-bus loin]. Pertaining to the sacrum and the loin.

sacroperineal (sa"kro-per-in-e'al). Pertaining to the sacrum and the perineum.

sacroposterior (sa"kro-pos-te're-or). Having the sacrum directed backward.

sacropromontory (sa-kro-prom'on-to-re). The promontory of the sacrum.

sacrosciatic (sa"kro-si-at'ik) [sacro- + sciatic].

Pertaining to the sacrum and the ischium.

sacrospinal (sa-kro-spi'nal) [sacrum + L. spi'na spine]. Pertaining to the sacrum and the spine, or vertebral column.

sacrospinalis (sa"kro-spi-na'lis). See under Muscles, table of.

Sacrotomy (sa-krot'o-me) [sacrum + Gr. τέμνειν to cut]. The operation of cutting out the lower end of the sacrum.

sacro-uterine (sa-kro-u'ter-in). Pertaining to the sacrum and the uterus.

sacrovertebral (sa-kro-ver'te-bral). Pertaining to the sacrum and the vertebræ

sacrum (sa'krum) [L. "sacred"]. The triangular bone situated dorsad and caudad from the two ilia. It is formed of five united vertebræ wedged in between the two innominate bones. **assimilation s.**, a sacrum in which a lumbar vertebra is fused to the sacrum, or one in which the first sacral vertebra is free, resembling a lumbar vertebra.

Sactosalpinx (sak-to-sal'pinks) [Gr. $\sigma \alpha \kappa \tau \dot{\sigma}_{S}$ stuffed $+ \sigma \dot{\alpha} \lambda \pi \iota \gamma \xi$ tube]. Dilatation of the inflamed oviduct from retention of its secretions: hydrosalpinx in which the tube is distended to such an extent as to form large tumors.

saddle (sad'l). A part or section of the base of an artificial denture carrying less than fourteen teeth.

saddle-back (sad'l-bak). See lordosis.

saddle-joint (sad'l-joint). A joint in which a convex surface fits into a concave one.

saddle-nose (sad'l-noz). A nose with a bridge much depressed.

sadism (sa'dizm) [Marquis de Sade]. Sexual perversion in which satisfaction is derived from the infliction of cruelty upon another.

sadist (sa'dist). A practiser of sadism.

sadistic (sa-dis'tik). Pertaining to sadism.

Saemisch's operation, ulcer (sa'mishs) [Edwin Theodor Saemisch, ophthalmologist in Bonn, 1833–1909]. See operation, ulcer.

Saenger's operation, suture (zeng'erz) [Max Saenger, gynecologist in Prague, 1853-1903]. See operation, suture.

Saenger's sign (zeng'erz) [Alfred Saenger, German neurologist, born 1853]. See sign.

sæptum (sep'tum). Latin for septum.

safety-tube (saf'te-). That part of the eustachian tube which is always open.

safflower (saf'low-er). See Carthamus.

saffron (saf'ron). See Crocus. American s. See
 Carthamus. meadow-s. See Colchicum. Spanish s. See Crocus. s.-substitute, dinitrocresol, a poisonous yellow coal-tar dye.

safranin (saf'ran-in). A methyl or ethyl substitution product of an azin base, (NH₂.C₆H₃.N)₂(OH)-C₆H₅. It is used as a pink stain in microscopy and as a test for sugar in the urine. See under *tests* It is a respiratory and cardiac poison. **s.** O, a mixture of dimethyl and trimethyl phenosafranin.

safranophil (saf-ran'o-fil) [safranin + Gr. φιλείν to love].
 1. Readily stained with safranin.
 2. Any cell or element readily stained with safranin.

safrene (saf'rēn). A hydrocarbon, C₁₀H₁₆, obtained from sassafras.

safrol (saf'rol). An oily, volatile, anodyne substance, the methylene ether of allyl dioxybenzene, C₃H₅.C₆H₃.O₂ CH₂, from sassafras oil. useful in headache and neuritis. Dose, 20-30 min. (1.333-2 c.c.).

safrosin (saf'ro-sin). Bluish eosin.

sagapenum (sag-ap-e'num) [L.; Gr. σαγάπηνον]. A fetid gum-resin from Fer'ula per'sica, much like galbanum and asafetida: little used.

sage (sāj). A labiate plant, Sal'via officina'lis. See Salvia.

sagittal (saj'it-al) [L. sagitta'lis; sagit'ta arrow]. Shaped like or resembling an arrow.

Sagnac rays (san-yak'). See under ray.

sago (sa'go). A starch mainly derived from the pith of various species of palm, chiefly of the genus Sa'gus.

sagradin (sag-ra'din). A proprietary preparation of cascara sagrada. aperient.

sagrotan (sag'ro-tan). An antiseptic and germicide liquid composed of chlorcresol 8 per cent, chlorxylenol 4 per cent, soap 22 per cent, alcohol 9 per cent, and water 57 per cent.: used as a wound irrigant and for the disinfection of excreta in dilutions of 1 · 20 to 1 · 100.

sagur (sa'gur). An astringent gall formed on certain East Indian tamarisks.

Sahli's desmoid reaction, test, whistle (sah'lēz) [Herman Sahli, physician in Bern, born 1856] See under reaction, tests, and whistle.

Saigon cinnamon (si-gon'). See cinnamon.

Saint Anthony's fire. Erysipelas.

St. John Long's liniment [John St. John Long, an English quack and portrait painter, 1800–1837]. See liniment.

Saint Vitus' dance. Chorea.

saiodin (sa-i'o-din). See sajodin.

sajina (sah-je'nah). An East Indian plant, Morin'ga pierygosper'ma: used in rheumatism and dyspepsia.

sajodin (saj'o-din). A colorless or yellowish powder, calcium monoiodobehenate, (C₂₁H₄₂I.CO O)₂Ca: used like the iodids. Dose, 15-45 gr. (1-3 gm.) daily.

sakushu fever (sah-koo'shoo). See under fever.

sal (sal). Latin for salt. s. acetosel'la, potassium binoxalate. s. acetosel'la, potassium binoxalate. s. acetosel'la, potassium binoxalate. s. alem'broth. See alembroth. s. ammoniac, ammonium chlorid. s. caroli'num facti'tum, artificial Carlsbad salt. s. commu'nis, common salt; sodium chlorid. s. dam'mar, an aromatic resin from the sal-tree, Sho'rea robus'ta, of India. s. de duo'bus, potassium sulphate. s. diuret'icum, potassium acetate. s. enix'um, potassium bisulphate. s. ethyl, a proprietary preparation of ethyl salicylate in gelatin globules containing 5 min. (0.33 c.c.). s. hepat'ica, a proprietary effervescent saline laxative and uric acid solvent. s. kissingen'se facti'tum, artificial Kissingen salt. s. pol'ychrest, potassium sulphate with sulphur. s.

prunel'la, potassium nitrate in balls. s. so'dæ, sodium carbonate. s. vichya'num facti'tum, artificial Vichy salt. s. volat'ile, s. volat'ilis, ammonium carbonate.

salabrose (sal'ab-rōs). A form of anhydrosugar.

salacetin (sal-as-e'tin). Phenylamin acetosalicylate: used as an antiseptic, analgesic, and uricacid solvent.

salacetol (sal-as-e'tol). A crystalline compound of acetone and salicylic acid, OH.C₈H₄.COO.CH₂.-CO.CH₃. antirheumatic and antiseptic. Dose, 30-45 gr. (2-3 gm.). Called also salicylacetol and salantol

salactol (sal-ak'tol). A compound of sodium salicylate, sodium lactate, and hydrogen dioxid: used in diphtheria.

salamanderin (sal-am-an'der-in). A poisonous base, C₃₄H₆₀N₂O₅, from the skin of a species of salamander.

salamid (sal-am'id). An amid derivative of salicylic acid or from the oil of gaultheria: antirheumatic.

salantol (sal-an'tol). See salacetol.

salarabin (sal-ar'ab-in). A proprietary antidiarrheic and intestinal astringent for veterinary work.

salazolon (sal-az'o-lon). Salipyrin.

salborol (sal-bor'ol). An antirheumatic and antiseptic compound containing boric acid and salol.

salbromalid (sal-bro'mal-id). A proprietary compound containing salicylic acid, ammonium bromid, and acetanilid: antirheumatic. Same as antirnerum.

saldanin (sal'dan-in). A locally anesthetic alkaloid from Datu'ra arbo'reum, a Mexican tree or shrub.

salen (sal'en). A proprietary mixture of methyl and ethylglycolic esters of salicylic acid.

salenal (sal'en-al). A proprietary ointment of salen.

salep (sa'lep). The dried tubers of various species of orchid: nutritious and demulcent, and reputed to be aphrodisiac.

saleratus (sal-er-a'tus). Potassium bicarbonate, KHCO₃.

salethyl (sal-eth'il). A proprietary ethyl salicylate, said to be chemically pure.

salfene (sal'fēn). A proprietary analgesic, antiseptic, and antispasmodic mixture. Dose, 5-10 gr. (0.333-0.666 gm.).

salhypnone (sal-hip'nōn). Benzoylmethylsalicylic acid ester, C₆H₄O(COC₆H₅)COOCH₃: an antiseptic in colorless needles.

sa'lia effervescen'tia. Effervescent salts; the N. F. name for preparations made by adding sodium bicarbonate and tartaric and citric acids to the active salt.

salibromin (sal-ib-ro'min). White crystals of dibrom-salicylic-methyl-ester.

salicaine (sal-ik-a'in). A proprietary brand of saligenin.

salicamar (sal"ik-am-ar"). A clear, syrupy fluid, CH₂OH.CHOH.CH₂O.C₆H₄.CO₂.CH₂CHOH.CH₂OH, a glycerin ester of glycerosalicylic acid: anti-rheumatic and stomachic.

salicidol (sal-is'id-ol). A proprietary form of mercury salicylate.

salicin (sal'is-in) [L. sa'lix willow]. A bitter tonic and antiperiodic glucosid, C₆H₁₁O₅.O.C₆H₄.CH₂OH, in white, powdery crystals, from willow and poplar. Ptyalin and emulsin hydrolyze it to glucose and ortho-oxybenzyl alcohol. It is used in rheumatism, and, like quinin, in intermittent fever, coryza, and neuralgia. Dose, 5-30 gr. (0.333-2 gm.).

salicitrin (sal-is-it'rin). Novaspirin.

salicol (sal'ik-ol). A proprietary combination of methyl alcohol, oil of gaultheria, salicylic acid, and water: antiseptic. **salicyl** (sal'is-il). The supposed radical, $C_7H_5O_2$, of salicylic acid. **s. salicylic acid**, diplosal.

salicylacetol (sal"is-il-as-e'tol). Same as salacetol. salicylage (sal'is-il-āj). The treatment of food-

substances with salicylic acid so as to preserve them.
salicylal (sal-is-il'al). Salicylic aldehyd. See aldehyd.

salicylaldehyd (sal-is-il-al'de-hīd). Salicylous acid. See under acid.

salicylamid (sal''is-il-am'id). A yellow, analgesic and antirheumatic crystalline derivative of methyl salicylate, C₆H₄(OH)CO.NH₂, the amid of salicylic acid. It is used like salicylic acid. Dose, 3-5 gr. (0.2-0.33 gm.).

salicylanilid (sal"is-il-an'il-id). A compound formed by heating a mixture of salicylic acid, anilin, and phosphorus trichlorid.

salicylase (sal-is'il-ās). An enzyme oxidizing salicyl aldehyd into salicylic acid.

salicylate (sal'is-il-āt). Any salt of salicylic acid. The salicylates are used like salicylic acid in rheumatism. The official salicylates are those of lithium, methyl, sodium, and physostigmin.

salicylated (sal'is-il-a-ted). Containing or impregnated with salicylic acid.

salicylbromanilid (sal"is-il-brom-an'il-id). Same as salbromilid.

salicylic (sal-is-il'ik). Pertaining to the radical salicyl.s. acid. See acid.

salicylid (sal'is-il-id). Salicylous acid. See under acid.

salicylism (sal'is-il-izm). The toxic effects of excessive dosage with salicylic acid or its salts.

Salicylize (sal'is-il-Iz). To treat with or bring under the influence of salicylic acid.

salicylol (sal'is-il-ol). A fragrant volatile liquid, C₇H₈O₂, obtainable from salicin and from various plants.

salicylquinin (sal"is-il-kwin'in). Saloquinin.

salicyl-resorcinol (sal"is-il-re-zor'sin-ol). An analgesic, antipyretic, and antiseptic compound, C₁₃H₁₀O, derived from salicylic aldehyd and resorcinol. Dose, 5-15 gr. (0.33-1 gm.).

salicyl-resorcinol-ketone. Trioxybenzophenone: an antiseptic used in skin diseases and in typhoid fever. Dose, 45-60 gr. (3-4 gm.).

salicyluric acid (sal-is-il-u'rik). See acid.

salicylysin (sal-is-il'is-in). A proprietary make of thiosinamin salicylate.

salifebrin (sal-ef-e'brin). Salicylanilid, a white, antiseptic powder, C₁₃H₁₁NO₂: antineuralgic and antipyretic. used in rheumatism and malaria.

salifiable (sal'if-i-ab-l) [L. sal salt + fi'eri to become]. Capable of combining with acids so as to form salts.

saliformin (sal-if-or'min). Formin, or urotropin, salicylate, (CH₂)₆N₄.C₆H₄(OH).COOH, a white, soluble, crystalline powder. It is soluble in water and alcohol, and is used as an antiseptic and a solvent of uratic deposits. Daily dose, 15-30 gr. (1-2 gm.).

salify (sal'if-i). To convert into a salt.

saligaliol (sal-ig-al'ol). Disalicylate of pyrogaliol, (OH.C₆H₄,COO)₂C₆H₃ OH; a resin-like substance: used externally in skin diseases, and as a vehicle of various applications used as varnishes.

saligenin (sal-ij'en-in). Salicylic alcohol, OH.C₆-H₄.CH₂OH, ortho-oxybenzyl alcohol; derivable from salicin and convertible into salicylic acid. It occurs in colorless scales or needles, soluble in alcohol, ether, and hot water: used in rheumatism, typhoid, and malarial fever. It is a local anesthetic similar in action to novocain. Dose, 7½-15 gr. (o.5-1 gm.).

saligenol (sal-ij'en-ol). Same as saligenin.

salihexin (sal-i-hek'sin). A proprietary urinary antiseptic.

salimenthol (sal-im-en'thol). A light yellowish fluid, the salicylic-acid ester of menthol. used as an anodyne in capsules.

salimeter (sal-im'et-er) [L. sal salt + me'trum measure]. A hydrometer for ascertaining the strength of saline solutions.

salinaphthol (sal-in-af'tol). See betol.

saline (sa'līn) [L. sali'nus; sal salt]. Salty; of the nature of a salt; containing a salt or salts.

salinigrin (sal-in-i'grin). A glucosid, C₁₃H₁₆O₇, from the bark of willow: used like salicin.

saliodin (sal-i'o-din). A proprietary preparation for the treatment of uric-acid diathesis.

saliphen (sal'if-en). See saliphenin.

saliphenin (sal-if-e'nin). Salicyl-paraphenetidin, C₆H₄(OC₂H_δ)NH.C₆H_δ(OH)CO: an antipyretic.

Salipyrin (sal-ip-i'rin). Antipyrin salicylate, C₁₁H₁₂-N₂O.(OH)C₆H₄.COOH, a crystalline substance, somewhat soluble in water, and containing about 58 parts of salicylic acid and 42 parts of antipyrin. It is soluble in 200 parts of cold and 25 parts of boiling water; freely soluble in alcohol and ether. It is an anodyne and antipyretic, and is used in rheumatism, neuralgia, and hectic fever. Dose, 15-30 gr. (1-2 gm.).

saliretin (sal-ir-e'tin). A whitish-yellow, resinous substance, C₁₄H₁₄O₃, obtainable from salicin or saligenin.

saliseparin (sal-is-ep'ar-in). See parillin.

salit (sal'it). An oily fluid, a salicylic acid ester of borneol, C₁₀H₁rO.CO.C₀H₄OII, insoluble in water, but freely soluble in alcohol, ether, and oils It is split up in the body into salicylic acid and borneol. It is applied by inunction in a mixture with an equal part of olive oil.

salitannol (sal-it-an'ol). A white, amorphous powder, C₁₄II₁₀O₇ a derivative of salicylic and gallic acids: insoluble in water, ether, and chloroform, but slightly soluble in alcohol. It is a surgical antiseptic.

salithymol (sal-ith-i'mol). Thymol ester of salicylic acid, $C_0H_3(CH_3)(C_3H_7)O(COC_0H_4(OH)$, a white and sweet, crystalline powder soluble in alcohol or ether, slightly in water. It is used as an internal antiseptic.

salitonia (sal-it-o'ne-ah). A proprietary stomach remedy.

saliva (sal-i'vah) [L]. The spittle; a clear, alkaline, somewhat viscid, digestive fluid secreted by the salivary glands. It contains ptyalin, a digestive ferment, and serves to moisten and soften the food, keeps the mouth moist, and converts starch into maltose. The saliva also contains mucin, serum-albumin, globulin, leukocytes, epithelial débris, and potassium thiocyanate. Certain toxins frequently occur in it. chordas., submaxillary saliva produced in response to stimulation of the chorda tympani nerve. It is less viscid and turbid than that of the unstimulated gland. ganglionic s., that which is obtained by irritating the submaxillary gland. lingual s., that which is secreted by Ebner's glands and other serous glands of the tongue. parotid s., that which is produced by the parotid gland. It is thinner and less viscid than the other varieties, containing no mucin. sublingual s., that of the sublingual gland, the most viscid of all. submaxillary s., that of the submaxillary gland on stimulation of its sympathetic nerve-supply. It is more viscid and turbid than that of the unstimulated gland.

salivant (sal'iv-ant). Provoking a flow of saliva.
 salivary (sal'iv-a-re) [L. saliva'rius]. Pertaining to the saliva.

salivate (sal'iv-āt). To produce an excessive flow of saliva.

salivation (sal-iv-a'shun) [L. saliva'tio]. An excessive discharge of saliva; ptyalism.

- salivator (sal'iv-a-tor). An agent which salivates. salivatory (sal'iv-at-o-re). Causing salivation.
- salivin (sal'iv-in). Ptyalin.
- salivolithiasis (sal-i''vo-lith-i'as-is) [saliva + Gr. λίθος stone]. Formation of a salivary calculus.
- Salix (sa'liks) [L. for willow]. A genus of trees and shrubs: the willows. The bark is a bitter tonic, containing salicin. See willow.
- Salkowski's test (sal-kow'skēz) [Ernst Leopold Salkowski, physiologic chemist in Berlin, 1844–1923] See under tests.
- sallenders (sal'en-derz). See mallanders.
- salmester (sal-mes'ter). See mesotan.
- salmin (sal'min). A protamin from the spermatozoa of the salmon.
- Salmonella (sam-o-nel'ah) [Daniel Elmer Salmon, American pathologist, 1850-1914]. I. A name given to the Bacillus suipestifer, formerly known as Bacillus cholera suis. 2. A genus of the Bacteriacea found in the intestinal tract in acute inflammatory conditions S. enterit'idis. Same as Bacterium enteritidis

 S. poraty'phi, Bacterium paratyphosum A S. schotmuel'leri, Bacterium paratyphosum B.
- **salmonellosis** (sam-o-nel-o'sis). An infectious disease of hogs having a low degree of contagiousness, caused by the *Bacullus suipestifer* and resembling hog-cholera in its symptoms and lesions.
- salo (sa'lo). A proprietary disinfectant and deodorizer.
- salochinin (sal-o-kin'in). See saloquinin.
- **salocoll** (sal'o-kol). Phenocoll salicylate, $C_2H_5O_{-}$ $C_6H_4.NII.CO$ $CH_2.NH_2.C_7H_6O_3$, a crystalline salt: used as an antirheumatic and antipyretic. Dose, 10–20 gr (0 666–1.333 gm.).
- **8a.locreo1** (sal-o-kre'ol). A salicylic acid derivative of beech-wood creosote phenols: used by inunction in rheumatism, erysipelas, gout, etc.
- **salol** (sa'lol). r. Phenyl salicylate, OH.C₆H₄.CO.O C₆H₅, a white, crystalline powder, nearly insoluble in water, but soluble in chloroform, ether, oils, and in 10 parts of alcohol. It is split up in the intestine into salicylic acid and phenol. It is an antirheumatic, antiseptic, and antipyretic, and is used in neuralgia and rheumatism, in jaundice, and in gonorrhea to sterilize the bladder contents. Dose, 5-15 gr. (0.333-1 gm.). 2. Any one of that group of the esters of salicylic acid to which normal salol belongs **acetyl s**. See spiroform. **s.-camphor**, a compound of 3 parts of salol and 1 part of camphor, forming a colorless, oily liquid: used as a local antiseptic. **s. Chloral**, an oily liquid, a compound of salol and hydrated chloral, used as a hypnotic and antiseptic.
- Salomon's test (sal'o-monz) [Hugo Salomon, contemporary physician in Vienna]. See under tests. salop (sal'op). Same as salep.
- **salophen** (sal'o-fen). Acetyl paraminophenyl salicylate, C₆H₄(OH).COO C₆H₄.NH CO.CH₃, a crystalline substance containing 50 per cent of salicylic acid. It is used like the latter in acute rheumatism, and also as an intestinal antiseptic. Dose, 15–90
- gr. (1-6 gm) **salophenin** (sal-o-fe'nin). Salophen.
- **saloquinin** (sa-lo-kwin'in). A crystalline substance, OH C₆H₄.CO.O.C₂₀H₂₃N₂O, the salicylic acid ester of quinin. It is soluble in alcohol and ether, is tasteless and non-toxic. It is used like quinin in rheumatism, neuralgia, sciatica, typhoid fever, etc. Dose, 15-30 gr. (1-2 gm.). Also called salochinin. **s. salicylate**. Same as rheumatin.
- salosantal (sa-lo-san'tal). A preparation of salol and oil of santal: used in gonorrhea, cystitis, and nephritis. Dose, 10-20 min. (0.66-1.33 c.c.).
- salpingectomy (sal-pin-jek'to-me) [Gr. σάλπιγξ tube + ἐκτομή excision]. Surgical removal of an oviduct.

- salpingemphraxis (sal''pin-jem-fraks'is) [Gr. σάλπιγξ tube + ἔμφραξις stoppage]. Obstruction of an oviduct or of the eustachian tube.
- salpingian (sal-pin'je-an) [Gr. σάλπιγξ tube] Pertaining to an oviduct or to a eustachian tube.
 s. dropsy, hydrosalpinx.
- salpingion (sal-pin'je-on). A point at the apex of the petrous bone on its lower surface.
- salpingitic (sal-pin-jit'ik). Pertaining to salpingitis.
- salpingitis (sal-pin-ji'tis) [Gr. σάλπιγξ tube]. Inflammation of an oviduct or of the eustachian tube chronic vegetating s., a form characterized by marked hypertrophy of the mucosa of the oviduct. hemorrhagic s., that which attends rupture of a blood-vessel and effusion of blood. interstitial s., that which is attended with hyperplasia of the connective tissue. mural s., parenchymatous s. See pachysalpingitis. nodular s., a form attended with the growth of nodules in the walls and mucosa of the tube. s. prof'luens, salpingitis in which the discharge has been locked up in the tube for a time, but afterward discharges. pseudofollicular s., that which is characterized by agglutination of the walls of the tube, causing a formation of saccules. purulent s., inflammation of the oviduct attended with suppuration. tuberculous s., a nodular salpingitis due to the tubercle bacillus.
- **salpingocatheterism** (sal-ping-o-kath'et-er-izm). The catheterization of a eustachian tube
- **salpingocele** (sal-ping'o-sēl) [Gr. σάλπιγξ tube + κήλη hernia] Hernial protrusion of a fallopian tube.
- **salpingocyesis** (sal-ping"o-si-e'sis) [Gr. σάλπιγξ tube + κύησις pregnancy]. Pregnancy in an oviduct.
- salpingomalleus (sal-ping"o-mal'e-us). The tensor tympani muscle.
- salpingo-oöphorectomy (sal"ping-o-o"of-o-rek'-to-me) [Gr. σάλπιγξ tube + oophorectomy]. Surgical removal of an oviduct and ovary.
- salpingo-oöphoritis, salpingo-ovaritis (sal'-ping-o-o'of-o-ri'tis, sal-ping''o-o-var-i'tis) [salpingitis + oophoritis]. Inflammation of an oviduct and an ovary.
- **salpingo-oophorocele** (sal-ping"o-o-of-or'o-sēl) [salpingocele + oophorocele]. Hernia containing the ovary and fallopian tube
- **salpingo-oöthecitis** (sal-ping''o-o-o-the-si'tis) [Gr. σάλπιγξ tube + ψοθήκη ovary + -ιτις inflammation]. Salpingo-oophoritis.
- **salpingo-oöthecocele** (sal-ping"o-o-o-the ko-sēl) [Gr. σάλπιγξ tube + ψοθήκη ovary + κήλη hernia]. Hernia of the ovary and oviduct.
- **salpingo-oöthectomy** (sal-ping"0-0-q-thek'tome) [Gr. σάλπιγξ tube + ψοθήκη ovary + ἐκτομή excision]. Salpingo-oophorectomy.
- salpingo-ovariectomy (sal-ping"o-o-va-re-ek'to-me). Same as salpingo-oophorectomy.
- salpingo-ovariotomy (sal'pin-go-o'va-re-ot'o-me). Same as salpingo-oophorectomy.
- **salpingoperitonitis** (sal-ping"o-per-it-o-ni'tis). Inflammation of the peritoneum lining the fallopian tube.
- **salpingopexy** (sal-ping'o-pek-se) [Gr. $\sigma \dot{\alpha} \lambda \pi \iota \gamma \xi$ tube $+ \pi \dot{\eta} \dot{\xi} \iota s$ fixation]. The operation of fixing the fallopian tube.
- salpingopharyngeal (sal-ping"o-far-in'je-al).
 Pertaining to the eustachian tube and the pharynx.
- **salpingopharyngeus** (sal-ping"o-far-in'je-us). The levator palati muscle.
- salpingorrhaphy (sal-ping-or'a-fe) [Gr. $\sigma \dot{\alpha} \lambda \pi \iota \gamma \xi$ tube $+ \dot{\rho} a \varphi \dot{\eta}$ suture]. The stitching of an oviduct to its ovary after a partial removal of the latter.

salpingosalpingostomy (sal-ping'o-sal-ping-os'-to-me). The operation of implanting a fallopian tube that has been operated on into its fellow.

SALPINGOSALPINGOSTOMY

salpingoscope (sal-ping'o-skōp) [Gr. σάλπιγξ tube + σκοπεῖν to examine]. An instrument for exploring the nasopharynx and eustachian tube.

salpingostaphyline (sal-pin"go-staf'il-īn). Pertaining to the eustachian tube and the uvula.

alpingostaphylinus (sal-ping"o-staf-il-i'nus) [Gr. σάλπιγξ tube + σταφυλή uvula]. The tensor salpingostaphylinus palati muscle.

salpingostomatomy (sal-pin''go-sto-mat'o-me) [Gr. σάλπιγξ tube + στόμα mouth + τομή cut]. The operation of resecting a portion of the oviduct and forming a new abdominal ostium.

salpingostomy (sal-ping-os'to-me) [Gr. σάλπιγξ tube + στόμα mouth]. The formation of an opening or fistula into an oviduct for the purpose of drainage.

salpingotomy (sal-ping-ot'o-me) [Gr. σάλπιγξ tube + τέμνειν to cut]. Surgical incision of an oviduct.

salpingo-ureterostomy (sal-ping"o-u-re-ter-os'to-me) [Gr. $\sigma\dot{a}\lambda\pi\iota\gamma\xi$ tube + ureter + Gr. $\sigma\tau\dot{b}\mu a$ mouth]. The operation of making an anastomosis between the ureter and the fallopian tube.

salpingysterocyesis (sal-pin-jis"ter-o-si-e'sis) [Gr. $\sigma \dot{\alpha} \lambda \pi \iota \gamma \xi$ tube + $\dot{\nu} \sigma \tau \dot{\epsilon} \rho a$ womb + $\kappa \dot{\nu} \eta \sigma \iota s$ pregnancy]. Pregnancy partly in the oviduct and partly in the uterus.

salpinx (sal'pinks) [Gr. σάλπιγξ tube]. 1. An oviduct. 2. A eustachian tube.

salpyrin (sal-pi'rin). Same as salipyrin.

salseparisin (sal-sep-ar-i'sin). See parillin.

salt (sawlt) [L. sal; Gr. and I. Sodium chlorid, or common salt. 2. Any compound of a base or radical and an acid; any compound of an acid some of whose replaceable hydrogen atoms have been substituted. acid s., any salt in which the combining power of the acid is not completely exhausted bakers's., ammonium carbonate: sometimes used in leavening cakes. basic s., any salt with more than the normal proportion of the basic elements. bay-s., common salt derived from sea-water. bile s., the salt of a bile acid. buffer s., a salt, such as sodium bicarbonate and sodium phosphate, in the blood, which is able to absorb acid or alkali without a corresponding change in hydrogen-ion concentration. Carlsbad s., a mixture of sodium sulphate, potassium sulphate, sodium chlorid, and sodium bicarbonate. common s., sodium chlorid, NaCl. Crab Orchard s., a complex saline obtained by evaporating the water of a spring at Crab Orchard, Ky. diuretic s., potassium acetate, CH₃.COOK. double s., any salt in which the
hydrogen atoms of the acid have been replaced by two metals. **Epsom s.**, magnesium sulphate. **Everitt's s.**, iron and potassium cyanid. **s.** frog, Cohnheim's frog; a frog whose blood has been entirely removed from the vessels and replaced by a salt solution. Gettysburg s., a salt compound obtained from the water of a lithic spring at Gettysburg, Pa. Glauber's s., sodium sulphate. haloid s., any binary compound of a halogen—i. e., of chlorin, iodin, bromin, fluorin. Homberg's sedative s., boracic acid. microcosmic s., sodium and ammonium phosphate,
NaNH₄HPO₄₄H₂O. Monsel's s., iron subsulphate: a brown and highly styptic substance.

neutral s., normal s., any salt which is neither
acid nor basic. pancreatic s., a mixture of the
pancreatic fermants with common and the pancreatic fermants with common and the pancreatic fermants with common and the pancreatic fermants with common and the pancreatic fermants with common and the pancreatic fermants with common and the pancreatic fermants with common and the pancreatic fermants with common and the pancreatic fermants with the pancreatic ferman pancreatic ferments with common salt: used as a digestant. peptic s., common salt mixed with pepsin: used as a digestant. Plimmer's s., antimony sodiotartrate: used in trypanosome infection. Preston's s., smelling s., aromatized ammonium carbonate: stimulant and restorative. s.-rheum, chronic eczema. Rochelle s., po-tassium and sodium tartrate. Siegnette's s. Same as Rochelle s. s. solution. See solution.

saltation (sal-ta'shun) [L. salta'tio]. Chorea, or the dancing which sometimes accompanies it.

SALVEOL

saltatorial (sal-tat-o're-al). Saltatoric.

saltatoric, saltatory (saltat-o'rik, sal'tat-o-re).
Marked by leaping or dancing. See spasm.

Salter's incremental lines (sawl'terz) [Sir James A. Salter, English dentist of the nineteenth century]. See under line.

salt-fever. See fever.

salt-free diet. See dechloridation.

saltpeter (sawlt-pe'ter) [L. salpe'tra or sal pe'tra].
Potassium nitrate, KNO₃. Chile s., sodium nitrate.

salts (sawlts). A saline purgative. See Epsom s., Glauber's s., Rochelle s., under salt.

salt-sac (sawit-sak). See under sac.

salubrin (sal'u-brin). A preparation containing alcohol, acetic acid, acetic ether, and water: antiseptic and hemostatic. used externally and in gargles.

salubrious (sal-u'bre-us) [L. salu'bris]. Conducive to health; wholesome.

salubrol (sal'u-brol). Tetrabromomethylene diantipyrin a product of the action of bromin on methylene and antipyrin: a harmless and inodorous powder, antiseptic and hemostatic: used like iodoform.

saludador (sah-loo-thah-thor') [Sp. "a healer"]. In Spain, a person who professes to be able to restore the health by the exercise of mysterious natural powers.

salufer (sal'u-fer) [L. sa'lus health + fer're to bring]. An antiseptic and astringent solution of sodium silicofluorid.

salumin (sal'u-min). Aluminum salicylate, Al(OH.- $C_0H_4.CO.O)_3$, a reddish powder, used as an astringent and disinfectant in rhinitis and pharyninsoluble s., pure salumin in powder: used in nasal and throat diseases. soluble s., salumin rendered soluble by ammonia and used in a solution.

salunguene (sal-un'gwēn). A proprietary salicylic ester salve used in veterinary practice.

salusol (sal'u-sol). A proprietary astringent, antiseptic, and germicide, being a compound spirit of acetic ether.

salutarium (sal-u-ta're-um) [L. sa'lus health]. A resort for the preservation of health.

salutary (sal'u-ta-re) [L. saluta'ris]. Favorable to the preservation and restoration of health.

salvacea (sal-va'se-ah). A proprietary soothing medicine for outward use.

salvarsan (sal'var-san). See arsphenamin copper, a yellowish-red powder, a combination of salvarsan and copper: suggested by Ehrlich for use in protozoan infections. s. milk. See under milk. sulphoxylate s., a modified salvarsan.

salvarsanized serum (sal-var'san-īzd).

salvarsannatrium (sal"var-san-na'tre-um). dium salvarsan; a derivative of salvarsan so prepared that when dissolved in distilled water its solution has the same composition as solutions of salvarsan prepared by neutralization with sodium hvdrate.

salvatella (sal-vat-el'ah) [L.]. A sma the little finger and dorsum of the hand. A small vein of

salve (sahv). A thick ointment or cerate. ointment. Deshler's s., compound resin cerate. fetron s., a salve composed of from 3 to 5 per cent. of the anilid of stearic acid with vaselin. mother's s., brown ointment.

salvelin (sal-ve'lin). A protamin from the sperm of lake trout, Salvelinus namaycush.

salveol (sal've-ol). An antiseptic solution of sodium creosotate in cresol.

lalvia (sal've-ah) [L.]. A genus of labiate plants. The leaves of S. officina'lis, sage, contain a volatile oil, and are sudorific, carminative, and astringent: used in sore throat and as an application to ulcers, also for the purpose of checking excessive milk secretion. Dose of fluidextract, \(\frac{1}{2}-\text{if.dr.}\) (1-4 c.c.).

lalvin (sal'vin). A preparation of ethereal silicaceratin, used in skin diseases.

talviol (sal've-ol). An eleopten, $C_{10}H_{16}O$, from the volatile oil of Sal'via officina'lis.

salvosal (sal'vo-sal). See solvosal.

talysal (sal'is-al). An insoluble, colorless, tasteless, odorless, crystalline powder, the salicyl ester of salicylic acid, OH.C₆H₄CO.O.C₆H₄ COOH, used the same as the salicylates. Called also diplosal.

Salzer's operation, test-meal (salz'erz) [Fritz Adolf Salzer, surgeon in Utrecht, born 1858]. See operation and test-meal.

tamaderin (sam-ad'er-in). A light-yellow, bitter, crystalline principle from the fruit and bark of Samad'era in'dica. It paralyzes the voluntary muscles and quickens the respiration.

Ismandaridin (sam-an-dar'id-in) An alkaloid from the skin of various salamanders: less poisonous than samandarin.

tamandarin (sam-an'dar-in). A poisonous alkaloid from the skin of various salamanders.

samarium (sam-a're-um). A very rare metallic element; symbol, Sm; atomic weight, 150.4.

tambucin (sam-bu'sin). A proprietary diuretic tincture of the bark of Sambu'cus ni'gra.

Sambucus (sam-bu'kus) [L. "the elder-tree"]. A genus of caprifoliaceous trees and shrubs; elder. The flowers of S. canaden'sis or S. ni'gra are sudorific, and are used as a dressing for wounds, burns, ulcers, etc. The berries are sudorific and alterative. A'qua sam'buci is used as a flavoring agent.

tamol (sam'ol). An ointment containing 25 per cent. of salimenthol.

samshu (sam-shoo'). A Chinese spirit distilled from rice.

anal (sa'nal). A proprietary surgical antiseptic.

Ignarthrit (san-ar'thrit). A proprietary alcoholic extract of cartilage for protein therapy of arthritis, especially gonorrheal arthritis.

lanative (san'at-iv) [L. sana're to heal]. Having a tendency to heal; curative.

sanatogen (san-at'o-jen). A proprietary preparation of glycerinophosphate of sodium casein: used as a food for invalids.

Ianatol (san'at-ol). A thick, brown, proprietary liquid containing sulphuric acid and the phenol esters: disinfectant and antiseptic. Called also Artmann's creolin.

sanator (san-a'tor). A proprietary wine of ferromanganate and glycerophosphate of lime.

sanatorium (san-at-o're-um) [L. sanato'rius confering health, from sana're to cure]. I. An establishment for the treatment of sick persons, especially a private hospital for convalescents or those who are not extremely ill. The term is now applied particularly to an establishment for the open-air treatment of tuberculous patients. 2. A health station; a health-resort in a hot region.

sanatory (san'at-o-re) [L. sanato'rius]. Conducive to health.

sanatose (san'at-ōs). The glycerin phosphate of sodium casein: nutritive.

Sanctorius (sank-to're-us). An Italian physician, 1561-1636. He was professor of medicine at Padua, and published several works, the most important of which is "Ars de Statica Medicina."

sand, brain- (sand). Acervulus cerebri. intestinal s., sand-like matter made up of oxids of calcium and phosphorus, bacteria, bile-pigment, etc., formed in the intestine. Its presence is attended with pain and mucous colic.

sand-bath (sand'bath). See bath.

sand-crack. A crack in a horse's hoof, sometimes causing lameness. When situated on the inside of the hoof it is termed quarter-crack; when in the forepart of the hoof it is toe-crack.

sand-fly (sand'fli). See Phlebotomus papatassii. s. fever. See under fever.

sandalwood (san'dal-wood) [L. sant'alum]. 1. The fragrant wood of San'talum al'hum, white or yellow sandal, and of other trees of the genera San'talum and Fusa'nus. The oil and other preparations are used like copaiba in gonorrhea, bronchitis, and diarrhea. Dose of oil, 5-30 min. (0.33-2 c.c.); of fluidextract, 1-2 fl.dr. (4-8 c.c.). 2. Red sandalwood, red saunders; the wood of Pterocar'pus santali'nus, a leguminous tree (L. san'talum ru'brum): used as a coloring agent.

sandarac (san'dah-rak) [Gr. σανδαράκη]. A white, transparent resin from Cal'litris quadrical'vis, a tree of Africa. It is used in dentistry in an alcoholic solution as a separating fluid and as a preservative varnish for plastic casts.

sandaracing (san'dar-ak-ing). The painting of a dental cast or impression with sandarac.

Sanders' sign (san'derz) [James Sanders, English' physician, 1777-1843]. See sign.

Sandström's bodies (zant-strāmz) [Ivar Sandström, Norwegian physician of the nineteenth century]. The parathyroids.

Sandwith's bald tongue (sand'withs) [Fleming Mant Sandwith, British physician, 1853–1918]. See under tongue.

sane (sān) [L. sa'nus]. Of sound mind.

sang (sang). 1. Ginseng. 2. Sangaree.

sangaree (sang-ar-e') [Sp. sangria]. A drink containing wine or porter: often prescribed as a tonic or galactic.

sangogen (san'go-jen). A proprietary compound of predigested iron albuminate and manganese with strychnin and arsenic.

sangrenal (sang're-nal). A preparation from the exsanguinating renal glands of the sheep: used as an astringent and hemostatic and as a cardiac stimulant and tonic.

sanguestin (sang-wes'tin). A proprietary preparation of a principle derived from the suprarenal glands.

sanguicolous (sang-wik'o-lus) [L. san'guis blood + col'lere to dwell]. Inhabiting or living in the blood.

sanguifacient (sang-we-fa'shent) [L. san'guis blood + fa'cere to make]. Forming blood.

sanguiferous (sang-wif'er-us) [L. san'guis blood + fer're to bear]. Conveying or containing blood.

sanguiferrin (sang-wif-er'in). A liquid preparation of hemoglobin, iron, and manganese.

sanguification (sang'wif-ik-a'shun) [L. san'guis blood + fa'cere to make]. The process of making blood; also conversion into blood.

sanguimotor, sanguimotory (sang-wim-o'tor, sang-wim-o'tor-e) [L. san'guis blood + mo'tor mover]. Pertaining to the circulation of the blood.

sanguinal (sang'win-al). A preparation of fresh blood, defibrinated and dried, and said to contain 10 per cent. of hemoglobin, 46 per cent. natural blood salts, and 44 per cent. of muscle-albumin. It is used as a hematinic in chlorosis and anemia.

Sanguinaria (sang-win-a're-ah) [L.]. A genus of papaveraceous plants. The rhizome of S. canaden'sis, blood-root, contains the alkaloid sanguinarin, and is a gastric tonic, emetic, expectorant, and cholagogue. It is useful in coughs, jaundice, bronchitis, etc. In large doses it is an irritant poison. Dose of vinegar (ace'tum sanguina'ria), 10-30 min. (0.666-2 c.c.); of fluid-extract, 5-15 min. (0.333-1 c.c.); of tincture, 5-30 min. (0.333-2 c.c.).

sanguinariin (sang-win-a're-in). A proprietary concentration from sanguinaria.

sanguinarin (sang-win-a'rin). .1. A white alkaloid, C₂₀H₁₆NO₄.H₂O, from Sanguina'ria canaden'sis tonic and expectorant. Dose, ¹/₄O⁻¹/₄ gr. (0.0016-0.016 gm.). 2. A precipitate or concentration prepared from S. canaden'sis. Dose, ¹/₈-1 gr. (0.008-0.066 gm.).

sanguine (sang'win) [L. sanguin'eus; san'guis blood]. r. Abounding in blood. 2. Ardent; hopeful.

sanguineous (sang-win'e-us) [L. sanguin'eus]. Abounding in blood; pertaining to the blood.

sanguino (sang'win-o). A therapeutic preparation of blood, in a liquid or in tablets, said to contain all the carbohydrates, fats, albumins, and iron salts of the animal economy.

sanguinoform (sang-win'o-form). A therapeutic preparation containing hemoglobin and nucleated erythrocytes, from embryonic pigs.

sanguinol (sang'win-ol). A proprietary liquid preparation of a petrolate with sanguinaria and antiseptics.

sanguinolent (sang-win'o-lent) [L. sanguinolen'tus]. Of a bloody tinge.

sanguinopoietic (san"gwin-o-poi-et'ik) [L. san'-guis blood + Gr. ποιεῖν to make]. Forming blood.

sanguirenal (sang-wir-e'nal) [L. san'guis blood + ren kidney]. Pertaining to the blood and the kidneys

sanguis (sang'wis). Latin for blood.

sanguisuga (sang-wis-u'gah) [L. san'guis blood + su'gere to suck]. A leech.

sanicult (san'ik-ult). A certain system of quack medicine.

sanies (sa'ne-ēz) [L]. A fetid, ichorous discharge from a wound or ulcer, containing serum, pus, and blood.

saniopurulent (sa"ne-o-pu'ru-lent). Partly sanious and partly purulent.

sanioserous (sa"ne-o-se"rus). Partly sanious and partly serous.

sanious (sa'ne-us) [L. sanio'sus]. Of the nature of sanies.

sanipractic (san-ip-rak'tik). A system of medical practice based on applied prophylactic and therapeutic sanitation.

sanitarian (san-it-a're-an). A person who is expert in matters of sanitation and public health.

sanitarium (san-it-a're-um) [L] An incorrect spelling or form of the word sanatorium.

sanitary (san'it-a-re) [L. sanita'rius]. Promoting or pertaining to health.
s. train. See under train.
sanitas (san'it-as) [L. "health"]. A proprietary

disinfectant prepared from turpentine.

sanitation (san-it-a'shun) [L. san'itas health].

The establishment of environmental conditions

favorable to health; assanation.

sanitol (san'it-ol). A proprietary mouth-wash.

sanitorium (san-it-o're-um). An incorrect spelling of the word sanalorium.

sanity (san'it-e) [L. san'itas soundness]. Soundness, especially soundness of mind.

sanmethyl (san-meth'il). A proprietary preparation of methylene-blue, copaiba, salol, oils of santal and cinnamon, and the oleoresins of matico and cubebs. It is used in gonorrhea, etc. Dose, 10 min. (0.666 c.c.), in capsule.

sanmetto (san-met'o). A preparation of saw-pal-metto and santal: used in bladder affections.

sano (sa'no). A proprietary dietetic remedy for anemia and indigestion.

sanocalcin (san-o-kal'sin). Calcium glycerino-lactophosphate: used in chronic infectious diseases. Dose, 1½-8 gr. (o.1-o.5 gm.).

sanocrysin (san-o-kris'in) [L. sa'nus health + Gr. χρυσός gold]. A double thiosulphate of sodium and gold, 3Na₂S₂O₃.Au₂S₂O₃.4H₂O, a white crys-

talline substance containing 37 per cent. of gold. Used by intravenous or intramuscular injection for the treatment of tuberculosis. Dose, 8-15 gr. (0.5-1 gm.). See Möllgaard treatment, under treatment.

sanoform (san'o-form). A colorless, crystalline substance, diiodomethyl salicylate, OH.C₆H₂I₂. CO.O.CH₃: used as a substitute for iodoform.

sanogyl (san'o-jil). A tooth paste containing fluorin salts and neosalvarsan in a soap base.

sanolith (san'o-lith). A proprietary tablet of calcium sulphate charged with a preparation of formaldehyd: used in aerial disinfection.

sanose (sa'nōs). A compound of casein (80 parts) and albumose (20 parts): a food for the sick; used also as a vehicle.

sanosin (san'o-sin). A preparation used for inhalation in pulmonary tuberculosis, consisting of flowers of sulphur, powdered charcoal, and powdered eucalyptus leaves with oil of eucalyptus.

Sansevieria (san"se-vi-e're-ah) [L.]. A genus of East Indian liliaceous plants; good in urethral, pulmonary, and rheumatic affections.

Sansom's sign (san'somz) [Arthur Ernest Sansom, English physician, 1838-1907]. See sign.

Sanson's images (san'sonz) [Louis Joseph Sanson, French physician, 1790-1841]. See Purkinje-Sanson's images, under image.

santal (san'tal) [L. san'talum]. White, or true, sandalwood.

santal-monal (san-tal-mo-nal'). A French antiseptic, analgesic, and diuretic containing methyleneblue in balsamic oils.

santalin (san'tal-in). A red, crystalline, resin-like dye, $C_{15}H_{14}O_{5}$, from red saunders. Called also santalic acid.

Bantalol (san'tal-ol). A sesquiterpenic alcohol, C₁₅-H₂₅OH, the chief constituent of sandalwood. It is used in gonorrheal urethritis and cystitis Dose, 3 gr (o 2 gm.). **S. Salicylate**, santyl.

santalum (san'tal-um). Sandal wood. s. ru'brum, red saunders; the heart-wood of Pterocarpus santalinus.

santol (san'tol). 1. A colorless, crystalline principle, C₈H₆O₃, from red saunders. 2. A proprietary sandalwood preparation for gonorrhea, etc.

santolin (san'to-lin). A proprietary preparation of oil of sandal, salol, and diastase, and the oleoresins of copaiba, cubebs, and matico: used in urethritis and cystitis.

santonica (san-ton'ik-ah) [L.]. Levant worm-seed, or cina, the dried flower-heads of Artemis'-ia marit'ima. Santonica contains santonin, and is used as a vermifuge, especially for seat-worms and round-worms, and for incontinence of urine. In large doses it is mydriatic and diurctic. Over-doses may cause convulsions and vertigo, and give a yellow or pinkish tint to objects seen. Dose, 5-30 gr. (0.33-2 gm.); of fluidextract, 15-60 min. (1-4 c.c.). The trochis'ci santoni'ni contain 1 gr. of santonin.

santonin (san'to-nin) [L. santoni'num]. A color-less, crystalline, and poisonous active principle, the inner anhydrid of santonic acid, (CH₃)₂C₁₀H₈O.-CH(CH₃)CO₂, from santonica. It is used as a vermifuge like santonica. Dose, 1-4 gr. (0.066-0.266 gm.).

santoninoxim (san"to-nin-oks'im). A crystalline substance, C₁₆H₁₈O₂NOH, prepared from anthelmintic santonin. Dose for a child, $\frac{3}{4}$ -2 $\frac{1}{4}$ gr. (0.049-0.149 gm.); for an adult, 2-4 gr. (0.132-0.264 gm.).

Santorini's cartilages, duct, muscle, etc. (san-to-re'nez) [Giovanni Domenico Santorini, Italian anatomist, 1681-1737]. See cartilage, duct, muscle. etc.

santogea (san-to'ze-ah). A preparation of santal, saw-palmetto, etc.: used as a diuretic and genito-urinary tonic.

- santyl (san'til). A proprietary salicylic acid ester of santalol, C₁₆H₂₃O.CO.C₆H₄.OH: used internally in gonorrhea. Dose, 25 min. (1.5 c.c.) three times a day.
- **santylmethylether** (san"til-meth"il-e'ther). Same as thyresol.
- sap (sap). The natural juice of a living structure. cell s., enchylema. nuclear s. See karyalymph.
- sapa (sap'ah). A proprietary solid substitute for liquid soap.
- **sapacol** (sap'ak-ol). A proprietary antiseptic paste for cutaneous affections.
- **sapene** (sap'ēn). A liquid soap used as a vehicle for various proprietary antiseptics.
- saphena (saf-e'nah) [L.; Gr. σαφηνήs manifest]. Either of two large superficial veins of the leg. See saphenous vein, under vein.
- **saphenous** (saf'e-nus). Pertaining to or associated with a saphena: applied to certain arteries, nerves, veins, etc.
- **sapid** (sap'id) [L. sap'idus]. Having or imparting an agreeable taste.
- sapin (sa'pin). A non-toxic ptomain, C₅H₁₄N₂: isomeric with cadaverin and neuridin.
- **sapiphore** (sap'if-or) [L. sa'pis taste + Gr. φορεῖν to bear]. Any member of a series of atomic groups which influence taste. If these are suitably mated, a sweet taste is said to result; if discordantly, a bitter taste.
- sapo (sa'po) [L. for soap]. 1. Soap; a compound of a fatty acid with a suitable base. 2 White castile soap made of soda and olive oil used in pills, suppositories, plasters, and liniments: detergent. S. anima'lis, sapo domesticus. S. cine'reus (gray soap, or mercurial salve soap), a soap containing 50 per cent, by weight, of quicksilver and 5 per cent of benzoinated fat. S. domes'ticus, a preparation of a soft soap made of animal fat and soda. S. du'rus, hard soap. S. mol'lis (soft soap), S. vir'idis (green soap), a soap made of linseed or other oil, potash, alcohol, and water: used in skin diseases and liniments. Called also green s.
- **sapocarbol** (sa-po-kar'bol). An antiseptic solution of cresol in potassium soap.
- **sapocrinin** (sa-po-krin'in). Fleig's name for secretion produced by rubbing of the intestinal mucous membrane with a solution of soap.
- sapodermin (sa-po-der'min). A proprietary soap containing 0.2 to 1 per cent. of mercuric albuminate: used in syphilitic and other skin affections.
- sapogenin (sa-poj'en-in). A crystalline substance, C₁₄H₂₂O₂, derivable from saponin
- sapolan (sa'po-lan). An ointment-base composed of soap, lanolin, and crude naphtha.
- **sapolanolin** (sa-po-lan'o-lin). A preparation of 5 parts of lanolin and 4 parts of soft soap: used in eczema and acne.
- **saponaceous** (sa-po-na'shus) [L. sa'po soap]. Of a soapy quality or nature.
- saponal (sa'po-nal). Soap, 20 per cent.; sodium carbonate, 60 per cent.; and other ingredients: detergent.
- Saponaria (sa-po-na're-ah). A genus of plants. The root of S. officena'lis, or soapwort, has alterative properties and was formerly used in skin diseases.
- saponatus (sa-po-na'tus) [L.]. Charged or mixed with soap.
- **saponetin** (sa-po-ne'tin). A crystalline substance, $C_{40}H_{46}O_{15}$, from soapwort, etc.
- saponification (sa-pon-if-ik-a'shun) [L. sa'po soap + fa'cere to make]. The act or process of converting or becoming converted into soap. In chemistry, the term now denotes the hydrolysis of an ester by an alkali, resulting in the production of a free alcohol and an alkali salt of the ester acid.
- saponin (sap-o'nin). r. A glucosid, C₃₂H₅₄O₁₈,

- found in soap-wort, quillaia, and many other plants: it is an irritant poison; it is expectorant and emetic. 2. Any glucosid of the group to which typical saponin belongs.
- sapotin (sap-o'tin). A white, crystalline glucosid, $C_{20}H_{52}O_{20}$, from the seeds of Sapo'ta zapotilla.
- **sapotinetin** (sap"o-tin-e'tin). A principle, C_{17} - $H_{32}O_{10}$, from sapotin.
- sapotoxin (sa-po-toks'in) [L. sa'po soap + toxin].
 A poisonous glucosid, C₁₇H₂₆O₁₀ found in soap-bark (quillaia).
- sappan wood (sap'an). The wood of a Philippine tree, Cæsalpin'ia sap' pan. A decoction is used as a dye, and also to control hemorrhage. Called also sibucao.
- Sappey's fibers, ligament, veins (sap'ēz) [Marie Philibert Constant Sappey, French anatomist, 1810–1896]. See fiber, ligament, vein.
- **sapphism** (saf'fizm) [after Sappha, Greek poetess]. Tribadism, or sexual perversion between women.
- Sappin'ia diploi'dea. A genus of coprozoic amebæ having a definite cuticle and two similar nuclei. It has been called also Amæba diploidea and Vahlkampfia diploidea.
- sapremia, sapræmia (sap-re'me-ah) [Gr. σαπρός rotten + αluα blood]. Intoxication due to the presence in the blood of the products of saprophytic and non-pathogenic bacteria. Called also septic intoxication and putrid intoxication.
- sapremic, sapræmic (sap-re'mik). Pertaining to or of the nature of sapremia.
- saprin (sa'prin) [Gr. σαπρόs putrid]. A ptomain, C₅H₁₄N₂, from decaying visceral substances: not poisonous.
- saprodontia (sa-pro-don'she-ah) [Gr. σαπρός rotten + όδους tooth]. Caries of the teeth.
- saprogen (sap'ro-jen). Any saprogenic microorganism.
- saprogenic, saprogenous (sap-ro-jen'ik, sap-ro-jen-us) [Gr. $\sigma a\pi \rho \delta_{S}$ putrid $+ \gamma \epsilon \nu \nu \hat{a} \nu$ to produce]. Causing or arising from putrefaction.
- saprol (sa'prol). A dark-brown, inflammable, oily mixture of 40 per cent. of crude cresols in hydrocarbons from petroleum disinfectant.
- Saprolegnia (sap-ro-leg'ne-ah) [Gr. $\sigma \alpha \pi \rho \delta s$ putrid $+ \lambda \dot{\epsilon} \gamma \nu \rho \nu$ border]. A genus of phycomycetous fungi. The species are partially saprophytic. S. fe'rax is destructive to salmon and to various water animals.
- saprophilous (sa-prof'il-us) [Gr. σαπρός putrid + φιλεῦν to love]. Living upon decaying and dead matter; a term applied mainly to various microorganisms.
- saprophyte (sap'ro-fit) [Gr. σαπρόs putrid + φυτόν plant]. Any vegetable organism living upon dead or decaying organic matter.
- **saprophytic** (sap-ro-fit'ik) [Gr. σαπρός putrid + φυτόν plant]. Of the nature of or pertaining to a saprophyte.
- sapropyra (sa-pro-pi'rah) [Gr. σαπρός putrid + πῦρ fire, fever]. Putrid or typhus fever.
- saprotyphus (sa-pro-ti'fus) [Gr. σαπρός putrid + τῦφος typhus]. True or putrid typhus.
- saprozoic (sap-ro-zo'ik) [Gr. σαπρός filth + ζφον animal]. Living on dead or lifeless matter.
- saprozoite (sap-ro-zo'īt). A protozoan organism which does not require a living host.
- sapucainha oil (sah-poo-kin'hah). See under oil. sarampion (sar-am'pe-on). See serempion.
- sarcin (sar'sin) [Gr. σάρξ flesh]. 1. Same as hypoxonthin. 2. Same as sorcine.
- Sarcina (sar-si'nah) [L. "pack"]. A genus of Coccaceæ characterized by the fact that cell division occurs under favorable conditions in three planes, forming regular packets. S. al'ba, a species with small cocci found in air and water. S. auranti'aca, a species from air, water, and

from white beer, producing a golden-yellow pigment (linoxanthin). S. au'rea, a species from pulmonary exudates of pneumonia; it produces a bright yellow pigment. S. can'dida, a species from water and the air of a brewery. S. fla'va, a species from beer and cheese; it produces a yellow pigment. S. fusces'cens, a species from the human stomach. S. hyali'na, a species from marshwater. S. intestina'lis, a species from the intestines of man, animals, and fowls. S. littora'lis, a species from sea-water, producing a red pigment. Löwenberg's s., a pathogenic form from a case of ozena. S. lu'tes, a species from air, the conjunctival sac, human skin, potato, water, etc., producing a yellow pigment. S. max'ima, a large species from malt-mash. S. minu'ta, a very small species from sour milk. S. mor'rhuse, a species from sour disk. S. mor'rhuse, a species from soul fish. a species from cod-fish. S. nob'ilis, a species from old ascitic fluid, producing a brick-red pigment. S. paludo'sa, a species from marshwater. S. pulmo'num, a non-pathogenic species from the sputum of phthisis. S. reitenbach'ii, a form from decaying water-plants. re'nis, a species from the kidneys of tuberculous cadavers. S. ro'sea, a species from air, beer, red milk, etc.: it produces an intensely red pigment. S. ure'se, S. uri'nse, a form from the human bladder; not pathogenic S. ventric'uli, a species from the stomachs of men and animals, forming colonies of considerable size. S. viola'cea, a species from water producing a violet pigment. S. vircho'wii, a species from the human lung: said to cause the condition known as pseudomycosis sarcinica.

sarcine (sar'sīn) [L. sarci'na pack]. A cube composed of eight bacterial cells (sarcine of the first power), or of sixty-four cells (sarcine of the second power), produced by the division of Sarcinæ.

sarcinic (sar-sin'ik). Pertaining to sarcinæ.

sarcitis (sar-si'tis) [Gr. σάρξ flesh + -ιτις inflammation]. Same as myositis.

sarco- [Gr. σάρξ flesh]. A prefix denoting relation to flesh.

sarco-adenoma (sar"ko-ad-en-o'mah). Same as adenosarcoma.

sarcoblast (sar'ko-blast) [Gr. σάρξ flesh + βλαστόs germ]. The primitive cell which develops into a muscle-cell.

sarcocarcinoma (sar"ko-kar-sin-o'mah). Sarcoma and carcinoma combined.

sarcocele (sar'ko-sēl) [Gr. σ $d\rho$ ξ flesh + κ η λ η tumor]. Any fleshy swelling or tumor of the testicle.

Sarcocol (sar'ko-kol) (L. sarcocol'la; Gr. σάρξ flesh + κόλλα glue]. A nauseous gum-resin from various African species of Pena'a; also a similar drug from Asia now discarded as medicines.

sarcocyst (sar'ko-sist). A globular, oval, or elongated body produced by the growth of Sarcocystis and called the tubes of Rainey and of Miescher. They can sometimes be seen with the unaided eye in the muscles.

sarcocystin (sar-ko-sis'tin). A toxin obtained from the bodies of species of Sarcocystis.

Barcocystis (sar-ko-sis'tis) [Gr. σάρξ flesh + κύστις bladder]. A genus of the Sarcosporidia. S. bertram'i is said to have been found in man. S. blanchar'di is found in cattle. S. hue'ti is found in the seal. S. kor'tei is found in monkeys. S. mischeria'na is found in the pig. S. muco'sa is found in the kangaroo and perhaps in man. S. mu'ris is found in rats and perhaps in man. S. tenel'la is found in sheep and cattle and in man. S. tenel'la bu'bali is found in the meat of Indian buffaloes (Bu'balus buf'felus).

sarcocyte (sar'ko-sit) [Gr. $\sigma \alpha \rho \xi$ flesh $+ \kappa \nu \tau \sigma \sigma$ cell]. The middle layer of the ectoplasm of a protozoan lying between the epicyte and the myocyte.

sarcode (sar'kōd) [Gr. $\sigma \dot{\alpha} \rho \xi$ flesh + $\epsilon l \delta \sigma$ form]. The protoplasm of animal cells.

Sarcodina (sar-ko-di'nah) [Gr. σαρκώδης flesh-like]. The lowest class of protozoa in which the body protoplasm is naked, locomotion and ingestion of blood being accomplished by pseudopodia. It includes Amoche, Foraminifera, Heliozoa, and Radiolaria.

sarco-enchondroma (sar''ko-en-kon-dro'mah).
Sarcoma combined with enchondroma.

sarcogenic (sar"ko-jen'ik) [Gr. σάρξ flesh + γεννῶν to produce]. Forming flesh.

sarcoglia (sar-kog'le-ah) [Gr. $\sigma \acute{a} \rho \not \xi$ flesh $+ \gamma \lambda \iota a$ glue]. The substance which composes the eminences of Doyen at the points of entrance of nerves into muscle-fibers.

sarcoid (sar'koid) [Gr. σάρξ flesh + είδος form].

1. Resembling flesh; fleshy. 2. A sarcoma-like tumor. 8. of Boeck, multiple benign sarcoid.

Darier-Roussy s., a type of multiple benign sarcoid, characterized by the large size of its nodules and its subcutaneous location. multiple benign s., a condition marked by the presence of nodules on the skin, caused by proliferation of connective tissue surrounding the blood-vessels; called also sarcoid of Boeck and muliary lupoud.

sarcolactate (sar-ko-lak'tāt). Any salt of sarcolactic acid.

sarcolactic acid (sar-ko-lak'tik). See acid.

sarcolemma (sar-ko-lem'ah) [Gr. σάρξ flesh + λέμμα husk]. The delicate elastic sheath which invests every striated muscle-fiber. See muscle

Sarcolemmic, sarcolemmous (sar-ko-lem'ik, sar-ko-lem'us). Pertaining to or of the nature of sarcolemma.

sarcology (sar-kol'o-je) [Gr. σάρξ flesh + λόγος treatise]. That branch of anatomy which treats of the soft tissues of the body.

sarcolysis (sar-kol'is-is) [see sarcolyte]. Disintegration of the soft tissues; disintegration of flesh.

sarcolyte (sar'ko-lit) [Gr. σάρξ flesh + λύειν to dissolve]. A cell concerned in the disintegration of the soft tissues.

sarcolytic (sar-ko-lit'ik). Disintegrating flesh

sarcoma (sar-ko'mah), pl. sarco'mata [Gr. σάρξ, σαρκός flesh + -ωμα tumor]. A tumor made up of a substance like the embryonic connective tissue; tissue composed of closely packed cells embedded in a fibrillar or homogeneous substance. Sarcomata are often highly malignant. See also chondrosarcoma, fibrosarcoma, lymphomelanosarcoma, myxosarcoma, sarcoma, etc. Abernethy's 8., a variety of fatty tumor found principally on the trunk. adipose 8., one which contains a copious element of fat. alveolar s, a variety having a reticulated fibrous stroma inclosing groups of sarcoma cells, which resemble epithelial cells and are inclosed in alveoli walled with connective tissue. angiolithic s. Same as psammoma. botryoid s., a grape-like form occurring within the cervix uteri. chicken s., a malignant spindle-cell growth which can be transmitted to but one strain of fowl and is caused by a filtrable virus. chloromatous s., a round-cell sarcoma of the periosteum of the skull, having a greenish color. Same as chloroma. cylindromatous s., a sarcoma whose substance is traversed by cylinders of myxomatous tissue. deciduocellular s., malignant deciduoma of the uterus. See syncytioma malignum. encephaloid s. Same as round-cell s. fasciculated s., a spindle-cell sar-coma. giant-cell s., a variety named from its containing large multinucleated cells, or myeloplaxes. infective s., a growth in the dog, of uncertain nature, and attributed to infection. leukocytic s., leukemia. lymphatic s., lymphosarcoma. mammary s., a sarcoma having the appearance and texture of mammary tissue. medullary s., a soft, bleeding, fungous sar-coma; fungus hæmatodes. melanotic s., a variety whose substance is pigmented with

melanin. mixed-cell s. Same as polymorphous s. myelogenic s., a sarcoma involving the bone-marrow. myeloid s., a variety containing both giant-cells and spindle-cells. netcell s., a variety of myxosarcoma. oat-cell s., oat-shaped-cell s., a sarcoma in which the cells are bluntly elongated and contain long oval nuclei. osteogenic s., a general term for tumors occurring in bone and arising from bone cells of osteogenic tissue. osteoid s., a sarcoma in which bony tissue has developed. parosteal s., a saicoma situated close to the outer surface of a bone. polymorphous s., a sarcoma containing cells of several varieties. retroperitoneal s., sarcoma situated behind the peritoneum. round-cell s., encephaloid or medullary cancer: a sarcoma with large or small cells resembling leukocytes. Rous s., a peculiar sarcoma-like growth found in some fowls. From it can be obtained a filtrable virus which on inoculation into other fowls reproduces similar growths. serocystic s., a proliferous cyst with intracystic growths spindle-cell s., a form with spindle-shaped cells; a recurrent fibroid or fibroplastic tumor. withering s., mycosis fungoides.

sarcomatoid (sar-ko'mat-oid). Resembling sarcoma.

sarcomatosis (sar"ko-mat-o'sis). A condition characterized by the formation of sarcomata.
s. cu'tis, the development of sarcomatous growths on the skin. general s., the occurrence of sarcomata in several parts of the body at the same time.

sarcomatous (sar-ko'mat-us). Pertaining to or of the nature of sarcoma.

sarcomelanin (sar-ko-mel'an-in) [Gr. σάρξ flesh + μέλας black]. The black pigment of melanosar-coma.

sarcomere (sar'ko-mēr) [Gr. σάρξ flesh + μέρος part]. Any one of the segments into which the lines or membranes of Krause are supposed to divide a muscular fibrilla.

sarcomphalocele (sar-kom-fal'o-sēl)[Gr. σάρξ flesh + ὁμφαλός navel + κήλη tumor]. A fleshy tumor of the umbilicus.

sarcomyces (sar-ko-mi'sēz) [Gr. σάρξ flesh + μύκης fungus]. A fleshy fungus growth.

Sarcophaga (sar-kof'ag-ah) [Gr. σάρξ flesh + φαγεῖν to eat]. A genus of flies of the family Muscidæ. The larvæ are sometimes accidental parasites on man. S. carna'ria is widely distributed in Europe. S. commu'nis is widely distributed in the United States. S. chrysos'toma is

Sarcophaga carnaria.

found in tropical America. S. magnif'ica is found in Russia.

sarcoplasm (sar'ko-plazm)[Gr. σάρξ flesh + πλάσμα plasm]. The interfibrillary matter of the striated muscles; the substance in which the fibrillæ of the muscle-fiber are embedded

sarcoplasmic (sar-ko-plaz'mik). Composed of or containing sarcoplasm.

sarcoplast (sar'ko-plast) [Gr. σάρξ flesh + πλαστός formed]. An interfibrillary cell of a muscle, itself capable of being transformed into a muscle.

sarcopoletic (sar"ko-poi-et'ik) [Gr. σάρξ flesh + ποιείν to make]. Producing flesh or muscle.

Sarcopsylla (sar-ko-sil'ah). See chigger.

Sarcoptes (sar-kop'tēz) [Gr. σάρξ flesh + κόπτειν to cut]. A genus of acarids, including S. scabie'i, or the itch-mite which produces scabies in man. See scabies. Varieties of S. scabie'i cause mange of swine, horses, and dogs.

sarcosepsis (sar-ko-sep'sis) [Gr. σάρξ flesh + sepsis]. Sepsis due to the presence of bacteria in the tissues. sarcosin (sar'ko-sin). Methyl-glycocoll, a crystallizable substance, CH₂.NH.CH₂.COOH, from decomposing creatin and caffein.

sarcosis (sar-ko'sis) [Gr. σάρξ flesh]. 1. The presence of multiple fleshy tumors. 2. Abnormal increase of flesh.

sarcosome (sar'ko-sōm) [Gr. σάρξ flesh + σῶμα body]. The darker and contractile part of a muscle fibril.

Sarcosporidia (sar''ko-spo-rid'e-ah) [Gr. σάρξ flesh + sporidia]. An order of sporozoan parasites found in the muscles of warm-blooded animals and producing anemia and cachexia. See Sarcocystis.

sarcosporidiosis (sar"ko-spo-rid-e-o'sis). The condition of being infected with Sarcosporidia.

sarcostosis (sar-kos-to'sis) [Gr. σάρξ flesh + όστεον bone]. Ossification of the fleshy tissues.

sarcostyle (sar'ko-stil) [Gr. σάρξ flesh + στῦλος column]. Any one of the primitive fibrillæ of an elementary muscle-fiber: a muscle column.

sarcotherapeutics (sar'ko-ther-ap-u'tiks) [Gr. σάρξ flesh + therapeutics]. Treatment of disease by the use of animal extracts.

sarcotherapy (sar-ko-ther'ap-e). Sarcotherapeu-

sarcotic (sar-kot'ik) [Gr. σαρκωτικόs]. Promoting the growth of flesh.

sarcotome (sar'ko-tōm) [Gr. σάρξ flesh + τέμνειν to cut] A kind of écraseur worked by a spring.

sarcous (sar'kus) [Gr. σάρξ, σαρκός flesh]. Pertaining to flesh or to muscular tissues.

sardonic (sar-don'ik) [L sardon'icus; Gr. Σαρδονικός Sardinian]. Noting a kind of spasmodic or tetanic grin or involuntary smile, the ri'sus sardon'icus: so called from a plant of Sardinia, probably a Ranun'culus, or crowfoot, which was believed to produce it.

sarkin (sar'kin). Same as hypoxanthin.

Sarothamnus (sa-ro-tham'nus) [Gr. σάρον broom + θάμνος shrub]. A genus of leguminous European shrubs. S. scopa'rius is called broom. See Scoparius.

Sarracenia (sar-as-e'ne-ah) A genus of polypetalous plants, known as sidesaddle-flower and pitcher-plant, type of the order Sarraceniaceæ. S purpu'rea, the commonest of the pitcher-plants of North America, is vaunted as a cure for small-pox: also its homeopathic preparation. The secretion of the pitcher of this plant is said to contain digestant and anesthetic ferments. It is a stimulant diuretic and aperient. S. fla'va, a species known as trumpetleaf and huntsman's-horn, is an effective remedy for diarrhea. Dose of fluidextract of rhizome, 5-15 min. (0.333-1 c.c.)

sarsa (sar'sah), gen. sar'sæ [L.; Sp. sarça briar]. Same as sarsaparilla.

sarsaparilla (sar"sap-ar-il'ah) [L.; Sp. "briar vine"]. The root of Smi'lax officina'lis, S. mexica'na, S. med'ica, and other species of tropical America. It contains the glucosid parillin, and is alterative and diuretic. It is employed, often in connection with iodids and mercurials, in late syphilis and chronic rheumatism, and is in high popular esteem as a tonic and blood purifier. Dose of fluidextract, \(\frac{1}{2}\top1\) fl.dr. (2-4 c.c.); of compound fluidextract, \(\frac{1}{2}\top1\) fl.dr. (2-4 c.c.); of decoction, 4-15 fl.oz. (118-444 c.c.); of syrup, 1-4 fl.dr. (4-16 c.c.).

sartian (sar'shan) [named for the Sarts, a people of Central Asia). Noting an epidemic skin disease of Central Asia, characterized by facial nodules which become converted into scabby ulcers: probably furunculus orientalis.

sartorius (sar-to're-us) [L. from sar'tor tailor]. See muscles, table of.

Sassafras (sas'af-ras) [L.]. A genus of lauraceous trees. The root-bark of S. variifo'lia, a tree of North America, is aromatic, stimulant, diaphoretic, and carminative. It is somewhat employed in the treatment of syphilis and skin diseases. The volatile oil contains safrene and safrol. It is an antinarcotic and carminative, but is chiefly used as a flavoring agent. Dose of fluidextract, 30-60 min. (2-4 c.c.); of volatile oil, 1-5 min. (0.066-0.333 c.c.). The pith of the stems of sassafras (s. medul'la) affords a mucilage (mucila'go sas'safras medul'læ) which is used as a demulcent in bronchial and gastric affections, and as an application in eye diseases.

sassy-bark (sas'e). The poisonous bark of Erythrophla'um guineen'se. See Erythrophlaum.

sat. Abbreviation for saturated.

satamul (sah'tah-mool). The Aspar'agus sarmento'sus, a medicinal plant of India.

satellite (sat'el-īt) [L. satel'les companion]. 1. A vein that closely accompanies an artery, such as the brachial. 2. A minor, or attendant, lesion situated near a larger one.

Accumulation of free **satellitosis** (sat-el-i-to'sis). nuclei about the ganglion-cells of the brain-cortex: seen in general paralysis, etc.

satrose (sat'ros). A commercial preparation of oatmeal for use in diabetes.

saturated (sat'u-ra-ted). 1. Having all the chemic affinities satisfied. 2. Unable to hold in solution any more of a given substance

saturation (sat-u-ra'shun) [L. satura'tio]. 1. The act of saturating or condition of being saturated. 2. An effervescing draft or potion.

saturnine (sat'ur-nîn) [L. saturni'nus; satur'nus lead]. Pertaining to or produced by lead.

saturnism (sat'ur-nizm) [L. satur'nus lead]. Chronic lead-poisoning; plumbism.

satyria (sat-ir'e-ah). A proprietary tonic for the genito-urinary system.

satyriasis (sat-ir-i'a-sis) [Gr. σάτυρος satyr]. cessive venereal impulse in the male.

satyromania (sat"ir-o-ma'ne-ah) [Gr. satyr + µavia madness]. Same as satyriasis.

saucer, auditory. A saucer-shaped fold of the embryonic ectoderm which develops into the otocvst.

Sauerbruch's cabinet, prosthesis (sow'erbrooks) [Ferdinand Sauerbruch, surgeon in Greifswald, born 1875]. See under cabinet and prosthesis.

sauerin (zow'er-in). A proprietary preparation of a pure active culture of Massol's bacillus.

Saundby's test (sawnd'bez) [Robert Saundby, English physician, 1849–1918]. See under tests.

saunders, red (sawn'derz). See sandalwood.

Saunders's disease, sign (sawn'derz) [Edward Watt Saunders, physician in St. Louis, born 1854]. See disease and sign

sauriasis (saw-ri'as-is). Sauriosis.

sauriderma (saw-rid-er'mah) [Gr. σαῦρος lizard + δέρμα skin]. Ichthyosis hystrix.

sauridon (saw'rid-on) [Gr. σαῦρος lizard]. infectant substance distilled from fossil shells.

sauriosis (saw-re-o'sis) [Gr. σαῦρος lizard]. Ichthyosis sebacea cornea; Darier's disease.

sauroid (saw'roid) [Gr. σαῦρος lizard + είδος form]. Resembling a reptile. s. cell or stage. See normoblast.

saurol (saw'rol). A proprietary ammonium sul-phur substitute for ichthyol derived from fossil fauna in the chalk layers of Trefontane, near Meriac, Switzerland.

sausage, sigmoid (saw'saj). See sigmoid roll, under roll.

sausage-poisoning (saw'saj). See allantiasis and botulism.

sausarism (saw'sar-izm). A dry or paralyzed condition of the tongue.

Saussure's hygrometer (so-sūrz) [Horace Bénédict de Saussure, Swiss physicist, 1740-1779]. See hygrometer.

Saussu'rea lap'pa. A plant of India. The essential oil is antiseptic and disinfectant. powdered root (kuth root) is expectorant and is used in asthma.

Savill's disease (sa'vilz) [Thomas Dixon Savill, physician in London, 1856-1910]. See disease.

Savin (sav'in) [L. sabi'na]. The evergreen shrub, Junip'erus sabi'na. The leaves and tops afford an acrid volatile oil, which is a poisonous stimulant, emmenagogue, and abortifacient. Its use in producing abortions is extremely dangerous. It is also given in dysmenorrhea, amenorrhea, gout, and rheumatism, and is used locally as an application to ulcers, condylomata, and carious teeth. Dose of fluidextract, 5-15 min. (0.333-1 c.c.); of tincture, 20-60 min. (1.333-4 c.c.); of oil, 1-5 min. (0.066-0.333 c.c).

savoline (sav'o-lin). A proprietary cleansing fluid, used also as a medium for lotions and injec-

savonal (sav'o-nal). A soap mixture, used as an ointment-base.

saw (saw). A cutting instrument with a cutting or serrated edge. Adams's s., a small straight saw with a long handle, for osteotomy. amputating s., one for use in performing amputations. Butcher's s., an amputating saw with a blade that can be set at various angles. chain-8., one in which the teeth are set upon links, the saw being moved by pulling upon one or the other handle. **crown-s.**, a form of trephine. **Farabeuf's s.**, a saw the blade of which can be set at any desired angle. **Gigli's wire-s.**, a wire with saw-teeth, used in cranial operations. tions. hemp-s., a hempen cord used in cutting soft tissues. Hey's s., a small saw for enlarging orifices in hones s.-palmetto. See Serenoa. separating s., a saw for separating teeth. Shrady's s., a saw for bone work operated through a fenestrated cannula which has been introduced alongside the bone by a trocar. string-s., the string used in treating esophageal strictures by the "string-method" (q. v.). subcutaneous s. Same as Shrady's s.

saxifrage (saks'if-rāj) [L. saxif'raga; sax'um stone + fran'gere to break]. I. A popular name for various herbs, chiefly those of the genus Saxif'raga, formerly reputed serviceable against urinary calculus; not now employed in scientific medicine. 2. Pumpinel'la saxif'raga, or Burnet saxifrage; an umbelliferous plant of Europe. an aromatic, stomachic, diaphoretic, and diuretic. Dose of fluidextract of root, 15-30 min. (1-2 c.c.).

saxifragrant (saks-if'rag-rant) [L. saxif'ragus]. 1. Dissolving or breaking up calculi. 2. A remedy for calculus.

saxin (sak'sin). A proprietary agent 600 times as sweet as sugar used like saccharin.

saxol (sax'ol). A proprietary liquid paraffin.

saxolin (sak'so-lin). A semisolid preparation of petroleum hydrocarbons resembling vaselin.

Sayre's jacket (sārz) [Lewis Albert Sayre, American surgeon, 1820-1901]. See jacket.

Sb. The symbol of antimony (stibium).

SbCl₃. Antimony trichlorid.

Sb₂O₃. Antimony trisulphid.

8b₂O₅. Antimonic oxid. 8b₄O₆. Antimonious oxid.

Sc. The symbol of scandium.

S. C., s. c. Abbreviation for closure of the semilunar valves.

scab (skab). 1. The crust of a superficial sore. 2. To become covered with a crust or scab. **Crown**5., a cancerous sore around the corners of the hoof
of a horse foot s. Same as sheep s. head s.,
any acariasis of the head, especially the sarcoptic
scab of the head of sheep. sheep s., a disease of sheep caused by the mite Psoroptes communis, which infests the skin at the base of the hairs. A

scab is formed which comes off, bringing the wool along with it. Transkeian s., Veldt sore.

Scables (ska'be-ēz) [L. from scab'ere scratch]. The itch; a contagious skin disease due to the itch-mite, Sarcop'tes scable'i, which bores beneath the skin, forming cuniculi or burrows. The disease is attended with intense itching, together with the eczema caused by scratching Called also psora. Boeck's s., s. crusto'sa, Norwegian itch, a form characterized by crusts and pustules, and said to be due to an acarid parasitic upon wolves. bovine s., a disease of cattle resembling sheep scab s. feri'na, acariasis itch of animals. Norwegian s., radesyge. ovine s., sheep scab. See under scab.

scabiophobia (ska"be-o-fo'be-ah) [scabies + Gr. φόβος fear]. Morbid fear of scabies.

Scabiosa (ska-be-o'sah) [L.]. A genus of dipsaceous plants called *scabious*: various species are popularly regarded as depuratives of the blood.

scabrities (ska-brish'e-ez) [L] A scaly or rough state of the skin. **s. un'guium**, a thickened and distorted condition of the nails.

scala (ska'lah) [L. "staircase"]. Any one of the three passages of the cochlea. s. me'dia, s. of Löwenberg, the cochlear canal, the space between the basilar membrane and Reissner's membrane: it contains the organ of Corti. See car s. tym'pani [B N A], the tympanic canal; the part of the spiral canal below the lamina spirals See car. s. vestib'uli [B N A], the vestibular canal, the part of the spiral canal above the lamina spiralis. See car.

scald (skawld). 1. A burn caused by a hot liquid or a hot, moist vapor. 2. Same as scald-head.

scald-head (skawld-hed'). A popular name for favus, porrigo, or other scaly affection of the scalp.

scale (skāl). 1. [L. squa'ma.] Any thin, plate-like structure, as of epithelial cells, compacted and shed from the skin. 2. [L. sca'la.] Anything marked off at regular intervals.

3. To scrape tartar from the teeth. **absolute s.**, the temperature scale which is based on the absolute zero (minus 273.13° C). **Baumé s.**, a hydrom-(minus 273.13° C). **Baumé s.**, a hydrometer scale for determining the specific gravity of liquids. **Benoist's s.**, a scale for measuring the hardness of x-rays in terms of the thickness of aluminum necessary to reduce the intensity of the rays to that of the same rays that have been passed through a screen of silver 11 mm thick. Bloch's 8., a series of solutions of tincture of benzoin in glycerinated water, employed to determine by comparison of turbidity the amount of albumin precipitated in urine or other fluid by heat. centigrade s., the scale of a centigrade thermometer. Charrière s., a scale for grading the size of urethral sounds and catheters Clark's s. (of the hardness of water). It is based on the number of grains of calcium carbonate per imperial gallon. diaphanometric s., a scale used for measuring the transparency of turbid solutions such as are produced in flocculation tests Dunfermline 8., a scheme for classifying children according to their degree of nutrition. I, superior condition; 2, passable condition; 3, requiring supervision; 4, requiring medical treatment. **Kelvin s.** See absolute s **Sorensen s.**, a scale for hydrogen-ion concentration in which the values are expressed in Ph. **Tallqvist's**, a series of litherarched alers the state of the s of lithographed colors showing the tints of blood of from 10 to 100 per cent. of hemoglobin, and accompanied by a booklet containing sheets of prepared paper. A sheet of the paper is moistened with a drop of blood and the color compared with the scale.

scalene (ska'lēn) [Gr. σκαληνός uneven]. r. Unequally three-sided. 2. Pertaining to one of the scalenus muscles.

scalenus (ska-le'nus) [L.; Gr. σκαληνός uneven]. See muscles, table of.

scaler (ska'ler). An instrument for performing the operation of scaling. curet s., a scaler having two cutting edges approximately parallel to the shank. hoe s., a scaler having a single cutting edge, the blade being turned up at approximately a right angle to the shank.

scaling (ska'ling). Removal of concretions from the visible tooth surface and that part of the surface covered by the marginal gingiva or its equivalent.

scall (skawl). 1. Any scaly, or scabby, disease of the skin. 2. Favus of animals. honeycomb s., an eruption consisting of small ulcers separated by raised edges. milk s., crusta lactea.

scalma (skal'mah). A contagious febrile disease of the horse marked by coughing, difficult breathing, fever, loss of strength, and sometimes by pleuritis.

scalp (skalp). That part of the integument of the head which is hairy in both sexes.

scalpel (skal'pel) [L. scalpel'lum]. A small, straight knife, usually with a convex edge.

scalpriform (skal'prif-orm). Shaped like a chisel. scalprum (skal'prum) [L. "knife"]. A raspa-

scaly (ska'le) [L. squamo'sus]. 1. Scale-like, 2. Characterized by scales.

scaly leg (ska'le leg) A disease of domestic fowls marked by heavy scales and incrustations on the legs, produced by a burrowing mite, *Cnemidocoptes mulans*.

scammonia (skam-o'ne-ah). Scammony.

tory; also a strong knife.

scammonin (skam'o-nin). A glucosid, C₃₄H₅₆O₁₆₅ found in scammony.

Scammony (skam'o-ne) [L. scammo'nium, scammo'nia]. The plant Convol'vulus scammo'nia, of Asia Minor and Syria. The root (Scammo'niæ ra'-dix, U.S.P') affords a gummy and resinous exudate (scammo'niæ res'ina, scammo'nium), which is an anthelmintic and hydragogue cathartic. It contains scammonium, and is employed chiefly, in conjunction with other purgatives, for constipation and dropsy. Dose of root, 3-10 gr. (0.2-0666 gm.); of resin, 2-10 gr. (0.133-0666 gm.); of mixture, I fl.oz. (30 c.); of compound powder (which contains jalap also), 15 gr. (1 gm.) Mexican 8. is very similar to the true scammony.

scandium (skan'de-um). A very rare metallic element, symbol, Sc, atomic weight, 45 1.

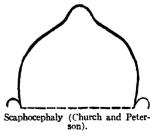

scanning (skan'ing). Noting a manner of utterance characterized by somewhat regularly recurrent pauses. See speech.

Scanzoni's operation (skan-tso'nez) [Friedrich Wilhelm Scanzoni, German obstetrician, 1821-1891]. See under operation.

scapha (ska'fah) [L. "a skiff"]. The scaphoid fossa.

scaphocephalic (ska"fo-sef-al'ik) [Gr $\sigma\kappa\dot{\alpha}\varphi\eta$ boat $+\kappa\epsilon\varphi\alpha\lambda\dot{\eta}$ head]. Having a keeled or boat-shaped

scaphocephalism, scaphocephaly (skafo-sef'-al-izm, ska-fo-sef'al-e). The condition of being scaphocephalic.

scaphocephalous (ska-fo-sef'al-us). Same as sca-

phocephalic.

scaphohydorcephalus (ska"fo-hi-dro-sef'al-us).

Hydrocephalus in which the head assumes a boat-like shape.

scaphochydrocephaly (ska"fo-hi-dro-sef'al-e). A scaphocephalic form of the head due to hydrocephalus.

scaphoid (ska'foid) [L. scaphoid'es; Gr. σκάφη skiff + είδος form]. 1. Shaped like a boat; navic-2. The os scaphoides: the outer bone of the first row of the carpal bones. 3. A bone on the inner side of the tarsus, before the astragalus and behind the cuneiform bone.

scaphoiditis (skaf-oi-di'tis). Inflammation of the scaphoid bone. tarsal s. See Kohler's disease, under disease.

scapula (skap'u-lah) [L.]. The shoulder-blade; the flat, triangular bone in the back of the shoulder. scaphoid s., a scapula in which the vertebral border is more or less concave. s. ala'ta. See winged s. winged s., a scapula having a prominent vertebral border. Called also s. alata.

scapulalgia (skap-u-lal'je-ah) [scapula + Gr. άλγος pain]. Pain in the scapular region.

scapular (skap'u-lar). Of or pertaining to the scapula.

scapulary (skap'u-la re). A shoulder bandage, like a pair of suspenders or braces, to hold in place a body-bandage or girdle.

scapulectomy (skap-u-lek'to-me) [scapula + Gr. ἐκτομή excision]. The surgical removal of the scapula

scapuloclavicular (skap"u-lo-klav-ik'u-lar). Pertaining to the scapula and the clavicle.

scapulodynia (skap"u-lo-din'e-ah) [scapula + Gr. οδύνη pain]. Pain in the region of the shoulder.

scapulohumeral (skap"u-lo-hu'mer-al). Pertaining to the scapula and the humerus.

scapulopexy (skap'u-lo-pek-se) [scapula + Gr. πηξις fixation]. The operation of fixing the scapula to the ribs; done in some cases of myopathy.

scapulothoracic (skap"u-lo-tho-ras"ik). Pertaining to the scapula and the thorax.

scapus (ska'pus) [L. "shaft"]. The shaft of the hair.

scar (skar) [Gr. ἐσχάρα]. Same as cicatrix. ling s's, round, superficial cicatrices left behind by an eruption of rupia.

scarf, Mayor's. A triangular bandage for immobilizing the upper limbs, and consisting of a square of stout cotton material 40 inches across, folded obliquely, 40 inches of 3-inch bandage, a plug of carded cotton 6 inches long and 4 inches thick, and dozen stout

safety-pins.

scarf-skin (skarf'skin). The cuticle or epidermis. See skin.

scarification (skar"if-ik-a'shun) scarifica'tio]. The making of a set of small, superficial incisions or punctures in the skin.

scarificator (skar'if-ik-a-tor). An instrument for making a scarification.

Scarificator (DaCosta).

scarlatin (skar'lat-in). An antiscarlatinal serum extracted from the blood of infected animals. Called also Morpinami's scarlatina toxin.

scarlatina (skar-lat-i'nah) [L. "scarlet"]. An acute contagious and exanthematous fever with a scarlet eruption, or rash; scarlet fever (Syden-ham, 1675). It begins with chills, vomiting, and sore throat, followed by pyrexia and rapid pulse. After about twenty-four hours the eruption appears as a rash of thickly set red spots, which begin to fade in two or three days, and is often gone by the end of the first week. The fever departs in favorable cases with the disappearance of the eruption, which is attended by a desquamation of the skin in fine, branny scales

and in large flakes. Recovery may often be looked for in two or three weeks, but is seldom complete in less than six weeks, and it is during this stage that kidney complications are liable to occur, chiefly as a result of exposure to cold or wet. The nephritis is liable to lead to dropsy and uremia. Throat, ear, and eye complications are not infrequent, and often prove chronic. Scarlatina attacks principally children and youths, but may affect adults also. Second attacks are extremely rare. See exanthemata, table of. 8. angino'sa, a decrous form with marked throat symptoms. symptoms. s. hæmorrha'gica, scarlatina in which there is extravasation of the blood into the skin and mucous membranes. s. la'tens, that in which no rash or fever is observed, but which is manifested in kidney disease or some other resultant complication. s. malig'na, a variety with severe symptoms and great prostration, often fatal; also a form in which the rash disappears suddenly and prematurely. s. rheumat'ica, dengue. s. sim'plex, a mild form attended with but little soreness of the throat.

scarlatinal (skar-lat'in-al). Pertaining to or due to scarlatina.

scarlatinella (skar-lat-in-el'ah). Mild apyretic scarlet fever.

scarlatiniform, scarlatinoid (skar-lat-in'if-orm, skar-lat'in-oid). Resembling scarlatina. metadiphtheric s., an eruption with symptoms re-sembling those of scarlet fever, sometimes scen in convalescence from diphtheria.

scarlet (skahr'let) A bright red tinged with orange or yellow. Biebrich s., water-soluble, an azo dye used as a plasma stain, C₆H₄(SO₂ ONa).N:N.- $C_6H_2(SO_2.ONa).N\ N.C_{10}H_3\ OH$ s. fever. See scarlatina. s. G. Same as sudan III. s. J. Jg. Same as bluish cosin. s. R. s.-red. See under red.

Scarpa's fascia, foramen, membrane, shoe, triangle (skar'pahz) [Antonio Scarpa, Italian anatomist and surgeon, 1747-1832]. See fascia, foramen, membrane, shoe, triangle.

Scat. Abbreviation for L. scat'ula, a box.

scatacratia (skat-ak-ra'she-ah) [Gr. σκώρ dung + άκρατία inability]. Incontinence of the feces

scatemia (ska-te'me-ah) [Gr. σκῶρ dung + αίμα blood]. Intestinal toxemia.

scatol (ska'tol). See skatol.

scatologic (ska-tol-oj'ik). Pertaining to fecal matter.

scatology (ska-tol'o-je) [Gr. σκωρ dung + λόγοs treatise]. The study of the feces.

scatophagy (ska-tof'aj-e) [Gr. σκῶρ dung + φαγείν to eat]. The eating of excrement.

scatoscopy (ska-tos'ko-pe) [Gr. σκῶρ dung + σκοπεῖν to view]. Inspection of the feces.

scatoxyl (ska-tok'sil). The radical, C₀H₈ON. scatula (skat'u-lah) [L. for "parallelepiped"].

An oblong paper box for powders or pills.

scavenger-cell (skav'en-jer-). See cell.

Sc. D. A. Right scapulo-anterior position of the fetus.

Sc. D. P. Right scapuloposterior position of the fetus.

Sc. L. A. Left scapulo-anterior position of the fetus. Sc. L. P. Left scapuloposterior position of the fetus. scelalgia (ske-lal'je-ah) [Gr. σκελίς leg + ἄλγος pain]. Pain in the leg.

Sceleth treatment (ske'leth) [Charles E. Sceleth, Chicago physician]. See under treatment.

scelotyrbe (sel-o-ter'be) [Gr. $\sigma \kappa \epsilon \lambda ls$ leg + $\tau l \rho \beta \eta$ disorder]. Spastic paralysis of the legs.

Schacher's ganglion (shah'kerz) [Polycarp Gott-lieb Schacher, German physician, 1674-1737]. The ciliary ganglion.

Schachowa's tube (shah'ko-vahz) [Seraphina Schachowa, Russian histologist in Bern 19th centuryl. See under tube.

Schäfer's method (sha'ferz) [Edward Albert Schäfer, English physiologist, born 1850]. See under respiration, artificial.

Schäffer's reflex (sha'ferz) [Max Schäffer, contemporary German neurologist]. See reflex.

Schamberg's disease (sham'bergz) [Jay Frank Schamberg, Philadelphia dermatologist, born 1870] See under disease.

Schanz's syndrome (shahnts') [Alfred Schanz, contemporary German physician]. See syndrome.

scharlach r (shar'lak). Same as scarlet red. See under red.

Schaudinn's bacillus (shaw-dinz') [Fritz Schaudinn, German bacteriologist, 1871-1906]. The Spirochæta pallida.

Schede's method (sha'dēz) [Max Schede, surgeon in Bonn, 1844-1902]. A method of treating necrosis of bone by scraping away all dead bone and diseased tissue, permitting the cavity to fill with a blood-clot, and keeping the latter moist and aseptic by a cover of gauze and rubber tissue.

Scheele's green (sha'lez or shelz) [Karl William Scheele, Swedish chemist, 1742-1786]. Copper arsenite.

Scheiner's experiment (shi'nerz) [Christoph Scheiner, physicist, 1575-1650]. The experiment of looking at an object through two pin-holes close together in a card. If the object is in focus, only one image is observed; if not, two or more images are seen.

schema (ske'mah) [Gr. $\sigma \chi \hat{\eta} \mu \alpha$ outline]. A plan, outline, or arrangement; in homeopathy, the arrangement of the drug symptoms in anatomic order. Hamberger's s., the external intercostal and the intercartalaginous muscles are inspiratory muscles, the internal intercostal muscles are expiratory

schematic (ske-mat'ik) [Gr. σχηματικός resembling]. Serving as a diagram or model. See eye.

Schenck's disease (shenks) [Benjamin R. Schenck, American surgeon, born 1872]. Sporotrichosis.

Schenk's theory (shenks) [physiologist in Vienna, 1840-1904]. See under theory.

Scherer's test (sha'rerz) [Johann Joseph von Scherer, German physician, 1814–1869]. See un-

scherlievo (skār-lya'vo). A contagious disorder formerly prevalent in Illyria and Dalmatia: supposed to have been syphilis.

Scheurlen's bacillus (shor'lenz). See bacillus.

Schiassi's operation, solution (she-as'ez) [B. Schiassi, contemporary Italian surgeon]. See under operation and solution.

Schick's sign, test (sheeks') [Béla Schick, Austrian pediatrist in New York]. See under sign and tests.

Schiff's biliary cycle (shifs) [Moritz Schiff, German physiologist, 1823-1896]. See under cycle.

Schiff's test (shifs) [Hugo Schiff, German chemist in Florence, 1834-1915]. See under tests.

Schimmelbusch's disease (shim'el-boosh-ez) [Curt Schimmelbusch, German surgeon, 1860-1805]. See disease.

schindylesis (skin-dil-c'sis) [Gr. σχινδύλησις a splintering]. A synarthrosis in which one bone is received into a slit in another, as in the articulation of the perpendicular plate of the ethmoid bone with the vomer.

Schinus (ski'nus) [Gr. σχίνος mastic]. A genus of anacardiaceous trees of warm regions. S. mol'le, of tropical America (pepper-tree), affords a kind of mastic, and is a mild purgative and aromatic.

Schiötz's tonometer (she-ets') [Hjalmar Schiotz, Norwegian physician, born 1850]. See tonometer.

schistasis (skis'tas-is) [Gr. σχίστος split]. A splitting; specifically, a congenital defect consisting of a split condition of the body, as schistocormia, schistomelia, schistosomia.

schistocelia (skis-to-se'le-ah) [Gr. σχιστός split + κοιλία belly]. Congenital fissure of the abdomen.

schistocephalus (skis-to-sef'al-us) [Gr. σχιστός cloven + κεφαλή head]. A fetus born with a cleft head.

schistocœlia (skis-to-se'le-ah). Schistocelia.

schistocormia (skis-to-kor'me-ah). A congenitally cleft condition of the trunk.

schistocormus (skis-to-kor'mus) [Gr. σχιστός split + κορμύς trunk]. A monster-fetus in which the trunk is cleft.

schistocyte (skis'to-sīt) [Gr. σχιστός cleft + κύτος cell]. 1. A blood-corpuscle undergoing segmentation. 2. A product of the division of a red blood-corpuscle in malaria. parasitiferous s., blood-corpuscle in malaria. parasitiferous s., that half of a divided red blood-corpuscle which contains a parasite.

schistocytosis (skis"to-si-to'sis) [Gr. $\sigma \chi \iota \sigma \tau \delta s$ cleft $+ \kappa \iota \nu \tau \sigma s$ cell]. The accumulation of schistocytes + κύτος cell]. in the blood.

schistoglossia (skis-to-glos'e-ah) [Gr. $\sigma \chi \iota \sigma \tau \delta s$ cleft $+ \gamma \lambda \hat{\omega} \sigma \sigma a$ tongue]. Fissure of the tongue.

schistomelia (skis-to-me'le-ah). A congenitally cleft condition of a limb.

schistomelus (skis-tom'e-lus) [Gr. σχιστός split + μέλος limb]. A monster with a cleft limb.

schistometer (skis-tom'et-er) [Gr. σχιστός cleft + μέτρον measure]. An instrument for measuring the aperture between the vocal cords.

schistoprosopia (skis"to-pros-o'pe-ah) [Gr. σχισ- τ 6s split + $\pi \rho \delta \sigma \omega \pi \rho \nu$ face]. A fissure of the face due to defective development.

schistoprosopus (skis-to-pros'o-pus) [Gr. σχιστός cleft $+ \pi \rho \delta \sigma \omega \pi \sigma \nu$ face]. A monster-fetus born with a cleft face.

schistorachis (skis-tor'a-kis) [Gr. σχιστός cleft + baxıs spine]. Same as spina bifida.

Schistosoma (skis-to-so'mah) [Gr. σχιστός cleft + σωμα body]. A genus of trematode parasites or flukes; the blood-flukes. S. hæmato'bium, a common parasite of tropical countries, especially Egypt, occurring in the natives, especially boys from six to ten years of age. It is found in dilatation of the veins, especially the cystic vein, producing irritability of the bladder, hematuria, and dysentery. The parasites enter the body by the alimentary tract, especi-

ally by drinking water, the invertebrate host being a small snail, Isidora (Bullinus) contorta and proba-bly other species. Called also Distoma hæmatobium and Bilharzia hæmatobia. S. japon'ica, the Asiatic blood-fluke, a species found in Japan, China, and the Philippines, causing the katayama disease. The transmitting host is the small mollusk, Blanfor'-dia nosoph'ora, which enters the body of man through the drinkingthrough the armany to the the infection point to the liver and the spleen, consisting of ascites, cachexia, bronchial trouble, and urticarial spots (urticarial

bium, male and female (×6) (Looss).

fever). S. manso'ni, this species is very similar to S. hæmalobium except that (1) it is found in the feces instead of the urine, (2) the egg has a spur, and (3) its invertebrate host is the fresh-water snail, Plan-orbis. S. pathlocop'ticum, a form pathogenic for mice. The invertebrate host is the snail (Limnæa).

schistosomia (skis-to-so'me-ah). Congenital fissure of the abdomen.

Schistosoma hæmato

- schistosomiasis (skis-to-so-mi'as-is). Infection with Schistosoma. Asiatic s., infestation with Schistosoma japonicum; katayama disease. intestinal s., infestation with Schistosoma mansoni, which produces inflammation of the liver and intestines. urinary s., infestation with Schistosoma hamatobium, causing cystitis and hematuria.
- schistosomus (skis-to-so'mus) [Gr. σχιστός cleft + σῶμα body]. A monster-fetus with a fissured abdomen. The lower limbs are usually rudimentary or wanting.
- **schistosternia** (skis-to-ster'ne-ah) [Gr. σχιστός cleft + sternum]. Schistothorax.
- schistothorax (skis-to-tho'raks) [Gr. σχιστός cleft + θώραξ chest]. Congenital fissure of the chest or sternum.
- schistotrachelus (skis-to-trak-e'lus) [Gr. σχιστός split + τράχηλος neck]. A monster-fetus with fissure of the neck.
- schizaxon (ski-zaks'ōn) [Gr. σχίζειν to divide + ἄξων axis]. An axon which is divided into two equal, or nearly equal, branches.
- schizocyte (skiz'o-sit). Schistocyte.
- **schizocytosis** (skiz-o-si-to'sis) [Gr. σχίζειν to divide + κύτος cell]. Schistocytosis.
- schizogenesis (skiz-o-jen'es-is) [Gr. σχίζειν to split + γένεσις production]. Reproduction by sporulation without fertilization; asexual sporulation. Cf. sporogony.
- **schizogenous** (skiz-oj'en-us). Reproducing by schizogenesis.
- schizogony (skiz-og'o-ne). Same as schizogenesis.
- **schizomycete** (ski"zo-mi-sēt') [Gr. σχίζειν to divide + μύκης fungus]. Any organism or species belonging to the Schizomyce'tes.
- Schizomycetes (ski-zo-mi-se'tēz), pl. [Gr. σχιζός cleft + μόκης fungus]. A class of vegetable microorganisms, the bacteria or fission-fungi The class includes Myxobacteriales, or slime-mold bacteria; the Eubacteriales, or true bacteria; the Thiobacteriales, or sulphur bacteria: Actinomyctales, or thread bacteria; and Spirochatales, or spiral organisms.
- schizomycetic (ski"zo-mi-set'ik). Due to the presence of bacteria.
- schizomycosis (ski"zo-mi-ko'sis). Any disease due to the presence of schizomycetes.
- schizont (ski'zont) [Gr. σχίζειν to divide]. One of the developmental forms of a protozoan which exhibits alternation of generations. The schizont develops by schizogony, giving rise to isospores which develop without conjugation. The other form is the sporont, which develops by sporogony, giving rise to anisospores which conjugate to form schizonts. Called also monont and agamont.
- schizophrenia (ski-zo-fre'ne-ah) [Gr. σχίζειν to divide + φρήν mind]. Bleuler's term for dementia præcox which, according to his interpretation, represents a cleavage or fissuration of the mental functions.
- schisophrenic (ski-zo-fren'ik). Pertaining to or affected with schizophrenia.
- schizophrenosis (ski-zo-fre-no'sis). Southard's term for any disease of the dementia præcox group.
- Schizosiphon (ski-zo-si'fon). A genus of nematogenous schizomycetes with flagelliform filaments, slender toward the extremity.
- schisothemia (ski-zo-the'me-ah) [Gr. σχίζειν to divide + θέμα theme]. Interruption of an argument by reminiscences; regarded as hysterical by Breuer and Freud.
- schizothemic (ski-zo-the'mik). Marked by schi-zothemia.
- schizotonia (ski-zo-to'ne-ah) [Gr. σχίζειν to divide + τόνος tone]. Division of the influx of tone to the muscles, so that, for instance, the flexor groups of the arm become hypertonic, while in the leg the extensors become hypertonic.
- schizotrichia (ski-zo-trik'e-ah) [Gr. oxijes to

- split $+ \theta \rho l \xi$ hair]. Splitting of the hairs at the ends.
- schizotrypanosis (ski-zo-tri-pan-o'sis). Infection by Schizotrypanum, a condition with symptoms resembling Hodgkin's disease.
- Schizotrypa'num cru'zi. An organism resembling trypanosomes, but which undergoes schizogony in the vertebrate host. It causes an American form of trypanosomiasis, Chagas's disease, which is transmitted by Cimex, Rhodnius, Triatoma, Ornithodorus, and Rhipicephalus. See Chagas's disease, under disease.
- **schizozoïte** (ski-zo-zo'īt) [Gr. σχίζειν to divide + ζφον animal]. Same as merozoite.
- schlammfleber (shlahm'fe-ber) [Ger "slime-fever"]. A disease resembling Weil's disease, which prevailed among young persons who worked in the flooded districts near Breslau in the summer of 1891.
- Schlatter's disease, operation (shlat'erz)
 [K. Schlatter, surgeon in Zurich, born 1864]. See disease and operation.
- Schleich's anesthesia, solution (shliks) [Karl Ludwig Schleich, surgeon in Berlin, born 1850]. Infiltration-anesthesia. See anesthesia, solution.
- Schlemm's canal (shlemz) [Friedrich S. Schlemm, German anatomist, 1795-1858]. See canal. 8's ligaments, two ligamentous bands strengthening the capsule of the shoulder-joint.
- Schlesinger's sign (shla'zing-erz) [Hermann Schlesinger, Austrian physician, born 1868] See sign.
- Schlösser's method or treatment (shles'erz) [Carl Schlosser, German oculist, 1857-1925]. See treatment.
- Schmidel's anastomosis (shme'delz) [Casimin Christoph Schmidel, German anatomist, 1718-1792]. See under anastomosis.
- Schmidt's fibrinoplastic (shmits) [Eduard Oskar Schmidt, German anatomist, 1823–1886] Serum-globulin.
- Schmidt's syndrome (shmits) [Johann Friedrich Moritz Schmidt, German laryngologist, born 1838] See syndrome.
- Schmidt's test (shmits) [Adolf Schmidt, physician in Halle, 1865-1919]. See under tests.
- schmutzdecke (schmoots'dek-uh). The carpetlike layer of bacteria, algae, and other microorganisms which forms on the surface of a slow sand filter and which aids in purifying the water.
- Schneider's carmin (shni'derz) [Franz Coelestin Schneider, German chemist, 1813-1897]. See carmin.
- schneiderian membrane (sni-de're-an) [Conrad Victor Schneider, German physician, 1610-1680] See under membrane.
- Schöler's treatment (sha'lerz) [Heinrich Leopold Scholer, German ophthalmologist, born 1844]. See treatment
- Schönbein's reaction, test (shān'līnz) [Christian Friedrich Schönbein, German chemist, 1799-1868]. See reaction, tests
- Schönlein's disease (shān'līnz) [Johann Lukas Schönlein, German physician, 1793-1864]. See disease.
- Schott's treatment (shots) [Theodore Schott, physician in Nauheim, 1850-1921]. See treatment.
- Schreger's lines (shra'gerz) [Bernhard Gottlob Schreger, German anatomist, 1766-1825]. See under line.
- Schreiber's maneuver (shri'berz) [Julius Schreiber, German physician, born 1848]. See maneuver.
- Schridde's granules, hairs (shrid'ez) [H. Schridde, contemporary German physician]. See under granule and hair.
- Schröder's ring, operation (shra'derz) [Karl Schröder, German gynecologist, 1838-1887]. See ring and operation.

- Schröder's test (shra'ders) [Woldemar von Schröder, German physician, 1850–1898]. See tests.
- scrombrone (skrom'brön). A histone found in mackerel sperm.
- Schrön's bacillus, granule (shrenz) [Otto von Schrön, German pathologist in Naples, 1837–1913]. See bacillus and granule.
- Schroth's treatment (shröts) [Johann Schroth, German physician, 1800-1856]. See under treatment.
- Schrötter's chorea (shret'erz) [Leopold von Schrötter, Viennese laryngologist, 1837-1908]. Chorea of the larynx.
- **Schuchardt's operation** (shoo'kharts). Paravaginal hysterectomy.
- Schüffner's granules (shef'nerz) [Wilhelm Schüffner, contemporary German pathologist]. See under granule.
- **Schüle's sign** (she'lez) [Heinrich Schüle, contemporary German psychiatrist]. See under sign.
- Schüller's method (shil'erz) [Karl Heinrich Anton Ludwig Max Schuller, surgeon in Berlin, 1843-1907]. See under method.
- **Schüller's phenomenon** (shil'erz) [Arthur Schuller, contemporary Austrian neurologist]. See phenomenon.
- Schultze's bundle, cells, tract (shoolt'sez) [Max Johann Schultze, German biologist, 1825-1874]. See bundle, cell, tract.
- Schultze's fold, method (shoolt'sez) [Bernhard Sigismund Schultze, German gynecologist, 1827–1919]. See fold and method.
- Schultze's monochord (shoolt'sez). See monochord.
- Schultze's test (shoolt'sez) [Ernst Schultze, Swiss chemist, 1860-1912]. See under tests.
- Schultze-Chvostek sign. Chvostek's sign.
- Schutz's micrococcus (shitz'ez) [Johann Wilhelm Schutz, German veterinarian, 1839-1920]. Sec micrococcus.
- Schwabach's test (svah'baks) [Dagobert Schwabach, otologist in Berlin, born 1846]. See under tests.
- Schwalbe's corpuscles, fissure, foramen, sheath, space, etc. (shval'bez) [Gustav Schwalbe, German anatomist, 1844-1916]. See corpuscle, fissure, foramen, sheath, space, etc.
- Schwann, sheath of (shwon) [Theodor Schwann, German physiologist, 1810-1882]. The neurilemma of a nerve-fiber. S., white substance of, the myelin of a medullated nerve-fiber.
- Schwartz's method (shvartz) [Charles Edouard Schwartz, French surgeon, born 1852]. Multiple ligation for varicose veins.
- Schwartze's operation (shvart'sez) [Hermann Schwartze, German otologist, 1837-1910]. See operation.
- Schwarz's test (shvarz). 1. [Karl Leonhard Heinrich Schwarz, German chemist, 1824–1890]. See under test. 2. [G. Schwarz, contemporary German physician]. See under tests, 2d def.
- Schwediauer's disease (shva'de-ow-erz) [Francois Xavier Schwediaucr, Austrian physician, 1748-1824]. See under discase.
- schweinerrothlauf (shwi-ner-ot'lowf). Same as rouget du porc (q. v.), or swine erysipelas.
- schweineseuche (shwi"muh-soy'kuh) [Ger.]. Swine plague.
- Schweinfurt green (shwin'foort). Paris green.
- Schweitzer's reagent (shvi'tsers) [Matthias Eduard Schweitzer, German chemist, 1818-1860]. See reagent.
- schwelle (shwel'eh). German for threshold.
- Schweninger's method (shwen'in-gerz) (Ernst Schweninger, German physician, 1850-1024). Reduction of obesity by the restriction of fluids in the diet.

- sciage (se-ahzh') [Fr.]. A sawing movement in massage.
- sciagram, sciagraphy, etc. See skiagram, skiagraphy, etc.
- sciatic (si-at'ik) [L. sciat'icus; Gr. lσχιαδικόs]. Pertaining to the ischium.
- sciatica (si-at'ik-ah) [L.]. A painful inflammation of the sciatic nerve, usually a neuritis. It is attended with paresthesia of the thigh and leg, tenderness along the course of the nerve, and sometimes by wasting of the calf muscles. The pain is constant, but subject to exacerbations. The disease usually attacks persons of middle age.
- scieropia (si-er-o'pe-ah) [Gr. σκιερός shady + ωψ eye]. Visual defect in which objects appear in a shadow.
- scilla (sil'ah). Latin for squill.
- scillain (sil'ah-in). An amorphous and poisonous glucosid from squill: diuretic. Dose, $\frac{1}{60}$ gr. (0.0011 gm.).
- scillaren (sil'ar-en) A glucosid obtained from squill. It is used as an expectorant and a cardiac tonic.
- scillin (sil'in). A yellowish, crystalline glucosid from squill.
- scillipicrin (sil-ip-ik'rin) [Gr. σκίλλα squill + πικρός bitter] A yellow, bitter, and amorphous active
 principle from squill. diuretic. Dose, ¹/₆₀ gr.
 (0.0011 gm.).
- scillitin (sil'it-in). One of the active principles of squill diuretic. Dose, $\frac{1}{65}$ gr (0.001 gm.).
- scillitoxin (sil-it-oks'in) [L scil'la squill + toxin]. A brown, amorphous principle found in squill: a cardiac poison. Diuretic dose, $\frac{1}{10}$ gr. (0.001 gm).
- Scindapsus officina'lis (sin-dap'sus). An araceous Asiatic plant: esteemed in oriental medicine.
- scintillascope (sin-til'as-kōp) [L. scintil'la spark + Gr σκοπεῖν to view]. Same as spinthariscope.
- scintillation (sin-til-a'shun) [L. scintilla'tio]. 1.

 An emission of sparks. 2. A subjective visual sensation, as of seeing sparks.
- scirrhencanthus (skir-en-kan'thus) [Gr. $\sigma\kappa l\dot{\rho}_{l}\dot{\rho}_{0}$ s hard tumor $+\dot{\epsilon}\nu$ in $+\kappa\dot{\alpha}\nu\theta_{0}$ s canthus]. Scirrhus of the lacrimal gland.
- scirrhoblepharoncus (skir'o-blef-ar-ong'kus) [Gr. σκίρρος hard + βλέφαρον eyelid + ὅγκος tumor]. A scirrhous tumor of the eyelid.
- scirrhoid (skir'oid) [Gr. σκίββος scirrhus + είδος form]. Resembling a scirrhus.
- scirrhoma (skir-o'mah) [Gr. σκιβρος hard + -ομα tumor]. A scirrhus. s. caminiano'rum, chimney-sweeper's cancer, or soot-cancer.
- scirrhophthalmia (skir-of-thal'me-ah) [Gr. σκίρρο bard + δφθαλμός eye]. Scirrhus of the eye.
- scirrhosarca (skir-o-sar'kah) [Gr. σκίρμος scirrhus + σάρξ flesh]. Scleroderma, or sclerema neonatorum.
- scirrhous (skir'us) [L. scirrho'sus]. Pertaining to or of the nature of a scirrhus.
- scirrhus (skir'us) [Gr. σκιρρος]. A hard cancer with a marked predominance of connective tissue.
- scissel (siz'el). Small pieces of metal cut from a plate which is being made into the base of a denture.
- scission (sizh'un) [L. scin'dere to cut]. Fission; splitting. In chemistry, the splitting of a molecule into two or more new molecules, particularly the splitting of one carbon from a chain.
- soissiparity (sis-ip-ar'it-e) [L. scin'dere to split + pa'rere to bring forth]. Reproduction by fission.
- scissor-gait (siz'er-gat). See under gait.
- scissor-leg (siz'er-leg). A crossing of the legs from deformity.

- scissors (siz'erz). A cutting instrument with two opposed blades. canalicular s., delicate scissors with one of the blades probe-pointed: used in slitting the lacrimal canal. cannula-s., probe-pointed scissors used in slitting a canal lengthwise. craniotomy-s., strong f-shaped shears for use in opening the fetal head. de Wecker's s., a small scissors for operations on the eyeball, in which the blades are operated by pressure on two springs joined at the end like a pair of tweezers. Jewish s., a cutting instrument used in circumcision: they have a limited use in surgery. Liston's s., scissors for cutting plaster-of-Paris bandages. Smellie's s., short, strong-bladed scissors with external cutting edges: used in craniotomy.
- scissura (sis-su'rah) [L.]. A splitting. s. pilo'-rum, splitting of the hair.
- **sclera** (skle'rah) [L.; Gr. σκληρός hard]. [B N A] The sclerotic coat of the eye. See sclerotica.
- scleradenitis (skle''rad-en-i'tis) [Gr. σκληρός hard + άδήν gland + -ιτις inflammation]. Inflammation and hardening of a gland.
- scleral (skle'ral). Pertaining to the sclera.
- scleratitis (skle-rat-i'tis). See scleritis.
- scleratogenous (skle-rat-oj'en-us). Same as sclerogenous.
- sclerectasia (skle-rek-ta'zhe-ah) [sclera + Gr. ἔκτασις extension]. A bulging out of the sclera.
- **sclerecto-iridectomy** (skle-rek"to-i-rid-ek'to-me). The operation of excision of a portion of the sclera and of the iris for glaucoma. Called also *Lagrange operation*.
- **sclerectome** (skle-rek'tōm). An instrument for performing sclerectomy.
- **sclerectomy** (skle-rek'to-me) [Gr. σκληρός hard + ἐκτομή excision]. τ. Excision of a part of the sclera. 2. Removal of the sclerosed parts of the middle ear after otitis media.
- **scleredema** (skle-re-de'mah). Sclerema neonatorum.
- sclerema (skle-re'mah) [Gr. σκληρός hard]. A hardened or sclerosed state of a tissue, especially of the skin. s. adulto'rum, diffuse symmetric scleroderma. s. neonato'rum, a very fatal disease of early infancy, with coldness, hurdening, and tightness of the skin, especially that of the feet and legs, and depression of the respiration and pulse. It is thought to be due to coagulation or congelation of the fat.
- sclerencephalia, sclerencephaly (skle"ren-sefa'le-ah, skle-ren-sef'al-e) [Gr. σκληρός hard + έγκέφαλος brain]. Sclerosis of the brain.
- sclerenchymatous (skle-ren-kim'at-us). Of the nature of sclerenchyma.
- sclererythrin (skle-rer'ith-rin) [sclerotium + Gr. έρυθρός red]. A red coloring-matter from ergot.
- scleriasis (skle-ri'as-is) [Gr. σκληρίασις]. 1. Same as scleroderma. 2. A hardened state of an eyelid.
- sclerin (skle'rin). Same as rhinosclerin.
- scleriritomy (skle-ri-rit'o-me) [sclera + iris + Gr. τέμνειν to cut]. Incision of the sclera and iris in anterior staphyloma.
- scleritis (skle-ri'tis) [sclera + Gr. -tris inflammation]. Inflammation of the sclerotica. It may be superficial (episcleritis) or deep. The latter form causes bulging and thinning of the sclerotic.
- sclero-adipose (skle-ro-ad'ip-ōs). Composed of fibrous and fatty tissue.
- scleroblastema (skle"ro-blas-te"mah) [Gr. σκληρόs hard + blastema]. The embryonic tissue which takes part in the formation of bone.
- scleroblastemic (skle"ro-blas-tem'ik). Pertaining to the scleroblastema.
- scierocataracta (skie"ro-kat-ar-ak'tah) [Gr. σκληρός hard + καταρράκτης downpour]. A hard cataract

- sclerochoroiditis (skle"ro-ko-roid-i'tis). Inflammation of the sclera and the choroid coat, resulting in atrophy of both coats and protrusion of the former. s. ante'rior, involves the anterior portions of the sclera and causes anterior staphyloma. s. poste'rior, a condition seen in progressive myopia in which posterior staphyloma occurs in the region of the optic disk.
- **scleroconjunctival** (skle"ro-kon-junk-ti'val). Pertaining to the sclera and conjunctiva.
- scleroconjunctivitis (skle-ro-kon-junk-tiv-i'tis). Inflammation of the sclera and the conjunctiva.
- **sclerocornea** (skle-ro-kor'ne-ah). The sclera and the cornea considered as forming one organ.
- sclerocorneal (skle-ro-kor'ne-al). Pertaining to the sclera and the cornea.
- sclerodactylia (skle''ro-dak-til'e-ah) [Gr. σκληρός hard + δακτυλός finger]. Scleroderma of a finger or of the fingers and toes. s. annula'ris ainhumoi'des, a form which sometimes destroys the terminal phalanges.
- scleroderma (skle-ro-der'mah) [Gr. σκληρός hard + δέρμα skin]. A disease of the skin in which thickened, hard, rigid, and pigmented patches occur, the connective tissue of the corium and subcutaneous structures being increased, a hidebound condition resulting (Watson, 1754). The ordinary form (s. adulto'rum) begins in middle life, and is often incurable. s. circumscrip'tum, morphea. diffuse symmetric s., scleroderma. s. neonato'rum. Same as sclerema neonatorum.
- sclerodermatitis, sclerodermitis (skle"ro-dermat-i'tis, sk e"ro-der-mi'tis) [Gr. $\sigma\kappa\lambda\eta\rho\delta s$ hard $+\delta\epsilon\rho\mu a$ skin]. Inflammation and hardening of the skin.
- sclerogenous (skle-roj'en-us) [Gr. σκληρός hard + γεννᾶν to produce]. Producing sclerous tissue.
- **sclerogummatous** (skle-ro-gum'at-us). Composed of fibrous and gummatous tissue.
- scleroid (skle'roid) [Gr. σκληρός hard + είδος form]. Having a hard texture
- **sclero-iodin** (skle-ro-i'o-din). A principle obtainable from ergot in small quantities.
- sclero-iritis (skle-ro-i-ri'tis). Inflammation of the sclera and of the iris.
- **sclerokeratitis** (skle"ro-ker-at-i'tis) [Gr. σκληρόs hard, sclera + κέρας cornea]. Inflammation of the sclera and of the cornea.
- sclerokerato-iritis (skle"ro-ker"at-o-i-ri'tis). Inflammation of the sclera, cornea, and iris.
- scleroma (skle-ro'mah) [Gr. σκλήρωμα induration]. A hardened patch or induration, especially of the nasal or laryngeal tissues s. respirato'rium, rhinoscleroma.
- **scleromeninx** (skle-ro-me'ninks) [Gr. σκληρός hard + μῆνιγξ membrane]. The dura mater.
- **scleromere** (skle'ro-mēr) [Gr. σκληρός hard + μέρος part]. Any segment or metamere of the skeletal system.
- sclerometer (skle-rom'et-er) [Gr. σκληρός hard + μέτρον measure]. An instrument for determining the hardness of substances.
- scleromucin (skle-ro-mu'sin) [Gr. σκληρός hard + mucin]. A slimy, active principle from ergot.
- scleronychia (skle-ro-nik'e-ah) [Gr. σκληρός hard + δνυξ nail]. A simultaneous thickening and dryness of the nails.
- scleronyxis (skle-ro-nik'sis) [Gr. σκληρός hard + νόξις puncture]. Surgical puncture of the sclera.
- sclero-oöphoritis (skle"ro-o-of-o-ri'tis) [Gr. σκληρόs hard + oophoritis]. Sclerosing inflammation
 of the ovary.
- sclero-oöthecitis (skle"ro-o-o-the-si'tis). Sclerooöphoritis.
- sclero-optic (skle-ro-op'tik). Pertaining to the sclerotica and the optic nerve.
- sclerophthalmia (skle-rof-thal'me-ah) [Gr. σκληρός hard + όφθαλμός eye]. The condition in

which, from imperfect differentiation of the sclera and cornea, the former encroaches on the latter, so that only the central part of the cornea remains clear.

scleroprotein (skle-ro-pro'te-in) [Gr. σκληρόs hard + protein]. A name proposed as a substitute for albuminoid. See albuminoid (3).

sclerosal (skle-ro'sal). Sclerous.

sclerosarcoma (skle"ro-sar-ko'mah) [Gr. σκληρός hard + σάρκωμα fleshy tumor]. A hard, fleshy variety of epulis.

sclerosed (skle-rozd'). Affected with sclerosis.

sclerosing (skle-ro'zing). Causing or undergoing

sclerosis.

sclerosis (skle-ro'sis) [Gr. σκλήρωσις hardness]. An induration, or hardening; especially hardening of a part from inflammation and in diseases of the interstitial substance. The term is used chiefly for such a hardening of the nervous system due to hyperplasia of the connective tissue. Alzheimer's s., hyaline degeneration of the smaller cerebral blood-vessels, presentle insanity. amyotrophic lateral s., a disease marked by a hardening of the lateral columns of the spinal cord with muscular atrophy. It may invade the oblongata and affect the ventral columns also. The disease always ends fatally in from one to three years, death occurring from extension of the hardening to the medulla oblongata. annular s., sclerosis of the spinal cord, forming a band around it. anterolateral s., sclerosis of the ventral and lateral columns of the cord, leading to spastic paraplegia. Called also ventroarterial s., arteriosclerosis. arteriocapillary s. Same as urteriosclerosis. bone s., eburnation. cerebral s., multiple sclerosis of the brain. cerebrospinal s., multiple sclerosis of the brain and spinal cord. See multiple s. combined s., sclerosis of both the posterior and lateral columns of the cord. diffuse s., a form affecting large areas of the brain and cord. disseminated s., focal Same as multiple s. latinsular s. eral s., a form seated in the lateral columns of the cord. It occurs either as a primary affection, resulting in spastic paraplegia, attended with rigidity of the limbs, increase of the tendon-reflexes, and absence of nutritive and sensory disturbance. The disease may also be secondary to myelitis, in which there is spastic paraplegia, with sensory and other disturbances. **lobar s.**, sclerosis involving an entire lobe of the brain. miliary s., sclerosis occurring in minute spots. Mönckeberg's s., degeneration of the arteries marked, in the arteries of large size, by extensive degeneration of the media, with atrophy of its muscular elements and frequent calcareous deposits in the atrophied muscle-cells. There is usually a similar calcareous deposit in the smaller arteries. multiple s., a disease marked by sclerosis occurring in sporadic patches throughout the brain or spinal cord, or both. It is regarded as probably of infective origin. Among its symptoms are weakness, incoordination, strong jerking movements of the legs, and especially of the arms, amenomania or other abnormal mental exaltation, scanning speech, nystagmus, etc. It is not curable, and may last for many years. Called also Charcot's disease, disseminated s., and insular s. posterior s., sclerosis of the posterior columns of the cord, leading to locomotor ataxia. See locomotor ataxia. posterolateral s., Friedreich's ataxia, or, more correctly, the lesion of the posterior and lateral columns of the spinal cord which leads to it. s. re'dux. See chancre redux. tuberous s., a condition characterized pathologically by the presence of numerous glial tumors within the brain, and marked by progressive mental deterioration, epileptic convulsions, and tumors of the skin and viscera. unicellular s., the development of bands of fibrous material between the cells of a gland. vascular s., arteriosclerosis. s. ventric'uli, sclerotic gastritis. ventrolateral s. See anterolateral s.

scleroskeleton (skle-ro-skel'et-on) [Gr. σκληρός hard + skeleton]. Those parts of the bony skeleton that are formed by the ossification of ligaments, tendons, or fasciæ.

sclerostenosis (skle"ro-ste-no'sis) [Gr. σκληρός hard + στένωσις narrowing]. Induration or hardening combined with contraction. s. cuta'nea, scleroderma.

Sclerostoma (skle-ros'to-mah). A genus of nematode worms. S. duodena'le, Ankylostoma duodenale. S. syn'gamus, Syngamus trachealis.

Sclerostominæ (skle-ro-sto'mi-ne). A subfamily of the Strongylidæ, characterized by hooks or plates in the mouth. It contains five genera: Ankylostoma, Necator, Triodontophorus, Esophagostoma, and Physaloptera.

sclerostomy (skle-ros'to-me) [sclera + Gr. στόμα opening]. The operation of forming a fistulous opening through the sclera for the relief of glaucoma.

sclerothrix (skle'ro-thriks) [Gr. σκληρός hard + θρίξ hair]. Abnormal hardness and dryness of the hair.

sclerotic (skle-rot'ik) [L. sclerot'icus; Gr. σκληρός hard]. 1. Hard, or hardening; affected with sclerosis. 2. Same as sclerotica. s. acid, a yellowish-brown substance, one of the active principles of ergot. It is used as an ecbolic. Dose, ½-2 gr. (0 03-0.13 gm.).

sclerotica (skle-rot'ik-ah) [L.]. The sclerotic coat, or sclera; the hard, white, and fibrous membrane which, with the cornea, forms the outer-most coat of the eye. It is continuous with the cornea in front and the optic nerve sheath behind.

scleroticectomy (skle"rot-is-ek'to-me) [sclerotica + Gr. ἐκτομή excision]. Excision of a portion of the sclera.

scleroticochoroiditis (skle-rot"ik-o-ko-roi-di'tis). See sclerochoroiditis.

scleroticonyxis (skle-rot"ik-o-niks'is). scleronvxis

scleroticopuncture (skle-rot"ik-o-punk'tshur). Scleronyxis.

scleroticotomy (skle"rot-ik-ot'o-me) [Gr. σκληρός hard + τομή cut]. Surgical incision of the sclera, as in an operation for cataract.

sclerotitis (skle-ro-ti'tis). Same as scleritis.

sclerotium (skle-ro'she-um) [Gr. σκληρός hard]. The hard, blackish mass formed by certain fungi, such as the ergot of rye.

sclerotome (skle'ro-tōm) [Gr. σκληρός hard + τέμνειν to cut]. 1. An instrument used in the incision of the sclera. 2. One of the masses of tissue in the early embryo which develops into the skeleton; skeletogenous tissue.

sclerotomy (skle-rot'o-me) [Gr. σκληρός hard + τομή a cut]. Surgical incision of the sclera. anterior s., the opening of the anterior chamber of the eye, chiefly done for the relief of glaucoma posterior s., an opening made into the vitreous through the sclera, as for detached retina or the removal of a foreign body.

sclerotrichia (skle-ro-trik'e-ah) [Gr. σκληρός hard + θρίξ hair]. A hard, dry state of the hair.

sclerozone (skle'ro-zōn) [Gr. σκληρός hard + ζώνη zone]. Any surface on a bone giving attachment to the muscles from a given myotome.

scoleciasis (sko-les-i'as-is) [Gr. σκώληξ worm].
The morbid state due to the presence of larvæ of moths or butterflies in the body.

scoleciform (sko-les'if-orm). Resembling a scolex. scolecitis (sko-le-si'tis) [Gr. σκώληξ worm]. Same as appendicitis.

scolecoid (sko'lek-oid). 1. Resembling a worm. 2. Resembling a skolex; hydatid.

scolecoidectomy (sko-lek-oi-dek'to-me). Appendicectomy.

scolecoiditis (sko"le-koid-i'tis) [Gr. σκωληκοειδής vermiform]. Same as appendicitis.

scolecology (sko-le-kol'o-je) [Gr. σκώληξ worm + λόγος discourse]. Same as helminthology.

scolectomy (sko-lek'to-me). Appendicectomy.

scoledocostomy (sko-le-do-kos'to-me). abbendicostomy.

scolex (sko'leks), pl. scol'ices [Gr. σκώληξ worm]. The anterior end of a tapeworm, consisting of the head and neck.

scoliokyphosis, (sko''le-o-ki-fo'sis) [scoliosis + kyphosis]. Combined lateral and posterior curvature of the spine.

scoliometer (sko-le-om'et-er) [Gr. σκολιός crooked + μέτρον measure]. An apparatus for measuring curves, especially those of the spinal column.

scoliorachitic (sko''le-o-ra-kit'ik). Affected with scoliosis and rickets.

scoliosiometry (sko''le-os-e-om'et-re) [Gr. σκολίωσις curvation + μέτρον measure] The measurement of curvatures, especially those of the vertebral column.

scoliosis (sko-le-o'sis) [Gr. σκολίωσις curvation]. Abnormal curvature of the vertebral column, especially a lateral curvature. **cicatricial s.**, that which is due to a cicatricial contraction following caries or necrosis. **coxitic s.**, scolosis in the lumbar region caused by hip disease. **empye**matic s., that which is caused by empyema. habit-s., scoliosis due to improper position of the body. inflammatory s., that which is due to vertebral disease. ischiatic s., that which is due to hip disease. myopathic s., that which is due to paralysis of the muscles that support the ocular s., ophthalmic s., scoliosis attributed to tilting of the head on account of astigmatism. osteopathic s., that which is caused by disease of the vertebræ. paralytic s., lateral curvature of the spinal column. rachitic s., spinal curvature due to rickets rheumatic s., that which is due to rheumatism of the dorsal muscles. sciatic s., curvation of the spinal column toward the affected side in scratica. static s., that which is due to difference in the length of the legs.

scoliosometer (sko-le-o-som'et-er). Scoliosiometer. scoliotic (sko-le-ot'ik). Affected with or pertaining to scoliosis.

scoliotone (sko'le-o-ton). An apparatus for the forcible correction of scoliosis.

scolopsia (sko-lop'se-ah) [Gr. σκόλοψ a pointed thing]. A suture between two bones that allows motion upon each other.

scombrin (skom'brin). A protamin found in mackerel sperm.

coop (skoop). A spoon-like instrument for clearing out cavities. **Mules's s.**, a form of curet scoop (skoop). used in eye operations.

scoparin (sko-pa'rin). A yellowish, crystalline principle, $C_{20}H_{20}O_{10}$, from the tops of Cyt'isus scopa'rius: diuretic. Hypodermic dose, $\frac{1}{2}$ -1 gr. (0.033-0.066 gm.).

scoparius (sko-pa're-us). The tops of Cyl'isus scopa'rius. or broom, a leguminous shrub. They scoparius, or broom, a leguminous shrub. They contain the alkaloid spartein and the principle scoparin. They are diuretic, purgative, and emetic, and are used in dropsy. Dose of fluidextract, ½-1 fl.dr. (2-4 c.c.); of decoction, 1-2 fl.oz. (30-60 c.c.).

scopin (sko'pin). A substance formed by the gentle hydrolysis of hyoscin. It is OH.C6H8O.N.CH3, and readily changes into oscin.

scopola (sko-po'lah). The dried rhizome and larger

roots of Scopo'lia carniol'ica. It contains the same constituents as At'ropa belladon'na, and is used like belladonna as a sedative and narcotic. Dose, 5 gr. (0.324 gm.).

scopolamin (sko-pol-am'in). A mydriatic alkaloid, C17Hi1NO4 + H2O, from the root of Scopo'lia atropoi'des, At'ropa belladon'na, and other solanaceous plants. It is the same as hyoscin. Dose of hydrochlorate, $2\frac{1}{10}$ gr. (0.00025-0.0011 gm). **8.** hydrobromid, a crystalline sedative and mydriatic, $C_{17}H_{21}O_4N.HBr._3H_2O$, similar in action to atropin, but not producing dryness of the throat and other disagreeable symptoms Subcutaneous dose, $\frac{1}{2}\frac{1}{10-60}$ gr. (0 00025-0.0011 gm). It is used locally in 0.1 to 0.2 per cent. solution. s. hydrochlorid, $C_{17}H_{21}O_4N$. HCl. $2H_2O$. s. stable, scopomannit.

scopolein (sko-po'le-in). A crystalline alkaloid, C₁₇H₂₁NO₁, from plants of the genera Scopo'lia, Duboi'sia, and At'ropa: a strong mydriatic and sedative.

Scopolia (sko-po'le-ah) [after J. A. Scopoli]. genus of solanaceous plants. S. atropoi/des (carniolica), of Europe, and S. japon'ica and S. lu'rida, of Asia, have properties like those of hyoscyamus and belladonna. Dose of fluidextract of the rhizome, 1-3 min. (0.06-0.2 c c.).

scopolin (sko'po-lin). An alkaloid or glucosid, C₈H₁₃NO₂, obtainable from scopolamin; narcotic.

scopomannit (sko-po-man'it). A proprietary aqueous solution of scopolamin hydrobromid containing 10 per cent of mannite.

scopomorphin (sko-po-mor'fin). A proprietary combination of scopolamin bromid and morphin chlorid.

scopomorphinism (sko-po-mor'fin-izm). tion to the use of scopolamin and morphin.

scopophobia (sko-po-fo'be-ah) [Gr. $\sigma \kappa o \pi \epsilon \hat{\iota} \nu$ to view $+\varphi \delta \beta os$ fear]. A morbid dread of being seen.

scoracratia (skor-ak-ra'she-ah) [Gr. σκῶρ dung + άκρατία lack of control] The involuntary discharge of feces.

scorbutic (skor-bu'tik) [L. scorbu'ticus]. Pertaining to or affected with scurvy.

scorbutus (skor-bu'tus). Latin for scurvy.

scordinemia (skor-din-e'me-ah) [Gr. for "yawn-Yawning and stretching with a feeling of lassitude, occurring as a preliminary symptom of some infectious disease

scoretemia, scoretæmia (skor-et-e'me-ah) [Gr. $\sigma\kappa\hat{\omega}\rho$ dung + $\alpha l\mu\alpha$ blood]. Autointoxication due to the absorption of putrescent fecal material from the intestine.

scotodinia (sko-to-din'e-ah) [Gr. σκότος darkness + δîvos whirl] Dizziness with obscurity of vision and headache.

scotogram, scotograph (sko'to-gram, sko'to-graf) [Gr. σκότος darkness + γράφειν to write]. 1. Same as skiagraph. 2 The effect produced upon a photographic plate in the dark by certain substances.

scotographic (sko-to-graf'ik). Affecting a photographic plate in the dark.

scotography (sko-tog'raf-e). Same as skiagraphy. scotoma (sko-to'mah), pl. scoto'mata [Gr. σκότωμα] r. A blind or partially blind area in the visual 2. An appearance as of dark, vanishing, field. cloudy patches before the eyes. absolute s., an area in the visual field as to which the eye is absolutely blind. annular s., a scotomatous zone which surrounds the center of the visual field. Called also ring-s. s. au'ris, loss of power to hear sounds which come from a certain direction. central s., blindness limited to a part of the visual field corresponding to the macula lutea. colors., color-blindness as to a part of the visual field. flimmer s., a kind in which the glimmering begins in the center of vision and spreads outward. flittering s., a variety with serrate margins, and usually producing an extensive defect of vision. Same as leichopsia. insular s., a scotoma occurring as a spot completely surrounded by the visible portion of the field. negative s., one due to lesion of the retina and not perceptible to the patient. paracentral s., a scotoma the edge

of which passes through the fixation-point. peripapillary s., enlargement of the blind spot. peripheral s., a spot of absent vision anywhere in the visual field outside the point of fixation. physiologic s., the blind-spot. positive s., one which is seen by the patient as a dark spot. relative s., scotoma in which perception of objects is impaired, but not destroyed. ring-s. See annular s. scintillating s., the sudden appearance before the eyes of a luminous cloud having a zigzag outline, whence it is called fortification spectrum. See teichopsia. It often foreruns an attack of migraine.

scotomagraph (sko-to'mah-graf) [scotoma + Gr. γράφειν to write]. An instrument for recording a scotoma.

scotomatous (sko-tom'at-us). Pertaining to or affected with scotoma.

scotometer (sko-tom'et-er) [scotoma + Gr. μέτρον measure]. An instrument for diagnosticating and measuring scotomata.

scotometry (sko-tom'et-re). The measurement and recording of scotomata by the scotometer.

scotophobia (sko-to-fo'be-ah) [Gr. $\sigma\kappa\delta\tau\sigma$ s darkness $+ \varphi\delta\beta\sigma$ s fear]. Morbid fear of darkness.

scotopia (sko-to'pe-ah) [Gr. σκότος darkness]. Dark adaptation; the adjustment of the eye for darkness. Cf. photopia.

scotoscopy (sko-tos'ko-pe) [Gr. σκότος darkness + σκοπεῖν to view]. Same as skiascopy.

scototherapy (sko-to-ther'ap-e) [Gr. σκότος darkness + θεραπεία treatment]. Treatment of disease by the complete exclusion of light-rays.

scours, white. A diarrhea affecting calves during the first few days after birth, a form of septicemia from infection through the umbilical cord.

Scr., scr. Abbreviation for scruple.

scratches (skratsh'ez). Eczematous inflammation of the feet of a horse.

screatus (skre-a'tus) [L.]. Paroxysmal hawking and snorting, due to neurosis.

screen, fluorescent (skrēn). A plate in the fluoroscope coated with crystals of calcium tungstate.

screws (skreuz). Caisson disease.

screw-worm. See Cochliomyia macellaria.

scriveners' palsy (skrīv'nerz). Writers' cramp.

scrobiculate (skro-bik'u-lāt) [L. scrobicula'tus].
Marked with pits or cavities.

scrobiculus (skro-bik'u-lus) [L. "little trench" or "pit"]. A small hollow, pit, or cavity. s. cor'dis [L. "pit of the heart"], the anterior depression called the pit of the stomach; the precordial depression.

scrofula (skrof'u-lah) [L. "brood sow"]. Tuberculosis of the lymphatic glands, and sometimes of bones and joint surfaces, with slowly suppurating abscesses and fistulous passages, the inflamed structures being subject to a cheesy degeneration. It is essentially a disease of early life.

scrofulid, scrofulide (skrof'u-lid, -lid) [Fr. scrof-ulide]. Same as scrofuloderm.

scrofuloderm (skrof'u-lo-derm) [scrofula + Gr. δέρμα skin]. Any skin affection of tuberculous origin, and marked by irregular superficial ulcers. s. gummo'sa, a deep tuberculosis of the skin forming a gumma-like lesion. papular s. Same as lichen scrofulosorum. pustular s., a form in which large or small sluggish pustules of the skin are formed, which, after ulcerating, leave depressed scars. tuberculous s., granuloma: a subcutaneous nodule which degenerates slowly and leads to an indolent fistulous ulcer. ulcerative s., a tuberculous scrofuloderm in its ulcerating stage. verrucous s., tuberculous lupus characterized by necrogenic or other warty growths.

scrofuloderma (skrof-u-lo-der'mah). See scrofuloderm. scrofulophyma (skrof"u-lo-fi'mah) [scrofula + Gr. φύμα growth]. A tuberculous growth of the skin.

scrofulosis (skrof-u-lo'sis). A tendency toward scrofula; the scrofulous diathesis.

scrofulotuberculosis (skrof"u-lo-tu-ber-ku-lo-sis). Same as attenuated tuberculosis. See tuber-culosis.

scrofulotuberculous (skrof"u-lo-tu-ber'ku-lus). Characterized by scrofulous tubercle.

scrofulous (skrof'u-lus). Affected with or of the nature of scrofula.

scroll-bone (skrōl'bōn). Either of the turbinated bones.

scroll-ear (skröl'er). An ear in which the pinna is rolled up

Scrophularia nodo'sa (skrof-u-la're-ah). The Scrophula'ria marilan'dica, a North American variety of S. nodo'sa, is deobstruent, anodyne, and diuretic. Dose of fluidextract, 30-60 min. (2-4 c c.).

scrotal (skro'tal). Pertaining to the scrotum.

scrotectomy (skro-tek'to-me) [scrotum + Gr. ἐκτομή excision]. Excision of a portion of the scrotum.

scrotitis (skro-ti'tis). Inflammation of the scrotum.

scrotocele (skro'to-sēl) [scrotum + Gr. κήλη hernia]. Scrotal hernia.

scrotum (skro'tum) [L. "bag"]. The pouch which contains the testicles and their accessory organs. It is composed of skin, the dartos, the spermatic, cremasteric, and infundibuliform fasciæ, and the tunica vaginalis. s. lapillo'sum, calcareous atheroma of the scrotum. lymph-s., dilatation of the scrotal lymphatics, as in certain cases of filariasis; described by Wong, of Canton, in 1858.

scrum-pox (skrum'poks). An acne-like skin disease in foot-ball players in England.

scruple (skru'pl) [L. scru'pulus]. Twenty grains, apothecaries' weight, symbol, Θ . See weights and measures, table of.

scrupulosity (skru-pu-los'it-e). Morbid sensitiveness in matters of conscience.

sculcopine (skul'ko-pin). A proprietary astringent preparation of skullcap and hydrastis.

scultetus (skul-te'tus) [after Johann Scultet, German surgeon, 1505–1645]. Same as scultetus bandage. See under bandage.

scurf (skurf). Dandruff; a branny substance of epidermic origin.

scurvy (skur've) [L. scorbu'tus]. A nutritional disease, due to dietetic errors, and marked by weakness, anemia, spongy gums, a tendency to mucocutaneous hemorrhages and a brawny induration of the muscles of the calves and legs It oftenest affects mariners and those who use salted meats and few or no vegetables. The use of fresh potatoes, scurvy-grass, and onions as food, and especially the drinking of lime-juice, are preventive and remedial measures. Alpine s., s. of the Alps. Same as *pellagra*. **button s.**, a skin disease, formerly endemic in Ireland, characterized by button-like excrescences. s.-grass, a cruciferous plant, Cochlea'ria officina'lis, a remedy for scurvy: used in infusion or taken raw or cooked as a food or salad. infantile s., a nutritional disease of infants characterized by the same symptoms as scurvy in adults. Called also Barlow's disease, Moller's disease, and Cheadle's disease. land-s. Same as purpura hamorrhagica. s.-rickets, infantile scurvy associated with rickets. sea-s., the true scurvy, such as mainly affects mariners.

scute (skūt) [L. scu'tum shield]. Any squama or scale-like structure; especially the bony plate which divides the upper part of the tympanic cavity from the mastoid cells. tympanic s., a thin plate of bone between the attic of the tympanum and the mastoid cells.

Scutellaria (sku-tel-a're-ah). A genus of labiate herbs, called skullcap. S. lateriflo'ra, a plant of North America, is nervine, antispasmodic, and tonic, and is used in malarial fever and epilepsy. Dose of fluidextract, 30-60 min. (2-4 c.c.); of extract, 4-15 gr. (0.26-1 gm.).

SCUTELLARIA

scutellarin (sku-tel-a'rin). A crystalline principle, $C_{10}H_8O_3$, found in scutellaria and other labiate plants. Dose, 1-4 gr. (0.066-0.26 gm.).

scutiform (sku'tif-orm) [L. scu'tum shield + for'ma forml. Shaped like a shield.

scutular (sku'tu-lar). Marked by scutula, or small, shield-shaped crusts.

scutulum (sku'tu-lum), pl. scu'tula [L.]. Any one of the disk-like crusts of favus.

scutum (sku'tum) [L. "shield"]. 1. The scute, or roof of the attic. 2. The thyroid cartilage.
3. The patella. 4. A hard chitious plate on the anterior portion of the dorsal surface of the Ixodidæ or true ticks. s. pec'toris, the sternum.

scybala (sib'al-ah). Plural of scybalum.

scybalous (sib'al-us). Of the nature of or composed of scybala.

scybalum (sib'al-um), pl. scy'bala [Gr. σκυβαλον]. A dry, hard mass of fecal matter in the intestine.

scyllite (sil'it) [Gr. σκύλλος a young dog]. A hexose from the liver and kidneys of sharks, skates, etc.

scymnol (sim'nol). A substance allied to cholic acid found in the bile of Scym'nus borea'lis, a marine fish of the shark family.

scyphoid (sī'foid) [Gr. σκύφος cup + είδος form]. Shaped like a cup.

scythropasmus (si-thro-paz'mus) [Gr. σκυθρωπασ μός; σκυθράζειν to look sullen]. A dull, fatigued expression, regarded as a grave symptom in serious disease.

scytitis (si-ti'tis) [Gr. σκῦτος skin]. Same as dermatitis.

scytoblastema (si"to-blas-te'mah) [Gr. σκῦτος skin + βλάστημα sprout]. The rudimentary skin of the embryo.

Scytonema (si-to-ne'mah) [Gr. σκῦτσς skin + νῆμα thread]. A genus of schizomycetes with cylindric phycochromous filaments.

S. D. A. Right sacro-anterior position of the fetus. S. D. P. Right sacroposterior position of the fetus. Se. The chemical symbol of selenium.

seamstresses' cramp. See cramp.

searcher (sur'cher). A sound used in searching for stone in the bladder.

seasickness (se'sik-nes). Nausea and malaise caused by the motion of a ship at sea.

sea-tangle (se'tang-l). See Laminaria.

seat-worm (sēt'werm). Same as Oxyuris.

sebaceous (se-ba'shus) [L. seba'ceus]. 1. Pertaining to sebum or suet. 2. Secreting a greasy lubricating substance.

sebadilla (seb-ad-il'ah). See sabadilla.

sebastomania (se"bas-to-ma'ne-ah) [Gr. σεβαστός reverend + µavla madness]. Religious insanity.

sebiagogic (seb-e-ag-oj'ik) [L. $se'bum + Gr. \dot{a}\gamma\omega\gamma\delta s$ leading]. Producing fatty or sebaceous matter.

sebiferous (se-bif'er-us) [L. sebif'erus, from se'bum suet + fer're to bear]. Same as sebiparous.

sebiparous (se-bip'ar-us) [L. sebip'arus; se'bum suet + par'ere to produce]. Producing a fatty secretion.

sebirol (seb'ir-ol). A proprietary vermifuge based upon the active principle of the plant Ri'bes em-

sebolite, sebolith (seb'o-lit, seb'o-lith) [sebum + Gr. \(\lambda \lambda \text{os} \) stone]. A concretion formed in a sebaceous gland.

seborrhagia (seb-or-a'je-ah). Same as seborrhea.

seborrhea, seborrhosa (seb-or-e'ah) [L. se'bum suet + Gr. pola flow]. A chronic disease of the

sebaceous glands marked by the occurrence of an excessive discharge of sebum from the glands. forming white or yellowish, greasy scales on the body. It is generally attended with itching or burning. s. adipo'sa, that in which the secretion is oily, especially occurring about the nose and forehead. Called also s. oleo'sa. s. capillit'ii, s. cap'itis, seborrhea of the scalp. s. crete s., greasy crusts of the scalp. concrete s., greasy crusts of the scalp or of the smooth parts. s. congestiva. Same as lupus crythematosus. s. cor'poris, a form affecting the trunk; lichen circinatus. ecsematoid s., that associated with inflammation of the scalp. s. facie'i, a form which affects the face: it may follow small-pox or any of the exanthematous fevers. s. furfura/cea, a staly, dandruffy form of seborrhœa sicca. s. genera/lis, that which affects the entire surface. s. ni'gra, s. nig'ricans, a variety which is characterized by a darkcolored secretion.

8. 0100'88, that in which the discharge is only. See s. adiposa.

8. sie'ca, a common form of seborrhea characterized by the formation of brownish-gray scales or scabs. s. squa'mo neonato'rum, ichthyosis sebacea.

seborrheal (seb-or-e'al). Characterized by seborrhea.

seborrheic (seb-or-e'ik). Affected with or of the nature of seborrhea.

seborrheid, seborrheide (seb-or-e'id). A seborrheic eruption.

seborrhoic (seb-o-ro'ik). Seborrheic.

sebum (se'bum). r. Latin for suel, or sevum. 2.

The secretion of the sebaceous glands; a thick, semifluid substance composed of fat and epithelial débris from the cells of the malpighian layer. s. cuta/neum [B N A], the fatty secretion of the skin. s. palpebra/le [B N A], the secretion of the meibomian glands. s. præputia'le [B N A], smegma.

secacornin (se-kak-or'nin). A proprietary preparation of the active principles of ergot. Dose, 8-15 min. (0 5-1 c.c.).

Secale (se-ka'le) [L. "rye"]. A genus of graminaceous plants. S. cerea/le produces rye, a cereal grain S. cornu'tum, the ergot of rye. See ergot.

secalin (sek'al-in). One of the active principles of ergot: said to be identical with trimethylamin, $N(CH_3)_3$.

secalintoxin (sek"al-in-toks'in). A principle obtainable from ergot. It is a compound of secalin with ergochrysin. It is less active than chrysotoxin, and is probably identical with cornutin

ocalose (sek'al-ōz). A carbohydrate obtainable from rye: when dried, it forms a white, hygrosecalose (sek'al-ōz). scopic powder, convertible by inversion into levulose.

secernent (se-ser'nent) [L. secer'nens secreting]. 1. Secreting. 2. Any secreting organ or surface

Sechenoff's center (setsh'en-ofs) [Ivan Sechenoff, Russian neurologist of nineteenth century]. See Sechenoff's center, under center.

seclusion of the pupil (se-klu'zhun) [L. seclu'sio pupil'læ]. Same as annular posterior synechia. See under synechia.

secodont (se'ko-dont) [L. seca're to cut + Gr. ¿δοῦς tooth]. Having teeth in which the tubercles of the molars are provided with cutting edges.

second intention (sek'und). See healing and intention. s. nerve, the optic nerve.

secondary (sek'un-da-re) [L. secunda'rius; secun'-dus second]. Second or inferior in order of time, place, or importance.

secreta (se-kre'tah) [L. pl.]. The secretions.

secretagogue (se-krēt'ag-og) [secretion + Gr. άγογός drawing]. A substance which acts as a stimulant to the secretion of glands.

secrete (se'krēt) [L. secer'nere, secre'tum to separate]. To separate or elaborate from the blood. arate].

secretin (se-kre'tin). 1. A substance secreted by the mucosa of the duodenum and jejunum. It is carried by the blood to the pancreas, in which organ it stimulates the secretion of pancreatic juice. 2. A general name for any hormone which stimulates glandular secretion. gastric s., gastrin.

secretion (se-kre'shun) [L. secre'tio, from secer'nere to secrete]. 1. The process or function of separating various substances from the blood. 2. Any secreted substance. antilytic s., saliva secreted by the submaxillary gland with nerves intact, as distinguished from that secreted when the nerve is divided. external s., one that is discharged upon the external or internal surface of the body. internal s., a secretion that is not discharged by a duct from the body, but is given off into the blood and lymph, taking an important part in metabolism. Such secretions are furnished by the thyroid, the spleen, the adrenals, the testicles, the pituitary body, etc. Those that excite metabolic processes are hormones, those that depress are chalones or colyones. See endocrine. paralytic s., secretion from a gland after paralysis or division of its nerve.

secretodermatosis (se-kre"to-der-mat-o'sis). Any derangement of the secreting functions of the skin.

secretogen (se-kre'to-jen). A proprietary extract from the duodenum: used for gastro-intestinal deficiencies.

secretogogue (se-kre'to-gog) [secretion + Gr. άγογός leading]. Stimulating glandular secretion; also a substance that stimulates secretion.

secreto-inhibitory (se-kre"to-in-hib'it-o-re). Producing decreased secretion.

secretomotor, secretomotory (se-kre-to-mo'tor, se-kre-to-mo'to-re). Exciting or stimulating secretion: said of nerves.

secretory (se-kre'to-re). Pertaining to secretion or affecting the secretions.

sectarian (sek-ta're-an). A practitioner of medicine who "follows a dogma, tenet, or principle based on the authority of its promulgator to the exclusion of demonstration and practice" (Judicial Council A. M. A.).

sectile (sek'tīl) [L. secti'lis, from seca're to cut]. Susceptible of being cut.

sectio (sek'she-o) [L. seca're to cut]. Latin for section.
s. agrippi'na. See section, cesarean.
s. al'ta, suprapubic cystotomy.
s. cadav'eris, a postmortem examination; an autopsy.
s. lateral lithotomy.
s. media'na, median lithotomy.

section (sek'shun) [L. sec'tio]. 1. An act of cutting. 2. A cut surface. 3. A segment; also any subdivision of an organ. abdominal s., laparotomy. cesarean s., the operation of delivering a fetus by incision through the abdominal wall and uterus. It is done when delivery by the natural passages is impossible or dangerous. When performed after death of the mother, it is called postmortem cesarean s. frontal s., a cut made through the body or a part of the body transversely from right to left. perineal s., external urethrotomy. Pitres's s's, a series of six transverse sections made through the brain, as follows: 1. Prefrontal s., through the prefrontal lobe. Pediculofrontal s., two centimeters in front of the fissure of Rolando. 3. Frontal s., at the level of the ascending frontal convolution. 4. Parietal s., through the ascending parietal convolution. 5. Pediculoparietal s., three centimeters behind the fissure of Rolando. 6. Occipital s., through the middle of the occipital lobe. Saemisch's s., a surgical operation for the relief of corneal complications. sagittal s., a cut in a dorsoventral or anteroposterior direction through the body or a part of it. serial s., histologic section made in a consecutive order and so arranged for the purpose of microscopic examination. **signultian s.**, symphysiotomy. **s.-smoother**, a mechanism for preventing the section made for microscopic study from curling up. **vaginal s.**, incision through the vaginal wall into the abdominal cavity.

sector (sek'tor) [L. " cutter"]. The area of a circle included between an arc and the radii bounding it.

sectorial (sek-to're-al) [L. sec'tor, cutter]. Cutting.

secunds vise (se-kun'de vi'e) [L. "second way"].
The lacteals and blood-vessels.

secundigravida (se-kun"dig-rav'id-ah) [L. secun'-dus second + grav'ida pregnant]. A woman pregnant for the second time.

secundina cerebri (se-kun-di'nah ser'e-bri). The pia-arachnoid. s. oc'uli, the middle coat of the choroid. s. u'teri, the chorion.

secundinæ (se-kun-di'ne). Same as secundines.

Secundines (se-kun'dīnz) [L. secundi'na]. The after-birth; the placenta and membranes expelled after childbirth.

secundipara (se-kun-dip'ah-rah) [L. secun'dus second + par'ere to produce]. A woman who has borne two children.

secundiparity (se-kun-dip-ar'it-e). The condition of being a secundipara.

secundiparous (se-kun-dip'ah-rus). Having borne a second child.

secundum artem (se-kun'dum ar'tem) [L.]. In an approved or professional manner.

Sed. Abbreviation for L. se'des, stool.

sedasi'na gualdo'ni. The benzoic ether of dimethyl-amino-propanol.

sedaspirin (sed-as'pir-in). A proprietary compound of aspirin and bromin.

sedatin (sed'at-in). Same as valeridin.

sedation (se-da'shun) [L. seda'tio]. The production of a sedative effect; the act or process of calming.

sedative (sed'at-iv) [L. sedati'vus]. r. Allaying activity and excitement. 2. A remedy that allays excitement. Battley's s., extract of opium, 360 gr., boiling water, 7 fl.oz., alcohol, ½ fl.oz., and cold to make 10 fl.oz. Dose, 5 min. (0.3 c c.). cardiac s., a drug that abates the force of the heart's action, such as aconite, antimony, chloral, chloroform, conium, the nitrites, tobacco. etc. cerebral s., one which principally affects the brain. To this class belong cannabis, camphor, the bromids, hyoscin, and the hypnotic and revulsive agents. gastric s., one which soothes or lessens irritability of the stomach, such as bismuth salts, cerium oxalate, cocain, hydrocyanic acid, silver nitrate. general s., one which affects all the organs and functions. These are alcohol, bromids, camphor, chloroform, ether, hydrocyanic acid, the hypnotics, opium, warm baths, etc. genital s., any anaphrodisiac agent, like the bromids, camphor, or hops. intestinal s., one which diminishes intestinal irritation: in general, they are also gastric sedatives. nerve-trunk s., one which acts upon the trunks of the nerves, like antipyrin, aconite, cocain, cannabis, conium, and curare. nervous s., a sedative which acts upon and through the nervous system. The cerebral, spinal, and nerve-trunk sedatives belong to this respiratory s., one which affects especiclass. ally the respiratory centers and organs. Among them are chloral, chloroform, conium, curare, hydrocyanic acid, gelsemium, and opium. spinal s., any drug which abates the functional or abnormal activity of the spinal cord. The principal drugs of this class are bromids, calabar bean, the nitrites, gelsemium, and chloral. vascular s., one which affects the vasomotor activities. In general, they are the drugs named above as cardiac sedatives.

sedatol (sed'at-ol). A proprietary preparation of heroin for respiratory diseases.

1056

sedentary (sed'en-ta-re) [L. sedenta'rius]. ting habitually; of inactive habits. 2. Pertaining to a sitting posture.

Sédillot's operation (sa-de-yoz') [C. E. Sédillot, French surgeon, 1804-1883]. See under operation.

sediment (sed'im-ent) [L. sedimen'tum]. cipitate, especially one that is formed spontaneously. **urinary s.**, the deposit of solid matter left after the urine has been allowed to stand for some time. See urine.

sedimentation (sed'im-en-ta'shun). The act of causing the deposit of sediment, especially by the use of a centrifugal machine.

sedimentator (sed-im-en-ta'tor). A centrifugal machine for separating sediments from the urine.

sedinha (sa-dēn'yah) [Portuguese]. pathic preparation of a Brazilian herb. A homeo-

sedobrol (se'do-brol). A proprietary preparation of sodium bromid combined with bouillon in the form of tablets used in epilepsy.

sedol (se'dol). A proprietary analgesic, antispasmodic, and sedative containing morphin hydrochlorid, scopolamin hydrobromid, and spartein sulphate.

sedox (se'doks). A proprietary wound-dressing.

seed (sēd). See semen. celery s., Apium. larkspur s., Delphinium.

seedy toe. See under toe.

seehear (se'hēr). A device by which the motions and sounds of the heart are rendered audible and

Seeligmüller's sign (za'lik-me-lerz) [Otto Ludovicus G. A. Seeligmuller, German neurologist, 1837-1912]. See sign.

seepage (se'paj). 1. Oozing of fluid; percolation: also the quantity of fluid that percolates. 2. Continuous rectal infusion.

segment (seg'ment) [L. segmen'tum]. A piece cut off or marked off, either actually or by an imaginary line. ceratobranchial s. See stylohyoid arch, under arch. cranial s., the three segments into which the bones of the cranium may be divided. They are distinguished as the occipital, the parietal, and the frontal. epibranchial s. See stylohyoid arch, under arch. hypobranchial s. See stylohyoid arch, under arch. interannular s., the portion of a nerve-fiber between two consecutive nodes of Ranvier. See nerve. medullary .. divisions of the medullary sheath of a nervemesodermal s. See somite. neural s., a neuromere. occipital s., the posterior of the three cranial segments. See stylohyoid arch, under arch. primitive s. See somite. pubic s. of the pelvis, that portion of the floor of the pelvis which is between the symphysis pubis and the anterior wall of the vagina, which latter it includes. Ranvier's s's, the portions of the medullary substance of a nerve-fiber between Ranvier's nodes. rivinian s., an irregular notch at the upper border of the tympanic rod-s., the two segments which make up one of the rods of the retina. The outer rod-s. is the portion presenting a uniform diameter, while the inner rod-s. has a slightly increased diameter. sacral s., that portion of the floor of the pelvis which lies between the sacrum and the posterior vaginal wall. Schmidt-Lantermann's s's, elongated pieces which seem to compose the medullary substance of nerve-fibers: seen after treatment of the fibers with osmic acid. spinal s., a portion of the spinal cord contained between two imaginary sections, one on each side of a nerve pair.

segmental (seg-men'tal). Pertaining to or forming a segment; undergoing segmentation.

segmentation (seg-men-ta'shun). Division into parts more or less similar, especially that which takes place in the fertilized ovum. s.-cavity.

See cavity. centrolecithal s., segmentation in which a central mass of nutritive yolk is surrounded by the segmentation spheres. complete s. See total s. haustral s. See haustral churning. holoblastic s. See total s. incomplete s. See partial s. meroblastic s. See partial s. s.-nucleus. See nucleus. partial s., a variety in which the formative yolk alone undergoes segmentation. Called also incomplete s. and meroblastic s. s.-sphere. See sphere. total s., a variety in which the entire ovum undergoes seg-mentation. Called also holoblastic s. and complete s. unequal s., a variety in which the spheres of one pole are smaller and more numerous than those of the opposite pole.

segregation (seg-re-ga'shun). In genetics the separation of the two genes of a pair in the process of maturation so that only one goes to each germ cell. Also the result in the offspring of this separa-

segregator (seg're-ga-tor). An instrument for securing the urine from each kidney separately. Harris's s., an instrument for collecting the urine from each kidney separately. Luys's s., an instrument for collecting the urine from each kidney

Séguin's symptom (sa-ganz') [Edouard Séguin, French alienist, 1812-1880]. See under symptom.

Seidelin bodies (si'de-lin) [Harold Seidelin, contemporary British physician]. See under body.

Seidlitz powder (sīd'litz). [Named from a mineral spring in Bohemia]. See powder.

Seignette's salt (sin-yets') [Pierre Seignette, apothecary in Rochelle, 1660-1719]. Rochelle salt.

seisesthesia (sīs-es-the'ze-ah) [Gr. σείσις concussion + alognous perceptionThe perception of concussion; a sensation of concussion.

seismesthesia, seismæsthesia (sīs-mes-the'zheah) [Gr. σεισμός shake + αἴσθησις sensation]. Tactile perception of vibrations in a liquid or aerial medium.

seismotherapy (siz-mo-ther'ap-e) [Gr. σεισμός shake + therapy] The treatment of disease by mechanic vibration.

seizure (se'zhur). The sudden attack or recurrence of a disease. psychic's., psycholepsy

sejunction (se-junk'shun). An interruption of the continuity of association-complexes which leads to a breaking up of the personality.

sekisanin (sek-is'an-in). An alkaloid, C34H36N2O9, found along with narcissin.

sekretin (se-kre'tin). Secretin prepared from the duodenum of the pig used in diabetes.

selacean (se-la'se-an). One of a class of vertebrates which includes the sharks and rays.

selenin (sel'e-nin). A serum obtained from cultures of Diplococ'cus semiluna'ris.

seleniol (se-le'ne-ol). A colloidal preparation of selenium recommended for the treatment of cancer.

seleniovanadium (se-le"ne-o-va-na'de-um). proprietary selenium preparation recommended for the treatment of cancer

selenium (se-le'ne-um) [Gr. σελήνη moon]. non-metallic element resembling sulphur; symbol, Se; atomic weight, 70.2. Compounds of selenium have been used in the experimental treatment of tumors in rats. 2. A homeopathic trituration of the same.

selenodont (se-le'no-dont) [Gr. σελήνη moon + οδοῦς tooth]. Having teeth with crescentic ridges, as in the molars of man.

selenoplegia, selenoplexia (se-le-no-ple'je-ah, -plek'se-ah) [Gr. $\sigma\epsilon\lambda\eta\nu\eta$ moon + $\pi\lambda\eta\xi\iota$ s stroke]. A diseased condition once believed to be due to the influence of the moon's rays

self-abuse (self"ab-ūs"). Same as masturbation.

self-digestion (self"di-jes'chun). Same as autodigestion.

- self-fermentation (self-fer-men-ta'shun). See autolysis.
- **self-hypnosis** (self-hip-no'sis). Hypnosis by autosuggestion.
- self-infection (self"in-fek'shun). See auto-infec-
- self-limited (self-lim'it-ed). Limited by its own peculiarities, and not by outside influence: said of a disease that runs a definite limited course.
- self-pollution (self-pol-u'shun). Masturbation.
- self-suspension (self"sus-pen'shun) The suspension of the body by the head and axillæ (axillocephalic s.) or by the head (cephalic s.) for the purpose of stretching the vertebral column.
- sella turcica (sel'ah tur'sik-ah) [L. for "Turkish saddle"]. The pituitary fossa.
- sellanders (sel'an-derz). Same as mallanders.
- sellar (sel'ar). Pertaining to the sella turcica.
- **Sellards's test** (sel'ardz) [Andrew Watson Sellards, American physician, born 1884]. See under tests.
- Selters water, seltzer water (sel'ters, selts'er) See water.
- **Sem.** Abbreviation for L. se'men, seed.
- semeiography (sem-i-og'ra-fe) [Gr. σημείον sign + γράφη writing]. A description of the signs or symptoms of disease.
- semeiology (sem-i-ol'o-je) [Gr. σημεῖον sign +λόγος treatise]. Symptomatology.
- semeiotic (sem-i-ot'ik) [Gr. σημειωτικός]. 1. Pertaining to the signs or symptoms of disease. 2. Pathognomonic.
- semeiotics (sem-i-ot'iks). Same as symptomatology.
- **semelincident** (sem-el-in'sid-ent) [L. se'mel once + in'cidens falling upon]. Attacking a person only once.
- **Semen** (se'men), gen. sem'inis [L. for "seed"]. I. Any seed or seed-like fruit. 2. The thick, whitish, liquid, fecundating secretion produced by the testes and ejaculated in coition. It is composed of liquor seminis (a clear, limpid fluid), holding in suspension the spermatozoa, seminal and other granules, epithelial cells, and oil-globules. **S. con'tra.** Same as santonica.
- **semenuria** (se-men-u're-ah) [semen + Gr. olipov urine]. The presence of semen in the urine.
- **semi-** [L. se'mis half]. A prefix signifying half, or one-half.
- **semicanal** (sem"e-kan-al"). A trench or furrow open at one side.
- semicana'lis tenso'ris tym'pani. The canal in the temporal bone for the tensor tympani muscle. s. tu'bæ auditi'væ, the canal in the temporal bone for the eustachian tube.
- semicartilaginous (sem"e-kar-til-aj'in-us). Partly cartilaginous.
- **semicircular canal** (sem-e-sir'ku-lar). See canal and ear.
- semicoma (sem-e-ko'mah). A mild coma from which the patient may be aroused.
- **semicomatose** (sem-e-ko'mat-ōs). In a condition of semicoma.
- **semicretin** (sem-e-kre'tin). A person affected with a modified or incomplete form of cretinism.
- semicretinism (sem-e-kre'tin-izm). A relatively mild form of cretinism; partial cretinism with ability to appreciate the bodily wants and some knowledge and use of language.
- semicrista (sem-e-kris'tah). A small or rudimentary crest. s. incisi'va, the nasal crest.
- Semid. Abbreviation for L. semidrach'ma, half a dram.
- semidecussation (sem"e-de-kus-a'shun). r. An incomplete crossing of nerve-fibers. 2. The decussation of the pyramids.
- semidiagrammatic (sem"e-di-ah-gram-at'ik).
 Partly diagrammatic; modified so as to illustrate

- a principle, rather than to serve as an exact copy of nature.
- semiflexion (sem-e-flek'shun). The position of a limb midway between flexion and extension.
- semifluctuating (sem-e-fluk'tshu-a-ting). Giving a somewhat fluctuating sensation on palpation.
- semiglutin (sem-e-glu'tin). A substance, C55H85-N17O23, derived from gelatin and resembling a peptone.
- Semih. Abbreviation for L. semiho'ra, half an hour.
- semilunar (sem-e-lu'nar) [L. semiluna'ris; semi-half + lu'na moon]. Resembling a crescent, or half-moon. s. cartilages, two crescentic lamellæ of fbrocartilage of the knee-joint, serving to deepen the surface of the head of the tibia for articulation with the condyles of the femur.
- semilunare (sem"e-lu-na're) [L.]. The semilunar bone of the wrist; the second bone of the first row of carpal bones, counting from the thumb side.
- semiluxation (sem"e-luk-sa'shun). Same as subluxation.
- semimalignant (sem"e-mal-ig'nant). Somewhat malignant.
- semimembranosus (sem"e-mem-bran-o'sus) [L. se'mis half + membrano'sus membranous]. See muscles, table of.
- semimembranous (sem-e-mem'bran-us). Made up in part of membrane or fascia.
- seminal (sem'in-al) [L. semina'lis]. Pertaining to seed or to the semen.
- seminarcosis (sem''e-nar-ko'sis). See twilight sleep under sleep.
- seminase (sem'in-ās). A ferment found in alfalfa. semination (sem-in-a'shun) [L. semina'lio]. The introduction of semen into the vagina or uterus.
- **seminiferous** (sem-in-if'er-us) [L. se'men seed + fer're to bear]. Producing or conveying semen.
- seminoma (sem-in-o'mah) [semen + Gr. -ομα tumor]. A tumor arising from the spermatogonial cells.
- **seminormal** (sem-e-nor'mal). Of one-half the normal or standard strength.
- seminuria (sem-in-u're-ah) [L. se'men seed + Gr. οὖρον urine]. The discharge of semen in the urine. semiography (se-me-og'raf-e). Semeiography.
- semiology (se-me-ol'o-je). See semeiology.
- semiorbicular (sem"e-or-bik'u-lar). Semicircular. semiotic (se-mi-ot'ik). Semeiotic.
- semiparasite (sem-e-par'as-īt). An organism with
- moderate infestiousness for living tissue, such as the typhoid bacillus and cholera vibria.
- semipenniform (sem-e-pen'if-orm). Penniform on one side said of a muscle the fibers of which are attached to one side of the tendon.
- semipermeable (sem-e-per'me-a-bl). Permitting the passage of certain molecules and hindering that of others. See under membrane.
- semiplegia (sem-e-ple'je-ah). See hemiplegia.
- semipronation (sem"e-pro-na'shun).
 of bringing to a semiprone position.

 1. The act
 2. A semi-
- semiprone (sem-e-pron') [L. se'mis half + pro'nus prone]. Midway between pronation and supination.
- semirecumbent (sem"e-re-kum'bent). Reclining but not completely recumbent.
- semis (se'mis). Latin for half; abbreviated to ss.
- semisideratio, semisideration (sem-e-sid-er-a'-she-o, sem-e-sid-er-a'shun). Hemiplegia.
- semisomnus (sem-e-som'nus). Semicoma.
- semisopor (sem-e-so'por). Semicoma.
- semispeculum (sem-e-spek'u-lum). A blunt gorget shaped like a half-speculum: used in lithotomy.
- semispinalis (sem"e-spi-na'lis) [L.]. See muscles. table of.

semistarvation (sem"e-star-va'shun). The so called hunger-cure.

semisulous (sem-e-sul'kus) [L. so'mis half + sul'cus furrow]. A channel which, with an adjacent
and opposing one, forms a sulcus.

semisupination (sem"e-su-pin-a'shun). The act of bringing to a semisupine position; a semisupine position.

semisupine (sem"e-su-pin"). Same as semiprone. semitendinosus (sem"e-ten-din-o'sus). See musdes, table of.

semitendinous (sem-e-ten'din-us) [L. semitendino'sus]. In part composed of a tendinous structure. semitertian (sem-e-ter'shan). Partly tertian and

semitertian (sem-e-ter'shan). Partly tertian and partly quotidian.

semivalent (sem-iv'al-ent). Having one-half the power which is normal.

Semon's law, sign (se'monz) [Sir Felix Semon, German laryngologist in London, 1849-1921]. See low and sign.

semprolin (sem'pro-lin). A proprietary petroleum emulsion: used as a laxative.

senasal (sen'as-al). A cathartic preparation of senna and sodium phosphate.

senecin (sen'e-sin). 1. A concentration prepared from Sene'cio gra'cilis: tonic, diuretic, and emmenagogue; also a homeopathic preparation of the same plant. 2. A proprietary emmenagogue elixir prepared from Sene'cio jacoba'a. 3. An alkaloid said to be derivable from Sene'cio vulga'ris. 4. A concentration prepared from Sene'cio au'reus. Dose, 1-3 gr. (0.066-0.2 gm.).

Senecio (sen-e'she-o) [L. "old man"]. A genus of composite-flowered plants: many species are reputed to be tonic and diuretic. S. au'reus, the common ragwort, or life-root, is a diuretic and diaphoretic, expectorant, and tonic. Dose of fluid-extract, 30-60 min. (2-4 c.c.); of solid extract, 5-10 gr. (0.333-0.666 gm.).

senecionin (se-ne-se-o'nin). A crystalline alkaloid, C₁₈H₂₅NO₆, from certain species of Senecio.

senega (sen'e-gah) [L]. The root of Polyg'ala sen'ega, or seneca snakeroot, a plant of North America. It contains senegin and polygalin, and is expectorant and diuretic; in large doses emetic and purgative. It is used mainly in the later stages of pneumonia, asthma, catarrhal laryngitis, and bronchorrhea, and sometimes in dropsy as a hydragogue. Dose of abstract, 5-10 gr. (0.333-0.666 gm.); of fluidextract, 5-15 min. (0.333-1 c.c.); of syrup, 1-2 fl.dr. (4-8 c.c.); of tincture, 1 fl.dr. (4 c.c.).

senegin (sen'e-jin). The active principle of senega; a saponin. Dose, ½-1 gr. (0.016-0.66 gm.).

senescence (se-nes'ens) [L. senes'cere to grow old].

The process or condition of growing old.

senescent (sen-es'ent). Growing old.

seng (seng). A proprietary restorative medicine, said to be the active constituent of Asiatic ginseng.

senile (se'nīl) [L. seni'lis]. Of, or pertaining to, old age.

senilism (se'nil-izm). Premature old age.

senility (se-nil'it-e) [L. senil'itas]. Old age; the feebleness of body and mind incident to old age.

senium (se'ne-um). Old age; senility.

Senn's bone-plates (senz) [Nicholas Senn, American surgeon, 1844-1908]. Plates of decalcified bone, used in approximating and suturing a divided intestine. B's test. See under tests.

senna (sen'ah) [L. from Arabic]. The leaflets of Cas'sia acutifo'lia, C. angustifo'lia, and other leguminous plants of the same genus. Senna is a purgative cholagogue. Its active principle is said to be cathartic acid, an unstable glucosid: combined with ammonia it is a strong purgative, but the acid injected into the veins has no effect.

Senna is much employed in the constipation of children and pregnant women. Its action appears to be exerted upon all parts of the intestinal canal. In infusion with spigelia it is very serviceable against ascarides. As an aperient it is used to promote menstruation. It is an ingredient of black draft, Vienna draft, licorice powder, and many other laxative preparations. Dose in substance, 5-60 gr. (0.333-4 gm.); of confection, 1-2 dr. (4-8 gm.); of fluidextract, 1-4 fl.dr. (4-16 c.c.); of syrup, 1-2 fl.dr. (4-8 c.c.); of tincture, 1-4 fl.dr. (4-16 c.c.); of compound infusion, 4 fl.oz. (120 c.c.); of pul'vis glycyrrhi'zæ compos'itus, 30 gr. (2 gm.); of mistu'ra sen'næ compos'itus, 30 gr. (2 gm.)

sennatin (sen'at-in). An active principle extracted from senna: used subcutaneously as a cathartic. Dose, 2 gr. (0.12 gm.).

sennin (sen'nin) [after N. Senn]. A combination of phenol and iodin, employed as an antiseptic surgical dressing.

senopia (sen-o'pe-ah) [L. seni'lis pertaining to old age + opsis vision]. A change in the power of vision of old people by which they return to the sight of their youth. Called also gerontopia.

sensation (sen-sa'shun) [L. sensa'tio]. An impression conveyed by an afferent nerve to the sensorium commune. articular s., the sensation produced by the contact of moving joint surfaces. common s. (Gemeingefühl), the general feeling superinduced by the summation of all the bodily sensation (E. H. Weber, 1846). delayed s., a sensation which is not perceived until some time after the application of the stimulation. external s., objective s., the effect produced upon the mind by an external object through the medium of the senses. general s., a sensation felt throughout the body. girdle s., zonesthesia. internal s., subjective s., a sensation perceptible only to the subject himself, and not connected with any object external to his body. palmesthetic s. See palmesthetic sensibility, under sensibility. reflex s., referred s., a sensation felt on a place other than the point of application of the stimulus. strain s., a sensation as of a strain or straining. transferred s. Same as referred s.

sense (sens) [L. sen'sus; senti're to think]. A faculty by which the conditions or properties of things are perceived. Hunger, thirst, malaise, and pain are varieties of sense; a sense of equilibrium, of well-being (euphoria), and other senses are also distinguished. acid s., that power of the stomach to regulate the secretion of HCl in accordance with the needs of digestion. color-s., the faculty by which various colors are perceived and distinguished. **concomitant s.**, a secondary sensation, developed, without special stimulation, along with a primary sensation. **cutaneous s.**, sensation which is perceived at or on the skin, as touch, temperature, etc. dermal s., one of the senses of the skin, as of pressure, temperature, etc. genesic s., reproductive s., the instinct which leads to the act of procreation. kinesthetic s., t. muscular sense. light-s., the faculty by which we distinguish degrees of brilliancy. muscle s., muscular s., the faculty by which muscular movements are perceived. s.-organ, an organ which receives a stimulus and transforms it into a sensation. Sense-organs consist of nerve-cells (central s.-organs) and sensory nerve-endings (peripheral s.-organs), which, in the case of special senses, are highly specialized. posture-s., a variety of muscular sense by which we distinguish the position or attitudes of the body or its parts. pressure-s., the faculty by which we appreciate pressure upon the surface of the body. respiratory s. Same as besoin de respirer. s.-shock. See shock. sixth s., the general feeling of consciousness of the entire body; cenesthesis or coenæsthesis. space-s., that combination of the senses (chiefly of sight and touch) which gives us information as to the relative positions and relations of objects in space. special s., any one of the five senses of seeing, feeling, hearing, taste, and smell. stereognostic s., the sense by which form and solidity are perceived. temperature-s., the faculty by which a person is able to appreciate differences of temperature. time-s., the ability to appreciate time-intervals, especially in sound and in music. tone-s., the power of distinguishing one tone from another. visceral s., seventh s., the internal and subjective sensations supposed to appertain to the ganglionic portion of the nervous system.

sensibilatrice (sen-se-be-lat-rēs'). Same as amboceptor.

sensibiligen (sen-sib-il'ij-en). See sensibilisinogen.
sensibilin (sen-sib-il'in). A substance formed in the body as a reaction against the first injection of a protein in anaphylaxis. Called also anaphylactic reaction body and anaphylactin.

iensibilisin (sen-sib-il'is-in). Besredka's term for a specific antibody produced in the blood by a sensitizing injection. The sensitizing injection contains an active element (sensibilisinogen), which gives rise in the injected animal to sensibilisin. On injection of the same protein a reaction takes place between the sensibilisin and a third substance present in the protein and called antisensibilisin. See anaphylactic antibody, under antibody.

lensibilisinogen (sen"sib-il-is-in'o-jen). See under sensibilisin.

sensibility (sen-sib-il'it-e) [L. sensibil'itas]. Susceptibility of feeling; ability to feel or perceive.

bone s., pallesthesia deep s., the sensibility to pressure and movement which exists after the skin area is made completely anesthetic. epicritic s., the sensibility to gentle stimulations which furnishes the means for making fine discriminations of touch and temperature. This sensibility exists in the skin only. **mesoblastic s.** Same as deep s. palmesthetic s., the sensibility of the skin to sensations of vibration, as a tuning fork applied to the skin. protopathic s., the sensibility to strong stimulations of pain and temperature which is low in degree and poorly localized Such sensibility exists in the skin and in the viscera, and acts as a defensive agency against pathologic changes in the tissues. recurrent s., sensibility exhibited in the anterior root of a spinal nerve when the distal portion is stimulated after division. 80mesthetic s., bodily consciousness; the sensory consciousness of bodily movements, the sensibility of the somatic sensory receptors. splanchnesthetic s., the consciousness or sensibility dependent on the splanchnic receptors

ensibilization (sen-sib-il-iz-a'shun). I. The act of making more sensitive. 2. Same as sensitization.

ensibilizer (sen'sib-il-i-zer). Same as amboceptor. ensible (sen'sib-il). [L. sensib'üis]. Capable of sensation; perceptible to the senses.

ensiferous (sen-sif'er-us) [L. sen'sus sense + fer're to carry] Transmitting sensations.

ensigenous (sen-sij'en-us) [L. sen'sus sense + Gr. γεννᾶν to generate]. Producing sensory impulses.

ensitinogen (sen-sit-in'o-jen). A general term including all the antigens which have a sensitizing effect on the body or which produce a hypersusceptible condition, such as anaphylactogen, allergen, sensibilisinogen.

ensitive (sen'sit-iv) [L. sensiti'vus]. Able to receive or to transmit a sensation; capable of feeling or of responding to a sensation.

ensitization (sen-sit-i-za'shun). r. The process of rendering a cell sensitive to the action of a com-

plement by subjecting it to the action of a specific amboceptor. 2. Same as anaphylaxis. actives., the sensitization that results from the injection of a dose of antigen into the animal. passive s., the sensitization which results when some of the blood of a sensitized animal is injected into a normal animal protein s., that bodily state in which the individual is sensitive or hypersusceptible to some foreign protein, so that when there is absorption of that protein, a typical reaction is set up.

sensitized (sen'sit-izd). Rendered sensitive. s. vaccine. See under vaccine.

sensitizer (sen'sit-i-zer). Same as amboceptor.

sensitizin (sen-sit-i'zin). Same as anaphylactogen.

sensitometer (sen-sit-om'et-er). A set of sensitive photographic plates for testing the penetration of the body by light-rays.

sensomobile (sen-so-mo'bil). Moving in response to a stimulus.

sensomobility (sen"so-mo-bil'it-e). The capacity of man or animals for movement in response to a sensory stimulus.

sensomotor (sen-so-mo'tor). Both sensory and motor.

sensoparalysis (sen"so-par-al'is-is). Paralysis of the sensory or afferent nerves of a part.

sensorial (sen-so're-al) [L. sensoria'lis]. Pertaining to the sensorium.

sensoriglandular (sen"so-re-glan'du-lar). Producing glandular activity as one of the consequences of stimulation of the sensory nerves.

sensorimetabolism (sen"so-re-met-ab'o-lizm).

The production of some metabolic action as a result of stimulation of the sensory nerves.

sensorimotor (sen"so-re-mo'tor). Both sensory and motor.

sensorimuscular (sen"so-re-mus'ku-lar). Producing reflex muscular action in response to a sensory impression.

sensorium (sen-so're-um) [L. senti're to perceive]. Any sensory nerve-center; more frequently, the whole sensory apparatus of the body. s. commu'ne, that part of the cerebral cortex that receives and coordinates all the impressions sent to the individual nerve-centers.

sensorivascular (sen"so-re-vas'ku-lar) Producing vascular changes as a result of stimulation applied through the sensory nerves

sensorivasomotor (sen"so-re-vas-o-mo'tor). Same as sensorivascular.

sensory (sen'so-re) [L. senso'rius] Pertaining to or subserving sensation.

sensualism (sen'shu-al-izm) [L. sen'sus sense]. The condition of being dominated by bodily passions.

sentient (sen'she-ent) [L. sen'tiens]. Able to feel; sensitive; having sensation or feeling.

sentinel (sen'tin-el). A watcher or guard. s. gland. See under gland. s. pile. See under bile

sentisection (sen-te-sek'shun) [L. senti're to perceive + sec'tio to cut] Vivisection of an unanesthetized animal.

separator, separatory (sep'ar-a-tor, sep'ar-a-tore) [L. separa'tor]. A device for effecting a separation. In dentistry, an appliance for forcing adjoining teeth apart.

separatorium (sep"ar-a-to're-um). An instrument used in separating the pericranium from the subjacent bone.

sepedogenesis (sep"ed-o-jen'es-is). Sepedonogenesis.

sepedon (se-pe'don) [Gr.]. A septic condition: putridity.

sepedonogenesis (sep"e-do-no-jen'es-is) [sepedon + L. gen'esis production]. The production of septic conditions.

sepia (se'pe-ah) [L.; Gr. σηπία squid]. The inspissated inky juice of a cuttle-fish, or squid; also a homeopathic preparation of the same.

sepium (se'pe-um) [L.; Gr. σηπία cuttle-fish]. The bone of a cuttle-fish, Se'pia officina'lis.

sepsin (sep'sin) [Gr. σηψις decay]. A poisonous, crystallizable ptomain from decaying yeast and from animal matter.

sepsis (sep'sis) [Gr. σηψις decay]. Poisoning by the products of a putrefactive process. See septicemia. incarcerated s., an infection which is latent after the primary lesion has apparently healed, but which may be stirred into activity by a slight trauma. s. intestina'lis, poisoning from the eating of damaged food, such as canned meats, ice-cream, sausages, or cheese. s. len'ta, a condition produced by infection with the Streptococcus vir'idans. It is marked by slowly developing symptoms of a low infection ending in chronic endocarditis. oral s., a diseased condition in the mouth or adjacent parts which may affect the general health through the dissemination of toxins. puerperal s., sepsis occurring after childbirth, due to putrefactive matter absorbed from the parturient canal.

Sep'sis viola'cea. The common dung fly which may be found in houses.

sepsometer (sep-som'et-er) [Gr. σῆψις putrefaction + μέτρον measure]. An instrument for detecting organic matter in the air.

Sept. Abbreviation for L. sep'tem, seven.

septacrol (sep'tak-rol). A crystalline powder soluble in water. It is an addition product of silver nitrate and diamino-trimethyl-acridinium nitrate and contains about 24 per cent of silver

septal (sep'tal). Pertaining to the septum.

septan (sep'tan) [L. sep'tem seven]. Recurring every seventh (sixth) day.

septate (sep'tāt). Divided by a septum.

septatome (sep'tah-tōm). See septome.

septavalent (sep-tah'val-ent). Same as septivalent.

septectomy (sep-tek'to-me) [seplum + Gr. ἐκτομή excision]. Excision of a portion of the nasal septum.

septemia, septæmia (sep-te'me-ah). Same as septicemia.

septentrionalin (sep-ten"tre-o-na'lin). A poisonous alkaloid, C₈₈H₄₅N₂O₉, from Aconi'tum septentriona'le. It is a sensory paralyzant with anesthetic properties.

septic (sep'tik) [L. sep'ticus; Gr. σηπτικόs]. Produced by or due to putrefaction.

septicemia, septicæmia (sep-tis-e'me-ah) [Gr. σηπτικός putrid + alμa blood]. A morbid condition due to the presence of pathogenic bacteria and their associated poisons (toxins and toxalbumins) in the blood. It is accompanied by chills, profuse sweat, and irregularly remittent fever and great prostration. Called also septic infection and septicemia. apoplectiform s. of fowls, a septicemia of fowls marked by apoplectiform symptoms and caused by the Streptococ'cus gallina'rum. bronchopulmonary s., septicemia from the aspiration of infected wound secretions into the trachea in operations on the larynx. Bruce's s., Malta fever. cryptogenic s., septicemia in which the focus of infection is not evident during life fowl s., a disease of fowls caused by the Spiril'lum (Vib'rio) metschniko'vii, marked by diarrhea, hyperemia of the alimentary canal, and the presence of a blood-tinged yellowish liquid in the small intestine. s. hemorrhag'ica bubalo'rum. Same as bar-bone. hemorrhagic s., any one of a group of animal diseases caused by microorganisms of the genus Pasteurella and marked by hemorrhages, with local edema, infectious pleuropneumonia, and intestinal lesions; included in the group are hemorrhagic septicemia of cattle and of sheep, septic pleuropneumonia of calves, fowl

cholera, rabbit septicemia, and swine plague. lymphovenous s., infection of the deep cellular planes of the body. melitensis s., Malta fever. morphin-injector's s. See Whitmore's disease, under disease. mouse-s., an infectious disease of mice, due to Erysipelothrix (Bacillus) murisepticus. phlebitic s., pyemia. puerperal s., septicemia in which the focus of infection is a lesion of the mucous membrane received during childbirth. See sepsis, puerperal. rabbit-s., an infectious disease of rabbits due to the presence of Pasteurella cuniculicida and of methylguanidin, a toxin produced by that microbe. sputum-s., a form produced by inoculation of certain of the microorganisms of the sputum. typhoid s., general infection with typhoid bacillus. vibrio-s., the deadly septicemia produced by Vib'rio metschniko'vii.

septicemic (sep-tis-e'mik). Pertaining to, or of the nature of, septicemia.

septicidin (sep-tis-i'din). A proprietary serum for the treatment of swine-plague and chicken-cholera.

septicin (sep'tis-in). A ptomain, or compound of hexylamin and amylamin, from putrid flesh.

septicoemia, septicoemia (sep"tik-o-e'me-ah). Same as septicemia.

septicophlebitis (sep"tik-o-fle-bi'tis) [septic + phlebitis]. Inflammation of the veins, due to septic poisoning.

septicopyemia (sep"tik-o-pi-e'me-ah). Septice-mia and pyemia combined. cryptogenic s. See spontaneous s. metastatic s., a form marked by septic deposits in the lungs caused by embolism from putrid thrombi. spontaneous s., a variety developing without obvious cause or from a slight wound of the skin. Called also cryptogenic s.

septicopyemic (sep"tik-o-pi-e'mik). Pertaining to septicopyemia.

septicozymoid (sep"tik-o-zi'moid). A hypothetic substance supposed by some to supply the necessary feeding-ground for septic processes.

septiferous (sep-tif'er-us) [sepsis + L. fer're to carry]. Transmitting septic poisoning.

septigravida (sep-tig-rav'id-ah) [L. sep'tum seven + grav'ida pregnant]. A woman pregnant for the seventh time.

septile (sep'tīl). Of or pertaining to a septum.

septimetritis (sep"tim-e-tri'tis) [septic + metritis]. Septic inflammation of the uterus.

septipara (sep-tip'ah-rah) [L. sep'tem seven + par'ere to produce]. A woman who has borne seven children.

septivalent (sep-tiv'al-ent) [L. sep'tem seven + va'lens able]. Able to combine with or to replace seven hydrogen atoms.

septoforma (sep-to-for'mah). A condensation-product of formaldehyd with terpenes, naphthalenes, and members of the phenol group: used as a disinfectant for instruments, in 5 to 10 per cent. solution; as a wash for wounds, in 3 per cent. solution; and in various skin diseases in a 10 per cent. ointment.

septomarginal (sep-to-mar'jin-al). Pertaining to the margin of a septum.

septometer (sep-tom'et-er). I. [L. sæp'ium partition + me'irum measure.] An instrument for measuring the thickness of the nasal septum. 2. [Gr. σηπτός decayed + μέτρον measure.] Same as sepsometer.

septonasal (sep-to-na'zal). Pertaining to the nasal septum.

septosan (sep'to-san). A proprietary liquid disinfectant and antiseptic irritant.

septotome (sep'to-tôm) [septum + Gr. τομή a cutting]. An instrument for operating on the nasal septum.

septotomy (sep-tot'o-me). The operation of incising the nasal septum.

septulum (sep'tu-lum). A small septum. s. tes'tis, one of the trabeculæ of the testis.

septum (sep'tum), pl. sep'ta [L. sæp'tum septum]. A dividing wall or partition. s. alve'oli, one of the thin plates of bone separating the alveoli of the jaw. s. atrio'rum [B N A], s. auricula'rum, the wall that separates the auricles of the heart. **Bigelow's s.**, a layer of hard, bony tissue in the neck of the femur. **bronchial s.**, s. bronchia'le, a projection into the bronchial tube at its bifurcation. s. bul'bi ure'three [B N A], the fibrous septum dividing the interior of the bulb of the urethra. s. cana'lis musculotuba'rii [B N A], the cochleariform process. s. cartilag-in eum [B N A], the plate of cartilage forming the anterior part of the nasal septum. **8. cervica/le** interme'dium [B N A], the membrane joining the cervical spinal arachnoid and dura mater in the middle line. Cloquet's s., the septum crurale internum. crural s., the layer that closes the femoral ring. Douglas's s., the septum formed by the union of Rathke's folds, forming the rectum of the fetus. s. femora'le [B N A], the crural septum. **gingival s.**, **gum s.**, the part of the gum which occupies the interproximal spaces **s.** glan'dis [B N A], the fibrous septum of the glans penis hemal s., a structure of animals which in man is represented by the linea alba and the transversalis, iliac, and rectovesical fasciæ. S. interalveola're, one of the partitions between the tooth-sockets. interauricular s. Same as s. atriorum. intermuscular s., the sheaths of aponeurosis separating some of the muscles of the extremities. interradical s., the bony septum between the roots of multirooted teeth. intraventricular s. Same as s. ventriculorum. s. lin'guse [B N A], the median vertical fibrous part of the tongue. s. luci'dum. 1. The partition between the lateral ventricles of the brain. 2. The stratum corneum of the epidermis. membranous s., the membranous portion of the nasal septum. nasal s., the boundary between the two nasal cavities. neural s., a prolongation, chiefly in the lower vertebrates, of the general investing fascia, extending medially from the surface toward the skeleton. In man it is represented by the ligamentum nuchæ and the supraspinous and interspinous ligaments. 8. orbita'le [B N A], the anterior protecting wall of the eyeball, composed of the tarsi, the canthal ligaments, and the tarso-orbital fascia. s. pectinifor'me, the partition which separates the corpora cavernosa of the penis. **pellucid s.**, the septum lucidum. **s. pe'nis** [B N A], the tunica alba lying between the corpora cavernosa of the penis. **pharyngeal s.**, the partition which separates the mouth cavity from the pharynx in the embryo. s. pon'tis, the septum of the pons varolii. s. posti'cum, the membranous septum which extends from the arachnoid to the pia, opposite the dorsal fissure of the spinal cord. rectovaginal s., the wall which separates the rectum from the vagina. s. scro'ti [B N A], the partition formed by the dartos, which divides the scrotum and separates the testes. **s. sin'uum fronta'le** [B N A], the bony septum between the two frontal sinuses. s. sphenoida'le, the mesial partition between the sphenoid sinuses. s. spu'rium, a ridge on the roof of the atrium of the embryonic heart. subarachnoidal s., the septum pos-ticum. s. transver'sum, the ridge in the ampulla of the semicircular canal which bears the crista acustica. **s. tu'bæ**, the cochleariform process. **s. ventriculo'rum** [B N A], the partition between the ventricles of the heart.

septuplet (sep'tu-plet) [L. sep'tuplum a group of seven]. Any one of seven children born at a birth.

Seq. luce. Abbreviation for L. sequen'ti lu'ce, the following day.

sequardin (se-kwar'din) [after Brown-Séquard]. A proprietary sterilized testicular extract.

sequel (se'kwel). Sequela.

sequela (se-kwe'lah), pl. seque'læ [L.]. Any lesion or affection following and caused by an attack of disease.

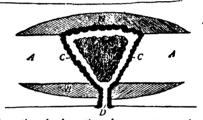

sequester (se-kwes'ter) [L.]. Same as sequestrum. sequestral (se-kwes'tral). Pertaining to or of the nature of a sequestrum

sequestration (se-kwes-tra'shun) [L. sequestra'-tio]. 1. The formation of a sequestrum. 2. The isolation of a patient. 3. The shutting off of a portion of the blood from the general circulation by means of bands about the thighs and arms, for the purpose of reducing hemorrhage in operations on the head or trunk.

sequestrectomy (se-kwes-trek'to-me) [L. seques'-trum + Gr. ἐκτομή excision]. The surgical removal of a sequestrum.

sequestrotomy (se-kwes-trot'o-me) [sequestrum + Gr. τέμνειν to cut]. The surgical removal of necrosed bone.

sequestrum (se-kwes'trum), pl. seques'tra [L.]. A piece of dead bone that has become separated during the process of necrosis from the sound bone. s. forceps, a forceps for removing a se-

Illustrating the formation of a sequestrum: A, A, Sound bone; B, B, new bone; C, C, granulations lining involucrum; D, cloaca; E, sequestrum. (DaCosta.)

questrum. **primary s.**, a sequestrum that is entirely detached. **secondary s.**, a sequestrum that is partially detached and may be pushed into place. **tertiary s.**, a sequestrum that is only cracked, and remains in its place.

sera (se'rah). Plural of serum.

seralbumin (se-ral-bu'min). Serum-albumin: the albumin of the blood.

serangitis (se-ran-ji'tis) [Gr. σήραγξ cavern + -ιτις inflammation]. Same as cavernitis.

seraphtin (se-raf'tin). A trade name for a serum said to be curative and prophylactic in hoof-and-mouth disease.

serempion (se-rem'pe-on). A fatal form of measles occurring in the West Indies.

Serenoa (ser-e-no'ah) [after Sereno Watson]. A genus of palms. S. serrula'ta is the saw-palmetto or sabal of the southern United States. A fluidextract of the berries is diuretic, expectorant, and aphrodisiac used in diseases of the prostate and bladder. The medicinal virtues of the drug are said to reside in its various oils. Dose of fluidextract, 30-120 min. (2-8 c.c.); of extract, 5-10 gr. (0.333-0.666 gm.).

serglobulin (sēr-glob'u-lin). See paraglobulin.

serial (se're-al). Arranged in or forming a series.

séribele (ser-e-bel'e). The seeds and root-bark of Con'narus africa'nus? used to expel tapeworm. Dose, 2 fl.oz. (60 c.c.) in decoction.

sericeps (ser'is-eps) [L. ser'icus silken + ca'put head]. A silken bag used in making traction on the fetal head.

sericfa (ser'is-in). Silk-glue or silk-gelatin; a protein, $C_{18}H_{28}N_5O_3$, derivable from silk.

sericum (ser'ik-um) [L.; Gr. σηρικόs silken]. Silk; a product of various insect-larvæ, but chiefly of Bom'byx mo'ri, the silk-worm: used in surgery.

1062

- series (se're-ēz) [L. "row"]. A group or succession of objects or substances arranged in regular order or forming a kind of chain. aliphatic s. See aliphatic. aromatic s., the compounds derived from benzene. fatty s., methane and its derivatives and the homologous hydrocarbons. homologous s., a series of compounds each member of which differs from the one preceding it by the radical CH₂.
- seriflux (ser'if-luks) [L. se'rum whey + flux'us flow]. A thin, watery discharge.
- serin (se'rin). 1. A white, crystalline amino-acid, alpha-amino-beta-hydroxy-propionic acid, OH.CHNH₂.COOH, obtained by boiling sericin with dilute sulphuric acid (Emil Fischer, 1902) It is also obtainable from horn by hydrolysis. 2. Serum-albumin.
- seriscission (ser-is-sizh'un) [L. ser'icum silk scin'dere to cut]. The cutting of soft tissues by means of a silken ligature.
- Serjania (ser-ja'ne-ah). A genus of tropical trees, some of them poisonous. S. letha'lis grows in Brazil; from it a native bee collects an exceedingly poisonous honey.
- sero-albuminuria (se"ro-al-bu-min-u"re-ah). The presence in the urine of serum-albumin.
- **sero-anaphylaxis** (se"ro-an-af-il-aks'is). Anaphylaxis produced by the use of blood-serum.
- serobacterin (se-ro-bak'ter-in). A sensitized vaccine; an emulsion of a bacterium which has been treated by the application of the corresponding immune serum. See under vaccine.
- **serochrome** (se'ro-krōm) [serum + Gr. χρώμα The coloring-matter of normal serum.
- serocolitis (se"ro-ko-lit"is) [serous + colitis]. Inflammation of the serous surface of the colon.
- seroculture (se'ro-kul-tshur). A bacterial culture on blood-serum.
- serocym (se'ro-sim). The designation of the fresh normal blood-plasma used in Hirschfeld and Klinger's coagulo-reaction
- serocystic (se-ro-sis'tik). Made up of serous cysts seroden (se'ro-den). A colloidal combination of iodin with serum proteins.
- serodermatosis (se"ro-der-mat-o'sis). A skin disease with serous effusion into the skin.
- serodiagnosis (se"ro-di-ag-no'sis). Diagnosis made by means of reactions taking place in the blood-serum. See serum diagnosis, under diagnosis.
- sero-enteritis (se"ro-en-ter-i'tis). Inflammation of the serous coat of the intestine.
- sero-enzyme (se-ro-en'zīm). An enzyme or ferment existing in the blood-serum.
- **serofibrinous** (se-ro-fib'rin-us). Both serous and fibrinous.
- serofibrous (se-ro-fibrus). Pertaining to serous and fibrous surfaces; as, serofibrous apposition.
- serofluid (se-ro-flu'id). A serous fluid.
- seroformalin (se-ro-for'mal-in). An antiseptic dusting-powder composed of blood-serum coagulated, dried, and mixed with formalin.
- serohemorrhagic (se"ro-hem-o-raj'ik). terized by serum and blood.
- serohepatitis (se"ro-hep-at-i'tis) [serous + hepatitis]. Inflammation of the peritoneal coat which covers the liver.
- sero-immunity (se"ro-im-u'nit-e). Immunity produced by antiserum.
- serolactescent (se"ro-lak-tes'ent). Resembling serum and milk.
- serolemma (se-ro-lem'ah) [serous + Gr. λέμμα sheath]. The membrane from which the false amnion is developed.
- serolin (se'ro-lin) [L. se'rum serum + o'leum oil]. A crystallizable compound from the serum of the blood.
- serolipase (se-ro-li'pas). Lipase from blood-serum.

- serologic, serological (se-ro-loj'ik, se-ro-loj'ik-al). Pertaining to sera and the study of sera.
- serologist (se-rol'o-jist). One who is an expert in serum diagnosis.
- **serology** (se-rol'o-je) [serum + Gr. λόγος treatise]. The study of sera and their actions.
- seromembranous (se-ro-mem'bran-us). Both serous and membranous; composed of serous membrane.
- seromucoid (se-ro-mu'koid). A substance sometimes found in urine.
- seromucous (se-ro-mu'kus). Partly serous and partly mucous.
- seromuscular (se-ro-mus'ku-lar). Pertainin the serous and muscular coats of the intestine. Pertaining to
- eronol (se'ro-nol) A preparation for influenza containing guaiacol, eucalyptol, and camphor in sterilized olive oil: injected daily into the gluteal seronol (se'ro-nol) muscles for five or six days.
- seroots (se-roots'). Tabanid flies.
- seroperitoneum (se"ro-per-it-o-ne'um). The presence of free fluid in the peritoneum; ascites.
- serophthi'sis pernicio'sa endem'ica. Beriberi.
- serophysiology (se"ro-fiz-e-ol'o-je). The study of the physiologic mechanism of serum action.
- **serophyte** (se'ro-fit) [serum + Gr φύτον plant]. A micro-organism which grows readily in the body fluids.
- seroplastic (se-ro-plas'tik). Same as serofibrinous.
- seropneumothorax (se"ro-nu-mo-tho raks). Pneumothorax with a serous effusion in the pleural cavity.
- seroprevention (se"ro-pre-ven'shun). actic injection of serum.
- seroprognosis (se"ro-prog-no'sis). The prognosis of a disease by study of its seroreactions.
- seroprophylaxis (se"ro-pro-fil-ak'sis). The injection of convalescent serum into persons who have been exposed to infection; done as a prophylactic measure.
- seropurulent (se-ro-pu'ru-lent). Both serous and purulent.
- seropus (se-ro-pus'). Serum mingled with pus.
- seroreaction (se-ro-re-ak'shun). A reaction occurring in a serum or as a result of the action of a serum. Cf. fixation of the complement. Klausner's s. See Klausner's reaction, under reaction.
- serosa (se-ro'sah). Any serous membrane.
- serosamucin (sc-ro-sah-mu'sin). A protein resembling mucin, found in inflammatory ascitic exudates.
- serosanguineous (se"ro-sang-win'e-us). Pertaining to or containing both serum and blood.
- serosaprophyte (se"ro-sap'ro-fit). A micro-organism which thrives in the body fluids only when they have become degenerated.
- **seroscopy** (se-ros'ko-pe) [serum + Gr. σκοπεῖν to examine]. Diagnostic examination of serum with the agglutinoscope.
- serose (se'rōs). An albumose obtained from serumalbumin.
- seroserous (se-ro-se'rus) Pertaining to two or more serous membranes.
- serosine (ser'o-sin). A proprietary antiseptic, antipyretic, and sedative preparation.
- serositides (se-ro-si'tid-ez) Plural of serositis.
- membrane. multiple s., polyorrhomeningitis.
- serosity (se-ros'it-e). The quality possessed by serous fluids.
- serosynovial (se"ro-si-no've-al). Both serous and synovial.
- serosynovitis (se"ro-sin-o-vi'tis). Synovitis with effusion of serum.

serotaxis (se-ro-taks'is) [serum + Gr. τάξις arrangement]. The determination of the blood-serum toward the skin in diagnosis by the application of caustic potash in solution, so as to bring pathogenic germs to the skin.

serotherapeutic (se"ro-ther-ap-u'tik). Pertaining to serotherapy.

serotherapist (se-ro-ther'ap-ist). One who treats disease by serotherapy.

serotherapy (se-ro-ther'ap-e) [serum + Gr. $\theta \epsilon \rho a - \pi \epsilon l a$ treatment]. I. Whey-cure. 2. Passive immunization for protective or curative purposes by the injection of the blood-sera of animals that have been actively immunized by inoculation with the bacteria or the bacterial toxins of the disease.

serothorax (se-ro-tho'rax). Hydrothorax.

serotina (se-rot'in-ah) [L. "late"]. Same as decidua serotina.

serotoxin (se-ro-toks'in). A toxin formed in and from blood-serum when the latter is treated with kaolin, barium sulphate, or in other ways.

serous (se'rus) [L. sero'sus]. 1. Pertaining to or resembling serum. 2. Producing or containing serum. 8. inflammation, inflammation in which the exudate is of a serous nature, also inflammation of a serous membrane. 8. membrane, the membrane lining one of the large lymph-spaces of the body. It is composed of a basement-membrane located upon ordinary connective tissue, and bearing a single layer of endothelial cells. A serous membrane consists of two layers forming a closed sac—the parietal portion, lining the wall of the cavity, and the visceral portion, covering the viscera contained in it. See membrane.

serovaccination (se-ro-vak-sin-a'shun). Injection of serum combined with vaccination to produce passive immunity by the former and active immunity by the latter.

Serozym, serozyme (se'ro-zim) [L. se'rum + Gr. $\zeta \dot{\nu} \mu \eta$ yeast]. Bordet's name for the prothrombin present in the blood-serum, his view being that thrombin is formed by a union of serozyme and cytozyme. The serozyme exists in an inactive form, proserozyme, which is converted by the calcium of the blood into serozyme.

Berpentaria (ser-pen-ta're-ah) [L. ser'pens snake]. The rhizome and roots of Aristolo'chia serpenta'rıa, Virginia snakeroot, and A. reticula'ta, or Texas snake-root, herbs of North America. Serpentaria is tonic, diaphoretic, and diuretic, and is used as a stimulant in typhoid fever and typhoid pneumonia, as a digestive tonic, and in cruptive fevers Dose of fluidextract, 10-30 min. (0.666-2 c.c.), of tincture, ½-2 fl.dr. (2-8 c.c.); of infusion, I floz. (30 c.c.); of tinctu'ra cincho'næ compos'ita, I fl dr. (4 c.c.).

serpiginous (ser-pij'in-us) [L. ser'pere to creep]. Creeping from part to part.

serpigo (ser-pi'go) [L. ser'pere to creep]. Any creeping eruption; tinea or herpes.

serpolet (ser'po-let) [L. serpyl'lum thyme]. A kind of camphory oil from Thy'mus serpyl'lum, used mainly in perfumery; also the plant which produces it; wild thyme.

serpyllum (ser-pil'um). Latin for thyme.

serrago (ser'a-go), gen. serra'ginis [L.]. Saw-dust. It has a limited use in surgical dressings.

serrate, serrated (ser'at, ser'a-ted) [L. serra'tus, from ser'ra saw]. Having a saw-like edge.

Serratia (ser-a'she-ah). A genus of the Bacteriaceæ. They are saprophytic and produce a red or pink pigment. S. marces'cens, Erythrobacillus (Baccillus) prodigiosus; a common well-known organism producing a bright red pigment.

serration (ser-a'shun) [L. serra'tio]. 1. A structure or formation with teeth like those of a saw.
2. A notch like one between two teeth of a saw.

sorratus (ser-a'tus). See muscles, table of.

serrefine (sār-fēn') [Fr.]. A small spring-forceps for compressing bleeding vessels.

serrenœud (sār-nud') [Fr. ser'rer to press + næud knot]. An instrument used in surgery for tight-ening ligatures.

Serres's angle, glands (sarz) [Etienne Renaud Augustin Serres, French physiologist, 1786–1868]. See angle and gland.

serrulate (ser'u-lāt) [L. serrula'tus]. Marked or bordered with small serrations or projections.

Sertoli's cell, column (ser-to'lez) [Enrico Sertoli, Italian histologist]. See cell and column.

serum (se'rum), pl. se'ra [L. "whey"]. 1. The clear portion of any animal liquid separated from its more solid elements; especially the clear liquid (blood-s.) which separates in the clotting of blood 2. Blood-serum from the clot and the corpuscles. from animals that have been inoculated with bacteria or their toxins. Such serum, when introduced into the body, produces passive immunization by virtue of the antibodies which it contains. 3. See blood-serum. Abderhalden's cancer s., a blood-serum from an animal which has been injected with cancer fluid and has thus developed protective ferments. Such serum has been used in treating patients with cancer. Adamkiewicz's s., cancroin. adapted s., a serum resulting from immunization. adrenal s., a serum to which has been added an extract from the adrenal gland of an animal. Such a serum has a toxic effect upon the adrenal glands of animals of the species from which the extract was made. s.-albumin. See allergic s., a serum which produces hypersensitiveness (anaphylaxis) to serum injections. anallergic s., a serum which does not produce hypersensitiveness (anaphylaxis) to serum injections. antagonistic s., treatment of a disease by the injection of serum of some antagonistic disease; as the treatment of patients having myxedema with serum from patients with exophthalmic goiter. anti-amarillic s., an animal serum recommended for use in treating yellow fever. anti-anthrax s., an antitoxic serum prepared by the inoculation of bouillon cultures of virulent anthrax. anti-blastomycetic s., serum from birds inoculated with blastomycetes of cancer, proposed for protective inoculation against the blastomycetes of carcinoma. antibothropic s., serum used to produce immunization against the bites of rattlesnakes. anticancerous s. a serum for use in treating cancer. It is obtained from an animal which has been injected with some preparation of cancerous tissue. anticholera s., a serum made by injecting horses with killed or (and) live cultures of the Vibrio choleræ, or with toxins or with other products of the germs. Krous's s. anticoagulative s., a serum which prevents the coagulation of serum. anticomplementary s., a serum which interferes with or destroys the activity of complement. anti-crotalus s., an antivenomous serum which is protective against the poison of the rattlesnake. anticytotoxic s., an immune blood-serum which neutralizes the activity of a cytotoxic serum. antidiphtheric s. 1. See diphtheria antitoxin, under antitoxin. 2. A serum produced by injecting an animal with killed or living diphtheria germs, or with both. It is used therapeutically to inhibit or kill the diphtheria germs rather than to neutralize the diphtheria toxin. antidysenteric s., a serum from horses immunized against the dysentery bacterium or its toxin, or both. epithelial s. Same as epitheliolysin. antiantigonococcus s., a serum from goats immunized against the gonococcus. antigourmeaux s., a serum for the treatment of strangles. anti-hepatic s., serum of an animal into which has been injected liver matter from another animal. anti-This serum is destructive to the liver of the animal of the species from which the injected matter was

anti-influenza s., blood-serum from goats or horses which have been injected first with non-virulent and then with virulent influenza organisms. antileprous s., a serum for the treatment of leprosy. antimeningococcus s.. a polyvalent serum prepared by injecting first an autolysate of the strains and later living cultures (method of Flexner and Jobling). antimorphin 8., a serum obtained from animals that have been injected with increasing doses of morphin. antiophidic s. [Ophidia, an order of reptiles including serpents], serum which combats the poison of snakes. antipancreatic s., serum of an animal into which has been injected pancreatic extract from another animal. This serum is destructive to the pancreas of the animal of the species from which the extract was taken. antiparamœcious s., a serum resulting from immunization with paramœcium, a protozoan organism. antiper-tussis s., blood-serum from patients convalescent from pertussis antipest s. See antiplague serum. antiphagocytic s., a serum which destroys phagocytes. antiplague s., a serum obtained from animals which have been repeat edly injected with killed or living plague germs Offeifferella pestis), or with both, or with some preparation of the germs. antiplatelet s., a serum which dissolves blood-platelets, obtained by repeatedly injecting a rabbit with guinea-pig platelets. antipneumococcus s., a serum found in the blood of horses which have been injected with pneumococci. The Type I serum is particularly valuable therapeutically. antisarcomatous s., serum from an animal into which sarcoma tissue has been injected: said to be useful to prevent the growth of sarcoma. antiscarlatinal s. See Moser's s. antispermotoxic s. See antispermotoxin. antistaphylococcus s., a serum thought to be curative of staphylococcus infection. antistreptococcus 8., a scrum obtained from the blood of animals which have been injected with killed or living streptococci or with both. It is used in treating various streptococcic infections. antitetanic s. streptococcic infections. antitetanic s. See tetanus antitoxin. antithyroid s., a serum obtained by immunizing animals with thyroid cells or with their nucleoproteins. antitoxic s., a serum which contains the antitoxin of a pathogenic organism. antitubercle s., a serum prepared by injecting an animal with killed or with living by injecting an animal with kined of with living tubercle germs (Mycobacterium tuberculosis) or with both or with a preparation of the germs. antityphoid s., a serum derived from horses which have been injected with filtered bouillon cultures of Bacterium typhosum for several years and with the typhoid germs. It is used in the treatment of typhoid fever. antivenomous s. a serum used as a remedy for snake-bite, prepared from the blood of horses or asses which have been immunized against the venom of serpents. Called also Calmette's s. antivirilic s., a serum which contains antivirulin. Aronson's s., an antistreptococcus serum artificial s., a solution containing albumin, salts, etc.: used in intravenous and in traperitoneal injections. autosalvarsanized s. See salvarsanized s, bacteriolytic s., a serum which contains the bacteriolysin of a microörganism Bardel's s., a mixture of sodium chlorid, phenol, sodium phosphate, sodium sulphate, and water. **Beebe's s.**, a serum obtained from the blood of thyroidectomized animals: used in conditions of thyroid hyperactivity. Behring's s., a serum against diphtheria. blister s., the fluid found in a blister. It is sometimes injected back into the patient in non-specific protein therapy. Blondel's s., the serum of fresh milk, prepared by filtration after coagulation and neutralization. blood s., the clear, usually amber-colored, fluid which separates when blood clots. It contains neither fibrin nor corpuscles. See also blood-serum. Bruschettini's s., an antituberculosis serum-vaccine prepared by mixing with a bacterial vaccine a serum obtained by immunizing animals

with increasing quantities of endotoxins secured b producing a pleural exudate in rabbits through ir jections of aleuronat and tubercle bacilli. and Pritchett's s., an antitoxic serum for gas bacillus infection. Calmette's s. See anti venomous s. cancer-s., a serum for the treat ment of cancer, prepared in the same way a diphtheria antitoxin. Carrasquilla's s., a antileprous serum of little therapeutic value Catani's s., sodium chlorid, 4 parts; sodium carbonate, 2 parts; and boiled distilled water, 100 parts; for injection in infectious diseases. Chan temesse's s. See antityphoid serum. Cheron' 8., crystalline phenol, I part; sodium chlorid, parts; sodium phosphate, 4 parts; sodium sulphate 8 parts; boiled distilled water, 100 parts: for ir jection in infectious diseases. convalescent s. blood-serum from a patient who is convalescent in feature and account in the state of the serum is used a convenience. from an infectious disease: such a serum is used a a prophylactic injection in such diseases as measle: scarlet fever, whooping-cough, etc. Crocq's s. sodium phosphate, 2 parts: boiled distilled water 100 parts: for injection in infectious disease: Cuguillere's s., an antituberculosis preparatio of allyl sulphid, I gm.; tincture of myrrh, I c.c and Hayem's glycerinated serum, 100 c.c. cyto tropic s., a serum rendering cells ingestible b phagocytes. **Deutschmann's s.**, a serum of tained from horses injected with increasing dose of sterile yeast: used by injection in various infer tious diseases. Dose, 30-60 min. (2-4 c.c. Dochez's s., an antiscarlatinal serum obtaine by immunizing horses with a culture of Strepte coccus hemolyticus. Dopter's s., a serum effec tive against the parameningococcus. **Dorset Niles s.**, a serum for immunizing against hog
cholera. **double s.**, a mixture of immune ser from horses and cattle, believed to furnish a greate variety of specific amboceptors than a serum from either animal alone. **Doyen's s.**, a serum from cows whose udders have been inoculated wit *Micrococ'cus neofor'mans*: used in cancer. **Du** jardin-Beaumetz s., a solution containing potassium carbonate and sulphate, sodium chloric lactate, and phosphate **Dunbar's s.**, an ant toxin from the pollen of rag-weed, golden rod, rye etc.: used in the treatment of hay-fever. merich-Scholl s., a serum for cancer, obtaine from the blood of sheep which have been inoculate with streptococci cultures derived from inoculate rabbits. **endotheliolytic s.**, serum whic destroys endothelial cells. It is obtained fror the blood of animals immunized with endothelia Flexner's s., an antidiplococcus serur used in the treatment of cerebrospinal meningiti by injection into the spinal canal. foreign s. serum from an animal to be injected into one of another species. Gabritschewsky's s., a antiscarlatinal serum. gastrotoxic s., a serum toxic to the gastric mucous membrane. s. globulin. Same as paraglobulin. glycerin s. blood-serum which contains 5 per cent. of glycerin used as a culture medium for tubercle bacill **Haffkine's s.**, not a serum. See Haffkine's vaccine, under vaccine. **Hayem's s.**, sodium chloric 5 parts; sodium sulphate, r part; distilled an boiled water, 1000 parts: for injection in infectiou diseases. heterologous s., a serum derived from an animal of another species. **Hoffmann's 8**. epitheliolysin. **hog-cholera 8.**, hogs havin some immunity either from having recovered from an attack of the disease or as a result of an injection of hog-cholera serum, are injected severa times intravenously at intervals of three to fou weeks with infectious blood from a hog sick witl hog-cholera. The serum of such hyperimmun hogs is used both in the prevention and in the cur of hog-cholera. horse s., serum obtained fror the blood of horses; it may be normal serum o immune serum. Howell's s., a solution of sc dium chlorid and bicarbonate, calcium chlorid, an potassium chlorid. Huchard's s., a solution i 100 c.c. of distilled water; sodium phosphate, 1

gm.; sodium cn.orid, 5 gm.; and sodium sulphate, 2.5 gm. immune s., a serum containing one or more antibodies; especially one in which the antibody content has been increased by recovery from its specific infection or by injection with its specific antigen. **inactive s.**, a serum which has been treated until its activity has been destroyed: it is injected to aid in the elimination of toxic material. **inorganic s.** See *Trunecek's s.* **isotonic s.**, serum which contains enough saline matter to preserve the red corpuscles. jequiritol s., an antitoxin that corrects the effects of jequiritol. Jonsell's s., an antituberculosis serum obtained by injecting horses intravenously or subcutaneously with frequently increasing doses of human bacilli of attenuated virulence. Kitasató's s., an anticholera serum. Kolle's s., a serum used in treating cerebrospinal meningitis. Kraus's s., a serum for treating cholera prepared by immunizing horses with a toxin derived from a vibrio isolated from patients dying from a cholera-like infection Kronecker and Lichtenstein's s., sodium chlorid, 6 or 7 parts; sodium carbonate, o 1 part; water, 1000 parts; for injection in infectious diseases. s. lac'tis, the whey of milk. Latta's s., sodium chlorid, to parts; builed 3 to 5 parts; sodium carbonate, 1.7 parts; boiled distilled water, 3 to 4 parts: for injection in infectious diseases. Leclainche-Vallée s., a polyvalent serum derived from horses inoculated with several varieties of staphylococcus, streptococcus, Bacillus coli, pyocyaneus, Bacillus proteus, Vibrio septicus, and Bacillus aerogenes: used in the treatment of wound infections and septicemia. Leclerc's s., sodium chlorid, 40 parts; sodium phosphate, 4 parts; boiled distilled water, 1000 parts: for injection in infectious diseases. leukocygenic s., horse-serum treated so as to render it stable: said to cause marked migration of leukocytes to the site of injection and used in treating infected wounds. **leukocytolytic s.**, serum that destroys leukocytes; it is from the blood of animals immunized with leukocytes. **leuko** toxic s., a serum that destroys leukocytes. Leyden's s., blood-serum from patients recovering from scarlet fever. Löffler's s. See Löffler's blood-serum, under blood-serum. Lustig's s., a serum obtained from horses which have been immunized with Lustig and Galeotti's vaccine, q. v., under vaccine. s.-lutein, the lipochrome, or yellow coloring-matter of serum. Luton's s., crystalline sodium phosphate, 4 parts; sodium sulphate, 10 parts, boiled distilled water, 100 parts: for injection in infectious diseases. lymphatolytic s., serum which destroys lymphatic tissues, such as the spleen and lymph-glands. Maragliano's s., an antitubercle serum prepared by injecting animals with unheated products of the tubercle bacilli. marine s., a mixture of sea-water 83 parts with 190 parts of spring water for hypodermic injection. Marmorek's s., a serum obtained by injecting animals with young cultures of tubercle germs which have been grown on a leukotoxic serum and then with strains of streptococci obtained from tuberculous patients. Mat-hieu's s., a solution containing 6 gm. of sodium sulphate, 4 gm. of sodium phosphate, 1 gm. of sodium chlorid, 20 c c. of glycerol, in 100 c.c. of distilled water. Menzer's s., a serum for treating rheumatic fever; it is obtained by in-oculating horses with living cultures derived from human cases. **mercurialized 8.**, a solu-tion of mercuric chlorid in normal horse serum diluted with physiologic salt solution for intravenous or intraspinal injection. Merz's s. A preparation containing hamamelis extract in tubes for use in hemorrhoids. 2. Veraserol. Morpinami's s. See scarlatin. Moser's s., antistreptococcus serum produced by inoculating horses with several kinds of streptococci from the blood of scarlet-fever patients. motile s., an immune serum containing flagellar agglutinins. multipartial s., polyvalent serum. muscle-s.,

muscle plasma deprived of its myosin. nephrolytic s., a serum which has a specific destructive effect on kidney tissue. nephrotoxic s., a serum having a specific toxic effect on the kidney. It is produced by treating serum with an emulsion of kidney substance from an animal, the serum being toxic for animals of the same species. neuro-lytic s., neurotoxic s., a serum which exerts a specific toxic action on the brain and spinal cord. It is produced by treating serum with emulsion of brain and cord of an animal, the serum being toxic for animals of the species. normal s. 1. Serum from a normal untreated animal. It is used in treating bleeding in hemophiliac and melena cases and in non-specific protein therapy. 2. Serum of which o.1 c.c. will neutent therapy. 2. Sertin of which off c.c. win heu-tralize ten times the minimal lethal dose of a definite bacteria toxin. **Pane's s.**, antipneu-mococcic serum. **Paquin's s.**, a tuberculous serum obtained by successive inoculation of horses. **Parascandolo's s.**, a serum obtained by inoculation of an animal with mixed cultures of staphylococci and streptococci. **s.-paste**, a preparation of serum of ox-blood and zinc When painted over denuded surfaces, it dries, leaving a protective film. **petit s.**, a non-sensitizing, non-toxic, but vaccinating substance derived from serum by mixing with 2 parts of 90 per cent. alcohol, treating the resulting precipitate with physiologic salt solution, and filtering. Cf. Vaughan's split products, under product. plague s., Yersin's s., antiplague serum. polyvalent s., a serum obtained by inoculating animals with s., a serum obtained by inoculating animals with several varieties of an organism, such as streptococcus. pooled s., the mixed serum from a number of subjects. prophylactic s., a serum for immunizing against a disease. Quentin's s., marine serum. Query's s., a serum for syphilis obtained by inoculating monkeys with filtered bouillon cultures of Spirocheta pallido. filtered bouillon cultures of Spirochata pallida. Renzi's s., a solution, in 1000 c.c of water, of gm. iodin, 3 gm. of potassium iodid, and 6 gm. of sodium chlorid. Richet-Héricourt's s., a serum for use in cancer. Rogers's s., a serum for treatment of exophthalmic goiter. Römer's s., an antipneumococcus serum. Roussel's s., a solution of 50 gm. of sodium phosphate in 1000 c.c. of water. Roux's s., antidiphtheric serum. Ruppell's s., a serum for cerebrospinal meningitis prepared from a number of strains of the micrococcus. Ruppell and Rickstrains of the micrococcus. Ruppell and Rickmann's s., an antituberculosis serum prepared by injecting living and virulent human bacilli into cattle or mules, and after tuberculous lesions have been produced, injecting the animals with increasing amounts of tuberculin, bacillary extracts, and living bacilli. salvarsanized s., bloodserum taken from a patient after an intravenous injection of salvarsan. See Swift-Ellis method, under method. Sanarelli's s., a serum used in protective inoculation against yellow fever. Sapellier's s., a solution, in 100 c.c of boiled water, of 60 gm. of sodium chlorid, 5 gm of potassium chlorid, 31 gm of sodium carbonate, 4.5 gm. of sodium phosphate, and 3.5 gm. of potassium sulphate. Schiassi's s., a solution for the physiologic treatment of wounds, containing 6.5 gm. of sodium chlorid, 0.3 gm. of potassium chlorid, 1 gm. of fused calcium chlorid, 0.5 gm. of sodium bicarbonate, 1.5 gm. of glucose, and 1000 gm. of distilled water. **Schiess's s.**, a solution, in 1000 c.c. of water, of 75 gm. of sodium chlorid and 50 gm. of sodium bicarbonate. Schurupow's s., a serum used in the treatment of Asiatic cholera. Sclavo's s., a bactericidal serum for treating human anthrax, produced by inoculating the ass with anthrax bacilli. **specific s.**, a serum which contains a large number of amboceptors having a special affinity for a given cell. **Spengler's s.**, an antituberculous serum obtained from the dissolved crythrocytes of the blood of animals: used by productively. Called also immunicables and hypodermically. Called also immunkörper and I. K. streptococcus s. See antistreptococcic

surgical s., sodium chlorid, 71 parts; boiled distilled water, 1000 parts: for injection in surgical cases. Sydmann's s. See Sydmann's solution, under solution. thymotoxic s., a serum which has a specific toxic effect on thymus tissue. thyrolytic s., a serum formed in an animal on injection of the extract of cells of the thyroid body of other animals, and capable of dissolving the thyroid of the animal from which the cells were thyrotoxic s., a serum destructive to tissue. Torrey's s., antigonococcus taken. tissue. Torrey's s., antigonococcus serum.

Trunecek's s., an aqueous solution of sulphate, chlorid, phosphate, and carbonate with potassium sulphate, in the proportion in which they exist in the human blood used for arteriosclerosis, rheumatism, epilepsy, uremia, diabetes, paralysis agitans, etc. Dose, 15 min. (1 c.c.) subcutaneously or 1½ fl oz. (35 c.c.) by the rectum every three or four days. Called also inorganic serum. Vallée's s. Same as Leclainche-Vallée s. Vandervelde's s. 1. A solution of 3 gm. each of codium glucorophysphoto and codium glucorophysishid in sodium glycerophosphate and sodium chlorid in 1000 c.c. of water. 2. A solution of 3 gm. each of sodium chlorid, sodium phosphate, and potassium chlorid, 2 5 gm. of sodium carbonate, and 2 gm. of potassium sulphate in 100 c.c. of water. von Leyden's s. See Leyden's s. Weinberg's s., antigangrene serum. Wlaeft's s., an antiblastomycetic serum. yeast s., serum from animals which have been given increasing doses of yeast in their food; recommended for use in various infections. Yersin's s., antiplague serum.

serumal (se-ru'mal). Pertaining to or formed from serum. s. calculus. See under calculus.

serum-casein (se-rum-ka'se-in). Paraglobulin.

serum disease (se'rum dis-ez'). See serum sickness, under sickness.

serum-fast (se'rum-fast). Resistant to the destructive effect of serum: said of bacteria.

serum-identical (se-rum-i-den'tik-al). Acting in the same way toward a given immune serum.

serum-sickness (se'rum-sik'nes). See under sickness.

serum-therapy (se-rum-ther'ap-e). See serotherapy. **serumuria** (se-rum-u're-ah). Same as albuminuria.

Serv. Abbreviation for L ser'va, keep, preserve.
Servetus (ser-ve'tus), Michael. A Spanish theologian and physician, 1500-1553. He is believed by some to have preceded Harvey in the discovery of the circulation of the blood.

serviette (săr-ve-et') [Fr.]. A towel or napkin.

Sesame (ses'am-e) [L. ses'amum; Gr. σήσαμον]. The plants Ses'amum in'dicum and S. orienta'le; also their oil-bearing seeds The oil (o'leum ses'ami), called oil of benné, is used like olive oil. The seeds are demulcent, and are useful in dysentery.

sesamoid (ses'am-oid) [L. sesamoi'des; Gr. σήσαμον sesame + είδοs form]. Resembling a grain of sesame. See bone.

sesamoiditis (ses'am-oid-i'tis). Inflammation of the sesamoid bones and surrounding structures of a horse's foot.

sesqui- [L. ses'qui- a half more]. A prefix meaning one and a half.

sesquibasic (ses-kwe-ba'sik) [L. ses'qui- one and a half + ba'sis base]. Formed by the substitution of two atoms of a base for three of the hydrogen atoms of an acid.

sesquibo (ses'kwe-bo) [L sesqui one and one-half + bovinum]. Pirquet's term for a milk nutriment intermediate between simple and double nutriment. It contains 150 nems. Cf dubo and sibo.

sesquicarbonate (ses-kwe-kar'bo-nāt). A carbonate in which the carbonic acid radical is united to a base in the proportion of three to two.

sesquichlorid (ses-kwe-klo'rid). A chlorid in which the chlorin is united to a base in the proportion of three to two. **sesquih.** [L. sesquiho'ra]. An abbreviation for an hour and a half.

sesquihora (ses-kwi-ho'rah) [L.]. An hour and a half.

sesquioxid (ses-kwe-oks'id). A compound of three parts of oxygen with two of another element.

sesquisalt (ses'kwe-sawlt). A salt containing three parts of an acid with two of a base.

sesquisulphate (ses-kwe-sul'fāt). A sulphate containing three parts of sulphuric acid united with two of another element.

sesquisulphid (ses-kwe-sul'fid). A sulphid containing three parts of sulphur united with two of another element.

sessile (ses'il) [L. ses'silis]. Attached by a broad base; not pedunculated or stalked.

Sesunc. Abbreviation for L sesun'cia, an ounce and a half.

setaceous (se-ta'shus) [L. seta'ceus; se'ta bristle]. Slender and rigid, like a bristle.

Seta'ria equi'na. A filarial nematode found in the abdominal cavity of the horse.

setiferous (se-tif'er-us) [L. se'ta bristle + fer're to bear]. Bearing bristles; covered with bristles.

setigerous (se-tij'er-us) [L. se'ta bristle + ge'rere to carry]. Same as setijerous.

seton (se'ton) [Fr. seton; L. se'ta bristle]. r. A strip or skein of silk or linen drawn through a wound in the skin to make an issue. 2. The tract or fistula so formed.

Setschenow's center, nucleus (sets'en-of-) [Ivan Setschenow, Russian neurologist]. See center.

seven-barks (sev'en-barks). Hydrangea.

seven-day fever. See nanukayami.

seventh nerve (sev'enth). The facial nerve. See nerves, table of.

sevetol (sev'e-tol). A preparation of predigested animal and vegetable fats.

sevum (se'vum). Latin for suet. s. benzoina' tum, benzoinated suet. s. præpara'tum, prepared suet.

sewage (su'āj). The matters found in sewers. It consists of the excreta of man and animals, waste matters from kitchens, and other substances. activated s., sewage mixed with activated sludge. domestic s., sewage from dwellings, business buildings, factories, or institutions. septic s., sewage undergoing anaerobic putrefaction.

sewerage (su'er-āj). The system of pipes arranged for carrying off the excreta and waste matters of a house or a town.

sewer-gas (su'er-gas). The poisonous vapor emanating from foul sewers.

sex (seks) [L. sex'us]. The distinctive generative character.

sex intergrade. See under intergrade.

sexdigitate (seks-dij'it-āt) [L. sex six + dig'itus digit]. Having six fingers on the hand or six toes on the foot.

sexivalent (sek-siv'al-ent) [L. sex six + vale're to have power]. Able to combine with or displace six atoms of hydrogen.

sex-limited. Affecting one sex only.

sex-linked. A term applied to characters which are inherited unequally by males and females,

sexology (seks-ol'o-je). The study which deals with the sexes and their relations.

sextan (seks'tan) [L. sexta'nus of the sixth]. Recurring every sixth day.

sextigravida (seks-tig-rav'id-ah) [L. sex six + grav'ida pregnant]. A woman pregnant for the sixth time.

sextipara (seks-tip'ah-rah) [L. sex'tus sixth + par'ere to produce]. A woman who has borne six children.

sextonol (seks'to-nol). A proprietary preparation

of quinin, strychnin, iron, manganese, soda, and lime.

sextuplet (seks'tu-plet) [L. sex'tus sixth]. Any one of six born at one birth.

sexual (seks'u-al) [L. sexua'lis]. I. Pertaining to sex. 2. A person considered in his sexual relations. contrary s., a sexual invert.

sexuality (seks-u-al'it-e). The characteristic quality of the male and female reproductive elements.

sexvalent (seks'val-ent) [L. sex six + va'lens able]. Having a chemic valence of six.

S.-G. Abbreviation for Sachs-Georgi test.

Sgambati reaction or test (sgahm'bah-te) [O Sgambati, physician in Rome]. See under reaction
S. G. O. Abbreviation for Surgeon-General's Office.
shaddock (shad'ok). See naringin.

shadow (shad'o). A faded or colorless red blood-corpuscle. blood-s. Same as phantom-corpuscle. See under corpuscle. heart s., the x-ray shadow of the heart. Ponfick's s's, phantom corpuscles. s.-test. See skiascopy.

shadowgram, **shadowgraph** (shad'o-gram, shad'o-graf). Same as *skiagram*.

shadowgraphy (shad'o-graf-e). Same as skiagraphy.

shadow nucleus (shad'o). See under nucleus.

shakes (shāks). A popular name for the cold paroxysm of intermittent fever. spelter-s., a form of disease seen among brass-founders, characterized by violent chills.

shaking palsy (sha'king). See paralysis agitans.

shank (shangk). The tibia or shin; also the leg.

Sharpey's fibers (shar'pēz) [William Sharpey, English anatomist, 1802-1880]. See fiber.

shashitsu (shah-shit'soo). See tsutsugamushi disease, under disease.

shaven-beard appearance (sha'ven-bērd). The appearance of the intestinal glands in typhoid fever, being dark colored, with fine white markings.

sheath (shēth) [L. vagi'na]. A tubular body inclosing or surrounding some organ. adventitial s., a structure within the brain which separates the extra- and the intra-adventitial spaces arachnoid s., the delicate membrane between the dural and pial sheath of the optic nerve. capillary s., the wall of a lymph-channel surrounding a capillary. caudal s., a tubular cytoplasmic structure at the base of the nucleus in the early spermatid. chordal s., the sheath of the notochord. crurals. Same as femorals. dentinal s., the layer of tissue which lines the dentinal tubules. Called also Neumann's s. dural s., the external investment of the optic nerve. femoral 8., the fascial envelope of the femoral vessels. 8. of Henle, the envelope of a nerve-fiber outside of the neurilemma. s. of Hertwig, an investment of epithelial cells around the unerupted tooth and inside of the dental follicle which are derived by budding from the enamel organ. lamellar s., the perincurium. Mauthner's s., the double granular protoplasmic sac or layer, marked with lengthwise striæ, beneath Schwann's sheath. It incloses the myelin. medullary s. Same as myelin s., the sheath surrounding the axis-cylinder of some (myelinized, medullated) nerve-fibers. It consists of myelin supported by a network of neurokeratin and is itself surrounded by the neurilemma. Called also medullary s. Neumann's s. See dentinal s. notochordal s., an elastic sheath surrounding the notochord. Called also elastica externa. nucleated s. See neurilemma. s's of the optic nerve, the envelopes that sur-round the optic nerve, formed by extension of the membranes of the brain. perinephric s., the sheath of fascia investing the kidney. perivascular s., a lymphatic organ which surrounds some of the blood-vessels of the brain. pial s., an

extension of the pia which partly surrounds the optic nerve. **primitive s.**, the neurilemma. **s.** of the rectus, the sheath inclosing the rectus muscle, formed by splitting of the tendon of the internal oblique muscle. **root-s.**, the epithelial sheath of the root of the embryonic tooth. **Scarpa's s.**, the cremasteric fascia. **Schwalbe's s.**, the thin envelope of an elastic fiber. **s. of Schwann**, the neurilemma. **synovial s.**, the membrane which lines a bony passage through which a tendon passes. **tangential s.**, the fibrocellular sheath inclosing the carotid arteries.

sheep-cholera. See under cholera.

sheeppox (shep'poks). See ovinia.

sheep-scab (shep'skab). See under scab.

sheet (shēt). An oblong piece of cotton or linen for a bed covering. **draw-s.**, a folded sheet placed under a patient in bed so that it may be withdrawn without lifting the patient.

shelf (shelf). A shelf-like structure, normal or abnormal, in the body. Blumer's s., a pocket-like cavity in the abdomen due to carcinoma. dental s., the shelf-like epithelial invagination formed by the dental ridge, beneath which the dental papillæ are formed; called also dental ledge.

shell crown. See under crown.

shell, diffusion. A small sac of semipermeable membrane used in the Abderhalden reaction.

shellac (shel-ak'). Shell-lac; a variety of lac from India, produced on various plants by an insect, Coc'cus lac'tis. It is of some use in surgery.

shell-shock. See under shock.

Shenton's arch or line (shen'tonz). See under line.

sherbet (sher'bet). The name of various refreshing, cooling, or medicinal drinks; chiefly used in oriental regions.

Sherrington's law (sher'ing-tonz) [Charles Scott Sherrington, contemporary English physiologist]. See under law.

sherry (sher'e) [L. vi'num xer'icum]. A variety of white or brownish wine from Xeres, in Spain.

shield (sheld). I. Any protecting tube. 2. The metal tube that covers the core of soft iron in the primary coil of a faradic battery; by sliding or drawing it the current is intensified or diminished at will. Buller's s., a watch-glass fitted over the eye to guard it from gonorrheal or ophthalmic infection. embryonic s., the dark circular field due to cell-proliferation within the area pellucida, in which the primitive streak appears. nipple-s., a cover to protect the nipple of a nursing woman. phallic s., a device for the antiseptic protection of the male genitals during surgical operations.

Shiga's bacillus (she'gahz) [Kiyoshi Shiga, a contemporary Japanese physician]. See under bacillus.

Shiga - Kruse bacillus (she'gah-kru'seh). Shiga's bacillus.

shikimene (shik'im-ēn). Same as sikimin.

shilajatu (she-laj-at'oo). A mineral gum which exudes from the heated rocks in summer in India: used as a diuretic See silajit.

shimamushi disease (shim-am-oo'she). See tsutsugamushi disease, under disease.

shin (shin). The crest or anterior edge of the tibia; the tibia itself; also the anterior aspect of the leg below the knee. trench s., a painful condition of the tibialis muscles seen in soldiers in the trenches. It is attended by headache, fever, and is regarded as an infectious fibrositis.

shingles (shin'glz). Herpes zoster. See zoster.

shirt-stud abscess (shirt'stud). See abscess.

shiver (shiv'er). 1. A slight chill or tremor. 2. To tremble, as from a chill.

shivering (shiv'er-ing). Chorea affecting the muscles of the hip and thigh of a horse.

shock (shok). Sudden vital depression, due to an injury or emotion which makes an untoward impression upon the nervous system. Shock may be slight and transient, or profound and even fatal. In severe shock the prostration may amount to immobility or syncope; but in other cases the patient is restless and excited. Recovery from shock is followed by more or less quickening of the pulse and respiration and abnormally high temperature. aerial s., a neurotic condition in soldiers due to the aërial disturbance produced by bursting shells. The aërial wave produced by bursting shells. The aërial wave compression is believed to affect arterial pressure in the body by causing changes in the atmospheric allergic s. See anaphylactic s. anaphylactic s., a violent attack of symptoms produced by a second injection of serum or protein and due to anaphylaxis. See anaphylaxis. apoplectic s., a stroke of apoplexy. barium s., a hemoclastic shock produced when barium is injected into the veins. cardiac s. See heart-s. colloid s., pseudo-anaphylaxis. deferred s., severe physical or mental disturbance, of which the symptoms occur a considerable time after the injury or mental impression is received. electric s., the sudden impression produced by the passage of an electric current through any part of the body. epigastric s., the effect of a sudden blow upon the epigastrium. erethismic s., a form of shock in which the patient is excited and restless. faradic s., the effect produced by faradization. fetal s., distress sometimes produced by the movements of the fetus in utero. heart-s., a sudden collapse of the functions of the heart during exertion, often fatal. hemoclastic 8. See hemoclastic crisis, under crisis. insulin s., a condition of circulatory insufficiency resulting from overdosage with insulin which causes too sudden reduction of blood sugar. It is marked by tremor, sweating, vertigo, diplopia, convulsions, and collapse. mental s., that which is due to emotion or to a mental impression. s. of metaballodispersion, shock due to a change (usually diminution) in the degree of dispersion of the colloids of the body. paralytic s., a sudden paralytic attack. **peptone s.**, **protein s.**, a state of acute intoxication manifested by a chill with fever, spasm of the bronchi, acute emphysema, and vomiting and diarrhea, produced by the intravenous injection of peptone or other substance of protein nature, such as bacterial proteins, animal or vegetable proteins, organic extracts, etc. **phenolic s.**, a hemoclastic crisis produced by the intravenous injection of phenol. railway-s., a nervous shock caused by a railroad accident. **secondary s.**, a second shock, following a first, often due to the formation of a heart-clot. sense-s., a relatively mild, night-mare-like attack which comes on mainly in the first stages of sleep serum s. See serum sickness and anaphylactic s. sexual s., a state of prostration following coitus or rape. shell-s., a condition of lost nervous control with numerous psychic symptoms, ranging from extreme fear to actual dementia, produced in soldiers under fire by the noise and concussion from bursting shells. static s., the effect produced by the discharge of static electricity. surgical s., that which is due to injury. testicular s., the effect of a sharp stroke upon the testes. torpid s., shock in which the patient lies prostrate and immobile. trau-matics., shock due to injury or violence. wound **s.**, shock resulting from a wound.

shoddy-fever (shod'e). A febrile disease caused by the dust in shoddy factories, and marked by cough, dyspnea, and headache.

shoe, Charlier's. A horse's shoe which allows the sole and the frog to come to the ground exactly as in the unshod foot. Scarpa's s., a metal brace used in treating talipes equinus by preventing palmar extension of the foot beyond a right angle.

shoe-boil (shoo'boil). See capped elbow, under elbow.

shoemakers' spasm (shoo'ma-kerz). See spasm. short cir'cuit (short). See circuit. s.-circuit, to form an opening between two portions of intestine above and below an obstruction.

shot-compressor (shot'kom-pres-or). A sort of forceps for compressing split-shot on sutures.

shot-feel. A bodily sensation as of the rolling of shot down the body, sometimes occurring in acromegaly.

shotgun prescription. See under prescription. shot-silk phenomenon, reflex (shot-silk'). See watered-silk reflex, under reflex.

shoulder (shol'der). The junction of the arm and trunk; also that part of the trunk which is bounded at the back by the scapula. s.-blade, the scapula. bull's-eye s., a horse's shoulder having on it a loose flabby disk of hyperplastic skin with a central denuded surface. s.-girdle. See girdle. pegged s., a condition in the horse marked by limitation of movement in the shoulder. s.-slip, inflammation of shoulder muscles and tendon in the horse.

show (shō). The appearance of blood that foreruns a labor or menstruation.

shower, erythroblastic (show'er). A rapid and marked increase in the nucleated red cells of the blood occurring in pernicious anemia uric-acid
s., temporary increase in the uric-acid contents of the urine; occurring in the course of a gouty attack.

Shrady's saw (shra'dez) [George Frederick Shrady, New York surgeon, 1837-1907]. See saw

Shrapnell's membrane (shrap'nelz) [Henry J. Shrapnell, English anatomist]. See membrane.

shut-in personality. See under personality. shuttlemakers' disease. See under disease.

Si. The symbol of silicon.

siagantritis, siagonantritis (si-ag-an-tri'tis, si"-ag-on-an-tri'tis) [Gr. σιαγών jaw-bone + antritis]. Inflammation in the antrum of Highmore.

sialaden (si-al'ad-en) [Gr. σίαλον saliva + άδήν gland]. A salivary gland.

sialadenitis (si"al-ad-en-i'tis). Inflammation of a salivary gland.

sialadenoncus (si"al-ad-en-ong'kus) [sialaden + Gr. δγκος mass]. Λ tumor of a salivary gland.

sialagogue (si-al'ag-og). Same as sialogogue.

sialaporia (si"al-ap-o're-ah) [Gr. σίαλον saliva + άπορία lack]. Deficiency in the amount of saliva.

sialemesis (si-al-em'es-is) [Gr. σίαλον saliva + ξμεσις vomiting]. The hysteric vomiting of saliva.

sialic (si-al'ik) [Gr. σιαλικόs]. Pertaining to the

sialine (si'al-īn) [L. siali'nus]. Pertaining to the

sialism, sialismus (si'al-izm, si-al-iz'mus) [Gr. σιαλισμός]. Salivation; ptyalism.

sialo-adenitis (si"al-o-ad-en-i'tis) Sialadenitis.

sialo-aërophagy (si"al-o-a-er-of'aj-e) [Gr. σlαλον saliva + $\delta\eta\rho$ air + $\varphi\delta\gamma\epsilon\iota\nu$ to eat]. The swallowing of saliva and air.

sialo-angiitis (si"al-o-an-je-i'tis). Sialo-angitis.

sialo-angitis (si"al-o-an-ji'tis). Inflammation of the salivary ducts.

sialodochitis (si"al-o-do-ki'tis) [Gr. σlαλον saliva + δοχή receptacle + -ιτις inflammation]. Inflammation of the salivary ducts.

sialoductilitis, sialoductitis (si"al-o-duk-til-i'tis, si"al-o-duk-ti'tis) [Gr. σίαλον saliva + L.
duc'tus duct + Gr. -ιτις inflammation]. Inflammation of Stenson's duct.

sialogenous (si-al-oj'en-us) [Gr. σίαλον spittle + γεννᾶν to produce]. Producing salivation.

sialogogic (si-al-o-goj'ik). Sialogogue.

sialogogue (si-al'o-gog) [Gr. σιαλον spittle + άγογός leading]. 1. Producing a flow of saliva. 2. A medicine which promotes a flow of saliva; the principal sialogogues are mercury, jaborandi, pilocarpin, potassium iodid, and lobelia.

sialolith (si-al'o-lith) [Gr. $\sigma la\lambda o\nu$ saliva + $\lambda l\theta os$ stone]. A salivary calculus.

sialolithiasis (si"al-o-lith-i'as-is) [Gr. $\sigma l \alpha \lambda o \nu$ saliva $+ \lambda \iota \theta l a \sigma \iota s$ formation of a stone]. The formation of salivary calculi or the condition characterized by it.

sialology (si-al-ol'o-je) [Gr. σ laλον saliva + λόγος treatise]. The study of the saliva.

sialorrhea, sialorrhœa (si''al-or-e'ah)[Gr. σιαλον spittle + ροία flow]. Same as salivation. s. pancreat'ica, the spitting of fluid resembling saliva or pancreatic juice, sometimes seen in disease of the pancreas.

sialoschesis (si-al-os'kes-is) [Gr. σίαλον saliva + σχέσις suppression]. Suppression of the salivary secretion.

sialosemeiology (si"al-o-se-mi-ol'o-je) [Gr. σlαλον saliva + semeiology]. Diagnosis by means of a chemic examination of the saliva and the pharyngeal secretion.

sialosis (si-al-o'sis) [Gr. σίαλον saliva]. The flow of saliva.

sialostenosis (si"al-o-ste-no'sis) [Gr. σίαλον saliva + στενός narrow]. Stenosis, or narrowing, of a salivary duct.

sialosyrinx (si"al-o-si'rinks) [Gr. σίαλον saliva + σῦριγξ pipe]. 1. A salivary fistula. 2. A syringe for washing out the salivary ducts, or a drainage-tube for the salivary ducts.

sialotic (si-al-ot'ik). Pertaining to or marked by the flow of saliva.

sialozemia (si"al-o-ze'me-ah) [Gr. σίαλον saliva + ζημία loss]. The involuntary flow of saliva.

sib (sib) [Anglo-Saxon sib kin]. Related by blood; a blood relation.

sibbens (sib'enz). A disease formerly prevalent in Scotland, somewhat resembling yaws and syphilis.

sibilant (sib'il-ant) [L. sib'ilans hissing]. Of a shrill, hissing or whistling character.

sibilus (sib'il-us) [L.]. A whistling or sibilant râle.

sibling (sib'ling). One of two or more offspring of the same parents.

sibo (se'bo). Pirquet's term for a cow's milk nutriment having the same value as human milk (lac simplex bovinum.

sibred (sib'red). Relationship; kindred.

sibship (sih'ship). Relationship by blood; blood relationship.

Sibson's furrow (sib'sunz) [Francis Sibson, English physician, 1814–1876]. See under furrow.

siccative (sik'at-iv) [L. sic'cus dry]. Drying: removing moisture from surrounding objects.

sicchasia (sik-ka'ze-ah) [Gr. σικχασία]. Nausea.

Sicco (sik'o). A proprietary iron-protein preparation in powder form.

siccolabile (sik-o-lab'il). Altered or destroyed by

siccoles (sik'olz). Preparations in a dried form of bad-tasting liquids, as castor oil.

siccostabile (sik-o-sta'bil). Not altered by drying. siccus (sik'us). Latin for dry.

sick (sik). 1. Not well; not in good health. 2. Affected with nausea. 3. Menstruating.

sick-headache. Migraine.

sickle-cell anemia. See under anemia.

sickness (sik'nes). The condition of being ill; ill health. asrial s. Same as aviators' disease. See disease. African s. See Congo trypanosomiasis, under trypanosomiasis. altitude s. See mountain s. aviation s. See mountain s. aviation s. See mountain s. aviation s. See aviators' disc

ease. under disease. balloon s., a condition similar to mountain sickness occurring in aëronauts. black s., kala-azar. car s., nausea and malaise from railway travel. falling-s., epilepsy. gall s. See galziekte. Gambian horse s., a fatal infection of horses and cattle throughout central Africa caused by Trypanosoma congolense. grass s., a disorder occurring in western Australia, Queensland, and parts of Brazil, marked by vomiting after meals, and by some attributed to a spirochete in the stomach. Called also gastric spirochetosis and Belyando sprew. green s., chlorosis. laughing s., pseudobulbar paralysis. milk-s. See trembles. Monday-morning s., a condition sometimes seen in horses after having remained idle for a few days. It is marked by sweating, lameness, pain in the legs, and nervous excitement. morthly s., menstruation. morning s., the nausea of early pregnancy. mountain s., nausea and dyspnea occurring at great elevations. It is caused by the lessened oxygenation of the body due to the rarefaction of the air breathed. protein s., symptoms, such as eruptions, fever, edema, and pain in the joints, following the injection of foreign proteins into the body. radiation s. See x-ray s. sea-s., nausea and malaise caused by the motion of a ship. serum-s., a form of anaphylactic or allergic reaction following the injection of foreign serum and marked by urticarial rashes, edema, adenitis, joint pains, high fever, and prostration. Called also serum disease. sleeping-s. 1. See Congo trypanosomiasis, under trypanosomiasis 2. Lethargic encephalitis. See encephalitis. spotted 8., pinta. sweating-s. See miliary fever, under fever. talking s., epidemic encephalitis marked by extreme excitement, muscular twitching, and talkativeness. tin-s., a form of poisoning caused by a continued diet of canned food.

trolley s., a peculiar sickness said to be caused by riding in electric cars. vomiting s., an extremely fatal disease of Jamaica due to eating damaged ackus, the fruit of Blighia sapida. x-ray 8., a feeling of sickness and acute general symptoms which sometimes follow the application of massive doses of short wave Roentgen and radium rays. It is attributed by some to breathing the ozone and nitrogen pentoxid produced by the hightension current of the x-ray machine. Called also radiation sickness, roentgencater.

Sida asiat'ica (si'dah). A plant called iàm takuri in India, where it is used in the treatment of sores. S. rhomboi'dea, a mucilaginous plant used in India for dysentery.

side (sid). The portion of the surface of the body between the dorsal and ventral aspects; the lateral aspect.

sidebone (sīd'bōn). A condition of horses marked by hardness of the lateral cartilages above the heels from deposit of lime salts. The condition results in lameness.

side-chain theory. See Ehrlich's side-chain theory, under theory.

sideration (sid-er-a'shun) [L. sidera'ri to be blasted by a constellation].
1. Sudden destruction of vital forces.
2. Therapeutic application of electric sparks.

siderism (sid'er-izm) [Gr. σίδηρος iron]. Same as metallotherapy.

siderodromophobia (sid"er-o-dro-mo-fo'be-ah) [Gr. $\sigma l \delta \eta \rho \sigma s$ iron $+ \delta \rho \delta \mu \sigma s$ way $+ \varphi \delta \beta \sigma s$ fear]. Morbid dread of railway travel.

siderogenous (sid-er-oj'en-us) [Gr. σίδηρος iron + γεν- to produce]. Producing or forming iron.

siderol (sid'er-ol). A proprietary preparation of beef essence, iron, and phosphorus: used in anemia, general debility rickets, etc.

siderophil, siderophile (sid'er-o-fil). 1. Same as siderophilous. 2. A siderophilous tissue or struc-

- siderophilous (sid-er-of'il-us) [Gr. σίδηρος iron + φιλείν to love]. Having a tendency to absorb iron.
- siderophobia (sid"er-o-fo'be-ah). Same as sidero-dromophobia.
- siderophone (sid'er-o-fon) [Gr. σίδηρος iron + φονή voice]. An instrument for detecting, by a telephone-like arrangement, the presence of iron splinters in the eyeball.
- sideroscope (sid'er-o-skop) [Gr. σίδηρος iron + σκοπείν to see]. A magnet or other appliance for determining the presence of metallic iron as a foreign body in the eye.
- siderosis (sid-er-o'sis) [Gr σίδηρος iron]. I Pneumoconiosis due to the inhalation of iron particles 2. Excess of iron in the blood. s. bul'bi, the deposit of an iron pigment within the eye. hematogenous s., pigmentation with an iron compound derived from the blood. hepatic s., the deposit of an abnormal quantity of iron in the liver: called also iron-liver. urinary s., presence of hemosiderin granules in the urine. xenogenous s., pigmentation with an iron oxid derived from a foreign body.
- siderous (sid'er-us) [Gr. σίδηρος iron]. Containing iron.
- **sidonal** (sid'on-al). Piperazin quinate, a white powder, soluble in water. It is a uric-acid solvent. Dose, 15-30 gr (1-2 gm.). **new s.**, quinic acid anhydrid used like sidonal.
- Siebold's operation (ze'bolts) [Gaspard von Siebold, German surgeon, 1736-1807]. Hebotomy.
- Siegle's otoscope (ze'glez) [Emil Siegle, French aurist in Stuttgart, 1833-1900]. See otoscope.
- Sierra salvia, Serra salvia (se-er'ah sal've-ah, ser'ah sal've-ah). The plant Artemis'ia fri'gida, or mountain sage: antiperiodic.
- sieve (siv). A network of wire, hair, or silk placed in a frame and used for sifting.
- Sig., sig. Abbreviation for L. signe'tur, let it be labeled
- signultian operation (se-go'she-an) [Jean René Signult, French surgeon of the eighteenth century]. See operation.
- sigh (si) [L. suspir'ium]. An audible and prolonged inspiration, followed by a shortened expiration.
- sight (sīt) 1. The act or faculty of vision. 2. A thing seen. day-s., nyctalopia, or night-blindness. far-s., long-s., hypermetropia. near-s., short s. Same as myopia. night-s., hemeralopia, or day-blindness. old s. Same as presbyopia. short-s., myopia.
- sigillative (sig'il-a-tiv) [L. sigil'la mark]. Tending to cicatrization.
- sigma r. See under reaction.
- sigmatism (sig'mat-izm) [Gr. σlγμα letter s]. The incorrect or difficult or too frequent use of the s-sound.
- sigmoid (sig'moid) [L. sigmoi'des; Gr. σιγμοειδήs]. Shaped like the letter S, or like the Greek sigma (Σ or C).
- sigmoidectomy (sig-moi-dek'to-me). Excision of a portion of the sigmoid flexure of the colon.
- sigmoiditis (sig-moid-i'tis). Inflammation of the sigmoid flexure.
- **sigmoidopexy** (sig-moi'do-peks-e) [sigmoid + Gr. $\pi \hat{\eta} \xi \iota s$ fixation]. The operation for rectal prolapse, done by making an incision in the lower abdomen, and pulling the sigmoid until the prolapse disappears, and then stitching the sigmoid to the abdominal wound.
- sigmoidoproctostomy (sig-moid"o-prok-tos'tome) [sigmoid + proctostomy]. The creation of an artificial opening at the junction of the sigmoid flexure and the rectum.
- sigmoidorectostomy (sig-moi"do-rek-tos"to-me)
 Same as sigmoido proctostomy.

sigmoidoscope (sig-moid'o-skōp) [sigmoid + Gr. σκοπεῖν to view]. A speculum for examining the sigmoid flexure.

SIGN

- **sigmoidoscopy** (sig-moid-os'ko-pe). Inspection of the sigmoid flexure by the aid of a long speculum (sigmoidoscope).
- sigmoidostomy (sig-moid-os'to-me) [sigmoid + Gr. στόμα mouth]. The formation of an artificial anus in the sigmoid flexure.
- Sigmund's glands (zēg'moonds) [Karl Ludwig Sigmund, Austrian physician, 1810–1883]. See under gland.
- sigmuth (sig'muth). Trade name for tartrobismuthate of sodium and potassium in sulphur water.
- sign (sīn) [L. sig'num]. Any objective evidence of a disease. Aaron's s., a sensation of pain or distress in the epigastric or precordial region on pressure over McBurney's point in appendicitis.

 Abadie's s. 1. Spasm of the levator palpebræ superioris muscle; a sign of exophthalmic goiter. 2. Insensibility of the Achilles tendon to pressure; seen in locomotor ataxia. Abrahams's s., a sound between dull and flat obtained on percussion over the acromion process in early tuberculosis of the apex of the lung. accessory s., assident s., any non-pathognomonic sign of disease. Ahlfeld's s., irregular tetanic spasms of portions of the uterus after the third month of gestation. Allis's s., relaxation of the fascia between the crest of the illum and the greater trochanter. a sign of fracture of the neck of the femur. Andral's s. Same as Andral's decubitus. See decubitus. Angelescu's s., a sign of tuberculosis of the vertebræ, consisting in inability to bend the spine while lying on the back so as to rest on the head and heels alone. antecedent s., any precursory indication of an attack of disease. anterior tibial s., involuntary extension of the tibialis anticus muscle when the thigh is forcibly flexed on the abdomen seen in spastic paraplegia. anticus s. See Protrowski's s. Argyll-Robertson pupil s. See pupil. Ar**noux's s.**, a sign of twin pregnancy, consisting of a peculiar rhythm in the fetal heart-beat produced by the action of the two hearts and resembling the sound of the hoofs of a pair of trotting Arroyo's s., asthenocoria assident horses 8. Same as accessory a Auenbrugger's 8., a bulging of the epigastrium, due to extensive pericardial effusion. Aufrecht's s., a feeble breathing sound heard just above the jugular fossa it points to a tracheal stenosis **Babès's** 8., tenderness over the splenic artery together with muscular rigidity, indicative of aneurysm of the abdominal aorta Babinski's s's. Loss or lessening of the Achilles tendon reflex in sciatica this distinguishes it from hysteric sciatica. 2. Same as Babinski's reflex. See reflex. 3. The patient lies on his back with arms folded and alternately flexes and extends the trunk on the thigh. The toes gradually separate from each other in lesions of the pyramidal tract and in hysteric paralysis 4 In hemiplegia the contraction of the platysma muscle in the healthy side is more vigorous than on the affected side, as seen in opening the mouth, whistling, blowing, etc. 5. The patient lies on the floor, with arms crossed upon his chest, and then makes an effort to rise to the sitting posture. On the paralyzed side the thigh is flexed upon the pelvis and the heel is lifted from the ground, while on the healthy side the limb does not move. This phenomenon is repeated when the patient resumes the lying posture. It is seen in organic hemiplegia, but not in hysteric hemiplegia. Called also combined flexion phenome-6. When the paralyzed forearm is placed in supination it turns over to pronation; seen in organic paralysis. Called also pronation sign.

 Baccelli's S., aphonic pectoriloguy: a sign of pleural effusion. Baillarger's S., inequality of the pupils in paralytic dementia. Bal-

lance's s., resonance of right flank when patient lies on his left side. seen in splenic rupture. Ballet's s., ophthalmoplegia externa, with loss of all voluntary eye movements, the pupil movements and automatic eye movements persisting: seen in exophthalmic goiter and hysteria. Bamberger's s. r. Allochiria. 2. Presence of signs of consolidation at the angle of the scapula, which disappear when the patient leans forward sign of pericardial effusion. Barany's s. See Barany's symptom, under symptom. Bard's s., in organic nystagmus the oscillations of the eye increase as the patient's attention follows the finger moved alternately from one side to the other; but in congenital nystagmus the oscillations disappear in like condition. Barre's pyramidal s., the patient lies face down and the legs are flexed at the knee; he is unable to hold the legs in this vertical position if there is disease of the pyramidal tracts. **Baruch's 8.**, resistance of the temperature in the rectum to a bath of 75° F. for fifteen minutes; a sign of typhoid fever. **Bassler's 8.**, in chronic appendicitis, a sharp pain is caused by pinching the appendix between the thumb and the iliacus muscle. The procedure is carried out by pressing the tip of the thumb into the abdominal wall midway between the umbilicus and the anterior superior spine of the ilium and then pressing to the right. **Bastedo's s.**, the production of pain and tenderness in the right iliac fossa (at McBurney's point) on inflation of the colon with air by means of a rectal tube seen in latent or chronic appendicitis. Battle's s., discoloration in the line of the posterior auricular artery, the ecchymosis first appearing near the tip of the mastoid process: seen in fracture of the base of the skull. **Beaumés's s.**, sternalgia; retrosternal pain as an indication of angina pectoris. **Beccaria's s.**, a painful sense of pulsation in the occiput in pregnancy. Bechterew's s., in Becker's s., increase of pulsation in the retinal arteries in exophthalmic goiter Beevor's s., a sign of functional paralysis consisting in inability of the patient to inhibit the antagonistic muscles. **Béhier-Hardy s.**, aphonia in the early stages of pulmonary gangrene. **Berger's s.**, an irregular-shaped or elliptic pupil in the early stages of tabes dorsalis, paralytic dementia, and certain paralyses Bernhardt's s., perverted and painful sensations on the outer and anterior surfaces of the thigh, experienced in displacement of the external cutaneous nerve. Bezold's s., an inflammatory swelling below the apex of the mastoid process; an evidence of mastoiditis. Bieg's entotic s., when sounds are heard by the patient only when spoken through an ear-trumpet, joined by a catheter to the eustachian tube, disease of the malleus or incus is indicated. Biermer's s. Same as Gerhardt's s. Biernacki's s., analgesia of the ulnar nerve in paretic dementia and tabes dorsalis. **Binda's s.**, a sudden movement of the shoulder when the head is passively and sharply turned toward the other side; an early sign of tuberculous meningitis. **Bird's s.**, a definite zone of dulness with absence of the respiratory sounds in hydatid disease of the lung. **Blecard's s.**, a sign of the maturity of the fetus consisting of a center of ossification in the lower epiphysis of the femur. Blumberg's s., short acute pain felt by the pa-tient when the examiner's hand is pressed over Mc-Burney's point and lifted up suddenly; it occurs in all forms of peritoneal inflammation. Boas's s., lactic acid in the gastric juice in certain cases of cancer of the stomach. **Bolognini's s.**, a sensation of friction observed on alternate pressure with the fingers of both hands on the right and with the fingers of both hands on the right and left sides of the belly an early indication of measles. Bonnet's s., pain on thigh adduction in sciatica. Bordier-Fränkel s., an outward and upward rolling of the eye in peripheral facial paralysis. Borsieri's s., when the finger-nail is drawn along the skin in early stages of scarlet

fever, a white line is left which quickly turns red. Boston's s., in exophthalmic goiter, when the eyeball is turned downward there is arrest of descent of the lid, spasm, and continued descent. Bouchard's s., a few drops of Fehling's solution are added to the urine and the mixture is shaken; if pus from the kidney is present, fine bubbles will form which push to the surface the coagulum formed by heating. Boutillau's s., a peculiar tinkling at the right side of the apex-beat in hypertrophy of the heart. Bouveret's s., distention of the cecum and right iliac fossa in obstruction of the large intestine. Bozzolo's s., a visible pulsation of the arteries within the nostrils: said to indicate aneurysm of the thoracic aorta. Brauch-Romberg s. See Romberg's s. Braun-Fernwald 8. (of pregnancy), a symmetric en-largement of the uterus, one side being greater than the other, with a longitudinal line or furrow separating the two. **Braxton-Hicks s.** Same as *Hicks'* s. **Brenner's s.**, a metallic rub over the twelfth left rib behind when the patient sits up. It is seen in perforation of the stomach and is caused by bubbles of air collecting between the stomach and the diaphragm. Brissaud-Marie s., hysteric glossolabial hemispasm. Broadbent's 8., a retraction seen on the back, near the eleventh and twelfth ribs, on the left side, due to pericardial adhesion. Brodie's s's. 1. A black spot on the glans penis: a sign of urinary extravasation into the spongiosum. 2. Same as Brodie's pain, see under pain. Brown-Séquard's 8. Same as Brown-Séquard's paralysis. See under paralysis. Brown's dipping crackle s., a fine crackling sound heard on placing the stethoscope over the right iliac fossa and dipping suddenly with it: heard in intestinal perforation in typhoid fever. Brown's gravitation s., the area of tenderness in the lower abdomen is marked out. The patient is then turned on the unaffected side. If, in from fifteen turned on the unaffected side. It, in from litteen to thirty minutes, the tenderness has moved one or two inches, or if the tenderness and rigidity should become marked, immediate operation is indicated. **Brudzinski's s.** 1. In meningitis, when the neck of the patient is bent, flexure movements of the ankle, knee, and hip are produced. 2. In meningitis, when passive flexion of the lower limb on one side is made, a similar movement will be seen in the opposite limb: called also contralateral reflex. Bruns's s., intermittent headache, vertigo, vomiting, etc., on suddenly moving the head in cysticercus disease of the fourth ventricle. Bryson's s., lessened power of expansion of the thorax, sometimes noticed in exophthalmic goiter. Burger's s. Same as Garel's s. Burghart's s. See under symptom.

Burton's s., a blue line at the junction of the teeth with the gums in chronic lead-poisoning Cantelli's s., dissociation between the movements of the head and eyes: as the head is raised the eyes are lowered, and vice versa Called also doll's eye s. Cardarelli's s., sidewise movements of the trachea in aortic aneurysm. cardiac s., a sign of cancer, consisting of marked diminution in the area of cardiac dulness when the patient is in the recumbent position. Called also Gordon's s. cardiorespiratory s., a change in the normal pulse-respiration ratio from 4:1 to 2:1; seen in infantile scurvy. Castellino's s. See Cardarelli's s. Chaddock's s., extension of the toes on irritating the skin in the external malleolar region: seen in lesions of the cortico-spinal reflex paths. Called also external mal-leolar s. Charcot's s's. 1. The raising of the eyebrow in peripheral facial paralysis, and the lowering of the same part in facial contraction. 2. Intermittent limping in arteriosclerosis of the legs and feet. Charcot-Vigouroux s. See legs and feet. Charcot-Vigouroux s. See Vigouroux's s. Chase's s., pain in the cecal region, felt when the examiner's hand is passed quickly and deeply along the transverse colon from left to right, the descending colon being closed by pressing deeply with the other hand.

Chaussier's s., pain in the epigastrium preceding eclampsia. Cheyne-Stokes s. See under respiration. Chyostek's s., a sudden spasm on tapping one side of the face: seen in postoperative tetany. Clark's s., obliteration of hepatic due to tympanitic distention of the abdomen. Claybrook's s., a sign of rupture of the abdominal viscera, consisting in the transmission of the sounds of the heart-beat and of respiration so that they can be heard over the abdomen, the transmission of the sounds being due to the presence of fluid, exudate, or blood. Cleeman's s., creasing of the skin just above the patella, indicative of fracture of the femur with overriding of fragments. Cloquet's needle-s., a clean needle is plunged into the biceps muscle; if life be not extinct, it soon oxidizes. cogwheel s. See cogwheel phenomenon, under phenomenon. coin s. Same as coin test. See under tests. Cole's s., deformity of the duodenal contour as seen in the roentgenogram, a sign of the presence of duodenal ulcer. combined plantar s., the simultaneous disappearance of the cortical plantar reflex and the spinal plantar reflex: seen in hysteria. Comby's s., whitish patches on the buccal mucosa and the gums: an early sign of measles. commemora-tive s., any sign of a previous disease. contralateral s. See Brudzinski's s. (2d def.). Coopernail's s., ecchymosis on the perineum and Corrigan's 8. 1. A purple line at the junction of the teeth with the gum in chronic copperpoisoning. 2. A peculiar expanding pulsation indicative of aneurysm of the abdominal aorta. See also Corrigan's pulse, under pulse. coughing s. See Huntington's s. Courvoisier's s., a much-distended gall-bladder from obstruction of the common duct indicates tumor rather than calculus. Crichton-Browne's s., tremor of the outer angles of the eyes and of the labial commissures in the earlier stages of paretic dementia.

Cullen's s., discoloration of the skin about the umbilicus, regarded as a sign of ruptured extrauterine pregnancy. Dalrymple's s., abnormal wideness of the palpebral opening in exophthalmic goiter. **Damoisseau's s.** Same as *Ellis's line*, under *line*. **Dance's s.**, depression in the right tiliac region in intussusception. Davidsohn's s., the reflection of light through the pupil in transilumination; seen in health. Davis's s., an empty state and a yellowish or pale tint of the pulseless arteries; a sign of death. **Dawbarn's s.**, in acute subacromial bursitis, when the arm hangs by the side palpation over the bursa causes pain, but when the arm is abducted this pain disappears. de la Camp's s., relative dulness over and to both sides of the fifth and sixth vertebræ in tuberculosis of the bronchial lymph-nodes. **Delbet's s.**, in aneurysm of the main artery of a limb, if the nutrition of the part distal to the aneurysm is maintained, although the pulse may have disappeared, the collateral circulation is efficient. Delmege's s., deltoid flattening, an early sign of phthisis. Demarquay's s., fixation or lowering of the larynx during phonation and deglutition; a sign of syphilis of the trachea. de Mussy's s., the presence in the left hypochondriac region of a spot intensely painful on pressure: an indication of diaphragmatic pleurisy. Desault's s., a sign of intracapsular fracture of the femur, consisting of alteration of the arc described by rotation of the great trochanter, which normally describes the segment of a circle, but in this fracture rotates only as the apex of the femur as it rotates about its own axis. D'Espine's s. (1889). 1. In the normal person, on auscultation over the spinous processes, pectorilo-quy ceases at the bifurcation of the trachea, and in infants opposite the seventh cervical vertebra. If pectoriloguy is heard lower than this it indicates enlargement of the bronchial lymph-nodes. 2. In pulmonary tuberculosis the bronchophony over the spinous processes is heard at a lower level than in health. Dewees's s., expectoration of tough

whitish mucus by a pregnant woman. Dixon Mann's s. See Mann's s. doll's eye s. See Cantelli's s. and Widowitz's s. Dorendorf's s., fulness of the supraclavicular groove on one side in aneurysm of the aortic arch. **Douglas's s.** See *Douglas's cry*, under *cry*. **Drummond's s.**, a whiff heard at the open mouth during respiration in cases of aortic aneurysm. Duchenne's s., the sinking in of the epigastrium on inspiration in paralysis of the diaphragm or in certain cases of hydropericardium. **Duckworth's s.**, seemingly complete stoppage of respiration several hours before stoppage of the heart-beat; seen in conditions of intracranial pressure. duct s., a red spot seen at the orifice of Steno's duct in mumps.

Duga's s., inability to place the hand on the shoulder of the other side while the elbow rests on the chest; seen in shoulder dislocation. Duncan-Bird s. Same as Bird's s. Dupuytren's 8. 1. A crackling sensation on pressure over a sarcomatous bone. 2. In congenital dislocation of the head of the femur there is a free up-and-down movement of the head of the bone. Duroziez's s. Same as Duroziez's murmur (q. v. under murmur) echo-s., the repetition of the last word or clause of a sentence; seen in certain brain diseases. liot's s., induration of the edge of a syphilitic skin lesion. Ellis's s., the peculiar curved line of dulness discoverable during resorption of a pleuritic exudate. Erb's s. 1. Increased electric irritability of motor nerves in cases of tetany. 2. Dulness in percussion over the manubrium of the sternum in acromegalia. Erb-Westphal s., loss of the patellar tendon reflex seen in tabes dorsalis and in some other spinal or cerebral diseases. Erichsome other spinal or cerebral diseases. Erichsen's s., when the iliac bones are sharply pressed
toward each other pain is felt in sacro-iliac disease, but not in hip disease. Erni's s., the
cavernous tympany developed over an apical
cavity that has previously been filled with fluid.
Sometimes gently rapping over such a filled
cavity with a hard instrument will excite coughthe cavernous signs are developed. Eustace Smith's s. Same as Smith's s. Ewart's s., undue prominence of the upper border of the first undue for t rib in certain cases of pericardial effusion. **Ewing's s.**, percussion dulness at the inner side of the angle of the left scapula, indicating an acor the angle of the left staputa, indicating an accumulation of fluid in the pericardium behind the heart. external malleolar s. See Chaddock's s. extinction s., extinction of the eruption over an area about the size of the palm when normal human serum is injected intracutaneously; characteristic of the eruption of scarlet fever. fabere

8. See Patrick's test, under tests. Faget's 8. (1860), a fall in the pulse-rate while the fever remains high or rises; seen in yellow fever. Fajersztajn's crossed sciatic s., in sciatica, when the leg is flexed, the hip can also be flexed, but not if the leg be held straight; flexing sound thigh with leg straight causes pain on affected side. fan s., spreading of the toes apart following the stroking of the sole of the foot with a dull needle. It forms part of the Babinski reflex. Federici's s., on auscultating the abdomen the heart-sounds can be heard in cases of intestinal perforation with gas in the peritoneal cavity. Filipovitch's s., the yellow discoloration of prominent parts of the palms and soles in typhoid fever. Fischer's s., on auscultation over the manubrium with the partie of the parties o erforation with gas in the peritoneal cavity. there is sometimes heard, in tuberculosis of the bronchial glands, a murmur due to pressure of the glands on the innominate veins. **Fisher's s.**, a glands on the innominate veins. Fisher's S., a presystolic murmur in certain cases of adherent pericardium. Flint's S., Flint's murmur. See under murmur. Flora's S., a sign of neurasthenia consisting in defective tetanic response to prolonged faradic stimulation of the muscles alleged to be affected. flush-tank S., the passage of a large amount of urine and the coincident temperature of the property of the passage of a large amount of urine and the coincident temperature. porary disappearance of a lumbar swelling: a

sign of hydronephrosis. Forchheimer's s., the presence of a reddish eruption on the soft palate in measles. formication s. See *Tinel's s*. Fournier's s., the sharp delimitation characteristic of a syphilitic skin lesion. Francke's s., deep tenderness over the apex of the lung behind. Frankel's s., diminished tonicity of the hip-joint muscles in tabes dorsalis. Frédéricq's s., the presence of a red line on the gums in pulmonary tuberculosis. Friedreich's s., diastolic collapse of the cervical veins due to adherent pericardium. Fürbringer's s., in cases of subphrenic abscess the respiratory movements will be transmitted to a needle inserted into the abscess, which is thus distinguished from abscess above the diaphragm. Gangolphe's s., a serosanguineous abdominal effusion in strangulated hernia. Garel's s., absence of light perception on the af-fected side of the antrum of Highmore on electric transillumination; seen in diseases of the antrum of Highmore. **Gerhardt's s.** 1. The absence of laryngeal movements in dyspnea due to aneurysm of the aorta. 2. Change of percussion sound on of the aorta. 2. Change of percussion sound on change of the patient's position; seen in pneumothorax and in pulmonary tuberculosis. **Gifford's s.**, inability to evert the upper lid; seen in exophthalmic goiter. **Gilbert's s.**, opsiuria indicative of hepatic cirrhosis. **Glasgow's s.**, a systolic sound in the brachial artery in latent aneurysm of the aorta. Goggia's s., in health, the fibrillary contraction produced by striking and then pinching the brachial biceps extends throughout the whole muscle in debilitating disease, such as typhoid fever, the contraction is local. **Golden's s.**, paleness of the cervix uteri: regarded as a sign of tubal pregnancy. **Golomboy's s.**, tenderness on permission con the tibic in chlorosis. **Gordon's s.** cussion over the tibia in chlorosis. Gordon's s. 1. Same as Souque's phenomenon. 2. See cardiac s. Gould's bowed-heads., the bowing of the head in walking to see the ground in any destructive disease of the peripheral portion of the retina this act brings the image upon the functioning part of the retina. Gowers's s., abrupt intermittent oscillation of the iris under the influence of light: seen in certain stages of tabes dorsalis. Graefe's s., failure of the eyeball to move downward promptly and evenly with the upper lid in looking downward, instead it moves tardily and jerkingly; seen in exophthalmic goiter. Grancher's s., equality of pitch between expiratory and inspiratory murmurs; a sign of obstruction to expiration. Grasset's s. sign of obstruction to expiration. See Grasset's phenomenon, under phenomenon. Greene's s., outward displacement of the free cardiac border by the expiratory movement in pleuritic effusion. It is detected by percussion. Grie-singer's s., edematous swelling behind the mastoid process; seen in thrombosis of the transverse sinus. Grisolle's s., if, on stretching an affected portion of the skin, the papule becomes impalpable to the touch, the eruption is caused by measles, if, on the contrary, the papule can still be felt, the eruption is one of smallpox. Grocco's s. 1. A sign of pleural effusion consisting in the presence of a triangular area of dulness (Grocco's triangle) on the back, on the side opposite to that on which the effusion is present. Called also Grocco's triangle and Grocco's triangle dulness. 2. Acute dilatation of the heart produced by muscular effort in the early stages of exoph-thalmic goiter. 3. Extension of the liver dulness to the left of the midspinal line, indicating enlarge-ment of the organ. **Grossman's s.**, dilatation of ment of the organ. Grossman's s., dilatation of the heart as a sign of early pulmonary tuberculosis. Gubler's s., a swelling on the wrist in lead-poisoning. Günzberg's s., a resonant area between the gall-bladder and the pylorus with localized borborygmi; seen in duodenal ulcer. Guttmann's s., a humming sound heard over the thyroid in exophthalmic goiter. Guye's s., aprosexia in children with adenoids. Guyon's s., the ballottement and palpation of a floating kidney. Hahn's s., persistent rotation of the head from side to side in cerebellar disease of childhood. Hall's s., a

tracheal diastolic shock sometimes felt in aneurysm of the aorta. Haudek's s., a diverticular projecting shadow in radiographs of penetrating gasjecting shadow in radiographs of penetrating gastric ulcer, due to settlement of bismuth in pathological niches of the stomach wall; not possible in flat ulcer (1910). Called also *Haudek's niche*. **Heberden's s's**, nodes on the sides of the distal phalanges of the fingers, commonly ascribed to gout. **Hegar's s.**, softening of the lower segment of the uterus: an indication of pregnancy. **Heilbronner's s.**, Heilbronner's thigh. See *thigh*. **Heim-Kreysig s.**, a depression of the intercostal spaces occurring along with the cardiac systole in adherent pericarditis. **Hellat's** diac systole in adherent pericarditis. Hellat's s., in mastoid suppuration a tuning-fork placed on the diseased area is heard for a shorter time than when placed on any other part. Hennebert's 8., in the labyrinthitis of congenital syphilis, compression of the air in the external auditory compression of the air in the external auditory canal produces a rotary nystagmus to the diseased side; rarefaction of the air in the canal produces a nystagmus to the opposite side. Called also pneumatic sign or test. Hernig-Lommel 8., respiratory arhythmia. See arhythmia. Hertzel's 8., if in the normal person the circulation of both legs and one arm is entirely stopped by pneumatic pressure, the blood-pressure in the other arm rises about 5 mm Hg. In arteriosclerosis, however, there is a rise as high as 60 mm. Hg. Heryng's s., an infra-orbital shadow produced by pus in the maxillary antrum and observable by electric illumina-tion of the buccal cavity. **Hicks's 8.**, intermittent contraction of the uterus after the third month of pregnancy; it may also be caused by a uterine tumor. Hochsinger's s., indicanuria in the tuber-culosis of childhood. Hoffmann's s. 1. Increased mechanic irritability of the sensory nerves in tetany. 2. A sudden nipping of the nail of the index, middle, or ring finger produces flexion of the terminal phalanx of the thumb and of the second and third phalanx of some other finger. Called also digital reflex. Hoover's s., in the normal state or in genu-ine paralysis, if the patient, lying on a couch, is directed to press the leg against the couch, there will be a lifting movement seen in the other leg. phenomenon is absent in hysteria and malingering.

Hope's s., double heart-beat in aortic aneurysm.

Howship-Romberg s. See Romberg-Howship
s. Huchard's s. 1. When a change from a standing to a recumbent posture is not followed by a diminution of the pulse-rate, it is a sign of arterial hypertension. 2. Paradoxic percussion resonance in pulmonary edema. **Hueter's s.**, the absence of the transmission of osseous vibration in cases of fracture with fibrous material interposed between the fragments. **Huntington's s.**, the patient is recumbent, with his legs hanging over the edge of a table, and is told to cough. If the coughing produces flexion of the thigh and extension of the leg in the paralyzed limb, it indicates lesion in the pal liospinal path. Hutchinson's s's. I Interstitial keratitis and a dull-red discoloration of the cornea in inherited syphilis. 2. Sec teeth, Hutchinson's. 3. Hutchinson's trio. interstitial keratitis, notched teeth, and otitis occurring together in inherited syphilis. Itard-Cholewa 8., anesthesia of the tympanic membrane in otosclerosis. Jaccoud's s., prominence of the aorta in the suprasternal notch: an indication of leukemia. Jackson's s. 1. Of cardiac failure: a discrepancy between the pulse-rate and that of the heart-beat. 2. Prolongation of the sound of expiration over the part of the lung affected with tuberculosis (Chevalier Jackson). See asthmatoid wheese, under wheese. Jacquemier's s., a violet colored spot on the mucous membrane of the vagina just below the urethral orifice, seen after the fourth week of pregnancy.

Jadelot's s's. See Jadelot's line, under line.

Jellinek's s., the brownish pigmentation which occurs in many cases of hyperthyroidism. Joffroy's s., absence of facial contraction of exophthalmic goiter when the patient suddenly turns his eye upward. Johnson's s., alterations of color of the vaginal cervix from vio-

let to pink, with alterations of consistence from hard to soft: a sign of early pregnancy. Jorissenne's S., non-acceleration of the pulse on changing from a horizontal to the erect positive of the pulse of the pul tion: a sign of pregnancy. Josseraud's a., a loud metallic sound heard over the pulmonic area in acute pericarditis. Jürgensen's s., delicate crepitation of pleural tubercles sometimes heard in auscultation in acute pneumonic phthisis. Karplus's s., a modification of the vocal resonance, in which, on auscultation over a pleural effusion, the vowel u spoken by the patient is heard as a. **Keen's s.**, increased diameter of the leg at the malleoli in Pott's fracture of the fibula. Kehr's s., severe pain in the left shoulder in some cases of rupture of the spleen. Kellock's 8., increase of the vibration of the ribs on sharp percussion with the right hand, the left hand being placed firmly on the thorax under the nipple: a sign of pleural effusion. Kernig's s's. 1. In the dorsal decubitus the patient can easily and completely extend the leg; in the sitting posture or when lying with the thigh flexed upon the abdomen the leg cannot be completely extended: it is a sign of meningitis. 2. Hypertonia. kink s., tenderness on a line joining the umbilicus and the center of Poupart's ligament: indicative of ileal kink. Kocher's s. See Kocher's sympiom, under symptom. Koplik's s., the appearance of a crop of buccal macules, consisting of small, dark-red spots surrounded by minute white specks; seen in the prodromal stage of measles. Koranyi's s. Same as Grocco's s. Krey-sig's s. See Heim-Kreysig s. Krisowski's B., cicatricial lines which radiate from the mouth in inherited syphilis. Kussmaul's s., overfulness of the jugular veins on inspiration, seen in mediastinopericarditis and mediastinal tumor. Küster's s., a cystic tumor on the median line anterior to the uterus in cases of ovarian dermoids. Labordes's s. Same as Cloquet's needle s. Laennec's s., the occurrence of rounded, gelatinous masses (Laennec's perles) in the sputum of bronchial asthma. Landin's s., a sign of pregnancy, consisting in a circular elastic area, which offers a sensation of fluctuation to the examining finger, situated in the median line of the anterior surface of the body of the uterus just above the junction of the body and the cervix. This area increases in size as pregnancy advances. Landolfi's s., systolic contraction of the pupil and diastolic dilata-tion, seen in aortic insufficiency. Landou's 8., inability to grasp the uterus bimanually in the presence of slight ascites. Langoria's s., relaxation of the extensor muscles of the thigh: a symptom of intracapsular fracture of the femur. Larcher's 8., grayish, cloudy discolorations of the conjunctive that are speedily blackened: a sign of death. Lasegue's s., in sciatica, flexion of the thigh upon the hip is painless; and when the knee is bent, such flexion is easily made: this distinguishes the case from hip-joint disease. Laugier's s., a condition in which the styloid process of the radius and of the ulna are on the same level seen in fracture of the lower part of the radius. Lebhardt's s. Same as Jacquemin's s. leg s. 1. See Schlesinger's s. 2. See Neri's s. Legenleg s. dre's s., greater resistance on the unaffected side in the closed eyelid to its being raised by the examiner's finger, in facial hemiplegia. Leichtenstern's s., in cerebrospinal meningitis, tapping lightly any bone of the extremities causes the patient to wince suddenly. Lennhoff's s., a furrow appearing on deep inspiration below the lowest rib and above an echinococcus cyst of the liver. Lesieur's s., impaired resonance over the right lower thorax posteriorly, occurring in typhoid fever. Lesieur-Privey s. Same as albuminoreaction. Leudet's s. Same as bruit de Leudet. Levasseur's s., the failure of the scarificator and cupping-glass to draw blood a sign of death. Lich-theim's s., in subcortical aphasia, although the patient cannot speak, he is able to indicate with his fingers the number of syllables in the word he is

thinking of. ligature s., in hematuria, the development of ecchymoses in the distal part of a limb to which a ligature has been applied. Litten's s. See phenomenon, diaphragmatic. Livierato's s., vasoconstriction when the abdominal sympathetic is irritated by striking the anterior abdomen along the xipho-umbilical line. Lloyd's s., a symptom of renal calculus, consisting of pain in the loin on deep percussion over Lombardi's s., the appearance of venous varicosities in the region of the spinous processes of the seventh cervical and first three thoracic vertebræ; seen in early pulmonary tuberculosis. Called also varicose zone of warning. Lorens's s., ankyto the repulse some of warrang. Lorents \$ s., ankyotic rigidity of the spinal column, especially of the
thoracic and lumbar segments: sometimes seen in
incipient phthisis. Löwy's s., marked dilatation of the pupil on the instillation of adrenalin into the conjunctival sac: seen in pancreatic insufficiency. Lucas's s., distention of the abdomen in the early stages of rickets. Ludloff's s., swelling and ecchymosis at the base of Scarpa's triangle together with inability to raise the thigh when in a sitting posture, a sign of traumatic separation of the epiphysis of the great trochanter. Macewen's s., on percussion of the skull behind the junction of the frontal, temporal, and parietal bones, there is a more resonant note than normal in internal hydrocephalus and cerebral abscess. Magendie-Hertwig s., deviation of the eye in which one eye is directed higher than the other. Magnan's s., a sensation as of foreign bodies being under the skin seen in users of cocain. Magnus's s., after death the light ligation of a finger causes no visible change in its distal portion. Mahler's s., a steady increase of pulse-rate without corresponding elevation of temperature. seen in thrombosis. Maisonneuve's s., marked hyper-extensibility of the hand: a symptom of Colles' fracture. Mann's s., lessened resistance of the scalp to a constant electric current: seen in certain traumatic neuroses. Mannaberg's S., accentuation of the second sound of the heart in abdominal disease, especially appendicitis. Mannkopf's s., increase in the frequency of the pulse on pressure: not present in simulated pain. Mannkopf-Rumpi s. Same as Mannkopf's s. Marañon's 5., a vasomotor reaction following stimulation of the skin over the throat; seen in exophthalmic goiter. Marie's s., tremor of the body or extremities in exophthalmic goiter. Marie-Foix s., withdrawal of lower leg on transverse pressure of tarsus or forced flexion of toes, even when the leg is incapable of voluntary movement Masini's s., marked dorsal extension of the fingers and toes in mentally unstable children. Mathieu's s., a splashing sound heard on rapid percussion in the region about the umbilicus in complete intestinal Mayo's s., relaxation of the musobstruction. cles controlling the lower jaw, indicative of profound anesthesia Mayor's s., the sound of the fetal heart-beat in pregnancy. Mc-Burney's s., tenderness at a point midway between the umbilicus and the anterior superior spine of the ilium: it is seen in appendicitis. McClintock's s., a pulse-rate 100 an hour or more after childbirth a pulse-rate exceeding irth It points Meltzer's s. postpartum hemorrhage. r. Loss of the normal second sound, heard on auscultation of the heart after swallowing symptomatic of occlusion or contraction of the lower part of the esophagus. 2. Pain on active flexion of the hip, with the knee extended, while the examiner presses firmly down over McBurney's point: seen in appendicitis. **Mendel's s.**, an area on the epigastrium about the size of a half dollar, tender to percussion occurring in gastric and duodenal ulcer. Mendel-Bechterew s. 1. Bechterew's pupil reflex. 2. Flexion of small toes on percussion with hammer of dorsal surface of cuboid bone: a sign of organic hemiplegia. Meunier's s., daily loss of weight in measles, following the incubative

stage and preceding the eruptive stage. Meyer's s., formication of the hands and feet in the eruptive stage of scarlet fever. Milian's s., in subcutaneous inflammation of the head and face the ears are not involved, but in skin diseases they are. Mirchamp's s., a sign of mumps, when a sapid substance, such as vinegar, is applied to the mucous membrane of the tongue, a painful reflex secretion of saliva in the gland about to be affected. Mo-bius's s., inability to keep the eyeballs converged in exophthalmic goiter: due to insufficiency of the internal recti muscles. Monteverde's s., failure of any response to the subcutaneous injection of ammonia a sign of death. Morquio's s., the patient lying supine resists all attempts to raise the trunk to a sitting posture until the legs are passively flexed: noticed in epidemic poliomyelitis. Moskowicz's B., a sign of vascular gangrene. On making a circular compression of the base of the limbs by elastic bands, and then, after a few minutes, releasing the pressure, the skin, which has been rendered anemic, will become red. If the limbs are healthy the redness appears with the same intensity and rapidity on each side. On a gangrenous limb there is usually a slower and less extensive hyperemia than on a healthy one. Müller's s., a sign of aortic insufficiency, consisting of pulsation of the uvula and redness of the tonsils and velum palati, occurring synchronously with the action of the heart. Murphy's s., a sign of gall-bladder disease, consisting of inability of the patient to take a deep inspiration when the physician's fingers are hooked up deep beneath the right costal arch, hepatic margin. Musset's s., rhythmic jerking movement of the head, seen in cases of aortic aneurysm and aortic insufficiency. Naunyn's s., a sign of cholecystitis, consisting in deep tenderness when, at the end of a full inspiration, the examiner's fingers are thrust upward beneath the costal arch at the outer limit of the right epigastrium. **neck s.** Same as *Brudzinski's s* (1st def). **negro s.**, exaggerated excursion of the eyeball on the side most severely affected by paralysis when the eyeballs are turned up. Neri's s., a sign of organic hemiplegia, consisting in the spontaneous bending of the knee of the affected side as the leg is passively lifted, the patient being in the dorsal position. niche s., Haudek's sign Nikolsky's s., a condition in which the outer layer of the skin nagel's s., paralysis of the facial muscles, especially in respect of movements connected with the emotions observed in cases of tumor of the thalamus. Objective s., one that can be seen, heard, or felt by the diagnostician. Called also physical s Oliver's s., tracheal tugging a sign of aneurysm of the aorta. Oliver-Cardarelli s., Olshausen's s., when a tumor is found in young unmarried women lying anterior to the uterus it is likely to be a dermoid cyst Onanoff's s., Onanoff's reflex. See reflex. Oppenheim's s., contraction of the tibialis anticus, extensor hallucis longus, extensor digitorum communis, and sometimes of the peroneal muscles on stroking the median surface of the leg at the posterior margin of the tibia from above downward: seen in spastic conditions of the lower extremities. Oppolzer's s., in serofibrinous pericarditis palpation shows that the seat of the apex-beat changes with the posture of the patient. orbicularis s., in hemiplegia, inability to close the eye on the paralyzed side without closing the other. Osler's s., small, painful, erythematous swellings in the skin of the hands and feet in malignant endocarditis. palmoplantar s. See Filipovitch's s. Parkinson's s., an immobile, mask-like expression in paralysis agitans. Parrot's s's. 1. Dilatation of the pupil on pinching the skin of the neck: seen in meningitis. 2. Bony nodes on the outer table of the skull of infants with inherited syphilis. Pastia's s. transverse lines, usually two or three, in the fold

of the elbow in scarlet fever. They are rose-red at first, but later turn dark red or wine colored. They are visible before the appearance of the rash, remain through the eruptive stage, and continue after desquamation Paul's s., feeover the rest of the heart: indicative of pericardial adhesions.

Pende's s., development of goose flesh after rubbing the skin. a sign of hypo-adrenia **Perez's s.**, a friction sound heard over the sternum when the patient raises and drops his arms: a sign of mediastinal tumor or of aneurysm of the arch of the aorta. Pfuhl's s., inspiration increases the force of flow in paracentesis in the case of subphrenic abscess, but lessens it in the case of pyopneumothorax. This distinction is lost when the diaphragm is paral-This distinction is lost when the diaphragm is parayzed. **Pfuhl-Jaffé s.**, in pyopneumothorax the liquid issues from the exploratory puncture or incision with considerable force during inspiration: in true pneumothorax during expiration. **physical s.** Same as objective s **Pilcz's s.**, the Westphal-Pilcz phenomenon. **Pinard's s.**, a sharp pain on pressure over the fundus uteri: after the sixth month of pregnancy a sign of breech presentation. **Pins's s.**, a sign seen in pericarditis, consisting of disappearance of the symptoms that simulate pleurisy when the patient is placed in the knee-chest position. Piotrowski's s., percussion of the tibialis muscle produces dorsal flexion and supination of the foot. When this reflex is excessive it indicates organic disease of the central nervous system. Called also anticus reflex. Pitres's 8'8. 1. Hyperesthesia of the scrotum and testes in tabes dorsalis. 2. Anterior deviation of the sternum in pleuritic effusion. plumb-line s., the estimation in sternal displacement by a plumb-line in the diagnosis of pleuritic ment by a plumb-line in the diagnosis of pleuritic effusion. **pneumatic s.** See *Hennebert's s.* **Pool-Schlesinger s.**, spasm of the extensor muscles of the knee and of the muscles of the calf in tetany. See *Schlesinger's s.* **Porter's s.** Same as *Oliver's s.* **Potain's s.**, extension of percussion dulness in dilatation of the aorta from the manubrium to the third costal cartilage on the right-hand side. **Pot**tenger's s. I. Intercostal muscle rigidity on palpation in pulmonary and pleural inflammatory conditions. 2. Different degrees of resistance on light touch palpation, noted (1) over solid organs when compared with hollow organs; (2) over foci of disease in the lungs and pleura when compared with that over normal organs. Prat's s., muscular rigidity as a sign of gangrene or necrosis in wounds, and as an indication for operation.

Prevel's s., acceleration of the heart beat when a reclining subject changes to the upright position Prevost's s., conjugate deviation of the head and eyes, the eyes looking toward the affected hemisphere and away from the palsied extremities: seen in hemiplegia. **pronation s.** See *Babinski's s*. (5th def). **pseudo-Graef's s.**, slow descent of the upper lid on looking down, and quick ascent on looking up seen in conditions other than exophthalmic goiter. Putnam's s., lengthening of the leg in hysteric hip disease. pyra-midal s. See Barre's pyramidal s. Quant's 8., a T-shaped depression in the occipital bone, sometimes seen in rickets. Queckenstedt's s., when the veins in the neck are compressed on one or both sides there is a rapid rise in the pressure of the cerebrospinal fluid of healthy persons, and this rise quickly disappears when pressure is taken off the neck. But when there is a block in the vertebral canal the pressure of the cerebrospinal fluid is little or not at all affected by this ma .euver. Quénu-Muret s., in aneurysm, the main artery of the limb is compressed and then a puncture is made at the periphery; if blood flows, the collateral circulation is probably established. Quincke's s., a blanching of the finger-nails at each diastole of the heart; seen in aortic insufficiency. Quin-quaud's s., trembling of patient's fingers, felt

when his fingers, spread apart, are placed vertically in the palm of the examiner's hand: said to be a sign of alcoholism. radialis s. See Strümpell's s. (3d def.). **Ramond's s.**, rigidity of the erector spinæ muscle indicative of pleurisy with effusion. The rigidity relaxes when the effusion becomes purulent. Rasch's s., fluctuation of the liquor amnii obtained as by ballottement in early pregnancy. Raynaud's s. Same as acro-asphyxia. Reder's s., a tender point on the right side above O'Beirne's sphincter: seen in appendicitis. Remak's s., a double sensation caused by pricking with a needle in tabes dorsalis. Reusner's s., increased volume of the pulse in the uterine arteries, perceptible in Douglas' culdesac in the fourth month of pregnancy and later. Revilliod's 8., inability to close the eye on the affected side in paralysis of the superior facial nerve Richardson's s., the application of a tight fillet to the arm as a test of death if life be present, the veins on the distal side of the fillet become more or less distended. Riess's s., on listening over the stomach in some cases of adherent pericardium, the heart-sounds are heard loud and metallic in quality. Rinman's s., the appearance in early pregnancy of cord-like radiations proceeding from the nipple. Rinault's s., external pressure upon the eye during life causes only a temporary change in the normal roundness of the pupil; but after death the change so caused may be permanent. Risquer's s., the presence of blood-pigment loose in the blood: a sign of malaria. Ritter-Rollet s., flexion of the foot on gentle electric stimulation; extension on energetic stimulation. Riviere's s., an area of change in percussion note denoting a band of increased density across the back at the plane of the spindensity across the back at the blade of the spin-ous processes of the fifth, sixth, and seventh dorsal vertebræ. a sign of pulmonary tuber-culosis. **Romberg's 8.**, swaying of the body when standing with the feet close together and the eyes closed: a sign of locomotor ataxia. Called also the Brauch-Romberg s. Romberg-Howship s., the lancinating pains in the leg occurring in incarcerated obturator hernia.

Rommelaere's s., an abnormally small proportion of normal phosphates and of sodium chlorid in the urine of the cancerous cachexia. Rosenbach's s's. I. Absence of the abdominal reflex in inflammatory disease of the intestines. 2. Absence of a reflex in pinching the skin of the abdominal reflex i men on the paralyzed side in hemiplegia. 3. Tremor of the eyelids in exophthalmic goiter. Inability to close the eyes immediately on command: seen in neurasthenia. Rosenheim's 8., a friction-sound in the left hypochondrium: a sign of perigastritis. Rosenthal's s., stabbing and burning pain caused by a faradic Rosenthal's s., current applied to the spinal column: a sign of spondylitis. Roser-Braun s., absence of dural pulsation: a sign of cerebral tumor or abscess. Rossolimo's s., Rossolimo's reflex. See reflex. Rotch's s., dulness on percussion of the right fifth intercostal space: a sign of pericardial effusion. Roth's s., percussional dulness between the fifth and sixth costal cartilages. It is due to either tricuspid stenosis and dilatation of the right auricle or to a pericardial effusion. Rothschild's s. 1. Preternatural flattening and mobility of the sternal angle: seen in phthisis. 2. Rarefaction of the outer third of the eyebrows in thyroid inadequacy. Roussel's s., sharp pain on light percussion on the subclavicular region, between the clavicle and fourth rib: a sign of incipient tuberculosis. Rovighi's s., a fremitus felt on percussion and palpation of a superficial hepatic hydatid. Rovsing's s., pressure on the left side over the point corresponding to Mc-Burney's point will elicit the typical pain at Mc-Burney's point in appendicitis, but not in other abdominal affections. Rumpel-Leede s. See Rumpel-Leede phenomenon, under phenomenon.

Rumpf's s. 1. Alternating fibrillary and tonic

contractions after the cessation of strong faradization: seen in traumatic neuroses. Called also Rumpf's traumatic reaction. 2. Quickening of the pulse on pressure over a painful point: seen in neurasthenia. Rust's s., in caries or malignant disease of the cervical vertebræ the patient supports his head with his hands while moving the body. Saenger's s., a light reflex of the pupil that has ceased returns after a short stay in the dark, in cerebral syphilis, but not in tabes dorsalis. Sanders's s., an undulating cardiac impulse, especially at the epigastrium a sign of pericardial adhesion. Sansom's s's. 1. Marked increase of the area of dulness in the second and third intercostal spaces, due to pericardial effusion. 2. A rhythmic murmur heard with a stethoscope applied to the lips in aneurysm of the thoracic aorta. Sarbo's s., analgesia of the peroneal nerve: sometimes noticed in locomotor ataxia. Saunders's s., on wide opening of the mouth there takes place in children associated movements of the hand consisting of opening of the hand and extension and separation of the schapiro's s., no slowing of the pulse-rate on lying down: indicative of weakness of the heart muscle. Schapiman's s., in dry pleurisy the pain is increased when the patient bends his body toward the well side, whereas in intercostal neuralgia it is increased by bending toward the affected side. Schick's s., stridor heard on expiration in an infant with tuberculosis of the bronchial glands. Schlange's s., dilatation above and absence of peristalsis below the point of obstruction in intestinal obstruction. Schlesinger's s., in tetany, if the patient's leg is held at the knee-joint and flexed strongly at the hip-joint, there will follow with-in a short time an extensor spasm at the kneejoint, with extreme supination of the toot. Called also leg phenomenon and Pool's phenomenon. Schlunge's s., lack of peristalsis below the seat of intestinal obstruction, with dilatation above it. Schüle's s., the omega melancholium. Schultze's s. 1. Same as Chrostek's s. 2. See longue phenomenon, under phenomenon. Seeligmiller's s., mydriasis on the side of the face affected with neuralgia. Seguin's s., contraction of the muscles preceding an epileptic attack, and joint, with extreme supination of the foot. Called of the muscles preceding an epileptic attack, and giving warning of its approach. Seitz's s., bronchial inspiration which begins harshly and then becomes faint: indicative of a cavity in the lung. Semon's s., impairment of the mobility of the vocal cords in malignant disease of the larynx. Shelly's s., a sago-like eruption on the palate and lips in influenza. Shibley's s., in the presence of consolidation of the lung or a collection of fluid in the pleural cavity, all spoken vowels come through the stethoscope to the ear of the examiner as "ah." Sicar's s., a metallic resonance on percussion with two coins on the front of the chest and auscultation at the back, observed in some cases of effusion within the pleura. Sieur's s. Same as coin-test, under tests. Signorelli's s., extreme tenderness on pressure on the retromandibular point in meningitis. furrows radiating from the mouth in inherited syphilis. Simon'ss. 1. Retraction or fixation of the umbilicus during inspiration. 2. Absence of the usual correlation between the movements of the diaphragm and thorax: seen in beginning meningtis. Sisto's s., constant crying as a sign of congenital syphilis in infancy. Skeer's s., a small circle in the iris, near the pupil, in both eyes; seen in tuberculous meningitis. Skoda's s., a tympanitic sound heard on percussing the chest above a large pleural effusion or above a consolidation in pneumonia. Smith's s., a murmur heard in cases of enlarged bronchial glands on auscultation over the manubrium with the patient's head thrown back. somatic s., any sign presented by the trunk and limbs rather than

by the sensory apparatus. Spiegelberg's s., a feeling like that of friction against wet india-rubber, conveyed to the finger by a cervix uteri affected with malignant disease. **spinal s.**, tonic contraction of the spinal muscles on the diseased side in pleurisy. **Stairs-s.**, difficulty in descending a stairway in locomotor ataxia. Stellwag's s., an apparent widening of the palpebral opening in exophthalmic goiter. Sterles's s., increased pulsation over the cardiac region in intrathoracic tumors. Sternberg's s., sensitiveness to palpation of the muscles of the shouldergirdle in pleurisy. Stewart-Holmes s., the patient rests his elbow on the table and the examiner grasps his wrist. The patient then tries to flex the arm against the resistance of the examiner. When the wrist is released, flexion occurs, but is again arrested by the contraction of the triceps. This takes place in normal patients, but in hypotonia the flexion of the arm continues without any action on the part of the triceps. Stiller's s., detachment, or loose attachment, of the tenth rib to the costal cartilages; preternatural mobility or fluctuation of the tenth rib in enteroptosis or gastroptosis. **Stocker's s.**, in typhoid fever, if the bed-clothes be pulled down, the patient takes no notice; but in tuberculous meningitis the patient resents the interference and immediately draws the clothes up again. Stokes's s., a severe throbbing in the abdomen, at the right of the umbilicus, in acute enteritis. Straus's s., the injection of pilocarpin in facial paralysis due to a central lesion does not cause any difference in the perspiration of the two sides, but if the paralysis be of peripheral origin, the secretion of the paralyzed side is markedly affected. Strauss's s., increase of fat following the use of fatty foods in chylous ascites. Strümpell's s. 1. Dorsal flexion of the foot when the thigh is drawn up toward the body seen in a paralyzed limb Called also tibial phenomenon. 2. Dorsal flexion of the great toe in an extremity affected with paresis. 3. Inability to close the fist without marked dorsal extension of the wrist. Cal'ed radialis s. Strunsky's s., a sign for detecting lesions of the anterior arch of the foot. The examiner grasps the toes and flexes them suddenly. This procedure is painless in the normal foot, but causes pain if there is inflammation of the anterior arch. subjective s., one which is apparent only to the patient, such as pain or vertigo. **Tansini's s.**, in cancer at the pylorus the abdomen is shrunken in unless there is metastasis in the bowel below, in which case the abdomen is prominent. Tarnier's s., effacement of the angle between the upper and lower uterine segments in pregnancy; an indication of the inrevitable approach of an abortion. **Tay's s.** See cherry-red spot, under spot. **Tellais's s.**, pigmentation of the eyelid in exophthalmic goiter. **Ten Horn's s.**, if gentle traction in the right spermatic cord causes pain, appendicits is indicated. **Testimin's s.** cated. Testivin's s., the formation of a collodion-like pellicle on the urine after removing the albumin and treating with acid and then with one-third of its volume of ether; said to occur during the incubation of infectious diseases. **Theimich's lip sign**, a protrusion or pouting of the lips elicited by tapping the orbicularis or smuscle. **Thornton's 8.**, severe pain in the region of the flanks in perhapitibisis. region of the flanks in nephrolithiasis. thyroid 8., an injection of thyroid extract retards the pulse and causes a fall in the systolic arterial pressure, while the oculocardiac reflex persists or becomes positive, in persons with increased thy-roid function. **Tinel's s.**, a tingling sensation in the distal end of a limb when percussion is made over the site of a divided nerve. It points to beginning regeneration of the nerve. Called also formication s. and distal tingling on per-cussion (D. T. P.). **Toma's s.**, in ascites from peritoneal inflammation when the patient lies on his back percussion on the right side of the abdomen gives tympany; on the left side, dulness.

Traube's s., a faint double sound heard in auscultation over the femoral arteries in aortic regurgitation. **Tresilion's s.**, a reddish appearance of Stenson's duct in mumps. Trima-deau's s., if the dilatation above an esophageal stricture is conic, the stricture is fibrous; if cup shaped, the stricture is malignant. **Troisier's** s., enlargement of the lymph-glands above the clavicle; a sign of intra-abdominal malignant disease or of retrosternal tumor. Trousseau's s., a muscular spasm on pressure over large detached arteries or nerves; seen in tetany. **Uhthoff's** arteries or nerves; seen in tetany. Uhthoff's s., nystagmus occurring in multiple cerebrospinal sclerosis. ulnar s., analgesia of the ulnar nerve on one side, generally present in all insane patients except general paralytics. **Unschuld's s.**, a tendency to cramp in the calves of the legs; an early indication of diabetes. **Uriolla's s.**, the presence in the urine of malarial patients of minute black granules of blood-pigment. Vanzetti's s., in sciatica the pelvis is always horizontal in spite of scoliosis, but in other lesions with scoliosis the scoliosis, but in other lesions with scoliosis the pelvis is inclined. **vein 8.**, a bluish cord along the midaxillary line formed by the swollen junction of the thoracic and superficial epigastric vein; seen in tuberculosis of the bronchial glands. **Verco's 8.**, subungual striæ or dots of hemorrhage on the hands and feet in nodal fever. **Vigouroux's** s., diminished electric resistance of the skin in exophthalmic goiter. Villaret's s., flexion of the great toe on percussion of the tendo achillis, a sign of lesion of the sciatic nerve and its branches. Vincent's s., the Argyll-Robertson pupil. Vipond's s., generalized adenopathy seen during the incubation period of the exanthematous fevers of childhood. **vital s.**, the pulse, respiration, and temperature. **Voltolini's s.**Same as *Heryng's s.* **von Graefe's s.**, failure of the upper lid to move downward with the eyeball in glancing downward; seen in exophthalmic gotter **von Wahl's s.** See *Wahl's* s's. Wahl's s's. 1. Local meteorism, or distention on the proximal side of an obstruction of the bowel. 2. A blowing or scraping sound at the systole, heard over an artery soon after its partial division by an injury. Warthin's s., exaggerated pulmonary sounds in cases of acute pericarditis. **Weber's s.**, paralysis of the oculomotor nerve of one side and hemiplegia of the opposite side. **Wegner's s.**, a broadened, discolored appearance of the epiphyseal line in infants dying from hereditary syphilis.

Weill's s., absence of expansion in the subclavicular region of the affected side in infantile pneumonia. Weiss's s., contraction of
facial muscles when lightly percussed it occurs
in hydroic powers the significant of the state of the sta in hysteria, neurasthenia, tetany, etc. Wer-nicke's s., the hemiopic pupillary reaction. See under reaction. Westphal's s., loss of the knee-jerk in locomotor ataxia. Widmer's s., Werthe temperature in the right axilla is distinctly higher than the left; a sign of appendicitis. Widowitz's s., protrusion of the eyeballs and sluggish movements of the eyeballs and eyelids seen in diphtheric paralysis. Called also doll's eye s. Wilder's s., an early sign of exophthalmic goiter consisting in a slight twitch of the eyeball when it changes its movement from adduction to abduction or vice versa **Williams's s.** 1. A dull tympanitic resonance heard in the second intercostal space in severe pleural effusion. 2. Lessened lung expansion on the affected side; a sign of adherent pericardium.

Williamson's s., markedly diminished bloodpressure in the leg as compared with that in the arm on the same side, seen in pneumothorax and pleural effusion. Wintrich's s., a change in the pitch of the percussion-note when the mouth is opened and closed; it indicates a cavity in the lung. Wölfler's s., in hour-glass stomach fluids pass quickly, but on subsequent lavage the water contains food and foul matter Wolkowater contains food and foul matter witsh's 8., marked relaxation of the abdominal muscles of the right side in chronic recurrent

SIGN

1078

appendicitis. Wood's s., relaxation of the orbicularis muscle, fixation of the eyeball, and divergent strabismus, indicative of profound anesthesia. Wreden's s., presence in the external auditory meatus of a gelatinous matter in children who are born dead. Zaufal's s., saddle-nose. Zugsmith's s., abnormal dulness on percussion in the second interspace for a variable distance on both sides of the sternum; seen

in gastric ulcer and carcinoma. signa (sig'nah). Latin for mark or write: abbreviated to s. or sig. on prescriptions. See prescription.

signature (sig'nat-chur) [L. signatu'ra]. 1. That part of a prescription which gives directions as to the taking of the medicine. See prescription.

2. Any characteristic feature of a substance formerly regarded as an indication of its medicinal virtues. thus, the eye-like mark on the flower of the euphrasia was supposed to show its usefulness in eye diseases; the liver-like shape of the leaf of liverwort pointed to its use in hepatic diseases, the yellow color of saffron indicated its use in jaundice.

signaturist (sig'nat-ur-ist). One who believes in the doctrine of signatures.

Signorelli's sign (sēn-yor-el'ēz) [Angelo Signorelli, a contemporary Italian physician]. See under sign.

Sig. n. pro. Abbreviation for L sig'na nom'ine pro'prio, label with the proper name.

siguatora (sig-wah-ta'rah) [Sp.]. Poisoning due to the eating of certain kinds of fish.

sijna (sij'nah). An East Indian bark, used in colics; ecbolic if given in large doses.

sikimi (sik'im-e) [Japanese]. The plant, Illic'ium religio'sum.

sikimin (sik'im-in). A poisonous hydrocarbon, C10H16, which is found in the leaves of Illic'ium religio'sum.

silajit (sil'aj-it). An exudation from rock surfaces during the hot season in certain parts of India. used in Hindoo medicine.

silbamin (sil'bam-in). Silver fluorid, a powder used in a solution of 1: 1000 for irrigating the bladder and the urethra.

lberol (sil'ber-ol). A proprietary sulphocarbolate of silver, OH C₀H₄.SO₂.OAg: used in gonorsilberol (sil'ber-ol). rhea and in eye inflammations.

silex (si'leks). Same as silica.

silica (sil'ik-ah) [L. si'lex flint]. Silicon dioxid, SiO₂, or silicic anhydrid; also its homeopathic preparation.

silicate (sil'ik-āt) [L. sil'icus]. Any salt of silicic acid.

silicea (sil-is'e-ah). A homeopathic preparation of silica.

silicic acid (sil-is'ik). See acid.
silicious (sil-ish'us). Resembling or containing silica.

silicofluorid (sil"ik-o-flu'o-rid). A compound of silicon and some other base with fluorin.

silicol (sil'ik-ol). An organic silica compound, silicic oxid casein metaphosphate: used in the treatment of tuberculosis.

silicon (sil'ik-on) [L. si'lex flint]. A non-metallic tetrad element whose dioxid is silica; symbol, Si; atomic weight, 28.3. **8. fluorid**, a compound whose fumes are sometimes fatal to workers in superphosphate factories.

silicosis (sil-ik-o'sis) [L. si'lex flint]. Pneumono-coniosis due to the inhalation of the dust of stone, sand, or flint; grinders' disease.

silin (sil'in). The citrosilicate of hexamethylenetetramin: used in uric-acid diathesis.

siliqua olives (sil'ik-wah o-li've) [L. "husk of the olive"]. The fibers which appear to incircle superficially the inferior olive of the brain. Their outer and inner portions are termed funic'uli sil'iquæ.

silique (sil-ēk') [L. sil'iqua pod]. A slender pod of a cruciferous plant, like the pods of the mustard and radish.

siliquose (sil'ik-wos). Having siliques, or resembling a silique. See cataract and desquamation.

silkworm-gut (silk'werm-gut). A strand drawn from a silkworm which has been killed when ready to spin its cocoon. It is used, like catgut, for sutures, but is much less pliable than the latter, and not so absorbable.

sillonneur (si-von-nuhr') [Fr.]. A three-bladed scalpel for operations on the eye.

Silpha sinua'ta (sil'fah). An animal organism sometimes found upon the remains of persons long dead.

Silphium (sil'fe-um) [L.; Gr. σίλφιον]. A genus of large, composite-flowered herbs known as rosin-weeds. S. lacinia'tum, the compass-plant of North America, is useful in coughs and in remittent fevers. Dose of fluidextract, 30-60

min. (2-4 c.c.). silver (sil'ver). lver (sil'ver). A white, soft, malleable, and ductile monad metal; symbol, Ag; atomic weight, 107 88. Its compounds are extensively used in medicine, and metallic silver is employed in surgery and in the manufacture of instruments. s. arsphenamin, a combination of argentum. the disodium salt of dioxy-diamino-arseno-benzol with silver oxid, Ag₂O.₂[NH₂(ONa)C₆H₃As], a brownish-black powder used as is salvarsan. It contains approximately 20 per cent of arsenic and 15 per cent. of silver. **8. bromid**, a binary compound, AgBr. Dose, $\frac{1}{4} - \frac{1}{2}$ gr. (0.016-0033 gm.). s. chlorid, horn-silver, a white solid, AgCl. alterative. Dose, ½-3 gr. (0.033-0.19 gm). s. citrate. Same as itrol. colloidal s. See collargol, antisyphilitic. Dose, $\frac{1}{10}$ − $\frac{1}{20}$ gr. (0 ∞1-0 ∞3,3 gm).

s. eosolate, a salt, C_6HOCH_3 OC₂H₃OAg₃(SO₃)₄, an antiseptic and germicide powder: used in skin diseases and gonorrhea. s. fluorid, a glassy, s. iodate, an insoluble astringent and antiseptic salt, AgIO₃. Dose, $\frac{1}{6}$ - $\frac{1}{2}$ gr. (0.01-0.033 gm). s. iodid [L. argen'ti io'didum], a light-yellowish, binary, powdery compound, AgI. useful in syphilis and in nervous diseases, and used locally for conjunctivitis. Dose, 10-1 gr. (0.006-0.06 gm.).

s. lactate. See actol. s. nitrate [L. ar genti m'tras], AgNO₃, a salt in transparent, tabular, rhombic crystals. It is a very important caustic counterirritant and escharotic, and is used internally in epilepsy and in diseases of the stomach ternally in epilepsy and in diseases of the scottler and intestines. Dose, $\frac{1}{h}-\frac{1}{2}$ gr (0.008-0.033 gm). Fused silver nitrate, or lunar caustic, is prepared in cones or pencils for external use. Dilute silver nitrate consists of one part of the nitrate with two of potassium nitrate. It is for external use, and is much milder in its action than the pure nitrate. s. oxid [L. argen'ti ox'idum], a brown-black powder, Ag₂O, used like silver nitrate employed in uterine and vaginal diseases. Dose, $\frac{1}{2}$ -2 gr. (0 033-0.13 gm.). s. protalbin. See largin. s. protein, gm.). **s. protaibin**. See largin. **s. protein**, silver oxid made colloidal by the addition of protein. s. salvarsan. See silver arsphenamin. 8. sulphocarbolate. See silberol.

silver-fork deformity. The peculiar fork-like deformity produced by Colles' fracture.

Silvester's method (sil-ves'terz) [Henry Robert Silvester, English physician, 1829-1908]. See under respiration, artificial.

A hydrocarbon, C10silvestrene (sil-ves'tren). H₁₆, obtainable from European oil of turpentine.

silvodide (sil'vo-dīd). A proprietary preparation, known as milk of silver iodid, used like the silver salts, as an antiseptic and germicide.

silvoform (sil'vo-form). See sophol.

silvol (sil'vol). A proprietary colloidal protein-silver compound containing 20 per cent. silver: it is antiseptic and astringent, and is used locally in 5 to 40 per cent. solutions.

Simaba (sim-a'bah). A genus of simarubaceous trees and shrubs, various species of which are medicinal. S. ce'dron, of tropical America, affords cedron-seed: locally much employed as an antispasmodic, antipyretic, and as a cure for dyspepsia. Dose of fluidextract, 1-8 min. (0.66-0.5 c.c.).

Simaruba (sim-ar-u'bah). A genus of tropical American trees, several species of which are medicinal. The root-bark of S. ama'ra is a bitter tonic and astringent. Dose of fluidextract, 10-30 min. (0.666-2 c.c.).

simesthesia (sim-es-the'ze-ah). Osseous sensibility.

similia similibus curantur (sim-il'e-ah sim-il'ib-us ku-ran'tur) [L. "likes are cured by likes"]. The doctrine, or the brocard that expresses it, which lies at the foundation of homeopathy; namely, that a disease is cured by those remedies which produce effects resembling the disease itself.

similimum (sim-il'im-um) [L. "likest"]. The homeopathic remedy which most exactly reproduces the symptoms of any disease.

Simmonds's disease [Morris Simmonds, physician in Hamburg, born 1855]. See under disease.

Simo'nea folliculo'rum. Same as Demodex folliculorum.

Simon's operation, sign (si'monz) [John Simon, English surgeon, 1824-1876]. See operation and sign.

Simon's position (ze'monz) [Gustav Simon, German surgeon, 1824-1876]. See position.

Simonart's thread (se-mo-narz') [Pierre Joseph Cécilien Simonart, Belgian obstetrician, 1817– 1847]. See thread.

simple (sim'pl) [L. sim'plex]. 1. Neither compound nor complex; single. 2. An old term for any herb with real or supposed medicinal virtues.

simpler, simplist (sim'pler sim'plist). An herb-doctor.

Simpson light (simp'sun) [William Speirs Simpson, British civil engineer, died 1917]. See light.

Simpson's forceps (simp'sunz) [Sir James Young Simpson, Scottish obstetrician, 1811-1870]. See force ps.

Simpson's splint (simp'sunz) [William Kelly Simpson, laryngologist in New York, born 1855]. See splint.

Sims's position, speculum, etc. (simz) [J. Marion Sims, New York gynecologist, 1813-1883]. See position, speculum, etc.

simul (si'mul). Latin for at once.

simulation (sim-u-la'shun) [L. simula'tio]. 1. The act of counterfeiting a disease; malingering. 2. The imitation of one disease by another.

Simulium (sim-u'le-um). A genus of robust, hump-backed dipterous insects which are known as black flies, sand flies, or buffalo gnats. They are widely distributed and a great pest at times. S. columbaczen'se, a species in southern Europe which has been known to kill children. S. griseicol'lis, the nimetti found in the Sudan. S. pecua'rum, the buffalo gnat, a terrible scourge to horses and cattle. S. venus'tum, a species widely distributed in North America.

simulo (sim'u-lo). A proprietary tincture of the seeds of *Cap'paris coria'cea*, or caper: used for hysteria and epilepsy.

sinalbin (sin-al'bin). A white, crystalline glucosid, C₃₀H₄₄N₂S₂O₁₆, from the seeds of white mustard, Sina'pis al'ba. It hydrolyzes into methyl-phenylisothiocyanate (the volatile oil of white mustard), glucose, and sinapin sulphate.

sinamin (sin-am'in). Allyl cyanamide, C₃H₅-NHCN, from crude oil of black mustard.

sinapin (sin-a'pin). An alkaloid from the seeds of white mustard. It is the cholin ester of sinapic

acid with the formula OH(OCH₂)₂C₄H₂(CH)₂CO₁.-(CH₂)₂N(CH₄)₅OH.

Sinapis (sin-a'pis) [L. for "mustard"; Gr. o'lvant].

A genus of cruciferous plants; mustard. Now regarded as a subgenus of Bras'sica, See mustard.

S. al'oa, white mustard. See mustard. S. ni'gra, black mustard. See mustard.

sinapiscopy (sin-ap-is'ko-pe) [Gr. σίναπι mustard + σκοπεῖν to view]. The application of mustard as a test for sensory disturbance.

sinapism (sin'ap-izm) [L. sinapis'mus; Gr. συαπισμός, σινάπισμα]. A plaster or paste of ground mustard-seed; a mustard-plaster.

sinapized (sin'ap-Izd). Mixed with or containing mustard.

sinapol (sin'ap-ol). A proprietary analgesic for external use.

sinapolin (sin-ap'o-lin). Dialylures, a compound,

C₁₄H₁₂N₂O₂.C₇H₁₂NO₂, from mustard oil.

sincipital (sin-sip'it-al). Pertaining to the sincipit.

sinciput (sin'sip-ut) [L.]. The anterior and upper part of the head.

sinew (sin'u). The tendon of a muscle. back s., the large flexer tendon at the back of the cannon bone of quadrupeds. Called also back lendon. weeping s., an encysted ganglion, chiefly on the back of the hand, containing synovial fluid.

Sing., sing. An abbreviation of L. singulo'rum, of each.

singers' nodule (sing'erz). Same as chorditis tuberosa.

singultation (sing-ul-ta'shun). A hiccup.

singuitous (sing-ul'tus). Affected with hiccup.

singultus (sing-ul'tus) Latin for hiccup. s. gas'tricus nervo'sus, hiccup due to a neurotic condition of the stomach.

sinigrin (sin'ig-rin). Potassium myronate; a glucosid found in black mustard seed. It is hydrolyzed by myrosin into dextrose, potassium bisulphate, and allyl-isothiocyanate (C₄H₅NCS, the volatile oil of black mustard).

sinistrad (sin-is'trad). To or toward the left.

sinistral (sin'is-tral) [L. sinistra'lis], Pertaining to the left side.

sinistrality (sin-is-tral'it-e). Left-handedness.

sinistraural (sin-is-traw'ral) [L. sinis'ter left + au'ris ear]. Hearing better with the left ear.

sinistrin (sin-is'trin) [L. sinis'ter lest]. Same as inulin.

sinistrocardia (sin-is-tro-kar'de-ah) [L. sinis'ter left + Gr. καρδία heart]. Displacement of the heart to the left.

sinistrocerebral (sin"is-tro-ser'e-bral) [L. sinis'ter left + cerebral]. Pertaining to or situated in the left cerebral hemisphere.

sinistrocular (sin-is-trok'u-lar). Left-eyed: having the left eye the stronger.

sinistrocularity (sin'is-trok-u-lar'it-e) [L. sinis'ter left + oc'ulus eye]. The state of having the left eye the stronger.

sinistrogyration (sin-is"tro-ji ra'shun) [L. sinis' ter left + gy'rus a turn]. A turning to the left, as a movement of the eye or the plain of polarization

sinistromanual (sin-is-tro-man'u-al) [L. sinis'tes left + ma'nus hand]. Left hand.

sinistropedal (sin-is-trop'e-dal) [L. sinis'ter lest + pes foot] Using the lest foot in preference.

sinistrorse (sin'is-trors). Turned to the left.

sinistrose (sin'is-trōs). A levorotatory sugar sometimes found in the urine.

sinistrosis (sin-is-tro'sis). [I. sin'ister unlacky]. Shell-shock; the nervous and mental condition, including defects of speech and hearing, occurring in persons who have gone through bombardments in war.

inistrotorsion (sin'is-tro-tor'shun) [L. sinis'ter. left + tor'sio twist]. A twisting toward the left: used mainly of the eye.

inkalin (sing'kal-in). A base found in mustard: identical with cholin.

ino-atrial, sino-auricular. See sinu-atrial and sinu-auricular.

inomenin (sin-om'en-in). A crystalline alkaloid, C₁₉H₂₃NO₄, from Sinomenium diversifolium.

ii non val. Abbreviation for L si non va'leat, if it does not answer.

inospiral (si-no-spi'ral). Pertaining to the sinus venosus and having a spiral course: said of certain muscle-fibers of the heart.

inter (sin'ter). The calcareous or silicious matter deposited by mineral springs.

intoc (sin'tok). The bark of Cinnamo'mum sin'toc, of the East Indies: it resembles cinnamon.

inu-atrial (sin-u-at're-al). Same as sinu-auricular. inu-auricular (sin"u-aw-rik'u-lar). Pertaining to the sinus venosus and the auricle of the heart.

inuberase (sin-u'ber-ās). A proprietary preparation for use in enteritis, dysentery, dyspepsia, constipation, and other intestinal disorders.

inuitis (sin-u-i'tis). Same as sinusitis.

inuous (sin'u-us) [L. sinuo'sus]. Bending in and out; winding.

inus (si'nus) [L. for "cavity," "bosom," etc.]. 1. A recess, cavity, or hollow space. 2. A dilated channel for venous blood: found chiefly within the cranium. 3. An air-cavity in one of the cranial bones; especially one communicating with the nose. Such are the ethmoid, frontal, max-illary, and sphenoid sinuses. 4. A suppurating channel or fistula. accessory s's of the nose, they are the frontal, maxillary, sphenoidal, and ethmoidal sinuses. air-s., a cavity in a bone containing air. s. of the anterior chamber, the narrow space at the edge of the anterior chamber of the eye, between the border of the cornea and the root of the iris. aortic s., a pouch-like dilatation of the aorta, opposite each of the segments of the semilunar valve. Arit's 8., a small recess occasionally seen in the lower part of the lacrimal sac. auricular s. Same as simus venosus (1). basilar s. Same as transverse s. Breschet's s., the sphenoparietal sinus. s. carot'icus, an extension of the cavernous sinus into the carotid canal. cavernous s.. a venous sinus extending from the sphenoid fissure to the apex of the petrous bone, and communicating behind with the inferior and superior petrosal sinuses. cerebral s's. Same as cranial s's. circular s. 1. A venous sinus around the pituitary body. 2. A venous channel near the margin of the placenta. s. circula'ris i'ridis. Same as Schlemm's canal. s. coch'leæ, a branch of the internal jugular vein within the cochlear aqueduct. coronary s., a venous sinus in the groove between the left cardiac auricle and the left ventricle. costomediastinal s., the pleural sinus situated at the junction of the anterior mediastinal and costal pleuræ. costophrenic s. Same as phrenicocostal s. cranial s's, channels in the cranium, consisting partly of bone and partly of dura mater, containing venous blood. Cuvier's s's, two venous channels of the embryo, one on either side: the one on the right is developed into the precava. s. du'ræ ma'tris [B N A], the cranial sinuses. s. epidid'ymis, the digital fossa of the epididymis. ethmoid s's, air-spaces or cells within the ethmoid bone. cial s., the inferior longitudinal sinus. frontal s's, two air-cavities in the lower border of the fron-tal bone. Guérin's s., a diverticulum behind Guérin's fold. Huguier's s., a depression in the tympanum between the fenestra ovalis and the fenestra rotunda. intercavernous s's, two sinuses, anterior and posterior, connecting the cavernous sinuses. s. jugula'ris, either of three

enlargements on the jugular vein. s. of the kidney, the inward extension of the hilum of the kidney. s. lac'teus, the wide part of the duct of the mammary gland. s. of the lar-ynx, the ventricle of the larynx. lateral either of the two cranial venous sinuses which begin at the torcular herophili and go to the internal jugular vein. Lieutaud's s., a straight sinus running between the inferior longitudinal sinus and the lateral sinus. longitudinal s., inferior, a venous sinus along the lower border of the falx cerebri, connected with the straight sinus. longitudinal s., superior, a venous sinus along the convex border of the falx cerebri, extending to the torcular. lymph-s., a lymph-channel; a space which conveys lymph. s. of Maier, an occasional diverticulum of the lacrimal sac into which the lacrimal canaliculi open. mastoid s's, the cells within the mastoid portion of the temporal bone. maxillary s., the antrum of Highmore. Meyer's s., s. Meyer'i, a small depression in the floor of the external auditory canal just in front of the membrana tympani. Morgagni's s's, three dilatations near the commencement of the aorta. oblique s., a fold of pericardium over the posterior surface of the left auricle. occipital s., a small venous sinus in the attached margin of the falx cerebri, opening into the torcular herophili. oral s. Same as stomodeum. s. paranasa'les [B N A], the accessory sinuses of the nose. parasinoidal s., any one of several spaces in the dura mater opening into a cranial blood-sinus; called also lacuna lateralis or lacus lateralis. s. pericra'nii, a soft fluctuating vascular tumor of the scalp which communicates directly with an intracranial sinus through a defect in the skull. **Petit's s's.** Same as the sinuses of Valsalva. **petrosal s.**, **inferior**, a venous sinus arising from the cavernous sinus and running along the lower edge of the petrous bone to the internal jugular vein. petrosal s., superior, a sinus which runs in a groove in the petrous bone from the posterior part of the cavernous sinus to the lateral sinus. s.-phlebitis. See under phlebitis. phrenicocostal s., that pleural sinus situated at the junction of the costal and diaphragmatic pleuræ. pilonidal s., a suppurating sinus of the coccygeal region containing a tuft of hair. piriform s., pyriform sinus. pla-cental s., a venous channel near the edge of the placenta. pleural s's, spaces where the individual portions of the pleura pass into each other at an angle and which are never completely filled by the lung. s. pocula/ris, a lacuna in the prostatic portion of the urethra. Called also uterus masculinus. posterior s., a groove in the posterior wall of the tympanic cavity above the pyramidal eminence. s. præcervica'lis, the depression at the side of the neck, developed in the embryo by the growth of the branchial arches. s. prostat'icus. Same as s. pocularis. pulmonary s's, the pouch-like dilatations of the pulmonary artery opposite to each segment of the semilunar valve. pyriform s., a fossa on the side of the larynx external to the aryepiglottic fold. s. rec'tus [B N A], the straight sinus. s. reu'niens, the sinus venosus of the embryonic heart. rhomboid s., the fourth ventricle of the brain. Ridley's s., the circular sinus. sagittal s., the longitudinal sinus. sigmoid s., the portion of the lateral sinus which lies on the mastoid bone and jugular process of the occipital. It is S-shaped. sphenoid s., an air-space in the sphenoid bone. sphenoid parietal s., the anterior portion of the cavernous sinus of the dura, where it communicates with the ophthalmic vein. straight s., a venous sinus going from the in-ferior longitudinal to the lateral sinus. s. sulcifor mis, a furrow on the inner surface of the ves-tibule of the ear, below the hemispheric and hemielliptic fossæ, opening into the aquæductus vestibuli. Called also sulcus ad aquæductus vestibuli and recessus labyrinthi. tarsal s., s. tar'si [BNA], the space between the calcaneus and the astragalus containing the interosseous ligament. tentorial s., the straight sinus. terminal s., vein which encircles the vascular area in the blastoderm. s.-thrombosis. See thrombosis. tonsillar s., the space between the palatine arches wherein the tonsil is located. transverse s., one which unites the two inferior petrosal sinuses. s. tym'pani [B N A], a depression in the tympanic cavity, below and behind the fenestra ovalis. **urogenital s.**, the duct into which, in the embryo, the wolffian ducts and bladder empty and which goes to the cloaca. uterine b's, venous canals in the wall of the impregnated uterus. uteroplacental s's, sinuses carrying blood from the placenta into the uterine sinuses. s. of Valsalva, the aortic and pulmonary sinuses; pouches in the aorta and pulmonary artery behind cach semilunar valve. **S. vena'rum** [B N A]. Same as S. venosus (1st def). **S. veno'sus**. 1. The main part of the cavity of either auricle of the heart. It is the portion into which the veins empty their blood. Called also atrium and s. of the auricle. 2. [B N A] The common venous re ceptacle in the embryo attached to the posterior wall of the primitive auricle: it receives the umbilical and vitelline veins and the ducts of Cuvier. 8. veno'sus scle're [B N A], the canal of Schlemm. vertebral s's, two venous sinuses running along the spinal canal. s. vertebra'les longitudina'les [B N A], the vertebral sinuses.

sinusal (si'nus-al) Pertaining to a sinus

sinusitis, sinuitis (si-nu-si'tis, sin-u-i'tis). In-flammation of a sinus. frontal s., inflammation of the frontal sinus.

sinusoid (si'nus-oid) [sinus + Gr. είδος form].

1. Resembling a sinus. 2. A form of terminal blood-channel consisting of a large, irregular anastomosing vessel, having a complete endothelial wall, but little or no adventitia. Sinusoids are found in the liver, suprarenals, heart, parathyroid, carotid gland, spleen, hemolymph glands, and pancreas.

sinusoidal current (si-nus-oid'al). See current. sinusoidalization (si-nu-soi-dal-iz-a'shun). application of a sinusoidal current.

sinuventricular (si"nu-ven-trik'u-lar). ing to the auricular sinus venosus and the ventricle of the heart.

SiO₂. Silicon dioxid.

siomine (si'o-min) Hexamethylenamin tetraiodid, (CH₂)₆N₄I₄, a red powder containing 78.5 per cent. of iodin. It is decomposed in the intestine into hexamethylenamin and iodid and produces the effect of iodids. Dose, same as potassium iodid.

Si op. sit. Abbreviation for L. si o' bus sit, if necessarv.

siphac (si'fak). An obsolete name for the peritoneum.

siphon (si'fun) [Gr. σίφων tube]. A bent tube of two unequal arms: used in the transfer of liquids, also in wound-drainage and in lavage of the stomach. Duguet's s., a rubber tube armed with a trocar for performing thoracentesis without aspiration.

siphonage (si'fun-āj). The use of the siphon, as in washing the stomach or in draining wounds.

Siphonaptera (si-fo-nap'ter-ah) [Gr. σίφων tube + $a\pi\tau\epsilon\rho\sigma$ s wingless]. An order of insects, the fleas. They are small, wingless, laterally compressed insects adapted to sucking blood.

siphonoma (si-fon-o'mah) [Gr. σίφων tube + -ομα tumor]. A tumor made up of a series of tubes.

Siphunculata (si-funk-u-la'tah). An order of insects including the lice.

Siphunculi'na funic'ola.
fly" which may transmit yaws. The oriental "eye-

Sippy method or treatment (sip'e) [Bertram

Welton Sippy, physician in Chicago, 1866-1924]. See under treatment.

siqua [coined from L. sidentis altitudinis quadratio, the square of the sitting height]. Pirquet's unit for calculating the area of the absorptive surface of the intestine; it is the square of the sitting height (in centimeters)

siren-limb. See sirenomelus.

sirenomelus (si"ren-om'elus) [Gr. $\sigma \epsilon \iota \rho \dot{\eta} \nu$ siren $+ \mu \dot{\epsilon} \lambda \sigma$ limb]. A monster with fused legs and with no feet.

siriasis (sir-i'as-is) [Gr. from σειοιᾶν to be hot]. Thermic fever, or sunstroke.

sirikaya (ser-ik-a'yah). The tree Ano'na squamo'sa, whose leaves are sudorific and bark purgative.

siritch (sir'itsh) [Arabic]. Oil of sesamum.

sirolin (sir'o-lin). A proprietary preparation of beech-tar and guaiacol used in pulmonary diseases.

sirup (sir'up). See syrup.

-sis. A termination or ending of words of Greek origin, signifying state or condition.

Sirenomelus.

sismotherapy (sis-mo-ther'ap-e). Seismotherapy. Sisto's sign (ses'tōz) [Genaro Sisto, Chilian pediatrician, died 1923] See under sign.

sistomensin (sis-to-men'sin). A preparation containing the luteolipoid of the corpus luteum: used to check excessive menstrual flow.

Sisyrinchium galaxioi'des (sis-ir-in'ke-um). South American iridaceous plant; its bulbs are purgative and diuretic.

sitfast (sit'fast). A small hard tumor on the skin of a horse's back.

sitiergia (sit-e-īr'je-ah) [Gr. σιτίον food + εἶργειν to bar out]. Insane rejection of food.

sitiology (sit-e-ol'o-je). Same as sitology.

sitiomania (sit-e-o-ma'ne-ah). Sitomania.

sitiophobia (sit"e-o-fo'be-ah). Same as sitophobia. sitology (si-tol'o-je) [Gr σῖτος food + λόγος discourse]. The sum of knowledge regarding food. diet, and nutrition.

sitomania (si-to-ma'ne-ah) [Gr. σῖτος food + μανία madness]. 1. Excessive hunger, or insane craving for food. 2 Periodic bulimia.

sitophobia (si-to-fo'be-ah) [Gr. $\sigma \tilde{\iota} \tau o s$ food $+ \varphi \delta \beta o s$ fear]. A morbid or insane dread of cating.

sitosterol (si-to-ste'rol). A sterol, C₂₆H₄₄O, from wheat embryos.

sitotherapy (si-to-ther'ap-e) [Gr. σίτος food + θεραπεία treatment]. Treatment by food, dietotherapy.

sitotoxin (si-to-toks'in). Any basic poison generated in a cereal food by a plant microorganism.

sitotoxism (si-to-toks'izm) [Gr. σῖτος food + τοξικόν poison]. Poisoning by diseased vegetable foods.

sitotropism (si-tot'ro-pizm) [Gr. σῖτος food τρόπος turning]. Response of living cells to the attractive or repulsive influence of food.

situs (si'tus). Latin for site or position. s. inver'sus vis'cerum, lateral transposition of the viscera of the thorax and abdomen. s. perver'sus, dislocation of any viscus. s. transver'sus. Same as s. inversus viscerum.

sitz-bath (sits'bath). See bath.

Sium (si'um). See ninsi Si vir. perm. Abbreviation for L. si vi'res permit'tant, if the strength will permit.

six-o-six (siks-o-siks). See arsphenamin.

sixth nerve (aiksth). The abducent nerve. See nerves, table of.

Sjöqvist's method (syek'vists) [John August Sjöqvist, Swedish physician, born 1863]. See under method.

akatol (ska'tol) [Gr. σκῶρ, σκατόs dung]. Betamethyl indol, a strong-smelling, crystalline substance, CH₃.C₈H₆N, from human feces. It is produced by the decomposition of proteins in the intestine and directly from the amino-acid tryptophane.

skatologic (ska-tol-oj'ik). See scatologic.

skatology (ska-tol'o-je). Scatology.

skatophagy (ska-tof'aj-e) [Gr. σκῶρ, σκατός dung + φαγεῖν to eat]. Same as coprophagy,

skatosin (ska-to'sin). A base, C₁₀H₁₆N₂O₂, derived from certain proteins.

skatoxyl (ska-toks'il). An oxidation-product of skatol, CH₃.C₈H₆NO, found in the urine in certain cases of disease of the large intestine.

skein (skān). The thread-like figure seen in the earlier stages of karyokinesis. **test-s's**, Holmgren's yarns: skeins of worsted yarn for testing color-blindness.

skelalgia (ske-lal'je-ah) [Gr. σκελίς leg + ἄλγος pain]. Pain in the leg.

skeletal (skel'et-al). Pertaining to the skeleton.

skeletin (skel'et-in). Any one of a number of gelatinous substances occurring in invertebrate tissue, and including chitin, sericin, spongin, etc.

skeletization (skel"et-iz-a'shun). 1. Extreme emaciation. 2. The removal of the soft parts from the skeleton.

skeletogenous (skel-et-oj'en-us) [Gr. σκελετόν skeleton + γεννῶν to produce]. Producing skeletal or bony structures.

skeletogeny (skel-ct-oj'en-e). The formation of the skeleton; the origin and development of the skeleton

skeletography (skel-et-og'raf-e) [skeleton + Gr. γράφειν to write]. A description of the skeleton.

skeletology (skel-et-ol'o-je) [Gr. σκελετόν skeleton + λόγος treatise]. The sum of what is known regarding the skeleton.

skeleton (skel'et-on) [Gr. σκελετόν]. The hard framework of the animal body, especially the bony framework of the higher vertebrate animals; the bones of the body collectively. See further under dermoskeleton, endoskeleton, exoskeleton, neuroskeleton, and splanchnoskeleton. appendicular s., the skeleton of the limbs. axial s., the skeleton of the head and trunk. visceral s., that portion of the skeleton which protects the viscera, as the sternum, ribs, and innominate bones.

Skene's gland (skenz') [Alexander J. C. Skene, physician in Brooklyn, 1838-1900]. See gland.

skenitis (ske-ni'tis). Inflammation of Skene's glands.

skenoscope (ske'no-skōp) [Skene's glands + Gr. $\sigma\kappa\sigma\pi\epsilon\hat{\imath}\nu$ to examine]. An endoscope for examining Skene's glands.

skeocytosis (ske"o-si-to'sis) [Gr. σκαιος left + κύτος cell]. Presence of immature forms of white cells in the blood; called also deviation to the left.

skeptophylaxis (skep"to-fi-laks'is) [Gr. σκεπτικος doubtful + phylaxis]. A condition in which a minute dose of a substance poisonous to animals will produce immediate temporary immunity to the action of the poison, although the blood of the animal may be highly toxic during that period of immunity (Lambert, Ancel, and Bouin, 1910).

skiagram (ski'ag-ram) [Gr. σκιά shadow + γραμμα writing]. Same as skiagraph.

skiagraph (ski'ag-raf) [Gr. σκιά shadow + γραφείν to write]. A picture or photograph made by the Roentgen rays.

skiagraphy (ski-ag'raf-e) [Gr. σκιά shadow + γραφείν to write]. The art or process of making

skiagraphs or photographs by means of the Roentgen rays. It is performed by placing the part or article between the rays and a photographic plate, when the rays will penetrate many substances, as the flesh, which are impervious to ordinary lightrays; but any substance, as bone or glass, which is impervious to the Roentgen rays, will cast a shadow of itself upon the photographic plate.

skiameter (ski-am'et-er) [Gr. σκιά shadow + μέτρον measure]. An instrument for measuring the intensity of the Rontgen rays, and thus determining how long an exposure is needed.

skiascope (ski'as-kōp). An instrument for performing skiascopy.

skiascopy (ski-as'ko-pe) [Gr. σκιά shadow + σκοπεῖν to view]. 1. Pupilloscopy or retinoscopy: the determination of eye-refraction by illuminating the retina with a mirror and observing the movements of light and shade on the pupil (Chibret, 1886). Called also shadow-test. 2. Examination of the body by the x-ray; fluoroscopy.

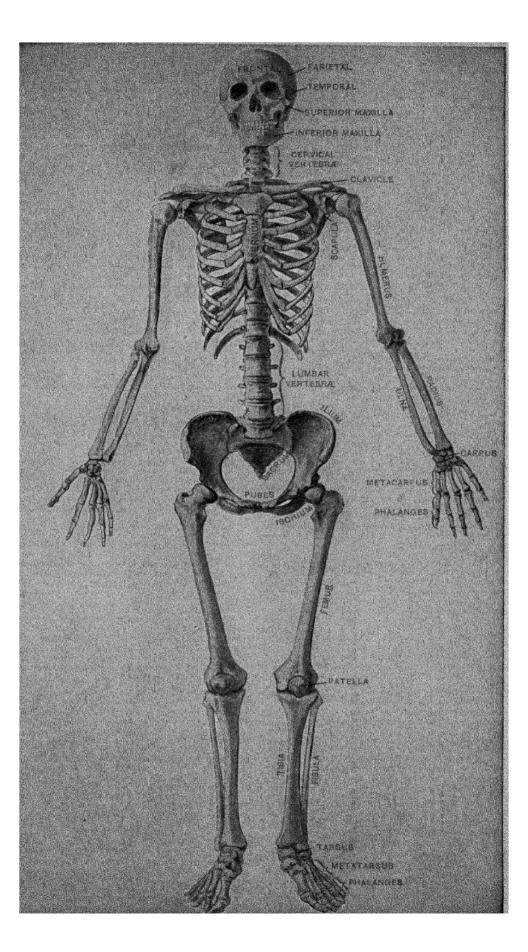

Skillern's fracture (skil'ernz) [Penn Gaskell Skillern, Jr., American surgeon, born 1882] See under fracture.

skimmianin (skim-i'an-in). A crystalline alkaloid, C₃₂H₂₉N₃O₉, from Skimmia japonica.

skin (skin). The outer integument, or covering, of the body. It is made up of an epithelial layer, the epidermis, cuticle, or scarf-skin, and the **true s**. (corium, derma, or cutis vera). The epidermis (cuticle, or scarf-skin) is made up of several layers, from without inward as follows: The horny layer (stra'tum cor'neum), which consists of layers of flattened horny cells; the stra'tum Succidem (Ohl's layer), consisting of transparent nucleated cells; the stra'tum granulo'sum (granular layer, Langerhans' layer), consisting of flattened granular cells; the stra'tum muco'sum (mucous layer, malpighian layer, rete mucosum), consisting of pigmented columnar cells, the outer part of which is covered with prickles, forming the prickle layer. The true s. (corium, derma, cutis vera) is divided from the epidermis by a basement-membrane, and consists of an outer, or papillary, layer, containing the nerve-endings and capillaries, and a deeper reticular layer, largely made up of fibrous bundles. Beneath the skin is the subcutaneous connective tissue, consisting of oblique elastic fibers extending between the corium and fasciæ or deeper tissues, and containing lymphatics, vessels, nerves, and generally fat beaters's. Same as gold-beaters's. s.-bound, hide-bound; affected with scleroderma. crocodile s., ichthyosis sauroderma. elastic s. See cutts hyperplastica. glossy s., a shining, glazed appearance of the skin, seen in states in which the trophic nervesupply of the skin is interrupted. goldbeaters' s., a very thin, tough membrane prepared from ox's cecum and from the intestine of other animals. s.-grafting, the implantation of bits of skin to form centers of cicatrization. s.-heart, a name for the peripheral vessels; so called for their importance in various metabolic processes loose s., dermatolysis skin parchment s. parchment s. The thin, atrophic looking, stretched skin of cutaneous atrophy; 2. A dry condition of the skin of xeroderma. cattle and sheep, especially such a condition accompanying verminous bronchitis. **piebald s.** See under *piebald*. **sailors' s.**, a condition in which the skin is of a bluish-red color, thickened, and covered with warty growths. sourf s., the cuticle. wash-leather s., a condition in which silver makes a black mark upon the skin.

skink (skingk). A lizard, Scin'cus officina'lis: its dried flesh is used in oriental medicine.

sklero-. For words thus beginning, see under sclero-. **Skoda's râle, sign**, etc. (sko'dahz) [Joseph Skoda, Austrian physician, 1805-1881]. See rdle, sign, etc. **skodaic resonance** (sko-da'ik) [see above]. See under resonance.

skolecitis. For words beginning sko-, see those beginning sco-.

skookum-chuck (skoo''kum-tchuk') [Chinook jargon for "good waters'']. A salt obtained from the waters of a lake in the state of Washington: used in skin diseases.

skopometer (sko-pom'et-er). An instrument for measuring color, cloudiness, and other optical phenomena of liquids without using standards for comparison.

skotogram, skotograph, etc. See scotogram, scotograph, etc.

skull (skul). The bony framework of the head, composed of eight cranial bones and the fourteen bones of the face. The cranial bones are the occipital, two parietal, two temporal, frontal, ethmoid, and sphenoid. The facial bones are the two lacrimal, two nasal, two palate, two inferior turbinate, two superior maxillary, two malar, the vomer, and the inferior maxilla. The ear-bones, or ossicles, are not considered a part of the skull. natiform s., a skull marked by Parrot's nodes, which give it a buttock shape. s.-cap. I The sinciput or calvarium. 2. Same as scutellaria. steeple-s., oxycephaly.

skunk-cabbage (skungk-kab'ij). The fetid araceous marsh plant, Symplocar'pus fæl'idus, of North America. Its rhizome is stimulant, antispasmodic, and narcotic. Dose of fluidextract, 10-40 min. (0.666-2.666 c.c.).

S. L. A. Left sacro-anterior position of fetus.

slack of the optic nerve (slak). The surplus length of the optic nerve, permitting a certain amount of play of the ball. It averages 5 for millimeters.

slaked lime (slakt). A white powder obtained by pouring one-half its weight of water on quick-lime.

slant (slant) A sloping surface of agar in a testtube; also a slant-culture **s.-culture**, a bacterial culture in which the test-tube is placed in a slanting position for the agar to solidify

mind, during which volition and consciousness are in partial or complete abeyance and the bodily functions partially suspended. The movements of breathing and of the pulse are less frequent than in the waking state; the pupils are also contracted and the secretions partly suspended. s.-drunkenness. See somuolentia (2d def). electric s., loss of voluntary movement and presence of general anesthesia induced by the application to the head of a rapidly interrupted electric current. paroxysmal s., narcolepsy. temple s. Same as incubation, 2d def. twilight s. (Gauss), a condition of light anesthesia marked by mental subconsciousness, produced by the hypodermic administration of morphin and scopolamin. In this state the patient, while responding to pain, does not retain it in her memory. It is employed in the conduct of labor. Called also scopolaminmorphin anesthesia s.-walking, somnambulation.

sleeping-disease (sle'ping-). Narcolepsy.

sleeping-sickness. See Congo trypanosomiasis, under trypanosomiasis.

slide (slid). A glass plate on which objects are placed for microscopic examination.

sling (sling). A bandage or suspensory for supporting a part. s. of the lenticular nucleus, a tract of nerve-fibers passing beneath the optic thalamus to enter the lenticular nucleus. Called also ansa nuclei leuticularis.

slippery-elm. See Ulmus.

slobbering (slob'er-ing). An abnormal flow of saliva in animals.

slos (slo). See Prunus spinosa.

slough (sluf). A mass of dead tissue in or cast out from living tissue.

sloughing (sluf'ing). The formation or separation of a slough.

slows (sloz). Same as trembles.

Sluder's method or operation (slu'derz) [Greenfield Sluder, American laryngologist, born 1865]. Removal of the tonsil along with its capsule. 8's neuralgia, neuralgia of the splenopalatine

S. L. P. Left sacroposterior position of fetus.

ganglion.

sludge (slujh). The more or less solid matter which settles out of sewage. activated s., sludge from well aerated sewage, which, being well supplied with oxidizing bacteria, ensures the presence of sufficient oxidizing organisms to activate the next tankful of sewage dewatered s., sludge from which the water has been removed by drying or pressing

8m. The symbol for samarium.

smalarina (smal-ar-i'nah). A mercury preparation, C₉H₁₉O₇N₄HgSb: used in the treatment of malaria.

small intestine (smawl). See intestine.

smallpox (smawl'poks) See vartola inoculation s., the direct, purposeful transfer of variola virus from a patient to a well person, usually a child It was widely practised before the advent of vaccination. milk s., amaas.

smartweed. See Polygonum.

smear-culture (smēr'kult-yur). See under culture.

Smee cell (smee) [Alfred *Smee*, English surgeon, 1818-1877]. See under cell.

smegma (smeg'mah) [Gr. σμῆγμα soap]. A thick, cheesy, ill-smelling secretion found under the prepuce and around the labia minora. Called also smegma præputu. s. clitor'idis [B N A], the thick, cheesy secretion of the glands of the clitoris. s. embryo'num, the vernix caseosa. s. præpu'tii [B N A]. See smegma.

smell-brain. The rhinencephalon.

Smellie's scissors (smel'ēz) [William Smellie, British obstetrician, 1697-1763]. See scissors.

smelting-house smoke. Crude arsenious acid.
 smilacin (smi'las-in) [Gr σμιλάκινος pertaining to smilax]. τ. A poisonous glucosid, C₁₈H₃₀O₆, from sarsaparilla 2. A precipitate or concentration prepared from sarsaparilla

Smilax (smi'laks) (L.; Gr. σμίλαξ bindweed]. A genus of climbing smilaceous plants. The roots of various tropical American species are known as sarsaparilla (q v) ('hina-root, the rhizome of S. chi'na, an Asiatic species, is used like sarsaparilla. S. pseudo-chi'na, the bamboo-brier of North America, is said to be more efficacious than the imported sarsaparillas in the treatment of syphilis. Dose of fluidextract, 30-120 min. (2-8 c.c.).

Smith's disease [Eustace Smith, London physician, 1835-1914]. Mucous colitis. S's sign. See under sign.

Smith's fracture [Robert William Smith, Irish surgeon, 1807-1873] See fracture.

Smith's operation [Henry Smith, English surgeon in India]. See under operation (2d def).

Smith's phenomenon [Theobald Smith, American pathologist, born 1859]. See Theobald Smith phenomenon, under phenomenon.

Smith's test [Walter George Smith, contemporary Irish physician]. See under tests.

Smith-Pitfield method [John Blackburn Smith, contemporary English surgeon; Robert L. Pitfield, American physician, born 1870]. See under stains and staining.

8. M. O. Abbreviation for Medical Officer of Schools. smokers' cancer. See cancer.

smudging (smuj'ing). A defect of speech in which the difficult consonants are omitted.

smut. See ustilago and urocystis.

Sn. The symbol of tin [L. stan'num].

S. n. Abbreviation for L. secun'dum natu'ram, according to nature.

snakeroot (snāk-root). See Cimicifuga, senega, and ser pentaria. button-s., the North American plant, Lia'iris spica'ia: diuretic and deobstruent; used in nephritis, gonorrhea, and leukorrhea. Dose of fluidextract of root, ½-2 fl.dr. (2-8 c.c.). Canada s. See Asarum. senega s., Polygala. Texas s., Aristolochia reticulata. Virginia s., Aristolochia serpentaria. white s., Eupatorium urticæfolium.

snap-finger (snap'fin-ger). See finger.

snare (snair). A wire loop or noose for removing polypi and tumors, being placed around them and tightened so as either to cut them off at the base or to tear them out by the roots. cold s., a snare that has not been heated. hot s., a wire snare heated by a galvanic current, and used to burn off growths. Called also galvanocaustic s. Jarvis's s., a wire snare operated by a screw in the handle.

sneeze (snēz). I. To expel air forcibly and spasmodically through the nose and mouth. 2. A sudden violent and audible expiration through the mouth and nose.

Snell's law [Simeon *Snell*, English ophthalmologist, 1851-1909]. See under *law*.

Snellen's type (snel'enz) [Hermann Snellen, ophthalmologist in Utrecht, 1834-1908]. See test-type.

snore (snōr). 1. To breathe noisily in sleep or coma.
 2. A noisy breathing in sleep or coma;

snow-blindness (sno-). See blindness.

snow, carbon dioxid. The snow formed by the rapid evaporation of liquid carbon dioxid. It gives a temperature of about 110° below zero, producing instant freezing of the skin when applied. It is used locally in various skin diseases.

snowflake (sno'flāk). The Leuco'ium ver'num; an old-world amaryllidaceous plant. emetic and poisonous.

snuff (snuf). Any medicinal or errhine powder to be inhaled into the nose. catarrh s., a powder used by insufflation for coryza. niopo s. See barica.

snuffles (snuf'flz). A catarrhal discharge from the nasal mucous membrane in infants, generally in congenital syphilis.

802. Sulphur dioxid.

soamin (so-am'in). Sodium para-aminophenylarsenate, a proprietary preparation used like atoxyl in protozoal diseases, especially in syphilis.

soap (sōp) [L. sa'po]. Any compound of one or more fatty acids, or their equivalents, with an alkali. See sapo. Soap is detergent, and is much employed in liniments, enemata, and in making pills. It is also a mild aperient and antacid. See also under sapo, emplastrum, lini-mentum, etc. animal s., sapo domesticus. arsenical s., a soap containing arsenic: used in taxidermy to preserve skins. s.-bark. See quillaja. carbolic s., a disinfectant soap containing 10 per cent. of carbolic acid. Castile s., a hard soap, either white or mottled, prepared from olive oil and soda. curd s., sapo domesticus. green s. See sapo viridis. guaiac s., a resin of ouniacum sanonified with liquor potassæ. hard s. guaiacum saponified with liquor potassæ. hard s. Same as soda s. McClintock's s., a disinfectant soap containing an active mercury salt. potash See soft s soda s., soap made from soda and ve oil Called also hard s. soft s., a liquid soap made from potash and some oil. The official sapo mollis is made from cottonseed oil. It is used as a detergent and stimulant. Called also potash s. and green s. Starkey's s., a soap made of potassium carbonate, turpentine oil, and Venice turpentine in equal parts. superfatted s., a

soap having an excess of fat over that necessary to neutralize all the alkali. **zinc-s.**, a soap containing zinc oxid or zinc sulphate: for use as an ointment or plaster.

sob (sob). A short convulsive inspiration, attended with contraction of the diaphragm and spasmodic closure of the glottis.

socaloin (so-kal'o-in). A variety of aloin, C₁₅H₁₆O₇, from Socotrine aloes: said to be identical with zanaloin.

socia parotidis (so'she-ah pa-rot'id-is) [L. "companion of the parotid"]. A detached part or exclave of the parotid gland.

Sociology (so-se-ol'o-je) [L so'cius fellow + Gr. λόγος treatise]. The science of social relations and phenomena.

socket (sok'et). A hollow, or depression, into which a corresponding part fits. tooth s., the cavity in which the root of a tooth rests; an alveolus.

Socotrine aloes (sok'o-tren) [Socotra, an island in the Indian Ocean]. See under aioes.

soda (so'dah). Sodium hydrate, or hydroxid, NaOH (caustic soda); also sodium carbonate, Na₂CO₃ (washing soda), or bicarbonate, NaHCO₃ (baking soda). baking s., sod um bicarbonate. caustic s., sodium hydroxid. chlorinated s., a mixture of sodium chlorid and sodium hypochlorite. Its aqueous solution (Labarraque's solution) is used as a disinfectant and deodorizer and as an application to foul ulcers. s. cum cal'ce, an escharotic preparation of equal parts of sodium hydroxid and lime. s.-lime, a mixture of lime and soda used for absorbing carbon dioxid or water. s. soap. See soap. washing s., sodium carbonate. s.-water, carbonic acid water; water impregnated with carbon dioxid.

sodiarsphenamin (so-di-ars-fen'am-in). Sodium arsphenamin. See arsphenamin.

sodic (so'dik). Containing soda or sodium

sodii (so'de-i). Latin for genitive of sodium.

sodiocitrate (so"de-o-sit'rāt). A citrate of sodium and another element.

sodiotartrate (so"de-o-tar'trāt). A tartrate of sodium and another element

sodium (sō'de-um). A soft, white, alkaline metallic element; symbol, Na; atomic weight, 23; specific gravity, 0.072. It is univalent and has a strong affinity for oxygen and other non-metallic elements. s. acetate, a compound, CH3 COONa: used as a diuretic. Dose, 15-60 gr. (1-4 gm.). s. acetylsalicylate. See hydropirin. s. acetylsulphanilate, a white, crystalline substance: antipyretic. acid s. borate, antipyonin. acid s. phosphate. See sodium biphosphate. acid s. sulphosalicylate, a salt in colorless crystals, CeH3(OH)CO2HSO3Na: used in the treatment of rheumatism. s. aminophenylarsenate, a colorless, tasteless, powder: used in syphilis and protozoan diseases. s. anilin-arsenate. Same as aloxyl. s. anisate, a hygroscopic, microcrystalline powder, CH3.O.CeH4.CO.ONa.-½H2O: antiseptic and antipyretic. Dose, 15 gr. (1 gm.). s. antimony thioglycollate, an organic compound of antimony, CO2.CH2 S.Sb.S-CH2 COONa used in the treatment of granuloma inguinale. s. antimonyl tartrate, a compound used in the treatment of trypanosomiasis. s. arsanilate. See aloxyl. s. arsenate, Na3-HASO4 + 7H2O. Dose, \(\frac{1}{3} \) \(\frac{1}{2} \) gr. (0.001-0.005 gm.); of solution (liquor), 2-15 min. (0.133-1 C.C.). s. arsenotartrate, used in skin diseases, intermittent fever, etc. s. aurate, NaAuO3: used as an antiseptic in 0.5 per cent. solution. s. auro-chlorid, gold and sodium chlorid, AuCl3-NaCl + 2H2O, a yellow powder: antisyphilitic. Dose, \(\frac{1}{2} \) gr. (0.016-0.066 gm.). s. aurothiosulphate. See sanocrysin. s. bensoate, a compound rheumatism, and as an antiseptic in diphtheria,

etc. Dose, 5-15 gr. (0.333-1 gm.). s. benzosulphimid, the sodium salt of saccharin. s. ben-soylsulphonate, a sodium salt of saccharin, C₆-H₄(CO)SO₂NNa + 2H₂O. It is more soluble in water than saccharin and its uses are those of saccharin. s. bicarbonate, or baking soda, Na-HCO3: used as an antacid and antirheumatic, and in dyspepsia, rheumatism, gout, diabetes, etc. Dose, 5-30 gr. (0.333-2 gm.); of li'quor so'dæ effernes'cens, 2-8 fl.oz. (60-250 c.c.). s. biphosphate, NaH₂-PO₄.H₂O, used to render the urine acid. s. bismuth citropyroborate, a salt in glistening leaflets: serviceable in dyspepsia and gastralgia. **s.** bisulphate, NaHSO₄ used as an antiferment, internally and externally. Dose, 3-10 gr. (0.2-0666 gm.). **s.** bisulphite, NaHSO₃. It is used as an antiseptic. s. biurate exists in certain gouty deposits. s. borate. See borax. s. borate, neutral, an antiseptic used for wounds and for eye diseases. See antipyonin. s. borobenzoate, an antiseptic and antilithic; composed of 3 parts of sodium horate, mixed with sodium benzoate. 8. bromid, NaBr, a substance in white or colorless crystals used in epilepsy, hysteria, and as a hypnotic sedative. Dose, 5-30 gr. (0.333-2 gm). 8. cacodylate, an arsenical remedy, (CH₃)₂AsO.-ONa, dimethyl arsenate, in the form of a white, amorphous powder, soluble in water. It is used in tuberculosis, anemia, malaria, psoriasis, syphilis, etc. Maximum daily dose, 1-3 gr. (0.065-0.2 gm.), hypodermically. **s. caffein-sulphonate**. The same as *symphorol*. **s. cantharidate**, a preparation of sodium hydroxid and cantharidin: in solution it is used subcutaneously in tuberculosis. s. carbonate, washing soda, Na2-CO₃ + 10H₂O, a salt in large, colorless crystals; antacid, antirheumatic, and irritant used internally and externally in the form of baths. Dose, 5-20 gr. (0.333-1 333 gm.). **s. carbonate**, dried, the foregoing salt deprived of its water of crystallization. Dose, 5-15 gr. (0.333-1 gm). **s. car-bonate, monohydrated,** Na₂CO₃ + H₂O. **s. chlorate,** NaClO₃, a salt in colorless crystals: detergent and alterant. Dose, 5-20 gr. (0.333-1.333 gm.); of solution (liquor), 10-60 min. (0.666-4 c.c.). s. chlorid, common salt, NaCl, a white, crystalline compound, soluble in water. It is a necessary ingredient of the human body, and consequently of food. Its properties are similar to those of potassium chlorate. A 0.75-0 90 per cent. solution (physiologic salt solution) is used for intravenous and other injections in hemorrhage and cholera, as a local application in rhinitis, conjunctivitis, etc., and as a preservative for microscopic specimens. Dose, rc-60 gr. (0.666-4 gm). **8. chloroborate**, a white, crystalline, antiseptic agent. **8. cinnamate**, a white, crystalline agent, NaC₀H₇O₂, soluble in water, and used in the treatment of tuberculosis. Dose, $\frac{1}{2}$ -I gr. (0.02-0.065 gm.). **s. ci- trate**, a white, crystalline salt, $2Na_3C_6H_5O_7 + IIH_2O$: purgative and antacid. Dose, 10-15 gr. (0 65-1 gm.). It is an ingredient of so'dii citrotarta'iis efferves'cens. s. citrobenscate, a white powder used in the treatment of asthma and bronchitis. s. citrophosphate. See melachol. s. copaivate, a salt: used like copaiba. s. cresylate, an alkaline antiseptic salt. s. cyanid, a powder soluble in water, NaCN: used like potassium cyanid. s. diaphtholate, a disinfectant substance. s. dibromomercurate, a soluble mercurial compound, HgBr_{2.2}NaBr: used hypodermically in syphilis. s. diiodosalicylate, OH.C6H2I2.COONa, an analgesic, antipyretic, and antiseptic agent, in white, scaly crystals. Dose, 8–15 gr. (0.5–1 gm.). **s. dimethylarsenate**. Same as s. cacodylate. **s. dioxid, s. peroxid,** a white powder, Na₂O₂: used in dentistry as an antiseptic. **s. diphosphate**. See sodium biphosphate. **s. dithiosalicylate**. 1. A yellowish antiseptic powder: it is used externally, chiefly in veterinary practice. in veterinary practice. 2. A gray, antiseptic powder: useful in rheumatism. Dose, 3-15 gr. (0.2-1 gm.). These two salts represent two of

the nine dithiosalicylic acids. s. ethylate, a the nine dithiosalicylic acids. **s. ethylsic**, a white powder, CH₃CH₂ONa: used externally in the treatment of lupus and psoriasis. **s. ethylsulphate**, a salt in crystalline plates, NaC₂H₂SO₄: cathartic. **s. fluorid**. Same as fluorol. **s. fluosilicate**. See s. silicofluorid. **s. formate**, a white, crystalline substance, H.CO.ONa.H₂O, white, crystalline substance, H.CO.ONa.H₂O, soluble in water and glycerin. It is used by injection in surgical tuberculosis. Dose, $\frac{2}{5}$ -1 $\frac{1}{5}$ gr. (0.025-0.08 gm.). **s. glyceroborate**, an effective and non-poisonous disinfectant. **s. glycero- phosphate**, a nerve-tonic salt, C₃H₅(OH)₂PO₂(ONa)₂ + 7H₂O; also a solution of the same. Dose, 3-4 gr. (0.20-0.26 gm.). **s. glycocholate**, a cholagogue salt, C₂₆H₄₂NO₆Na, obtained from bile. s. guaiacol-carbonate, s. methylsalicylate, a white, antirheumatic powder. 8. gynocardate, a yellowish-white powder: used in leprosy. Dose, 15-30 gr. (1-2 gm.). 8. hippurate, a uric-acid solvent. Dose, 5-15 gr. (0.3-1 gm.). 8. hydrate, 8. hydroxid, soda; a hard, white solid, NaOH, soluble in water. It is strongly all all and a cardinal of the solid soluble in water. white solid, NaOH, soluble in water. It is strongly alkaline and caustic. It is used as a caustic and as an antacid. Dose of higure soide, 5-30 min. (0.333-2 c.c.). **8.** hypophosphite, a salt, NaH₂PO₂ + H₂O: used in skin diseases, tuberculosis, and rickets. Dose, 5-20 gr. (0.333-1.33 gm.). **8.** hyposulphite, Na₂S₂O₃ + 5H₂O, a salt in colorless prisms or plates, mostly used in skin diseases. Dose, 6-20 gr. (0.333-1.333 gm.). **8.** indigotindisulphonate, indigocarmin, the sodium salt of indigotindisulphonic acid, C₁₆H₆O₂-No(SOONa)₂, a blue powder or purple mass used N2(SO2ONa)2, a blue powder or purple mass used as a stain in histology and as a test for sugar. s. iodate, NaIO3, a salt used as an alterative, especially in diseases of the mucous surfaces s. iodid, NaI, a binary haloid in colorless crystals used in syphilis, rheumatism, hepatic diseases, etc. Dose, 5–15 gr. (0.333–1 gm.); of solution (liquor), 5–30 min. (0.333–2 c.c.). **s. kakodylate.** See s. cacodylate. **s. kussinate**, a whitish-yellow, amorphous salt, NaC₃₁H₃₇O₁₀: used to expel tapeworms. **s. lygosinate**, a greenish, crystalline compound, $C_{17}H_{12}O_{23}Na_2 + 7H_{2}O$, the sodium salt of dioxydibenzol acetone: used in 2 to 8 per cent compound, $C_{17}H_{12}O_3Na_2 + 7H_2O$, the sodium sait of dioxydibenzol acetone: used in 3 to 8 per cent. solution in gonorrhea. s. metaoxycyanocinnamate. See zimphene. s. metavanadate, a very poisonous vanadium salt, NaVO₃. Its use stimulates nutrition and improves the appetite. used in anemia, neurasthenia, diabetes, and tuber-culosis. Daily dose, 1-5 gr. (0.065-0.33 gm.). s. methylarsenate. See arrhenal. s. methylsulphate, a colorless crystalline cathartic salt, NaO.SO₂.OCH₃. s. monosulphate, a salt, Na₂SO₄, recommended for lead-poisoning. morrhuate, a salt used in the treatment of leprosy and tuberculosis. s. naphtholate. leprosy and tuberculosis. **8. naphtholate**. Same as microcidin. **8. nitrate**, Chili saltpeter, NaNO₈, a compound with purgative properties, sometimes administered for dy sentery. Dose, 8-40 gr. (0.5-2.5 gm.). **8. nitrite**, a white, crystalline salt, NaNO₂: used in angina pectoris, epilepsy, atony, and other functional disorders of the bladder. Dose, \(\frac{1}{2}\)-3 gr. (0.033-0.2 gm.). **8. nucleinate**, a white powder: employed in puerperal infections; also in pneumonia and in the diagnosis of fections; also in pneumonia and in the diagnosis of tuberculosis. Dose, 30-45 gr. (2-3 gm.). 8. oleate, the sodium salt of oleic acid, NaC₁₈H₃₅O₂, used in laxative pills: said to have useful action on the biliary tract. s. ossalinate, a salt of an acid obtainable from ox-marrow. used like codacid obtainable from ox-marrow. used like cod-liver oil. s. oxyalphanaphtholate, a white powder, C₁₀H₃OH COONa: antiseptic and anti-pyretic. s. paracresotate, a bitter, colorless, crystalline powder, the sodium salt of oxytoluic acid, CH₃.C₆H₃(OH).COONa: used in acute rheumatism. Daily dose 45-00 gr. (3-6 gm.). s. parafluorbenzoate, a white powder: used internally for lupus, with great caution. s. perinternally for lupus, with great caution. s. perborate, a compound, NaBO_{3.4}H₂O, formed by treating sodium peroxid with boric acid. On dissolving the substance in water dioxid of hydrogen is generated. s. peroxid, Na2O2, a white powder

soluble in water in which it liberates oxygen. s. persulphate, a compound, Na₂S₂O₃, having tonic and antipyretic properties. As it liberates oxygen easily, it is used in 3 to 5 per cent. solution as a dressing for ulcer, lupus, etc.; also by intravenous injection in the treatment of tetanus.

5. phenolsulphonate. Same as s. sulphocarbolate. s.-phenol sulphoricinate, a causticinate. tic liquid employed in the treatment of diphtheria. **s. phenosuccinate**, a white powder antipyretic and antineuralgic. Dose, 7½-46 gr. (0.5-3 gm.). **s. phosphate**, a salt, Na₂HPO₄ + 12H₂O: used as an aperient and cholagogue in diarrhea, jaundice, scrofula, rickets, etc. Dose, 5-30 gr. (0.3-2 gm.). s. phosphate, effer-vescent, a dry granular mixture of exsiccated sodium phosphate, sodium bicarbonate, tartaric acid, and citric acid. It liberates carbon dioxid in water. s. phosphate, exsiccated, the anhydrous salt, Na₂HPO₄. s. and potassium tartrate. See under potassium. 8. pyroborate. See borax. **s.** pyrophosphas, **s.** pyrophosphate, Na₄P₂O₇ + 10H₂O₃ a salt in colorless prisms: used in pharmacy. Dose, 5-20 gr. (0.3-1.33 gm.). **s.** quadriurate exists in certain samples of gouty urine. **s.** salicylate, a white, crystalline salt, OH C₆H₄ COONa antirheumatic, and used like salicylic paid. and used like salicylic acid. Dose, 2-10 gr (0.133o.666 gm.). s. santoninate, a vermicide remedy, effective, but said to be dangerous, used in eye diseases to stimulate the visual powers. Dose, 2-8 gr. (o 13-0.5 gm.). s. silicate, Na₂SiO₃ anti-septic. Its aqueous solution (liquid glass) hardens to a glass-like solid, and is used in preparing immovable surgical dressings. **3. silicofluorid**, a white, crystalline, antiseptic substance, Na₂SiF₆. It is used as an antiseptic, deodorant, and styptic in wounds, carious teeth, cystitis, gonorrhea, etc., in a 1:500 solution. 8. sozoiodolate, a white, crystalline powder, $C_6H_2I_2OH$ $SO_3Na + 2H_2O$. antiseptic, and is used internally and subcutaneously in phthisis. Dose, internally, 4-8 gr. (0.25-0.5 gm.). **s. stearate**, CH₃(CH₂)₁₆COONa, a white soapy powder. used in skin diseases. **s.** white soapy powder. used in skin diseases. **8. succinate**, a compound, (CH₂.CO.ONa)₂: used in catarrhal jaundice. Dose, 5-15 gr. (0.3-1 gm). **8. sulphanilate**, a salt in white plates, C₆H₄-NH₂.SO₁NaO.2H₂O used in acute nasal catarrh. **8. sulphate**, Glaubec's salt a white, efflorescent salt, Na₂SO₄ + 10H₂O: purgative. Dose, 5-20 gm). **8. sulphate** a salt in the control of the contr gr. (0.333-1.333 gm). **8. sulphite**, a salt in white crystals, Na₂SO₃ + 7H₂O: an antiferment. Dose, 5-20 gr. (0.333-r.333 gm.). s. sulphite, exsiccated, the anhydrous salt, Na₂SO₃. s. sulphobenzoate, a compound, ONa SO₂.C₆H₄.-CO.ONa used as a urinary antiseptic. Dose, 15-30 gr. (1-2 gm.). 8. sulphocaffeate. See symphorol. 8. sulphocarbolate, a salt, OH.C. H4.-SO. ONa + 2H2O, in white or colorless prisms: autiseptic and antifermentative. Dose, 8-30 gr. (0.518-2 gm.). s. sulphoichthyolate, a dark brown, tarry substance used like ichthyol. s. sulphoricinate. See polyvolveol. s. sulphosalicylate, a white, crystalline, astringent powder,

COOH

C₆H₃(OH), soluble in water, and used SO₃Na as an antirheumatic like the salicylate. Dose, 2-10 gr. (0.133-0.66 gm). s. sulphovinate, a white purgative salt, sodium ethyl sulphate, O.-C₂H₃.SO₂.ONa.H₂O. Dose, 5 dr. (10 gm.). s. sulphurosobenzoate, a colorless, liquid salt, a non-toxic antiseptic for external use. s. tauro-cholate, the sodium salt of taurocholic acid: used to stimulate biliary secretion. Dose, 2-6 gr. (0.13-0.4 gm.). s. tellurate, used in the night-sweats of tuberculosis. Dose, ½-½ gr. (0.01-0.02 gm.). s. tetraborate. See borax. s. tetraiodophenolphthalein. See tetraiodophthalein. s. thiolinate, a soluble preparation of thiolin and soda: used like ichthyol in skin diseases. s. thiophenate, a white, antiseptic and antipruritic powder, SNa C₂H₄.SO₂.ONa: used in ointments for prurigo.

s. thiophene-sulphonate, a white, crystalline salt, SC₄H₂,SO₃,ONa. s. thiosulphate, a material used in various chemic tests. Same as s. hyposulphite. s. trioxybismutho bensoate, a soluble aromatic compound of bismuth containing about 50 per cent. of bismuth. Dose of a 20 per cent solution intramuscularly, 30-45 min. (2-3 c c.). s. triphenylrosanilin, alkal blue. s.-tumenoi sulphonate, a dry, dark colored powder used in the treatment of skin diseases. s. valerianate, a white, crystalline salt, NaC₅H₉(O₂: a nerve stimulant and antispasmodic. Dose, 1-5 gr. (0 065-0.33 gm.). s. vanadate, used in anemia, diabetes, tuberculosis, neurasthenia. Subcutaneous dose, $\frac{1}{10}$ gr. (0.001 gm.); daily dose by the mouth, $\frac{1}{30}$ gr. (0.002 gm.).

sodokosis (so-do-ko'sis). Rat-bite fever. See un-

sodoku (so'do-koo). Japanese name for rat-bite fever.

sodomist (sod'o-mist). One who practises sodomy. **sodomite** (sod'om-it). Sodomist.

sodomy (sod'o-me) [after the city of *Sodom*]. Copulation between males by the anus.

sodophthalyl (so-do-thal'il). Disodoquinone phenolphthalein used as a laxative.

sodor (so'dor). The trade name for steel capsules containing liquid carbonic acid used for impregnating beverages with carbonic acid.

Soemmering's spot (sem'er-ingz) [Samuel Thomas von Soemmering, physician in Frankfurt-am-Main, 1755-1830] The macula lutea.

80108 (so fos). A proprietary mixture of sodium dihydrogen phosphate and sodium hydrogen carbonate rendered stable by coating the particles of one of the constituents with 2 per cent sugar. When treated with water, sodium phosphate is formed and carbon dioxid is set free.

softening (sof'en-ing). The process of becoming soft; malacia; any morbid process of becoming soft, as of the brain or spinal cord, or of the vascular coats. anemic s., disintegration of brain-matter from deficient blood-supply. s. of the brain. 1. A popular designation for progressive dementia with general paresis. 2. True softening of the brain-substance; encephalomalacia colliquative s., softening in which the tissues become liquefied. gray s., a stage in which the fat produced by degeneration has been more or less absorbed. green s., a stage in which there is green pus present in the degenerated spot. hemorrhagic s., softening of a part due to hemorrhage into it. inflammatory s., a form of red softening due to inflammation mucoid s., myxomatous degeneration. pyriform s. Same as yellow s. red s., softening of a patch or of patches of brain substance, with local redness due to congestion. s. of the stomach, gastromalacia; softening of the stomach-walls due to an extremely acid condition of its contents the condition is usually seen after death. white s., the stage next following yellow softening, in which the spot has become white from the presence of fatty deposit. yellow s., the second of the three stages of the myelic process, characterized by fatty degeneration; the stage following red softening, in which the patch has become yellow as a result of degenerative changes.

soil-disease (soil). Any disease caused by exhalations from decaying matter in the soil.

soja bean (so'yah). See soy bean.

sokodu (so-ko'doo). The Japanese name for ratbite fever.

sokosha (so-ko'sha). The Japanese name for ratbite fever.

Sol. Abbreviation for solution.

sol (sol). 1. A colloidal solution in which the mixture is liquid. See gel. 2. An abbreviation for solution.

solesthin (so-les'thin). A proprietary brand of methylene chlorid for use as an anesthetic.

solandrin (so-lan'drin). An alkaloid from the plant Solan'dra la'vis, having properties like those of hyoscin.

solanein (so-lan'e-in). An alkaloid, C₄₈H₇₈NO₁₃, from Solonum dulcamara.

solangustin (so-lan-gus'tin). A crystalline alkaloid, C₃₈H₅₈NO₇.H₂O₇, from Solanum angustifolium.

solanidin (so-lan'id-in). An alkaloid, C₁₅H₃ON, derived from solanin.

solanin (so'lan-in). A poisonous narcotic substance, $C_{42}H_{76}NO_{12}$, obtainable as a white, opaque, powdery, or crystalline substance from *Sola'num ni'grum* and other solanaceous plants. Dose, $\frac{1}{6}$ -1 gr. (0.011-0.066 gm.).

solanoid (so'lan-oid) [L. sola'num potato + Gr. elbos form] Resembling a raw potato in texture.

solanoma (so-lan-o'mah). A solanoid cancer.

Solanum (so-la'num) [L. "nightshade"]. A genus of herbs and shrubs, including the potato, several of the nightshades, and many poisonous and medicinal species. S. carolinen'se, horse-nettle, a plant of the United States. The fluidextracts of the root and berries are used in epilepsy. Dose, 30 min. (2 c.c.). S. cris'pum. See natri. S. dulcama'ra. See bitter-sweet. S. mammo'sum, the so-called apple of Sodom, a plant of North America, also its homeopathic preparation. S. olea'ceum, the jaquerioba, an herb of tropical America; also a homeopathic preparation of its blossoms. S. tomatillo. See natri. S. tubero'sum, the common potato.

solar (so'lar) [L sola'ris]. r. Pertaining to the sun.
2 Noting the great sympathetic plexus and its principal ganglia: so called from their radiating nerves. **s. plexus**. See plexus.

solargentum (sol-ar-jen'tum). A form of colloidal silver.

solarium (so-la're-um) [L]. A sun-parlor; a glass-inclosed room in which sun-baths are taken.

solarize (so'lar-īz) [L. sol sun]. To expose to the sun.

solarson (sol-ar'son). A r per cent. solution of ammonium heptenchlorarsonate: used as a means of administering arsenic in the treatment of anemia, chlorosis, malaria, neuroses, and dermatoses.

solation (sol-a'shun). The transformation of a gel into a sol.

Soldaini's reagent or test (sol-dah-e'nēz) [Arturo Soldaini, Italian chemist]. See under lests.

soldier's heart. See under heart.

sole (sôl) [L. so'lea; plan'la]. The bottom of the foot. convex s., dropped s. See pumiced foot, under foot. s.-plate, a mass of protoplasm in which motor nerve-endings are embedded.

solenoid (so'len-oid). A cage in which the patient is placed in arsonvalization.

Solenop'tes capilla'tus. A sucking louse found on cattle.

solestina (so-les-ti'nah). A commercial brand of methylene chlorid.

soleus (so'le-us) [L. "pertaining to the sole"]. See muscles, table of.

solferino (sol-fer-e'no). Same as fuchsin.

solid (sol'id) [L. sol'idus]. 1. Not fluid nor gaseous; not hollow. 2. A substance or tissue not fluid nor gaseous.

80lidago (sol-id-a'go) [L.]. An extensive genus of composite-flowered plants: the golden-rods. S. virgau'rea, of Europe and North America, is aromatic and diuretic, and is employed as an astringent vulnerary. Dose of fluidextract, ½-1 fl.oz. (15-30 c.c.).

solidism (sol'id-izm) [L. sol'idus solid]. The obsolete doctrine that changes in the solids of the body,

such as expansion or contraction, are the causes of every disease.

solidist (sol'id-ist). One who accepts the doctrine of solidism.

solidistic (sol-id-is'tik). Pertaining to solidism or to the solidists.

solitænia (sol-it-e'ne-ah). A brown powder, consisting chiefly of an extract of pomegranate bark and castor oil. used for tapeworm.

solitary (sol'it-a-re) [L. solita'rius]. Placed alone; not grouped with others.

sol-lunar (sol-lu'nar) [L. sol sun + lu'na moon]. Caused by the sun and moon.

soloid (sol'oid). A cone-shaped preparation of compressed drugs.
 nizin, tablets each one of which contains 2 gr. (0.13 gm.) of zinc sulphanilate: used as an astringent and antiseptic in gonorrhea.

Solomon's seal (sol'om-unz sel). A popular name for various plants of the genus *Polygona'tum*. *P. officina'le* is a mucilaginous astringent and vulnerary used also in rheumatism. It is said to be poisonous in large doses. Dose of fluidextract of root, 1-2 fl.dr. (4-8 c.c.).

solphinol (sol'fin-ol). An antiseptic mixture of borax, boric acid, and alkaline sulphites.

solquinate (sol-kwin'āt). A proprietary antiseptic preparation of oxyquinolin sulphate.

solubility (sol-u-bil'it-e). The quality or fact of being soluble; susceptibility of being dissolved.

soluble (sol'u-bl) [L. solu'bilis]. Susceptible of being dissolved.

solubrol (sol'u-brol). A proprietary iodoform substitute.

solurol (sol'u-rol). A trade name for a preparation of nucleotin phosphoric acid. Called also thyminic acid

solusin (so-lu'sin). A preparation containing bichlerid of mercury, 1.4 parts; sodium arsenate, 0.5 part; sodium iodid, 24 parts; and water, 100 parts. It is used for intravenous injection.

solute (so-lūt'). A substance dissolved in a solution. A solution consists of a solute and a solvent.

solutio (so-lu'she-o). Latin for solution.

solution (so lu'shun) [L. solu'tio]. r. The process of dissolving. 2. A liquid containing dissolved matter in a state of molecular subdivision, the matter in a state of molecular subdivision, the whole forming a homogeneous mixture for the official solutions. See under liquor. 3. A loosening or separation See also contiguity, solution of, and continuity, solution of. Adams's s., a mixture of 100 parts ammoniated alcohol and 110 parts of ether (65°). alcoholic s., a solution in which alcohol is the solvent. Almén's s. See Almén's test, under tests. ammoniacal silver s., add ammonium hydroxid to a 5.2 per cent. solution of silver nitrate until the precipitate formed is redissolved and make the volume up to 2.6 per cent. ammonium thiocyanate s., a solution of such strength (about 1.3 per cent.) that r c.c. of it is equal to r c.c. of standard silver nitrate solution.

anisotonic s., a solution in which is not isotonic.

aqueous s., a solution in which water is the solvent arsenical s. Same as water is the solvent also shows a Sainte state, under tests. basic lead acetate s., dissolve 180 gm, of lead acetate in 700 c.c. of boiling water, add 110 gm. of finely powdered lead oxid (litharge) Cool. filter, and add and boil one-half hour. water to make I liter. Belloste's s., solution of mercurous nitrate. Beyrnick's s., a synthetic culture-medium for the growth of nitrogen-fixing organisms. It contains potassium acid phosphate 1 gm., magnesium sulphate 0.2 gm., sodium chlorid 0.02 gm., 0.1 per cent. solution of ferric sulphate I c.c., o.1 per cent. solution of manganese sulphate I c.c., and dextrose 20 gm. in 1000 c.c. of water. Biett's s., solution of ammonium arsenate. Bondin's s., a weak aqueous solution of arsenous acid and wine. borosalicylic s.

Same as Thiersch's s. Boulton's s., a mixture of 110 min. of compound solution of iodin, 40 min. of liquefied carbolic acid, 21 fl.oz. of glycerin, and enough water to make 16 fl.oz. Called also French mixture. buffer 5., a solution which is able to resist change in its hydrogen-ion concentration by taking up any excess of acid or alkali added to it.

Burnett's s., an aqueous solution of zinc chlorid. Burrow's s., alum. 5 parts, and lead acetate, 25 parts, dissolved in 500 parts of water used in the treatment of burns and of eczema. centinormal s., a solution that is one-hundredth part as strong as the normal solution. Channing's s., a solution of the iodids of mercury and potassium. Christmas's s. See phenosalyl. cleaning s., dissolve 100 gm. of potassium bichromate in 10 per cent sulphyric acid and make up the liter. cent. sulphuric acid and make up to 1 liter. Clemcent. sulphuric acid and make up to 1 liter. Clemens's s., liquor arsenii bromidi. a 1 per cent. solution of the bromid of arsenic. Dose, 1-4 min. (0.066-0.266 c.c.). Cohn's s., a synthetic medium for growing yeast and molds. It contains monopotassium acid phosphate 5 gm. calcium phosphate 0.5 gm., magnesium sulphate 5 gm., and ammonium tartrate 10 gm., in water 1000 c.c. coloids., colloidsls., a solvent containing minute particles of matter suspended in it. The solvent is called the continuous phase and the suspended matter the disperse phase. Called also disperse system. See dispersoid and emulsoid. s. of contiguity, a dislocation, as of the bones of a joint. system. See dispersord and emusord. 8. Of Contiguity, a dislocation, as of the bones of a joint. 8. Of continuity, a break, division, or fracture, as of a bone. Cutler's 8., a solution containing equal parts of phenol, tincture of iodin, and chloral hydrate. Dakin's 8. See Dakin's fluid, under fluid. Daufresne's 8., a modified Dakin's solution: dissolve 200 gm. of bleaching powder in 5 liters of water and make a separate solution of 100 gm. of water and make a separate solution of 100 gm. of experiments. gm. of dry sodium carbonate and 90 gm. of sodium bicarbonate in 5 liters of water; after filtering the two solutions are mixed. **decinormal s.**, a solution having one-tenth the strength of a normal solution. **Delbet's s.**, a solution of 12.1 parts of anhydrous magnesium chlorid in 1000 parts of water: used in irrigating wounds. **deodorant** 8., a solution of zinc sulphate, naphthol, oil of thyme, hypophosphorous acid, and water. Dobell's s., an aqueous solution of sodium bicarbonate, borax, carbolic acid, and glycerin: used as a wash or spray for nasal and throat diseases. Donovan's s., a solution of the iodids of arsenic and mercury used for cutaneous and venereal sores. Dose, 2-10 min. (0.133-0.666 c.c.). See liquor arsenii et hydrargyri iodidi. Dujardin-Beaumetz's s., sodium carbonate, I part; potassium sulphate, I part; sodium lactate, I part; sodium phosphate, 0.5 part; sodium chlorid, 3.1 parts, distilled water, 1000 parts; for injection in infectious disease. Dunham's s., a solution of I per cent. of peptone and 0.5 per cent. of sodium chlorid in distilled water: used in making the index test. Explicit s. the indol test. Ehrlich's s., a basic anilin dye dissolved in anilin oil and water. EhrlichBiondi s. See under stain. ethereal s., a
solution in which ether is the solvent. Farrant's
s., a mounting preparation used in bacteriologic
works diversing water agreement acid solution in work: glycerin, water, arsenous acid solution, in equal parts, gum arabic, half a part. Fehling's s., dissolve 34.65 gm. of copper sulphate in water and make up to 500 c.c.; dissolve 125 gm. of potassium hydroxid and 173 gm. of Rochelle salt in water and make up to 500 c.c. For use mix equal parts of the two solutions. Fischer's s., equal parts of the two solutions. Fischer's B., a solution of sodium chlorid, 14 gm., and sodium carbonate, 20 gm., in 1000 c.c. of water: used by rectal or intravenous injection in anuria from Bright's disease and eclampsia. Flemming's B., a strong solution of aconite. Fowler's B., a solution of potassium arsenite, made from 10 gm. of arsenous acid, 20 gm. of potassium carbonate, 30 c.c. of compound tincture of lavender, and enough distilled water to make 1000 c.c. It is a very convenient form for the administration of arsenic. Dose, 3-10 min. (0.2-0.666 c.c.). Frohmann's s., an aqueous solution of cocain hydrochlorate, morphin hydrochlorate, sodium chlorid, antipyrin, and guaiacol: used as a rocal anesthetic in dentistry. **Gabbet's s.**, a solution containing methylene-blue, 2 gm.; sulphuric acid, 25 c.c., and water, 75 c.c. It is used as a decolorizer and con-Gannal's s., trast-stain for tubercle bacilli. solution of aluminum acetate. Golgi's s., a mixture of 1 part of an 8 per cent. solution of potassium bichromate with 2 parts of a 1 per cent. chromic acid solution. gram-molecular s., a solution containing a gram-molecule of the sub-stance to a liter of the solution. Gram's s., iodin 1 part, and potassium iodid 2 parts, dissolved in 300 parts of water: used in Gram's method of staining. Gulland's 8., a mixture of 25 c.c. of absolute alcohol, 25 c.c. of ether, and 0.4 c.c. of a 20 per cent. alcoholic solution of corrosive sublimate. Hall's 8., solution of strychnin acetate. Harrington's s., a solution for hand disinfection consisting of commercial alcohol (94 per cent.), 640 c.c.; hydrochloric acid. 60 c.c.; water, 300 c.c.; corrosive sublimate, 0.8 gm. **Hayem's s.**, a fluid used in microscopic examination of the blood. It consists of corrosive sublimate, 0.5; sodium sulphate, 5; sodium chlorid, 1; and distilled water, 200. Hershell's malt extract s. See malt extract solution. Hubl's iodin s., 25 gm. of iodin and 30 gm. of mercury bichlorid in 1 liter of the corresponding to the os per cent. alcohol. **Huchard's s.**, sodium phosphate, 10 parts; sodium chlorid, 5 parts; water, 100 parts for injection in infectious diseases. **Hühnerfeld's s.**, a solution of glacial acetic acid, 2 c.c.; distilled water, 1 c.c.; and oil of acetic acid, 2 c.c.; distilled water, 1 c.c.; and oil of turpentine and alcohol, each, 100 c.c. hyperosmotic s., hypertonic s., a solution having an osmotic pressure greater than that of blood-serum. hypobromite s. Solution A: Dissolve 125 gm. of sodium bromid in water, add 125 gm. of bromin, and make up to 1 liter. Solution B is a 22.5 per cent. solution of sodium hydroxid. For use 1 volume of Solution A, 1 volume of Solution B, and 2 volumes of water hyposmotics s. hypoand 3 volumes of water. hyposmotic s., hypotonic s., a solution having an osmotic pressure less than that of blood-serum. IKI s., any aqueous solution of iodin (I) with the addition of potassium iodid (KI) to render it more soluble. isomotic s. Same as isotonic s. isotonic s., a solution having an osmotic pressure the same as that of some other solution with which it is compared. An isotonic salt s. is an aqueous solution of sodium chlorid (0.9 per cent.) having an osmotic pressure the same as that of the blood-serum. Javel s., a solution of sodium or potassium hypochlorite used as a wound antiseptic and in the purification of water. **Kaiserling's s.**, a solution for preserving morbid tissues, prepared by dissolving 30 gm. of potassium acetate and 10 gm. of potassium nitrate in 750 c.c. of distilled water and adding 300 c.c. of formalin. Koppeschaar's s., a decinormal solution of bromin. used as a test. Labarraque's s., a solution of chlorinated soda containing 2.5 per cent. of available chlorin: disinfectant. See soda, chlorinated. Lang's s., a solution of 0.75 gm. of sodium chlorid, 12 gm. of mercury perchlorid, 5 gm. of acetic acid, in 100 c c. of distilled water. Lange's a collided gold columns. tilled water. Lange's s., a colloidal gold solu-tion, made by adding 5 c.c. of a 1 per cent. solu-tion of gold chlorid and 5 c.c. of a 2 per cent. solution of potassium carbonate to 500 c.c. of hot distilled water. This mixture is heated to the boiling-point and then there is added 5 c.c. of a 1 per cent. solution of formalin, the whole being shaken until it has a clear red color. Leary's s., an antiseptic mouth-wash consisting of an aqueous solution containing 1 per cent. of iodin and 2 per cent. of potassium iodid. Locke's s., a solution of sodium chlorid, 0.9 per cent.; calcium chlorid, 0.024 per cent.; potassium chlorid, 0.042 per cent.; sodium bicarbonate, o.o. to o.o. per cent.; and glucose, o.r per cent. It is used in physiologic experiments to keep the mammalian heart beating. Locke's s. (citrated), sodium chlorid, 9.2 gm.; potassium

chlorid, o.5 gm.; calcium chlorid, o.r gm.; sodium citrate, 10 gm.; and distilled water to 1000 c.c. After autoclaving the reaction is adjusted to PH 7.4. Löffler's s., a solution of toluol and iron in alcohol: used locally in diphtheria. See Löffler's method, under stain. Lugol's s., the official compound solution of iodin (liquor iodi compositus, the official U. S. P), containing iodin 5, potassium iodid 10, distilled water to make 100. Dose, 1-10 min. (0.066o.666 c.c.). Magendie's s., a solution of 16 gr. of morphin sulphate in r fl oz. of water: used for hypodermic injection. malt extract s., a 21 per cent. solution of malt extract in water clarified and sterilized for use as a bacteriologic culture-medium. Mandl's s., a solution used locally in chronic Manqu's 8., a solution used locally in chronic catarrh, consisting of 5 gr. iodin, 10 gr. potassium iodid, 2 min. phenol, and ½ oz. glycerin. Mathieu's 8., sodium sulphate, 6 parts; sodium phosphate, 4 parts; sodium chlorid, 1 part; glycerin, 20 fluid parts; water, 100 fluid parts: for injection in infectious diseases. Mayor's 8., a solution of 1 part each of potassium phosphate, magnesium sulphate, and calcium phosphate in 200 parts of water: a bacterial culture liquid. **McDonald's s.**, a solution for sterilizing the hands and the skin of the abdomen consisting of acctone 40 parts, denatured alcohol 60 parts, and pyxol 2 parts. Mencière's s. See Mencière's mixture, under mixture. Mitchell's **8.**, a solution of $\frac{3}{4}$ gr. of cocain and $\frac{1}{400}$ gr. of adrenalin in 50 c.c of normal salt solution, and another in too c.c. of salt solution; the first is used in anesthesia and nerve-blocking; the second, for general infiltration of the tissues. **molal s.**, **molar s.**, a solution containing 1 mol. (gram molecule) of the solute in 1 liter of the solution. **molecular** disperse s., a true solution or a system in which the dispersed particles have a diameter of about or micromicron. **molybdate s.**, dissolve roogm. of molybdic acid in 144 c.c. of ammonium hydroxid (specific gravity 0.90), and 271 c.c. of water. Then add slowly 489 c.c. of nitric acid (specific gravity 142) and 1148 c.c. of water. Monsel's s., a styptic solution of basic ferric sulphate or subsulphate; liquor ferri subsulphatis. sulphate or subsulphate; induor terri subsulphates.

Naegeli's s., a synthetic culture-medium for growing yeasts and molds. It contains dibasic potassium phosphate 1 gm., magnesium sulphate o 2 gm, calcium chlorid o 1 gm., and ammonium tartrate 10 gm., in 1000 c.c. of water. Nessler's s. Same as Nessler's reagent, under reagent. nitrate s., a bacteriologic culture-medium consisting of peptone 10 gm., potassium nitrate 10 gm., and water 1000 c c. normal s., one which contains in each liter 1 gm. of (acid) hydrogen or enough of the reagent to unite with or replace I gm. of hydrogen. normal salt s. See saline normal toxin s., a diphtheric toxin-bouillon which contains one hundred toxin units. nuclear which contains one numered toxin units. Indeed s., breaking up of a cell nucleus; caryolysis. Ochsner's s., carbolic acid, o.5 per cent.; aqueous saturated solution of boric acid, 66 per cent.; and alcohol, 33 per cent. Orth's s., a histologic fixation mixture of 10 parts of Müller's fluid and 1 part of formol. Pacini's s., a solution used in microscopic examination of blood. It consists of corrosive sublimate at sodium chlorid. sists of corrosive sublimate, 2; sodium chlorid, 4; glycerin, 26; and distilled water, 226. Panas's s., 1 part of mercuric iodid dissolved in 400 parts of alcohol and 20,000 parts of water: used in eye inflammations. Pappenheim's s. See under stains, table of. Pasteur's s., a bacteriologic culture-medium for growing yeast and molds. It contains ammonium tartrate 10 gm., cane-sugar 100 gm., and the ash from 10 gm. of yeast in 1000 c.c. of water. Pavy's s., a solution containing in I liter 4.158 gm. of copper sulphate. 20.4 of caustic potash, 20.4 of potassium and sodium tartrate, and 300 c.c. of ammonia-water. Pearson's s., liquor sodii arsenatis: the solution of sodium arsenate. peptone-salt s. See peptone water, under culture-medium. Perenyi's s., an embryologic fixing solution, consisting of 4 parts of a 10 per cent. solution of nitric acid, 3 parts of

alcohol, and 3 parts of a 0.5 per cent. solution of chromic acid. physiologic salt s. See saline s. Plehn's s. See under stains, table of. Plenck's 8., an external syphilitic preparation made by dissolving I ounce of mercuric chlorid and I dram of camphor in 12 ounces of alcohol, and mixing it with a solution of 1 ounce of alum and 1 dram of lead acetate in 12 ounces of vinegar; it should be used with care. **Potain's s.**, a mixture of equal parts of solutions of gum arabic, sodium sulphate, and sodium chlorid: used for diluting the blood preparatory to counting the corpuscles. Progl's s., an antiseptic solution of the sodium salt of hydriodic acid and iodic acid with metallic iodin (o o4 per cent.). protein-free s. See protein-free culture-medium. Purdy's s., a solution containing copper sulphate, 4.752; potassium hydrate, 23.5; stronger ammonia-water, 350; glycerin, 38; and distilled water to make 1000 parts. Rienzi's s., iodin, 1 part; potassium iodid, 3 parts; sodium chlorid, 6 parts; distilled water, 1000 parts: for injection in infectious diseases. Ringer's s., a physiologic solution used for perfusing the heart of a frog. It contains sodium chlorid, 0.650; potassium chlorid, 0.014; calcium chlorid, 0.012; sodium bicarbonate, 0.020; monosodium phosphate, o.ooi (glucose, o.200); and water to 100. Rotter's s., an antiseptic solution consisting of 2 gm. of carbolic acid, 3 gm. of boric acid, 5 gm. each of zinc chlorid and zinc phenolsulphonate, 5 centigrams of mercury chlorid, 25 of sodium chlorid, 60 of salicylic acid, and 10 each of thymol and citric acid. Sachsse's s., a solution of potassium iodid, potassium hydroxid, and red iodid of mercury in water used as a test for sugar. saline s., salt s., a solution of sodium chlorid, or common salt, in distilled water. Normal or more correctly, physiologic salt s. is one that contains o o per cent. of salt. It resembles in action and density most of the animal fluids, and is used for intravenous injection after profuse hemor-rhage or severe diarrhea. Salkowski's s., a mixture of 2 parts of barium hydroxid solution saturated at room temperature with 1 part of barium chlorid solution saturated at room temperature. Sapelier's s., sodium chlorid, 60 parts; potassium chlorid, 5 parts; sodium carbonate, 32 parts; sodium phosphate, 1.5 parts; potassium sulphate, 3.5 parts; boiled water, 900 parts; for injection in infectious diseases. saturated s., a solution in which the solvent has taken up all of the substance that it can hold in solution. Schällbaum's s., a solution for attaching paraffin sections to slides, consisting of 1 part of celloidin in 3 or 4 parts of oil of cloves. Schiassi's s. See Schiassi's serum, under serum. Schleich's s. See Schleich's anesthetic, under an-Schwarz's s., sodium chlorid, 6 gm.; esthetic. solution of caustic potash and soda, 2 min; water, 1000 c c.; for injection in infectious diseases. seminormal s., a solution containing half as much of a reagent as the normal solution. special acetic acid-acetate s., dilute 100 c.c. of 50 per cent. acetic acid with an equal volume of 5 per cent. acetic acid with an equal volume of 5 per cent. sodium acetate solution. standard s., one which contains in each liter a definite amount of any reagent. Called also volumetric s. standard amino-acid s., a solution of glycocoll, leucin, phenylalanin, or tyrosin which contains 0 o7 mg. of nitrogen per cubic centimeter. Stewart's s. 1. A solution of 1 part of alum sulphate and 2 parts of chlorinated lime in 100 parts of water, the whole boiled for five minutes used for sterilizing the hands of surgeons. 2. A solution containing I gr. calomel in 2 oz. each of alcohol, glycerin, and tincture of iodin. supersaturated s., a solution made in a heated condition, containing a greater quantity of a solid than could be dissolved at any ordinary temperature. Suzmann's 8., a saline infusion solution consisting of so-dium chlorid, 6 parts; sodium carbonate, 1 part; and distilled water, 1000 parts. Sydmann's 8., sodium chlorid, 6 parts; sodium bicarbonate,

r part; water, 1000 parts: for injection in infectious diseases. test-s. See test-solution.

Thiersch's s., a solution of boric acid, 12 parts, and salicylic acid, 2 parts, in 1000 parts of water: used as an antiseptic wash.

Thompson's s., liquor phosphori: a solution of I gr. of phosphorus, 460 min. of absolute alcohol, 10 min. of spirit of peppermint, and 2 fl.oz. of glycerin. **Toison's s.** See under stain. **Tsuchiya's s.**, a solution of 1.5 gm. of crystalline phosphotungstic acid in 100 gm. of 96 per cent. alcohol and 5 gm. of concentrated hydrochloric acid: used for quantitative estimation of the albumin in the urine. Tyrode's s., a modified Locke's solution containing magnesium. It is used especially for per-fusing the intestine of the rabbit. It contains: sodium chlorid, 0.800; potassium chlorid, 0.020; calcium chlorid, 0.020; magnesium chlorid, 0.010; monosodium phosphate, o oo5; sodium bicarbonate, o.100; glucose, o 100; and water to 100. Uschinsky's s., a solution in 1000 c.c. of water of 4 gm. of asparagin, 6 gm. of ammonium lactate, 2 gm. of neutral sodium phosphate, and 5 gm. of so-dium chlorid: used as a culture-medium for bacvan Swieten's s., a solution of mercuric chlorid in 100 parts of alcohol and 900 parts of water. Villate's s., a mixture of 6 parts each of zinc sulphate and copper sulphate with 12 parts of solution of lead subacetate and 20 parts of vinegar: used in the treatment of caries. Vleminckx's s., liquor calcis sulphuratæ; a mixture of fresh salaked lime, 2 parts; sublimed sulphur, 3 parts; and water enough to make 12 parts. It is used in seborrhea. Volhard's s., a decinormal solution of potassium thiocyanate. volumetric s. See standard s. Waller's B., to I liter of Hubl's soluwind s. wanter s., to I niter of Fiuol's solution add 50 c.c. of strong hydrochloric acid wijs's., a solution of iodin monochlorid made as follows: Dissolve separately in glacial acetic acid 9.4 gm of iodin trichlorid and 7.2 gm. of iodin. Mix, make up to a liter, and titrate. Winogradally's s., a synthetic culture-medium for the growth of nitric organisms. It contains potassium phosphate a gm. magnesium sulphate as gm. phosphate 1 gm., magnesium sulphate 0.5 gm., calcium chlorid c.o1 gm., sodium chlorid 2 gm., and ammonium sulphate 2 gm, in 1000 c.c. of water. Winogradsky's 8. (for nitrous organwater. Winogradsky's 8. (for nitrous organisms): It contains ammonium sulphate 1 gm, potassium sulphate 1 gm., and basic magnesium carbontae 5 to 10 gm., in water 1000 c.c Woelfler's s., benzoin varnish; a preparation made by shaking together 1 part of iodoform and 10 parts of compound tincture of benzoin: used to paint over raw tissues. Wright's s. sodium citrate, 11 gr.; sodium chlorid, 20 gr., and distilled water to make 1 fl.oz. Zenker's s., a fixative solution of corrosive sublimate 5, potassium bi-chromate 2.5, sodium sulphate 1, water 100. Ziehl's 8. See stains, table of.

solutol (sol'u-tol). An antiseptic solution of cresol and sodium cresotinate.

solv. An abbreviation of Latin sol've, dissolve.

solvable (sol'va-bl). Soluble.

solvate (sol'vāt). A compound of one or more molecules of a solvent with the ions or with the molecules of a dissolved substance.

solvation (sol-va'shun). Chemical combination of a solvent with the solute.

solvent (sol'vent) [L. sol'vens]. 1. Dissolving; effecting a solution. 2. A liquid that dissolves or that is capable of dissolving.

solveol (sol've-ol). A patented solution of cresol and sodium cresotinate: disinfectant.

solvin (sol'vin). Sodium sulphoricinate: a brown, viscid liquid prepared from any fatty acid by the action of sulphuric acid, and neutralized with sodium hydroxid; it is a strong solvent, and destroys the red blood-corpuscles: antiseptic.

solvolysis (sol-vol'is-is). A general term for double decomposition reactions of the type of hydrolysis, ammonolysis, and sulpholysis.

solvosal (sol'vo-sal). A compound, C₀H₅.CO₂.C₆-H₄.O.PO(OH)₂, or salol phosphorous acid, whose lithium salt is diuretic and antiseptic and is used like salicylic acid. Called also salolphosphinic acid.

soma (so'mah) [Gr.]. The body; the body tissue as distinguished from the germ cells.

somacule (so'mak-ūl) [Gr. $\sigma \hat{\omega} \mu a$ body]. The smallest possible particle of protoplasm.

somal (so'mal). Pertaining to the body.

somaplasm (so'mah-plazm). Somatoplasm.

somasthenia (sōm-as-the'ne-ah) [Gr. σῶμα body + ά neg. + σθένος strength]. A condition of bodily weakness, poor appetite and sleep, and inability to maintain a normal active life without easy exhaustion.

somatalgia (so-mat-al'je-ah) [Gr. σῶμα body + ἄλγος pain]. Bodily pain.

somatasthenia (so"mat-as-the'ne-ah). Somasthenia.

somatesthesia (so-mat-es-the'ze-ah) [Gr. $\sigma\hat{\omega}\mu$ a body + $ai\theta\eta\sigma\iota s$ sensation]. The consciousness of having a body.

somatesthetic (so-mat-es-thet'ik). Pertaining to somatesthesia.

somatic (so-mat'ik) [Gr. σωματικός]. Pertaining to the body; especially pertaining to the framework of the body, as distinguished from the viscera.

somaticosplanchnic (so-mat"ik-o-splank'nik). Somaticovisceral.

somaticovisceral (so-mat"ik-o-vis'er-al). Pertaining to the body and viscera.

somatist (so'mat-ist) [Gr. $\sigma\hat{\omega}\mu\alpha$ body]. A psychiatrist who believes that neuroses and psychoses are of physical origin and are based on bodily lesions.

somatoblast (so-mat'o-blast) [Gr. $\sigma \partial_{\mu} a$ body + $\beta \lambda a \sigma \tau \delta s$ germ]. Any one of the cytoblasts aggregated in the protoplasm of the cell outside of the body.

somatoceptor (so-mat'o-sep-tor). A ceptor which receives a stimulus from the mittor of an adjoining neuron.

somatochrome (so-mat'o-krōm) [Gr. $\sigma \hat{\omega} \mu a$ body + $\chi \rho \hat{\omega} \mu a$ color]. Any nerve-cell which has a well-marked cell-body completely surrounding the nucleus, its colorable protoplasm having a distinct contour; used also adjectively.

somatoderm (so-mat'o-derm) [Gr. σωμα body + δέρμα skin]. The somatic layer of mesoderm.

somatodidymus (so"mat-o-did'im-us) [Gr. σωμα body + δίδυμος twin]. A twin monster with the bodies united.

somatodymia (so''mat-o-dim'e-ah) [Gr. σωμα body + δύειν to enter]. The blending of the bodies of twin monsters into one.

somatogenesis (so"mat-o-jen'es-is) [Gr. σῶμα body + γένεσις production]. The formation or emergence of bodily structure out of hereditary sources; the formation of somatoplasm out of germ plasm.

somatogenetic (so-mat"o-jen-et'ik). Aiding in the reproduction of the body.

somatogenic (so"mat-o-jen'ik) [Gr. σωμα body + γεννών to produce]. Originating in the cells of the body.

somatology (so-mat-ol'o-je) [Gr. $\sigma \hat{\omega} \mu \alpha$ body + $\lambda \delta \gamma os$ word]. The sum of what is known regarding the body; the study of the anatomy and physiology of the body.

somatome (so'mat-ōm) [Gr. σωμα body + τέμνειν to cut]. 1. An appliance for cutting the body of the fetus. 2. A somite.

somatopagus (so-mat-op'ag-us) [Gr. σῶμα body + πηγνύναι to fix]. A double monstrosity with separate trunks.

somatopathic (so-mat-o-path'ik) [Gr. σωμα body + πάθος disease]. Disordered in body; organic, as distinguished from psychopathic or neuropathic.

- somatoplasm (so-mat'o-plazm) [Gr. σωμα body + πλάσσειν to mold]. The protoplasm of the body cells as distinguished from that of the germ cells. Cf. germ-plasm.
- somatopleural (so"mat-o-plu'ral). Pertaining to the somatopleure.
- somatopleure (so-mat'o-plūr) [Gr. σωμα body + πλευρά side]. 1. The somatic mesoblast; the upper layer of the mesoblast adjoining the epiblast, the under one being the splanchnopleure.
 2. More correctly, the layer formed by the somatic mesoblast and the epiblast.
- somatopsychic (so-mat-o-si'kik) [Gr. σωμα body + ψυχή mind]. Pertaining to both body and mind.
- **somatopsychosis** (so''mat-o-si-ko'sis) [Gr. σωμα body + psychosis]. Southard's name for a mental disease symptomatic of bodily disease.
- somatose (so'mat-ös). A patented yellow foodpowder made up of soluble albumoses derived from beef. milk-s., a similar preparation of albumoses derived from milk.
- **somatosplanchnopleuric** (so"mat-o-splank-no-plu'rik). Pertaining to the somatopleure and the splanchnopleure.
- somatotomy (so-mat-ot'o-me) [Gr. σῶμα body + τέμνειν to cut]. The anatomy or dissection of the body.
- somatotridymus (so"mat-o-trid'im-us) [Gr. σωμα body + τρίδυμος threefold]. A fetal monster with three trunks.
- **somesthesia** (so-mes-the'ze-ah). The sensibility to bodily feeling or bodily sensations.
- somesthetic, somesthetic (so-mes-thet'ik) [Gr. $\sigma\hat{\omega}\mu a$ body + $al\sigma\theta\eta\sigma\iota s$ sensation]. Pertaining to the bodily sensations.
- **somite** (so'mīt) [Gr. $\sigma \hat{\omega} \mu \alpha$ body]. r. A segment of the trunk of the embryo; one of the segmented masses of mesoderm in the vertebrate embryo which gives rise to the somatic muscles. Called also myotome, primitive segment, mesodermal segment, mesodlastic s. or protovertebral s. Same as metamere.
- **somnal** (som'nal) [L. som'nus sleep]. A clear, colorless liquid, $C_1H_{12}NO_3Cl_3$, from urethan, alcohol, and chloral. It is hypnotic and diuretic. Dose, in alcoholic solution (r-3 parts), 20-60 min. (1.333-4 c.c.).
- somnalgesin (som-nal-je'sin). A proprietary sedative, analgesic, and antipyretic. Dose, 1-5 gr. (0.065-0.33 gm).
- somnambulance (som-nam'bu-lans). Somnambulism.
- **somnambulation** (som-nam-bu-la'shun). Sleep-walking.
- somnambulism (som-nam'bu-lizm) [L. somnam-bulis'mus; som'nus sleep + ambula're to walk].

 1. Habitual walking in the sleep. 2. A hypnotic state in which the subject has the full possession of his senses.
- somnambulist (som-nam'bu-list). A person who walks in his sleep; a sleep-walker.
- **somnarium** (som-na're-um) [L. som'nus sleep]. An institution for the treatment of functional neuroses by sleep.
- somnifacient (som-nif'a-shent) [L. som'nus sleep + fac'ere to make].
 1. Causing sleep; hypnotic.
 2. A medicine which induces sleep.
- somnifen, somnifene (som'nif-ën). A soluble hypnotic, diethyl-diallyl-barbiturate of diethyl-amin
- somniferin (som-nif'er-in) [L. som'nus sleep + fer're to bring]. 1. A derivative of morphin, said to be safer and more effective than morphin. 2. A narcotic alkaloid from Witha'nia somnif'era.
- somniferous (som-nifer-us) [L. som'nus sleep + fer're to bring]. Inducing or causing sleep.
- somnific (som-nif'ik). Somnifacient.

- somniloquence, somniloquism, somniloquy (som-nil'o-kwens, som-nil'o-kwizm, som-nil'o-kwe) [L. som'nus sleep + lo'qui to speak]. The habit of talking in one's sleep.
- somniloquist (som-nil'o-kwist). One who talks in his sleep.
- somnipathist (som-nip'ath-ist) [L. som'nus sleep + Gr. πάθος illness]. A person in or subject to hypnotic trance.
- **somnipathy** (som-nip'ath-e) [L. som'nus sleep + Gr. $\pi \alpha \theta$ os sickness]. A condition of hypnotic trance.
- somnoform (som'no-form). A mixture of 60 parts of ethyl chlorid with 35 parts of methyl chlorid and 5 parts of ethyl bromid; used as an anesthetic for minor operations.
- somnol (som'nol) [L. som'nus sleep]. Chlorethanal alcoholate, C₀H₁₁O₆Cl₀; a hypnotic and cerebral sedative: used like chloral hydrate.
- **somnolence** (som'no-lens) [L. somnolen'tia sleepiness]. Sleepiness; also unnatural drowsiness.
- **somnolent** (som'no-lent) [L. somnolen'tus]. Affected with somnolence.
- somnolentia (som-no-len'she-ah) [L.]. r. Drowsiness, or somnolence. 2. Sleep-drunkenness; a condition of incomplete sleep in which some of the faculties are excited while the rest are in repose. The patient is excited and may become violent.
- **somnolism** (som'no-lizm). A state of mesmeric, or hypnotic, trance.
- somnone (som'non). A proprietary hypnotic preparation of opium, lactucarium, and lupulin. Dose, 15-30 min. (1-2 c.c.).
- **somnos** (som'nos). A proprietary hypnotic and sedative, said to be chlorethanal alcoholate, $C_0H_{11}O_0Cl_0$.
- somnus (som'nus) [L.]. Sleep.
- somopsychosis (so"mo-si-ko'sis) [Gr. σωμα body + psycosis]. A mental disorder in which the symptoms are chiefly bodily, that is, sensory, motor, or visceral, in character.
- **somosphere** (so'mo-sfēr) [Gr. $\sigma \hat{\omega} \mu a$ body + $\sigma \varphi a l \rho a$ sphere]. One of the elements of the archiplasm.
- sonde coudé (sond koo-da') [Fr. "bent sound"].

 A catheter with an elbow, or sharp, beak-like bend, near the end.
- soneryl (son'er-il). A white crystalline hypnotic, butyl-ethyl-barbituric acid. Dose by mouth, 2-4 gr. (0.1-0 2 gm.); by subcutaneous injection, 1-2 gr. (0.05-0 τ gm.).
- sonifer (son'if-er) [L. so'nus sound + fer're to bear]. A variety of ear-trumpet.
- sonitus (son'it-us) [L. "sound"]. A sounding or tinkling in the ears; tinnitus aurium.
- sonnin (son'in). An antiseptic compound of boric acid and phenols.
- sonometer (so-nom'et-er) [L. so'nus sound + me'-trum measure]. 1. An apparatus for testing acuteness of hearing. 2. An instrument for measuring the ratios of sound-vibrations in various bodies.
- sonorous (so-no'rus) [L. sono'rus]. Resonant; sounding.
- soor (sor). German for thrush.
- soot-cancer, soot-wart (soot). The scrotal cancer of chimney-sweepers.
- sophistication (so-fis-tik-a'shun) [Gr. σοφιστικός deceitful]. The adulteration of food or medicine.
- sophol (so'fol). A proprietary preparation of formaldehyd, nucleic acid, and silver; silver formonucleinate: used in gonorrheal ophthalmia.
- sophomania (sof-o-ma'ne-ah) [Gr. σοφός wise + μανία madness]. An insane belief in one's own great wisdom.
- Sophora (so-fo'ra) [Arabic sofāra]. A genus of leguminous trees and shrubs. The root and seed of S. tomento'sa are used in India to arrest choleraic vomiting. For certain poisonous species, see loco.

sophorin (sof'o-rin). A fluid alkaloid found in the seeds of various species of Sopho'ra; it is poisonous and has properties like those of Calabar bean.

sopor (so'por) [L.]. Sound, deep, or profound sleep.
soporiferous (so-po-rif'er-us) [L. so'por sleep + fer're to bring]. Inducing deep or profound slumber.

soporific (so-po-rif'ik) [L. soporif'icus]. Causing or inducing profound sleep.

Soporose, **Soporous** (so'po-rōs, so'por-us) [L. so-po'rus]. Associated or affected with coma or profound slumber.

8. op. s. Abbreviation for L. si o'pus sit, if necessary.

Soranus (so-ra'nus). A celebrated Greek physician, the most renowned gynecologist of antiquity, born at Ephesus and educated at Alexandria. He lived under the reigns of the emperors Trajan and Hadrian. Among his writings are "Acute and Chronic Diseases" and "On the Obstetric Art," parts of which have survived.

sorbefacient (sor-be-fa'shent) [L. sorbe're to suck + fa'cere to make]. 1. Promoting absorption.
 2. A remedy that promotes absorption.

sorbite (sor'bit). A crystalline, hexahydric alcohol, CH₂OH (CHOH)₄CH₂OH, from the tree Sor'bus aucupa'ria. It is also called sorbitol, has a sweet taste, and yields dextrose on oxidation.

sorbose (sor'bōs) A keto-hexose, CH₂OH(CHOH)₃-CO.CH₂OH, resembling levulose in its properties, but much more easily crystallized. It can be obtained from the juice of the berries of the mountain ash after the sorbitol of the juice has been oxidized by Bacterium xylinum.

bodies with metals in such wise that in the breaking down process of the former the metals are set free; the detection of the free metals by the usual chemical reagents is then a measure of the albuminoid decomposition. In the serodiagnosis of pregnancy, a combination of iron and placental extract is used. When used in diagnosis, the preparations are called diasorcymes; when employed to bring about reactions against pathologic processes for therapeutic purposes, they are called serasorcymes.

therapeutic purposes, they are called serasorcymes.

sordes (sor'dēz) [L. "filth"]. The dark-brown, foul matter which collects on the lips and teeth in low fevers. It consists of a mixture of food, epithelial matter, and microorganisms. s. gas'-trice, undigested food, mucus, etc., in the stomach.

sore (sor). A lesion of the tegument, such as an ulcer or abscess, less frequently, a wound. chrome s. See chrome ulcer, under ulcer. fungating s., a soft chancre with granulations. hard s., a chancre. Lahore s. See furunculus orientalis. Madagascar s., oriental s. See furunculus orientalis. Moultan s., furunculus orientalis. Naga s., a chronic and malignant form of ulcer occurring among workers in tea gardens in Assam. Pendjdeh s., furunculus orientalis soft s., a chancroid. Umballa s., furunculus orientalis. Veldt s., an ulceration on the legs and forearms, occurring in South Africa. venereal s., a chancroid.

sore-head. See epithelioma contagiosum.

sore-shins. Periostitis of the metacarpal bones of the horse.

sore-throat (sōr-thrōt'). See laryngitis, pharyngitis, tonsillitis. clergyman's s., dysphonia clericorum. cyclists' s., a form of sore-throat peculiar to bicyclers, and said to be due to inhalation of road-dust. diphtheric s., croupous tonsillitis. Fothergill's s., ulcerative angina of severe scarlatina. hospital s., septic inflammation of the pharynx and fauces sometimes affecting nurses and interns in hospitals. putrid s., gangrenous pharyngitis. septic s., a severe

type of sore throat occurring in epidemics, marked by intense local hyperemia with or without a grayish exudate and enlargement of the cervical lymph glands. It is caused by a peculiar type of hemolytic streptococcus, the infection being spread by direct contact or by milk. Called also streptococcus sore throat and streptococcus tonsillitis. spotted 8., follicular tonsillitis. steptococcus s. See septic s. ulcerated s., putrid sore throat.

Soret effect (so-ra'). See under effect.

sorghum (sor'gum) [L.]. I. A cane-like grass, Andropo'gon sorgh'um, of many varieties: cultivated for its juice, from which sugar and syrup are prepared. It is frequently a cause of poisoning to cattle who eat it. 2. A syrup prepared from the above used as an article of food. The seed of broom-corn, a cultivated variety of A. sacchara'tum, is a soothing diuretic. Dose of fluidextract, I fl.dr. (4 c.c.).

sorisin (so-ri'sin). A solution of sulphoguaiacolate of sodium with iron or arsenic in syrup of orange: used as a tonic for anemic and poorly nourished children.

soroche, sorroche (sor-o-chā') [Sp. "antimony"]. Mountain-sickness of the Andes, incorrectly ascribed to metallic exhalations.

sororiation (so-ro-re-a'shun) [L. sororia're to increase together]. Increase in size of the breasts at puberty.

sorption (sorp'shun). The combination of water within a colloid or coagulum.

S. O. S. Abbreviation for L. si o'pus sit, if occasion require, if necessary.

8080n (so'son). An artificial food-product, recommended as a substitute for meat.

soterocyte (so'ter-o-sit) [Gr. $\sigma\omega\tau\hat{\eta}\rho$ savior + $\kappa b\tau \sigma s$ cell]. Platelet.

sotopan (so'to-pan). A proprietary compound of quinin, iron, bromin, calcium, and phosphoric acid stomachic, sedative, and roborant.

soudan III (soo-dan'). A diazo-compound: used as a stain for fats. See *sudan*.

soudanite (su'dan-ēt) [Fr.; from Sudan (Arabic súdán black), in Africa]. A fever of tropical Africa, often leading to homicidal mania.

A soft, blowing, auscultatory sound. Cardiac s., any cardiac murmur of a blowing quality. electric s., the aura, or slight current of electrified air, which passes from a static electric machine while it is in action. fetal s., a blowing sound sometimes heard in pregnancy: supposed to be due to compression of the umbilical vessels. funic s., funicular s., a hissing souffle snychronous with the fetal heart-sounds, and supposed to be produced in the umbilical cord. placental s., a souffle supposed to be produced by the blood-current in the placenta. splenic s., a sound said to be sometimes audible over a diseased spleen. umbilical s. Same as funicular s. uterine s., a sound made by the blood within the arteries of the gravid uterus.

soulal (soo'lal). A severe form of scables in Arabs. soul-pain (söl'pān). Psychalgia.

souma, soumaya (soo'mah, soo-mah'yah). A disease of cattle, horses, goats, and camels in the Sudan, caused by the *Trypanoso'ma vivax*, which is transmitted by various species of *Glossina*.

sound (sownd) [L. so'nus]. I. The effect produced on the organ of hearing by the vibrations of the air or other medium. 2. The vibrations collectively which normally impress the organs of hearing. 3. An instrument to be introduced into a cavity, so as to detect a foreign body or to dilate a stricture. anasarcous s., a bubbling sound of moist quality often heard over edematous skin. auscultatory s., any sound heard on auscultation. bandbox s., a highly resonant sound elicited by percussion over the chest in cases of emphysema of the lung. Beatty-Bright

friction-s., the friction-sound of pleurisy. bell s. Same as bruit d'arain. Bellocq's s. See Bellocq's cannula, under cannula. bellows s., an endocardial murmur resembling the sound made by a bellows. **Béniqué's s.**, a lead or tin sound, having a wide curve, for dilating urethral strictures. bottle-s. Same as amphoric râle. See râle. cardiac s. Same as heart-sounds. coin s. Same as bruit d'arain. s.-conducting apparatus, the parts of the auditory apparatus external to the cochlea. cracked-pot s., a percussion-sound indicative of a pulmonary cavity into which the breath may pass. cracked-pot s., cranial, a peculiar sound due to the separation of the cranial sutures from a cerebellar tumor. esophageal s., a long, flexible sound for exploring the esophagus. flapping s., the peculiar sound made by the closure of the heart-valves. friction-s., any sound produced by the rubbing of one surface over another. hearts's, the two sounds heard over the cardiac region. The first is dull and prolonged, and occurs along with the systole of the ventricles, the second occurs along with the closure of the semi-lunar valves, and is short and sharp. hippo-cratic s., the succussion-sound heard in pyo-pneumothorax or seropneumothorax. kettlesinging s., a sound resembling the boiling of water in a kettle heard in the chest in the early stages of pulmonary tuberculosis. lacrimal s., a sound of small caliber for use in the lacrimal canal. metallic s., a sound having a metallic quality heard especially over cavities in the chest. mid-diastolic s., a sharp sound heard on auscultation just before the first sound of the heart, produced by the auricular systole when the auricular and ventricular systoles are discontinuous. muscle-s., the sound heard over a muscle when in a condition of contraction. peacockand lesions of the air-passages. s.-perceiving apparatus, the cochlea and the auditory nerve, with its terminations and connections with the auditory nucleus and auditory center. percussion-s., any sound obtained by percussion. respiratory s., any sound heard on auscultation over any portion of the respiratory tract. **shaking s.** Same as succussion s. siphon-s., a variety of tube or siphon for the stomach. sizzling s's, sounds as of fermentation in the stomach. subjective s. 1. Same as phonism. 2. The sound sometimes produced by the bloodcurrent in the ears of the auscultator. succussion-s's, splashing sounds heard on succussion over a distended stomach and in hydropneumothorax. to-and-fro s., the peculiar friction-sound heard in pericarditis and pleuritis. urethral s., a long, slim, slightly conic instrument of steel for exploring and dilating the urethra. waterwheel s. See bruit de moulin. water-whistle 8., a whistling sound heard over a fistula of the Winternitz's s., a double-current cathelung. Winternitz's 8., a double-current catheter. For other sounds, see under bruit, fremitus, murmur, and râle.

Bourwood (sow'er-wood). A small tree of North America, Oxyden'drum arbo'reum: its leaves are tonic, refrigerant, and diuretic. Dose of fluid-extract, \frac{1}{2}-2 \text{ fl.dr. (2-8 c.c.); of extract, 5-15 gr. (0.3,33-1 gm.).}

southernwood (suth'ern-wood). See abrotanum. Southey's tubes (south'ez) [Reginald S. Southey, English physician, 1835–1899]. See under tube.

Soxhlet's apparatus (soks'lets) [Franz Soxhlet, German chemist, 1848–1926]. See under apparatus.

soya (so'yah). See soy bean.

soy bean (soy). The bean of the leguminous plant, So'ja his' pida (Glyci'ne so'ja), or Chinese bean. It contains little starch and is rich in alkaloids, and from it is prepared a meal which is used in making bread for diabetics. It also furnishes a ferment, urease. See urease.

Soymida febrif'uga (soi'mid-ah). A tree of southern Asia. The bark is bitter, astringent, and aromatic. very useful in intermittent fevers.

SOZA! (so'zal). Aluminum paraphenol sulphonate: a crystalline powder, $[C_6H_4(OH)SO_2O]_3Al$, soluble in water, glycerin, and alcohol: used as an antiseptic in a 1 per cent. solution, especially for application to ulcers.

sozalbumin (so-zal-bu'min) [Gr. σώζειν to save + albumin]. Any defensive protein that is not a toxalbumin.

SOSIN (so'zin) [Gr. σώζειν to save]. Any defensive protein occurring normally in the body. Sozins are distinguished as mycosozins, or those which act by destroying the bacteria themselves, and the loxosozins, or those that counteract the poisons generated by the bacteria.

soziodol (so-zi'o-dol). See sozoiodol.

sozoborol (so-zo-bo'rol). A preparation of aristol and the borates and sozoiodates: used in nasal catarrh.

sozoderma (so-zo-der'mah). A proprietary antiseptic soap.

sozoiodol (so-zo-i'o-dol). Sozoiodolic acid: a patented antiseptic diiodoparaphenolsulphonic acid, C₆H₂I₂(OH)SO₃H, occurring in acicular prisms, being a derivative of iodin and phenolsulphonic acid. It is used as an antiseptic, disinfectant, and parasiticide, chiefly in the form of sozoiodolates.

sozoiodolate (so"zo-i-od'o-lāt). Any compound of sozoiodol. The sozoiodolates of mercury, sodium, zinc, etc., are antiseptic remedies. lead B., a compound in fine needles: antiseptic. mercury s., a pale yellow powder, (OH.C.6H2I2.SO.6)2-Hg, soluble in salt water: used locally and by injection in the treatment of syphilis. It is used in a 25 per cent. solution or a 1 per cent. ointment. potassium s., a white, crystalline salt. C.6H2I2(OH)SO3K + 2H2O. antiseptic; soluble in 10 parts of water: used as an antiseptic in burns, eczemas, etc, in 10 to 25 per cent. dusting-powder or 10 per cent. ointment. sodium s., a white, crystalline compound, C.6-H2I2OH.SO3Na + 2H2O, soluble in water, glycerin, and alcohol used as an antiseptic; internally, in diarrhea, diabetes, phthisis, etc., and externally in wounds, diphtheria, skin diseases, etc. Dose, 5-30 gr. (0.3-2 gm); of solution, 1 to 8 per cent. zinc s., an antiseptic, (C.6H2I2-(OH)SO3)2Zn + 6H2O, in colorless crystals: used as an astringent antiseptic in gonorrhea, catarrh, etc., in 5 to 20 per cent. dusting-powder or 2 per cent. solution.

sozolic acid (so-zol'ik). See aseptol.

Sp., sp. An abbreviation for L. spir'itus, spirit.

space (spās) [L. spa'tium]. Any area or cavity of the body. apical s., the space between the wall of the alveolus and the apex of the root of a tooth. It is filled with the soft tissue of the peridental membrane and is the seat of alveolar abscess. arachnoid s. See subarachnoid s. and subdural s. axillary s., the axilla. Bogros's s., a space having the peritoneum above and the fascia transversalis below; in it the lower part of the external iliac artery can be found without cutting the peritoneum. bregmatic s., the anterior fontanel. Broca's s., the central part of the anterior olfactory lobe of the brain. **Burns'** s., a space between the layers of the deep cervical fascia it sometimes contains a lymphatic gland. cardiac s., the space on the surface of the chest which overlies the heart. The deep cardiac s. is the portion that lies over the lung-covered parts of the heart. The superficial cardiac s. is the area in the chest that lies over the portion of the heart that is not covered by the lung. cartilage s's, the spaces in hyaline cartilage which contain the cartilage cells. cathodal dark s. See Crookes's s. cell s's, the spaces in the ground-substance of connective tissue inclosing the connective-tissue corpuscles. chyle s's, the central

lymphatic spaces of the villi of the intestine. circumiental s., the space between the ciliary body and equator of the lens. Colles's s., a space under the perineal fascia containing the transversus perinei, ischiocavernosus, and bulbocavernosus muscles, the posterior scrotal or labial vessels and nerves, and the bulbous portion of the urethra. complemental s., the space between the two layers of the pleura at the lower border of the lung. corneal s., the space between the layers of the cornea. Cotunnius' s., the space within the membranous labyrinth. Crookes's s., a dark space at the cathode of a nearly exhausted x-ray tube through which a current is being passed. Called also cathodal dark s. cupola s., the attic of the tympanum. Czermak's s's, irregular vacant places in the interglobular substance of dentin. dead s. 1. A space remaining after suture of a wound which is not closed by the dressings that are applied. 2. The space within the bronchial tree, so called because the air filling this Douglas's s., Douglas' pouch. See pouch. See pouch. epidural s's, the lymph-spaces between the dura of the spinal cord and the periosteum lining the spinal canal. epispinal s's, lining the spinal canal. epispinal s's, the spaces between the substance of the spinal cord and the pia mater. epitympanic s., the attic of the tympanum. Fontana's s's, the attic of the tympanum. spaces between the processes of the ligamentum pectinatum of the iris. haversian s's, haversian cavities, irregular, marrow-filled cavities in spongy and in developing bones. Henke's s., a space containing connective tissue between the spinal column and the pharynx and esophagus. His's perivascular s's, the lymph-spaces that surround the blood-vessels of the spinal cord. intercostal s., the space between two adjacent ribs. intercrural s., the triangular space between the crura cerebri. interfascial s. See Tenon's s. interglobular s's, irregular spaces near the periphery of the dentin due to defective calcification. interlamellar s's, the spaces between the lamelie of the cornea. interosseous s's, spaces between parallel long bones. interpeduncular s., the posterior perforated space. interpleural s., the mediastinum. interproximal s., interproximate s., the space between adjoining teeth; called also septal s. interseptal s., a space in the embryonic heart between the superior and the spurious septa. intervalvular s's, the intervals—(1) between the aortic sinuses and (2) between the pulmonary sinuses on the outer side respectively of the aorta and the pulmonary artery. intra-adventitial s., a lymph-space in the brain just within the adventitial sheaths. intravaginal s. See subvaginal s. Kiernan's s's, interlobular lymph-spaces in the liver. Kretzschmann's s., a depressed area in the attic of the tympanum below Prussak's space. Kuhnt's s's, a succession of radiating spaces in the eye containing aqueous humor. Larrey's s's, intervals between those parts of the diaphragm which are attached to the ribs and that which is attached to the sternum. Leshaft's s., a rhombus which in some persons exists between the external oblique muscle in front, the latissimus dorsi behind, the serratus posticus above, and the internal oblique below. Here an abscess may point or a hernia occur. lymph-s., an open space connected with the lymphatic system; in a wide sense the term includes the serous and synovial cavities. lymph-s., subdural, an extensive capillary lymph-cleft between the dura and the arachnoid. Magendie's s's, lymph-spaces between the pia and arachnoid corresponding to the principal suici of the brain.

Malacarne's s., the posterior perforated space.

Meckel's s., an intradural cavity which contains the gasserian ganglion. mediastinal s., the mediastinum. medullary s., the central space and intervals between the trabeculæ of bone which contain the marrow. Mohrenheim's s., a

groove on the deltoid muscle for the cephalic vein and a branch of the acromiothoracic artery, s.-nerve. See nerve. Nuel's s., an opening in the organ of Corti between the outer braincells and the outer rods. parasinoidal s's, spaces in the dura along the superior longitudinal sinus which receive the venous blood. Parona's s., a space between the pronator quadratus muscle and the deep flexor tendons in the forearm about 2 inches above the wrist, in direct continuity with tendon sheaths and middle palmar space. **perforated s.**, an area at the base of the brain pierced by several blood-vessels. Called also substantia perforata. perforated s., anterior. See substantia per orata anterior. perforated s., posterior. See substantia per orata posterior perichoroid s., the space between the choroid and the sclera. perivascular s., the Virchow-Robin space. pharyngomaxillary s., the space included between the lateral wall of the pharynx, the internal pterygoid muscle, and the cervical vertebræ. **pneumatic s.**, any one of the accessory sinuses of the nosc. Poiseuille's s., that part of the cavity of a blood-vessel, situated near the periphery, in which red corpuscles do not move. popliteal s., the lozenge-shaped space at the back of the knee and thigh. postperforated s., the pos-terior perforated space. preperitoneal s., the space or series of alveolar spaces below the peritoneal tissue and in front of the bladder. Called also Retzius's. prevesical s., the space immediately above the os pubis and between the transversalis fascia and the posterior surface of the rectus abdominis muscle. Prussak's s., a space in the attic having, above, the external ligament of the malleus, outward, Shrapnell's membrane, and the neck of the malleus inward. retroperitoneal s., the space behind the peritoneum and in front of the spinal column and lumbar muscles. retropharyngeal s., the space behind the pharynx containing areolar tissue. Retzius's s. See preperitoneal s. Robin's s's, minute spaces in the external coat of an artery connecting with the lymphatics. Schwalbe's s. Same as subvaginal s. semi-lunar s. See Traube's s. s.-sense. See sense. septal s., the deep portion of the interproximal space. See *interproximal s*. **subarachnoid s.**, a space between arachnoid and pia containing cerebrospinal fluid. **subdural s.**, a lymph-space between the dura and the arachnoid. subgingival s., the space between the gingiva and the tooth enamel which it covers. subumbilical s., the somewhat triangular space within the body cavity just below the navel. subvaginal s., a lymph-space within the sheath of the optic nerve. suprasternal s., Burn's space. Tarin's s., the posterior perforated space. Tenon's s., a lymph-space between the sclera and Tenon's capsule. thyrohyal s., the depressed space between the thytoid cartilage and hyoid bone in front. Traube's semilunar s., an area on the left side and front of the lower part of the chest, over which the air in the stomach produces a vesiculotymthe air in the stomach produces a vesiculotympanitic sound. triangular s., the triangular space on the external surface of the bladder between the vasa deferentia and the reflection of the rectovesical pouch. undefended s. Same as pars membranacea septi. Virchow-Robin s., a lymph-space between the outer and middle coats of an artery; called also perivascular s. Westberg's s., the peri-aortic space between the pericardium and the beginning of the aorta. yolk-s., the space formed by the retraction of the vitellus of the ovum from the zona pellucida. Zang's s., an interval on the supraclavicular fossa between the two lower tendons of the sternomastoid muscle. **zonular E's**, the intercommunicating spaces between the fibers of the suspensory ligament of the lens; called also canal

spadic (spa'dik). The native name in western South America for the leaves of the coca plant when used for chewing.

spagiric (spaj-ir'ik). Pertaining to the obsolete alchemistic or paracelsian system of medicine.

spagirist (spaj'ir-ist). An iatrochemist: a follower of Paracelsus.

Spahlinger's treatment (spah'lin-jerz) [Henry Spahlinger, a non-medical research worker of Geneva]. See under treatment.

Spallansani (spal-an-zan'e), Lazarro. An eminent Italian anatomist, 1729-1799. In 1768 he published "On the Action of the Heart in the Blood-vessels"; he also wrote several other treatises.

spanemia, spanæmia (span-e'me-ah) [Gr. σπανός scarce + αίμα blood]. Poverty or thinness of the blood; anemia.

spanemic (span-e'mik).
with spanemia; anemic.
to impoverish the blood.
1. Pertaining to or affected
2. A medicine that tends

Spanish fly (span'ish). See Cantharis.

spanomenorrhea (span-o-men-o-re'ah) [Gr σπανός scarce + menorrhea]. Scanty menstruation.

spanopnea, spanopnea (span-op-ne'ah) [Gr. $\sigma\pi\alpha\nu\delta$; scanty $+\pi\nu\delta$ a breath]. A nervous affection, with slow, deep breathing and a subjective feeling of dyspnea.

sparadrap (spar'ad-rap) [L. sparadra'pum]. A medicated bandage or plaster.

sparer (spar'er). A substance which is destroyed in metabolism, but which, through its destruction, lessens the destruction of other substances.

sparganosis (spar-gan-o'sis). Infestation with Spar-ganum

Sparganum (spar-ga'num). A group name for several larvæ of the family Dibothriocephalidæ, of which the adult form is unknown and the true genus, therefore, undetermined. S. bax'teri, a species found in an abscess of the thigh in Africa. S. manso'ni, a species found in China and Japan, perhaps the same as Bothriocephalus mansoni S. prolif'erum, a species found in the connective tissue of man in Japan and in the United States.

spargosis (spar-go'sis) [Gr. σπάργωσις swelling]. Excessive swelling or distention, particularly of the mammæ with milk.

spark (spark). A flash of light attended with a crackling sound, made by a discharge of electricity. direct s., an electric spark which passes through the body from electrodes without the use of a Leyden jar.

Sparmannia africa'na (spar-man'e-ah). A mucilaginous African plant (order Tilia'ceæ): emollient.

spartein (spar'te-in) [L. spar'tium broom]. A clear liquid alkaloid, (CH₂)₂C₆H₈N.CH₂.C₆H₈N.(CH₂)₂, from broom (scopa'rius). It is poisonous, and acts like digitalis. Dose, ½-2 gr. (0.033-0.133). s. sulphate, a white, crystalline compound, C₁₅-H₂₈N₂.H₂SO₄ + 5H₂O; a cardiac poison: used like digitalis. Dose, ½-1 gr. (0.0065-0.065 gm.).

spartium (spar'she-um) [Gr. σπάρτον]. Same as Scoparius.

spasm (spazm) [L. spas'mus; Gr. σπασμός]. A sudden, violent, involuntary, rigid contraction due to muscular action. When persistent, it is called tonic s.; when characterized by alternate contraction and relaxation, it is a clonic s.; also a sudden but transitory constriction of a passage, canal, or orifice. Spasm is attended by pain and interference with function, producing involuntary movement and distortion. s. of accommodation, spasm of the ciliary muscles, producing excess of accommodation for near objects. athetoid s., a spasm in which the affected member makes movements like those of athetosis. Bell's s., convulsive tic. bronchial s., spas-

modic contraction of the muscular coat of the bron chial tubes, such as occurs in asthma. cadaveric s., rigor mortis causing movements of the limbs. canine s., the sardonic grin. See sardonic. carpopedal s., spasm of the wrist or foot, or of the thumbs and great toes: seen in children with rickets and in cases of laryngismus stridulus. cerebral and in cases of laryngismus stridings. Cerebral as so, one due to a cerebral lesion. clonic s., a spasm in which rigidity of the muscles is followed immediately by relaxation. cynic s. See risus sardonicus. facial s., clonic spasm of the muscles supplied by the facial nerve, either involving the entire side of the face or confined to a limited region around the eye. fixed s., to a number region around the eye. fixed s., permanent rigidity of a muscle or set of muscles. functional s. Same as occupation-neurosis. See neurosis. habit-s., habitually performed spasmodic movements; especially involuntary movements performed habitually in connection with particular acts, as teething. See also lic. handicraft s., any occupation-neurosis. histrionic s.. convulsive tic: convulsion of the trionic s., convulsive tic; convulsion of the facial muscles analogous to writers' cramp. inspiratory s., spasmodic contraction of the muscles of inspiration. intention s., muscular spasm occurring on attempting voluntary movement. lock-s., a firm tonic spasm that seems to lock the fingers together, as in writers' cramp other similar affections. malleaand in mimic s., tory s. Same as malleation. convulsion of the facial muscles. mobile s., a tonic spasm with irregular movements of the extremities It occurs especially after hemiplegia, and is then called spassic hemiplegia and post-hemiplegic chorea. myopathic s., that which accompanies a disease of the muscles. nicti-tating s. Same as winking s. nodding s., salaam convulsions; clonic spasm of the sternomastoid muscles, producing bowing motions.

occupation s., a spasm, such as writers' cramp,
due to continual repetition of some movement. perineal s., vaginodynia. phonatory s., spasm of the tensors of the vocal bands. profesperineal s., vaginodynia. sional s. Same as occupation s. progressive torsion s., dystonia musculorum deformans. piratory s., spasm of the muscles of respiration. retrocolic s., spasmodic retroflexion of the head. Romberg's s., masticatory spasm of the muscles supplied by the fifth nerve. rotatory s., intermittent spasm of the splenius muscle causing rotation of the head. salaam s. Same as nodding s. saltatory s., palmus; clonic spasm of the muscles of the legs, producing a peculiar jumping metric in the notion. or springing motion in the patient. sewing s., spasm of the muscles of the forearm and hand in those engaged in sewing, such as seamstresses, shoemakers, tailors, etc. shoemakers's., spasm of the muscles of the forearm and hand in shoemakers. Smith's s., hephestic hemiplegia. See hemiplegia. Synclonic s., clonic spasm of more than one muscle tatanic s. Emprosphere than one muscle. tetanic s. r. Emprosthotonos, pleurothotonos, or opisthotonos. 2. Same as *tonic s.* tonic s., spasm in which rigidity persists for a considerable time. tonoclonic s., persists for a considerable time. **tonoclonic s.**, a convulsive twitching of the muscles. **tooth s.**, infantile eclampsia. **toxic s.**, that which is due to a poison. **winking s.**, spasmodic twitching of the orbicularis palpebrarum muscle and of the eyelid. **writers'** s., writers' cramp.

spasmodermia (spaz-mo-der'me-ah) [Gr. $\sigma\pi\alpha\sigma\mu\delta$ s spasm + $\delta\epsilon\rho\mu\alpha$ skin]. A spasmodic affection of the skin.

spasmodic (spaz-mod'ik) [Gr. σπασμώδηs]. Of the nature of a spasm.

spasmodism (spaz'mo-dizm). A spasmodic condition due to medullary excitation.

spasmology (spaz-mol'o-je) [Gr. σπασμός spasm + λόγος discourse]. The sum of what is known regarding spasms.

spaemolygmus (spaz-mo-lig'mus) [Gr. σπασμός spaem + λυγμός a sob]. Spaemodic hiccup.
spaemophile (spaz'mo-fil). Same as spaemophilic.

spasmophilia (spaz-mo-fil'e-ah) [Gr. $\sigma\pi\alpha\sigma\mu\delta$ s spasm + $\omega\iota\lambda\epsilon\bar{\nu}$ to love]. Spasmophilic diathesis; a condition in which the motor nerves show abnormal sensitiveness to mechanical or electric stimulation, and the patient shows a tendency to spasm. tetany, and convulsions.

spasmophilic (spas-mo-fil'ik). Marked by a ten-

dency to spasms.

spasmotin (spaz'mo-tin). A poisonous ecbolic and acid principle, C₂₀H₂₁O_y, from ergot. Dose, ²/₃-1¹/₂ gr. (o.o4-o.1 gm.).

spasmotoxin (spaz-mo-toks'in) [Gr. σπασμός spasm + τοξικόν poison]. A poisonous principle from cultures of the bacillus of tetanus.

spasmus (spaz'mus) [L.; Gr. σπασμός spasm].
Same as spasm. B. nu'tans, nodding spasm.

spasmyl (spaz'mil). A proprietary form of camphorbenzoyl-valerianate. It is put up in perles soluble in the intestines.

spastic (spas'tik) [Gr. σπαστικόs]. Of the nature of or characterized by spasms.

spasticity (spas-tis'it-e). The state or quality of being spastic, marked hypertonus of muscles.

spa'tia zonula'ria. Same as Petit's canal.

spatial (spa'shal). Pertaining to space.

spatium (spa'she-um), pl. spa'tia; Latin for space.
s. an'guli i'ridis [B N A], the space of Fontana.
spa'tia intercosta'lia [B N A], the intercostal spaces.
spa'tia zonula'ria [B N A]. Petit's canal.

spatter-dock. 'See Nuphar.

spatula (spat'u-lah) [L.]. A flat, blunt, knife-like instrument, used for spreading plasters and for mixing ointments and masses. s. mal'lei, the flat end of the handle of the malleus, attached to the membrana tympani. Roux's s., a small steel spatula for transferring infected material to culture-tubes.

spatulated (spat'u-la-ted). Flattened into the shape of a spatula.

spavin (spa'vin). A disease of the hock-joint of a horse, producing lameness. blood-s., a soft swelling on the inside of the hock, formed by dilatation of a vein. bog-s., a dilatation of the capsular ligament of the tibiotarsal joint of a horse, forming a swelling on the inside of the hock. bone-s., an exostosis on the inside of the hock. high-s., a tumor or enlargement on the upper part of the inside of the hock.

spavined (spav'ind). Affected with spavin.

spay (spa). To deprive of the ovaries.

spearmint (spēr'mint). See under Men ha.

specialism (spesh'al-izm). Devotion to a special department of medicine or surgery.

specialist (spesh'al-ist). A practitioner who devotes himself to a special class of diseases.

species (spe'shēz) [L.]. I. Any primary subdivision of a genus. 2. A mixture or powder prepared from dried herbs, seeds, barks, and the like chiefly intended to be made into a decoction. aromatic s. [L. spe'cies aromat'ica], a mixture of garden thyme, wild thyme, peppermint, lavender (2 parts each), and cubeb and cloves (1 part each). diuretic s. [L. spe'cies diuret'ica], a mixture of ononis root, lovage root, juniper-berries, and licorice. emollient s. [L. spe'cies emollient s. [L. spe'cies emollient s.] [L. spe'cies emollient

specific (spe-sif'ik) [L. specif'icus]. 1. Pertaining to a species. 2. Produced by a single kind of microgrganism. 3. A remedy specially indi-

cated for any particular disease. s. gravity. See gravity.

specificity (spes-if-is'it-e). The quality or fact of being specific.

specillum (spe-sil'um) [L. spece're to look]. A sound or probe.

spectacles (spek'tak-lz) [L. spectacu'la; specta're to see]. A pair of lenses in a frame to assist vision. bifocal s., Franklin s., pantoscopic s., spectacles with two half-lenses of different foci for each of the eyes: the upper half for distant, and the lower for near, vision. compound s., spectacles fitted with extra colored glasses, or extra lenses, to be used as occasion requires. decentered s., spectacles with lenses formed from eccentric portions of two convex lenses. divided s., bifocal spectacles. Masselon's s., spectacles with an attachment for keeping the upper lid raised in cases of paralytic ptosis. micas., spectacles of sheet mica: used to protect the eye from foreign bodies. periscopic s., spectacles with either menisci or concavoconvex surfaces toward the eyes: these allow the eyes considerable latitude of motion. prismatic s., spectacles for correcting muscular defects. pulpit s., spectacles containing the lower segments of the lenses only. stenopeic s., spectacles fitted with metal plates, having each a small central aperture. tinted s., spectacles of a glass so colored as to protect the eyes from the effects of too bright light. wire-frame s., a kind of spectacles of wire gauze worn to protect the eye from the entrance of foreign bodies.

spectral (spek'tral) Pertaining to a spectrum; performed by means of a spectrum.

spectrochrome (spek'tro-krōm) [L. spec'trum + Gr. χρῶμα color]. A term applied to a method of treatment consisting of exposure of the part to be treated to light of various colors.

spectrocolorimeter (spek"tro-ko-lor-im'et-er). An ophthalmospectroscope used in detecting color-blindness for one color.

spectrometry (spek-trom'et-re) [L. spec'trum image + me'trum measure]. The determination of the places of the lines in a spectrum.

spectrophotometer (spek"tro-fo-tom'et-er) [spectrum + photometer].
1. An apparatus for measuring the light-sense by means of a spectrum.
2. An apparatus for estimating the quantity of coloring-matter in solution by the quantity of light absorbed (as indicated by the spectrum) in passing through the solution.

spectrophotometry (spek"tro-fo-tom'et-re). The use of the spectrophotometer.

spectropolarimeter (spek"tro-po-lar-im'et-er). A combined spectroscope and polariscope for determining optical rotation.

spectroscope (spek'tro-skop) [L. spec'trum image + Gr. σκοπεῖν to view]. An instrument for developing and analyzing the spectrum of a body.

spectroscopic (spek-tro-skop'ik). Of, pertaining to, or performed by, the spectroscope.

Spectrum (spek'trum), pl. spectra [L. "image"]. A variously colored band into which light is decomposed in passing through a prism or grating of glass. absorption s., one afforded by light which has passed through various gaseous media, each gas absorbing those rays of which its own spectrum is composed. chemic s., that part of the spectrum which includes the ultra-violet or actinic rays. chromatic s., that part of the spectrum which includes the visible rays. continuous s., one in which Fraunhofer's lines are not developed. diffraction-s., a spectrum formed by the passage of light through a diffraction grating. fortification s. See teichopsia. gaseous s., one which is afforded by an incandescent gas. ocular s. Same as after-image. prismatic s., one obtained by refraction through a prism. solar s., that which is afforded by sun-

light. thermal s, that part of the spectrum which contains the ultra red or heat rays. toxin s., a diagram in the form of a spectrum employed by Ehrlich to show the neutralizing power of anti-toxin.

speculum (spek'u-lum), pl. spec'ula [L. "mirror"]. 1. An appliance for opening to view a passage or cavity of the body. 2. The septum pellucidum. bath-s., a kind of vaginal dilator introduced during the bath and allowing the water to fill It is used in connection with the the vagina. It is used in connection wasitz-bath. Bozeman's s., a bivalve lum the blades of which remain parallel when separated Rrinkerhous. separated. Brinkerhoff's s., a rectal speculum consisting of a conical tube having a closed extremity, but provided with a sliding bar on the side which provides an opening. Cook's s., a three-pronged rectal speculum. Cusco's s., a form of vaginal speculum, the two blades of which are worked by a screw duck-hilled s. a form of worked by a screw. duck-billed s., a form of two-valved vaginal speculum. Fergusson's s., a cylindric speculum for the vagina made of silvered glass. Gruber's s., a form of ear speculum. s. Helmon'tii, the central tendon of the diaphragm. Kelly's s., a rectal speculum tubular in shape and fitted with an obturator. Martin's 8., a rectal speculum, consisting of a conical cylinder with an obturator. Mathew's s., a four-pronged rectal speculum. Politzer's s., a form of ear speculum. s. rhomboi'deum, the lumbodorsal fascia. Sims's s., a form of duck-billed vaginal speculum. **stop-s.**, an eye speculum with an appliance for controlling the degree to which its branches spread

spedalskhed (sped-alsk'hed). Norwegian leprosy.
 Spee's curve, embryo (spāz) [Ferdinand Grof von Spee, German embryologist, born 1855]. See under curve and embryo.

speech (spētsh). The utterance of vocal sounds conveying ideas. s.-center, that situated in the third left frontal convolution. See center. clipped s., utterance in which the words uttered are slurred over and uncompleted it is sometimes one of the features of general paresis. Called also slurred s. echo-s. 1. Echolalia. 2. Speech produced in the hypnotic state by pressure on the neck, abdomen, or right eyebrow, or speaking into the mouth. explosive s., loud, sudden enunciation seen in certain brain diseases mirrors., a speech abnormality in which the order of syllables in a sentence is reversed. s.-reading, the understanding by deaf-mutes of what is spoken. scamping s. Same as clipped s. scanning.
s., speech in which the syllables are separated by prolonged pauses. slurred s., the chopping off of syllables on words in speech: seen in paralysis of the insane. staccato s., speech in which each syllable is uttered separately. seen in multiple sclerosis. s.-tract, the fibers connecting the speech-center with the nuclei of the nerves which supply the muscles of phonation.

speedwell (spēd'wel). See Veronica.

speedy-cut (spe'de-kut). Injury of the foreleg of a horse near the knee, made by the shoe of the opposite foot.

Spencer-Wells facies [Sir Thomas Spencer-Wells, English surgeon, 1818-1897]. See Wells's facies, under facies.

Spengler's fragments, immune body, method, tuberculin, etc. (speng'lerz) [Carl Spengler, contemporary Swiss physician]. See under fragment, body, tuberculin, etc.

Spens's syndrome (spenz) [Thomas Spens, physician in Edinburgh, 1764-1842]. Adams-Stokes' disease. See disease.

sperm (sperm) [Gr. $\sigma\pi\ell\rho\mu\alpha$ seed]. 1. The semen or testicular secretion. 2. One of the mature germcells of a male animal. 8.-cell, a spermatozoön; more correctly, a spermatid. s.-nucleus, the nucleus of a spermatozoön.

sperma (sper'mah). See sperm.

spermaceti (sper-mas-e'te) [L.; also ceta'ceum; Gr. $\sigma\pi\epsilon\rho\mu a$ seed $+\kappa\eta\tau$ os whale]. A white, crystalline fat, consisting chiefly of cetyl palmitate, $C_{16}H_{31}O_2.C_{16}H_{33}$, from the head of the spermwhale, Physe'ter macroceph'alus, and the bottlenosed whale, Hypero'odon rostra'tus. It is a demulcent, and is an ingredient of various cerates and ointments. Called also cetaceum.

spermacrasia (sper-mak-ra'zhe-ah) [Gr. σπέρμα semen + ἀκρασία ill mixture]. Deficiency of spermatozoa in the semen.

spermase (sper'mās). An oxidizing enzyme found in barley

spermateliosis (sper"mah-te-le-o'sis). Spermio

spermatemphraxis (sper'mat-em-fraks'is) [Gr. $\sigma \pi \ell \rho \mu a$ seed $+ \ell \mu \varphi \rho \dot{a} \sigma \sigma \epsilon \nu$ to obstruction to the discharge of semen.

spermathanaton (sper-mah-than'at-on) [sperm + Gr. θάνατος death]. A proprietary contraceptive, being a mixture of sodium meta- and tetraborates, setting free hydrogen peroxid.

spermatic (sper-mat'ik) [L. spermat'icus; Gr. σπερματικόs]. Pertaining to the semen; seminal.

spermatid (sper'mat-id). A cell derived from a secondary spermatocyte by fission, and developing into a spermatozoon. Called also spermatoblast.

spermatin (sper'mat-in) [Gr. σπέρμα seed]. An albuminoid substance derived from the semen. It is related to mucin and to nucleo-albumin.

spermatism (sper'mat-izm) [Gr. $\sigma\pi\epsilon\rho\mu\alpha\tau\iota\sigma\mu\delta$ s]. The production or discharge of semen.

spermatitis (sper-mat-i'tis). Inflammation of a vas deferens; deferentitis or funiculitis.

spermatoblast (sper'mat-o-blast) [Gr. $\sigma\pi\epsilon\rho\mu\alpha$ seed $+\beta\lambda\alpha\sigma\tau\delta$ s germ]. A term originally applied to the supporting cell of Sertoli, but now used with the same meaning as spermatid.

spermatocele (sper'mat-o-sēl) [Gr. σπέρμα seed + κήλη tumor]. A cystic distention of the epididymis or the rete testis containing spermatozoa.

spermatocidal (sper"mat-o-si'dal) [sperm + L. ca'dere to kill]. Destructive to spermatozoa.

spermatocyst (sper'mat-o-sist) [Gr. $\sigma\pi\epsilon\rho\mu\alpha$ seed + $\kappa\nu\sigma\tau\iota s$ bladder]. A seminal vesicle; also a spermatocele.

spermatocystectomy (sper"mat-o-sis-tek'to-me) [spermatocyst + Gr. ἐκτομή excision]. Excision of the seminal vesicles.

spermatocystitis (sper"mat-o-sis-ti'tis). Inflammation of a seminal vesicle.

spermatocystotomy (sper"mat-o-sis-tot'o-me) [spermatocyst + Gr. τομή cut]. The operation of making an incision into the seminal vesicles for the purpose of draining.

spermatocytal (sper"mat-o-si'tal). Pertaining to a spermatocyte.

spermatocyte (sper'mat-o-sit) [Gr. σπέρμα seed + κύτος cell]. The mother-cell of a spermatid. primary s., a cell derived from a spermatogonium. secondary s., one of the two cells into which a primary spermatocyte divides, and which in turn gives origin to spermatids.

spermatogenesis (sper'mat-o-jen'es-is) [Gr. σπέρμα semen + γένεσις origin]. 1. The development
of the spermatozoon. 2. Same as miosis.

spermatogenic (sper'mat-o-jen'ik) [Gr. σπέρμα semen + γεννῶν to produce]. Producing semen or spermatozoa.

spermatogenous (sper-mat-oj'en-us). Spermatogenic.

spermatogeny (sper-mat-oj'en-e). Same as spermatogenesis.

spermatogone (sper'mat-o-gōn). Spermatogonium. spermatogonium (sper"mat-o-go'ne-um) [Gr. σπέρμα seed + γονη generation]. An undifferentiated germ cell of a male, originating in a seminal tubule and dividing into two primary spermatocytes. Called also spermatophore, spermatospore, and spermospore.

spermatoid (sper'mat-oid) [Gr. σπέρμα seed + elδos form]. r. Resembling semen. 2. A male or flagellated form of the malarial microparasite.

spermatology (sper-mat-ol'o-je) [Gr. σπέρμα seed + λόγος treatise]. The sum of what is known regarding the semen.

spermatolysin (sper-mat-ol'is-in). A substance causing spermatolysis.

spermatolysis (sper-mat-ol'is-is) [Gr. σπέρμα seed + λύσις solution]. Destruction or solution of spermatozoa.

spermatolytic (sper"mat-o-lit'ik). Pertaining to spermatolysis.

spermatomere (sper'mat-o-mēr) Spermatomerite.

spermatomerite (sper"mat-o-me'rit) [Gr. σπέρμα seed + μέρος part]. One of the granules of chromatin into which the sperm-nucleus splits up after entrance of the spermatozoa.

spermatomicrons (sper"mat-o-mi'kronz) Minute particles found in the semen of various animals. They are seen best with a dark-field microscope and show brownian motion.

spermatopathia, spermatopathy (sper'matopath-e'ah, sper-mat-op'ath-e) $[Gr. \sigma\pi \epsilon \rho \mu a$ seed $+ \pi \delta \theta os$ affection]. A diseased condition of the semen.

spermatophobia (sper'mat-o-fo'be-ah) [Gr. $\sigma\pi\xi\rho$ - μa seed $+ \varphi \delta \beta$ os fear]. A morbid dread of being affected with spermatorrhea.

spermatophore (sper'mat-o-fōr) [Gr. σπέρμα seed + φορεῖν to carry]. 1. See spermatogonium. 2.
 A capsule containing several spermatozoa.

spermatoplania (sper'mat-o-pla'ne-ah) [Gr. σπέρμα seed + πλάνη wandering]. Metastasis of the semen.

spermatopoietic (sper"mat-o-poi-et'ik) [Gr. σπέρμα seed + ποιεῖν to produce]. Subserving or promoting the secretion of semen.

spermatorrhea (sper'mat-or-e'ah) [Gr. σπέρμα seed + βοία flow]. Involuntary, too frequent, and excessive discharge of semen without copulation.

spermatoschesis (sper-mat-os'ke-sis) [Gr. σπέρμα semen + σχέσις check]. Suppression of the secretion of semen.

spermatosome (sper-mat'o-sōm). Spermatozoön.

spermatospore (sper-mat'o-spōr) [Gr. σπέρμα semen + σπόρος spore]. A spermatogonium.

spermatotoxin (sper'mat-o-toks'in). Same as spermoloxin.

spermatovum (sper-mat-o'vum) [Gr. σπέρμα seed + L. o'vum egg]. A fecundated ovum.

spermatoxin (sper-mat-oks'in). A toxin destructive to spermatozoa; especially an antibody produced by injecting an animal with spermatozoa.

spermatozoa (sper"mat-o-zo'ah). Plural of spermatozoon.

spermatosoal, spermatosoan (sper-mat-o-zo'al, -zo'an). Pertaining to spermatozoa.

spermatozoicide (sper'mat-o-zo'is-id) [Gr. σπέρμα seed + ζφον animal + L. cα'dere to kill]. 1. Causing the death of spermatozoa. 2. An agent which destroys the spermatozoa.

spermatozoid (sper'mat-o-zoid) [Gr. σπέρμα seed + ζφον animal + είδος form]. I. Same as spermatozoon. 2. The male germ cell in plants.

spermatozoön (sper'mat-o-zo'on) [Gr. σπέρμα semen + ζώον animal], pl. spermatozoo. The motile generative element of the semen which serves

to impregnate the ovum. It consists of a head, or nucleus, a middle piece, and a flagellum, or tail.

spermaturia (sper-matu're-ah) [Gr. σπέρμα seed + σύρον urine]. The presence or discharge of semen in the urine.

sperm-center (sperm'sen-ter). The centrosome of the spermatozoön during fertilization.

spermectomy (spermek'to-me). Excision of a portion of the spermatic cord.

spermiduct (sper'midukt) [Gr. σπέρμα seed + L. duc'tus duct]. The ejaculatory duct and vas deferens together.

spermin (sper'min). I. A base, NH₂(CH₂)₃NII-(CH₂)₄NH(CH₂)₃NH₂, from semen, sputum, and from various other animal substances. It is a soluble crystalline substance, and has an active tonic and stimu-

Human spermatozoa, side and flat views (Hill)

lating influence upon the nervous system. It is used in neurasthenia, locomotor ataxia, disbetes, etc., and in all nervous disorders complicated with anemia. Dose of 2 per cent. solution, 8–15 min. (0.5–1 c c), subcutaneously. 2 A therapeutic preparation of the testes of animals. Called also testicle juice. 8. aurochlorid, a golden-yellow compound, $C_2H_5N.HCl$ AuCl3. 8. phosphate, the substance, $(C_2H_5N)_4H_4Ca(PO_4)_2$, of which the Charcot-Neumann crystals are composed: found also in various organs and secretions in leukemia, asthma, and emphysema.

sperminum (sper-mi'num). Same as spermin (2d def.).

spermiogenesis (sper"mc-o-jen'is-is). The change of a spermatid into a sperm.

spermoblast (sper'mo-blast) [Gr. σπέρμα sperm + βλαστός germ]. A spermatid.

spermocytoma (sper-mo-si-to'mah). Same as seminoma.

spermolith (sper'mo-lith) [Gr. σπέρμα seed + λίθος stone]. A calculus in the spermiduct.

spermoloropexis (sper'mo-lo-ro-peks'is). Spermoloropexy.

spermoloropexy (sper-mo-lo'ro-peks-e) [Gr. $\sigma\pi$ έρμα semen + λῶρον thong + π ηξις fixation]. Fixation of the spermatic cord to the periosteum of the pubes in operation for undescended testicle.

spermolysin (sper-mol'is-in). Same as spermoloxin.
 spermolysis (sper-mol'is-is) [Gr. σπέρμα seed + λόσις solution]. Destruction of spermatozoa.

spermolytic (sper-mo-lit'ik). Destroying sper-matozoa.

spermoneuralgia (sper"mo-nu-ral'je-ah) [Gr. σπέρμα seed + νεθρον nerve + ἄλγος pain]. Neuralgic pain in the spermatic cord.

Spermoph'ilus citil'lus. The small marmot; a Manchurian rodent which may harbor plague germs.

spermophlebectasia (sper"mo-fleb-ek-ta'se-ah)
[Gr. σπέρμα seed + φλέψ vein + ἔκτασις distention]. Varicosity of the spermatic veins.

spermoplasm (sper'mo-plazm) [Gr. σπέρμα seed + πλάσμα plasm]. The protoplasm of the spermatids.

spermosphere (sper'mo-sfēr) [Gr. σπέρμα seed + σφαίρα sphere]. A group or mass of spermatids formed by the segmentation of a secondary spermatocyte.

- **spermospore** (sper'mo-spōr). Same as spermatogonium.
- spermotoxic (sper-mo-toks'ik). Pertaining to a spermotoxin.
- spermotoxin (sper-mo-toks'in). Spermatoxin.
- spes phthis'ica [L.]. A feeling of hopefulness of recovery frequently felt by patients with tuberculosis.
- sp. gr. An abbreviation for specific gravity.
- sph. Abbreviation for spheric or spheric lens.
- sphacelate (sfas'el-āt) [Gr. σφάκελος gangrene].
 Το become gangrenous.
- **sphacelation** (sfas-el-a'shun). The formation of a sphacelus, mortification.
- **sphacelism** (sfas'el-izm) [Gr. σφακελισμός]. Sphacelation or necrosis; sloughing.
- **sphaceloderma** (sfas"el-o-der'mah) [Gr. σφάκελος gangrene + δέρμα skin]. Gangrene of the skin.
- **sphacelotoxin** (sfas"el-0-toks'in) [Gr. σφάκελος gangrene + τοξικόν poison]. 1. Same as spasmotin. 2. A poisonous, yellow resm obtainable from ergot. Dose, $\frac{1}{\sqrt{0}-1/2}$ gr. (0.0022-0.0054 gm.).
- sphacelous (sfas'el-us). Affected with gangrene, sloughing.
- **sphacelus** (sfas'el-us) [L.; Gr. σφάκελος]. A slough or mass of gangrenous tissue.
- sphæræsthesia (sfer-es-the'zhe-ah). See spheres-
- **Spheria sinensis** (sfe're-ah si-nen'sis). A singular fungus found in China, where it is highly esteemed as a medicine.
- sphærobacte'ria. See spherobacteria.
- Sphærococcus (sfe-ro-kok'us) [Gr. σφαῖρα sphere + κόκκος berry]. A genus or form of bacterial cocci. S. ac'idi lac'tici, a species from milk.
- **sphagiasmus** (sfa-je-az'mus) [Gr. σφαγή throat]. Contraction of the neck muscles in an epileptic attack; also same as petit mal.
- **sphagitides** (sfaj-it'id-ēz) [Gr σφαγῖτις jugular; σφαγή throat]. An old name for the so-called jugular vessels, ι. c., those of the loins and lower extremities.
- **sphagitis** (sfa-ji'tis) [Gr. σφαγή throat + -ιτιs inflammation] Any throat inflammation.
- **sphagnol** (sfag'nol). A distillation of peat; said to contain creosote combined with sulphur. used in skin diseases.
- sphenethmoid (sfen-eth'moid). Same as sphenoethmoid.
- **sphenion** (sfe'ne-on), pl. sphe'nia [Gr. σφήν wedge]. The cranial point at the sphenoid angle of the parietal bone.
- sphenobasilar (sfe-no-bas'il-ar). Pertaining to the sphenoid bone and the basilar part of the occipital bone.
- sphenoccipital (sfe-nok-sip'it-al). Pertaining to the sphenoid and occipital bones.
- **sphenocephalus** (sfe-no-sef'al-us) [Gr. σφήν wedge + κεφαλή head]. A monster-fetus with a wedge-shaped head.
- **sphenocephaly** (sfe-no-sef'al-e). The condition of having a wedge-shaped head.
- **spheno-ethmoid** (sfe-no-eth'moid). Noting the curved plate of bone in front of the lesser wing of the sphenoid bone.
- **sphenofrontal** (sfe-no-frun'tal). Pertaining to the sphenoid and frontal bones.
- **sphenoid** (sfe'noid) [Gr. $\sigma \varphi h \nu$ wedge $+ \epsilon l \delta o s$ form]. 1. Wedge-shaped. 2. A very irregular wedge-shaped bone at the base of the skull. 3. A proprietary wedge-shaped suppository.
- sphenoidal (sfe-noid'al). Pertaining to the sphenoid bone.
- sphenoiditis (sfe-noi-di'tis). Inflammation of the sphenoid sinus.
- sphenomalar (sfe-no-ma'lar). Pertaining to the sphenoid and malar bones.

- sphenomaxillary (sfe-no-maks'il-a-re). Pertaining to the sphenoid bone and the maxilla.
- sphenometer (sfe-nom'et-er) [Gr. σφήν wedge + μένρον measure]. An instrument for measuring a wedge of bone removed in operations for correcting curvatures.
- **spheno-occipital** (sfe"no-oks-ip'it-al). Pertaining to the sphenoid and occipital bones.
- sphenopalatine (sfe-no-pal'at-in). Pertaining to or in relation with the sphenoid and palatine bones.
- sphenoparietal (sfe"no-par-i'et-al). Pertaining to the sphenoid and parietal bones.
- sphenopetrosal (sfe"no-pe-tro'sal). Pertaining to the sphenoid bone and the petrosa.
- sphenorbital (sfe-nor'bit-al). Pertaining to the sphenoid bone and the orbits.
- sphenosalpingostaphylinus (sfe''no-sal-ping''-o-staf-il-i'nus). The tensor palati muscle.
- sphenosis (ste-no'sis) [Gr. $\sigma \varphi \eta \nu$ wedge]. A wedging of the fetus in the pelvis.
- sphenosquamosal (sfe"no-skwa-mo'sal). Pertaining to the sphenoid bone and the squamous portion of the temporal bone.
- sphenotemporal (sfe-no-tem'po-ral). Pertaining to the sphenoid and temporal bones.
- sphenotic (sfe-no'tik) [Gr. σφήν wedge + οὖs ear]. Noting a fetal bone which becomes that part of the sphenoid which is adjacent to the carotid groove.
- sphenotresia (sfe-no-tre'ze-ah) [Gr. $\sigma \varphi \dot{\eta} \nu$ wedge + $\tau \rho \dot{\eta} \sigma \iota s$ boring]. Boring of the skull in craniotomy.
- **sphenotribe** (sfe'no-trib) [Gr. σφην wedge + τρl-βειν to rub]. An instrument for crushing the basal portion of the fetal skull.
- sphenotripsy (sfe'no-trip-se). The crushing of the fetal head with the sphenotribe.
- sphenoturbinal (sfe-no-tur'bin-al). Noting a thin, curved bone in front of each of the lesser wings of the sphenoid, with which bone it becomes fused.
- sphenovomerine (sfe-no-vo'mer-in). Pertaining to the sphenoid and to the vomer.
- sphenozygomatic (sfe"no-zi-go-mat'ik). Pertaining to the sphenoid and zygomatic bones.
- sphere (sier) [Gr. σφαίρα sphere]. A ball or globe. attraction-s. See under attraction. embryotic s. See segmentation s. s.-granule, a large granular cell or corpuscle seen in serous exudation. segmentation s. 1. The morula: the mass of cells formed by the segmentation of the nucleus of an ovum. 2. A blastomere. vitelline s., yolk-s. Same as segmentation s. (1).
- spheresthesia, spheræsthesia (sfe-res-the'zeah) [Gr. σφαίρα sphere + αΙσθησις sensation]. A morbid sensation, as of contact with a ball.
- spheric, spherical (sfer'ik, sfer'ik-al) [Gr. σφαιρικός]. Pertaining to a sphere; sphere-shaped.
- spherobacteria, sphærobacteria (sfe"ro-bakte're-ah) [Gr. σφαΐρα sphere + βακτήριον bacterium]. A group of bacterial organisms to which the micrococci belong.
- spherocylinder (sfe-ro-sil'in-der). A combined spheric and cylindric lens,
- **spheroid, spheroidal** (ste'roid, sfe-roid'al) [Gr. $\sigma \varphi a \hat{i} \rho a$ sphere $+ \epsilon \hat{i} \delta o s$ form]. Having the form or shape of a sphere.
- **spheroiding** (sfe'roi-ding). The formation of globules; particularly in dentistry, the formation of globules by amalgam on hardening, so that the filling of a tooth draws away from the margins of the cavity.
- spherolith (sfe'ro-lith) [Gr. $\sigma \varphi \alpha \hat{\imath} \rho \alpha$ sphere $+ \lambda i \theta_{0}$ s stone]. Any one of the minute spheric deposits found in the kidney tissue of athe newborn. They are probably uratic deposits.
- spheroma, spheroma (sfe-ro'mah). A globular tumor.

spherometer (sfe-rom'et-er) [Gr. σφαῖρα sphere + μέτρον measure]. An instrument for measuring the curvature of a surface.

spherospermia (sfe-ro-sper'me-ah) [Gr. σφαίρα ball + σπέρμα seed]. A round, tail-less spermatozoön.

spherule (sfer'ūl). A small sphere. paranuclear s., the archiplasm.

sphincter (sfingk'ter) [L.; Gr. σφιγκτήρ binder]. A ring-like muscle which closes a natural orifice. See muscles, table of. 8. a'ni. See under muscles, table of. cardiac s., the ring-like muscle surrounding the esophagus where it opens into the stomach. **Henle's** s., the muscular fibers which surround the prostatic urethra. Hvrtl's 8., an incomplete band of muscular fibers in the rectum a few inches above the anus. s. i'ridis, the muscle which produces contraction of the iris. **Nélaton's s.**, an occasional and often incomplete belt of muscle-fibers of the rectum at the level of the prostate. O'Beirne's s., a band at the junction of the colon and rectum. **s. oc'uli**, the orbicularis palpebrarum muscle. **Oddi's s.**, a contraction of the common bile-duct at the neck of the ampulla of Vater. **s. o'ris**, the orbicularis oris muscle. **prepyloric s.**, a band of muscle-fibers in the stomach-wall above the pyloric sphincter **pyloric s.**, a thickening of the muscular wall of the stomach around the pyloric opening. third s., Houston's valve. s. ure'three. See under muscles, table of. s. vagi'nee, the bulbocavernosus muscle. vasculolymphatic ner-vous s., a supposed contracting band of fibers at the margin of the pupil. s. vesi'cze. See under muscles, table of.

sphincteral (sfingk'ter-al). Pertaining to a sphincter.

sphincteralgia (sfingk-ter-al'je-ah) [Gr. σφιγκτήρ sphincter + ἄλγος pain]. Pain in the sphincter ani.

sphincterectomy (sfingk-ter-ek'to-me) [Gr. σφιγκτήρ sphincter + ἐκτομή excision]. Oblique blepharotomy

sphincterial, sphincteric (sfingk-te're-al, sfingk-ter'ik). Pertaining to a sphincter.

sphincterismus (sfingk-ter-iz'mus) [Gr. σφιγκτήρ sphincter]. Spasm of the sphincter ani.

sphincterolysis (sfingk-ter-ol'is-is) [Gr. σφιγκτήρ sphincter + λύσις loosing]. The operation of separating the iris from the cornea in anterior synechia.

sphincteroplasty (sfingk'ter-o-plas-te) [Gr. σφιγκτήρ sphincter + πλάσσειν to mold]. The plastic surgical repair of a defective sphincter.

sphincteroscope (sfingk'ter-os-kōp) [Gr. σφιγκτήρ sphincter + σκοπεῖν to view]. A speculum for inspecting the anal sphincter.

sphincteroscopy (sfingk-ter-os'ko-pe) [Gr. $\sigma \varphi_i \gamma \kappa - \tau \eta \rho$ sphincter $+ \sigma \kappa \sigma \pi \epsilon \hat{\iota} \nu$ to view]. Inspection of the anal sphincter.

sphincterotomy (sfingk-ter-ot'o-me) [Gr. σφιγκτήρ sphincter + τέμνειν to cut]. The cutting of a sphincter.

sphingoin (sfing'o-in). A leukomain, C₁₇H₃₅NO₂, from the substance of the brain.

sphingol (sfin'gol). An alcohol, C₉H₁₈O, obtained from sphingomyelinic acid by hydrolysis.

sphingomyelin (sfing-o-mi'el-in). A phosphatid that is not extracted from the white substance of the brain by ether.

sphingomyelinic acid (sfing"o-mi-el-in'ik). A mono-amino-mono-phosphatid obtained from sphingomyelin by hydrolysis.

sphingosin (sfing'o-sin). A nitrogenous base, C₁₇-H₃₆NO₂, derived from the phrenosin and kerasin of brain substance by hydrolysis.

sphygmic (sfig'mik) [Gr. σφυγμικόs]. Pertaining to the pulse.

sphygmobologram (sfig-mo-bo'lo-gram). tracing made by the sphygmobolometer.

sphygmobolometer (sfig"mo-bo-lom'et-er) [Gr. $\sigma \varphi \nu \gamma \mu \delta s$ pulse $+ \beta \hat{\omega} \lambda \delta s$ mass $+ \mu \epsilon \tau \rho \sigma \nu$ measure]. An instrument for measuring and recording the energy of the pulse-wave, and so, indirectly, the strength of the systole.

sphygmobolometry (sfig''mo-bo-lom'et-re). The use of the sphygmobolometer.

sphygmocardiogram (sfig-mo-kar'de-o-gram). The tracing made by a sphygmocardiograph.

sphygmocardiograph (sfig-mo-kar'de-o-graf) [Gr. $\sigma \varphi \nu \gamma \mu \delta s$ pulse $+ \kappa a \rho \delta la$ heart $+ \gamma \rho \dot{a} \varphi \epsilon \nu$ to write]. An instrument for recording the pulsewaves and heart-beat at the same operation.

sphygmocardioscope (sfig-mo-kar'de-o-skōp) [Gr. σφυγμός pulse + καρδία heart + σκοπείν to view]. An apparatus that records on a disk the behavior of the pulse, heart action, and sounds.

sphygmochronograph (sfig-mo-kro'no-graf) [Gr. σφυγμός pulse + χρόνος time + γράφειν to write]. A form of self-registering sphygmograph.

sphygmodynamometer (sfig"mo-di-nam-om'eter) [Gr $\sigma \varphi \nu \gamma \mu \delta s$ pulse $+ \delta \nu \nu \alpha \mu \iota s$ power $+ \mu \epsilon \tau \rho \rho \nu$ measure]. An instrument for determining the force of the pulse.

sphygmogenin (sfig-moj'en-in) [Gr. σφυγμός pulse + γεννῶν to produce]. An old name for adrenalin.

sphygmogram (sfig'mo-gram) [Gr. σφυγμός pulse + γράμμα record]. A sphygmographic tracing; the record or tracing made by a sphygmograph.

Radial sphygmogram from a healthy individual: p, The percussion wave, l, tidal or predicrotic wave; n, dicrotic or aortic notch, d, dicrotic wave, E is the sphygmic period during which the semivalves are open. (Hay.)

It consists of a curve having a sudden rise (primary elevation), followed by a sudden fall, after which there is a gradual descent marked by a number of secondary elevations

sphygmograph (sfig mo-graf) [Gr. $\sigma \varphi \nu \gamma \mu \delta s$ pulse $+ \gamma \rho \delta \varphi \epsilon \nu$ to write]. An instrument for registering the movements, form, and force of the arterial pulse. Vierordt's sphygmograph (1855) and Marey's (1860) were the earliest. The latter, variously modified, is the kind principally used.

sphygmographic (sfig-mo-graf'ik). Pertaining to the sphygmograph.

sphygmography (sfig-mog'raf-e). The scientific record of pulse-traces.

sphygmoid (sfig'moid) [Gr. $\sigma \varphi \nu \gamma \mu \delta s$ pulse $+ \epsilon l \delta \sigma s$ form]. Resembling the pulse.

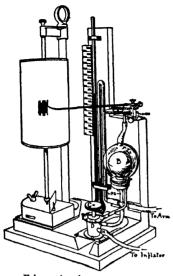

sphygmology (sfig-mol'o-je) [Gr. σφυγμός pulse + λόγος treatise]. The sum of what is known regarding the pulse.

sphygmomanometer (sfig"mo-man-om'et-er) [Gr. σφυγμός pulse + μανός thin + μέτρον measure]. An instrument for measuring blood-pressure in the arteries. See p. 1101 for various forms of instrument. Riva-Rocci s. See illustration, p. 1101. Rogers's s., an arm sphygmomanometer with an aneroid barometer instead of a mercury manometer.

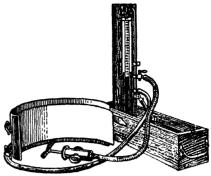

sphygmomanometroscope (sfig-mo-man-o-met'-ro-skōp). An apparatus that combines in one the Riva-Rocci cuff, the tonometer, the two manometers of Busch, and the water manometer used for determining the blood-pressure of the upper extremity.

sphygmometer (sfig-mom'et-er) [Gr. σφυγμός pulse + μέτρον measure]. An instrument for measuring the force and frequency of the pulse.

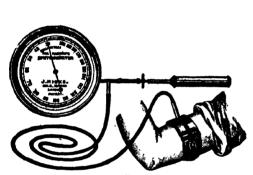

sphygmometrograph (sfig-mo-met'ro-graf). An apparatus for recording the maximal and minimal arterial pressures.

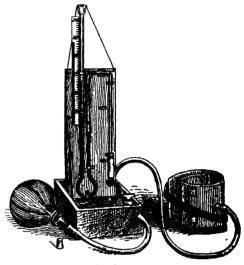

Erlanger's sphygmomanometer.

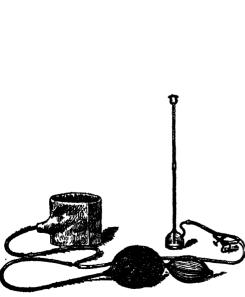

Faught's sphygmomanometer

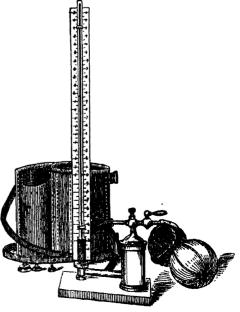

Hill and Barnard's sphygmometer.

Janeway's sphygmomanometer

Riva-Rocci's sphygmomanometer.

Stanton's sphygmomanometer

VARIOUS FORMS OF SPHYGMOMANOMETERS

sphygmometroscope (sfig-mo-met'ro-skōp). An instrument for taking the blood-pressure by the auscultatory method.

sphygmo-oscillometer (sfig"mo-os-il-om'et-er). A form of sphygmomanometer in which the disappearance and reappearance of the pulse are indicated by an oscillating needle.

sphygmopalpation (sfig"mo-pal-pa'shun). The act of palpating or feeling the pulse.

sphygmophone (sfig'mo-fōn) [Gr. σφυγμός pulse + φωνή sound]. An apparatus for rendering audible the vibrations of the pulse.

sphygmoplethysmograph (sfig"mo-ple-thiz'-mo-graf). A plethysmograph which traces a record of the pulse, together with the curve of fluctuation of volume.

sphygmoscope (sfig'mo-skōp) [Gr. σφνγμόs pulse + σκοπεῖν to view]. A device for rendering the pulse-beat visible. **Bishop's s.**, an apparatus for measuring the blood-pressure, especially the diastolic pressure.

sphygmoscopy (sfig-mos'ko-pe) [Gr. $\sigma\varphi\nu\gamma\mu\delta$ s pulse + $\sigma\kappa\sigma\epsilon\hat{\epsilon}\nu$ to view] Examination of the pulse.

sphygmosystole (sfig-mo-sis'to-le) [Gr. $\sigma \varphi \nu \gamma \mu \delta s$ pulse + systole]. That part of the sphygmogram that corresponds to the systole of the heart.

sphygmotonograph (sfig-mo-to'no-graf) [Gr. σφυγμός pulse + τόνος tension + γράφειν to write]. An instrument for recording simultaneously the blood-pressure, the carotid or jugular pulse, the brachial pulse, and the time in § seconds.

sphygmotonometer (sfig"mo-to-nom'et-er) [Gr- $\sigma \rho \nu \gamma \mu \delta s$ pulse $+ \tau \delta \nu \sigma s$ tension $+ \mu \epsilon \tau \rho \nu \sigma$ measure]. An instrument for measuring the elasticity of the arterial walls.

sphygmoviscosimetry (sfig"mo-vis-ko-sim'et-re) [Gr. σφυγμός pulse + viscosity + μετρον measure]. Measurement of the blood-pressure and the viscosity of the blood.

sphyrectomy (sfi-rek'to-me) [Gr. σφῦρα malleus + ἐκτομή excision]. Surgical removal of the malleus.

sphyrotomy (sfi-rot'o-me) [Gr. σφῦρα malleus + τομή a cutting]. Surgical removal of a portion of the malleus.

spica (spi'kah) [L. "ear of wheat"]. A figure-of-eight bandage with turns that cross one another. See bandage.

spice-bush (spis'bush). A tall shrub of North America, Lin'dera benzo'in: its bark is an aromatic and stimulant diaphoretic, and is said to be a good febrifuge. Dose of fluidextract, 1-2 fl.dr. (4-8 c.c.).

spicular (spik'u-lar). Pertaining to a spicule.

spicule (spik'ūl) [L. spic'ulum]. A sharp, needlelike body.

spiculum (spik'u-lum), pl. spic'ula [L.]. See spicule.

spider-cells (spi'der-selz). See Deiters' cells, under cell.

spider-lick (spi'der-lik). A troublesome affection of the skin in India due to an insect.

spider-web (spi'der-web) [L. te'la ara'nea; ara'-neum]. The web of various species of spider: hemostatic.

Spiegler's test (spe'glerz) [dermatologist of Vienna, 1860-1908]. See under tests.

Spigelia (spi-je'le-ah) [after A. van der *Spiegel*, 1558–1625]. A genus of loganiaceous plants. The rhizome and roots of *S. marilan'dica*, pinkroot, are an efficient vermifuge: used especially for round-worms. Dose of fluidextract, 15-60 min. (1-4 c.c.); of fluidextract of spigelia and senna, \frac{1}{2}-2 fl dr. (2-8 c.c.).

spigelian (spi-je'le-an). Noting a lobule of the liver (named after A. van der Spiegel, or Spigelius, a Flemish anatomist, 1558-1625)—the lobulus spigelii. It is the smallest lobe of the

liver, projecting from the posterior part of the under surface of the right lobe.

spigelin (spi-je'lin). A bitter volatile principle from *Spige'lia marilan'dica* and *S. anthel'mia*, of tropical America. purgative.

spikenard (spik'nard) [L. nar'dus, or spi'ca nar'-di]. The plant, Nardos'tachys jataman'si; also the name of various fragrant valerianaceous and other plants: now chiefly used in oriental medicine. American s., the Ara'lia racemo'sa, an aromatic plant; used mainly in domestic medicine; a stimulant diaphoretic. Dose of fluid-extract of the rhizome, 1-2 fl.dr (4-8 c.c.). false s., Andropo'gon nar'dus, an aromatic and stimulant East Indian grass; also Smila'cina racemo'sa, a North American plant.

Spilanthes (spi-lan'thez) [Gr. $\sigma\pi l \lambda os$ spot $+ \tilde{a}\nu \theta os$ flower]. A genus of composite-flowered plants. S. acmel'la, the Para cress of tropical America and Asia, is an excellent remedy for toothache.

spiloma (spi-lo'mah) [Gr. σπίλωμα spot]. Same as

spiloplania (spi-lo-pla'ne-ah) [Gr. σπίλος spot + πλάνος wandering]. A transient crythema.

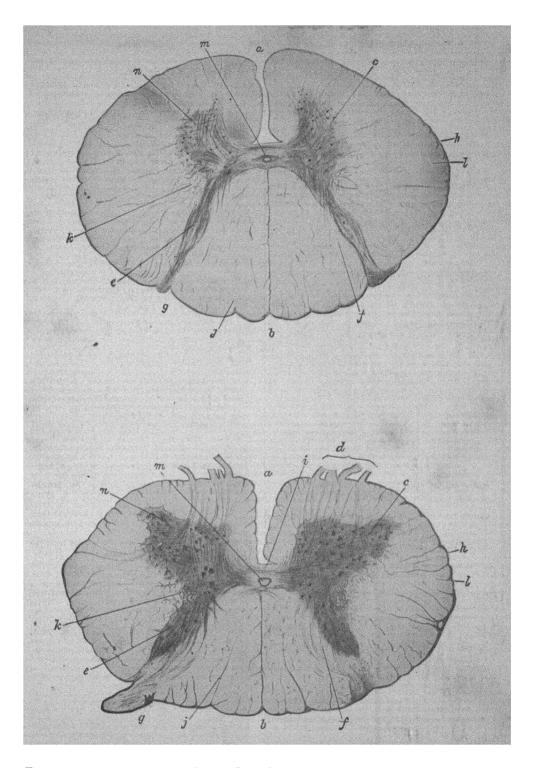

spiloplaxia (spi-lo-plaks'e-ah) [Gr. $\sigma\pi \ell \lambda os$ spot + $\pi \lambda d\xi$ plate]. A red spot seen in cases of leprosy, or pellagra.

spilus (spi'lus) [Gr $\sigma\pi l\lambda os$ spot]. Same as nevus.

spina (spi'nah), pl. spi'næ [L. "spine," "thorn" Any spine-like process or projection. s. angula-ris [B N A], the spinous process of the sphenoid bone. s. bif'ida, congenital cleft of the vertebral column with meningeal protrusion. s. bif'ida occul'ta, spina bifida in which there is a defect of the vertebral arches without protrusion of the cord and its membranes. s. fronta'lis [B N A], the nasal spine. s. hel'icis [B N A], the spinous process of the helix of the ear. s. ischiad'ica [B N A], spine of the ischium. s. mea'tus, a pointed process projecting from the temporal bone, just above and at the back of the auditory meatus. s. mentalis [B N A], the mental spine s. teg'-minis, a process of bone in the middle car, over the entrance to the mastoid antrum. s. trochlea'ris [B N A], the trochlear spine s. tympan'ice, the two projecting points of the tympanic plate s. vento'sa, enlargement and thinning of a bone in cancer or caries, with an appearance as if it were puffed full of air.

spinacin (spi'nas-in). A protein obtained from the cytoplasm of the cells of spinach leaves. It is insoluble in water and in salt solutions, but soluble in very slight excess of either acid or alkali.

spinal (spi'nal) [L spina'lis]. Pertaining to a spine or to the spinal column. s. column, the column composed of the vertebræ with their fibrocartilages and ligaments, and inclosing the spinal canal. **s. cord**, the cord-like structure contained in the spinal canal, and extending from the foramen magnum to the second lumbar vertebra. It is directly continuous with the oblongata, and with the brain constitutes the cerebrospinal axis. It is inclosed by three membranesspinal cord gives off the spinal nerves, and is divided into cervical, thoracic, lumbar, sacral, and coccygeal regions, corresponding to the nerves given off. There is an enlargement of the cord (cervical enlargement) where the nerves of the arms are given off, and one (lumbar enlargement) where those of the legs are given off. The cord is divided by anterior and posterior median fissures into two lateral halves; these halves are connected by an isthmus, which is made up of the anterior white commissure and the anterior and posterior gray commissures. The cord is pierced longitudinally by a central canal running through the cord. Each lateral half of the cord is made up of a central portion of gray matter inclosed by white matter. The gray matter consists of an anterior and a posterior horn, connected respectively with an anterior

TRANSVERSE SECTIONS OF THE SPINAL CORD STAINED WITH ANILINE BLUE-BLACK; X 10.

A, Upper cervical region; B, lower cervical region.

a, Anterior median fissure, b, posterior median septum; c, anterior horn of gray matter, d, anterior terve-root; e, posterior horn of gray matter; f, internal radicular fasciculus of posterior nerve-root; g, posterior nerve-root; h, pia mater, ι , anterior white commissure; \jmath , septum of pia mater, marking off internal from external subdivision of the posterior column; k, network of gray matter, ι , white matter of cord; m, central canal of cord; n, nerve-cells of anterior horn.

LOCALIZATION OF THE FUNCTIONS OF THE SEGMENTS OF THE SPINAL CORD (STARR).

| SEGMENT. | Muscles. | Replex. | SENSATION. |
|----------------------------------|--|--|---|
| econd and third cervical. | Sternomastoid, trapezius, sca- leni, and neck, diaphragm. | Hypochondrium (?); sudden in- spiration produced by sudden pressure beneath the lower border of ribs. | Back of head to vertex; neck. |
| 'ourth cervi- cal. '. | Diaphragm, deltoid, biceps, co- racobrachialis, supinator lon- gus, rhomboid, supraspinatus, and infraspinatus. | Pupil, fourth to seventh cervi- cal; dilatation of the pupil produced by irritation of the neck. | Neck, upper shoulder, outer arm. |
| ifth cervical, | Deltoid, biceps, coracobrachia- lis, brachialis anticus, supina- tor longus, supinator brevis, rhomboid, teres minor, pecto- ralis, serratus magnus. | Scapular, fifth cervical to first dorsal; irritation of the skin over scapula produces contrac- tion of the scapular muscles. Supinator longus; tapping its tendon in wrist produces flex- ion of forearm. | Back of shoulder and arm; outer side of arm and fore- arm, front and back. |
| ixth cervical. | Biceps, brachialis anticus, pecto- ralis (clavicular part), serra- tus magnus, triceps, extensors of wrist and fingers, prona- tors. | Triceps, fifth to sixth cervical; tapping elbow-tendon produces extension of forearm; posterior wrist, sixth to eighth cervical; tapping tendon causes extension of hand | Outer side of forearm, front and back, outer half of hand. |
| eventh cervi- cal. | Triceps (long head), extensors of wrist and fingers, prona- tors of wrist, flexors of wrist, subscapular, pectoralis (costal part) latissimus dorsi, teres major. | Anterior wrist, seventh to eighth cervical; tapping anterior tendons causes flexion of wrist; palmar, seventh cervical to first dorsal; striking palm causes closure of fingers, | Inner side of back of arm and forearm; radial half of hand. |
| lighth cervi- | Flexors of wrist and fingers, in- trinsic muscles of hand. | | Forearm and hand, inner half. |
| irst dorsal. | Extensors of thumb, intrinsic hand-muscles, thenar and hypothenar eminences. | | Forearm, inner half, ulnar dis- tribution to hand. |
| econd to twelfth dor- sal. | Muscles of back and abdomen, erector-s spinæ. | Epigastric, fourth to seventh dorsal; tickling mammary re- gion causes retraction of the epigastrium; abdominal, seventh to eleventh dorsal, striking side of abdomen causes retraction of belly. | Skin of chest and abdomen in bands running around and downward, corresponding to spinal nerves; upper gluteal region. |
| irst lumbar | Iliopsoas, sartorius, muscles of abdomen. | Cremasteric, first to third lum- bar; striking inner thigh causes retraction of scrotum. | Skin over groin and front of scrotum. |
| econd lumbar. | Iliopsoas, sartorius, flexors of knee (Remak), quadriceps femoris. | Patellar tendon, striking tendon causes extension of leg. | Outer side of thigh. |
| hird lumbar. | Quadriceps femoris, inner rota- tors of thigh, abductors of thigh. | | Front and inner side of thigh. |
| ourth lumbar. | Abductors of thigh, adductors of thigh, flexors of knee (Fer- rier), tibialis anticus | Gluteal, fourth to fifth lumbar; striking buttock causes dim- pling in fold of buttock. | Inner side of thigh and leg to ankle; inner side of foot. |
| itth lumbar. | Outward rotators of thigh, flex- ors of knee (Ferrier), flexors of ankle, extensors of toes. | · | Back of thigh, back of leg, and outer part of foot. |
| irst and second sacral. | Flexors of ankle, long flexors of toes, peroner, intrinsic mus- cles of foot. | Plantar, tickling sole of foot causes flexion of toes and retraction of leg. | Back of thigh, leg, and foot; outer side. |
| hird to fifth sacral. | Peroneal muscles | Foot reflex, Achilles tendon: overextension of foot causes rapid flexion, ankle-clonus, bladder and rectal centers. | Skin over scrotum, anus, peri- neum, genitals. |

and a posterior nerve-root, and of masses of nervecells. The white matter is made up of an anterolateral column, which consists of the direct pyramidal tract, or column of Türck, the crossed pyramidal tract, the cerebellar tract, the postero-external column, or column of Burdach, containing the posterior root-zone, and the posteromedian column, or column of Goll. The spinal cord is a center for certain reflex actions, and forms a pathway to and from the brain. S. nerves, the thirty-one pairs of nerves which arise from the spinal cord and pass out between the vertebræ. They include eight pairs of cervical, twelve of dorsal, five of lumbar, twolve of sacral, and one of coccygeal. See nerves, table of.

and a posterior nerve-root, and of masses of nervecells. The white matter is made up of an anterolateral column, which consists of the direct pyramidal tract, or column of Türck, the crossed pyramidal sis of the bronchial lymph-nodes.

spinalis (spi-na'lis). See muscles, table of.

spinant (spi'nant). Any agent which acts directly upon the spinal cord, increasing its reflex activity.
spinate (spi'nāt) [L. spina'lus]. Having thorns; shaped like a thorn.

spindle (spin'dl). The fusiform figure of achromatin in the cell-nucleus during mitosis. It consists of fine threads radiating out from the centrosomes and connecting the centrosomes with one another. Called also achromatic s., nuclear s.

See karyokinesis. aortic s., the dilated part of the aorta just below the isthmus. central s., the bundle of fibers in the axial part of the spindle of an amphiaster. His's s., a spindle-shaped dilatation of the aorta just beyond the isthmus. muscular s., a fiber of striated muscle. neuromuscular 8., a spindle-shaped structure in muscles, composed of striated muscular fibers inclosed by a sheath of connective tissue, and supplied by a nerve-fiber. **nuclear s.** See *spindle*. **tigroid s.**, the spindle-shaped individuals of Nissl bodies.

spindle-celled (spin'dl-seld). Having slender, fusiform cells.

spindle-tree (spin'dl-tre). See Euonymus.

spine (spin) [L. spina] 1. A slender, thorn-like process of bone. 2. The vertebral column. 3. The central ridge on the internal surface of a horse's hoof, between the branches of the frog. called also frog-stay. alar s. Same as angular s. angular s., the spinous process of the sphenoid bone. aortic s., a spindle-shaped dilatation of the aorta just below the isthmus. nini's s., the small eminence of the outer edge of the external pterygoid plate, to which is attached the pterygospinous ligament. deltoid s., the deltoid tubercle. See *tubercle*. **dorsal s.**, the spinal column. **hemal s.**, the anterior part of the typic vertebra. In man it is formed by the sternum. Henle's s., the spina meatus. hysteric s., a condition seen in neurotic patients in which there is simulation of vertebral disease, with curvature, etc. s's of the ilium, the projecting extremities of the crest of the ilium, and a similar pair of spines below, separated from the former by the iliac notch. s. of the ischium, the projection near the center of the posterior border of the ischium, to which is attached the lesser sacrosciatic ligament. meatal s., the spina meatus. mental s., any one of the small processes on the deep aspect of the symphysis of the inner jaw bone. nasal s., any of the three processes, anterior, posterior, and superior, about the nasal fossæ. neural s., the spinous process of a vertebra. palatine s. one of the ridges on the lower surface of the palatal process of the maxilla. peroneal s. See trochlear process, under process. s. of the pubis, the outer projecting end of the crest of the pubis. railway s., a set of obscure nervous phenomena sometimes following railway accidents. s. of the scapula, the projecting ridge on the posterior surface of the scapula. sciatic s., the spine of the ischium. s. of the sphenoid, the pointed backward projection of the lower angle of the great wing of the sphenoid. Spix's s., a bony spine at the edge of the inferior dental foramen for the attachment of the internal lateral ligament. suprameatal s., the spina meatus. s. of the tibia, the upward projecting eminence on the head of the tibia. trochlear s., a de-pression on the orbital surface of the frontal bone for the attachment of the trochlea of the superior oblique muscle. typhoid s., a painful condition of the spinal column following typhoid fever.

spinibular (spi-nib'u-lar). Same as spinobulbar. spinicerebellar (spi"nis-er-e-bel'ar). Same as spinocerebellar.

spinifugal (spi-nif'u-gal) [L. spi'na spine + fu'gere to flee]. Going, conducting, or moving from the spinal cord.

spiniperipheral (spi"nip-e-rif'er-al). Spinoperipheral.

spinipetal (spi-nip'et-al) [L. spi'na spine + pet'ere to seek]. Tending, conducting, or moving toward the spinal cord.

spinitis (spi-ni'tis). Myelitis.

spinobulbar (spi-no-bul'bar). Pertaining to the spinal cord and the medulla oblongata.

spinocerebellar (spi"no-ser-e-bel'ar). Pertaining to the spinal cord and the cerebellum.

spinocostalis (spi"no-kos-ta'lis). The superior and inferior serratus posterior muscles together.

spinogalvanization (spi"no-gal"van-iz-a'shun). Galvanization of the spinal cord, performed by moving the anode slowly up and down the spine.

spinoglenoid (spi-no-gle'noid). Pertaining to the spine of the scapula and to the glenoid cavity.

spinol (spin'ol). 1. A saccharated and borated fluidextract of spinach leaves. It is said to contain 2.6 per cent. of iron, and is used as a remedy for chlorosis and anemia. 2. A pale-green powder of a composition similar to that of the fluid spinol. Dose, 1-8 gr. (0.066-0.52 gm.).

spinomuscular (spi-no-mus'ku-lar). Pertaining to the spinal cord and to the muscles.

spinoneural (spi-no-nu'ral). Pertaining to the spinal cord and to the peripheral nerves.

spinoperipheral (spi"no-per-if'er-al). Pertaining to the spinal cord and the periphery. spinopetal (spi-nop'e-tal). Spinipetal.

spinotectal (spi-no-tek'tal). Same as tectospinal.

spinotransversarius (spi"no-trans-ver-sa're-us). The splenius and obliquus capitis muscles together.

spinous (spi'nus) [L. spino'sus]. 1. Like a spine. 2. Pertaining to a spine or to a spine-like process.

spinthariscope (spin-thar'is-kδp) [Gr. $\sigma \pi \iota \nu \theta \dot{\eta} \rho$ spark + $\sigma \kappa \sigma \pi \epsilon \hat{\iota} \nu$ to see]. An instrument for viewing the emanations of radium.

spintherism (spin'ther-izm) [Gr. σπινθερίζειν to Photopsia; the appearance as of emit sparks] sparks before the eyes.

spintherometer (spin-ther-om'et-er) [Gr. σπινθήρ spark + μέτρον measure]. An apparatus for measuring the changes which occur in the vacuum of the x-ray tube, and hence the penetrating power of the rays.

spintheropia (spin-ther-o'pe-ah) [Gr. σπινθήρ spark + w eye]. Same as spintherism.

spintometer (spin-tom'et-er). Same as spintherometer

Spir., spir. Abbreviation for L. spir'itus, spirit. spiracin (spi'ras-in). Methylcarboxysalicylic acid:

used like salicylic acid. spiradenitis (spi-rad-en-i'tis) [Gr. $\sigma\pi\epsilon\hat{i}\rho\alpha$ coil +

άδήν gland]. Same as hidradenitis suppurativa. spiradenoma (spi-rad-en-o'mah). Adenoma the sweat-glands.

spiral (spi'ral) [L **piral** (spi'ral) [L spira'lis]. Winding about a center like a coil or the thread of a screw. Curschmann's s's, coiled mucinous fibrils sometimes found in the sputum of bronchial asthma. Herxheimer's s's, Herxheimer's fibers. See under fiber. tendon s., a spiral receptor connected with a tendon.

Spiranthes (spi-ran'thez) [Gr. $\sigma\pi\epsilon\hat{i}\rho a$ coil + $a\nu\theta_{0}$ s flower]. A genus of orchidaceous plants. S. autumna/lis, an orchidaceous plant reputed to be aphrodisiac. S. diuret'ica, an orchidaceous plant of Chili said to be a valuable diuretic.

spirarsyl (spi-rar'sil). Same as arsenophenylglycin. spirem, spireme (spi'rem) [Gr. $\sigma \pi \epsilon l \rho \eta \mu \alpha$ coil]. Same as skein. See mitosis.

Spirilla, spirilla (spi-ril'ah). Plural of spirillum. Spirillacese (spi-ril-a'se-e). A family of the order Eubacteriales, the individuals of which are curved rods. It includes the genera Vibrio and Spirillum.

spirillan (spi-ril'an). A solution of bismuth hy-droxid in water: used for syphilis.

spirillicidal (spi-ril-o-si'dal). Destroying spirilla. spirillicide (spi-ril'is-id). Destroying spirilla.

spirillicidin (spi-ril-is-i'din) [spirilla + L. ca'dere to kill). A substance formed in the blood of patients immunized against spirilla and capable of destroying spirilla.

spirillolysis (spi-ril-ol'is-is) [spirilla + Gr. λόσις dissolution]. The breaking up of or destruction of spirilla.

spirillosis (spi-ril-o'sis). 1. Any diseased condition attended or marked by the presence of spirilla in the body. 2. A disease of fowls marked by diarrhea, fever, malaise, and death in a few days. It is caused by Spironema gallinarum transmitted by ticks of the genus Argas miniatus.

spirillotropic (spi-ril-o-trop'ik). Having an affinity for spirilla.

spirillotropism (spi-ril-ot'ro-pizm) [spirilla + Gr. $\tau \rho o \pi \dot{\eta}$ a turning]. The property of attracting spirilla.

Spirillum (spi-ril'um), pl. spiril'la [L. "coil]. A genus of the family Spirillacea, including the longer curved rod forms and motile by means of a tuft of polar flagella (5-20) which are mostly half circular, rarely wavy-bent. **S. amylif'erum**, a saprophytic species from water. **S. an'serum**, a pathogenic species from geese affected with septicemia. **S. aquat'ilis**, a saprophytic species from river-water. **S. attenua'tum**, a saprophytic species from sea-water. S. au reum. See under Vibrio. S. berolinen'se, a saprophytic species from water. S. bonhoff'ii, a saprophytic species from water. S. bucca'le, a species from the tartar of the teeth. S. chol'eræ, S. chol'eræ asiat'ice. See Vibrio cholera asiatica. S. concen'-tricum, a non-pathogenic form from putrid blood, in actively motile, screw-like rods. S. danu'-bicum, Vibrio danubicus. Deneke's s. See Vibrio tyrogenum. S. dentic'ola, a saprophytic species from the teeth and mouth: probably not pathogenic. S. desulphu'ricans, Vibrio desulpathogenic. S. desulphu'ricans, Vibrio desulphuricans. S. dunbar'ii, a saprophytic species from river-water. S. dutto'ni. Same as Spirochata duttoni. S. endoparago'gicum, a saprophytic form from an exudate of poplar trees. 8. of Finkler-Prior, a vibrio from cholera stools. See Vibrio proteus. S. flaves'cens and S. fla'-vum. See under Vibrio. S. gallina'rum, a vum. See under Vibrio. S. gallinarum, a species causing a fatal disease in chickens. s. of Gamal'eia. Same as Vibrio metchnikovii. S. gind'ha. See Vibrio gindha. S. helco'genes, a species resembling s. of Finkler-Prior, from the stools of diarrhea. s. of hospital gangrene, a pathogenic form from the pulpy, membranous covering of the ulcers of hospital gangrene. S. jenen'sis, a saprophytic species from water. S. ienen'sis, a saprophytic species from water. S. leukomelæ'num, a non-pathogenic form from the tongue of a mouse. S. maas'ei, a pathogenic form from river-water. S. mari'num, a saprophytic species from sea-water. S. massau'ah, a pathogenic species from sporadic sau'an, a patrogenic species from spotante cholera in man. S. metchniko'vii. Same as Vibrio melchnikovii. S. mil'leri, Vibrio milleri. S. nasa'le. See under Vibrio. S. obermei'eri. Same as Spironema recurrentis S. phosphores' cens, S. plicat'ile, a saprophytic species from water. s. of pseudocholera, a pathogenic form from well-water S. rec'ti physe'teris, a zymogenic species from ambergris S. rosenberg'ii, a saprophytic species from brackish water. S. ro'seum, a chromogenic species in two forms: one from feces, forming a red pigment, and one from gonorrheal pus, forming a rosy pigment. 8. ru'brum, a chromogenic species from wellwater producing a wine-red pigment. S. ru'gula, a zymogenic species from water and from the mouth **S. saproph'iles**. See under Vibrio. **S.** ser'pens, a saprophytic form from sewage. smith'ii, a saprophytic form from the intestines of swine. not pathogenic. S. sputig'enum, a species found in the saliva. S. ten'ue, a saprophytic species from water. S. terrig'enum, a saprophytic species from the soil. S. thei'leri, a species found in a benign affection of cattle in a species found in a benign affection of cattle in South Africa. S. tyro'genum. See Vibrio tyrogenus. S. un'dula, a saprophytic species from water. s. of Vincent. See Spironema vincentii. S. viola'ceum, a pathogenic species from water. S. volu'tans, a saprophytic species from water. s. of Wernicke, a pathogenic species from water.

spirit (spirit) [L. spiritus]. Any volatile or distilled liquid; also a solution of a volatile material in alcohol. ardent s., any alcoholic beverage. aromatic s. of ammonia contains ammoniawater, and the oils of lemon, lavendar, and myristica. Dose, 30 min. (2 c.c.). s. of camphor, a 10 per cent. solution of camphor. Dose, 15 min. (1 c.c.). s. of chloroform, a 6 per cent. solution of chloroform. Dose, 30 min. (2 c.c.). cologne s., rectified ethylic alcohol. Columbian s., deodorized methyl alcohol. compound s. of juniper contains the volatile oils of juniper, caraway, and fennel. Dose, 2½ fl.dr. (10 c.c.). compound s. of orange contains the oils of orange, lemon, anise, and coriander corn s., an alcoholic liquor distilled from maize. methylated s., denatured alcohol. Mindererus's., liquor ammonii acetatis. s. of niter, spiritus ætheris nitrosi. petroleum s., petroleum ether. See ether. potato-s., whisky distilled from potatoes. proof-s., dilute alcohol containing from 40 to 50 per cent. of pure alcohol. pyroacetic s., acetone. pyroligneous s., wood s., methyl alcohol. rectified s., alcohol with 16 per cent. of water. s. of turpentine, oil of turpentine. s. of wine, alcohol.

spirituous (spir'it-u-us) [L. spirituo'sus]. Alcoholic; containing a considerable proportion of alcohol.

spiritus (spir'it-us), pl. spir'itus. Latin for spirit.
s. frumen'ti, whisky. s. junip'eri, gin. s. limo'nis, an official preparation of the essential oil of lemon. Dose, 1-4 fl.dr. (4-16 c.c.). s. myr'ciæ, bay-rum; a preparation of the oil of myrcia, oil of orange-peel, oil of pimenta, and alcohol. s. odora'tus, cologne-water. s. vi'ni gal'lici, brandy.

Spiro's test (spe'ro) [Karl Spiro, German chemist, born 1867]. See under tests.

spirobacteria (spi"ro-bak-te're-ah) [Gr. σπεῖρα coil + βακτήριον club]. The spiral bacteria, a group containing the genera Spiril'lum, Spirocha'ta, and Vibrio.

spirobismol (spi-ro-biz'mol). A combination of the bismuthyl-tartrate of sodium and potassium with bismuth iodo-quinin. It is used in the treatment of syphilis.

Spirochæta, Spirochæte (spi-ro-ke'tah, spi-roke'te) [Gr. $\sigma \pi \epsilon \hat{i} \rho \alpha$ coil + $\chi \alpha i \tau \eta$ hair]. A genus of the Spirochætales with flexible undulating body. S. aborigina'lis, a species found in cases of ulcerative granuloma of the pudenda. S. anodon'tse, a large species found in mussels. anseri'na, a species found in geese suffering from a fatal disease, marked by fever, wasting, and diarrhea. S. argentinen'sis, an organism found in cases of multiple sclerosis, and supposed tound in cases of multiple scierosis, and supposed by some to be a possible causative agent in the disease. S. balanit'idis, a species found in balanitis. S. balbian'ii, a species of Christispira occurring in oysters. S. ber'bera is the cause of the relapsing fever of North Africa. S. bilio-hemoglobinu'ris, a form found in the blood in black-water fever. S. bronchia'lis, a species invading the bronchi and causing bronchospirochetosis S. bucca'lis, a species found in species invading the boncin and causing brokens spirochetosis **S. bucca'lis**, a species found in the human mouth. **S. car'teri**, a species from the relapsing fever of India. **S. cohn'ii**, found on the teeth and in the mouth. **S. cytoph'aga**, an aerobic organism which rapidly attacks cellulose and transforms it into a mucilaginous substance. 8. dentic'ola, 8. den'tium, a non-pathogenic species from carious teeth. 8. dutto'ni. See species from carious teeth. S. dutto'ni. See Spironema duttoni. S. emil'is, a species which has been found in the blood of typhus patients. S. eugyra'ta, a form found in human feces and believed by some to cause a form of dysentery. 8. fo'rans, a protozoon organism resembling S. pallida, named from its boring rotatory movements, with little or no flexion. It causes a rheumatoid affection (H. Reiter, 1916). S. gallina'-rum. See Spironema gallinarum. S. hebdom'-

Spirochæta pallida in leukocytes (Gierke).

Spirochæta pertenuis (Castellani).

Spirochæta recurrentis (Sp. ober-meieri) (Schellack).

Spirochæte of ulcerated cancer (Schaudinn).

Spirochæte of ulcus tropicum. Sexual forms × 2250 (Prowazek).

adis, a species said to be the causative agent of hy'os, a species isolated from cases of hog-cholera. S. icterohemorrha'giæ. Same as Leptospira icteroides. S. icteroi'des. Same as Leptospira icteroides. S. inter'rogans, a species found in the kidney in a case of yellow fever. S. ko'chi, a species found in cases of East African tick fever S. lymphat'ica, a species found in lymphatic leukemia and lymphosarcoma. S. microgyra'ta, a species found by Lowenthal in ulcerated human carcinoma, in a dog tumor, and in S. mor'sus mu'ris, a spirochete found in feces rat-bite fever. S. mu'ris, a species found in mice. S. neotropicalis, a species of spirochete found in the relapsing fever of Panama, transmitted by the tick, Ornithodorus talaje S. no'vyi. Spironema novyi. S. obermei'eri. See Spironema recurrentis. S. orienta'lis, a form found in ulcerating granuloma of the pudenda S. pal'lida, a spiral organism, the pathogenic parasite of syphilis; called also Treponema pallidum. S. perten'uis, a species thought to be the specific cause of frambesia. S. phagede'nis, a species obtained from a case of phagedenic ulcer on the external genitals of a woman. S. plicat'ilis, a large, non-parasitic species. recurren'tis. Same as Spironema recurrentis.

S. refrin'gens, a species found on the healthy genital organs

S. ros'si is the cause of the relapsing fever of East Africa.

S. schaudin'ni, a species found in tropical ulcer of the leg thei'leri, a species found in cattle suffering from a disease marked by fever, diarrhea, and enlargement of the spleen **S. vincen'ti**, a species found in the throat in Vincent's angma, along with the Bacillus fusiformis S. zeiman'ni, a species found in the blood of the cwl.

Spirochætales (spi-ro-ke-ta'les). An order of Schizomycetes intermediate between the true bacteria and the protozoa It includes the genera Spirochæta, Treponema, Spironema, and Leptospira

spirochætosis. See spirochetosis.

spirochetal (spi-ro-ke'tal). Pertaining to or caused by spirochetes.

spirochetalytic (spi-ro-ke-tal-it'ik). Destroying spirochetes

spirochete (spi'ro-kēt). An individual belonging to the genus Spirochæta.

spirochetemia (spi-ro-ke-te'me-ah) [spirochete + Gr. αίμα blood]. The presence of spirochetes in the blood

spirocheticidal (spi-ro-ke-tis-i'dal)[spirochete + L. cædere to kill]. Destructive to spirochetes

spirocheticide (spi-ro-ke'tos-id) A substance which destroys spirochetes

spirochetolysis (spi-ro-ke-tol'is-is) [spirochete + Gr. λύσις dissolution]. The destruction of spirochetes by lysis.

spirochetosis, spirochætosis (spi"ro-ke-to'sis). Infection with spirochetes s. arthrit'ica, a rheumatoid affection of the joints caused by Spirochæta forans (H. Reiter, 1916) bronchopulmonary s., bronchospirochetosis. gastric s. See grass sickness, under sickness. icterogenic s., s. icterohæmorrhag'ica, infectious jaundice or Weil's disease See Weil's disease, under disease. s. riveren'sis, a spirochetal chronic meningitis occurring in the department of Rivera in Brazil.

spirochetotic (spi-ro-ke-tot'ik). Pertaining to or characterized by spirochetosis.

spirocheturia (spi-ro-ke-tu're-ah) [spirochete + Gr. οὖρον urine] The presence of spirochetes in the urine.

spiroform (spi'ro-form). A proprietary antirheumatic, analgesic, and uric-acid solvent, acetylsalol, CH₃.CO.O.C₆H₄.O.CO.C₆H₆. Dose, 7½-15 gr. (0.5-1 gm).

spirograph (spi'ro-graf) [L. spira're to breathe + Gr. γράφειν to write]. An instrument for registering the respiratory movements.

spirographidin (spi-ro-graf'id-in). A hyalin derived from spirographin.

spirographin (spi-rog'raf-in). A hyalogen derivable from the skeletal structures of Spirog'-raphis, a worm-like animal.

spiroid (spi'roid). Resembling a spiral.

spiroma (spi-ro'mah). Spiradenoma.

spirometer (spi-rom'et-er) [L. spira're to breathe + me'lrum measure]. An instrument for measuring the air taken into and exhaled from the lungs.

spirometric (spi-ro-met'rik). Pertaining to spirometry or the spirometer.

spirometry (spi-rom'et-re). The measurement of the breathing capacity of the lungs.

Spiromonas (spi-rom'o-nas) [Gr. σπείρα coil + μονάς a unit]. A genus or form of spirillum of various species.

spirone (spi'rōn) A preparation of acetone, potassum hyposulphite, iodin, glycerin, and water: used as a disinfectant and as a substitute for potassium iodid.

Spironema (spi-ro-ne'mah) [Gr. σπείρα coil + νήμα thread]. A genus of Spirochetes, including the organisms of relapsing fever and Vincent's angina. The name Borrelia is said to be the proper genus name for these organisms. S. ber'bera, the species which causes North African or Algerian relapsing fever. It is transmitted by Pediculus humanus. S. car'teri, the species which causes the relapsing fever of Asia and India; it is transmitted by lice. S. dutto'ni, the species which causes African tick fever and which is conveyed by the bite of the tick, Ornithorus moubata. S. gallina'rum, a species which causes a fatal spirochetosis of chickens (spirillosis), it is conveyed by the bite of the tick, Argas persicus. S. icterohæmorrha'giæ. See Leplaspira icterohæmorrhagiæ. S. ko'chi, the species which causes East African tick fever. S. no'vyi, a species found in cases of relapsing fever in America. S. recurren'tis, the species which causes the European relapsing fever. It is a delicate spiral thread 7 to 9 microns in length and actively motile S. refrin'gens, a form found in smegma S. vincen'tii, an organism which is the causative agent of Vincent's angina. It occurs in the form of long spirilla and of fusiform bacterialike rods. The latter were formerly regarded as bacteria and called Bacillus fusiformis.

spirophore (spi'ro-fōr) [L. spira're to breathe + Gr $\varphi o \rho \epsilon \hat{\iota} \nu$ to bear]. An apparatus to effect artificial respiration.

Spirop'tera neoplast'ica. An organism which causes cancer (epitheliomata) in the stomach of rats. The rats become infected by eating infected cockroaches.

spirosal (spi'ro-sal). A colorless, odorless fluid, OH C₀H₄.CO O CH₂ CH₂.OH, a monoglycolic acid ester of salicylic acid: used externally in the treatment of rheumatism.

Spiroschaudinnia (spi"ro-shaw-din'e-ah). A name proposed by Sambon (1907) as the genus name for the spirochetes of the blood. See Spirocheta. S. dutto'ni. Same as Spirocheta duttoni. S. recurren'tis. Same as Spirocheta determeieri.

Spiroschaudin'nies. The group of spirochetes causing the relapsing fevers

spiroscope (spi'ro-skōp) [L. spira're to breathe + Gr. σκοπεῖν to view] An apparatus for respiration exercises by which the patient can see the amount of water displaced in a given time and thus gage his respiratory capacity.

spiroscopy (spi-ros'ko-pe). The use of the spiroscope.

Spirosoma (spi-ro-so'mah) [Gr. σπεῖρα coil + σῶμα body]. A genus of bacteria akin to Spiril'lum:

- splenauxe (sple-nawks'e) [Gr. σπλήν spleen + αδξη increase]. Enlargement of the spleen.
- **splenceratosis** (splen"ser-at-o'sis) [Gr. $\sigma\pi\lambda\eta\nu$ spleen + $\kappa\epsilon\rho\alpha$ s horn]. A morbid hardening of the spleen.
- **splenculus** (spleng'ku-lus) [L. "little spleen"]. An accessory spleen, or splenic exclave.
- splenectasis (splen-ek'tas-is) [Gr. σπλήν spleen + ξκτασις enlargement]. Enlargement of the spleen.
- splenectomize (sple-nek'to-miz). To remove the spleen from.
- splenectomy (sple-nek'to-me) [Gr. σπλήν spleen + ἐκτομή excision]. Excision or extirpation of the spleen. subcapsular s., splenectomy in which the capsule of the organ is incised and the spleen decapsulated and removed.
- splenectopia, splenectopy (splenek-to'pe-ah, splenek'to-pe) [Gr. σπλήν spleen + ξκ out + τόπος place]. Displacement of the spleen; wandering or floating spleen.
- **splenelcosis** (sple-nel-ko'sis) [Gr. $\sigma\pi\lambda\dot{\eta}\nu$ spleen + $\xi\lambda\kappa\omega\sigma\iota$ s ulceration]. Ulceration of the spleen.
- **splenemia, splenæmia** (splen-e'me-ah) [Gr. $\sigma\pi\lambda\dot{\eta}\nu$ spleen + $a\ddot{1}\mu a$ blood]. 1. Splenic leukemia. 2. Congestion of the spleen with blood.
- splenemphraxis (sple-nem-fraks'is) [Gr. σπλήν spleen + ξμφραξις obstruction]. Congestion of the spleen.
- spleneolus (sple-ne'o-lus). Accessory spleen.
- **splenepatitis** (sple"nep-at-i'tis) [Gr. $\sigma\pi\lambda\dot{\eta}\nu$ spleen $+\dot{\eta}\pi\alpha\rho$ liver $+\cdot\iota\tau\iota s$ inflammation]. Inflammation of the spleen and liver.
- splenetic (sple-net'ik). Affected with splenic disorder, ill-humored
- **splenial** (sple'ne-al). Pertaining to the splenium or to the splenius muscle.
- **splenic** (splen'ik) [Gr. σπληνικός; L. splen'icus]. Pertaining to the spleen.
- **splenicterus** (sple-nik'ter-us) [Gr. $\sigma\pi\lambda\dot{\eta}\nu$ spleen + $I\kappa\tau\epsilon\rho\sigma$ s jaundice]. Inflammation of the spleen associated with jaundice.
- spleniferrin (splen-if-er'in). A therapeutic preparation of the spleen of the oπ, combined with iron albuminate, in a chocolate-brown powder.
- **splenification** (splen"if-ik-a'shun). Same as splenization.
- spleniform (splen'if-orm). Resembling the spleen.
 splenin (sple'nin). A therapeutic preparation of the spleen of an animal.
- spleniserrate (splen-is-er'āt). Pertaining to the splenius and the serratus muscles.
- splenitis (sple-ni'tis) [Gr. σπλήν spleen]. Inflammation of the spleen: a condition that is usually produced by pyemia. It is attended by enlargement of the organ with pus, and is marked by much local pain. spodogenous s., that due to accumulation of foreign particles in the spleen.
- splenium (sple'ne-um) [Gr. σπληνίον].
 1. A bandage or compress.
 2. The posterior rounded end of the callosum.
- splenius (sple'ne-us). See muscles, table of.
- splenization (splen-iz-a'shun). That condition of a part, especially the lung, in which it has the appearance of the tissue of the spleen, due to engorgement and condensation. hypostatic s., that produced by hypostatic pneumonia.
- **splenoblast** (sple'no-blast) [Gr. σπλήν spleen + βλαστός germ]. A cell which develops into a splenocyte.
- **splenocele** (splēn'o-sēl) [Gr. σπλήν spleen + κήλη hernia]. Hernia of the spleen.
- splenoceratosis (sple"no-ser-at-o'sis) [Gr. σπλήν spleen + κέρας horn]. Hardening of the spleen.
- splenocleisis (sple-no-kli'sis) [Gr. σπλήν spleen + κλείσις closure]. Irritation of the suafree of the spleen to induce the development of new fibrous tissue.

- splenocolic (sple-no-kol'ik) [L. splen spleen + co'lon colon]. Pertaining to the spleen and colon.
- **splenocyte** (splen'o-sit) [Gr. σπλήν spleen + κύτος cell. Pappenheim's term for a large mononuclear phagocytic cell which migrates to the spleen and continues to exist there. Cf. endothelocyte.
- **splenodiagnosis** (sple"no-di-ag-no'sis). Diagnosis of typhoid fever by noting the effect on the spleen of injections of extracts of typhoid bacilli.
- **splenodynia** (sple-no-din'e-ah) [Gr. σπλήν spleen + δδύνη pain]. Pain in the spleen.
- splenography (sple-nog'raf-e) [Gr. σπλήν spleen + γράφη writing]. A description of the spleen.
 splenohemia (sple-no-he'me-ah). See splenemia.
- splenohepatomegalia (sple"no-hep"at-o-meg-a'-le-ah). Splenohepatomegaly.
- splenohepatomegaly (sple"no-hep"at-o-meg'al-e) [Gr. $\sigma\pi\lambda\eta\nu$ spleen + $\eta\pi\alpha\rho$ liver + $\mu\dot{\epsilon}\gamma\alpha$ s large]. Enlargement of the spleen and liver.
- splenoid (sple'noid) [Gr. σπλήν spleen + είδος form]. Resembling the spleen.
- **splenokeratosis** (sple"no-ker-at-o'sis) [Gr. $\sigma\pi\lambda\dot{\eta}\nu$ spleen + $\kappa\dot{\epsilon}\rho\alpha$ s horn]. Hardening of the spleen.
- **splenolaparotomy** (sple"no-lap-ar-ot'o-me). Same as *laparos plenotomy*.
- splenology (sple-nol'o-je) [Gr. σπλήν spleen + λόγος discourse]. The sum of knowledge regarding the spleen, its functions and diseases.
- splenolymph (sple'no-limf). Both splenic and lymphatic in character. See under gland.
- lymphatic in character. See under gland.

 splenolymphatic (sple'no-lim-fat'ık). Pertaining to the spleen and lymph-glands.
- **splenolysin** (sple-nol'is-in) [Gr. σπλήν spleen + λύσις dissolution]. A lysin destructive to splenic tissue.
- **splenolysis** (sple-nol'is-is). Destruction of spleen tissue.
- **splenoma** (sple-no'mah), pl spleno'mata [Gr. $\sigma\pi\lambda\dot{\eta}\nu$ spleen + - $\omega\mu a$ tumor]. A tumor of the spleen.
- splenomalacia (sple"no-mal-a'she-ah) [Gr. σπλήν spleen + μαλακία softness]. Abnormal softness of the spleen; softening of the spleen
- splenomedullary (sple"no-med'ul-a-re). Of or pertaining to the spleen and bone-marrow.
- splenomegalia, splenomegaly (sple"no-meg-a'-le-ah, sple-no-meg'al-e) [Gr. $\sigma\pi\lambda\dot{\eta}\nu$ spleen $+\mu\dot{\epsilon}\gamma\alpha$ s large]. Enlargement of the spleen. The term is principally applied to **s. primiti'va**, a disease marked by hypertrophy of the spleen, with progressive anemia and with no leukemia or disease of the lymph-glands. The disease is curable by splenectomy; and cases in which the organ is not removed are always fatal. Gaucher's s. See Gaucher's disease, under disease. hemolytic s., splenomegalia marked by destruction of the red corpuscles of the blood. infantile s. See anemia infantum pseudoleukamica. spodogenous s., enlargement of the spleen attributed to accumulation of erythrocytes in the organ tropical s., febrile. See kala-azar.
- **splenomyelogenous** (splc"no-mi-el-oj'en-us). Formed in the spleen and bone-marrow; splenomedullary.
- splenomyelomalacia (sple"no-mi"el-o-mal-a'se-ah) [Gr. σπλήν spleen + μυελός marrow + μαλακία softening]. Softening of the spleen and bone-marrow.
- splenoncus (sple-nong'kus) [Gr. σπλήν spleen + δγκος tumor]. Tumor of the spleen.
- **splenonephric** (sple-no-nef'rik). Pertaining to the spleen and the kidney.
- **splenonephroptosis** (sple"no-nef-rop-to'sis) [Gr. $\sigma\pi\lambda\dot{\eta}\nu$ spleen $+\nu\epsilon\varphi\rho\dot{\delta}$ s kidney $+\pi\tau\dot{\omega}\sigma\iota$ s falling]. Downward displacement of the spleen and kidney on the same side.
- splenopancreatic (sple"no-pan-kre-at'ik). Pertaining to the spleen and the pancreas.

the cells are rigid spirals or segments of spirals, and have no locomotive organs.

spirulina (spir-u-li'nah) [L. spir'ula twist]. A microorganism occurring in coiled and twisted

spissated (spis-a'ted) [L. spissa'tus]. thickened by evaporation.

spissitude (spis'it-ūd) [L. spissitu'do]. The state or quality of being inspissated.

spittle (spit'l). The saliva.

Spitzka's bundle, nucleus, tract, (spitz'kahz) [Edward Charles Spitzka, New York neurologist, 1852-1914]. See bundle, nucleus, tract.

Spix's spine (spik'ses) [Johann Baptist Spix, German naturalist, 1781-1826]. See under spine.

(splank"nap-o-fiz'e-al). splanchnapophyseal Pertaining to a splanchnapophysis.

(splank-nap-of'is-is) [Gr. splanchnapophysis σπλάγχνον viscus + apophysis] A skeletal element, like the lower jaw, connected with the alimentary canal.

splanchnectopia (splank-nek-to'pe-ah) σπλάγχνον viscus + έκτοπός out of place]. Displacement of a viscus.

splanchnemphraxis (splank-nem-fraks'is) [Gr. $\sigma\pi\lambda\dot{\alpha}\gamma\chi\nu\rho\nu$ viscus + $\xi\mu\rho\rho\alpha\xi\iota_{i}$ stoppage]. (struction of a viscus, particularly the intestine. Ob-

splanchnesthesia (splank-nes-the'ze-ah) [Gr. $\sigma\pi\lambda\dot{\alpha}\gamma\chi\nu\sigma\nu$ viscus + $\alpha i\theta\eta\sigma\iota s$ sensation]. Visceral sensation.

planchnesthetic (splank-nes-thet'ik) σπλάγχνον viscus + αίθησις sensation]. splanchnesthetic taining to visceral consciousness or sensation.

splanchnic (splank'nik) [Gr. σπλαγχνικός; L. splanch'nicus]. Pertaining to the viscera.

splanchnicotomy (splank-nik-ot'o-me) [splanchnic nerve + Gr τομή a cutting] Division of a splanchnic nerve.

splanchnoblast (splank'no-blast) [Gr. σπλάγχνον viscus $+\beta \lambda \alpha \sigma \tau \delta s$ germ]. The rudiment or an lage of any viscus.

splanchnocele (splank'no-sēl) [Gr. σπλάγχνον vis $cus + \kappa h \lambda \eta$ hernia]. Hernial protrusion of a viscus.

splanchnocœle (splank'no-sēl)[Gr. σπλάγχνον viscus + κοίλος hollow]. That portion of the bodycavity, or coelom, from which are developed the ab-dominal, pericardial, and pleural cavities. Called also pleuroperitoneal cavity and ventral calom.

Same as **splanchnoderm** (splank'no-derm). splanchnopleure.

splanchnodiastasis (splank"no-di-as'tas-is) [Gr. $\sigma\pi\lambda\dot{\alpha}\gamma\chi\nu\sigma\nu$ viscus + $\delta\iota\dot{\alpha}\sigma\tau\alpha\sigma\iota$ s separation]. ration of a viscus; displacement of a viscus.

(splank-no-din'e-ah) splanchnodynia σπλάγχνον viscus + όδύνη pain]. Pain in an abdominal organ.

splanchnography (splank-nog'raf-e) [Gr. σπλάγχ-νον viscus + γράφη writing]. The descriptive anatomy of the viscera.

splanchnolith (splank'no-lith) [Gr. σπλάγχνον viscus $+ \lambda l\theta$ os stone]. An intestinal calculus or concretion.

splanchnology (splank-nol'o-je) [Gr. σπλάγχνον viscus + λόγος treatise]. The sum of knowledge in regard to the viscera.

splanchnomegalia, splanchnomegaly (splank"no-meg-a'le-ah, splank-no-meg-a'le-) [Gr. σπλάγχνον viscus + μέγαs large]. Enlargement of the viscera.

splanchnopathy (splank-nop'ath-e) [Gr. σπλάγ; vov viscus $+ \pi \delta \theta$ os disease]. Disease of the viscera.

splanchnopleural (splank-no-plu'ral). Pertaining to the splanchnopleure.

splanchnopleure (splank'no-plūr) [Gr. σπλάγχ-κον viscus + πλευρά side]. 1. The inner layer of the mesoblast, separated from the somatopleure

by the pleuroperitoneal space. Called also splanchnic mesoblast and visceral mesoblast. 2. The layer formed by the union of the splanchnopleure (1) with the hypoblast. From it are developed the muscles and the connective tissue of the intestine.

splanchnoptosia (splank-no-to'se-ah). Splanch-

splanchnoptosis (splank-no-to'sis) [Gr. $\sigma\pi\lambda\Delta\gamma\chi$ -νον viscus + $\pi\tau\hat{\omega}\sigma$ is falling]. The prolapse, or falling down, of the viscera. Called also abdominal ptosis and Glénard's disease.

splanchnosclerosis (splank"no-skle-ro'sis) [Gr. $\sigma\pi\lambda\dot{\alpha}\gamma\chi\nu\rho\nu$ viscus $+\sigma\kappa\lambda\eta\rho\dot{\rho}$ s hard]. Induration of the viscera.

splanchnoscopy (splank-nos'ko-pe) [Gr. $\sigma\pi\lambda$ άγχ-νον viscus + $\sigma\kappa o\pi \epsilon \hat{l}\nu$ to view]. The inspection νον viscus $+ \sigma κοπεῖν$ to view]. of the viscera by transillumination.

splanchnoskeleton (splank-no-skel'et-on) [Gr. $\sigma\pi\lambda$ άγχνον viscus + $\sigma\kappa\epsilon\lambda\epsilon\tau$ όν skeleton]. The totality of the skeletal structures connected with the viscera, especially the bony structure that

forms within certain organs of animals, as in the tongue, eye, penis, etc.

splanchnosomatic (splank"no-so-mat'ik). Pertaining to the viscera and the body.

splanchnotomy (splank-not'o-me) [Gr. σπλάγχνον viscus + τέμνειν to cut]. The anatomy or dissection of the viscera.

splanchnotribe (splank'no-trib) [Gr. σπλάγχνον intestine $+ \tau \rho i \beta \epsilon i \nu$ to crush]. An instrument for crushing the intestine and so closing its lumen.

splash (splash). See succussion sound, under sound. splay-foot. Flat-foot; talipes valgus.

spleen (splen) [Gr. σπλήν, L. splen]. One of the so-called ductless glands, a purplish abdominal viscus of the hematopoietic system, placed on the left side of the cardiac end of the stomach. It disintegrates the red blood-corpuscles and sets free the hemoglobin, which the liver converts into bilirubin, and has other important functions. the full scope of which is not entirely determined. Its stroma consists of a fibro-elastic capsule, which gives off a network of fine fibrillary trabeculæ, the interspaces of which are filled with a reddishbrown splenic pulp, containing blood, lymph-cells, blood-cells, and large and small sustentacular cells. The malpighian bodies are found in the coats of the The organ is connected to the diaarterioles phragm by a suspensory ligament, rests upon the costocolic ligament, and is inclosed by the gastro-splenic omentum. Its vessels and nerves enter and depart by an elongated vertical hilum on the right side. accessory s., a detached and outlying portion, or exclave, of the spleen. bacon-s., a spleen with areas of amyloid degeneration, giving its cut surfaces the appearance of fried bacon. cyanotic s., a contracted form of spleen due to passive congestion. diffuse waxy s., amyloid degeneration of the spleen involving especially the coats of the venous sinuses and the reticulum of the organ. enlarged s., sphenomegalia; also the so-called ague-cake, a hypertrophy of the spleen due to chronic malarial poisoning. floating s., a spleen displaced and preternaturally movable. Called also wandering s. lardaceous s. See porphyry s., a spleen which is the seat waxv s. of nodular infiltration. sago-s., a spleen having on its cut surface the appearance of grains of sago: due to amyloid infiltration. wandering s. See floating s. Waxy S., a spleen affected with amy-loid degeneration. Called also lardaceous s.

splenadenoma (splē''nad-en-o'mah) [Gr. σπλήν spleen + άδήν gland + -ωμα tumor]. Hyperplasia of the spleen-pulp.

splenæmia (sple-ne'me-ah). See splenemia.

splenalgia (sple-nal'je-ah) [Gr. σπλήν spleen + ἄλγος pain]. Neuralgic pain in the spleen.

splenatrophia, splenatrophy (splen-at-ro'fe-ah, splen-at'ro-fe) [Gr. σπλήν spleen + atrophy]. Atrophy of the spleen.

splenoparectama, splenoparectasis (sple"nopar-ek'tam-ah, sple"no-par-ek'tas-is) [Gr. σπλήν spleen + παρέκτασις extension]. Excessive enlargement of the spleen.

splenopathy (splen-op'ath-e) [Gr. $\sigma\pi\lambda\dot{\eta}\nu$ spleen + $\pi \acute{a}\theta os$ illness]. Any disease of the spleen.

splenopexia, splenopexis, splenopexy (splen-opeks'e-ah, sple'no-peks-is, sple'no-peks-e) [Gr. $\sigma\pi\lambda\eta\nu$ spleen $+\pi\eta\xi\iota$ s fixation]. Surgical fixation of a wandering spleen to the abdominal wall by

splenophrenic (splen-o-fren'ik) [Gr. σπλήν spleen $+\varphi\rho\dot{\eta}\nu$ diaphragm]. Pertaining to the spleen and diaphragm.

splenopneumonia (splen"o-nu-mo'ne-ah) [Gr. σπλήν spleen + pneumonia]. Pneumonia attended with splenization of the lung.

splenoptosia, splenoptosis (sple-nop-to'se-ah, to'sis) [Gr. $\sigma\pi\lambda\dot{\eta}\nu$ spleen $+\pi\tau\dot{\omega}\sigma\iota$ s falling]. Prolapse or downward displacement of the spleen.

splenorrhagia (sple-no-ra'je-ah) [Gr. $\sigma\pi\lambda\dot{\eta}\nu$ spleen + ρηγυύναι to burst forth]. Hemorrhage from the spleen

splenorrhaphy (sple-nor'af-e) [Gr. σπλήν spleen + ραφή suture]. Suture of wounds of the spleen.

splenotomy (sple-not'o-me) [Gr. σπλήν spleen + τέμνειν to cut]. Surgical incision of the spleen.

splenotoxin (sple-no-tok'sin). The toxin contained in the splenic tissue.

splenotyphoid (sple-no-ti'foid). Typhoid fever with marked splenic involvement. splenulus (splen'u-lus). A little spleen; an acces-

sorv spleen.

splenunculus (sple-nung'ku-lus). Same as lienunculus.

splint (splint). 1. A rigid or flexible appliance for the fixation of displaced or movable parts. small tumor along the metacarpal bones of horses, usually at the junction of the large and small metacarpals, producing lameness. Agnew's s., a splint for fracture of the patella; also one for fracture of the metacarpus. (See illustrations on p. with metal loops fitting over the teeth and held together by a rod. **Angle's s.**, a wire splint for fastening the lower teeth to the upper ones in fracture of the mandible, the wires being held in place by bands cemented to the teeth. Ash-hurst's s., a bracketed splint of wire with a foot-piece: made to cover the thigh and leg, and used after excision of the knee-joint. Balkan s., an apparatus used for continuous extension in treatment of fractures of the femur. It consists of an overhead bar, supported from the floor with pulleys attached, which supports the leg in a metal sling. Bavarian s., an immovable dressing in which the plaster is applied between two layers of flannel. Bond's s., a form of splint for fracture of the lower end of the radius. bracketed s., a splint composed of two pieces of metal or wood joined by brackets. Carter's intranasal s., a fenestrated steel bridge, the wings of which are connected by a hinge: used in the bridge-splint operation of depressed bridge of the nose. coaptation 8's, small splints adjusted about a fractured limb for the purpose of producing coaptation of fragments. Dupuytren's s., a splint to prevent ever-sion in Pott's fracture. Engelmann s., a big splint consisting of two strips of metal connecting at the top with a ring which fits over the thigh as high as it can be pushed up against the crotch. It is fastened at the lower end with a spike in each side which is driven into the shoe between the sole and upper, close to the heel. Fox's s., an apparatus for fractured clavicle. Gilmer s., a silver wire fastening for holding the lower teeth to the upper ones in fracture of the mandible. Gordon's 8., a side splint for the arm and hand in Colles' fracture. Hammond's s., a wire splint for use in othodontic work. interdental s., a splint for fracture of the jaw, held in place by wires

passed around the teeth. **Jones's nasal s.**, a splint for fracture of the nasal bones. (See illustration on p. 1111.) **Levis's s.**, a splint of perforated metal extending from below the elbow to the end of the palm. It is shaped to fit the arm and hand. Mason's s., a splint for the after-treatment of amputation at the elbow. McGee's 8., a splint for fracture of both rami of the mandible. McIntire's s., a posterior splint for the leg and thigh, in the form of a double inclined plane. plaster s., a splint composed of gauze impregnated with plaster of Paris. poroplastic s., a splint which can be softened with water and molded upon the limb. Sayre's s., one of three varieties of splint: one for the ankle, one for the knee, and one for use in hip-joint disease (See illustration on p 1111) **Simpson's s.**, a shaped tampon of cotton for inserting into the nasal fossa. **Stro**meyer's s., a splint consisting of two hinged portions which can be fixed at any angle. s. technology, the scientific study of splints for surgeons' use. Thomas's knee-s., a splint for removing the pressure of the weight of the body from the knee-joint by transferring it to the ischium and perineum. **Thomas's posterior s.**, a form of splint used in hip-joint disease. (See illustration on p. 1111) **Volkmann's s.**, a guttered splint with a foot-piece and two lateral supports: for fracture of the lower extremity.

splint-bone. The second or fourth small metacarpal bones of the horse.

splinter (splin'ter). A piece of fractured bone.

splints. The presence of masses of new bone in the forelegs of young horses, due to osteitis.

split-products. See under product.

splitting (split'ing). Chemical separation of a complex substance into two or more simpler substances, hydrolysis.

spodiomyelitis (spo"de-o-mi-el-i'tis) [Gr. σπόδιος ash-colored + μύελος marrow + -ιτις inflammation | Acute anterior poliomyelitis.

spodogenous (spo-doj'en-us) [Gr. σποδός ashes + γενναν to produce]. Pertaining to or caused by waste matters in an organ.

spodophagous (spod-of'ag-us) [Gr. σποδός ashes + φαγείν to devour]. Eating up or destroying the waste materials of the body.

spodophorous (spod-of'or-us) [Gr. σποδός ashes + φορεῖν to bear] Removing waste materials

spondylalgia (spon-dil-al'je-ah) [Gr. σπόνδυλος vertebra + ἄλγος pain]. Pain in a vertebra.

spondylarthritis (spon"dil-ar-thri'tis) [Gr. σπόν-δυλος vertebra + ἄρθρον joint + -ιτις inflamma-tion]. Inflammation of the joints between the vertebræ.

spondylarthrocace (spon-dil-ar-throk'as-e) [Gr. σπόνδυλος vertebra + ἄρθρον joint + κάκη badness]. Tuberculosis of the vertebræ.

spondylexarthrosis (spon"dil-eks-ar-thro'sis) [Gr. σπόνδυλος vertebra + εξάρθρωσις dislocation]. Dislocation of a vertebra.

spondylitic (spon-dil-it'ik).r. Affected with or of the nature of spondylitis.2. A person affected with spondylitis

spondylitis (spon-dil-i'tis) [Gr. σπόνδυλος vertebra + -ιτις inflammation]. Inflammation of a vertebra; especially tuberculous disease of the vertebra—Pott's disease. **s. defor'mans**, deforming arthritis of the vertebral joints causing the vertebral column to become bent and rigid. Kümmell's s., traumatic spondylitis in which the symptoms do not show themselves until some time after the receipt of the injury. post-traumatic s. Sec Kummell's s. s. rhizome'lica, advancia visidities of the wine survey. advancing rigidity of the spine caused by ankylosis of the vertebræ extending from below upward traumatic s., spondylitis due to injury. s. tuberculo'sa, tuberculous disease of the ver tebral joints. s. typho'sa. See typhoid spine, under spine.

SPLINTS

1111

SPLINTS

Agnew's splint for fractured patella

Agnew's splint applied

Jones' nasal splint.

Bond's splint.

Bond's splint in Colles's fracture.

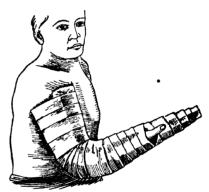

Dupuytren's splint in Pott's fracture.

Agnew's splint for fracture of metacarpus.

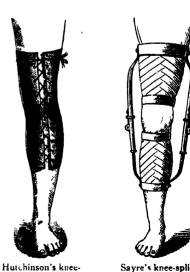

Internal angular splint in fracture of the shaft of the humerus.

Anterior angular splint for fractures near the elbow-joint.

joint splint.

Sayre's knee-splint applied.

Thomas's posterior splint

spondylizema (spon''dil-iz-e'mah) [Gr. σπόνδυλος vertebra + 1ζημα depression]. Downward displacement of a vertebra in consequence of the destruction or softening of the one below it.

spondylocace (spon-dil-ok'as-e) [Gr. σπόνδυλος vertebra + κάκη badness]. Tuberculosis of the vertebræ.

spondylodiagnosis (spon''dil-o-di-ag-no'sis) [Gr. σπόνδυλος vertebra + diagnosis]. Diagnosis by the reflexes obtained by stimulating the vertebræ.

spondylodidymia (spon''dil-o-did-im'e-ah) [Gr. σπόνδυλος vertebra + δίδυμος twin]. Teratic union of twins by the vertebræ.

spondylodymus (spon-dil-od'im-us). A twin monster united by the vertebræ.

spondylodynia (spon"dil-o-din'e-ah) [Gr. σπόνδυλος vertebra + όδύνη pain]. Pain in a vertebra.

spondylolisthesis (spon"dil-o-lis-the'sis) [Gr. σπόνδυλος vertebra + όλισθάνειν to slip]. Forward displacement of the lumbar vertebra, with consequent contraction of the pelvis.

spondylolisthetic (spon"dil-o-lis-thet'ik). Pertaining to or caused by spondylolisthesis.

spondylopathy (spon-dil-op'ath-e) [Gr. σπόνδυλος vertebra + πάθος affection]. Any disorder of the vertebræ. **traumatic s.** See *Kummell's disease*, under *disease*.

spondylopyosis (spon''dil-o-pi-o'sis) [Gr. σπόνδυλος vertebra + πύωσις suppuration]. Suppuration of a vertebra or of vertebræ.

spondyloschisis (spon-dil-os'kis-is) [Gr. σπόνδυλος vertebra + σχίσις fissure]. Congenital fissure of a vertebral arch.

spondylosis (spon-dil-o'sis). Ankylosis of a vertebral joint. rhizomelic s., complete ankylosis of the vertebræ, with more or less ankylosis of the hip- and shoulder-joints.

spondylosyndesis (spon"dil-o-sin'de-sis) [Gr. σπόνδυλος spine + σύνδεσις a binding together] Operative immobilization or ankylosis of the spine.

spondylotherapy (spon''dil-o-ther'ap-e) [Gr. σπόνδυλος vertebra + θεραπεία treatment]. Treatment by physical methods applied to the spinal region; spinal therapeutics.

spondylotomy (spon-dil-ot'o-me) [Gr. σπόνδυλος vertebra + τομή cut]. Same as rachitomy.

spondylous (spon'dil-us). Pertaining to a vertebra spongarion (spon-ga're-on) [Gr.]. An ancient eyesalve.

sponge (spunj) [L. spon'gia; Gr. σπογγιά sponge].

 The elastic fibrous skeleton of Euspon'gia officina'lis, a marine animal organism: used mainly as an absorbent.
 A gauze pad stuffed with cottonwaste and sterilized.
 -graft, a bit of sponge inserted in an ulcer or a wound to promote granulation.
 -tent, a piece of dry, compressed sponge to be inserted in a contracted passage, such as the os uteri. The secretions of the passage cause expansion of the sponge.

spongia (spon'je-ah) [L.; Gr. σπογγιά]. Sponge. s. cera'ta, s. præpara'ta, pressed and prepared sponges used in making sponge-tents. s. compres'sa, compressed sponge; a sponge-tent. s. us'ta, burnt sponge; an alterative; its curative qualities are due to the contained iodin.

spongiform (spon'jif-orm) [Gr. σπόγγος sponge +
 L. for'ma shape]. Resembling a sponge.

spongin (spon'jin). A horny, albuminoid material forming the basis of sponge.

spongioblast (spon'je-o-blast) [Gr. σπογγιά sponge + βλαστός germ].
 1. Any one of the embryonic epithelial cells, developed about the neural canal, which become transformed into ependyma cells.
 2. Same as amacrine.

spongioblastoma (spon"je-o-blas-to'mah). A tumor containing spongioblasts. In s. multifor'me the cells are of various forms and arrangements; in s. unipola're the spongioblasts are mostly unipolar.

spongiocyte (spon'je-o-sīt) [Gr. σπογγιά sponge + κύτος cell]. A neuroglia cell.

spongioid (spon'je-oid) [Gr. σπογγιά sponge + elδos form]. Resembling a sponge in structure or appearance.

spongiopilin (spon"je-o-pi'lin) [Gr. σπογγιά sponge + πίλος felt]. A fabric formed of sponge and wool felted together with a layer of caoutchouc applied to one surface. used like a poultice.

spongioplasm (spon'je-o-plazm) [Gr. σπογγιά sponge + πλάσμα plasm]. 1. A substance which forms the network of fibrils pervading the cell substance and forming the reticulum of the cell. Called also mitomes and fibrillar mass of Flemming.
2. The granular material of an axon.

spongiosa (spon-je-o'sah). See substantia spongiosa, spongiositis (spon''je-o-si'tis). Inflammation of the corpus spongiosum.

spongy (spun'je). Of a sponge-like appearance or texture.

spontaneous (spon-ta'ne-us) [L. sponta'neus]. Voluntary; instinctive; occurring without external influence.

spoon (spoon). A metallic instrument with an oval bowl placed on a handle. Daviel's s., an instrument used in removing the eye-lens. sharp s., a spoon with a sharp-edged bowl: used for scraping away granulations, etc. Volkmann's s. Same as sharp s.

spoon-nail. Ceylonychia.

sporadic (spo-rad'ik) [Gr. σποραδικός scattered; L. sporad'icus]. Not widely diffused or epidemic; occurring here and there.

sporadoneure (spo-rad'o-nūr) [Gr. σποραδικός sporadic + νεῦρον nerve] An isolated nerve-cell occurring in any of the tissues.

sporangia (spo-ran'je-ah). The plural of spo-rangum.

sporangial (spo-ran'je-al). Pertaining to a sporangium.

sporangiophore (spo-ran'je-o-for). The thread-like stalk which bears at its tip the sporangium of molds.

sporangium (spo-ran'je-um), pl. sporan'gia [Gr. $\sigma\pi\delta\rho\sigma$ s seed $+\dot{a}\gamma\gamma\epsilon\hat{i}\sigma\nu$ vessel]. Any encystment containing spores or spore-like bodies, as in the larval state of trematode parasites or in certain of the mold fungi.

sporation (spo-ra'shun). Same as sporulation.

spore (spor) [L. spo'ra; Gr. $\sigma\pi\delta\rho$ os seed]. The reproductive element of one of the lower organisms, such as a protozoan or a cryptogamic plant. Exospores or comdia are non-sexual spores arising from the end of the hyphæ by budding Large ones are called macroconidia; small ones, microconidia. Endos pores or gonidia are formed in the interior of special spore cases called sporangia. Endospores that are free and provided with locomotive flagella are zoospores, their cases being termed zoosporangia. An ascospore is a variety of endospore contained in a special spore-case called an ascus. Zygospores are spores formed by a conjugation between two special hyphæ. Chalamydospores are asexual resting spores, with thick walls, produced by enlargement of special cells. Oospores are spores formed by fertilization in a manner similar to true seeds. asexual s., a spore produced by division within the walls of a mother-cell. **black s.**, a degenerated blood-parasite in the body of a mosquito. **swarm-s's**, spores made up of numerous active motile individuals. washed s's., spores of bacteria which have been freed from their toxin by washing.

sporenrest (spo'ren-rest). The mass of protoplasm left after the completion of sporulation of two congregating protozoan cells. Called also *sporal residuum*.

sporetia (spo-re'she-ah). That part of the extranuclear chromatin of a cell that is concerned in the reproductive function of the cell. sportcidal (spo-ris-i'dal) [spore + L. cædere to kill]. Destroying spores.

sporicide (spo'ris-id). 1. Same as sporicidal. 2. An agent that destroys spores.

sporidiosis (spo-rid-e-o'sis). Infection with sporidia.

sporidium (spo-rid'e-um), pl. sporid'ia. A protozoan organism in one of the spore-stages of its growth: frequently seen in the vertebrate organism as a parasite.
S. vaccina'le. Same as Cytorrhyctes vaccinae.

sporiferous (spo-rif'er-us) [L. spo'ra spore + fer're to bear]. Producing or bearing spores.

sporiparous (spo-rip'ar-us) [L. sp'ora spore + pa'rere to produce]. Producing spores.

sporo-agglutination (spo"ro-agglutination of spores in the diagnosis of sporo-trichosis.

sporoblast (spo'ro-blast) [Gr. $\sigma\pi\delta\rho\sigma$ seed $+\beta\lambda\alpha\sigma$ $\tau\delta$ s germ]. One of the bodies developed within the occyst of the malarial parasite in the mosquito from which the sporozoite later develops.

sporocyst (spo'ro-sist) [Gr. σπόρος seed + κύστις cell]. 1. Any cyst or sac containing spores or reproductive cells, especially in a vegetal or animal organism of a low type. 2. The envelop that forms about a sporoblast in its course of development into a spore. Called also spore membrane.

sporoduct (spo'ro-dukt). A tube-like structure in the walls of certain sporocysts through which the spores are given off.

sporogenesis (spo-ro-jen'es-is) [Gr. σπόρος spore + γένεσις production]. The formation of spores; reproduction by spores

sporogenic (spo-ro-jen'ik) [Gr. σπόρος spore + γεννᾶν to produce]. Capable of developing into spores.

sporogenous (spo-roj'en-us) [Gr. σπόρος spore + γεννῶν to produce]. Reproduced by spores.

sporogeny (spo-roj'en-e) [Gr. $\sigma\pi\delta\rho\sigma$ s spore + $\gamma\epsilon\nu\nu\hat{a}\nu$ to produce]. The development of spores.

sporogony (spo-rog'o-ne) [Gr. $\sigma\pi\delta\rho\sigma$ s spore + $\gamma\sigma\nu\epsilon ia$ generation]. Reproduction by spores; sporogenesis; especially sporulation after fertilization. Cf. schizogony.

sporont (spo'ront) [Gr. σπόρος spore + δντος being]. A mature protozoan in its sexual cycle.

sporophore (spo'ro-for) [Gr. $\sigma\pi\delta\rho$ os spore $+\varphi\circ\rho\epsilon\hat{\iota}\nu$ to bear]. That part of an organism that supports the spores.

sporophyte (spo'ro-fit) [Gr. $\sigma\pi\delta\rho$ os seed + $\varphi b\tau \sigma\nu$ plant]. The diploid or asexual stage in the antithetic alternation of generation.

sporoplasm (spo'ro-plazm) [Gr. $\sigma\pi\delta\rho$ os seed + $\pi\lambda\delta\sigma\mu$ a plasm]. The protoplasm of reproductive cells.

sporoplasmic (spo-ro-plaz'mik). Pertaining to or of the nature of sporoplasm.

sporotheka (spo-ro-the kah) [Gr. $\sigma\pi\delta\rho\sigma$ seed + $\theta\eta\kappa\eta$ chest]. The envelop inclosing a number of exotospores of the malarial parasite before they leave the anopheles.

Sporothrix (spo'ro-thrix). Same as *Sporotrichum*. **sporotrichin** (spo-rot'rik-in). An agent used for the intracutaneous diagnosis of sporotrichosis.

sporotrichosis (spo'ro-trik-o'sis). Infection by fungi of the genus Sporotrichum, producing an eruption of refractory subcutaneous abscesses (culaneous s.). It may also occur as a generalized system disease (extracutaneous s.) affecting the muscles, bones, joints, and mucous membranes

Sporotrichum (spo-rot'rik-um) [Gr. $\sigma\pi\delta\rho$ os seed $+\theta\rho l\xi$ hair]. A genus of microorganisms resembling the yeast fungi. Some of the species are pathogenic, causing sporotrichosis. The commonest species in America is S. schenck'i, in France S. beurman'ni, but other pathogenic varieties are

S. jeanselmei, S. gougeroli, and S. dori. S. car'nis, a fungus which by its growth produces "white mold" on the surface of meat in cold storage.

Sporozoa porozoa (spo-ro-zo'ah), pl.; sing. sporozoon [Gr. $\sigma\pi\delta\rho\sigma$ seed ζφον animal]. A class of endoparasitic protozoans. They reproduce by sporulation and have no organs of locomotion. It includes the Gregari'næ, the Coccid'ia, the Sarcosporid'ia, the Microsporid'ia, and the Myxosporid'ia.

Sporotrichum (Rivas).

sporozoite (spo-ro-zo'it) [Gr. σπόρος seed + ζφον animal]. A spore formed after fertilization; any one of the sickle-shaped nucleated germs formed by division of the protoplasm of a spore of a sporozoan organism. In malaria, the sporozoites are the forms which are transferred from the mosquito to man. It represents one of the phases in the development of the organism. Called also falciform body. Cf. merozoite.

sporozoöid (spo-ro-zo'oid). Any one of a set of falciform bodies sometimes seen in cancer: thought to be protozoan.

sporozoon (spo-ro-zo'on). 1. Any organism or species belonging to the class *Sporozo'a*. 2. The female malarial parasite in the stage formed by the capsulation of a macrogamete; by division it is transformed into a crop of sporozoites. **s.** furunculo'sum. Same as *Leishmansa tropica*.

sport (sport). A freak of nature, or lusus naturæ.

sporular (spor'u-lar). Pertaining to a spore.

sporulation (spor-u-la'shun). A form of reproduction consisting of spontaneous division of the cell into four or more daughter elements, each with a part of the original cell-nucleus. Called also spore-formation. arthrogenous s., the change of bacteria into resistant forms which, in favorable conditions, will reproduce themselves. endogenous s., sporulation of a protozoan within its host. exogenous s., sporulation of a protozoan to produce the infection of fresh hosts.

sporule (spor'ūl). A small spore.

spot (spot). A circumscribed area or place; a loculus or macula. acoustic s. See macula acustica. Bitot's s's, shiny, gray, triangular spots on the cornea, consisting of flaky masses of dried epithelium, microorganisms, etc. Called also xerosis cornæ. black s., black spots 1-1 inch in diameter which form on the surface of meat kept in cold storage. They are caused by the growth of a fungus, Cladosporium herbarum. blind s., the spot on the retina where the optic nerve enters. See blue s., macula cærulia Carleton's retina. 8's, sclerosed spots in the bones in gonorrheal disease. cherry-red s., a red spot seen on the retina of each eye in the region of the macula lutea in amaurotic family idiocy. Called also Tay's sign cold 8., any one of the spots on the skin where senexperienced. corneal s., an opacity of the cornea. cribriform s. See macula cribrosa. de Morgan's s's, red spots, like nevus, sometimes seen on the skin of cancer patients. embryonic s. See area germinativa. epigastric s., a point of tenderness exactly over the ensiform a point of tenderness exactly over the clisholm cartilage. Filatow's 8's. Same as Koplik's s. flame-s's, large hemorrhagic spots in the eyeground. Flindt's 8's, Koplik's spots. focal s., the spot or are of the target on which the cathode stream is focused. germinal s., the area germinativa or germinal vesicle. Graefe's s's, spots over the vertebræ, pressure on which

produces relaxation of blepharofacial spasm. hot 8., any one of the temperature spots where heat is normally perceived, but not cold. hypnogenetic s., any superficial area stimulation of which will bring on sleep. Jacquemin's s. See Jacquemin's sign, under sign. Koplik's s's, small bluish-white spots surrounded by a reddish areola on the mucous membrane of the cheeks and lips during the prodromal stage of measles. light-s. Same as cone of light.

Mariotte's s., the blind spot, or optic papilla. milk-s., a spot seen on the visceral layer of the pericardium in postmortem examinations of elderly people. Mongolian s., a dark spot on the lumbar region in new-born children of the Mongolian race. pain-s's, spots on the skin where alone the sense of pain can be produced by a stimulus. pelvic s's, round or oval shadows often seen on fluoroscopic examination in the region of the inferior spine of the ilium and the horizontal ramus of the pubic bone. rose s's, a scattered eruption of rose-colored spots, appearing on the ab-domen and loins during the first seven days of typhoid fever. Called also typhoid spots and typhoid roseola. Roth's s's, white spots on the retina in septic retinitis. silver s., a mycetome of lice occupied by symbionts and essential to the life of the louse Soemmering's s. Same as macula lulea. spongy s., the vascular zone. See under zone. Tardieu's s's, spots of ecchymosis under the pleura following death by suffocation. Tay's s., a red spot (the choroid) surrounded by a white circle seen through the fovea centralis in amaurotic idiocy. temperature s's, hot and cold spots, spots on the skin normally anesthetic to pain and pressure and sensitive respectively to heat and cold, they are arranged in lines, often somewhat curved, they show the peculiar arrangement of the end-apparatus with respect to the temperaturesense tendinous s., macula albida. typhoid s's. See rose s's. vital s., a name sometimes given to the respiratory center in the medulla oblongata, because it is indispensable for breathing and therefore for life. **Wagner's s.**, the nucleolus of the human ovum. white s's, grayish, elevated spots, of varying size, sometimes seen on the ventricular surface of the anterior leaflet of the mitral valve. Willner's s's, efflorescent spots, soon becoming pustules, on the internal layer of the prepuce, seen in the early stages of variola. yellow s., macula lutea.

spotting (spot'ing). A slight menstrual show upon a woman's napkin.

sprain (sprān). The wrenching of a joint, with partial rupture or other injury of its attachments, and without luxation of bones. The signs of a sprain are rapid swelling, heat, and disablement of the joint. The pain is usually great, and is much increased by moving. The treatment is by hot or cold applications and bandaging if recovery be too slow, immobilization of the joint is indicated. s.-fracture. See fracture. riders's, sprain of the adductor longus muscle of the thigh, resulting from strain in riding horseback. Schlatter's s., Schlatter's disease. See under disease.

spray (sprā). A liquid minutely divided, as by a jet of air or steam. ether-s., ether applied in a nebulized form to produce local anesthesia by chilling the part.

Sprengel's deformity (spreng'elz) [Otto Gerhard Carl Sprengel, German surgeon, 1852-1915]. See deformity.

sprew (spru). See sprue.

spring-finger (spring). See finger.

spring-halt. Myoclonus of the hind leg of a horse, causing a gait in which the leg is suddenly raised and then stamped on the ground.

spring-hock. A swelling above and below the hock of a horse, due to inflammation of the ligaments.

sprue (sproo). I. Thrush. 2. Psilosis; a chronic disease marked by sore mouth, with a raw-looking tongue, gastro-intestinal catarrh with periodic diarrhea, and diminution in the size of the liver. It occurs mostly in hot countries, and causes emaciation, anemia, and frequently death. It may possibly be caused by Monilia psilosis. Called also tropical stomatitis, and Cochin-China diarrhea.

3. In dentistry, the hole through which metal is poured into a mold; also the waste piece cast in such a hole. Belyando s. See grass sickness, under sickness.

Spt. Abbreviation for L. spir'itus, spirit.

spuman (spu'man). A thymol-resorcin-formaldehyd compound, in crayon form, used in gonorrhea or other inflammations of the female genito-urinary organs. It sets free a foam of formaldehyd.

spunk (spunk). Agaric charged with niter.

spur (spur). A projecting piece of bone. In dentistry, a piece of metal projecting from a plate, band, or other dental appliance. Morand's s., the hippocampus minor.

spurge (spurj). See Euphorbia.

spurge-flax (spurj-flaks'). Same as Mezereum.

spurious (spu're-us) [L. spu'rius]. Simulated; not genuine, false.

spurred rye (spurd ri'). Ergot of rye.

sputamentum (spu-tah-men'tum) [L.]. Sputum.
sputamin (spu'tam-in). A proprietary disinfectant
for sputum. It contains so per cent. of chloramin.

for sputum. It contains 80 per cent of chloramin. sputum (spu'tum) [L.]. Matter ejected from the mouth; saliva mixed with buccal or nasal mucus. In lung diseases it contains mucopus and other disease products from the lungs; in bron hial, laryngeal, pharyngeal, or tonsillar disease it may be purulent, watery, fibrinous, putrid, or bloody.

s. **&rogino'sum**, green expectoration. albuminoid s., a yellowish, frothy sputum of
persons from whom large amounts of pleural fluid have been withdrawn; believed to be due to pulmonary edema. s. coc'tum, the opaque mucopus of the later stages of bronchitis and laryngitis. s. cru'dum, the clear, tenacious mucus of the early stages of laryngitis and bronchits. cruen'tum, bloody sputum egg-yolk s., sputum of a bright-yellow color, as in some cases of jaundice. globular s., sputum in cases of jaundice. **globular s.**, sputum in yellow, spheric lumps characteristic of the last stages of tuberculosis. green s., sputum stained with a green pigment, as in certain cases of jaundice. Icteric s., sputum stained with a greemish or yellow tint by bile-pigments, as in jaundice. moss-agate s., a grayish, opalescent gelatinous mottled sputum, usually projected from the mouth in coughing in a more or less globular form; it is characteristic of diseases of the trachea (Chevalier Jackson). **nummular s.**, sputum in rounded disks, shaped somewhat like coins. **prune-juice s.**, dark, reddish-brown, bloody sputum of certain forms of pneumonia, cancer of the lung, gangrene, etc. rusty s., sputum stained with blood or blood-pigments; seen in pneumonia, etc. s. septicemia. See septicemia.

spyrokolon (spi-ro-ko'lon). A kind of syphilis occurring in Greece.

squama (skwa'mah), pl. squa'mæ [L.]. A scale or scale-like substance; especially the vertical plate of the squamous portion of the temporal bone. s. fronta'lis [B N A], the broad, curved portion of the frontal bone. s. occipita'lis [B N A], the squamous portion of the occipital bone s. tempora'lis [B N A], the squamous portion of the temporal bone.

squamate (skwa'māt) [L. squama'tus, from squa'ma scale]. Scaly; having or resembling scales

squamocellular (skwa-mo-sel'u-lar) [L. squa'ma scale + cel'lula cell]. Having squamous cells.

squamofrontal (skwa-mo-fron'tal). Pertaining to the squama frontalis.

squamomastoid (skwa-mo-mas'toid). Pertaining

to the squamous and mastoid portions of the temporal bone.

squamo-occipital (skwa''mo-ok-sip'it-al). Pertaining to the squama occipitalis.

squamoparietal, squamosoparietal (skwa"-mo-par-i'e-tal, skwa-mo"so-par-i'e-tal). Pertaining to the squamous and parietal bones.

squamopetrosal (skwa"mo-pet-ro'sal). Pertaining to the squamous and petrous portions of the temporal bone.

squamosa (skwa-mo'sah) [L. "scaly" (part)]. The squamous bone or squamous portion of the temporal bone; the upper and anterior part of the temporal bone, forming an upright plate.

squamosal (skwa-mo'sal). 1. Same as squamous. 2. The squamosa.

squamosphenoid (skwa-mo-sfē'noid). Pertaining to the squamous and to the sphenoid bone.

squamotemporal (skwa-mo-tem'po-ral). Pertaining to the squamous portion of the temporal bone.

squamous (skwa'mus) [L. squamo'sus scaly]. Scaly, or plate-like. **s. bone**. See squamosa.

squamozygomatic (skwa"mo-zi-go-mat'ik). Pertaining to the squamous and zygomatic portions of the temporal bone.

squarrose, squarrous (skwar'ōz, -us) [L. squarro'sus]. Covered with scurf or dandruff.

squaw-vine (skwaw'vin). The partridge-berry; a small, trailing, evergreen rubiaceous herb of North America, Mitchel'la re'pens: diuretic and astringent. Dose of fluidextract, ½-1 fl.dr. (2-4 c.c.)

Squibb's diarrhea mixture (skwibz) [E. R. Squibb, American chemical manufacturer] A mixture of r ounce each of tincture of opium, tincture of capsicum, and spirit of camphor, 3 drams of chloroform, and alcohol to make 5 ounces. Dose, 15-60 min. (1-4 cc). S's podophyllum pills, pills each of which contains \(\frac{1}{4}\) gr. of alcoholic extract of belladonna, \(\frac{1}{2}\) gr. of capsicum, r gr. of sugar of milk, \(\frac{1}{2}\) gr. of capsicum, r gr. of sugar of milk, \(\frac{1}{2}\) gr. of acacia, and sufficient glycerin and syrup S's rhubarb mixture, compound rhubarb mixture.

squill (skwil) [L scil'la; Gr σκίλλα] The fleshy inner scales of the bulb of the white variety of Urgin'ca mart' ma, a liliaceous plant. It contains scillum, scillin, scillipicrin, scillotoxin, and several other principles, and is expectorant and diurctic; in large doses emetic and purgative. It is employed in bronchitis, croup, and dropsy. Dose, 1-2 gr (0.066-0.133 gm), of vinegar (ace'tum scil'la), 10-30 min. (0.666-2 c c); of fluidextract, 1-5 min (0.066-0.333 c.c), of compound fluidextract, 5-30 min. (0.333-2 c c); of syrup, ½-1 fl dr. (2-4 c.c.); of compound syrup, 10-30 min. (0.666-2 c.c.); of tincture, 5-30 min. (0.333-2 c.c.); of oxymel, ½-1 fl dr (2-4 c c.).

squillitic (skwil-it'ik) [L. scillit'icus; Gr. σκιλλιτικός]. Pertaining to or containing squill.

squint (skwint). See strabismus.

Squire's catheter [Trumann Hoffman Squire, American surgeon, 1823-1889]. See catheter.

squirrel (skwer'el). A common rodent. s. corn. See Corydalis. ground s. See Citellus.

squirting cu'cumber (skwer'ting). See Elaterium.

Sr. The chemical symbol for strontium

S roma'num. The sigmoid flexure.

Ss., ss. An abbreviation for L se'mis, one-half.

8.8. Abbreviation for soapsuds.

S. s. s. Abbreviation for L stra'tum su'per stra'tum, layer upon layer.

St., st. Abbreviation for L. stet, let it stand; or stent, let them stand.

3tab (stab). The line formed by stabbing a culture with a needle in bacterial study. s.-culture. See culture.

stabilarsen (sta-bil'ar-sen). A chemical compound of arsphenamin and glucose.

stabile (stab'il) [L. stab'ilis stable, abiding]. Noting an electric current applied by stationary electrodes.

stable pneumonia (sta'bl). Epizootic pleuropneumonia in horses.

staccato (stak-ah'to) [Ital. "detached"]. Noting a manner of utterance in which the speech is delivered in a quick, jerky manner, with an interval between each two syllables.

stachydrin (stak-id'rin). An alkaloid found in certain plants (Stachys). It is a dimethyl derivative of pyrrol, C₄H₇N(CO.O)(CH₃)₂.

stachyose (stak'e-ōs). A tetrasaccharid, C₂₄H₄₂O₂₁, from the tubers of Stachys tubifera. Acids hydrolyze it to dextrose, galactose, and levulose. It is not digestible

Stacke's operation (stah'kez) [Ludwig Stacke, German otologist, born 1859]. See operation.

stactometer (stak-tom'et-er) [Gr. στακτός dropping + μέτρον measure]. An instrument for measuring drops.

stadium (sta'de-um), pl. sta'dia [L. for "course"; Gr. στάδων]. A stage or period in a disease. s. ac'mes, the height of a disease. s. augmen'ti, the period or stage of increase in the intensity of a disease. s. calo'ris, the hot stage of a fever or disease. s. decremen'ti, the period of decrease of severity in a disease; the defervescence of fever. s. defervescen'tiæ, stadium decrementi s. fluorescen'tiæ, the stage of development of the cruption in an exanthematous disease. See also under stage. s. frig'oris, the cold stage of an intermittent fever. s. invasio'nis, the prodromal stage. s. sudo'ris, the sweating stage of a malarial paroxysm.

staff (stahf). An instrument introduced into the urethra as a guide in cutting. s. of Æsculapius, a rod or staff with a snake entwined around it, which always appeared in the ancient representations of Æsculapius, the god of medicine. It is the symbol of medicine and is now the official insignia of the American Medical Association. attending s., the corps of attending physicians and surgeons of a hospital. consulting s., the corps of physicians and surgeons attached to a hospital who do not visit regularly, but may be consulted by members of the attending staff. s. of

Staff of Æsculapi**us.**

bers of the attending staff. s. of Wrisberg, an appearance seen in the normal larynx during laryngoscopic observation.

Staffordshire knot (staf'ord-shēr). See under knot.

stage (stāj). r. A period or distinct phase in the course of a disease, a stadium. 2. The plate or platform of a microscope. algid s., a condition characterized by a flickering pulse, subnormal temperature, and varied nervous symptoms. amphibolic s., the stage which intervenes between the acme and the decline of an attack. asphyxial s., the preliminary stage of an attack of epidemic cholera: marked by cramps, severe pain, and great thirst. cold s., the chill or rigor of a malarial attack. defervescent s., the stage of falling temperature. eruptive s. Same as stadium fluorescentice. expulsive s., the stage of labor during which the child is being expelled from the uterus. s. of fervescence, pyrogenetic stage. first s., the time during which the fetal head is being molded and the cervix dilated. hot s., the period of pyrexia in a malarial paroxysm. incubative s., the early stage of an infectious disease, marked by the formation of toxins and the appearance of prodromal symptoms. s. of invasion, the time during which the system is coming under a morbific influ-

ence. knäuels. Same as skein. s. of latency, the incubation period of any infectious disorder. placental s., the third stage of labor; the period occupied by the expulsion of the placenta and the fetal membranes. presruptive s., the stage after infection and before eruption. prodromal s., incubative stage. pyrogenetic s., the stage of invasion of a febrile attack. resting s., the stage of invasion of a febrile attack. resting s., the stage of a cell or its nucleus when no mitotic changes are going on. second s. (of labor), the expulsive stage. step-ladder s., an early stage of enteric fever; so called from the peculiar form of the temperature curve. sweating s., the final stage of a malarial paroxysm, marked by sweating. third s., the placental stage of labor. vegetative s. Same as resting s. zooglea s., the stage in the life-history of a microorganism in which it forms zooglea.

itaggers (stag'erz). 1. One of various functional and organic diseases of the brain and spinal cord of domestic animals, known also as blind s., especially a disease of sheep caused by the presence in the brain of cænu'rus cerebra'lis, and marked by unsteadiness of gait. Called also gid, sturdy, turnsickness, and cænurosis. 2. A form of vertigo observed in some cases of caisson disease. blind s. See slaggers. grass s., loco poisoning. mad s. See slaggers. sleepy s., stomach s., a disease of horses, of unknown causation, but usually associated with the eating of moldy hay and grain. Called also forage poisoning.

stagnation (stag-na'shun) [L. stagna're to grow stagnant]. 1. The retardation of the flow of any circulating fluid in the body, as the blood or lymph. 2. In dentistry, the accumulation of glairy matter on a tooth whose antagonist in the other jaw has been removed.

itagnin (stag'nin). An extract derived from the spleen of horses by autolysis. It is a powerful styptic and hemostatic.

Stahl's ear (stahlz) [Friedrich Karl Stahl, German physician, 1811-1873]. See ear.

stain (stan). Any dye, reagent, or other material used in coloring tissues for microscopic observa-tion. Stains used in microscopic work may be divided into basic stains, which show special afknown as nuclear stains, which show special are, therefore, known as nuclear stains, and acid stains, which color more readily the protoplasm—protoplasmic stains. Certain stains, which we may know as selective stains (they may be either basic or acid), color one tissue element more vividly than others, or to the exclusion of others. Since the various tissue elements show affinity for different stains, preparations may be colored with more than one stain. Accordingly, we have simple, double, triple, or multiple staining acid s. See stain. basic s., a histologic stain which is nonacid, such as the methyl and phenyl derivatives of fuchsin, rosanilin, etc. contrast-s., one used to color an unstained portion of a tissue another portion of which has already been stained with another color. A table of the more important stains and staining methods is appended. green s., a greenish fungoid deposit on the teeth. neutral s., sa combination of an acid and a basic stain for staining neutrophil tissues. nuclear s. See stain. plasmatic s., plasmic s., a stain which colors the tissue uniformly throughout. protoplasmic s. See stain. selective s. See stain.

staining (stān'ing). The artificial coloration of tissues in order to facilitate their study under the microscope. (See table, pages 1042-1054) bipolar s., staining at the two poles only, or staining differently at the two poles. differential s., staining with a contrast-stain; also the treatment of diseased tissues with agents which stain the bacilli and decolorize the structures in which they are embedded. intra vitam s. See vital s. metachromatic s., staining in which the same pigment imparts different colors to different tissue elements. preagonal s., vital staining. vital s., staining of fresh tissues, particularly staining of fresh blood, before the cells are altered by either heat or cold. Called intravitam staining.

TABLE OF STAINS AND STAINING METHODS

ncluding a brief description of some of the stains, fluids, preparations, and methods most commonly employed in histologic and pathologic technic (arranged alphabetically).

Abbott's method (for spores): Stain the cover-glass preparation with Löffler's alkaline methylene-blue, heating repeatedly to the boiling-point; wash in water, and then in 95 per cent. alcohol containing 0.2 or 0.3 per cent. of hydrochloric acid; wash again in water; stain for eight to ten seconds in anilin-fuchsin solution; wash in water and mount. This stains the spores blue and the bodies of bacteria red. acid fuchsin: A diffuse stain used especially for axis-cylinders, and consisting of used especially for axis-cylinders, and consisting of a solution of 2 gm. of acid fuchsin in 40 c.c. of oo per cent. alcohol and 160 c.c. of distilled water. (For actinomyces). See Mallory's m., and Wheal and Clown's m. alcohol: The most common fixing fluid. It is at the same time a hardening fluid, as the water of the tissues is withdrawn and their albumin coagulated Small or thin pieces are put immediately into absolute alcohol, in which they remain for twelve to twenty-four hours. period required for fixation may be greatly shortened by changing the absolute alcohol at the end of one or two hours. In the case of larger pieces, a successive immersion in gradually increasing strengths of alcohol (50, 70, and 90 per cent.) is the method chosen. Pieces 1 cm. in size remain for twenty-four hours in each strength of alcohol, larger pieces for a proportionately longer time. Alcohol used in this way is a hardening rather than a fixing fluid. alcoholic borax-carmin solution: 3 gm. of carmin and 4 gm. of borax are placed in 93 c.c. of water, after which 100 c.c. of 70 per cent. alcohol is added. The mixture is stirred, then allowed to settle, and later filtered. alum-carmin: A staining preparation of 1∞ c.c. of a 3 to 5 per cent. solution of ordinary alum, or preferably ammonia alum, mixed with 0.5 to 1 gm. of carmin. This is boiled for onequarter of an hour, and after cooling filtered, and enough distilled water added to replace that lost by evaporation. Wash the sections in water. alumhematoxylin solution: A solution of 1 part of hematoxylin crystals, 100 parts of a saturated aqueous solution of ammonia alum, 300 parts of water, and 1 crystal of thymol. (For amebæ.) See stain for Entamebæ. Anderson's s., a method of myelin staining for frozen sections. anilinfuchsin: A mixture of 16 c c. of saturated alcoholic solution of fuchsin and 84 c.c. of anilin-water. anilin-water: To 100 c.c. of water in a stoppered bottle add 5 c.c of anilin oil. Shake vigorously and filter before using. anilin-water gentian-violet: To 108 c.c. of anilin-water add 12 c.c. of a saturated alcoholic solution of gentian-violet. **An- jesky's method** (for staining spores). A coverglass is thinly spread with the spore-containing fluid and dried. While it is drying some 0.5 per cent hydrochloric acid is warmed in a porcelain dish until it steams and bubbles form. When the solution is hot, the cover-glass is dropped upon the smear for three to four minutes. The cover is removed, washed with water, dried, and fixed, then stained with Ziehl's carbolfuchsin solution, which is warmed until fumes arise. The stain is allowed to cool, decolorized with 4 to 5 per cent. solution of sulphuric acid, and counterstained with

malachite green or methylene-blue. borax-carmin solution: 8 gm. of borax and 2 gm. of carmin are ground together and added to 150 c.c. of water. After twenty-four hours the fluid is poured off and filtered. The sections, previously freed from paraffin and treated with alco-hol, are placed in this fluid for several hours (as long as twelve), and then washed out in a solution of 0.5 to 1 per cent. hydrochloric acid in 70 per cent. alcohol. They are then transferred to 70 per cent. alcohol. **Archibald's s.**, a stain for plague organisms. Solution 1: thionin, 0.5 gm; crystals of phenol, 2.5 gm.; formalin, 1 c.c.; water, 100 c c. Solution 2 methylene-blue, 0.5 gm; crystals of phenol, 2.5 gm.; formalin, 1 c.c.; water, 100 c c. For use mix equal parts of each, filter, and stain for ten seconds. **Babes's anilin-saf-ranin:** A staining mixture prepared with anilinwater (2 per cent), 100 parts; safranin O, soluble in water in excess; heating in a flask in hot water and filtering. **Balch s.**, a method of polychrome methylene-blue staining for dried blood-films **Baumgarten's s.** (for bacillus of leprosy) Stain six or seven minutes in dilute alcoholic solution of fuchsin; discharge one-quarter of a minute in nitric acid alcohol (nitric acid, 1; alcohol, 10); wash in water; contrast-stain is saturated aqueous solution of methylene-blue, alcohol, xylol, balsam. Beale's 8., a stain made of 1 part of carmin, 3 parts of ammonia, 96 of glycerin, 96 of distilled water, and 24 of alcohol. Benda's method (for nervous tissue): A modification of the Weigert-Pal method benzalin. See nigrosin. benzo-purpurin. A protoplasmic stain of a darkred color used especially as a contrast-stain with hematoxylin and other blue stains. **Best's carmin s.** See under carmin, in this table. Bethe's method (for fixing methylene-blue stains of nerve-fibers). Wash off any excess of color with normal salt solution; place in molybdate of ammonium, I gr., distilled water, IO C C; hydrogen dioxid, I C.C.; hydrochloric acid, I drop. Leave it in the cold mixture surrounded by ice and salt for two to five hours; wash one-half to two hours in running water, dehydrate, and harden in cold absolute alcohol: clear with xylol and embed with paraffin. **Biondi-Heidenhain 8.**: A stain prepared by mixing a saturated watery solution of orange G, 100 parts; saturated watery solution of acid fuchsin, 20 parts; a saturated aqueous solution of methyl-green, 50 parts. Before staining, dilute with water, 1 part to 100 Biot's method (for tubercle bacilli). A very thin spread of sputum is made. It is fixed as usual; stain with warm carbolfuchsin for two or three minutes; without washing, decolorize thoroughly first in 25 per cent. nitric acid, then in absolute alcohol; wash with water; then place in ordinary, concentrated formol for at least three minutes; wash, dry, examine. The bacilli, colored a dark violet, stand out clearly against the unstained background. The detail of their structure comes out well, and the granules of Much take on the same stain as the bacilli themselves and are clearly seen to be of the same nature Birch-Hirschfeld method (for amyloid): Stain in a 2 per cent. alcoholic solution of Bismarck brown five minutes; wash in absolute alcohol, and then ten minutes in distilled water; stain in 2 per cent. solution of Birch-Hirschfeld method (for amygentian-violet five to ten minutes; wash in a dilute acetic-acid solution; mount in levulose. The amyloid becomes red, the tissue, brown. Bismarck brown: An anilin stain used in a 1 per cent. aqueous solution or in a saturated solution of 40 per cent. alcohol. blue mass: An injecting material for anatomic and histologic preparations, made by preparing a solution of gelatin warmed to 70° C., and coloring it to the desired shade with an aqueous solution of Berlin blue. Böhmer's hematoxylin: Hematoxylin crystals, 1 gm.; absolute alcohol, 10 c.c.; potassium alum, 10 gm.; distilled water, 200 c.c. Dissolve the hematoxylin crystals in the alcohol and the alum in the dis-

tilled water. While constantly stirring, add the first solution to the second. The whole is then left for about fourteen days in an open jar or dish, protected from the dust, during which time the color changes from violet to blue. After filtering, the stain is ready for use. Sections, either loose or fixed to the slide or cover-slip, are placed in this solution, and after about half an hour are washed with water. If the nuclei are well stained, the further treatment with alcohol may be com-menced. borax-carmin solution. See alcomenced. borax-carmin solution. See alco-holic b.-c. sol. and aqueous b.-c. sol. Bowhill's method (for spores): Stain the preparation for ten to fifteen minutes in a solution of 15 c.c. saturated alcoholic solution of orcein, 10 c.c. aqueous solution of tannin, 30 c.c. distilled water, warming slightly. Buchner's method (for anaerobic cultures): An inoculated slant-tube with tube, from which the oxygen is absorbed by a mixture of 6 gm. of pyrogallic acid and 1000 c.c. of potassium hydroxid. The slant-tube is held above the reducing mixture by a bent wire. **Buerber's** method (for capsules) I. Mix the material with serum to make the smear. 2. As it begins to dry flood it with Zenker's fluid (made without acetic acid) and warm. 3 Wash in water, then in alcohol, and apply tincture of iodin (U. S. P.). 4. Wash in and apply the ture of lodin (O. S. P.). 4. wash in alcohol, dry, and stain with anilin water gentian violet for a few seconds. 5. Wash and examine in 2 per cent. salt solution. Bullard's hematoxylin: 50 per cent. alcohol, 144 c.c.; glacial acetic acid, 16 c.c.; hematoxylin crystals, 8 gm. Dissolve by heat and add distilled water, 250 c.c.; ammonia alum, 20 gm. Heat to boiling and add slowly mercuric oxid (red), 8 gm. Cool quickly, filter, and add: 95 per cent. alcohol, 275 c.c.; glycerin, 330 c.c.; glacial acetic acid, 18 c.c.; ammonia alum, 40 gm. Bunge's mordant for Löffler's stain: Concentrated aqueous solution of tannin 75 c.c., 5 per cent solution of liquor ferri sesquichlorati 25 c.c., concentrated aqueous solution of fucshin 10 c.c. Before use add hydrogen peroxid until a reddish-brown color is produced. Burri's method: A method of staining organisms, especially spirochetes, with India ink. Cajal's double method (for ganglion-cells): A modification of Golgi's quick method by repeating the steps to get more perfect impregna-tion Capaldi's culture-medium: For the bacillus of tuberculosis fluid agar in tubes is mixed with fresh egg-yolk aseptically obtained, the yolk-membrane being seared with a hot knife. The medium is solidified on cooling so as to form slants. For capsules. See Buerger's m., Curry's m., Hiss's m, Huntoon's m., Johne's m, MacConkey's m., Muir's m, Ribbert's m., Smith's m., Wadsworth's m, and Welch's m. carbol-fuchsin: A mixture of saturated alcoholic solution of fuchsin 10 cc., and 5 per cent. solution of carbolic acid 90 c.c. See Ziehl-Neelson's carbol-fuchsin. carbol-gentian-violet: A mixture of saturated alcoholic solution of gentian-violet 10 c c. and 1 per cent. solution of carbolic acid 100 c c. carbol-thionin-blue: A bacteriologic stain consisting of thionin blue 1 gm. and carbolic acid 2.5 gm. in distilled water 100 c c. Before use dilute a portion with an equal volume of water and filter. carmin: A section stain used in the following solutions: alcoholic borax-carmin solution: 3 gm. of carmin and 4 gm. of borax are placed in 93 c.c. of water, after which 100 c.c. of 70 per cent. alcohol is added. The mixture is stirred, then allowed to settle, and later filtered. Sections are treated as in the following. aqueous borax-carmin solution: 8 gm. of borax and 2 gm. of carmin are ground together and added to 150 c.c. of water. After twenty-four hours the fluid is poured off and filtered. The sections, pre-viously freed from paraffin and treated with alcohol, are placed in this fluid for several hours (as long as twelve), and then washed out in a solution of 0.5 to r per cent. hydrochloric acid in 70 per cent. al-

They are then transferred to 70 per cent. conoi. They are then transferred to 70 per cent. alcohol. **Best's carmin s.** (for glycogen): Carmin, 2 gm.; potassium carbonate, 1 gm.; potassium chlorid, 5 gm.; distilled water, 60 c.c. Boil gently for several minutes. After cooling, add liquor ammonii, caustic, 20 c.c. **carmin bleu de Lyon:** Sections or pieces of tissue are first stained with carmin (alum- or borax-carmin). Bleu de Lyon is dissolved in absolute alcohol, and diluted with the latter until the solution is of a light bluish color. In this the sections or pieces of tissue are after-stained for twenty-four hours. Chenzinsky-Plein solution (for staining blood-corpuscles, etc.) To 40 c.c. of a saturated aqueous solution of methylene-blue there are added 20 c c. of a 0.5 per cent. alcoholic eosin solution and 40 c.c. of distilled water. This stains red corpuscles red, nuclei blue, and eosinophil granules bright red. **Cohn's 8.** (for organic urinary sediment). The dry slide is hardened in a 10 per cent. solution of formalin for ten minutes, then washed with water and placed for ten minutes in a concentrated solution of sudan stain in 70 per cent. alcohol. Fat is stained red and the nuclei violet. **corrosive** sublimate (fixing medium): An excellent fixing fluid is made by saturating distilled water or a physiologic saline solution with corrosive sublimate; saline solutions keep better. Small pieces, about 0.5 cm. in diameter, are immersed in this fluid for from three to twenty-four hours, then washed in running water for twenty-four hours, and then transferred to 70 per cent alcohol. After twentyfour hours the tissues are placed in 80 per cent. for the same length of time, and then preserved in oo per cent. alcohol. Cox's modification of Golgi's corrosive-sublimate method (for staining ganglion-cells). Small pieces are treated from one to three months in a 5 per cent. potassium from one to three months in a 5 per cent. potassium dichromate solution, 20 parts, a 5 per cent. solution of mercuric chlorid, 20 parts; distilled water, 30 to 40 parts; and a 5 per cent. potassium chromate solution, 16 parts, then treat as for Golgi preparations. Curry's method (for staining the capsule of the pneumococcus): Cover with glacial acetic acid; wash away the acid with potassium hydroxid in a 1 per cent. solution; wash again and stain with anilin-gentian-violet. Czaplewsky's method (for tubercle): I Stain as usual with carbolic fuchsin. 2. Decolorize with the following carbolic fuchsin. 2. Decolorize with the following mixture: fluorescin 1 gm., alcohol 100 c.c., add 5 gm. of methylene-blue, allow to stand one day, and decant. 3. Counterstain with a 5 per cent solution of methylene-blue in alcohol. Czocor's cochineal solution: A tissue stain prepared as follows: 7 gm. of powdered cochineal and 7 gm. of roasted alum are kept suspended in 100 c.c. of water by stirring while the mixture is boiled down to half its volume. After cooling it is filtered and a little carbolic acid added. Before the sections are placed in alcohol they should be washed with distilled water, as otherwise the alum is precipitated on the section by the alcohol. **Darling's** method (for Entamæba histolytica): Stain with Wright's stain in the usual way, follow this with Giemsa's stain until the film has a purple cast. Then plunge the preparation into a small beaker of 60 per cent. alcohol to which 10 to 20 drops of ammonia have been added, when the film will have a violet color. **Delafield's hematoxylin:** A strong solution of hematoxylin crystals, 4 c.c.; 95 per cent. alcohol, 25 c c.; saturated aqueous solution of ammonia alum, 400 c.c.; expose in an un-stoppered bottle to sun and air three or four days; filter, and add 100 c.c. of glycerin and 100 c c. of 95 per cent. alcohol. **Dervieux's s.:** 0 5 gm. of erythrosin in 100 c.c. of ammonia-water. For diphtheria. See Huni's m. Neisser's m., Ponder's m., and Roux's m. Dunham's mixture: Oil of cloves, 1 part; oil of thyme, 4 parts: a clearing reagent for sections in carmin or hematoxylin. eau de javelle: A concentrated solution of potassium hypochlorite. It is used as a corrosive in studying the choroid, iris, and pigmented

Ehrlich's method (for tuberculosis): 1. Stain with hot anilin-water gentianviolet for three to five minutes. 2. Decolorize with 33 per cent. nitric acid one-half to one minute. 3. Treat with 60 per cent. alcohol as long as color comes away. 4. Counterstain with methylene-blue. Ehrlich's acid hematoxylin: Hematoxylin crystals, 2 gm., are dissolved in absolute alcohol, 60 c.c; saturate with ammonia alum a mixture of glycerin, 60 c.c; water, 60 c.c., and glacial acetic acid. Mix the solutions and expose for a long time to light, until it acquires a deep-red color. Keep it in closely stoppered bottles. **Ehrlich's neutral s.**: A mixture of 1 part of a saturated aqueous solution of methylene-blue and 5 parts of saturated aqueous solution of acid fuchsin. Erythrocytes are stained fuchsin color, their nuclei black or lilac, eosinophil granules red, neutrophil granules violet, and leukocyte nuclei blackish. **Ehrlich's solution**: A bacterial staining solution prepared by mixing 4 gm. of pure anilin, 11 c.c. of saturated alcoholic solution of gentian-violet, and 100 c.c. of water. Ehrlich's triacid s.: and 100 c.c. of water. Entrich s trigged s.t. A stain containing acid fuchsin, orange G, and methyl-green. It stains erythrocytes orange, leukocyte nuclei greenish, eosinophil granules copper color, and neutrophil granules violet. Ehrlich's triglycerin s.: A solution, in 30 parts of glycerin, of 2 parts each of eosin, aurantia, and nigrosin. It stains erythrocytes orange, leukocytes greenish, their nuclei dark gray, and eosino-phil granules bright red. **Ehrlich-Biondi** triple s.: A stain containing rubin, orange G, methyl-green, prepared in concentrated aqueous solutions (rubin dissolves in the proportion of 1.5, orange G and methyl-green about 1:8). These concentrated solutions are combined in the following volumes rubin, 4; orange, 7; methyl-green, 8. The stock solution thus obtained is diluted with 50 to 100 times its volume of distilled water before using. The sections should be as thin as possible, and fixed to the slide by the water method. They remain for twenty-four hours in the stain, and are then washed either in pure 90 per cent. alcohol or in such with the addition of a little acetic acid (r to 2 drops to 50 c c), until the rinsing fluid is no longer colored. Before staining it is occasionally of advantage to treat the sections with acetic acid (2 1000) for one to two hours **Ehrlich-Weigert** method (for tubercle baculli). Place a dried coverglass preparation, film down, in the following soluviolet, 1.1 parts, absolute alcohol, 1 part; anilin water, 10 parts. Heat gently until steam rises, then allow to stand two to five minutes Decolorize for a few seconds in 1 part nitric acid and 3 parts water. Wash in 60 per cent. alcohol, then in water. Ehrlich-Westphal method (for mast-cells) Harden in weak alcohol Stain for twenty-four hours in a solution of 200 parts alum-carmin solution, 200 parts saturated solution of dahlia in absolute alcohol, 100 parts glycerin, 20 parts glacial acetic acid. Decolorize in absolute alcohol for twenty-four hours, oil, mount in Canada balsam. For entamoba. See Darling's m. and Mallory's s. eosin: Diffuse stain used in a 5 per cent. aqueous solution, especially as a contraststain with alum hematoxylin. It gives a rosy color, and brings out especially well red blood-corpuscles and muscle-fibers. **Erlicki's fluid:** A fixing solution containing potassium dichromate, 23 gm.; cupric sulphate, 0.5 gm.; and water, 100 c.c. It is quite similar to that of Muller's, except that it acts much more quickly. **Esmarch's method** for anaëro-cultures: Prepare a roll culture of the organism in glucose-gelatin on ice, and when the layer of gelatin is still cold and dispersed on the walls of the tube fill it with liquefied gelatin, solidify in cold water, and seal air-tight. Exner's method (demonstrating myelin sheaths): Place fresh pieces of brain or cord, not over 1 cm. thick, in a r per cent. aqueous solution of osmic acid, using at least 10 times as much fluid as the volume of the

specimen; on the second day change the osmic acid solution; after five or six days wash thoroughly in water; then dehydrate and embed; examine the specimens in slightly ammoniacal glycerin: the myelin sheaths appear gray to black. Farrant's gum-glycerin: A mounting medium: Glycerin, 50 c.c.; water, 50 c.c.; powdered gum arabic, 50 gm.; arsenous acid, 1 gm. Dissolve the arsenous acid in water; place the gum arabic in a glass mortar and mix it in the water; add the glycerin, and filter through the muslin or wet filter-paper. **Fiocea's method** (for spore-staining): Put 20 c.c. of a 10 per cent solution of ammonia into a watch-glass: add 10 to 20 drops of a saturated aqueous solu-tion of gentian-violet, fuchsin, methylene-blue, or safranin; warm the solution; a thinly spread and well-dried cover-glass is dipped for three to five minutes or more, washed in a 20 per cent. dilution of nitric or sulphuric acid, washed again, and counterstained with an aqueous solution of chrysoidin, malachite green, methylene-blue, vesuvin, or saf-ranin. For flagells. Bunge's m., Loffler's m., MacCrorrie's m., Muir's m., Neuman's m., Pit-field's m., Smith-Pitfield's m., and Williams' m. Flemming's solution: A solution for hard-ning histologic specimens, consisting of comic ening histologic specimens, consisting of osmic acid, 2 per cent.; aqueous solution, 4 parts, chromic acid, 1 per cent. aqueous solution, 15 parts; glacial acetic acid, 1 part. Flemming's triple s.: The tissue is fixed in acetic alcohol, stained in saturated aqueous solution of safranin for one hour, washed, stained in saturated aqueous methyl violet solution one-half hour, washed, and passed through orange acetone **Flexner's method** (1) (for typhoid bacilli). (a) Stain paraffin sections in Loffler's methylene-blue solution for two hours; in 1 1000 acetic acid solution for several minutes; dehydrate in absolute alcohol; clear in oil of cloves; xylol, xylol balsam. (b) Stain sections in Stirling's gentian-violet solution for ten minutes; in r 1000 acetic acid solution for several minutes; dehydrate in os per cent. alcohol; transfer to slide, blot, add foil of cloves to differentiate; wash in xylol, mount in xylol balsam (2) (For bacillus of leprosy): Stain in alum-hematoxylin; wash in water, carbolfuchsin for two to five minutes steaming or thirty to sixty minutes cold, wash in water; treat on slide with iodin solution; water, blot, clear, and differentiate in anilin oil, xylol, balsam. Fol's solution: This is a modification of Flemming's fixing solution, This is a modification of Flemming's fixing solution, consisting of osmic acid, I per cent. aqueous solution, 2 parts; chromic acid, I per cent. aqueous solution, 25 parts, glacial acetic acid, 2 per cent. aqueous solution, 5 parts, distilled water, 68 parts. Fontana's s. (for Spirochatla pallida): I. Fixing fluid acetic acid, I cc; solution of formaldehyd, U. S. P., 20 c.c.; distilled water, 100 c.c. 2. Mordant tannic acid, 5 gm.; phenol solution (I per cent), 100 c c. 3. A 0.25 per cent. solution of silver nitrate is prepared. Process: I. Prepare the slide by spreading material from syphilitic lesion very thinly on a clean slide, allowing it to dry very thinly on a clean slide, allowing it to dry yery thinly on a clean side, allowing it to dry spontaneously. 2. Fix by pouring on the fixing fluid, pouring it off after a few seconds; perform this process several times 3. Wash well in distilled water. 4. Flood with the mordant, apply gentle heat till steam arises, and continue this process for half a minute. 5. Wash thoroughly in distilled water. 6 Flood with the silver solution; then warm gently for half a minute, wash, blot, and dry. Mount in balsam. The spirochetes are stained jet black, and appear larger than when stained by ordinary methods **Fonte's method** (for acid-fast bacilli) Stain with carbolfuchsin, decolorize with 1 part absolute alcohol and 2 parts acetic acid, proceed as with the Gram method, counterstaining, however, with Bismarck brown. Acid-fast bacilli appear as red rods dotted with violet spots; bacilli which do not fully retain acid-fast properties appear as zigzag violet lines.

formalin (formol): A 40 per cent. solution of formaldehyd gas in water has been much used as a fixing fluid. It is best employed in the form of a

solution made by adding 10 parts of formalin to 00 parts of water or normal saline solution Small pieces of tissue remain in this solution for twelve to twenty-four hours; larger pieces or organs, a number of days or weeks, and are then transferred to 90 per cent. alcohol. **Fränkel's method**: A method for staining tubercle bacilli. The coverglass is stained with anilin-water fuchsin, placed in a mixture of saturated solution of methyleneblue in 50 parts of water, 30 of alcohol, and 20 of nitric acid. When the preparation seems blue, it is washed in pure water or in alcohol and acetic acid. Fränkel's mixture: Prepare dilutions in sterilized tubes of melted gelatin; pass hydrogen through the gelatin in the tubes to displace the air; make Esmarch rolls on ice and seal. Freud's gold s. (for nerve-fibers). Harden in Müller's or Ehrlich's fluid and follow with alcohol; embed in celloidin; stain section in equal parts of i per cent solution of gold chlorid and 95 per cent alcohol; wash in water; reduce in caustic soda, I part; distilled water, 6 parts, wash again; place in a 10 officent minutes; wash in water; treat with alcohol, oil, and Canada balsam. Friedländer's glycerin-hematoxylin: A staining preparation containing hematoxylin crystals, 2 gm.; potassium alum, 2 gm.; absolute alcohol, 100 c.c.; distilled water, 100 c.c.; glycerin, 100 c c. Dissolve the hematoxylin crystals in the absolute alcohol and the alum in the water; mix the two solutions and add the glycerin. The mixture is filtered and exposed for several weeks to the air and light, until the odor of alcohol has disappeared, and then again filtered. Sections are afterward washed in water, and are placed for a short time in acid alcohol if the nuclei are to be especially brought out. fuchsin: An anilin dye used for staining blood-corpuscles and bacteria. It is prepared as a saturated alcoholic solution (3 to 5 per cent.) and diluted as needed. Futcher and Lazew's s.: A stain for malarial sporozoa. Have ready a freshly prepared fixation-fluid consisting of a 025 per cent solution of formalin in 95 per cent, alcohol. The staining fluid is made of 20 cc. of Cogit's thionin in a saturated solution of 50 per cent. alcohol and a 2 per cent. aqueous solution of carbolic acid; stain with the supernatant liquid, which colors the parasites a reddish violet. **Gabbett's acid** blue: Methylene-blue, 1 to 2 gm; 25 per cent. sulphuric acid, 100 cc, and water. Gabbett's method (for staining the bacillus of tuberculosis): Stain with solution of carbolfuchsin with heat; wash in water and cover with Gabbett's methyleneblue for thirty seconds; then wash and mount. By this method the bacillus of tuberculosis is colored red, while other bacteria and cell-nuclei are stained bluc. Gasis's method (for tuber-culosis). 1. Boil crystalline bichlorid of mercury in a mixture of alcohol 5 c.c., water 5 c c., and eosin 1 gm until the stain is about to precipitate. 2. Flood the specimen with the above and heat one minute. 3. Treat with 1 gm. of sodium hydroxid and 0.5 gm. of potassium iodid in 100 c c. of 50 per cent. alcohol until the red color changes to a deep green. 4. Wash in 90 per cent. alcohol and then in distilled water. 5. Counterstain in the following mixture: methylene-blue 0.1 gm., hydrochloric acid I c.c., alcohol 20 c.c., and distilled water 80 c c. Gasperini's mixture: A nutrient medium for differentiating species of actinomyces: it consists of wheat flour, 150 gm.; water, 100 c.c.; magnesium sulphate, 0.5 gm.; potassium nitrate, 1 gm.; grape-sugar, 15 gm. gelatin-carmin: 4 gm. of carmin are stirred into 8 c.c of water and thoroughly ground. Enough ammonia is added to produce a dark-cherry color and render the whole transparent; 50 gm. of the best gelatin are soaked twelve hours in distilled water and then pressed out by hand and melted, at a temperature of 70° C., in a porcelain evaporating dish. The two solutions are mixed and stirred until the mixture becomes homogeneous. Drop a 25 per cent.

acetic-acid solution until the color begins to change to a brick red and the mass becomes slightly opaque. A single drop too much of the acid may spoil the whole. During this process the temperature is kept at 70° C., and constant stirring is maintained. Filter while still warm through flannel. preparation is used for injecting vessels. gentianviolet: An anilin dye used as a nuclear stain in a solution prepared by dissolving 0.5 gm. in 20 c.c. of 90 per cent. alcohol, 80 c.c. of distilled water, and r c.c. of glacial acetic acid. As a bacteriologic stain it is made up as a saturated alcoholic solution (5 per cent.) from which dilutions are made as required. **Gerlach's method** (for gold-staining nerve-fibers): Harden the tissues in a 1 to 2 per cent. solution of ammonium dichromate for one to three weeks; put sections in a 100 per cent, solution of the double chlorid of gold and potassium, very slightly acidulated of gold and potassium, very slightly acidulated with HCl, until they become slightly violet; wash in 2000 to 3000 parts of water and I part of HCl; put them for ten minutes in a 10 per cent. solution of HCl in 60 per cent. alcohol; finish with absolute alcohol, oil of cloves, and Canada balsam.

Giacomi's method: A method for staining the bacillus of syphilis. Color with hot anilin-fuchsin; wash with a dilute solution of iron chlorid; decolorize in a concentrated solution of iron chlorid; wash call in a concentrated solution of fron chlorid; wash in alcohol and finish with xylol and xylol-balsam. Giemsa's method (1) (for malarial parasites): The formula is azur II-eosin, 3 gm.; azur II, o.8 gm.; glycerin (Merck), 250 c.c.; methylalcohol (Kahlbaum I.), 250 c.c. The preparation is dried in air and fixed in methyl alcohol. To I c.c. distilled water, made slightly alkaline with potassium carbonate, add I drop of the fluid, and cover the preparation with this mixture for ten to fifteen minutes; wash in a stream of water; remove excess of water, dry in the air, and mount in bal-sam. (2) (For Spirochata pallida): Same as (1) except that to the water used for diluting the staining fluid 1 to 10 drops of a 0.1 per cent. solution of potassium carbonate is added. For gland-ors. See Kuehne's m., Loffler's m., and Schuetz's m. Goldhorn's s.: Heat 2 c.c. of methylene-blue solution and 2 gm. of lithium carbonate in 200 c.c. of distilled water. Cool, filter, make slightly acid with acetic acid, and add 0.5 per cent. solution of eosin until the solution is pale blue and slightly fluorescent. Wash the precipitate, dry, and dissolve to 1 per cent. in methyl alcohol. Golgi's mixed method (for staining ganglion-cells and dendritic and axis-cylinder processes): Harden as in the slow method, infra; transfer for three to eight days to a mixture of a 1 per cent. solution of osmic acid (2 parts) and a 2 per cent. solution of potassium dichromate (8 parts); finish in a 0.75 per cent. silver nitrate solution for twenty-four to forty-eight hours. The sections are dehydrated in alcohol, cleared in oil of cloves or oil of bergamot, washed with xylol, and mounted in xylol dammar. Golgi's quick method: Fresh pieces are placed in a mixture of 1 part of a 1 per cent. osmic-acid solution and 4 parts of a 3.5 per cent. solution of potassium dichromate. If the neuroglia is to be stained, let the pieces stay two or three days; if the nervecells, three to five days; nerve-fibers and collaterals, five to seven days. After this the sections are dehydrated in alcohol, cleared in clove or bergamot oil; wash off with xylol, mount in xylol dammar, and dry at 40° C. Golgi's slow method (for staining ganglion-cells and dendritic and axis-cylinder processes). The tissues are hardened for two to six weeks in a 2 per cent. potassium dichromate solution. Transfer for two to four days or more to a 0.75 per cent. solution of silver nitrate or a 0.5 per cent. solution of mercuric chlorid. For gonococcus. See Pappenheim's m. and Saathof's m. Goodpasture's s.: A stain used in differentiating leukocytes of marrow origin from those of lymphatic origin: alcohol, 100 c.c.; sodium nitroprussid, 0.05 gm.; benzidin, 0.05 gm.; başic fuchsin, 0.05 gm.; hydrogen peroxid, 0.5 c.c.

With the stain the cells of marrow origin show deep blue granules (peroxidase reaction). Gorden's method: This is a modification of van Ermengem's method, in which the preparations remain in the second bath for two minutes, are then transferred to the third bath for two minutes, and are then washed, dried, and mounted without being returned to the second bath. **Gram's method** (1) (for film preparations): 1. Dry and fix the film in the usual way. 2. Stain for five minutes with anilin-water gentian-violet. 3. Pour off excess stain and apply Gram's iodin solution for two or three minutes. 4. Decolorize with 95 per cent. alcohol as long as color comes away. 5. Wash in water and counterstain with Bismarck brown, dilute fuchsin, or safranin. Bacteria which decolorize when thus treated with alcohol are known as Gram negative; those which do not decolorize, as Gram positive. (2) (for parafin sections): Stain with anilin-gentian-violet for five to twenty minutes; wash in normal salt ror nve to twenty minutes; wash in normal salt solution or water; in iodin solution (1 or 2 · 300) one minute; wash in water, then alcohol; finish with xylol and xylol balsam. The bacteria are stained a deep blue. Methyl-violet modification of Gram's stain; Solution A. Anilin oil, 9 c.c., absolute alcohol, 33 c.c., and methyl violet in excess. Solution B is an aqueous solution of methyl violet. For use mix 1 part of A and a parts of R For use mix 1 part of A and 9 parts of B er. The mixed stain remains good several and filter. weeks. Gram's solution: A bacterial fixing solution consisting of 1 gm. of iodin crystals, 2 gm. of potassium iodid, and 300 c.c. of water. For Gram's 8. See anilin water, Gram-Weigerl m., Guenther's modification, Jensen's modification, methyl-riolet modification, Pellauf's modification, Sterling's modification, and Unna's modification.

Gram-Weigert method (1) (for staining trichophyta in hair): 1. Remove fat from the hair with ether. 2. Stain thirty minutes in a mixture of 15 ether. 2. Stain thirty minutes in a mixture of 15 parts of alcoholic solution of gentian-violet and 3 parts of anilin water. 3. Treat with iodin solution and then with anilin oil. (2) (for stains celloid), sections): Stain with lithium carmidehydrate with alcohol, and fasten to a sliw with ether vapor; then stain with anilin-gential-violet type to twenty minutes; wash in normal salt solution; treat with iodin solution, I to 2 parts to 100; wash in water; dry with blotting paper; dehydrate with anilin oil: treat repeatedly paper; dehydrate with anilin oil; treat repeatedly with xylol, and finish with xylol balsam. Günther's modification of Gram's method: After exposure to the iodin-potassium-iodid solu-tion the specimen is placed for one-half minute in alcohol, then for ten seconds in 3 per cent. hydrochloric acid alcohol, and finally, for complete decoloration, in pure alcohol. Before mounting the sections are cleared in oil of cloves or in xylol. Hansen's method (for spores): Prepare a film, fix, and stain with steaming hot carbol-fuchsin for five minutes; decolorize with 5 per cent acetic acid until the film is a light pink, and wash in water; stain three minutes with Loffler's methylene-blue; examine Harlows. Same as skeleton s. Harris's hematoxylin: 1 gm. of hematoxylin is dissolved in 10 c.c. of alcohol, 20 gm. of alum are dissolved in 200 c.c. of distilled water, and the hematoxylin solution is added. Bring the mixture to a boil and add 0.5 gm. of mercuric oxid. Cool the solution at once. Harrison's s. (for Pseudomonas radicicola): Take a loop of the mucilaginous or viscid growth from an agar culture of Pseudomonas radicicola two days to several months old, and spread it on a clean slide, lashing it out in slender tongues; let the film dry in air without killing or fixing, flood the film a moment with a saturated alcoholic solution of gentian-violet, wash under the tap, dry between folds of filter-paper, and examine with the oil-immersion lens. The mucilage in which the cells lie will be found deeply and evenly stained, and the bacteria scarcely stained at all, so that the preparation presents the appearance of a photographic negative. **Hastings's s.:** A mod-

ification of the Romanowsky method. **Heidenhain's hematoxylin s.** (for nuclei): Stain twenty-four to forty-eight hours in a 0.5 per cent. aqueous solution of hematoxylin dissolved by the aid of heat; place the sections in a 0.66 per cent. aqueous solution of potassium chromate for a day or two; wash in water thoroughly; treat with alcohol and then oil, and finish in Canada balsam. Held's method (for nerve tissue): Sections are warmed for one or two minutes in the following solution: 1 gm. erythrosin, 2 gm. acetone, 150 c.c. distilled water. Wash sections in water, and transfer to a solution consisting of equal parts of Nissl's methylene-blue solution and a 5 per cent. aqueous solution of acetone. Warm until the odor of acetone ceases. Decolorize in o.1 per cent. solution of alum until they are red. Dehydrate in alcohol, clear, and mount. **Heller's method** (for myelin sheaths). Harden with Muller's fluid or by the Weigert method; embed in celloidin; place sections in a r per cent. aqueous solution of osmic acid for ten minutes; wash in water; reduce in sodium sulphate, 125 parts; sodium carbonate, 70 parts; water, 500 parts; pyrogallic acid, 15 parts; wash in water, differentiate in an aqueous solution of potassium permanganate; decolorize with a r per cent. aqueous solution of oxalic acid; wash in water; finish with alcohol, oil, and Canada balsam. hemalum: 1 gm. of hematein is dis-This is poured into a solution of 50 gm. of alum in I liter of distilled water, and the whole well stirred. A thymol crystal is added to prevent the growth of fungus. After staining, sections or tissues are listilled water. hematoxylin. See washed ematoxylin, Delafield's hematoxylin, Ehrlich d hematoxylin, Friedlander's glycerin-hema-, Heidenhain's hematoxylin. hematoxylinosin method: osin method: Sections already stained in hematoxylin are placed for two to five minutes in a 1 to 2 per cent. aqueous solution of eosin or in a 1 per cent. solution of eosin in 60 per cent. alcohol. They are then washed in water, after which they remain a short time in absolute alcohol. hematoxylin-safranin method: Sections of preparations fixed with chromic-formic acid or solution of platinum chlorid are stained for a short time with Delafield's hematoxylin, then counterstained for twelve to twenty-four hours with saf-ranin, and washed with absolute alcohol until no osmic acid, 2 per cent. aqueous solution of platinic chlorid, per cent. aqueous solution of platinic chlorid, 15 parts; glacial acetic acid, I part. **Hermann's 8.** (for tuberculosis): 1. Dry and fix as usual. 2. Apply the following mixture and heat for three minutes: 3 per cent. alcoholic solution of crystal violet, I part and I per cent. solution of ammonium carbonate, 3 parts. 3. Decolorize with 10 per cent nitric acid or with 5 per cent. sulphuric acid. 4. Wash in alcohol, then in water, and counterstain with bismarck brown. Herxheimer's method (for staining elastic fibers): Harden in Müller's fluid; alcohol and other fixatives are not so good. Stain in hematoxylin, 1 part; absolute alcohol, Stain in hematoxylin, I part; absolute alcohol, 20 parts; water, 20 parts; saturated solution of lithium carbonate, I part. Decolorize in solution of chlorid of iron; wash in water; treat with alcohol, oil, and Canada balsam. Elastic fibers are stained black, the surrounding tissues pale blue. **Hiss's method** (for capsules of bacteria): Mix a small portion with a drop of serum on a cover-glass; then spread, and allow to dry in the air, and fix by drawing through flame. Then treat in either of the following ways: I Stain in treat in either of the following ways: 1. Stain in one-half saturated aqueous solution of gentianviolet for a few seconds; then wash, mount, and examine in 0.25 per cent. of aqueous solution of potassium carbonate. 2. Stain in a 5 to 10 per cent. solution of gentian-violet, steaming for a few seconds, then wash in a 20 per cent. solution of copper sulphate, blot with filter-paper, dry thoroughly, and mount in balsam. Hoyer's method

with thionin: Harden in corrosive sublimate, through xylol, chloroform, and 95 per cent. alcohol to free from paraffin. Put into a 5 per cent. aqueous solution of mercuric chlorid for three to five minutes; stain in a weak solution of thionin; clear in a mixture of oils of cloves and thyme; treat with turpentine oil or cedar oil and finish with balsam. **Hunt's method** (for Bacillus diphtheria): Stain in saturated aqueous solution of methylene-blue one minute without heating; wash in water; cover with aqueous solution of tannic acid, to per cent., for ten seconds; wash in water; stain in saturated aqueous solution of methyl orange one minute; wash in water; dry and mount in balsam. **Huntoon's method** (1) (for spores) Preparation of stain: (1) Acid fuchsin (Grübler), 4 gm.; aqueous solution acetic acid (2 per cent.), 50 (2) Methylene-blue (Grubler), 2 gm.; aqueous solution acetic acid (2 per cent.), 50 c.c. two solutions, let stand for fifteen minutes, and filter off the voluminous precipitate through moistened filter-paper. The filtrate is the staining fluid. Make a rather thick smear, dry, and fix in the usual way; apply as much of the stain as will remain on the cover-glass, and steam over a flame for one minute, replacing the stain lost by evaporation; wash in water; the film is bright red; dip the preparation a few times into a weak solution of sodium carbonate (7 or 8 drops of saturated solution in a glass of water). Too long application of the carbonate will cause the spores to be blue. The instant the film turns blue, rinse well in water; dry, mount, and examine. Spores are deep red, bodies of bacteria are blue. (2) (for capsules): In making the film use a 3 per cent. solution of nutrose as a diluent. Dry in the air, fix, and stain with the following: concentrated lactic acid, 0.5 c.c.; 1 per cent. solution of acetic acid, r c.c.; saturated alcoholic solution of fuchsin, I c.c.; carbol-fuchsin, cononic solution of fuchsin, I c.c.; carboi-fuchsin, I c.c., and 2 per cent. solution of carbolic acid, 100 c.c. India-ink method (for Spirochæta pallida): A loopful of serum from a syphilitic lesion is mixed with a drop of India ink and spread out on the slide in the thinnest possible layer; the slide is then allowed to dry. The field is stained a brownish yellow, the blood-cells and spirochetes appear white. **Japanese method** chetes appear white. Japanese method (for fixing paraffin sections): A little of Mayer's albumin is placed on the slide and so spread about that hardly a trace of the substance can be seen. The slide is then put in a thermostat heated to 70° C. The albumin soon coagulates, after which the sections are fixed to the slide by the water method. To every 30 c.c. of the distilled water a drop of gum arabic or glycerin-albumin may be added. Jenner's 8. (for blood-corpuscles): A 1.25 per cent. aqueous solution of Grubler's yellow, water-soluble eosin is added to a 1 per cent. aqueous solution of Grübler's methylene-blue. The precipitate is allowed to stand twenty-four hours, then washed, dried, and dissolved to 0.5 per cent. in methyl alcohol. It colors erythrocytes terra cotta, nuclei of leukocytes blue, neutrophil granules purplish red, carminophil granules light red, purplish red, carminophin granules and basephil granules dark violet, and bacteria and malarial parasites blue. **Jensen's modification of Gram's s.:** 1. Dry and fix in the usual way. 2. Stain with a 5 per cent. solution of methyl violet 6B one-half minute. 3. Pour off excess of stain and apply Lugol's solution two or three times. 4. Pour off excess of iodin and wash with 98 per cent. alcohol and then with absolute alcohol. Counterstain with neutral red 1 gm., glacial acetic acid 2 c.c., and water 1000 c.c. Johne's method (for staining bacterial capsules): The preparations are stained in a warmed 2 per cent. solution of gentian-violet, rinsed in water, decolorized for from ten to twenty seconds in a 2 per cent. solution of acetic acid, and are washed and mounted in water. **Kaiserling's method:** A procedure for preserving the natural colors in museum preparations. Fix one to five days in

formaldehyd, 200 c.c.; water, 100 c.c.; nitrate of potassium, 15 gm.; potassium acetate, 30 gm.; drain and lay in 80 per cent. alcohol one to six hours and in 95 per cent. alcohol one to two hours; preserve in potassium acetate, 200 gm.; glycerin, 400 c.c.; water, 2000 c.c. Kallius's method (for fixing Golgi stains). Place sections for several minutes in 1 part of a developer composed of hydrochinon, 1 part; sodium sulphite, 8 parts; potassium carbonate, 1.5 parts; water, 575 parts; and about five-sixths as much alcohol, until the sections become gray or black. Treat with 70 per cent. alcohol for ten to fifteen minutes, and with a 20 per cent. aqueous solution of sodium hyposulphite; soak in water twenty-four hours; finish with alcohol, oil, and Canada balsam. Klotz's s. (for fat acid crystals). Fix tissues; precipitate fatty acid radical in chromalum, 25 gm., and 7 per cent. formaldehyd, 100 c.c.; dissolve by boiling, and while cooling add glacial acetic acid, 5 c c., and then powdered neutral acetate of copper, 5 gm; wash in water, cut sections, and stain them in a saturated solution of hematoxylin in 60 per cent. alcohol for six hours; wash in water and treat with a mixture of potassium ferricyanid, 2.5 gm.; borax, 2 gm; and distilled water, 100 c.c. Koch-Ehrlich **solution:** A staining solution consisting of 100 parts of a filtered aqueous solution of anilin oil, no parts of absolute alcohol, and 11 parts of a concentrated alcoholic solution of fuchsin, methyleneblue, or gentian-violet. **Kronecker's fluid:**An indifferent mounting fluid consisting of distilled water, 100 c.c; sodium chlorid, 5 gm; sodium carbonate, 0.06 gm. Krönig's varnish: Used in sealing mounted objects between the cover-slip and the slide. Melt 2 parts of wax and stir in 7 to 9 parts of colophonium; filter while hot. **Kühne's method** (1) (for staining glanders bacıllus): The sections are placed for half an hour in a stain consisting of methylene-blue. 1.5; alcohol, 10; and 5 per cent aqueous solution of phenol, 100. They are then washed in water, decolorized in hydrochloric acid immersed in a solution of lithium carbonate, placed in a bath of distilled water, dipped in absolute alcohol colored with a little methylene-blue, dehydrated in anilin oil containing methylene-blue, washed in anilin oil, then in light ethereal oil, cleared in xylol, and mounted in balsam (2) (For paraffin sections): Stain the sections slightly in alum-hematoxylin; wash in water, treat with a 2 per cent. aqueous solution of anilin hydrochlorate for fifteen seconds; wash in water; treat with absolute alcohol; finish with xylol and xylol bal-sam. Kutscher's modification of Gram's method (for sections). Prepare a concentrated solution of gentian-violet in a mixture of anilin water, 1 part; alcohol, 1 part; 5 per cent. carbolic water, I part. Of this solution a drop at a time is added to a watch-glass full of water until a layer forms upon the surface. In this the sections are placed, and after ten to fifteen minutes are washed in water, then placed in the iodin solution for a minute, then in alcohol, xylol, and mounted in balsam. Langhans's method: A method for obtaining permanent mounts with iodin. Harden in alcohol; stain in Lugol's solution; dehydrate with I part of iodin tincture to 3 or 4 parts of absolute alcohol; clear and mount in oil of Cretan origanum. Leishman's s.: Mix a 1 per cent. solution of methylene-blue and a 0.1 per cent. solution of eosin. Filter, wash, and dry the precipitate and dissolve in pure methyl alcohol to 0.15 per cent. Lenhossek's method (for stanning ganglion-cells): Harden sections in 90 per cent. alcohol; then in 96 per cent., or in formaldehyd, followed by alcohol. Do not keep too long in alcohol. For leprosy. See Baumgarten's m., Flexner's m., and Much's m. Levaditi's method (for Spirochæta pallida in sections): Sections are placed in 10 per cent. formol for twenty-four hours; rinsed in water, and placed in 95 per cent. alcohol for twenty-four hours; placed in distilled water until they sink to the bottom; placed in a 1.5 to 3 per cent. solution of silver nitrate and kept in incubator at 38° for three to five days; washed in distilled water and placed in following solution for twenty-four to seventy-two hours: pyrogallic acid, 2 to 4 gm.; formol, 5 c.c.; distilled water, 100 c.c. lithiumcarmin: A staining mixture containing carmin, 3 to 5 gm., in a saturated solution of lithium carbonate, 100 c.c. litmus whey: The casein is precipitated from milk by producing a feeble acid reaction with dilute hydrochloric acid. The filtrate is boiled, filtered, neutralized, and mixed with litmus. Löffler's method (for staining glanders bacillus in sections) Stain paraffin sections twenty minutes in Loffler's methylene-blue solution, or in equal parts of a 1. 10,000 KOH solution, and anilin-gentian-violet; place for five seconds in 10 c.c. of distilled water containing 2 drops of concentrated sulphuric acid and 1 drop of 5 per cent. oxalic acid. Löffler's method for flagella: Mordant the preparation for one minute with a fresh filtered solution made of 10 gr. of tannic acid in 50 c.c. of water, 2.5 c.c. of a cold saturated solution of ferrous sulphate, and o 5 c c. of an alcoholic or aqueous solution of fuchsin or gentian-violet. Heat for one minute on the cover-glass without boiling; wash the preparation, and stain with a freshly prepared and filtered solution of anilingentian-violet or with anilin-fuchsin. Löffler's method for sections: Place in a caustic potash solution (1 10,000) for five to ten minutes; stain in Loffler's methylene-blue solution, or in equal parts of anilin-gentian-violet, and the same caustic potash solution twenty minutes, then five seconds in distilled water (10 c.c.) with 2 drops of sulphuric acid and 1 drop of 5 per cent oxalic acid, wash quickly in water; follow in succession with absolute alcohol, xylol, and xylol balsam Löffler's methylene-blue solution: Saturated solution of methylene-blue in alcohol, 30 c.c.; aqueous solution of caustic potash (1 10,000), 100 c c. Löffler's mixture: Glucose bouillon, 1 part; beef blood-serum, 3 parts: a culture-medium for use in slants. Löwit's formic-acid methods. Place bits of fresh tissue in a mixture of formic acid. (1 part) and water (1 to 2 parts) until they becom transparent; put in an aqueous solution of gold chlorid, 1 to 1.5 parts to 100 parts of water, then in formic acid, 1 part to 3 of water, for twenty-four hours; in concentrated formic acid twenty-four Finish and preserve in glycerin or balsam. Lustgarten's method: A method for staining the bacillus of syphilis. Treat for twenty-four hours with anilin-gentian-violet, and keep for two hours in a thermostat at 40° C.; decolorize completely with potassium permanganate (o 5 per cent. aqueous solution) and in an aqueous solution of sulphurous acid; wash and finish with alcohol, clove oil, and Canada balsam. MacConkey's s. (for bacterial capsules) Rub in mortar with 1000 c.c. of distilled water, o 5 gm. of dahlia, and 1.5 gm. of methyl-green; add 10 c c of saturated alcoholic solution of fuchsin, and 90 c.c. of distilled water. MacCrorrie's s. (for flagella): A mixture of 10 c.c of saturated alcoholic solution of night blue, 10 c c. of saturated aqueous solution of potash alum; and 10 c.c. of a 10 per cent. aqueous solution of tannin. For malaria. See Futcher and Lazew's m., Giemsa's m., Romanowsky's m., and Wright's m. Malassez's method (for neuroglia). Stain in ammoniacal picrocarmin, treat with a 40 per cent. potassa solution for ten minutes, wash in distilled water, treat with concentrated acetic acid, mount. Mall's method (for reticulum) lum): Frozen sections of fresh tissue 40 to 80 µ thick are digested for twenty-four hours in a solution of 5 gm. pancreatin, 10 gm. sodium bicarbonate, and 100 c.c. of water; wash in water; place in test-tube half full of water, and shake thoroughly; spread on slide and allow to dry; allow a few drops of a solution of 10 gm. of picric acid, 33 c.c. of absolute alcohol, and 300 c.c. of water to dry on the surface, stain for half an hour in a solution of 10 gm of acid fuchsin, 33 c.c. of absolute alcohol,

and 66 c.c of water; wash in picric acid solution; treat with alcohol, xylol, balsam. Mallory's differential s. (for Amæba coli): Harden in alcohol; stain sections in a saturated aqueous solution of thionin three to five minutes; differentiate in a 2 per cent. aqueous solution of oxalic acid for onehalf to one minute; wash in water, clear in oil of Cretan origanum; wash with xylol; finish with xylol balsam; remove to a 5 per cent. aqueous solution of ammonium bichromate four to six days in the incubator at 37° C., or for three or four weeks at room-temperature; change solution on the second day; place directly in alcohol; embed in celloidin; fasten sections to slide by means of ether vapor; stain in anilin-gentian-violet fifteen to twenty minutes, wash with normal salt solution; treat with iodin solution; wash and dry with paper, decolorize with xylol and anilin in equal parts, wash with xylol, finish with xylol balsam. Mallory's differential s. (for neuroglia fibers) (1) Fix in a 4 per cent. aqueous solution of formaldehyd four days or more; place in a saturated aqueous solution of picric acid four days or more. (2) (By means of phosphotungstic-acid hematoxylin) Fix and mordant tissues in exactly the same way as before given; stain in phosphotungstic-acid hematoxylin four to twenty-four hours; wash in water; treat with alcohol, and next with oil of Cretan origanum; finish with xylol balsam. Mallory's method (1) (for actinomyces) Stain sections in a saturated aqueous solution of eosin for ten minutes or more; wash in water, stain two to five minutes in anilingentian-violet, wash off with normal salt solution; follow with 10din solution one minute; then with water; clear with anilin oil, treat with changes of xylol, and follow with xylol balsam (2) (For actinomyces). Stain in alum cochineal three to five minutes; wash with water; dehydrate in 95 per cent. alcohol, fasten section to slide with ether vapor; apply anilin-gentian-violet five to twenty minutes; wash with water, dry with filter paper; use anilin saturated with fuchsin one to three minutes, wash the fuchsin out with pure anilin until the clubs are sharply differentiated; watch the process under the low power of the microscope. Apply several changes of xylol; finish with xylol balsam. Stain lightly in alum cochineal three to five minutes; wash in water, dehydrate with alcohol, fasten on slide with ether vapor, treat five to twenty minutes with anilin-gentian-violet, wash off with water; dry with filter-paper, test one Mallory's s. (for elastic fibers) Harden in alcohol, stain in phosphotungstic-acid hematoxylin twenty-four hours, wash in water, treat with alcohol, and finish with oil and Canada balsam. Mandelbaum's method (intra vitam staining of Spirochata pallida) To a hanging drop of serum is added a loopful of Loffler's methylene-blue solution along with a loopful of decinormal salt solution Marchi's fuid: Muller's fluid, 2 parts; osmic acid, 1 per cent. aqueous solution, 1 part: a fixing reagent.

Marchi's method (for degenerated nerve-fibers):
The specimen is placed in Marchi's fluid, when healthy fibers appear yellow, but degenerated ones show rows of black spots Marx's s: A stain containing eosin, potassium hydrate, and quinin. May-Grünwald s.: A o.i per cent solution of methylene-blue and of cosin is allowed to stand a few days. The precipitate is washed, dried and dissolved in methyl alcohol to saturation. May-Grünwald solution: An alcoholic neutral mixture of methylene-blue and eosin. Mayer's acid hemalum: Mayer's hemalum with 2 per cent. of glacial acetic acid added. Mayer's glycerin-albumin mixture: A mixture for affixing paraffin sections to slides, consisting of equal parts of white of egg and glycerin, with a little camphor or carbolic acid Mayer's glycerin-alum-hematein solution: Hematein, 0.4 gm, rubbed with glycerin, 5 c.c.; glycerin, 30 c.c.; water, 70 c.c. Mayer's hemalum: Hematein, or its ammonia salt, 1 gm.; 90 per cent. alcohol, 50 c.c.; alum, 50 gm.; water,

1000 c.c.; thymol, 1 crystal. Mayer's muchematein: Hematein, o.2 gm.; aluminum chlorid, o.t gm.; glycerin, 40 c c.; water, 60 c.c. Meirowsky's method (for Spirochata pallida): A paste is made consisting of methyl-violet and salt solution. This is rubbed into the surface of a syphilitic chancre. In the serum which exudes stained spirochætæ will be found. methyleneblue: An anilin dye which is much used as a staining agent. It is prepared in a saturated staining agent. It is prepared in a saturated solution (7 per cent.) in absolute alcohol, which is diluted for use. See Gabbet's solution, Kuhne's solution, Loffler's solution, Sahli's solution, Unna's solution. methyl-green-pyronin s. Same as solution. methyl-green-pyronin s. Same as Unna-Pappenheim s. methyl-violet stain: Anilin dye much used as a bacteriologic stain. It is made up as a saturated alcoholic solution from which dilutions are made as needed. It is used for staining amyloid substance, nuclei, and bacteria, which are colored pink. It is employed in a 0.5 to 2 per cent. aqueous solution. **Michaelis's method:** Stain the specimen fifteen minutes with the following mixture: Dissolve 2 gm. of methyleneblue in 200 c.c. of water and add 10 c c. of a normal solution of sodium hydroxid. For use add 1 part of this to 5 parts of a o 1 per cent. solution. **Michaelis's s.:** A mixture of alcoholic solution of methylene-blue and a solution of eosin in acetone stains the blood-corpuscles like Jenner's stain. Moeller's method (for spore staining) The cover-glass, dried in air, is placed for two or three minutes in absolute alcohol, then rinsed in water, and kept in chloroform two minutes. It is rinsed in water and treated with 5 per cent. solution of chromic acid. It is then rinsed in water and stained with carbolfuchsin solution, heated slowly until the fluid boils. It is decolorized in a 5 per cent. solution of sulphuric acid, washed in water, and stained in aqueous solution of methylene-blue or malachite-green, rinsed again, dried, and mounted in Canada balsam. Morris's s. (for vegetable parasiles) 1. Ether, or alcohol and ether equal parts. 2. Stain in solution of 5 per cent. gentian-violet in 70 per cent. alcohol, five to thirty minutes. 3. Iodin solution, one minute. 4. Anilin. 5. Anilin. 6. Xylol 7. Xylol balsam. Much's method (for tubercle bacilli). Methyl-violet B (Grubler), saturated alcoholic solution Carbolic acid, 2 per cent. watery solution. Add 10 c.c. of methylviolet solution to 90 c.c. carbolic acid solution. Prepare smears rather thin and as even as possible. Dry in air Fix gently in flame. Cover slide with methyl-violet solution and heat to boiling-point once or twice. Wash stain off in water. Pour on slide Lugol's solution, and keep it covered with it for five minutes Wash off with water. Pour on a 5 per cent. solution of pure nitric acid for one minute. Pour off and replace for ten seconds by a 3 per cent, pure hydrochloric acid solution. Put immediately, without washing, in a mixture of equal parts of pure acetone and absolute alcohol; decolorize by moving the slide until the smear is colorless, and wash off with distilled water; dry gently with filter-paper, and slowly but thoroughly dry over a flame. Counterstain with dilute fuchsin, Bismarck brown or safranin. Muir's method (1) (for flagella): A modification of Pitfield's method. The mordant consists of a mixture of 10 c.c. of 10 per cent. aqueous solution of tannic acid; 5 c.c. saturated aqueous solution of corrosive sublimate; 5 c.c. of saturated aqueous solution of alum, and 5 c.c. of carbolfuchsin. The stain consists of 25 c.c. of saturated aqueous solution of alum and 5 c.c. of saturated alcoholic solution of gentian-violet The emulsified growth is spread thin on a watch-glass, dried, fixed with heat, treated with the mordant, washed, dried, and stained. (2) (For capsules): 1. Mordant the dried film for two minutes with the following mixture: Saturated solution of bichlorid of mercury 2 parts, 20 per cent. solution of tannin 2 parts, and potassium alum solution 5 parts. 2. Wash with water, then with alcohol, then with water. 3. Stain two or three

minutes with warm carbolfuchsin. 4. Wash with water and again apply the mordant. 5. Wash with water and again apply the mordant. 5. Wash with water and stain for two minutes with a saturated aqueous solution of methylene-blue. 6. Decolorize in methyl alcohol and clear in xylol. Müller's fluid: A hardening solution consisting of potassium dichromate, 2 to 2.5 gm.; sodium sulphate, 1 gm.; water, 100 c.c. Neisser's method (for diphtheria): 1. Dry and fix the smear as usual. 2. Stain for two to five seconds with the following: methylene-blue, 1 gm. absolute alcohol, 20 c.c.; glacial acetic acid, 50 c.c.; and water to 1000 c.c. 3. Wash in water and counterstain with 0.4 per cent. solution of bismarck brown five seconds.

Neuman's s. (for flagella) Tannic acid, 1 gm.; potassium alum, 1 gm.; distilled water, 40 c.c. To this mixture add 0.5 gm. of night-blue dissolved in 20 c.c. of absolute alcohol. Filter, and use the filtrate for the staining fluid. Stain the preparation two or more minutes; wash in water; stain with saturated aqueous solution of gentianviolet for two minutes; wash and mount. Ni-colle's carbol-gentian-violet. See carbolgentian-violet. Nicolle's carbol-thionin-blue. See carbol-thionin-blue. Nicolle's method: A method of staining in sections. Loffler's blue, one to three minutes; wash in water; 10 per cent. solution of tannic acid, a few seconds; wash in water; absolute alcohol, oil of cloves, xylol, Canada balsam. nigrosin: Anilin blue-black, an anilin dye used as a stain for the study of the central nervous system, having a special affinity for ganglion-cells. The tissue is stained in a concentrated aqueous solution for from five to ten minutes. It is then decolorized and dehy-drated in alcohol, and finished in oil and Canada Nissl's method (for ganglion-cells): Harden tissues in pieces not over 1 to 1.2 cm. across in 96 per cent. alcohol; cut section as follows: remove excess of alcohol with filter-paper; dip base of specimen in thick celloidin; mount on block; harden in 96 per cent. alcohol; moisten at night with 96 per cent. alcohol; make sections less than 100 mm. in thickness; preserve in 96 per cent. alcohol. Transfer sections to slides, dry with filter-paper; apply oil of cajuput; wash with a few drops of benzin; add a little benzin-colophonium; heat in a flame until the benzin is expelled; cover slip and warm the slide; see that the colophonium is spread evenly, and mount. Nocht's method: Stain specimen five to ten minutes in the following: Mix I per cent. solution of methylene-blue and 0.5 per cent. solution of soda and keep at 50° to 60° C, for a few days. Cool and add a mixture of 2 to 3 drops of a 1 per cent. solution of eosin and 1 to 2 c.c. of water, drop by drop, until the eosin tint disappears. Noniewicz's method: Stain in Löffler's methylene-blue solution two to five minutes; wash in water; decolorize one to five seconds in 0.5 per cent. acetic acid, 75 parts; 0.5 per cent. aqueous solution of tropeolin, 25 parts; wash in water; dehydrate the section on a slide with filter-paper, then in air, and then over a small flame; clear by dropping xylol on it repeatedly; finish in xylol balsam. Oppenheim and Sachs's method (for Treponema): Very thin air-dried films are stained for from thirty seconds to three minutes with carbol-gentian-violet (saturated alcoholic solution of gentian-violet, 10 c.c.; 5 per cent. phenol, 90 c.c.). Previous fixation is not necessary. orcein: A vegetable dye obtained from certain species of lichens, and used mainly for staining elastic fibers. It is soluble in alcohol. Orth's discharging fluid: A fluid consisting of hydrochloric acid, r c.c.; acid alcohol, r c.c.; and 70 per cent. alcohol, 90 c.c.

Orth's fluid: Müller's fluid plus 4 per cent. of formaldehyd: a general fixing reagent. Orth's lithium-carmin: Carmin, 2,5 to 5 gm.; saturated of lithium-carmons. aqueous solution of lithium carbonate, roo c.c.; thymol, a crystal: a carmin stain. osmic acid: A reagent that kills quickly, fixes exceedingly well, and even colors certain tissues. Only small pieces can be fixed in this fluid, as it does not easily

penetrate the tissues. It is ordinarily used in a a per cent. aqueous solution, the objects remaining immersed twenty-four hours. They are then washed in running water for the same length of time, after which they are transferred to 90 per cent. alcohol. Very small objects may be treated with osmic acid in the form of vapor (vaporization). This is done as follows. A very small quantity of osmic acid solution is put in a small dish. The object is then suspended by a thread in such a way that it does not come in contact with the fluid. The dish should be covered with a well-fitting lid. Pal's modification of Weigert's myelinsheath s.: Fix as for Weigert's method, keep sections for some hours in a 0.5 per cent. aqueous solution of chromic acid, or for a longer time in a 2 to 3 per cent. solution of potassium dichromate; transfer to Weigert's hematoxylin solution twentyfour to forty-eight hours; wash in water containing I to 3 per cent. of a saturated aqueous solution of lithium carbonate until the sections appear of a uniform deep blue; differentiate in a 0.25 per cent. aqueous solution of potassium permanganate until the gray matter looks brownish-yellow: transfer to a solution containing 1 part of oxalic acid and 1 part of potassium sulphite in 200 parts of water, until the gray matter is colorless, or nearly so; wash thoroughly in water; dehydrate in 95 per cent. alcohol, finish in oil and Canada balsam. Paltauf's modification of Gram's s.: Absolute alcohol, 7 c.c., distilled water 90 c c, and anilin oil 3 to 5 c.c. Shake thoroughly, filter, and add gentian-violet 2 gm. Allow to stand twenty-four hours and filter. Use as the regular Gram stain. **Pappenheim's method** (for tuberculosis) I Stain the fixed film in carbolfuchsin for three Pappenheim's solution three or four times. 3. Wash in water, dry, and mount. Pappenheim's **solution** (for tubercle bacilli). I part rosolic acid is dissolved in 100 parts absolute alcohol, methyleneblue is added to the point of saturation; to this 20 parts of glycerin are added. Pappenheim's 8. (for differentiating between basophilic granulations of red cells and nuclear fragments): Stain I. Carbolic acid, 0.25 c.c., distilled water, 100 c c.; methyl-green, 1 gm. Stain II. Carbolic acid, 0.25 c.c.; distilled water, 100 c.c.; pyronin, 1 c.c.: 15 c.c. of I and 35 c c. of II; are mixed and filtered, and the blood-smear is fixed by heat and stained for a few seconds in the filtrate. Basophil granules are stained bright red; nuclear fragments, deep greenish blue. Pappenheim-Saathof methylgreen s. (for gonococcus) Methyl-green, 0.15 gm.; pyronin, 0.5 gm.; 95 per cent. alcohol, 5 c.c.; glycerol, 20 c.c.; and 2 per cent. solution of carbolic acid, 100 c.c. paracarmin: A stain consisting of a mixture of carminic acid, 1 gm.; aluminum chlorid, o 5 gm.; calcium chlorid, 4 gm.; alcohol, 70 per cent, 100 c.c. Paracarmin is peculiarly adapted to the staining of large objects. Specimens are washed in 70 per cent. alcohol, with the addition of 0.5 per cent. aluminum chlorid, or 2.5 per cent. glacial acetic acid in case of overstaining.

Perl's s. See Perl's test, under tests.

peroxidase s. See Good pasture's s. Pfeiffer's method: A method for staining bacteria in tissues by staining for half an hour in diluted Ziehl's solution, transferring to absolute alcohol made fully acid with acetic acid. As soon as the section begins to take on a reddish-violet color Pianese's solution: A fixing reagent made as follows: Mix 15 c.c. of a 1 per cent. aqueous solution of platinum and sodium chlorid, 5 c.c. of a 2 per cent. aqueous solution of chromic acid, 5 c.c. of a 2 per cent. aqueous solution of osmic acid, and 1 drop of formic acid. Pianese's staining solution and method: (I) Carmin and picronigrosin: Stain in neutral and lithium-carmin; decolorize in acid alcohol; wash in water; absolute alcohol; anilin-gentian-violet, ten min-utes; absolute alcohol so long as any color is

discharged; saturated aqueous solution of picric acid and nigrosin, five minutes; decolorize in a r per cent. alcoholic solution of oxalic acid; water, several minutes; absolute alcohol; oil of berga-mot; balsam. Nuclei, red; cell-protoplasm, light olive-green; connective tissue, dark olive-green; elastic fibers, bluish; bacteria, blastomycetes, violet. (II) Methylene-blue and eosin in borax solution: Keep three solutions on hand. (a) satusolution: Keep three solutions on hand. (a) saturated solution of borax, (b) 0.5 per cent. solution of "bluish eosin" in 70 per cent. alcohol; (c) saturated aqueous solution of borax. For use, mix together 2 parts of the filtered solution a to 1 of b and 2 of c. The steps of the staining process are as follows: (1) absolute alcohol; (2) staining colutions are as follows: (1) absolute alcohol; (2) staining solutions. solution ten to twenty minutes; (3) decolorize in a I per cent. solution of acetic acid; (4) wash in water; (5) absolute alcohol; (6) xylol; (7) xylol balsam. Nuclei, blue; red blood-globules, cell-protoplasm, granules of eosinophils, connective tissue, etc., are stained rose-red. (III, a) Malachite green, acid fuchsin, and nigrosin: Malachite green, 1 gm.; acid fuchsin, 4 gm.; nigrosin. Installing gicen, 2 gm.; acid fuchsin, 4 gm.; nigrosin, 1 gm.; water, 50 c.c.; alcohol saturated with copper acetate, 50 c.c. 1. Absolute alcohol. 2. Stain in 20 drops of the above solution diluted with 10 c.c. of distilled water for twenty-four hours. 3. Decolorize in a water for twenty-four hours. 3. Decolorize in a 0.5 per cent. solution of oxalic acid. 4. Wash in water. 5. Absolute alcohol. 6. Xylol balsam. Resting nuclei are stained light red; protoplasm, reddish yellow; in the karyokinetic figures, nuclein green, fibrillæ of the achromatic spindle and of the mitoma, bright red; centrosome and polar bodies, red; the rest of the cell-body, a reddish yellow. (III, b) Malachite green, acid fuchsin, and Martin's yellow: Malachite green, 5 gm.; acid fuchsin, 1 gm. Martin's yellow, 0.01 gm.; distilled water, 150 c.c.; alcohol, 96 per cent., 50 c c. 1. Stain in the solution, without diluting, half an hour. 2. Absolute alcohol. 3. Xylol. 4. Xylol balsam. Nuclei of resting and dividing cells, green; cell-protoplasm, connective tissue, etc., rose-colored; cancer bodies, mainly red, but in masses. (IV) Acid fuchsin and picronigrosin: Saturated alcoholic solution of acid fuchsin, 6 drops; picronigrosin, 8 drops; distilled water, 10 c.c. Treat with 70 per cent. alcohol; stain in the solution six hours; decolorize in dilute acetic acid; absolute alcohol; xylol, xylol balsam. Resting nuclei, red; nuclein of karyokinetic figures, yellow; cell-protoplasm, dark olive-green; cancer bodies, olive-gray, but some may be ruby-red or partly so. (V) Luchtgrun and hematoxylin: Ehrlich's acid hematoxylin, 15 c.c.; saturated solution of lichtgrun in 70 per cent. alcohol, 5 c.c.; distilled water, 15 c.c. Treat with distilled water; stain in above mixture thirty minutes; wash in several waters; alcohol; oil of bergamot; balsam. Nuclei, green; cancer bodies take hematoxylin stain. (VI) Acid fuchsin and hematoxylin: Ehrlich's acid hematoxylin, 15 c.c., in 70 per cent. alcohol, 15 c.c.; distilled water, 15 c.c.; stain as in V. Nuclei, red; protoplasm, brick-red; cancer bodies take hematoxylin stain. picric acid (fixing medium): Small and mediumsized objects (up to 1 cm.) are fixed for twenty-four hours in a saturated aqueous solution of picric acid (about 0.75 per cent.), although an immersion lasting for weeks is not detrimental, especially if the objects be of considerable size. The tissues the objects be of considerable size. The tissues are transferred to 70 per cent or 80 per cent alcohol, in which they remain until the alcohol is not colored by the picric acid. They are then preserved in 90 per cent. alcohol. picrocarmin. See Ranvier's picrocarmin. picrofuchsin. See van Gisson's solution. Piffard's method for living bacteria): Distilled water, 100; pure potassium cyanid, 1; dry potassium carbonate, 0.5; rectified methylene-blue, 0.5. A small drop of stain is placed on the center of slide, a loopful of the culture is gently mixed with the stain. A clean cover-glass is pressed down on it and the excess mixture absorbed with filter-paper. Pitfield's method (for staining flagella): Treat the prepara-

tion with a mixture of equal parts of two solutions, as follows: (a) Saturated aqueous solution of alum, 5 c.c.; saturated aqueous solution of gentian-violet in distilled water, 5 c.c. (b) Tannic acid, 1 gm.; distilled water, 10 c.c. Filter each and mix; the mixture is placed on the cover glass to be gently heated, but not boiled, during about one minute, then washed in water and mounted. Plehn's solution: An alkaline solution of methylene-blue and eosin. This solution stains malarial plasmodia and nuclei of leukocytes blue and erythrocytes red. polychrome methylene-blue: A solution of 1 part each of potassium carbonate and methyleneblue in 100 parts of distilled water, used for staining plasma cells and mast-cells. **Ponder's method** (for diphtheria bacilli): The film is made and fixed and is treated with the following stain: toluidin blue, 0.02; glacial acetic acid, 1; absolute alcohol, 2; distilled water to make 100. Typical diphtheria bacilli stain blue with red granules. Rabl's chromoformic acid solution: A solution prepared from 0.35 per cent. aqueous solution, 200 drops; formic acid, 4 to 5 drops, to be added just before the solution is used. Direction for use: 1. Harden in the fixing solution twelve to twenty-four hours. 2. Wash in running water twelve to twenty-four hours. Dehydrate in 80 per cent. alcohol. Ranvier's formic-acid method: Boil together 8 c.c. of a chlorid of gold and 2 c.c. of formic acid; when the solution is cold, place very small bits of tissue in it for one hour in the dark; wash quickly in water: expose to diffuse light in a mixture of formic acid (10 c.c) and water (90 c.c). Reduction takes place slowly—twenty-four to forty-eight hours. Harden in 70 per cent., then 90 per cent., alcohol in the dark. Ranvier's one-third alcohol: I part of 96 per cent. alcohol and 2 parts of water; a macerating fluid for tough or hardened tissues. Ranvier's picrocarmin: Two solutions are prepared—a saturated aqueous solution of picric acid and a solution of carmin in ammonia. second is added to the first to a point of saturation. The whole is evaporated to one-lifth of its volume and filtered after cooling. The solution thus obtained is again evaporated until the picrocarmin remains in the form of a powder. A r per cent. solution of the latter in distilled water is the fluid used for staining. To stain with this solution 1 or 2 drops are placed on the slide over the object, and the whole put in a moist chamber for twenty-four hours. A cover-slip is then placed over the preparation, the picrocarmin drained off with a piece of blotting-paper, and a drop of formic glycerin (1.100) brought under the cover-slip by irrigation. Proper differentiation takes place only after a few days, and the acid glycerin may then be replaced by the pure glycerin. Ravant and Ponselle's method (for spirochetes): Staining in a 2 per cent. solution of silver albuminate (largin), followed by 5 per cent. pyrogallic acid. Rees's thionin 5 per cent. pyrogallic acid. Rees's thionin solution: A stain for dried blood-films. Make a solution of thionin, 1.5 gm.; alcohol, 10 c.c.; aqueous solution of 5 per cent. phenol, 100 c.c. Filter off 5 c.c. of this solution and make up to 20 c.c. with water. Fix films, stain for from ten to twenty minutes, wash, and mount. Red cells stain greenish blue, leukocytes, blue; malarial parasites, purplish. Ribbert's method (1) (for connective-tissue fibrillæ). Fix, preferably in alcohol; place sections in a 10 per cent. solution of phosphomolybdic acid for five to thirty seconds; use glass or platinum needles; wash quickly in water; stain five minutes or less in phosphomolybdic-acid hematoxylin. For this purpose the solution can be used after it is twenty-four hours old. Treat with water, then with alcohol, oil, Canada balsam. Fibrillæ, deep blue; other tissue elements, grayish green; contrast stains incompatible. (For capsules): Stain the dried and fixed films for two seconds with the following; glacial acetic acid 12.5 c.c., absolute alcohol 50 c.c., and water 100 c.c. Saturate the mixture with dahlia at 37° C. Ripart and Petit's solution: An indifferent

mounting medium consisting of copper chlorid, 75 c.c.; distilled water, 75 c.c.; and glacial acetic acid, 1 c.c. After mixing, this solution is yellow, but clears up after a few hours, and should then be filtered. Romanowsky's method (contrast-stain for malarial parasite): A saturated aqueous solution of methylene-blue and a r per cent aqueous solution of eosin are kept separately. The specimen is heated not less than thirty minutes at a temperature of from 105° to 110° C. The staining mixture is made just before it is to be used. To 1 part of filtered methylene-blue solution are added about 2 parts of eosin solution. This mixture is carefully stirred with a glass rod and poured into a watchglass. The cover-glass preparations are allowed to float upon the top of the fluid with the bloodsurface down. The specimens are covered by another inverted glass, and the whole by an inverted cylinder, which is moistened upon the inside. By this method the red corpuscles are stained red, the malarial parasites blue, and the nuclear chromatin a violet color. Rosenberger's anilin black s. (for spirochetes) Reagents are: 1. Anilin oil water, prepared by adding 2 c c. anilin oil to 100 c.c. of water, shaking thoroughly, and filtering. 2. Oxidizing agent, made by dissolving 5 c.c. concentrated sulphuric acid and 15 gm. potassium bichromate in 375 cc distilled water. Heat smear 6 or 8 inches above flame to fix; cover slide with 10 drops of Solution 1, after two minutes add 10 drops of Solution 2, after five minutes flush slide with water. Spirochetes appear black on a granular blue background Roux s.: A double stain for the bacillus of diphtheria, containing 0.5 gm. of gentian-violet or dahlia, 1.5 gm. of methyl green, and 200 c.c. of distilled water. Saathoff's s.: A modification of Unna-Pappenheim method: methyl-green, 0.15 gm.; pyronin, 0.5 gm.; 96 per cent. alcohol, 5 c c.; glycerin, 20 c.c.; 2 per cent. carbol water, to make 100 c c. Stain two to four minutes, wash in water, dehydrate in absolute alcohol, clear in xylol, and mount in balsam safranin: An anilin dye used in a concentrated alcoholic solution diluted with one-half water. See also Babes's anilin-safranin. Sahli's boraxmethylene-blue solution: A mixture of saturated aqueous solution of methylene-blue, 24; per cent. borax solution, 16; water, 40 parts. Schäffer's method for staining bone: Decalcify with nitric acid; stain sections with aqueous solution of safranin (1: 2000); wash in water, place in a 0.1 per cent. solution of corrosive sublimate two to three hours; treat with alcohol; dehydrate; clear in clove or bergamot oil; mount in xylol balsam. This leaves bone uncolored, but stains cartilage orange, and connective tissue and marrow red. Schereshewsky's s. (for spiracheles): 1. Fix the fresh preparation with the fumes of 1 per cent. osmic acid. 2. Stain for two minutes with a hot mixture of 10 c.c. of a 0.5 per cent. solution of Schridde's method (for the granulations of myelocytes and leukocytes in sections). Fix tissues, cut sections 5 μ thick, and fix them to the slide with Mayer's albumn mixture. Stain for twenty minutes in Giemsa's stain, diluted. The preparaminutes in Giernsa's stain, united. The preparation is washed and placed in pure acetone. The section is cleared and mounted. Neutrophil granules are stained a violet red, eosin granules, red, mast-cell granules, dark blue, and granulations of the cytoplasm of the megakaryocytes, violet red. All nucle are blue, red corpuscles grassviolet red. All nucle are blue, red corpuscies grass-green, and connective tissue, pale red. Schül-libaum's solution: Celloidin, I part in 3 or 4 parts of oil of cloves, is often used; cover the slide with a thin layer of the solution; arrange the sections in order on the slide, and place it in the thermostat, at 54° to 60° C, for several hours, or heat for a few seconds to one-half minute over the flame until the oil of cloves runs together in drops. After cooling, remove the paraffin with xylol, pass through origanum oil to 75 per cent.

alcohol, and proceed as with other paraffin sections. Schütz's method (for staining glanders bacillus): Stain twenty-four hours in equal parts of concentrated alcoholic solution of methylene-blue and caustic potash (1 10,000); wash in acidified water; 50 per cent alcohol, five minutes; xylol; Canada balsam. skeleton s. (for blood-smears): Two solutions are used: (1) 1 gm. of watersoluble eosin is dissolved in 100 c.c. of absolute methyl alcohol; (2) I gm. of Ehrlich's medicinal methylene-blue is dissolved in 100 c.c. of absolute methyl alcohol. Blood smears are made by the cover-slip method and stained first in solution I and then in solution 2. It is rinsed, dried, and mounted. The staining should be done away from the air. Called also *Harlow s*. **Smith's** (W. H.) method (for pneumococcus in sputum) Stain in anilin-gentian-violet solution, gently warming until the staining fluid steams; wash in water; cover with Gram's solution of iodin for thirty seconds; wash with 95 per cent. alcohol, wash in ether for a few seconds; wash in absolute alcohol for a few seconds; stain one or two minutes in a saturated aqueous solution of eosin; wash in absolute alcohol, clear with xylol, mount in bal-sam. Smith-Pitfield method (for flagella): The preparation is treated with a mordant consisting of a saturated solution of ammonia alum in a hot saturated solution of corrosive sublimate to which has been added an equal part of a 10 per cent tannic acid solution and one-half part of a 5 per cent. carbol fuchsin solution; after this treatment the preparation is stained with a mixture of I part of a saturated alcoholic solution of gentian violet and 10 parts of a saturated solution of ammonium alum. Spengler's method (for tubercle bacilli). 1. Stain with carbol fuchsin, warm, but without too much heat. 2. Pour off the stain without washing 3. Pour on pieric acid alcohol (consisting of equal parts of saturated solution of picric acid and absolute alcohol) After three seconds 4. Wash with 60 per cent alcohol 5. Treat with 15 per cent mitric acid till yellow (thirty seconds). 6 Wash again with 60 per cent alcohol. 7. Counterstain with picric acid alcohol till lemon colored 8. Wash with distilled water and dry gently at a low heat The bacilli appear bright red on a lemon-colored ground. For spirochetes. See Burri's m, Giemsa's m, India-ink m, Levaditi's m, Mandelbaum's m, Meirowsky's m, Op-penheim and Saih's m, Revant and Poncelli's m, Rosenberger's s , Schereschewsky's m , Stern's m , and Yamamoto's m For spores. See Abbott's m, Anjesky's m. Bowhill's m. Fiocca's m., Hansen's m. Huntoon's m., and Moeller's m. Steida's method (for permanent mounts with nuclear stains) 1. Stain several hours in lithium-carmin, wash quickly in water; place from four to six hours in a 2 per cent aqueous solution of ferrocyanid of potassium. Transfer to acid alcohol for six to twelve hours, wash quickly in water, place from four to six hours in lithium-carmin Transfer to acid alcohol for six to twelve hours, wash quickly in water; alcohol, oil, Canada balsam. The reaction for the ferrous salts, with the exception that ferricyanid of potassium is used instead of the ferro-compound Reactions for ferric and ferrous salts (a) Use a mixture of ferro- and ferricyanid of potassium (1 gm. each to 100 c.c of water), followed by acid alcohol; nuclear stains and permanent mounts may be made as above. (b) Place sections in a freshly prepared solution of sulphate of ammonium for five to twenty minutes until they are dark or nearly black-green in color; wash quickly in water; examine in glycerin or pass through alcohol and oil to Canada balsam Sterling's modification of Gram's s.: Anilin oil, 2 c.c.; 95 per cent. alcohol, 10 c.c; water, 88 c.c., and gentian-violet, 5 gm. Stern's method (for Spirochæta pallida): The dried film is placed in the incubator for some hours, then in a 10 per cent. solution of silver nitrate in a colorless glass container, and is allowed to remain in diffuse daylight for some hours. The

spirocheta is stained black. Stirling's solution: A solution of gentian-violet, 5 c.c.; alcohol, 10 c.c.; anilin, 2 gm.; water, 88 c.c. **Ströbe's anilin-blue s.** (for nerve-fibers in hardened sections): Harden in Muller's fluid; stain one-half to one hour in a saturated aqueous solution of anilinblue; wash in water; transfer to alcohol containing 20 to 30 minims of a 1 per cent. alcoholic solution of caustic potash until the sections become translucent and turn a bright brownish-red; place in distilled water until the section becomes brig! t blue again, stain again in a half-saturated aqueous solution of safranin one-quarter to one-half hour; wash and dehydrate in absolute alcohol, finish with xylol and Canada balsam Strohschein's method (for tubercle bacilli): 5 to 10 c.c. of sputum are mixed with three times the quantity of Wendriner's borax-boric-acid solution, and after vigorous shaking the mixture is set aside for four or five days to settle. The mixture becomes fluid, and the bacilli settle to the bottom. sudan III: A red stain, soluble in alcohol, chloroform, essential oils, and xylol used as a stain for tubercle bacılli Taenzer's s.: A solution of orcein for staining elastic tissue tetrachrome s.: A stain which combines the four active staining agents of the Giemsa stain (methylene-blue, eosin, methylene azure, methylene violet) ready for use. **Toisson's mix**ture: A solution for diluting the blood in counting the red corpuscles. It consists of 8 gm of sodium sulphate, 1 gm of sodium chlorid, 30 c.c of glycerin, 0 025 gm. of methyl-violet, and 160 c c of distilled water. toluidin-blue solution: Toluidin blue, o 25 gm, acetic acid, 2 c c., absolute alcohol, 5 c c, and water, 100 c c. **Touton's method:** A method for staining gonococcus, stain sections in carbolfuchsin and wash in alcohol. triacid s. See Ehrlich's trucid s. For trichophyta. See Gram-Weigert m triglycerin s. See Ehrlich's truglycerin s For tuberculosis. See Biot's m, Czaplewsky's m , Ehrlich's m , Ehrlich-Weigert m., Frankel's m , Gabbett's m., Gasis's m., Herman's m., Much's m, Gaooett's m., Gasts's m., Herman's m., Much's m, Pappenheim's m., Spendler's m, Stohschein's m, Weigerl-Ehrlich m., Weiss's m, and Ziehl-Neelsen m. Türck's s.: A weak solution of iodin-potassium iodid. For typhoid. See Flevner's m Unna's alkaline methyleneblue solution: The strongly alkaline solution of methylene-blue is valuable for staining plasmacells, has been found extremely valuable as a general stain in connection with eosin, which is to be used first. The solution is diluted 1:10 or more before use. Methylene-blue, I part; potassium carbonate, I part; water, 100 parts.

Unna's orcein method (for elastic fibers):
Stain sections in this solution: Grüber's orcein, I part; hydrochloric acid, I part; absolute alcohol, 100 parts, place sections in a dish, and pour over them enough of the solution to cover them; warm gently in an incubator, or over a small flame, for ten or fifteen minutes, until the solution thickens, or leave in the solution at room-temperature overnight; wash in dilute 70 per cent. alcohol; wash in water to get rid of all the acid and to fix the color; follow in succession with alco-hol, oil, and balsam Unna's method (for the connective-tissue fibrilla) Harden in alcohol, wash in water, decolorize, differentiate, and stain in a r per cent. solution of orcein in absolute alcohol fifteen minutes; wash in absolute alcohol; follow with bergamot oil, finish with balsam. Nuclei, dark blue, protoplasm, pale blue; elastic and connectivetissue fibers, deep orcein red; smooth muscle-fibers, bluish, mast-cell granules, red; protoplasm of plasma-cells, deep blue. **Unna's method** (for keratohyalin): 1. Overstain sections in a fairly old alum-hematoxylin solution. 2. Place in a very weak solution of potassium permanganate (1: 2000) for ten seconds. 3. Dehydrate and decolorize in alcohol. 4. Finish in oil and balsam. Keratohyalin granules are stained blue-black in color. Unna's method (for hyalin and colloid material): Harden in alcohol; acid fuchsin; 2 per

cent. aqueous solution, five minutes; saturated aqueous solution of picric acid, two minutes; saturated alcoholic solution of picric acid, two minutes; wash in alcohol; treat with oil and balsam. Hyalin and connective tissue are stained red; colloid and protoplasm, yellow. **Unna's isolated**stains (for mast-celts). Harden in alcohol; stain in polychrome methylene-blue solution plus a little alum for three hours to overnight; wash in water; absolute alcohol; oil of bergamot; balsam. Unna's modification of Gram's s.: Instead of Gram's iodin solution Unna uses nascent iodin produced by adding hydrogen peroxid to a 5 per cent. solution of potassium iodid. Unna's polychrome methylene-blue solution: The Unna's same as Unna's alkaline methylene-blue solution, except that it has been kept several months until oxidation has caused the formation of methyl-violet and methylene-red Harden in alcohol, stain in polychrome methylene-blue solution one-quarter hour; wash in water; decolorize in glycerin-ether mixture for five or ten minutes; wash a long time in water; follow with absolute alcotong time in water; ionow with absolute alcohol, oil, and balsam. Unna's differential s. (for plasma-cells and mast-cells): Harden in alcohol, stain in paraffin sections in polychrome methylene-blue one-quarter hour to overnight; decolorize in a small dish of water to which are added a few drops of glycerin-ether mixture; wash thoroughly in water; follow with absolute alcohol, bergamot oil, balsam. 1. Stain in polychrome methylene-blue solution five to fifteen minutes. 2. Wash in water. 3. Decolorize and dehydrate in a 0.25 per cent. alcoholic solution of neutral orcein fifteen minutes; follow with absolute alcohol, bergamot oil, and balsam. **Unna- Pappenheim method** (for plasma cells) Methylgreen, o 15; pyronin, o.25; alcohol, 2.5, glycerin, 20; 0 5 per cent carbol water, to make 100. in alcohol, stain five to ten minutes in incubator; wash in cold water; differentiate and dehydrate in absolute alcohol; clear in oil of bergamot, and mount in balsam. Unna-Tänzer s.: Orcein stain for fibro-clastic tissue. van Ermengem's method: A method for staining flagella. Make a very dilute suspension in o.6 per cent. sodium chlorid solution of an eighteen-hour agar culture of the organism, and place a drop of the suspension in the center of a thoroughly clear cover-glass; allow the drop to dry in the air, and then fix the preparation by passing the cover-glass rapidly three times through the flame. To the fixed preparation apply the following mordant for onehalf hour at room-temperature, or five minutes at 50° to 60° C: Osmic acid (2 per cent solution), 30 c c.; tannin (20 per cent. solution), 60 c.c., and 4 or 5 drops of glacial acetic acid. Next wash in water and in alcohol (05 per cent.) and then immerse for a few seconds in an 0 25 to 0.5 per cent. solution of silver nitrate. From this, without washing, transfer to a small dish containing the reinforced bath, which is made as follows: Gallic acid, 5 gm.; tannin, 3 gm., fused potassium acetate, 10 gm.; distilled water, 350 c.c. In this the preparation is washed for a few seconds, and is then again immersed in the silver nitrate solution (025 to 0.5 per cent). The preparation is moved about in this solution until the solution begins to acquire a brown or black color, when it is removed, washed thoroughly in water, dried, and mounted in balsam. van Gieson's contrast-s.: Stain deeply in alumhematoxylin; wash in water; stain in van Gieson's solution three to five minutes, wash in water, and dehydrate directly in 95 per cent. alcohol; follow with oil of Cretan origanum, and finish with Canada balsam. van Gieson's method (for staining connective-tissue fibrillæ) Harden in chrome salts or in corrosive sublimate; stain deeply in alum-hematoxylin; wash in water; stain for three to five minutes in van Gieson's solution of picric acid; dehydrate in 95 per cent. alcohol; follow with oil of Cretan origanum; finish with Canada balsam.

van Gieson's solution of picric acid and acid fuchsin: A stain for connective tissue, consisting of 1 per cent. aqueous solution of acid fuchsin, 5 c.c.; saturated aqueous solution of picric acid, 100 c.c. van Gieson's s. (for nervous tissues): Mix a 1 per cent. aqueous solution of acid swesj: MIX a I per cent. aqueous solution of acid fuchsin, 15 c.c.; saturated aqueous solution of picric acid, 50 c.c.; water, 50 c.c. Stain sections first rather deeply in alum-hematoxylin; wash in water; stain in above solutions three to five minutes; dehydrate in alcohol; finish in oil and Canada balsam.

Verhoeff's s. (for elastic tissue): Hematoxyling are discoluted in an acid of about the content of th crystals, 1 gm., are dissolved in 20 c.c. of absolute alcohol and filtered. To this is added 10 per cent. aqueous solution of ferric chlorid, 8 c.c., and Lugol's solution, 8 c.c. von Kossa's s. (for lime salts): Fix in alcohol, formaldehyd, or corrosive sublimate; place sections in a r to 5 per cent. aqueous solution of silver nitrate for thirty to sixty minutes; wash in distilled water; mount in glycerin or balsam. The lime is stained deep black. Wadsworth's method (for capsules): 1. The smear is made as usual and is treated with a 40 per cent. solution of formalin is treated with a 40 per cent. Solution of formalin for from two to five minutes. 2. Wash in water only five seconds. 3. Stain by Gram's method or with any simple stain. Weigert's alcoholhematoxylin: Hematoxylin crystals, 10 gm.; absolute or 95 per cent. alcohol, 90 cc. Ripen for a week or two to a brown color. Used in staining myelin sheaths. Weigert's elastic tissue s.: Aqueous solutions of resorcin and fuchsin are boiled together, liquor ferri sesquichloridi is added, and the precipitate dissolved in alcohol, to which has been added 2 per cent. of hydro-chloric acid. Weigert's iron-hematoxylin (for nuclei): Prepare two solutions. (a) Hema-Liquor ferri sesquichloridi, 4 c.c.; water, 95 c.c; hydrochloric acid, 1 c.c. For use, mix equal parts Weigert's method (for neuroglia fibers) (a) Fix thin pieces of tissue, not over \(\frac{1}{2} \) cm. thick, in a 4 per cent, solution of formaldehyd for at least four days. (b) Mordant in the following solution for four or five days in an incubator, or for eight days at room temperature: Acetate of copper, 5 gm.; acetic acid, 36 per cent. solution, 5 c.c.; chrome alum, 2.5 gm.; water, to 100 c c. Boil the chrome alum in a covered dish (it turns to a green color); remove the gas, add the acetic acid, and then the copper acetate; stir until the latter is dissolved, then cool. The solution should remain clear and without a green precipitate. (c) Wash in water; dehydrate in alcohol; embed in celloidin. (d) Reduction of copper salt in sections 1. Place the sections, which must not be over 0.02 mm. thick, in a 0.33 per cent. aqueous solution of potassium permanganate for ten minutes. 2. Wash with water. 3. Decolorize and reduce for two to four hours in the following solution. Chromogenformic acid (specific gravity, 1.20), 5 c.c.; water, to 100 c.c. Add to 90 per cent. of this, just before using, 10 c.c. of a 10 per cent. solution of sodium sulphite. The sections can now be stained in the manner to be described, but the color of the fibers will be more intense if the following steps are observed, and a slight yellowish contrast-stain is obtained for the ganglion- and ependymal cells and for the larger nerve-fibers. (e) Further reduction of copper salt: 1. Wash twice in water. duction of copper salt: 1. Wash twice in water.

2. Place sections in a carefully filtered saturated
5 per cent. aqueous solution of chromogen overnight. 3. Wash in water. 4. The sections are
now ready for staining, or may be preserved
until wanted in 90 c.c. of 80 per cent. alcohol
and 10 c.c. of 5 per cent. oxalic acid. (f) Staining
of neuroglia fibers: 1. Lift section from large
dish of water on to slide freshly cleaned with of neuroglia fibers: 1. Lift section from large dish of water on to slide freshly cleansed with alcohol; blot with filter-paper (method recommended by Weigert for attaching sections to slide). 2. Stain in the following mixture: Saturated solution of methyl-violet in 70 to 80 per cent. alcohol, 100 c.c. (saturated with aid of heat; decanted when cold); and 5 per cent. aqueous solution of oxalic acid, 5 c.c. 3. Wash with normal salt solution. 4. Iodin solution: 5 per cent. potassium iodid solution saturated with iodin. This is poured on and then off. 5. Wash with water and blot with filter-paper. 6. Decolorize thoroughly in equal parts of xylol and anilin-oil. 7. Wash repeatedly with xylol, or the stain will not keep. 8. Canada balsam. The sections keep better if exposed for from two to three days to diffuse light before being put away. Weigert's method. See also Gram-Weigert staining method. Weigert's mixture: 1. A clearing agent for thick sections of the central nervous ing agent for thick sections of the central nervous system after carmin and hematoxylin stains: carbolic acid in crystals, I part; xylol, 3 parts.

2. Anilin, 2 parts; xylol, I part. Used like the preceding. Weigert's mixture of anilin and xylol: Anilin, 2 parts; xylol, 1 part. Weigert's myelin sheath s.: 1. Fix and mordant the fluid. 2. Dehydrate in alcohol without washing in water. 3. Embed in celloidin. 4. Place sections for twenty-four hours in the following solution: for twenty-four hours in the following solution:
Copper acetate, 5 parts; acetic acid, 36 per cent.
solution, 5 parts; chrome alum, 2 to 5 parts. 5.
Stain fifteen minutes to twenty-four hours in hematoxylin, 1 part; absolute alcohol, 10 parts; saturated aqueous solution of lithium carbonate, 7 parts; water, 90 parts. The hematoxylin and alcohol must be kept on hand for some time, in order to ripen. 6. Wash thoroughly in water.

The proporties in horax A parts: portassium ferro-7. Decolorize in borax, 4 parts; potassium ferrocyanid, 5 parts; water, 200 parts, until the gray
substance becomes distinctly yellow. 8. Wash
thoroughly in water. 9. Dehydrate in 95 per cent.
alcohol. 10. Clear in anilin oil, 2 parts; xylol,
1 part. 11. Finish in Canada balsam. Weigert's picrocarmin: A stain prepared by stirring 2 gm. of carmin in 4 c.c. of ammonia and allowing it to remain standing in a well-corked bottle for twenty-four hours. This is mixed with 200 c.c. of a concentrated aqueous solution of picric acid, to which a few drops of acetic acid are added after a further twenty-four hours. Filter after twenty-four hours. Should the precipitate also pass through the filter, a little ammonia is added to dissolve it. Weigert's quick method (for mordanting myelin sheaths): 1. Fix the tissues in a 4 per cent. solution of formaldehyd (10 per cent. solution of formalin) for four days to several weeks. Four days are enough for pieces not over 1 cm, thick. The solution is changed at the end of twenty-four hours. 2. Mordant the myelin sheaths in a solution of potassium dichromate, 5 parts; chrome alum, 2 parts; water, 100 parts, for four to eight days. The tissues should not be left in it more than eight days, lest they become too brittle. 3 Transfer directly to 80 per cent. alcohol, and keep in the dark until wanted for embedding, changing the alcohol occasionally as it becomes colored. Weigert's s. (for fibrin): Harden in alcohol. 2. Stain celloidin sections in lithium-carmin. 3. Fasten sections to slide with ether vapor. 4. Stain in anilin-gentian-violet five to twenty minutes. 5. Wash with normal salt solution. 6. Lugol's iodin solution one minute.

Wash with with with a Dasplain is a little with the salt solution. 7. Wash with water. 8. Decolorize in anilin, 2 parts; xylol, 2 parts. 9. Wash with three changes of xylol. 10. Canada balsam. Fibrin and Gramstainable bacteria are colored blue; nuclei become red. Weigert-Ehrlich 8. (for tubercle bacilli):
Alcoholic solution of fuchsin or of methyl-violet is added to an aqueous solution of anilin oil. The specimens are stained, washed in water, treated with dilute hydrochloric or nitric acid, and again washed. Weigert-Pal method. See Pal's method. Weiss's double s. (for tubercle bacilli): Mix 1 part of methyl-violet solution with 3 parts of carbolfuchsin. Mixture keeps a week. Otherwise as in Much's method. In both methods a counter-stain is desirable—either a much-diluted solution of fuchsin or a 1 per cent. watery solution of safranin. The results are much better if the slides are left from twenty-four to forty-eight

hours in the staining solution at room temperature. Welch's method (of staining the capsule of the pneumococcus): 1. Cover the preparation with glacial acetic acid for a few seconds. 2. Drain 2. Drain off and replace (without washing) with anilingentian-violet solution, repeatedly added. 3.
Wash in a 2 per cent. solution of sodium chlorid and mount in the same. Wendriner's mix-ture: 8 gm. of borax are dissolved in hot water, of borax; after crystallization it is filtered. Wheal and Clown's method (for actinomyces): 1. Stain with Ehrlich's hematoxylin and wash in the protection of the corpolity of the corpolity in the corpolity of t 2. Stain in hot carbolfuchsin for five tap-water. tap-water, 2. Stain in not carponucusin for live minutes and wash. 3. Decolorize with Spengler's picric acid alcohol See Spengler's m. Williams's method (for flagella) Cover the cover-glass with a mordant consisting of 5 c.c. of 1 per cent. solution of alumnol, 5 c.c. of a 2 per cent. solution of osmic acid, and 15 c.c. of a 20 per cent. solution of tannin; shake the mixture and add 3 drops of glacial acetic acid and shake again; apply the mordant less than one minute and wash in water; cover the preparation for one minute with a I per cent. solution of silver nitrate containing sufficient ammonium hydroxid to keep the silver in solution; wash in water; wash in a 0.6 per cent. solution of sodium chlorid; flood the preparation with a 30 per cent. solution of ammonium hy-droxid, and wash in water; apply a few drops of ortol photographic developer; wash in water; cover with a 1 per cent. solution of gold chlorid for a few seconds, wash in water and apply ortol developer a few seconds; wash in water and cover with a r per cent. solution of mercuric chlorid for a few seconds; wash in water; apply ortol developer a few seconds. Wash and repeat the application of chlorid of gold, the washing, and the ortol developer two or more times. Wood's modification of Giemsa's s.: 1. Fix film in methyl alcohol. 2. Stain with 0.1 per cent. solution of eosin until pink. 3. Pour off eosin and stain one-half to one minute with 0.25 per cent. solution of azur II. Wash with water and dry by blotting. Wright's s. (for blood and malarial parasites): Dissolve 0.5 gm. of sodium bicarbonate in 100 c.c. of distilled water, and add 1 gm. of methylene-blue. Steam the mixture in a steam sterilizer at 100° C. for one The mixture is removed, allowed to cool, and to it is added a 1: 1000 solution of eosin until the mixture becomes purple in color and a yellowish metallic scum forms on the surface. The precipitate is collected on a filter, is allowed to dry, and is then dissolved in pure methyl alcohol in the proportion of or gm. the proportion of o 5 gm. to 1000 c.c. of alcohol. Make films of the blood, spread thinly, and allow them to dry in the air; cover the preparation with the staining fluid for one minute; add to the staining fluid on the preparation sufficient water, drop by drop, until a delicate metallic scum forms on the surface, allowing the mixture to remain on the preparation for two or three minutes; wash in water until the film has a pinkish tint in its thinner portions and the red corpuscles take on a yellow or pink color; dry between filter-paper and mount

prepared from Canada balsam dissolved in xylol: a mounting reagent for stained specimens. Yama mounting leagent to stained specimens. 2 active agiwa's method (for staining neuroglia): The tissue, cut in very thin sections, is hardened in Müller's fluid for about a month, changing the fluid in the beginning daily for five or six days. From this solution the tissues are transferred directly, without washing in water, into absolute alcohol, where they remain for from several days to a week, the alcohol being changed daily. After embedding in celloidin and cutting, the sections are stained in a concentrated alcoholic solution of eosin for twelve days or more, then in a con-centrated watery solution of anilin-blue for from four to six hours, then differentiated in dilute alcohol rendered feebly alkaline with a r per cent. potassium hydroxid solution. The deep-blue sections become reddish-brown. They are then washed in distilled water and the excess of blue removed in diluted alcohol. The sections now are reddish. They are then now are reddish. They are then dehydrated in absolute alcohol, cleared in oil of origanum, and mounted in balsam. Thus treated, the axiscylinders are deep blue, the glia fibers and red blood-corpuscles dark red, the myelin sheaths bright red, the protoplasm of the glia cells pale violet, the bodies of the ganglion-cells pale bluishgray with greenish granules, connective-tissue fibers, adventitia, intima of blood-vessels sky-blue or pale greenish, the media bluish-red, the nuclear membranes all bluish. Yamamoto's method (for spirochetes): Staining with a 5 per cent solution of silver nitrate, followed by a solution of 2 per cent. pyrogallic and I per cent. tannic acid solution. Zenker's fluid: A fixing reagent consisting of potassium dichromate, 25 gm; sodium sulphate, I gm., mercuric chlorid, 5 gm.; glacial acetic acid, 5 c.c.; water, to 1000 c.c. For use, fix tissues in the solution one to twenty-four hours, rarely forty-eight hours, according to thickness. Wash in running water twelve to twenty-four hours. Preserve in 80 per cent. alcohol until used. **Zettnow's s.**: A method of staining the flagella of bacteria **Ziehl's carbolfuchsin** flagella of bacteria Ziehl's carbolfuchsin solution: A bacterial staining solution prepared by dissolving 1 gm. of fuchsin in 10 c.c. of 96 per cent. alcohol and adding 90 c.c. of 5 per cent carbolic acid Ziehl-Neelsen carbolfuchsin:
Saturated alcoholic solution of fuchsin, 16 c.c.; anilin-water, 84 c.c Ziehl-Neelsen method (for tuberculosis): 1. Stain the dried and fixed film in hot carbolfuchsin for five to ten minutes 2. Decolorize in 5 per cent. sulphuric acid, 5 per cent nitric acid or 1 per cent. hydrochloric acid three to five minutes. 3. Wash in water, then in alcohol as long as color comes away. 4. Counterstain with dilute methylene-blue Ziehl-Neelsen-Gabbett method (for tubercle bacillus): 1. Stain paraffin sections in carbolfuchsin solution, warming it three or four times until it steams. 2. Wash in water. 3. Decolorize and stain for contrast in sulphuric-acid methylene-blue solution one min-ute. 4. Wash in water. 5. Absolute alcohol. 6. Xylol. 7. Xylol balsam.

staircase (star'kas). See treppe.

stalagmometer (stal-ag-mom'et-er) [Gr. $\sigma\tau a\lambda a\gamma$ - μ 05 dropping + μ 4r ρ 0 ν measure]. An instrument for measuring surface tension by determining the exact number of drops in a given quantity of a liquid. See miostagmin reaction, under reaction.

stalagmon (stal-ag'mon). A colloidal substance which changes the surface tension of a liquid containing them.

staling (sta'ling). Urination in cattle and horses. stalk, abdominal (stawk). The tube of mesoblast which surrounds the stem of the allantois in the embryo. optic s., the embryonic structure which connects the optic vesicle with the diencephalon.

stalk-disease. An eruptive disease of cattle. stamen (sta'men). The male part of a flower. stamina (stam'in-ah) [L]. Vigor or endurance.

stammer, stammering (stam'er, stam'er-ing).
A faulty and interrupted manner of speech. s. bladder. See bladder.

stamper (stam'per). A person affected with locomotor ataxia so called because of the peculiar stamping gait of that disease.

stanch (stanch). To check the flow of blood from: as, to stanch a wound.

standard oandle (stan'dard). A spermaceti candle burning 120 grains an hour. s. solution, a solution that contains a definite amount of a reagent. permanent albumen s's, tubes of formalin-gelatin containing varying amounts of formazin in a uniform suspension. They are used in the life insurance method for albumin in urine. **Pignet's s.** See *Pignet's formula*, under *formula*.

standardization (stan"dard-iz-a'shun). The bringing of any preparation to a recognized standard as to quality or ingredients.

standardize (stan'dard-īz). To compare with or conform to a standard.

standstill (stand'stil). The quiet state resulting from suspended activity. respiratory s., suspension of the movements of respiration. When it occurs at the end of an expiration, it is termed expiratory s.; when at the end of an inspiration, inspiratory s.

stannate (stan'āt). Any salt of stannic acid.

stannic (stan'ik). Containing tin as a quadrivalent element. s. chlorid, an irritant war smoke, SnCl₄. For stannic compounds, see *tin*.

stanniferous (stan-if'er-us) [L. stan'num tin + fer're to bear]. Containing tin.

Stannius's ligature (stan'e-us) [Herman Friedrich Stannius, German biologist, 1808-1883]. See under ligature.

stannous (stan'us). Containing tin as a bivalent

stannoxyl (stan-ok'sil). A proprietary combination of metallic tin and its oxid. used in the treatment of staphylococcal infections, *i. e.*, acne and furunculosis

stannum (stan'um). 1. Latin for lin. 2. A homeopathic preparation of metallic tin.

stapedectomy (sta-pe-dek'to-me) [L. sta' pes stirrup + Gr. ἐκτομή excision]. Excision of the stapes.

stapedial (sta-pe'de-al). Pertaining to the stapes.

stapediotenotomy (sta-pe"de-o-ten-ot'o-me). The cutting of the tendon of the stapedius muscle.

stapediovestibular (sta-pe"de-o-ves-tib'u-lar).
Pertaining to the stapes and vestibule.

stapedius (sta-pe'de-us). See muscles, table of.

stapes (sta'pe de day). See mastes, now of.

stapes (sta'pēz) [L. "stirrup"]. The innermost of the ossicles of the ear, shaped somewhat like a stirrup. It articulates by its head with the incus, and its base is inserted into the fenestra ovalis. Called also stirrup.

staphisagria (staf-is-a'gre-ah) [Gr. σταφls raisin + ἄγριος wild]. The poisonous seeds of Delphin'-ium slaphisa'gria, stavesacre, or lousewort. The plant and its seeds are poisonous and narcotic. The seed is sometimes employed as a vermifuge, but mainly for destroying lice. Dose of fluid-extract, 1-2 min. (0.06-0 12 c.c.).

staphisagrin (staf-is-a'grin). A poisonous alkaloid, C₂₂H₃₃NO₅, from staphisagria.

staphylagra (staf-il'ag-rah, staf-il-a'grah) [Gr. σταφύλαγρα]. A forceps for holding the uvula.

staphylectomy (staf-il-ek'to-me) [Gr. σταφυλή uvula + ἐκτομή excision]. Complete removal of the soft palate.

staphyledema (staf-il-e-de'mah) [Gr. σταφυλή uvula + οίδημα swelling]. An enlargement or swollen state of the uvula.

staphylematoma (staf''il-em-at-o'mah) [Gr. σταφυλή uvula + hematoma]. Hemorrhage from the uvula (Pauli).

staphyline (staf'il-in) [Gr. σταφυλή bunch of grapes; also the uvula] 1. Shaped like a bunch of grapes. 2. Pertaining to the uvula.

staphylinopharyngeus (staf-il-i"no-far-in'je-us). The palatoglossus muscle.

staphylinus (staf-il-i'nus) [L]. Pertaining to the uvula. s. exter'nus, the tensor palati muscle. s. inter'nus, the levator palati muscle.

staphylion (staf-il'e-on) [Gr. σταφύλων little grape].

1. A craniometric point on the posterior edge of the hard palate at the median line.

2. The uvula.

3. A nipple or teat.

staphylitis (staf-il-i'tis) [Gr. σταφυλή uvula + -ιτι, inflammation]. Inflammation of the uvula.

staphylo-angina (staf"il-o-an'jin-ah). A mild torm of sore-throat, marked by a pseudomembranous deposit in the throat due to a staphylococcus.

staphylobacterin (staf''il-o-bak'ter-in). The bacterial vaccine prepared from staphylococci.

staphylococcal (staf"il-o-kok'al). Pertaining to or caused by staphylococci.

staphylococcemia (staf"il-o-kok-se'me-ah) [staph-ylococcus + Gr alµa blood]. A condition characterized by the presence of staphylococci in the blood.

staphylococcia (staf-il-o-kok'se-ah). 1. Skin suppuration due to a staphylococcus. 2. A secondary infection with a staphylococcus.

staphylococcic (staf"il-o-kok'sik). Pertaining to or caused by staphylococci.

staphylococcomycosis (staf"'il-o-kok"'o-mi-ko'-sis). A skin disease due to infection with staphylococci.

Staphylococcus (staf"il-o-kok'kus) [Gr. σταφυλή bunch of grapes + κόκκος berry]. A genus of hacteria of the family Coccaceæ made up of spheric cells arranged in irregular groups and short chains, and very rarely in packets. These are the bacteria most commonly found in boils, abscesses, carbuncles, and similar suppurative processes. Staphylococcus infection of the lungs results in a highly fatal bronchopneumonia. **S. al'bus**, a species from milk and the pus of osteomyelitis not known to be pathogenic. **S. au'reus**. S. pyogenes aureus. 8. bis'kræ, a pathogenic species from the serum and pus of Biskra button. seen as immobile paired and double micrococci. S. botryomy'ces, a species causing the disease botryomycosis in horses. S. can'dicans, a non-pathogenic species from air and water. S. ce'reus al'bus, a form from water and pus; not pathogenic. S. ce'reus au'reus, a variety from the nasal discharge in coryza, producing an orange-red pigment. S. ce'reus fla'vus, a variety from abscesses producing a yellow pigment. s. cit'reus, a species giving a yellowsh color in cultures S. delen'dæ mus'cæ. See S. muscæ. S. epider'midis al'bus (Welch, 1892), a microbe that always inhabits the skin and the hair-follicles sometimes becomes pathogenic in wounds. S. ful'vus, a species from the lungs of horses and rabbits, producing a rose-red pigment. S. hæm-orrhag'icus, a pathogenic species from the vesicular eruption of sheep affected with garget. 8. manfre'dii, a species occurring in the form of ovoid cocci from the sputum of lobar pneumonia. They produce lobar pneumonia when injected into animals 8. mus'(co. a species species) S. mus'cee, a species injected into animals which causes a fatal infection in house flies and other flies. S. parvu'lus, an organism very similar to if not identical with Murococcus gazogenes. S. passe'tii, a species from pus, yellow pigment. S. plicat'ilis, a species believed to cause perléche. S. pyog'-enes, a microorganism of suppuration, of which there are several varieties. S. pyog'enes al'-bus, a pyogenic variety with white cultures from stitch abscesses, etc. Called also Micrococcus albus. S. pyog'enes au'reus, a pyogenic variety with golden-yellow cultures, which produce phlogosin, obtained from air, water, soil, pus, etc. It is the cause of carbuncle, and is found in cases of osteomyelitis and in some cases of bronchopneumonia. Called also *Micrococcus* aureus. **S. pyog'enes cit'reus**, a form with citron-yellow cultures pyogenic. **S. pyosep'**citron-yellow cultures pyogenic. S. pyosep'-ticus, a variety resembling Staphylococcus ticus, a pyogenes albus, found in a tumor on the skin of a dog. It was pathogenic for rabbits and dogs.

3. rindfleisch'ii, a species from the capillaries in mycosis fungoides, occurring in chains of coloriess cocci. S. saliva'rius pyog'enes, a pyogenic form from a guinea-pig inoculated with

sputum from a case of scarlatinal angina. S. tetra'genus, an organism discovered by Gaffky in lung cavities in phthisis. It is found in abscesses in man and animals, and often occurs in the healthy mouth. It is also found in empyema following pneumonia and in the pus of war wounds Called also Micrococcus tetragenus. S. ure'se, the organism which produces ammoniacal fermentation in urine. S. vir'idis flaves'cens, a species from the vesicles of varicella, producing a yellowish-green pigment.

staphylodermatitis (staf"il-o-der-mat-i'tis). Inflammation of the skin due to staphylococci.

staphylodialysis (staf"il-o-di-al'is-is) [Gr. σταφυλή uvula + διάλυσις loosing]. Relaxation of the uvula.

staphylo-edema (staf"il-o-e-de'mah). See staphyl-edema.

staphylohemia (staf''il-o-he'me-ah) [Gr. σταφυλόs a bunch of grapes + α lμα blood]. The presence of staphylococci in the blood

staphyloleukocydin (staf"ıl-o-lu-ko-si'din). A toxin from staphylococcus cultures which is destructive to leukocytes

staphylolysin (stat"il-o-li'sin). The hemolysin of staphylococcus toxin.

staphyloma (staf-il-o'mah) [Gr σταφύλωμα]. Protrusion of the cornea or sclera, resulting from inflammation. annular s. 1. A staphyloma surrounded by an atrophic choroid coat. 2. Staphyloma of the sclera in the ciliary region, extending around the margin of the cornea. anterior 8., scleral staphyloma in the anterior part of the eye; keratoglobus. ciliary s., scleral staphyloma in the part covered by the ciliary body. s. 1. Protrusion of the cornea, caused by the cornea losing its transparency and projecting beyond the eyelid. Called also come cornea, prolapsus cornea, and projecting staph-2. Staphyloma formed by an iris which has protruded through a wound in the cornea. **s.** cor'neæ racemo'sum, staphyloma corneæ (2) in which there are a number of perforations from which small portions of iris protrude. equatorial s., scleral staphyloma occurring in the equatorial region of the eye intercalary 8., that which occurs in the rim of sclera anterior to the insertion of the ciliary body posterior s., s. posti'cum, the backward bulging of the sclera at the posterior pole of the eye projecting s. See s cornea Scarpa's s., posterior staphyloma. scleral s., protrusion of the contents of the eyeball at a point where the sclera has become too thin uveal s., protrusion of the uvea through a ruptured sclera.

staphylomatous (staf-il-om'at-us). Pertaining to or resembling staphyloma.

staphylomycosis (staf"il-o-mi-ko'sis)[Gr. σταφυλή grape + μύκης fungus]. Any systemic disorder due to staphylococci; staphylococcus infection.

Staphyloneus (staf-il-ong'kus) [Gr. σταφυλή uvula + ὄγκοs mass] A tumor or swelling of the uvula.

staphylopharyngeus (staf''il-o-fa-rin'je-us). The palatopharyngeus muscle.

staphylopharyngorrhaphy (staf"il-o-far-in-gor'af-e) [Gr. $\sigma \tau \alpha \varphi \nu \lambda \dot{\eta}$ uvula $+ \varphi \dot{\alpha} \rho \nu \gamma \dot{\xi}$ pharynx $+ \dot{\rho} \alpha \varphi \dot{\eta}$ suture]. The stitching of the halves of the velum palati to the posterior pharyngeal wall.

Staphyloplasmin (staf''il-o-plaz'min). A poison produced in the organism of a staphylococcus, producing suppuration.

staphyloplasty (staf'il-o-plas-te) [Gr. σταφυλή uvula + πλάσσειν to mold]. Plastic surgery of the uvula.

staphyloptosia, **staphyloptosis** (staf''il-ops to'se-ah, -sis) [Gr. σταφυλή uvula + πτῶσιfall] Elongation of the uvula.

staphylorrhaphy (staf-il-or'af-e) [Gr. σταφυλή uvula + ραφή suture]. Surgical closure of a

cleft-palate, especially of the soft palate. See uranorrhaphy.

staphyloschisis (staf-il-os'kis-is) [Gr. σταφυλή uvula + σχίσιs splitting]. Cleft uvula; fissure of the uvula and soft palate.

staphylostreptococcia (staf"il-o-strep-to-kok'seah). A secondary pyogenic infection with a staphylococcus and a streptococcus.

staphylotome (staf'il-o-tōm) [Gr. σταφυλοτόμον]. A knife or instrument for cutting the uvula

staphylotomy (staf-il-ot'o-me) [Gr. σταφυλή uvula + τέμνειν to cut]. 1. The surgical removal of a part of the uvula; also incision of the uvula. 2
The removal of a staphyloma by cutting.

staphylotoxin (staf''il-o-toks'in). A toxin occurring in cultures of staphylococci.

star (star). Any structure shaped like a star. blazing s., Helonias. daughter-s. See diaster. dental s., a marking on the incisor teeth of horses, first appearing in the lower central incisors at about the age of eight years: used in judging a horse's age. polar s's, the star-like figures of the diaster. s's of Verheyen, the venæ stellatæ; rosets of venous radicles beneath the capsule of the kidney. Winslow's s's, whorls of capillary vessels from which arise the vorticose veins of the choroid coat of the eye.

star-anise (star-an'is). See Illicium.

starch (starch) [L am'ylum]. A polysaccharid from various plant tissues, having the formula (C₆H₁₀-O₅)n. It is produced in plant cells by the influence of light on chlorophyl. The varieties of starch differ mainly in the form and size of their granules. The hull of the granule is composed of starch cellulose, and the interior of granulose, the two materials being isomeric. See amylopectin and amylose. The saliva and pancreatic juice convert cooked starch into maltose and then into dextrose. It is important as a food, and is used therapeutically as a dusting-powder, and as an emollient in enemas, ointments, etc Arrowroot, tapioca, tous-les-mois, salep, and sago are commercial forms of starch. The principal commercial starches are maize-starch, or corn-starch, potato-starch, rice-starch, and wheat-starch In surgery starch bandages have a considerable use. animal s. See glycogen. Corn-s., a starch from maize iodized s., starch that has been treated with iodin, of which it contains 5 per cent: alterative and antidotal Dose, 60 gr. (4 gm). lichen s., moss s., lichenin soluble s., the first stage in the hydrolysis of starch.

stare, postbasic (stār). A peculiar expression of the eyes in posterior basic meningitis due to downward rolling of the eyeball and retraction of the upper lid.

starter (star'ter). A culture of microorganisms used to initiate the desired fermentation, as in dairy products. **vitalait s.**, a culture of Lactobacillus bulgaricus and Streptococcus acudi lactici in symbiosis.

starvation (star-va'shun). Long-continued deprival of food. s.-treatment. See Allen treatment, under treatment.

stasibasiphobia (stas"e-bas-if-o'be-ah) [Gr. $\sigma\tau\dot{\alpha}\sigma\iota s$ standing $+\beta\dot{\alpha}\sigma\iota s$ step $+\varphi\delta\beta\sigma s$ fear]. Insane distrust of one's ability to stand or walk

stasimetry (stas-im'et-rē) [Gr. στάσις condition + μέτρον measure] The measurement of the consistence of soft bodies.

stasimorphia (stas-im-or'fe-ah) Stasimorphy.

stasimorphy (stas'im-or-fē) [Gr. στάσις halt + μορφή form]. Deformity or abnormality of shape in any crgan, due to arrest of development.

stasiphobia (stas-if-o'be-ah) [Gr. $\sigma\tau\dot{\alpha}\sigma\iota$ s standing + $\varphi\delta\beta\sigma$ s fear]. Morbid dread of standing erect.

stasis (sta'sis) [Gr. στάσις halt]. A stoppage of the flow of blood in any part. diffusion-s., stasis in which there is diffusion of lymph or serum.

foot s. See trench foot, under foot. ileal s., abnormal delay in the passage of the intestinal contents through the ileum; it is usually due to dilatation of the ileum. intestinal s., a condition of intestinal atony, frequently with visceral ptosis, intestinal kinks, bands, or adhesions, resulting in constipation, auto-intoxication, neurasthenia, etc papillary s. See choked disk, under disk. pressure s., traumatic asphyxia. See asphyxia. Venous s., stasis of blood due to venous congestion.

stasobasiphobia (stas"o-bas-if-o'be-ah). See stasi-basiphobia.

Stas-Otto method (stahs-ot'o) [Stas, a Belgian chemist, 1813-1891]. A method of separating alkaloids and ptomains. It consists in treating the substance with twice its weight of 90 per cent. alcohol and about 20 gm. of tartaric or oxalic acid, filtering, evaporating, dissolving the residue in absolute alcohol, filtering and evaporating again, dissolving the residue in water alkalinized with sodium bicarbonate, and extracting the alkaloid with ether.

Stat. Abbreviation for L. sta'tim, immediately.

state (stat) [L. sta'tus]. Condition or situation; status; also the crisis or turning-point of an attack of disease. anelectrotonic s., the condition which obtains in a nerve near the anode during the passage of a continuous current. catelectrotonic s., the condition of a nerve near the cathode during the passage of an electric current. correlated s., dynamic equilibrium. See equilibrium. dream s., a state of defective consciousness in which the environment is imperfectly perceived. hypnagogic s., that state of light slumber intermediate between sleep and waking which occurs just as one is falling to sleep or as one is awakening. **hypnoidal s.**, a condition in which portions of unrecognized past experience come up into consciousness from the subconscious life. hypnoidic s., a state in which more or less connected experiences of the past come up into consciousness from the subconscious state. hypnoleptic s., a state occurring between two experiences of double personality. refractory s., a condition of subnormal excitability of muscle and nerve following excitation. steady s., namic equilibrium See equilibrium. twilight 8., a temporary absence of consciousness in which the patient may perform certain acts involuntarily and without remembrance of them afterward. typhoid s., a condition of great muscular weakness and stupor, with dry, brown tongue, sordes on the teeth, muttering delirium, feeble pulse, involuntary discharge of feces and urine seen in certain wasting diseases, as typhoid and other fevers.

static (stat'ik) [L. stat'icus; Gr. στατικόs]. 1. At rest; in equilibrium; not in motion 2. Not dynamic.

Statice (stat'is-e) [Gr. στατική astringent]. A genus of plumbagineous plants. S. limo'nium, marshrosemary, and other species are highly astringent. statics (stat'iks). That department of mechanics

statics (stat'iks). That department of mechanics which treats of matter in a state of rest or equilibration.

statim (sta'tim). Latin for at once.

station (sta'shun) [L. sta'tio]. The manner of standing; in ataxic conditions it is sometimes pathognomonic. See attitude. aid s., a place for assembling and collecting the wounded in battle for their evacuation to the rear. dressing s., a sheltered temporary retreat for soldiers wounded in battle who have been collected on the field by the litter bearers and brought in from the aid station. rest s., stations for temporary relief of sick and wounded transported by hospital trains or ambulances located at definite points on a military road or railway. s. for the slightly wounded, an aid station for wounded soldiers who can walk and do not require transportation.

stationary (sta'shun-a-re) [L. stationa'rius]. Not subject to variations or to changes of place.

statistics (stat-is'tiks). Numerical facts pertaining to a body of things; also the science which deals with the collection and tabulation of such facts. vital s., that branch of biometry which deals with the data and laws of human mortality, morbidity, natality, and demography; called also biostatistics.

statoliths (stat'o-liths). Same as otoconia.

statometer (stat-om'et-er) [Gr. στατόs standing + μέτρον measure]. An apparatus for measuring the degree of exophthalmos.

statosphere (stat'o-sfēr). Same as centrosphere.

stature (stat'ūr) [L. statu'ra]. The height or tallness of a person standing.

status (sta'tus) [L]. State or condition. s. arthrit'icus, the gouty diathesis; predisposition to gout. s. cholera'icus, a state occurring in the algid stage of cholera, characterized by a dull countenance, weak pulse, and cold skin. s. chore'icus, a severe and persistent form of chorea, s. convul'sivus, a condition marked by a series of convulsions following one after the other. s. cribro'sus, a sieve-like condition of the brain due to dilatation of the perivascular lymph-spaces. s. crit'icus, a severe and persistent form of tabetic crises s. epilep'ticus. a series of rapidly repeated epileptic convulsions without any periods of consciousness between them. s. gas'tricus, a disordered state of the stomach. gastric indigestion. s. hemicra'nicus, a state marked by constantly recurring attacks of migraine s. lacuna'ris, a condition of the brain marked by numerous small losses of substance. s. lymphat'icus. See lymphatism. s. nervo'sus, the typhoid state. See state. s. parathyreopri'vus, a condition due to absence of parathyroid. s.præ'sens, the condition of a patient at the time of observation s. rap'tus, a condition of ecstasy. thymicolymphat'icus, a condition resembling lymphatism, with enlargement of the lymphadenoid tissue generally and with enlargement of the thymus as the special influencing factor thy'micus. See lymphalism. s. typho'sus, the typhoid state. See state. s. vertigino'sus, a prolonged condition of vertigo

statuvolence (stat-u'vo-lens) [I. sta'tus state + vo'lens willing]. A voluntary self-induced state of hypnotism.

statuvolent, statuvolic (stat-u'vol-ent, stat-u-vol'ik) Affected with or able to enter voluntarily a condition of statuvolence.

statuvolism (stat-u'vo-lizm). Same as statuvolence. staurion (staw're-on) [Gr. σταυρός cross]. A point at the crossing of the median and transverse palatine sutures.

stauroplegia (staw-ro-ple'je-ah) [Gr. $\sigma \tau \alpha \nu \rho \dot{o}s$ cross $+ \pi \lambda \eta \gamma \dot{\eta}$ stroke]. Crossed hemiplegia

Stauung's hyperemia (stau"oongs hi-per-e'meah) [Ger.]. Same as Bier's hyperemia. See hyperemia. stave of the thumb (stav). See Bennett's fracture, under fracture.

stavesacre (stavz'a-ker). Same as Staphisagria.

staxis (stak'sis) [Gr. στάξις a dropping]. Hemorrhage.

stay (stā). The bar of a horse's hoof.

stay knot (stā). See under knot.

steam-tug murmur (stēm-tug'). A murmur heard in aortic obstruction and insufficiency, and resembling the sound of the exhaust of a steam-tug.

steapsin (ste-ap'sin) [Gr. $\sigma \tau \dot{\epsilon} \alpha \rho$ fat $+ \pi \dot{\epsilon} \psi \iota_s$ digestion]. Same as lipase.

steapsinogen (ste-ap-sin'o-jen). A proenzyme of steapsin.

stearate (ste'ar-āt). Any compound of stearic acid. stearentin (ste-ar-en'tin) [Gr. στεάρ tallow + ξντερον intestine]. Greenish sebaceous matter occurring in feces of suckling infants.

stearic acid (ste-ar'ik). See acid.

- stearin (ste'ar-in). A white, crystalline fat, C₃H₅-(C₁₃H₃₅O₂)₃, found in the harder fats, such as tallow.
- Stearns's alcoholic amentia (sternz) [A. Warren Stearns, contemporary Boston physician]. See under amentia.
- stearoconotum (ste"ar-o-ko-no'tum) [Gr. $\sigma \tau \dot{\epsilon} a \rho$ solid fat $+ \kappa \dot{\epsilon} \nu \iota s$ dust or powder]. A yellow, pulverulent fat found in the brain mass.
- stearodermia (ste"ar-o-der'me-ah) [Gr. $\sigma \tau \epsilon a \rho$ fat $+ \delta \epsilon \rho \mu a$ skin]. A disease of the skin involving the sebaceous glands.
- stearol (ste'ar-ol) [Gr. στέαρ fat]. A medicinal preparation with fat as an excipient.
- stearopten' (ste-ar-op'ten) [Gr. στέαρ fat + πτηνός volatile]. A camphor; the more solid substance which, combined with an eleopten, constitutes a typical volatile oil.
- stearosan (ste'ar-o-san). A proprietary preparation of santolyl stearate used in catarrhal inflammation of the genito-urinary tract.
- stearrhea, stearrhea (ste-ar-e'ah) [Gr. στέαρ fat + ροία flow]. Same as steatorrhea.
- steatadenoma (ste-at-ad-en-o'mah) [Gr. στέαρ fat + adenoma]. Adenoma of the sebaceous glands.
- **steatite** (ste'at-īt) [Gr. στεάτιτηs]. Same as tal-
- steatitis (ste-at-i'tis) [Gr. στέαρ fat + -ιτις inflammation]. Inflammation of adipose tissue.
- steatocele (ste-at'o-sēl) [Gr. στέαρ fat + κήλη tumor]. A fatty mass formed within the scrotum.
- **steatocryptosis** (ste"at-o-krip-to'sis) [Gr. στέαρ fat + κρύπτη crypt]. Disorder of the function of the sebaceous glands.
- steatogenous (ste-at-oj'en-us) [Gr. στέαρ fat + γεννῶν to produce]. Causing steatosis.
- steatolysis (ste-at-ol'is-is) [Gr. στέαρ fat + λύσις loosing]. The emulsifying process fats undergo preparatory to absorption.
- steatolytic (ste"at-o-lit'ik). Pertaining to or performing steatolysis.
- steatoma (ste-at-o'mah) [Gr. στέαρ fat + -ωμα tumor] 1. A sebaceous cyst. 2. Same as lipoma.
- steatonecrosis (ste"at-o-nek-ro'sis) [Gr. στέαρ fat + necrosis]. Fatty necrosis.
- steatopathy (ste-at-op'ath-e) [Gr. στέαρ fat + πάθοs disease]. Disease of the sebaceous glands.
- **steatopyga**, **steatopygia** (ste"at-o-pi'gah, ste"at-o-pij'e-ah) [Gr. στέαρ fat + πυγή buttock]. Excessive fatness of the buttocks; Hottentot deformity.
- **steatopygous** (ste-at-op'ig-us). Characterized by excessive fatness of the buttocks.
- steatorrhea, steatorrhea (ste"at-or-e'ah) [Gr. στέαρ fat + ροία a flow]. τ. Same as seborrhea.

 2. The presence of an excess of fat in the stools.
- steatosis (ste-at-o'sis) [Gr. στέαρ fat]. 1. Fatty degeneration.
 2. Disease of the sebaceous glands.
- **steatozoön** (ste''at-o-zo'on) [Gr. στέαρ fat + ζφον animal]. Same as Demodex folliculorum.
- stechiology (ste-ke-ol'o-je) [Gr. στοιχείον element + λόγος treatise]. The science of elements, especially that branch of physiology which treats of the elementary cells of tissues.
- stechlometry, stochiometry (ste-ke-om'et-re) [Gr. στοιχείον element + μέτρον measure]. The measurement or estimation of the proportion in which elements combine to form compounds.
- steel (stēl). A tough and elastic form of iron, usually containing a small percentage of carbon. tincture of s., tinctura ferri chloridi. wine of s., vinum ferri.
- stege (ste'je) [Gr. στέγος roof]. The internal layer of the rods of Corti.
- stegmonth (steg'munth) [Gr. στέγειν to conceal + month]. The period (usually a month) between childbirth and perfect recovery.

- stegnosis (steg-no'sis) [Gr. στέγνωσις stoppage]. Constriction; stenosis.
- **stegnotic** (steg-not'ik). Relating to stegnosis; astringent.
- Stegomyia (ste-go-mi'e-ah). A genus of the Culicidæ (mosquitos) found in the southern United States and in the tropics. They are small, marked with silvery white, and the head is covered with broad, flat scales. The female has short four-jointed palpi and the male has long five-jointed ones. S. argen'tens. See S. calopus. S. calo'-pus, the species which transmits yellow fever. It is now known as Aedes agypti. S. fascia'tus. See S. calopus. S. scutelle'ris, a species which transmits Filaria bancrofti.
- Stein's test (stinz) [Stanislav Aleksandr Fyodorovich von Stein, Russian otologist, born 1855]. See under tests.
- Steinach's method or operation (sti'nahks) [Eugen Steinach, Austrian physician, born 1861]. See under operation.
- Stellaria (stel-a're-ah). A genus of caryophyllaceous plants: the chickweeds. S. holos'tea and S. me'dia were formerly used as demulcent medicines.
- stellate (stel'āt) [L. stella'tus]. Shaped like a star, or like stars; arranged in a roset, or in rosets.
- stellite (stel'it). A very hard, non-corrosive alloy of cobalt, chromium, and tungsten used for surgical instruments
- stellulæ vasculosæ winslowii (stel'u-le vas-ku-lo'se winz-lo'e-i). See Winslow's stars, under star.
 s. verhey'enii. See stars of Verheyen, under star.
- Stellwag's sign (stel'wagz) [Carl Stellwag von Carion, Austrian oculist, 1823-1904]. See sign.
- stem-length. The length of the stem of the body consisting of the head, neck, and trunk. It is the distance from the vertex to a line joining the ischial tuberosities.
- Stender dish (sten'der) [Wilhelm P. Stender, manufacturer in Leipsic]. A dish of various forms and sizes used in preparing and staining histologic specimens.
- stenion (sten'e-on), pl. sten'ia [Gr. στενός narrow]. A craniometric point situated at each end of the smallest transverse diameter in the temporal region.
- steno- [Gr. στενός narrow]. A prefix signifying contracted or narrow.
- Steno's duct (ste'noz). See duct.
- stenobregmate (sten-o-breg'māt) [Gr. στενός narrow + βρέγμα bregma]. Having the upper and anterior portion of the head narrowed.
- stenobregmatic (sten''o-breg-mat'ik). Stenobregmate.
- stenocardia (sten-o-kar'de-ah) [Gr. στενός narrow + καρδία heart]. Same as angina pectoris.
- stenocarpin (sten-o-kar'pin). A proprietary mixture containing cocain hydrochlorid, salicylic acid, and atropin sulphate.
- stenocephalia, stenocephaly (sten''o-sef-a'leah, -sef'al-e) [Gr. στενός narrow + κεφαλή head]. Excessive narrowness of the head.
- stenocephalous (sten-o-sef'al-us) [see stenocephaly]. Having a narrow head.
- stenochoria (sten-o-ko're-ah) [Gr. $\sigma\tau\epsilon\nu\delta$ s narrow $+\chi\hat{\omega}\rho\sigma$ s space]. Stenosis, or narrowing.
- stenocompressor (sten"o-kom-pres'or). An instrument for closing the opening of Stenson's duct during dental operations.
- stenocoriasis (sten''o-ko-ri'as-is) [Gr στενός narrow + κόρη pupil]. Contraction of the pupil of the eye.
- stenocrotaphia, stenocrotaphy (sten"o-krota'fe-ah, sten-o-krot'af-e) [Gr. στενός narrow + κρόταφος temple]. Narrowness of the temporal region.

1134

- stenol (ste'nol). A mixture of equal parts of caffein and theobromin, used in gastric insufficiency. cardiac palpitation, etc.
- stenopeic, stenopæic (sten-o-pe'ik) [Gr. στενός narrow + $\delta\pi\dot{\eta}$ opening]. Containing a narrow slit or opening.
- stenosal (ste-no'sal). Caused by or pertaining to stenosis.
- stenosed (ste-nozd'). Affected with stenosis or constriction.
- stenosin (sten'o-sin). See arrhenal.
- stenosis (sten-o'sis) [Gr. στένωσις]. Narrowing or stricture of a duct or canal. aortic s., a narrowing of the aortic orifice of the heart or of the cardiac s., a narrowing or diminuaorta itself tion of any heart passage or cavity. **cicatricial** s., stenosis caused by the contraction or shriveling of a cicatrix. **Dittrich's** s., stenosis of granulation s., stenosis the conus arteriosus. or narrowing caused by the deposit of granulations or by their contraction. mitral s., a narrowing of the left auriculoventricular orifice. postdiphtheritic s., stenosis of the larynx or preventricular trachea following diphtheria. s. See preventriculosis. pulmonary s., narrowing of the opening between the pulmonary artery and the right ventricle. pyloric s., hypertrophic obstruction of the pyloric orifice of the stomach, usually congenital (H. Beardsley, 1788). tricuspid s., narrowing or stenosis of the tricuspid orifice of the heart.
- stenostegnosis (sten"o-steg-no'sis). Stricture of Stenson's duct.
- stenostenosis (ste"no-sten-o'sis) [Stenson's duct + Gr. στένωσις narrowing] Stenosis or constriction of Stenson's duct.
- stenostomia (sten-o-sto'me-ah) [Gr. στενός narrow + στόμα mouth]. Narrowing of the mouth.
- stenothermal, stenothermic (sten-o-ther'mal, -mik) [Gr. $\sigma \tau \epsilon \nu \delta s$ narrow + $\theta \epsilon \rho \mu \eta$ heat]. Able to withstand only a small range of temperature: a term applied to bacteria which can develop only at a certain temperature or within a narrow range of temperature
- stenothorax (sten-o-tho'raks) [Gr. στενός narrow $+\theta\omega\rho\alpha\xi$ chest]. Abnormal narrowness of the chest.
- **stenotic** (sten-ot'ik) [Gr. στενότης narrowness]. Affected with stenosis or abnormal narrowness.
- Stenson's duct (sten'sonz) [Niels Stenson, Danish anatomist, 1638-1686]. See duct S's experiment, the experiment of cutting off the bloodsupply from the lumbar region of the spinal cord of an animal by compressing the abdominal aorta: it produces paralysis of the posterior parts of the body. S's foramen. See foramen.
- **stent** (stent) [See Stent's composition] In dentistry: (1) An impression taken in Stent's composition; (2) a mold to hold a graft in place.
- **Stent's composition.** A plastic resinous material which sets very hard used in dentistry for taking impressions of the mouth.
- stentorin (sten'to-rin). A blue pigment from protozoans of the genus Stentor.
- **stephanial** (stef-a'ne-al). Pertaining to the stephanion.
- **stephanion** (stef-a'ne-on) [Gr. στέφανος crown]. The point at the intersection of the temporal ridge and the cranial suture.
- Stephenson's wave (ste'ven-sons) [William Stephenson, Scotch obstetrician, 1837-1908]. See wave.
- steppage (step'aj). See steppage gait, under gait.
- steps, Krönig's. Extension of the lower part of the right edge of cardiac dulness in a step-like form: seen in hypertrophy of the right heart.
- stercobilin (ster-ko-bi'lin) [L. ster'cus dung + bilin]. Hydrobilirubin occurring in the feces and derived from the bile. It is a reduced form of bilirubin.

- stercoraceous (ster-ko-ra'shus) [L. stercora'ceus]. Consisting of or containing feces: fecal.
- stercoral (ster'ko-ral) [L. ster'cus dung]. Stercoraceous, or fecal.
- stercoremia (ster-ko-re'me-ah) [L. ster'cus dung + Gr. alua blood]. A toxic state occasioned by poisons absorbed from unexpelled feces.
- stercorin (ster'ko-rin) [L. ster'cus dung]. tallizable sterol, C27H49O, resembling cholesterin, extracted from the feces
- **stercorolith** (ster'ko-ro-lith) [L. ster'cus dung + Gr. λίθοs stone]. Same as feculith.
- stercorous (ster'ko-rus) [L. stercoro'sus]. Of the nature of excrement.
- Sterculia (ster-ku'le-ah) [L. Stercu'lius the god of dung]. A genus of trees and shrubs, including many species, mostly tropical: some have edible seeds and others are medicinal, while still others afford a gum resembling tragacanth.
- stercus (ster'kus). Latin for dung or feces.
- stere (ster) [Gr. στερεός solid]. Same as kiloliter.
- stereo- [Gr. στερεός solid]. A prefix signifying solid.
- stereo-agnosis (ste"re-o-ag-no'sis). Same as astercognosis.
- stereo-arthrolysis (ste"re-o-ar-throl'is-is) $\sigma \tau \epsilon \rho \epsilon \delta s$ solid $+ \ddot{a} \rho \theta \rho \rho \nu$ joint $+ \lambda b \sigma \iota s$ loosening]. Operative formation of a movable new joint in cases of bony ankylosis.
- stereo-auscultation (ste"re-o-aws-kul-ta'shun) [Gr. στερεός solid + auscultation]. Auscultation by means of two phonendoscopes each on different parts of the chest. One tube of each instrument is placed in the ears, the other tube of each being closed with the fingers.
- stereochemic (ste"re-o-kem"ik). Pertaining to stereochemistry, or the space relations of the atoms of a molecule.
- stereochemistry (ste"re-o-kem'is-tre). chemic theory which supposes an arrangement of the atoms of certain molecules in three dimensional spaces; that branch of chemistry which treats of the space relations between atoms.
- stereocognosy (ster-e-o-kog'no-se). Same as stereognosis.
- **stereofluoroscopy** (ste"re-o-flu-o-ros'ko-pe). Stereoscopic fluoroscopy.
- stereognosis (ste"re-og-no'sis) [Gr. στερεός solid + γνωσις knowledge 1 The faculty of perceiving and understanding the form and nature of objects by the sense of touch 2. Perception by the senses of the solidity of objects.
- stereognostic (ste"re-og-nos'tik). Of or pertaining to stereognosis.
- stereograph (ste're-o-graf). A stereoscopic radiograph.
- stereo-isomer (ste"re-o-i'so-mer). A compound in which the molecule contains the same number and variety of atoms as another, but in which the spatial arrangement of the atoms is different.
- stereo-isomerism (ste"re-o-i-som'er-izm). Stereochemic isomerism.
- stereometer (ste-re-om'et-er) [Gr στερεός solid + μέτρον measure]. An instrument for performing stereometry
- **stereometry** (ste-re-om'et-re) [Gr. στερεός solid + μέτρον measure]. The measurement of the cubic or solid contents of a solid body, or of the capacity of a hollow space.
- stereophantoscope **ereophantoscope** (ste"re-o-fan'to-sköp) [Gr. $\sigma \tau \epsilon \rho \epsilon \delta s$ solid $+ \varphi a \nu \tau \delta s$ visible $+ \sigma \kappa \sigma \pi \epsilon \hat{\iota} \nu$ to view]. A large stereoscopic machine with rotating disks in the place of pictures.
- stereophoroscope (ste"re-o-for'o-skōp) [Gr. στερ- ϵ solid + φ op δ s bearing + σ κ o π ϵ $\hat{\iota}\nu$ to view]. form of zoötrope, employed in the study of visual perception.

- stereophotography (ste"re-o-fo-tog'raf-e) στερεός solid + photography]. Stereoscopic photography.
- stereophotomicrograph (ste"re-o-fo-to-mi'krograf). A stereoscopic photograph of a microscopic subject.
- stereoplasm (ste're-o-plazm) [Gr. στερεός solid + πλάσμα plasma]. The more solid portions of protoplasm.
- stereopsis (ste-re-op'sis) [Gr. στερεός solid + όψις vision]. Stereoscopic vision. See vision. stereoroentgenograph (ste"re-o-rent-gen'o-graf).
- A stereoscopic x-ray picture.
- stereoscope (ste're-o-skop) [Gr. στερεός solid + $\sigma \kappa \sigma \pi \epsilon \hat{\imath} \nu$ to see]. An instrument for producing the appearance of solidity and relief by combining the images of two different objects.
- stereoscopic (ste"re-o-skop'ik). Having the effect of a stereoscope giving to objects seen a solid appearance.
- stereoskiagraphy (ste"re-o-ski-ag'raf-e). The making of a stereoscopic photograph by the Röntgen rays.
- stereotropic (ste"re-o-trop'ik). Marked by stereotropism.
- stereotropism (ste-re-ot'ro-pizm) [Gr. $\sigma\tau\epsilon\rho\epsilon\delta s$ solid $+\tau\rho\delta\pi\sigma s$ turning]. The movement of an organism brought about by contact with a foreign body.
- stereotypy (ste're-o-ti-pe) [Gr. στερεός solid + τύπος type] The persistent repetition of senseless or constant repetition of certain words or phrases (s. of speech, echolalia, verbigeration).
- steresol (ste'res-ol). An antiseptic varnish prepared from balsam of Tolu, benzoin, oil of cinnamon, carbolic acid, and saccharin dissolved in alcohol, used in treating diphtheria and skin diseases.
- steric (ste'rik) [Gr. στερεός solid]. Pertaining to the arrangement of atoms in space.
- steriform chlorid (ste'rif-orm). A proprietary antiseptic and digestant mixture of formaldehyd, 5 parts, pepsin, 20 parts, ammonium chlorid, 10 parts; and lactose, 65 parts s. iodid, the same as the chlorid, except that the ammonium chlorid is replaced by ammonium iodid.
- iterigma (ste-rig'mah), pl. sterig'mata [Gr. στή-ριγμα support] Any one of the radially arranged outgrowths crowded together on the upper half of the sphere into which the conidia bearers of an aspergillus expand.
- sterigmocystis, Sterigmatocystis (ste-rig-mosis'tis, ste-rig'mat-o-sis'tis). A genus of mold resembling Aspergillus except that secondary phalides project from each primary phalide. 'S nid'ulans has been found in otomycosis and in the white granules of mycetoma.
- terile (ster'il) [L. ster'ilis]. 1. Not fertile; infertile; barren; not producing young. 2. Aseptic; not producing microorganisms; free from microorganisms.
- terility (ster-il'it-e) [L. steril'itas]. Barrenness; inability to produce young. one-child s., sterility after having borne one child.
- terilization (ster"il-iz-a'shun). 1. The act or process of rendering sterile; the process of freeing from all germs. It is usually performed by means of heat. Sterilization differs from disinfection in that it calls for the destruction of all bacterial life, while disinfection is not necessarily the destruction of all bacteria, but only of those that are infectious. 2. Any procedure by which an in-dividual is made incapable of reproduction. fractional s., intermittent s., sterilization in which some time is permitted to elapse between the heatings. This is done so as to allow spores to develop into adult forms, which are more easily destroyed than the spores.

- sterilize (ster'il-īz). To render sterile: to free from sentic germs.
- sterilizer (ster'il-i-zer). A mechanism used in sterilizing substances. Arnold s., an apparatus for sterilizing objects by means of live steam at atmospheric pressure.
- sterisol, steriosol (ster'is-ol, ster'e-o-vol). maldehyd, sodium phosphate, etc., in a solution of milk-sugar an antiseptic.
- sternad (ster'nad). Toward the sternal surface or aspect.
- sternal (ster'nal) [L. sterna'lis]. Pertaining to the sternum.
- sternalgia (ster-nal'je-ah) [Gr. στέρνον sternum + άλγος pain]. Pain in the sternum; angina pectoris.
- sternalis (ster-na'lis). See muscles, table of.
- Sternberg's disease (stern'berz) [Karl Sternberg, German pathologist, born 1872] Lymphogranulomatosis.
- Sternbergia lutea (stern-ber'je-ah lu'te-ah). An amaryllidaceous plant of Asia: the bulb is locally used in preparing epithems for indolent ulcers.
- sternebra (ster'neb-rah), pl. sterne'bræ [sternum + A sternal vertebra; any one of the segvertebra] ments of the sternum.
- sternen (ster'nen). Pertaining to the sternum in itself.
- sternochondroscapularis (ster"no-kon"droskap-u-la'ris) [Gr. $\sigma \tau \epsilon \rho \nu \rho \nu$ sternum + $\chi \delta \nu \delta \rho \rho s$ cartilage + scapularis] An occasional muscle arising from the sternum and the first costal cartilage and running to the superior border of the scapula.
- sternoclavicular (ster"no-kla-vik'u-lar). taining to the sternum and clavicle.
- sternoclavicularis (ster"no-klav-ik-u-la'ris). An occasional muscle in man. s. anti'cus. one arising from the sternum, near the attachment of the sternomastoid, and inserted upon the anterior surface of the clavicle. s. posti'cus, a slip passing from the inner end of the manubrium to the clavicle behind the joint. s. supe'rior, one arising from the sternum above the sternoclavicularis anticus and running to the clavicle.
- sternocleidal (ster-no-kh'dal) [Gr. στέρνον sternum + κλείς key]. Same as sternoclavicular.
- sternocleidomastoid (ster''no-kli-do-mas'toid). See muscles, table of.
- sternocostal (ster-no-kos'tal) [sternum + L. cos'ta rib]. Pertaining to the sternum and ribs.
- sternodymia (ster-no-dim'e-ah) [Gr. στέρνον sternum $+\delta i\delta v_{\mu}$ twin]. The union of two monster-fetuses by the anterior wall of the chest.
- sternodymus (ster-nod'im-us) [Gr. στέρνον sternum + δίδυμος twin] A pair of twin monsters united by the anterior wall of the chest
- sternodynia (ster-no-din'e-ah). Same as sternalgia. sternofacialis (ster"no-fa-se-a'lis) [L.]. See muscles, table of.
- sternoglossal (ster-no-glos'al). Pertaining to the sternum and the tongue.
- sternogoniometer (ster"no-go-ne-om'et-cr). instrument for measuring the sternal angle.
- sternohyoid (ster-no-hi'oid). Pertaining to the sternum and to the hyoid bone. See muscles,
- sternoid (ster'noid). Resembling the sternum.
- sternomastoid (ster-no-mas'toid). Pertaining to the sternum and the mastoid process of the temporal bone. See also sternocleidomastoid, in muscles, table of.
- sternopagia (ster-no-pa'je-ah). Same as sterno-
- sternopagus (stern-op'ag-us) [Gr. στέρνον sternum $+ \pi \dot{\alpha} \gamma os$ fixed]. Same as sternodymus.
- sternopericardial (ster"no-per-ik-ar'de-al). taining to the sternum and the pericardium.

- sternoscapular (ster"no-skap'u-lar). Pertaining to the sternum and the scapula.
- sternothyroid (ster-no-thi'roid). Pertaining to the sternum and to the thyroid cartilage or gland. See muscles, table of.
- sternotomy (ster-not'o-me) [Gr. στέρνον sternum + τομή a cutting]. The operation of cutting through the sternum.
- sternotracheal (ster-no-tra'ke-al) [Gr. στέρνον sternum + trachea]. Pertaining to the sternum and to the trachea.
- **sternotrypesis** (ster"no-tri-pe'sis) [Gr. στέρνον sternum + τρύπησις trephination]. Surgical perforation of the sternum.
- sternovertebral (ster-no-ver'te-bral). See rib.
- Stern's position or posture (sternz) [Heinrich Stern, contemporary physician in New York]. See position.
- sternum (ster'num) [L.; Gr. στέρνον]. The breastbone; the narrow, flat bone in the median line of the thorax in front. It consists of three portions, distinguished as the manubrium, the gladiolus, and the ensiform or xiphoid appendix. cleft s., congenital fissure of the sternum.
- sternutatio convulsiva (ster-nu-ta'she-o kon-vulsi'vah) [L]. Paroxysmal and convulsive sneezing.
- **sternutation** (ster-nu-ta'shun) [L. sternuta'tio]. The act of sneezing; a sneeze.
- sternutator (ster'nu-ta-tor). A gas that causes sneezing.
- sternutatory (ster-nu'ta-tor-e). 1. [L. sternutato'rius.] Producing or causing sneezing; errhine. 2. [L. sternutato'rium] An agent that causes sneezing; an errhine.
- Sternzellen (stern'tsel-en) German for "star cells." See Kupffer's cells, under cell.
- sterol (ste'rol). A solid alcohol; one of a class of compounds widely distributed in nature, which, because their solubilities are similar to those of fats, have been classified with the lipoids Cholesterol is the best known member of the group.
- **sterolin** (ster'o-lin). A proprietary preparation for sterilizing the skin, containing Peruvian balsam, castor oil, Venice turpentine, glycerin in alcohol.
- stertor (ster'tor) [L]. An act of snoring; stertorous or sonorous breathing hen-cluck s., a respiration sound like a hen's cluck in cases of postpharyngeal abscess.
- stertorous (ster'to-rus). Characterized by stertor. sterule (ster'ūl). A glass capsule containing a sterile solution.
- **stetharteritis** (steth-ar-ter-i'tis) [Gr. στῆθος chest + arteritis]. Inflammation of the arteries of the chest.
- stethemia (steth-e'me-ah) [Gr. στηθος chest + αὶμα blood]. Congestion of the lungs.
- stethendoscope (steth-en'do-skōp) [Gr. $\sigma \tau \hat{\eta} \theta o s$ chest $+ \epsilon \nu \delta o \nu$ within $+ \sigma \kappa o \pi \epsilon \hat{\iota} \nu$ to see]. A fluoroscope used in examination of the chest by α -rays.
- stethocyrtograph (steth-o-ser'to-graf). See stetho-kyrtograph.
- **stethogoniometer** (steth"o-go-ne-om'et-er) [Gr. $\sigma \tau \hat{\eta} \theta os$ chest $+ \gamma \omega \nu i a$ angle $+ \mu \epsilon \tau \rho o \nu$ measure]. An apparatus for measuring the curvature of the chest.
- stethograph (steth'o-graf) [Gr. στήθος chest + γράφειν to write]. An instrument for recording movements of the chest.
- **stethokyrtograph** (steth-o-kir'to-graf) [Gr. $\sigma\tau\hat{\eta}\theta$ os chest + $\kappa\nu\rho\tau$ os bent + $\gamma\rho\hat{\alpha}\varphi\epsilon\nu$ to record]. An instrument for recording and measuring the curves of the chest.
- stethomenia (steth-o-me'ne-ah) [Gr. στῆθος chest + μήν month]. Vicarious menstruation into the bronchial tubes.
- stethometer (steth-om'et-er) [Gr. στήθος chest + μέτρον measure]. An instrument for measuring

- the circular dimension or expansion of the chest or of the abdomen.
- stethomyitis (steth"o-mi-i'tis) [Gr. $\sigma\tau\eta\theta$ os chest + $\mu\theta$ s muscle + $-\iota\tau\iota_s$ inflammation]. Inflammation of the muscles of the chest.
- stethomyositis (steth"o-mi-o-si'tis). Stethomyitis.
- stethoparalysis (steth"o-par-al'is-is) [Gr. στήθος chest + paralysis]. Paralysis of the chest muscles.
- stethophone (steth'o-fōn) [Gr. στῆθος chest + φονή voice]. 1. An instrument designed to transmit stethoscopic sounds so that many persons can hear them simultaneously. 2 A term proposed as a more accurate word for stethoscope.
- **stethophonometer** (steth"o-fo-nom'et-er) [Gr. $\sigma \tau \hat{\eta} \theta$ os chest $+ \varphi \omega \nu \hat{\eta}$ voice $+ u \dot{\epsilon} \tau \rho \rho \nu$ measure]. An instrument for measuring the intensity of auscultatory sounds.
- **stethopolyscope** (steth-o-pol'is-kōp) [Gr. $\sigma\tau\eta\theta$ os chest + π ολ $\dot{\nu}$ s many + σ κο $\pi\epsilon\hat{\nu}$ ν to examine]. A stethoscope for the simultaneous use of several persons.
- **Stethoscope** (steth'o-skōp) [Gr. $\sigma\tau\eta\theta$ os chest + $\sigma\kappa\sigma\kappa\bar{\epsilon}\nu$ to inspect]. An instrument of various form, size, and material for performing mediate auscultation. By means of this instrument the respiratory, cardiac, pleural, arterial, venous, uterine, fetal, intestinal, and other sounds are conveyed to the ear of the observer. **binaural 8.**, one with two adjustable branches, designed for use with both ears. **Cammann's 8.**, a binaural stethoscope. **differential 8.**, one by means of which sounds at two different portions of the body may be compared
- **stethoscopic** (steth-o-skop'ik). Pertaining to or performed by means of the stethoscope.
- **stethoscopy** (steth-os'ko-pe). Examination by means of the stethoscope.
- **stethospasm** (steth'o-spazm) [Gr. $\sigma r \hat{\eta} \theta os$ breast + spasm]. Spasm of the chest muscles.
- Stewart's purple, solution (stew'arts) [Douglas Hunt Stewart, New York surgeon, born 1860]. See purple and solution.
- **sthenia** (sthe'ne-ah). A conditon of seeming strength and activity.
- sthenic (sthen'ik) [L. sthen'icus; Gr. σθένος strength]. Active, strong. See fever.
- sthenometer (sthen-om'et-er). An instrument for measuring the muscular strength of a part.
- **sthenometry** (sthen-om'et-re) [Gr. $\sigma\theta \dot{\epsilon} \nu \sigma$ strength + $\mu \dot{\epsilon} \tau \rho \sigma \nu$ measure]. The measurement of bodily strength.
- sthenopyra (sthen-o-pi'rah) [Gr. $\sigma\theta\dot{\epsilon}\nu\sigma$ s strength + $\pi\hat{\nu}\rho$ fire]. Sthenic fever.
- stibacetin (stib-as'e-tin). An organic compound of antimony, para-acetyl-amino-phenyl-stibinate. It is used in the chemotherapeutic treatment of kalaazar, bilharziasis, trypanosomiasis, and granuloma inguinale.
- stibamine (stib'am-in). The sodium salt of aminophenyl-stibinic acid. It is used in the treatment of kala-azar. urea s., the carbamid salt of paramino-phenyl-stibinic acid, NH₂.CO.NH₂.C₆H₄-SbO(OH)₂. It is used in the treatment of kala-azar.
- stibenyl (stib'en-il). The acetyl-para-aminophenylstibiate of soda: used in kala-azar.
- **stibialism** (stih'e-al-izm) [L. stibium, antimony]. Poisoning with antimony.
- stibiated (stib'e-a-ted) [L. stibia'tus]. Containing antimony.
- stibiation (stib-e-a'shun) [L. stib'ium antimony]. Administration of antimonials in large quantities; treatment by bringing the patient under the full influence of antimony.
- stibine (stib'in). Antimoniureted hydrogen.
- stibium (stib'e-um). Latin for antimony,

tibonium (stib-o'ne-um). The radical SbH4.

tibosan (stib'o-san). A light brown powder which is used in the treatment of kala-azar. It is metachlor-para-acetyl-amino-phenyl-stibiate of sodium, it is freely soluble in water and much less toxic than sodium antimony tartrate. Dose, o.i-o.3 gm. intravenously three times a week.

tichochrome (sti'ko-krōm) [Gr. στίχος row + χρῶμα color]. Any nerve-cell having the stainable substance (chromophilic bodies) arranged in more or less regular striæ or layers.

kticker's disease [G. Sticker, German physician, born 1860]. Erythema infectiosum.

ticking plas ter (stik'ing). See plaster, adhesive. Iticta (stik'tah) [Gr. στικτός pricked]. τ. A genus of lichens; lungwort. 2. A homeopathic preparation of Stic'ta pulmona'ria.

Itifel's figure (sti'felz). See under figure.

tiff-neck fever (stif'nek). Epidemic cerebrospinal meningitis. See meningitis.

tifle-bone (sti'fel). The patella of the horse.
tifle-joint (sti'fel). The femorotibial joint of the horse.

tigma (stig'mah), pl. stig'mata [Gr. στίγμα mark].

1. A spot, dot, or impression upon the skin. 2. Any space between the cells of the endothelium of a capillary. 3. Any readily stainable area in the epithelium at the points of union of groups of cells. 4. That part of the pistil of a flower which receives the pollen. bakers' s., lumps on the backs of the fingers of bakers, produced by kneading dough. costal s. Same as Stiller's sign. See under sign. s. of degeneracy, any of the bodily abnormalities which are found in considerable number in degenerate persons. Giuffrida-Ruggieri s., abnormal shallowness of the glenoid fossa. hysteric s., bodily marks or signs characteristic of hysteria. malpighian s., the points where the smaller veins enter into the larger veins of the spleen. psychic s., mental conditions marked by susceptibility to suggestion. somatic s., the bodily signs of certain nervous diseases.

tigmal (stig'mal). Pertaining to a stigma.

tigmasterol (stig-mas'te-rol). A sterol, C₃₀H₄₈O, from cacao-butter.

tigmata (stig'mat-ah). The plural of stigma. s. ma'ydis, the silk or stigmata of maize; corn-silk: a diuretic. See Zea.

tigmatic (stig-mat'ik) Pertaining to a stigma.

tigmatism (stig'mat-izm). The condition due to or marked by stigmata.

tigmatization (stig"mat-iz-a'shun). r. The formation of impressions on the skin. 2. The formation of bleeding points or of red lines upon the skin by hypnotic suggestion.

tigmatodermia (stig"mat-o-der'me-ah) [Gr. $\sigma \tau l \gamma \mu a$ mark $+ \delta \epsilon \rho \mu a$ skin]. Any morbid state of the prickle layer of the skin.

tigmatometer (stig-mat-om'et-er). An instrument for testing the refraction of the eye by the objective method and for direct ophthalmoscopy.

tigmatosis (stig-mat-o'sis) [Gr. $\sigma \tau l \gamma \mu a$ a spot]. A skin disease marked by ulcerated spots.

tijfziekte (stēf-zēk'te) [Dutch]. A disease of the joints of young cattle in South Africa.

tilet, stilette (sti-let') [Fr. stilette]. 1. A delicate probe. 2. A wire used to stiffen or clear a catheter. tili (sti'li). Plural of stilus. See stylus.

Itill's disease [George Frederic Still, English physician, born 1868]. See disease.

tillbirth (stil'berth). The birth of a dead fetus.

itiller's sign, theory (stil'erz) [Berthold Stiller, physician in Budapest]. See sign and theory.

tillicidium (stil-is-id'e-um) [L. stil'la drop + ca'dere to fall]. r. A dribbling or flowing by drops.
2. Epiphora. s. lacrima'rum, epiphora. s. na'rium, coryza. s. uri'ns, strangury.

stilligout (stil-e-gowt') [Fr.; L. stilla're to let fall + gut'ta drop]. A form of dropper.

Stillingia (stil-in'je-ah) [after B. Stillingfleet]. A genus of euphorbiaceous trees, shrubs, and herbs. The root of S. sylval'ica, a plant of North America, is sialogogue and diuretic, and is used in syphilis, tuberculosis, and skin diseases. Dose of tincture or fluidextract, 10-60 min. (0.666-4 c.c.).

stillingin (stil-in'jin). 1. An alkaloid from Stillin'gia sylvat'ica. 2. A concentration prepared from Stillin'gia sylvat'ica. Dose, 1-4 gr. (0.066-0.266 gm.).

Stilling's canal, cells, nucleus, raphé, etc. (stil'ingz) [Benedict Stilling, German anatomist, 1810-1879]. See the nouns.

stilus (sti'lus), pl. sti'li. See stylus.

stimulant (stim'u-lant) [L. stim'ulans]. 1. Producing stimulation. 2. An agent or remedy that produces stimulation. alcoholic s., one of which whisky, and malt liquors. bronchial s., a stimulating expectorant: the chief ones are ammonium carbonate, belladonna, senega, strychnin, Calabar bean, caffein, and the emetics. cardiac s., one which increases the heart's action: such are ammonia, belladonna, digitalis, ether, stro-phanthus, and strychnin. cerebral s., one which exalts the functional activities of the brain: the principal are alcohol, caffein, ether, opium, strychnin, and phosphorus. cutaneous s., a diaphoretic agent which acts by stimulating the skin: as alcohol, ammonia, cold baths, hot drinks, etc. diffusible s., one which acts promptly and strongly, but transiently: the principal are ammonia, ether, musk, and sumbul. gastric s., stomachic s., one which promotes the digestion of food in the stomach, like alcohol and the pungent aromatics. general s., one which acts upon the whole body: such are the alcoholic and diffusible stimulants genital s., an aphrodisiac: here belong cantharides, phosphorus, etc. hepatic s., one which arouses the functions of the liver: the chief of these are blue mass, calomel, jalap, iris, aloes, podophyllin, colocynth, rhubarb, sodium phosphate, and leptandra. intestinal s., a cathartic agent a large class, including coloa cathartic agent a large class, including colocynth, croton oil, elaterium, scammony, etc. local s., one which affects that part only, or mainly, to which it is applied: like mustard, chloral hydrate, chloroform, oil of turpentine. nervous s., one which acts mainly upon the nerve-centers: a cerebral or spinal stimulant. paradoxical s., a warm object applied to one of the cold spots of the body produces a sensation of cold. renal s., a stimulating diuretic: the principal are colchicum, cantharides, turpentine, and juniper cil respiratory s., one which increases the respiratory movements: the chief are ammonia, arsenic, belladonna, and strychnin. spinal s., one which acts upon and through the spinal cord strychnin and caffein are examples. topical s. Same as local s. uterine s., an ecbolic or emmenagogue such are ergot, digitalis, rue, sabin, tansy, apiol, etc. vascular s., vasomotor s., one which appeals to the vasomotor centers of this class are ammonia, ergot, strychnin, opium, and belladonna

stimulate (stim'u-lāt) [L. stimu'lare]. To excite to functional activity.

stimulation (stim-u-la'shun) [L. stimula'tio]. The act or process of stimulating; the condition of being stimulated. areal s., stimulation of an extended portion of a sense organ. non-specific s., paraspecific s., stimulation by other than the specific exciting agent. punctual s., stimulation of a sense organ at a single point.

stimulin (stim'u-lin). A name given by Metchnikoff to the protective element in the bloodserum that produces immunity by stimulating the action of phagocytes.

stimulus (stim'u-lus), pl. stim'uli [L. "goad"].
Any agent, act, or influence that produces func-

tional or trophic reaction in an irritable tissue. adequate s., one that acts specifically upon the end-organs only, as light upon the retina. Called also homologous s. chemic s., one which induces a chemic change in a tissue. for example, nitric acid or silver nitrate locally applied. electric s., a galvanic, induced, or other electric current or shock, as applied to a responsive tissue. heterologous s., one which produces an effect or sensation when applied to any part whatever of a nerve-tract. heterotopic s., a stimulus to heart contraction arising somewhere else than in the Keith-Flack node, the normal pacemaker of the homologous s. See adequate s. chanic s., a stimulant application of mechanic force, as in friction or pinching. nomotopic s., a stimulus to heart contraction arising in the Keith-Flack node. thermal s., application of

Stipa virid'ula (sti'pah). A grass of the southwestern United States, called sleepy-grass: poisonous to cattle and horses; said to be a powerful narcotic, diuretic, sudorific, and cardiac poison.

stippling (stip'ling). A spotted condition or ap pearance; especially—(a) an appearance of the retina as if dotted with light and dark points; (b) the spotted appearance of red blood-corpuscles in basophilia. See basophilia. malarial s., the finely granular appearance often seen in stained red blood-corpuscles which harbor tertian malarial parasites. The granules are called Schiffner's granules.

stirpiculture (ster'pik-ult-ūr) [L. stirps stock + cultu'ra culture]. The systematic attempt at improving a stock or race by attention to the laws of breeding.

stirrup, stirrup-bone (stir'up). The stapes.

stitch (stitsh). 1. See suture. 2. A severe pain, generally at the costal margin on one side, brought on by running or riding, and ceasing when the pace is reduced to a walk. 3. To fasten with a needle and thread.

stithe (stith). An old name for the incus.

stizolobin (sti-zo-lo'bin). The globulin of the Chinese velvet bean.

stocking (stok'ing). Edema of a horse's leg.

stæchiology, stoicheiology (stek-e-ol'o-je, stoi-ke-ol'o-je) [Gr. στοιχείον element + λόγος law]. The physiology of the cellular elements of tissues.

stochiometry, stoicheiometry (stek-e-om'et-re, stoi-ke-om'et-re) [Gr. στοιχεῖον element + μέτρον measure]. The study of the numerical relationships of chemical elements and compounds and the mathematical laws of chemical changes, the mathematics of chemistry.

Stoerk's blennorrhea (sterk) [Carl Stoerk, Austrian laryngologist, 1832-1899]. See blennorrhea.

Stokes's disease, lens, sign, etc. (stöks) [1. William Stokes, Irish physician, 1804-1878. 2. English physicist, 1819-1903]. See disease, lens, sign, etc.

Stokes's reagent (stöks) [William Royal Stokes,

American pathologist, born 1870]. See reagent.

Stokvis's test (stok'vis) [Barend J. E. Stokvis, Dutch physician, born 1834]. See under tests.

Stoltz's operation (stoltz) [Joseph Stoltz, French gynecologist, 1803-1896]. See operation.

stoma (sto'mah), pl. sto'mata [Gr. στόμα mouth]. Any minute pore, orifice, or opening on a free surface; specifically, one of the openings (stigma, or pseudostoma) between epithelial cells of a lymph-space, forming a means of communication between adjacent lymph-channels.

stomacace (sto-mak'as-e) [Gr. στόμα mouth + ran badness]. Ulcerative stomatitis.

stomach (stum'ak) [L. stom'achus: Gr. στόμαχος]. The ovoid, musculomembranous digestive pouch below the esophagus. The end which connects with the esophagus is the cardiac end, and that nearest the pylorus is the pyloric end, or pylorus. The upper concave surface or edge is the lesser curvature; the lower convex edge is the greater curvature. The coats of the stomach are four: An outer, peritoneal, or serous coat, a muscular coat, made up of longitudinal, oblique, and circular fibers (the latter forming a pyloric sphincter); a submucous coat lined with a muscular layer, the muscularis mucosa; and the mucous coat or membrane forming the inner lining. The secretion of the stomach is the gastric juice, which contains pepsin, rennin, hydrochloric acid, etc. bilocular s., hour-glass stomach. s.-bucket, a small bucket for lowering into the stomach and withdrawing some of its contents for examination. cardiac s., the fundus of the stomach. cascade s., an atypical form of hour-glass stomach, characterized roentgenologically by a drawing up of the posterior wall. An opaque medium first fills the upper sac and then cascades into the lower sac. corset-s., a displaced or deformed stomach due to pressure from tight or improper lacing of the corset. s .cough, a cough excited by reflex irritation from the stomach. drain-trap s., water-trap stomach. hour-glass s., a stomach shaped somewhat like an hour-glass, on account of the formation of a band of exudation. leather-bottle s., severe hyper-trophy of the stomach-wall, usually with contraction of the cavity of the organ. Cf limits plastica. Pavlov's s., a portion of the stomach of a dog isolated from communication with the rest of the stomach and opening on to the abdominal wall through a fistula. used in studying gastric secretion. s.-pump, a pump for evacuating the contents of the stomach. red s., a condition in which the pyloric end of the stomach is dark red. reefing, an operation for dilatation of the stomach, done by folding in the wall of the stomach and then suturing the fold s.-tooth, one of the lower canine teeth of the first dentition. trifid 8., a stomach with two constrictions, producing three pouches. s.-tube. 1. A siphon used in washing out the stomach. 2. A feeding-tube. wallet s., bag-like distention of the stomach. water-trap s., a stomach with an extremely high pylorus, so that it does not readily empty itself.

stomachal (stum'ak-al). Pertaining to the stomach. stomachalgia (stum-ak-al'je-ah) [Gr. στόμαχος stomach + άλγος pain] Pain in the stomach.

stomachic (sto-mak'ik) [L. stomach'icus; Gr. στομαχικός]. 1. Pertaining to the stomach. medicine which promotes the functional activity of the stomach; a stomachic tonic. See tonic.

stomachodynia (stom-ak-o-din'e-ah) [Gr. στόμαχος stomach + οδύνη pain] Pain in the stomach.

stomachosan (stom-ak'o-san). A proprietary stomachic consisting of condurango and cinchona bark, valerian and gentian root, and ginger.

stomachoscopy (sto-mak-os'ko-pe) [Gr στόμαχος stomach + $\sigma \kappa \sigma \pi \epsilon \hat{i} \nu$ to view]. Examination of the stomach.

stomach-reefing (stum'ak-re'fing). Gastroplication.

stomadeum (sto-mah-de'um). Same as stomodeum. stomalgia (sto-mal'je-ah). Stomatalgia.

stomalix (sto'mal-iks). A proprietary preparation for disorders of the stomach and intestines.

oman (sto'man). A preparation of formaldehyd with the maltose of malt extract, used as a local stoman (sto'man). disinfectant for the mouth and throat.

stomata (sto'mat-ah). Plural for stoma.

stomatal (sto'mat-al). Pertaining to stomata.

stomatalgia (sto-mat-al'je-ah) [Gr. στόμα mouth + ἄλγος pain]. Pain in the mouth.

stomatic (sto-mat'ik). Pertaining to the mouth.

stomatitis (sto-mat-i'tis) [Gr. στόμα mouth]. Inflammation of the mouth. It is usually attended by pain and salivation, and often by fetor of the breath. s. aphtho'sa, aphthous s., the formation of small superficial ulcers on the mucous

membrane of the mouth; aphthous stomatitis canker. s. arsenica'lis, ulcerous stomatitis due to arsenical poisoning. catarrhal s., simple and uncomplicated inflammation and redness of the mouth. epidemic s., epizoötic s. See foot-and-mouth disease, under disease. erythematopultaceous s., stomatitis marked by reddening of the mucous membrane, which is covered with a layer of thick, sticky matter: seen in uremia.

s. exanthemat'ica, that which is secondary to the exanthemata. follicular s., stomatitis aphthosa. s. gangreno'sa, gangrenous s. Same as noma. s. herpet'ica. Same as aphthous s. s. hyphomycet'ica. Same as thrush. s. intertrop'ica, sprue. membranous stomatitis accompanied by the formation of false membrane. mercurial s., that which is due to mercurial poisoning. It is often accompanied by salivation, looseness of the teeth, and fetor of the breath. s. mycetogenet'ica, that which is due to the presence of some microscopic fungoid mycotic s., thrush. parasitic s., thrush. s. pseudomembrano'sa, that which is due to diphtheria, tuberculosis, syphilis, or other like disease. **s. scorbu'tica**, that which accompanies scurvy. It is attended with soreness and swelling of the gums and fetid breath. s. sim'-plex, a non-exanthematous form of catarrhal stomatitis. **syphilitic s.**, stomatitis due to systemic syphilis. **s. traumat'ica**, that which is systemic sypnins. s. traumatica, that which is due to some mechanic, thermal, or chemic cause. tropical s., sprue. ulcerative s., a form characterized by painful, shallow ulcers on the cheeks, tongue, and lips. It is attended with slight fever, fetid breath, salivation, and frequently prostravesicular s., stomatitis aphthosa.

stomatocace (sto-mat-ok'as-e) [Gr. στόμα mouth + κάκη badness]. Ulcerative stomatitis.

stomatodeum, stomatodæum (sto"mat-o-de'um). Same as stomodeum.

stomatodynia (sto"mat-o-din'e-ah) [Gr. στόμα

mouth + δδύνη pain]. Pain in the mouth. stomatodysodia (sto"mat-o-dis-o'de-ah) στόμα mouth + δυσωδία stench]. A bad odor coming from the mouth.

stomatogastric (sto"mat-o-gas'trik). Pertaining to the stomach and the mouth.

stomatography (sto-mat-og'raf-e) [Gr. στόμα mouth $+ \gamma \rho \dot{\alpha} \varphi \epsilon \iota \nu$ to write]. A description of the mouth

stomatol (sto'mat-ol). A proprietary antiseptic, said to be a solution of terpinol, soap, and glycerin in alcohol and water.

stomatologic, stomatological (sto-mat-o-loj'ik, sto-mat-o-loj'ik-al). Pertaining to stomatology.

stomatologist (sto-mat-ol'o-jist). One learned in stomatology a specialist in diseases of the mouth.

stomatology (sto-mat-ol'o-je) [Gr. στόμα mouth + λόγος treatise]. That branch of medicine which treats of the mouth and its diseases.

stomatomalacia (sto"mat-o-mal-a'she-ah) [Gr. στόμα mouth + μαλακία softness]. Softening of the structures of the mouth.

stomatomenia (sto"mat-o-me'ne-ah) [Gr. $\sigma \tau \delta \mu a$ mouth + $\mu \eta \nu$ month]. Vicarious menstruation by the mouth.

stomatomy (sto-mat'o-me) [Gr. στόμα mouth + τέμνειν to cut]. The surgical incision of the os uteri.

stomatomycosis (sto"mat-o-mi-ko'sis) [Gr. στόμα mouth + μύκης fungus]. Any mouth disease due to schizomycetes, especially the Oid'ium al'bicans.

stomatonecrosis (sto"mat-o-ne-kro'sis) [Gr. στόμα mouth + necrosis]. Same as noma.

stomatonoma (sto"mat-o-no"mah) [Gr. στόμα mouth + noma]. Same as noma.

stomatopathy (sto-mat-op'ath-e) [Gr. $\sigma\tau\delta\mu\alpha$ mouth + $\pi\delta\theta\sigma$ s suffering]. Any disorder of the

stomatoplastic (sto-mat-o-plas'tik). Pertaining to stomatoplasty.

stomatoplasty (sto'mat-o-plas-te) [Gr. στόμα mouth + πλάσσειν to mold]. Plastic surgery of, [Gr. στόμα or operative repair of, defects of the mouth or of the os uteri.

stomatorrhagia (sto"mat-or-a'je-ah) [Gr. στόμα mouth + ὀηγνύναι to burst forth]. Hemorrhage from the mouth. s. gingiva/rum, hemorrhage from the gum.

stomatoscope (sto-mat'o-skop) [Gr. στόμα mouth + σκοπείν to inspect]. A speculum for examining the mouth.

stomatosis (sto-mat-o'sis). Same as stomatopathy. stomatotomy (sto-mat-ot'o-me). Stomatomy.

stomatotyphus (sto"mat-o-ti'fus). Typhus fever with severe lesions of the mouth.

stomenorrhagia (sto"men-o-ra'je-ah) [Gr. στόμα mouth + ρηγνύναι to burst forth]. Hemorrhage from the mouth.

comocephalus (sto-mo-sef'al-us) [Gr. στόμα mouth + κεφαλή head]. A monster-fetus with a rudimentary head and jaws, so that the skin hangs stomocephalus in folds about the mouth.

stomodeal, stomodæal (sto-mo-de'al). Pertaining to the stomodeum.

stomodeum, stomodæum (sto-mo-de'um) [Gr. $\sigma\tau\delta\mu$ a mouth $+\delta\alpha\iota\epsilon\nu$ to divide]. An invagination of the ectoderm of the embryo whence are formed the mouth and upper part of the pharynx.

stomosan (sto'mo-san). Methylamin phosphate: used in gallstones.

tomoxys calcitrans (sto-mok'sis kal'sit-ranz). The com-mon stable-fly It is very an-Stomoxys noying to man and beast. It transmits Trypanosoma evansi, the cause of surra, and possibly also the virus of poliomye-Called also stable-fly and litis. leg-sticker.

Stomoxys calcit-

-stomy [Gr. στόμα mouth]. A suffix signifying the formation of a mouth or opening in a part.

stone (ston). A calculus or concretion. blue-s., copper sulphate; cupri sulphas. 8.-bruise, a painful bruise of the subcutaneous structures without breaking of the skin. 8.-child, a lithopedion. gall-s., biliary calculus. See calculus. lung s. See lung calculus, under calculus. pulns. See pulp-nodule, under nodule s.-searcher. a sound for exploring the bladder wherein a skin-s's, calculus is suspected. calcareous nodules sometimes seen in the subcutaneous tissues. struvit s. See struvit calculus, under calculus. womb-s., a calcified fibroid tumor of the uterus.

Stookey's reflex [Byron Stookey, contemporary New York neurologic surgeon]. See under reflex.

stool (stool). The fecal discharge from the bowels. bilious s., the yellowish or brownish stools, turning darker on exposure, that are characteristic of bilious diarrhea. Bilious stools are green if the bowel contents are very acid. caddy s., the stools seen in yellow fever; they look like dark, sandy mud. **fatty s.**, stools containing fat: seen in diseases of the pancreas. **mucous s.**, stools containing large amounts of mucus: seen in intestinal inflammation. **pea-soup s.**, the characteristic liquid evacuation of typhoid fever. rice-water s., the characteristic watery evacuations of cholera. spinach s., dark green stool resembling cooked spinach, resulting from the use of calomel in infants.

stop-needle (stop). See needle. stopping (stop'ing). A dental fitting; filling of the teeth.

stop-speculum (stop). See speculum. **storage-battery** (sto'rāj). See battery. storax (sto'raks) [L. sto'rax, sty'rax; Gr. στυραξ]. A balsam from the wood and inner bark of Liquidam'bar orienta'lis, a tree of western Asia. It contains styrol, styracin, and cinnamic acid, and is diuretic and anticatarrhal. It is administered for gonorrhea, and used externally for chilblains and frost-bite. Dose, 10-20 gr. (0 666-1.333 gm.).

STORAX

A resinol obtainable storesinol (sto-rez'in-ol). from storax.

stovain (sto-va'in) [named for the discoverer Fourneau, which is French for "stove"]. The hydrochlorid of benzoyldimethylaminomethylpropanol, CH₃.CH₂.C(C₆H₆.CO₂)(CH₃)CH₂N(CH₃)₂ -HCl, a crystalline compound: used as a local anesthetic, especially for subcutaneous and sub-conjunctival use. It is said to be much less toxic than cocain. Dose of 1 per cent. solution, \(\frac{1}{10}\) min. (0.002 c c.).

stovainization (sto-va-in-iz-a'shun). Production of local anesthesia with stovain.

stovarsol (sto-var'sol). Acetarsone; an acetyl derivative of oxyaminophenyl arsenic acid. It is a pentavalent compound and is used by oral administration in the treatment of amebic dysentery, syphilis, yaws, and other protozoal diseases. Dose, 0.25 gm. Called also 190 Fourneau.

strabismal, strabismic (stra-biz'mal, stra-biz'mik) [Gr. στραβισμός strabismus]. Pertaining to or of the nature of strabismus.

strabismometer (stra-biz-mom'et-er) [Gr. στρα-βισμός strabismus + μέτρον measure]. An apparatus for measuring strabismus; a strabometer.

strabismus (stra-biz'mus) [Gr. στραβισμός]. squint; deviation of one of the eyes from its proper direction, so that the visual axes cannot both be directed simultaneously at the same objective point. **absolute s.**, that which occurs at all distances for the fixation-point. **accom** modative s., that which is due to excessive or deficient accommodative effort. alternating s., a form affecting either eye alternately. bilateral s., that which affects each eye alternately. **Braid's s.**, the turning of the eyes simultaneously upward and inward; a means sometimes adopted of inducing the hypnotic state. concomitant s., that which is due to a faulty insertion of the eye muscles, resulting in the same amount of deviation in whatever direction the eyes are looking, because the squinting eye follows the movements of the other eye. constant s., persistent strabismus. convergents., cross-eye or esotropia. s. deor'sum ver'gens, that in which the visual axis of the squinting eye falls below the fixation-point. divergent s., that in which the visual axes diverge; exotropia. dynamic s., the tendency to strabismus due to insufficiency of the ocular muscles, but which may be overcome by the effort of binocular vision. Called also latent s external s., divergent strabismus. intermittent s., that which occurs only at intervals. internal s., esotropia. latent s., that which occurs only when one eye is occluded. manifest s., that which occurs when both eyes are open. mechanic s., that due to pressure or traction on the eye, as by a tumor, producing deflection. monolateral s., that in which it is always the same eye the visual axis of which fails to pass through the fixnon-concomitant s., that in ation-point. which the amount of deviation of the squinting eye varies according to the direction in which the eyes are turned. **paralytic s.**, that which is due to paralysis of an eye muscle. **paralytic s.**, acute, strabismus attended by dizziness and double vision. periodic s., that which is seen only during efforts at accommodation. relative s., that which occurs for some and not for other distances of the fixation-point. spasmodic s., that which is due to spasm of the muscles of the eye. suppressed s., heterophoria. s. sur'sum ver'gens, that in which the visual axis of the squinting eye falls below the fixation-point. unilateral s..

that which affects one eye only. unilocular s., strabismus affecting only one eye. vertical s., hypertropia; the elevation of one visual axis above the other.

strabometer (stra-bom'et-er). See strabismometer. strabometry (stra-bom'et-re). Measurement of the amount of strabismus.

strabotome (strab'o-tom). A knife for performing strabotomy.

strabotomy (stra-bot'o-me) [Gr. στραβισμός stra-bismus + τέμνειν to cut]. The cutting of an ocular tendon for strabismus.

Strachan's disease (strawnz) [William Henry Williams Strachan, English physician of the 19th century]. Pellagra.

straight-jacket (strat'-jak-et). See jacket.

strain (strān). 1. To overexercise; to use to an extreme and harmful degree. 2. To filter or subject to colation. 3. Injury due to exercise or overuse. 4. Excessive effort or undue exercise. sacro-iliac s., strain or sprain of the sacro-iliac joint causing continuous backache.

strainer (stran'er). An apparatus for straining. strait (strat). Either opening, superior or inferior, of the pelvis.

strait-jacket (strāt'-jak-et). See jacket.

stramonium (stra-mo'ne-um) [L.]. The poisonous solanaceous plant, Datu'ra stram'nium, or D. tatu'la, jimson-weed. The leaves (stramo'nii fo'lia) and seeds (s. se'men) are narcotic and antispasmodic. Its action resembles that of belladonna. The smoke of its burning leaves is inhaled for asthma. Stramonium ointment is used for hemorrhoids, etc. The drug is serviceable in muscular rheumatism, cramp, dysmenorrhea, and spasmodic retention of the urine Dose of fluidextract of the seeds, 1-5 min. (0 066-0.333 c.c.); of extract, $\frac{1}{6}-\frac{1}{2}$ gr. (0.011-0.033 gm.); of tincture, 5-20 min. (0.333-1.333 c.c.).

strangalesthesia (stran"gal-es-the'ze-ah) [Gr. στραγγαλίζειν to choke + αίσθησις feeling]. Same as zonesthesia.

strangle (strang'l) [L. strangula're]. or to be choked, by compression of the windpipe.

strangles (strang'lz). An infectious disease of horses, characterized by a mucopurulent inflammation of the respiratory mucous membrane, and caused by the Streptococcus equi.

strangulated (strang'u-la-ted) [L. strangula'tus]. Congested by reason of constriction or hernial stricture. See hernia.

strangulation (strang-u-la'shun) [L. strangula'tio]. 1. Choking or throttling; arrest of respiration, due to occlusion of the air-passage. 2. Arrest of the circulation in a part, due to compression.

strangury (strang'u-re) [Gr. στράγξ strangulation + οδρον urine]. Slow and painful discharge of the urine due to spasm of the urethra and bladder.

strap (strap). 1. A band or slip, as of adhesive plaster, used in attaching parts to each other. To bind down tightly. crib s., a strap to be placed around the neck of a horse to prevent cribbing by compressing the windpipe. man's s's, a set of straps for keeping a violently insane person in bed.

strapping (strap'ing). The application of strips by adhesive plaster, one overlapping the other, so as to cover a part and make pressure upon it.

Strassburg's test (strahs'boorgz) [Gustav Adolf Strassburg, German physiologist, born 1848]. See under tests.

stratification (strat"if-ik-a'shun) [L. stra'tum layer + fac'ere to make]. Disposal in layers.

stratified (strat'if-id). Disposed in layers.

stratiform (strat'if-orm) [L. stra'tum layer + for'ma form]. Having the form of strata.

stratum (stra'tum), pl. stra'ta [L.]. A layer or set of layers, as in the epidermis. s. albocine'-

reum, a twofold layer of white and gray matter within the striatum. s. al'bum profun'dum [B N A], a layer of white matter between the corpora quadrigemina and the central gray layer of the cerebral aqueduct. Arlt's s. See stratum reticulatum. s. bacillo'rum, the layer of rods and cones in the retina. s. cine reum, the uppermost of the three layers of the corpus quadrigeminum. s. compac'tum, the superficial layer of the decidua basalis. **s. cor'neum** [B N A], the outermost or horny layer of the epidermis. See skin. s. cor'neum un'guis, the horny layer of the nail. s. cylin'dricum, stratum malpighii. s. denta'tum, stratum malpighii. s. disjunc'tum, a layer of partially detached cells on the free surface of the stratum corneum. s. dorsa'le, one of the layers representing the prolongation of the tegmentum beneath the posterior part of the optic thalamus. s. fibro'sum [B N A], the outer layer of the capsular ligament of a joint. s. filamento'sum, stratum malpighii. s. gangliona'-re, the nerve-cell layer, or second layer from within, of the retina. s. gelatino'sum, the innermost of the four layers of the olfactory lobe. 8. germinati'vum un'guis [B N A], the germinative layer of the nail. s. glomerulo'sum, one of the four layers of the olfactory lobe. s. granulo'sum [B N A]. I. The innermost but one of four layers of the epidermis. See skin. 2. Either one of the granular layers of the retina. 3. One of the layers of the cortex of the cerebellum. See retina. 4. The layer of dentin of a tooth immediately beneath the cement. s. gris'eum centrale [B N A], the central gray layer of tegmentum s. gris'eum collic'uli superio'ris [B N A], the gray layer of the superior colliculus. s. interme dium, the layer of cells of the enamelorgan of a tooth just outside of the ameloblast-layer s. interoliva're lemnis'ci [B N A], the interolivary layer of lemniscus s. lacuno'sum, a layer of the hippocampus major above the stratum radiatum, consisting of reticulated neuroglia. lemnis'ci, the lowermost of the three layers of the corpus quadrigeminum. s. lu'cidum, the outermost but one of the four layers of the epidermis. See skin. s. malpig'hii, the rete mucosum or prickle-cell layer; the innermost of the four layers of the skin. Called also s mucosum and s. spinosum. See skin. s. molecula're, the molecular layer of the cerebral cortex. s. muco'sum. s. malþig'hiz. s. nuclea're, stratum granulosum of the retina. Oehl's s., the stratum lucidum. See skin. s. olfacto'rium, one of the four layers of the olfactory lobe. s. op'ticum, the middle, or second, of the three layers of the corpus quads. o'riens, the layer of polymorphic rigeminum cells of the hippocampus. s. papilla're, the outer layer of the corium. s. pigmen'ti ret'ins, the outer pigment layer of the retina. s. profun'-dum, the layer of the inferior colliculus which immediately surrounds the central gray matter. s. pyramida'le, the innermost layer but one of the strata of the human brain-cortex. s. radia'tum. a layer of the hippocampus major, crossed at right angles to its surfaces by the processes of large pyramidal cells which lie along its border. s. reticula're. See tunica propria, 3d def. s. reticula'tum. a network of fibers which connects the occipital lobe with the thalamus. s. spino'sum. See s. malpig'hii. s. spongio'sum, the middle layer of the decidua. s. subcuta'neum, the subcutaneous connective tissue. s. suprapyramida'le, the molecular layer; the principal layer of the cortical brain substance, chiefly developed in the cornu anterioris. s. synovia'le [B N A], the lining membrane of the capsular ligament of a joint. **s. vascula're**, the muscular wall of the uterus between the mucous and peritoneal surfaces. s. zona'le [B N A]. 1. A stratum of white nerve-fibers covering the ventricular surface of the optic thalamus. 2. The most superficial of the layers of the superior colliculus.

Straus's sign (strows') [Isador Straus, French physician, 1854-1896]. See under sign.

Strauss's reaction, sign, etc. (strows'ez) [Hermann Strauss, physician in Berlin, born 1868]. See reaction, sign, etc.

strawberry-cream blood. The appearance of the blood in lipemia.

strawberry-tongue (straw'ber-e). See tongue. straw-itch. See under itch.

streak (strek). Any line, stripe, or trace. angioid s's, pigment striæ appearing in the retina after hemorrhage. s.-culture. See culture. germinal s. Same as primitive s. Knapp's s's, lines resembling blood-vessels seen occasionally in the retina after hemorrhage. medullary s., the neural, or medullary, groove. See groove. meningitic s. Same as tache cerebrale. primitive s., a faint white trace at the aftermost end of the germinal area, formed by an aggregation of cells, and constituting the first indication of the development of the blastoderm.

stream (strēm). A current or flow of water or other fluid axial s., the central core of the blood stream composed of accumulated red blood-corpuscles and surrounded by a layer of plasma.

stremma (strem'ah) [Gr. στρέμμα a twist]. A sprain.

strengthening plaster. See plaster.

strephotome (stref'o-tom) [Gr. στρέφειν to twist + τέμνειν to cut]. An instrument like a corkscrew for invaginating the hernial sac.

strepitus (strep'it-us) [L.]. A noise; a sound heard on auscultation.

strepticemia (strep-tis-e'me-ah). Streptococcemia.

strepto-angina (strep-to-an'jin-ah) [streptococcus + angina]. A pseudomembranous deposit in the throat due to a streptococcus.

twisted + baculus]. A variety of bacillus in the form of twisted chains of rods. One variety has been found in typhus fever. S. pellag'ræ, an organism which Tizzoni claims is the cause of pellagra. S. pseudotuberculo'sis roden'tium, the Bacu'lus pseudotuberculo'sis.

streptobacteria (strep"to-bak-te're-ah) [Gr. στρεπτός twisted + bacteria]. A group including those bacteria (Streptothriv, etc.) which are linked together into twisted chains.

streptobacterin (strep-to-bak'ter-in). The bacterial vaccine prepared from streptococci.

streptococcal (strep-to-kok'al). Pertaining or due to a streptococcus.

Streptococcess (strep"to-kok-a'se-e). A tribe of the family Coccaces. It includes the following genera Diplococcus, Leuconostoc, Streptococcus, and Staphylococcus

streptococcemia, streptococcemia (strep"tokok-se'me-ah) [streptococcus + Gr. alua blood]. The presence of streptococci in the blood, streptococcus infection.

streptococcic (strep-to-kok'sik). Streptococcal.

streptococcicosis (strep-to-kok-sik-o'sis). A general term for all streptococcal infections.

streptococcolysin (strep"to-kok-ol'is-in). Same as streptocolysin.

Streptococcus (strep-to-kok'us) [Gr. στρεπτός twisted + κόκκος berry]. A genus of microörganisms of the family Coccacea including those spherical bacteria whose cells occur in chains. They are found associated in a great variety of pathologic conditions, among which are erysipelas, focal infections, ulcerative endocarditis, puerperal fever, septic sore throat, certain form of enteritis, rheumatic fever, and bronchopneumonia. The streptococci are now divided into two classes: a, the hemolytic s. (type alpha) which produce a clear zone of hemolysis around the colonies on blood-agar plates; and b, the green-producing streptococcus

(Streptococcus viridans) which produce a greenish zone about the colony on blood-agar plates. S. ac'idi lac'tici, a variety which precipitates casein from milk and produces lactic acid; in long rows of non-motile cells. S. agalac'tim contagio'sm. Same as S. masti'tidis sporad'ica. S. al'bus, a saprophytic species from water. S. ambra'tus, the microbe which causes the pneumonia of calves: made up of cocci arranged in filaments. S. angino'sus, a form of S. lon'gus. anhemolytic s., any streptococcus which does not hemolyze red blood-corpuscles. S. aphthic'-ola, a species from the blood, skin, and secretary of the strength of the streng tions of animals and men affected with footand-mouth disease. S. articulo'rum, a species from diphtheric mucous membranes, in long chains of large cocci: in rabbits it produces a fatal joint disease. S. aureola'tus, a microorganism derived from a patient infected with the poison of horse colic. S. bom'bycis, the species which causes flacherie in silk-worms: in oval cells, single, paired, or in short rows. S. bre'vis, a form found in the mouth, especially in inflammatory conditions, and occurring in short chains It is probably not pathogenic. **S. cadav'eris**, a saprophytic species from the liver of the cadaver of yellow fever S. cardio-arthrit'idis, an organism S. cardio-arthrit'idis, an organism isolated from blood and throat cultures of pa-tients with rheumatic fever. A therapeutic scrum prepared from the organism has been used in rheumatic fever and chronic arthritis S. charr'ini, the specific microorganism of contagious anthrax of rabbits: in long chains of oval or spheric cocci. S. cinnaba'reus, a form from air, water, and red milk; in large, spheric cocci, often forming pairs or tetrads it produces a reddish pigment. S. citrov'orus, a form found in sour milk and in "starters." S. co'li grac'ilis, a form from meconium and from the feces of carnivora S. conglomera'tus, a pathogenic species from patients with scarlatina phytic species from air.

S. cory'zæ contagio'se equo'rum, a form from the contagious coryza (strangles) of horses, in undulating chains made up of pairs or groups of non-motile, oval cocci. S. diffu'sus, a species causing a clouding of the fluid when cultivated on bouillon. S. dis'sei, a pathogenic form from the blood of a Japanese affected with syphilis, in chains of spheric encapsulated cocci, mostly non-motile. S. endocarditicus, a pathogenic species in chains or loops of small cocci from ulcerative endocarditis S. enter'itis, enteritis produced by streptococci. In the acute form it resembles cholera, and in the chronic form, typhoid fever. S. e'qui. Same as S. cory'zæ contagio'sæ equo'rum. S. equi'nus, a S. cory zee comagio see equo rum. S. equi itus, a species found in the intestines of horses and cows. S. erysipel'atis, the specific microorganism of erysipelas. It is found in the lymph-passages of the skin in pairs and chains of minute cocci. S. fæca'lis, a species found in the intestines in endocarditis, chronic cystitis, etc Feh-leisen's s., Streptococcus erysipelatis. S. leisen's s., Streptococcus erysipeiaus. s. fermen'ti, a variety producing the ropy confermentation dition of wine by causing viscous fermentation. S. flexuo'sus, a species from the mouth and from the pus of erysipelas: in serpentine chains of oval or spheric cells. S. gallina'rum, a species causing apoplectiform septicemia in chickens. S. gigan'tous ure'three, a form from the healthy urethra and from urine: in long, twisted chains of large round cocci. S. hæ-matosa'prus, a species seen in spheric cells from putrefying blood. S. havanien'sis, a species from the vomit of yellow fever: not known to be pathogenic. hemolytic s., s. hemolyt'icus, any streptococcus which is capable of hemolyzing red blood-corpuscles, or of producing a zone of hemolysis about the colonies on blood-agar. The great majority of streptococci found in pathologic processes belong to this type.

S. hollan'dicus, a zymogenic species from ropy milk.

S. hydrophobo'rum, a species

seen in chains of spheric cocci from the brains of animals affected with rabies. S. impetig'inis, a species from the vesicles of impetigo contagiosa. It is pathogenic for mice. S. insecto'rum, a pathogenic species from diseased insects. 8. involu'tus, a species found in cattle affected with foot-and-mouth disease, but probably not pathogenic. S. ko'chii, a species from rahhita with artificial septicemia. S. lac'rabbits with artificial septicemia. S. lac'ticus, a species found commonly in naturally soured milk. It has been called also Bacillus lactici acidi, Bacterium lactis, B. lactis acidi, B. guntheri, Streptococcus acidi lactui, and Streptococcus lacticus. S. laugh'lini, a species from cases of dengue: seen in chains of capsulated spheric cocci.

S. leb'inis, Streptococcus acidi lactici.

S. liquefa'ciens, a species from the liver of yellow-fever cadavers.

S. lon'gus, a non-motile species seen as small cocci in long chains. It includes the many varieties, such as Streptococ'cus pyog'enes, S. erysipel'atis, S. articulo'rum, S. sep'ticus, and S. septicopye'micus. 8. lu'cæ, a pathogenic species from soft chancre: seen in chains of minute cocci. It is also known as Bacil'lus ul' ceris cancro'si S. margarita'ceus, a species from putrid blood. in loose chains of spheric cells. S. masti'tidis sporad'icæ, a species found in the mastitis of cattle. S. meningit'idis. Same as Neisseria meningitidis. S. mesenterioi'des, a species found in beets and sugar solutions, occurring in the form of cocci inclosed in a capsule and arranged in chains. It causes the dextrin fermentation of cane-sugar. S. mirab'ilis, a saprophytic species from sewage. 8. mit'ior, a species found in endocarditis lenta.
8. monomor'phus, a species from pharyngeal ulcers
9. morbillo'sus, a species from measles, in large, spheric cocci.
9. muco'sus, a capsulated species found in a case of tubo-ovarian abscess with peritonitis. It causes mucous exudations in animals. s. mu'ris ratti, a species found in some cases of rat-bite fever. S. nocar'di, a pathogenic species from cows and goats affected with chronic infectious inflammation of the udder. **S. no'mæ**, a species from cases of noma. seen as cocci **S. ochroleu'cus**, a chromogenic species from the urine, occurring as single or paired cocci rom the urine, occurring as single or paired cocci or in chains. s. of Ostertag, a species causing vaginitis verrucosa in cattle. S. peritonit'idis o'qui, a pathogenic species from horses which died of peritonitis. S. pernicio'si psittaco'rum, S. psit'taci, a pathogenic species from disease of gray parrots, found in the heart and lungs in the form of cocci in chains S. pneumo'-Same as Diplococcus lanccolatus. pyo'genes, the name for a group of pus-forming microorganisms from various suppurative processes, in chains of cocci. S. pyo'genes malig'nus, a pathogenic form from necrotic foci in the spleen of leukemia; closely resembling S. erysipel'atis s. rheumat'icus, a variety which appears to be associated with rheumatic fever. S. rindfleisch'ii, a species from the blood in mycosis fungoides, in the form of colorless cells in chains. S. saliva'rius, a species found in the saliva and in the alimentary tract in malignant endocarditis and certain tertract in malignant endocarditis and certain terminal infections **S. scarlati'nse**, the causative agent in scarlet fever. **S. seifer'ti**, a species from the nasal mucus and sputum of influenza, in long chains of oval cells. **S. sep'ticus**, a pathogenic species from foul carth seen in chains or pairs of cocci. **S. sep'ticus liquefa'ciens**, a pathogenic species from blood of septic poison in pairs of chains of pathogenic species from blood of septic poison in pairs or chains of ing after scarlatina: seen in pairs or chains of round cocci. S. septopyse'micus, a pathogenic form from cases of phlegmonous angina. 8. suspec'tus, a species from blood and spleen of cattle affected with hematuria: seen as colorless, spheric cells. 8. toxica'tus, a species from an infusion of Rhus toxicoden'dron: said to produce one of the poisons of poison-ivy. S. tropica'lis, a species found in dermatitis cupoliformis (Castellani, 1916). S. tyro'genes, a species found in fipe cheese. S. u'res, a species from air and from stale urine; cocci in chains, wreaths, or pairs: it changes urea into ammonium carbonate. S. u'res liquefa'ciens, a zymogenic form from urine. S. varians, a species from water, producing a green pigment. S. varicel'ls, a species from the blood and lymph of chicken-pox: in loose chains of round cocci. S. vari'oles, a pathogenic species from the blood and lymph of small-pox and from the lymph of cow-pox: in loose chains of spheric cocci. S. vermifor'mis, a species from water, producing a green pigment. S. viniper'da, a species from spoiled wine. S. vir'idans, a species which produces a narrow green zone when grown upon blood-agar. It is non-hemolyzing and is found in cases of endocarditis lenta. S. weis'sii, a pathogenic species from the lungs of cattle with infectious pneumonia; it occurs in encapsulated cocci, single, paired, or in short chains. S. zymo'-genes, a species from the blood in acute endocarditis.

streptocolysin (strep-to-kol'is-in). A hemolysin destructive to streptococci, formed when virulent streptococci are grown in blood-scrum.

streptocyte (strep'to-sit) [Gr. στρεπτός twisted + κύτος cell]. An amebiform body occurring in bead-like strings from the vesicles of foot-and-mouth disease.

streptodermátitis (strep"to-der-mat-i'tis). Dermatitis produced by streptococci

streptoleukocidin (strep"to-lu-ko-si'din). A toxin from streptococcus cultures which is destructive to lcukocytes.

streptolysin (strep-tol'is-in). Same as streptocolysin.

streptomycosis (strep"to-mi-ko'sis) [Gr. στρεπτός twisted + μbκης fungus] A diseased condition due to a streptococcus.

Streptopus amplexifo'lius (strep'to-pus) [Gr. $\sigma\tau\rho\epsilon\pi\tau\dot{o}s$ twisted + $\pi\dot{o}\dot{v}s$ foot]. A liliaceous plant, the seeds of which afford a popular astringent gargle the root is used in salads.

Streptococcus + septicemia (strep"to-sep-tis-e'me-ah) (streptococcus + septicemia). Septicemia due to a streptococcus.

streptothricial (strep-to-thrish'al). Pertaining to or caused by streptothrix.

streptothricosis (strep-to-thri-ko'sis). Infection with streptothrix. See nocardiasis.

Streptothrix (strep'to-thriks) [Gr. twisted $+ \theta \rho i \xi$ hair]. A genus of schizomycetes in the form of slim, elongated filaments inclosed in a sheath. This genus is now given the name of Nocardia. S. actinom'yces. Same as Actinom'yces bo'vis. S. al'ba, a form said to cause actinomycosis. S. bronchit'idis, a species producing gangrenous bronchitis. It resembles Actinom'yces bo'vis, excepting that the ends of the rays are not knobbed. S. cap'ræ, a pathogenic species causing a sort of tuberculosis in horses, and abscesses when injected into guinea-pigs and rabbits. 8. cunic'uli, a species from the intestine of the pig, producing local necrosis. **S. eppinge'ri**, a pathogenic species from a brain-abscess. **S.** farcin'ica, a pathogenic species from cattlefarcy: non-motile, and made up of branching threads in lens-shaped colonies. S. förste'ri, octhreads in lens-shaped colonies. D. LUISUGE 11, occurs in concretions found in the lacrimal ducts. S. fre'eri, a species isolated from cases of mycetoma in the Philippines. S. hoffman'ni, a species that occurs in the air, causing abscesses in guinea-pigs and rabbits. S. isra'eli, a species found in actinomycosis of man. It resembles found in actinomycosis of man. It resembles Actinom'yces bo'vis. S. leproi'des, a species found in leprous nodules. S. mad'uræ, an organism from madura-foot, or the fungus-foot of India, by some identified with Actinom'yces bo'vis, but probably distinct from it. S. mu'ris rat'ti, species found in certain cases of rat-bite fever. 8.

pre'teus, a pathogenic species causing a sort of actinomycosis in man, and septicemia and pseudotuberculosis when injected into mice. S. pseudotuberculo'sa, a pathogenic species from a consolidated and caseous lung. S. of Rosenbach, a species found in an indolent dermatitis of the fingers and much resembling Cladothrix asteroides.

streptotrichal (strep-tot'rik-al). Pertaining to or caused by streptothrix.

streptotrichiasis (strep"to-trik-i'as-is). Same as streptotrichosis.

streptotrichosis (strep-to-tri-ko'sis). A diseased condition resembling actinomycosis, caused by streptothrix.

stress (stres). Forcibly exerted influence; pressure. In dentistry the pressure of the upper teeth against the lower in mastication.

stretcher (stretsh'er). A litter for carrying the sick or injured.

stria (stri'ah), pl. stri'æ [L.]. A streak or line. acoustic striæ, white, transverse lines across the floor of the fourth ventricle, which are connected with the roots of the auditory nerve. Called also meduliary s., auditory s., and s. acusticæ. S. of Amici, Dobie's lines; the lines which mark or separate the alleged disks of sarcous matter from each other. s. atro'phicæ, the lineæ albicantes of pregnancy white lines on the abdomen produced by atrophy of the skin. auditory s. See acoustic s s. of Baillarger. See Baillarger's layer, under layer. brown s., Retzius' parallel stria. s. cu'tis disten'sæ, the wrinkled-like approach the skin after shapemal distention due pearance of the skin after abnormal distention. due to tears in the cutis. S. for'nicis. See s. pinealis. S. of Gennari. See line of Gennari. s. gravida'rum, the striæ seen upon the abdomen of pregnant women; striæ atrophicæ. Knapp's s., streaks sometimes seen in the retina after hemorrhage. s. lancis'ii, s. longitudina'les, slender bundles of nerve-fibers along the dorsal surface of the corpus callosum in the floor of the longitudinal fissure; called also striæ of Lancisi and nerves of Lancisi. s. malleola'ris [B N A], a stripe on the membrana tympani from the malleolar prominence to the umbo, caused by the handle of the malleus. s. media le. Same as s. lancisii. medullary s. 1. See acoustic s. 2. See s. pineadullary s. 1. See acoustic s. 2. See s. pinea-meningitic s. Same as tache cerebrale. s. olfacto'ria [B N A], any one of three white stripes extending backward from the olfactory trigone. pinea'lis, either of two white lines in the third ventricle, extending from the peduncle of the pineal body to the inner side of the tubercle of the thalamus. Called also tunia fornicis and tania thalamus. Retzius' parallel s., brown lines crossing the enamel-prisms, seen on cutting the enamel. Schriger's s., darkish, irregular lines crossing the enamel solo and other contents. crossing the enamel-rods and strice of Retzius of the tooth-enamel. s. semicircula'ris. s terminalis. s. termina'lis [B N A], a band of fibers forming a correlation tract between the nucleus amygdalæ of the lateral olfactory area and the medial olfactory area. Called also terminal stria, stria semicircularis, and tænia semicircularis. s. vascula'ris [B N A], the layer of fibrous vascular tissue that covers the outer wall of the scala media. s. ventric'uli ter'tii, stria pinealis.

striatal (stri-a'tal). Pertaining to the corpus striatum. **s. syndrome**. See *Hunt's syndrome*, under *syndrome*.

striate, striated (stri'āt, stri'a-ted) [L. stria'tus].
Striped; provided with striæ. s. body. See
corpus striatum.

striation (stri-a'shun) [L. stri'a]. 1. The quality of being streaked. 2. A streak or scratch; also a series of streaks or scratches. Baillarger's s's. See Baillarger's lines, under line. tabby-cat s., tigroid s., striations or markings on muscle tissue that has undergone marked fatty degeneration. It is seen especially in degenerated heart muscles; tabby-cat striation.

striatum (stri-a'tum) [L. "grooved"]. The corpus striatum.

stricture (strik'tūr) [L. strictu'ra]. The abnormal narrowing of a canal, duct, or passage, either from cicatricial contraction or the deposit of abnormal tissue. annular s., a ring-like obstruction around the walls of an organ. bridle-s., a fold of membrane stretched across a canal, and partially closing it. cicatricial s., one which follows a wound or sore, producing cicatricial contraction. contractile s., one which may be mechanically dilated, but which soon returns to its contracted condition. Called also recurrent s. false s. Same as spasmodic s. functional s. See spasmodic s. hysteric s., spasmodic stricture of the esophagus seen in hysteric subjects. impermeable s., one that does not permit the passage of an instrument. irritable s., one in which the passage of an instrument produces severe pain. organic s., a stricture due to a structural change in or about a .anal, as the deposit of adventitious tissue, plastic inflammation, or c growths. permanent s., organic recurrent s. See neoplasmic growths. stricture. spasmodic s., spastic s., one that is due to muscular spasm. Called also false s., functional s., and temporary s. temporary s. See spasmodic s.

stricturotome (strik'tūr-o-tōm) [L. strictu'ra stricture + Gr. τέμνειν to cut]. A knife for cutting strictures.

stricturotomy (strik-tu-rot'o-me). The cutting of a stricture.

stridor (stri'dor) [L.]. A harsh, high-pitched sound like the whistling of wind. congenital s., infantile respiratory spasm. s. decu'tium, the noise made by grinding the teeth. s. den'tium, grinding of the teeth. laryngeal s., congenital stridor. s. serrat'icus, a sound like that made by filing a saw, caused by respiration through a tracheotomy tube.

stridulous (strid'u-lus) [L. strid'ulus]. Attended with stridor; shrill and harsh in sound.

string-galvanometer. See galvanometer.

string-halt (string). Sudden and extreme flexion of the back of a horse, producing a jerking motion of the hind leg in walking.

striocellular (stri-o-sel'u-lar) [L. stri'a streak + cellular]. Composed of striated muscle-fibers and cells.

striospinoneural (stri"o-spi-no-nu'ral) Pertaining to the corpus striatum, the spinal cord, and the nerves: a term applied to a system of nerve-fibers.

strip (strip) To press the contents from a canal, such as the urethra, by running the finger along it.

stripe (strip). A streak or stria. Baillarger's s's. See Vicq d'Azyr's s's. Gennari's s's. See Vicq d'Azyr's s's. Hensen's s. 1. A band near the middle of the under surface of the membrana tectoria of the ear. 2. A slightly stainable central section in certain insect muscles. Vicq d'Azyr's s's, the third and fifth stripes from within outward of the cortex of the cerebellum parallel to the surface. Called also Baillarger's s's and Gennari's s's.

strobila (stro-bi'lah), pl. strobi'læ [L.; Gr. στροβίλη twist] The entire adult tapeworm including the head, neck, and proglottides.

strobile (stro'bīl). See strobila.

strobiloid (stro'bil-oid). Resembling a row of tapeworm segments.

strobilus (stro-bi'lus) [L.; Gr. στρόβιλος cone]. Same as strobila.

stroboscope (stro'bo-skōp) [Gr. $\sigma\tau\rho\delta\beta$ os whirl + $\sigma\kappa\sigma\pi\epsilon\hat{\imath}\nu$ to view]. An instrument on the principle of a zoetrope, for exhibiting the successive phases of animal movements.

stroboscopic (stro-bo-skop'ik). Pertaining to the stroboscope.

Stroganoff's or Stroganov's treatment (strogan'ofs) [Vasilii Vasilovich Stroganov, contemporary Russian obstetrician]. See treatment.

stroke (strok). A sudden and severe attack, as of apoplexy or paralysis. apoplectic s., an attack of apoplexy. back-s. 1. The recoil of the ventricles at the time the blood is forced into the aorta. 2. The influence which a peripheral organ of response exerts back upon the nerve center from which the response was generated. s.-culture. Same as smear-culture. See under culture. heat s., a condition caused by exposure to excessive heat, natural or artificial. It may occur in one of three forms: (1) thermic fever or sunstroke, q. v.; (2) heat exhaustion, q. v., or more rarely heat cramps, q. v. light-s., a fatal narcosis produced in sensitized mice by exposure to light paralytic s., a sudden attack of paralysis from injury to the brain or cord. sun-s. See sunstroke.

stroma (stro'mah) [Gr. στρῶμα a covering]. The tissue which forms the ground-substance, framework, or matrix of an organ. s. of the cornea, the connective-tissue layer or substantia propria of the cornea. s.-fibrin, fibrin formed from the stroma of blood-corpuscles. s. of ovary, s. ova'ri, the connective tissue separating the graafian follicles of the ovary. s. plexus, a network formed by the ramifications of the nerves of the cornea within the substantia propria. It is made up of two parts, the deep stroma plexus (primary plexus, fundamental plexus), and a layer of finer fibers beneath the anterior limiting membrane, called superficial stroma plexus (subbasal plexus, accessory plexus of Ranvier). s. of the red blood-corpuscles which remains after the hemoglobin has been removed. Rollet's s. Same as s of the red blood-corpuscles. s. vit'reum, the framework of fibers composing the vitreous body of the eye.

stromal (stro'mal). Pertaining to stroma: stromatic.

stromatic (stro-mat'ik). Pertaining to or resembling stroma.

stromatolysis (stro-mat-ol'is-is) [stroma + Gr. λόσις dissolution]. Destruction of the enclosing membrane of a cell.

Stromeyer's splint (strom'i-erz) [Georg Friedrich Louis Stromeyer, German surgeon, 1804-1876]. See splint.

Stromuhr (strōm'oor) [Ger. "stream clock"]. Ludwig's instrument for measuring the velocity of the blood-flow (1867), a theometer.

Strongyliasis (stron-jil-i'as-is). Strongylosis.

Strongylidæ (stron-ji'lid-e). A family of the Nematoda It contains the following genera: Ankylostoma, Eustrongylus, Metastrongylus, Necator, Œsophagostoma, Physaloptera, Strongylus, Trichostrongylus, and Triodontophorus.

Strongylinæ (stron-jil-i'ne). A sub family of the Strongylidæ which contains three genera. Strongylus, Metastrongylus, and Trichostrongylus.

Strongyloides (stron-jil-oi'dēz). A genus of nematodes (round worms) widely distributed in the intestinal contents of mammals. S. intestina'-lis, a species of round worm, normally saprozoic, but sometimes found in the intestinal canal of man in tropical and subtropical countries, where it may cause an intermittent diarrhea with digestive disturbance and catarrh of the small intestine. Called also Anguillula stercoralis. S. papillo'sus, a species found in sheep, goats, rabbits, and rats. S. stercora'-lis, a species found in the feces of man.

strongyloidosis (stron-jil-oi-do'sis). Infection with strongyloides.

Strongyloplasmata (stron-jil-o-plas'mat-ah). Same as *Chlamydozoa*.

strongylosis (stron-jil-o'sis). Infection with worms of the genus *Strongylus*.

Strongylus (stron'jil-us), pl. stron'gyli [Gr. στρογγόλος round]. A genus of parasitic nematode worms of the family Strongylidæ. S. equi'nus, a worm parasitic in the intestines of horses; called also palisade worm. S. fila'ria causes the husk of sheep. S. gibso'ni, a species found in cattle and swine, and occasionally in man. S. gi'gas. See Eustrongylus gigas. S. longivagina tus, a species found in the lungs of sheep, swine, and rabbits. S. micru'rus causes the disease hoose in calves. S. paradox'us. See Metastrongylus apri. S. rena'lis, Eustrongylus gigas. S. sub'tilis. See Truchostrongylus unstabilis.

strontia, strontian (stron'she-ah, stron'shan). An earthy substance, strontium oxid, SrO.

strontium (stron'she-um) [Strontian in Scotland].

A dark yellowish metal: symbol, Sr; atomic weight, 87.63. S. arsenite, a compound, Sr-(AsO₂)_{2.4}H₂O: used in malaria and chronic diseases of the skin. Dose, $\frac{1}{10} - \frac{1}{15}$ gr. (0.002-0.004 gm). **s. bromid,** a clear, colorless, crystalline substance, SrBr₂ + 6H₂O. It is a gastric tonic, antinephritic, and antiepileptic: used like the other bromids. Dose, 10-60 gr. (0.606-4 gm). **s. caf**fein-sulphonate, a remedy said to be a valuable diuretic. s. carbonate, a white tasteless powder, s. dibromhebenate, a colorless powder, (C₂₂H₄₁Br₂O₂)Sr used as a substitute for bromids. **8.** glycerophosphate, a white salt, employed in phosphaturia, locomotor atavia, etc. 8. ployed in phosphatuma, nocomotor and man, iodate, an insoluble salt. $Sr(IO_3)_2$ an alterative for use in various affections of the mucous surfaces. s. iodid, a colorless, transparent, crystalline compound, SrI₂ + 6H₂O: used like potassium iodid. It is said to be an antiseptic and teniacide. Dose, 5-60 gr. (0.333-4 gm). **8. lactate,** a white, granular compound, $Sr(C_3H_2O_3)_2 + _3H_2O$, soluble in water and alcohol used as an anthelmintic, in nephritis for reducing the albumin in the urine, and is a specific against tetany. Dose, $2-2\frac{1}{2}$ dr. (8-10 gm.). **s. loretinate** (basic), a salt in bright, delicate needles, Sr.I O C_9H_4N SO₃ s. loretinate (normal), a salt, Sr(I.OHC $_9H_4N$.SO₃)₂ + $_2H_2O$, in orange-red crystals. s. peroxid, SrO₂, a white insoluble powder which gradually decomposes in water with the liberation of oxygen. **s. phos**phate, a salt, Sr₃(PO₄)₂, said to be antiseptic and teniacide, and to promote nutrition **s. salicylate**, a salt, (OH.C₆H₄.CO.O)₂Sr, in white crystals, soluble in 40 parts of water and freely in alcohol It is recommended in gout and in certain intestinal and rheumatic disorders. Dose, 5-15 gr (0 3-1 gm.) in a capsule.

strophanthin (stro-fan'thin). A poisonous, white, crystalline glucosid, C₂₀H₃₄O₁₀, or a mixture of glucosids from strophanthus. It is soluble in water and alcohol, and is used as a heart tonic. It is very powerful, and should be employed with the utmost caution. Dose, ½6-2½6 gr. (0 ∞02-0.003 gm.) crystallized s., oubain from Strophanthus gratus.

strophanthone (stro-fan'thōn). A proprietary preparation of strophanthus seed.

Strophanthus (stro-fan'thus) [Gr. στρόφος cord + άνδος flower]. A genus of poisonous apocynaceous plants. The seeds of S. his'pidus and S. kombé, African shrubs, are used like digitalis, chiefly in heart disease. Dose of the tincture, 1-6 min. (0.066-0.4 c.c.); of the extract, 1-1 gr. (0.016-0.666 gm.). brown s., S. hispidus. green s., S kombé.

strophocephalus (strof-o-sef al-us) [Gr. $\sigma\tau\rho\delta\varphi\sigma$ s twisted + $\kappa\epsilon\varphi\alpha\lambda\eta$ head]. A fetal monster with portions of the head and face displaced.

strophocephaly (strof-o-sef'al-e). The condition of a strophocephalus.

strophulus (strof'u-lus) [L.]. A papular eruption of infants, called tooth-rash or gum-rash, of several varieties. s. al'bus, a variety known as white gum, or milium. s. can'didus, a variety of strophulus in which the papulæ are larger, are not

inflamed, but have a smooth, shining surface, which gives them a lighter color than the cuticle near them. s. confer'tus, a variety with crowded papille. s. intertinc'tus, spotted strophulus, or red gum: a form in which the child's skin appears like cotton printed with red. s. prurigino'sus, a form characterized by intensely itching papules: seen chiefly in children. s. volat'icus, flying strophulus, or wildfire rash, a form characterized by a fugitive eruption.

structural (struk'tu-ral). Pertaining to or affecting the structure.

structural-functional (struk"tur-al-funk'shunal) Pertaining to the structure and function of a part, as the brain.

struma (stru'mah) [L.]. 1. Scrofula. 2. Goiter. s. aberra'ta, goiter affecting an accessory thyroid gland. adrenal s., suprarenal hyperplasia. s. aneurysmat'ica, vascular goiter in which the vessels are dilated. s. colloi'des, distention of the follicles of the thyroid gland with colloid secretion. s. cys'tica os'sea, cystic goiter with calcification. s. fibro'sa, thyroid enlargement caused by hyperplasia of the connective tissue. 8. atino'sa, colloid goiter. s. lipomato'des aberra'ta re'nis, hypernephroma. s. lymphatica, status lymphaticus. s. malig'na, cancer of the thyroid body. s. nodo'sa, adenoma of the thyroid gland. s. parenchymato'sa, enlargement of the thyroid gland due to follicular hyperplasia. s. pituita/ria, permanent enlargement of the pituitary body. Riedel's 8., benign granuloma of the thyroid; ligneous thyroiditis. s. suprarena'lis, a peculiar tumor of the suprarenal capsule, consisting mainly of fatty tissue. thymus s., persistence of the thymus gland beyond the time when it usually atrophies. s. vasculo'sa, vascular goiter.

strumectomy (stru-mek'to-me) [struma + Gr. ἐκτομή excision] Surgical removal of a scrofulous gland or of a goiter. median s., excision of a median goiter or an enlarged isthmus of the thyroid.

strumiform (stru'mif-orm) [L. stru'ma scrofula + for'ma shape]. Resembling struma.

strumiprivic (stru-mip-riv'ik). Strumiprivous.

strumiprivous (stru-mip-ri'vus) [L. strumipri'vus; stru'ma goiter + pri'vus deprived]. Caused
by the removal of the thyroid gland. See cachexia.

strumitis (stru-mi'tis). Inflammation of a thyroid gland affected with goiter eberthian s., strumitis due to infection with the typhoid bacillus.

strumoderma (stru-mo-der'mah). Same as scrofuloderma.

strumosis (stru-mo'sis). The state of being strumous.

strumous (stru'mus) [L. strumo'sus]. Scrofulous: affected with or of the nature of scrofula.

Strümpell's disease, sign, etc. (strim'pelz) [Adolf von Strümpell, physician in Leipsic, 1853-1925]. See disease, sign, etc.

Strümpel-Marie disease. Rhizomelic spondylosis.

Strunsky's sign (strun'skēz) [Max Strunsky, New York orthopedic surgeon]. See under sign.

Struve's test (stru'vez) [Heinrich Struve, physician in St. Petersburg]. See under tests.

struvit calculus or stone (stroo'vit). See under calculus.

struxin (strux'in). A white crystalline slightly hitter alkaloid, C₂₁H₂₀N₂O₄, obtained from deteriorated nux-vomica seeds

strychnia (strik'ne-ah). Same as strychnin.

strychnicin (strik'nis-in). A white, crystalline, slightly poisonous alkaloid obtained from a variety of Strychnos nux vomica grown in Java.

strychnin (strik'nin) [L. strychni'na, strychni'num, strych'nia]. A white, crystalline, bitter, and

poisonous alkaloid, C₂₁H₂₂N₂O₂, found most abundantly in the seeds of Sirychnes nux vomics of the West Indies and in the beans of S. ignatii of the Philippine Islands. It is highly poisonous, producing excessive irritability of the spinal cord, and this results in convulsions. Dose, the graph of the spinal cord, and this results in convulsions. Dose, the graph of the spinal cord, and this results in convulsions. Dose, the graph of nitrate, citrate, and phosphate are those principally employed. The dose of these is the same as that of uncombined strychnin. See poisons, table of. s. arsenite, a soft, white, crystalline powder: tonic and diuretic; useful in tuberculosis, malaria, dyspepsia, and skin diseases. It has been used in cases of snake-bite. Dose, \$60-\frac{1}{12}\$ gr. (0.001-0.005 gm). **s. citrate**, occurs in the iron and strychnin citrate of the U. S. P., which contains I per cent. of strychnin. **s. glycerophos**phate, a white powder. Dose, $\frac{1}{10}$ gr. (0 0015 gm.). s. hydrid, an agent in almost every respect opposite in its effects to the other preparations options in the checks to the other preparations of strychnin. **8.** hydrochlorid, a crystalline salt, $C_{21}H_{22}N_{2}O_{2}.HCl + 2H_{2}O$ used in a 1 per cent. solution ($li'quor\ strychni'ne\ hydrochlor'idi$). **8.** hydroiodate, a salt, $C_{21}H_{22}N_{2}O_{2}.HIO_{3}$, occurring ring in colorless crystals, soluble in water. It is used in paralysis and anesthesia, and as a tonic. Subcutaneous dose, $b_0 - \frac{1}{12}$ gr. (0.001-0.005 gm).

8. hypophosphite, a salt recommended for use in typhoid fever.

8. iodate, a salt of strychmin. Maximum hypodermic dose, 1 gr (0.066 gm).

s. nitrate, a salt, C₂₁H₂₂N₂O₂ HNO₃: used for dipsomania. saccharinated s., a mixture of 64.6 per cent. of strychnin and 354 per cent. of saccharin. s. sulphate, a white, crystalline salt, $(C_{21}H_{22}N_2O_2)_2.H_2SO_4 + 5H_2O$ it is more employed than any other of the strychnin salts s. valerate, a white crystalline powder. Dose, 40 gr. (0.0015 gm.).

strychninism (strik'nin-izm). A toxic condition due to the misuse of strychnin. See poisons, table of.

strychninization (strik"nin-iz-a'shun). The act of bringing under the influence of strychnin.

strychninomania (strik"nin-o-ma'ne-ah) [strychnin + Gr. µavla madness]. Insanity due to strychnin poisoning.

strychninum (strik-ni'num). 1. Strychnin. A homeopathic preparation of strychnin.

strychnism (strik'nizm). Poisoning by strychnin. strychnize (strik'nīz). To put under the influence of strychnin.

Strychnos (strik'nos) [Gr. στρύχνος nightshade]. A genus of loganiaceous tropical trees. See curare, hoang-nan, Ignatia, nux vomica, and strychnin.

stuck-finger. Trigger-finger. See under finger. students' placenta (stu'dentz). See placenta.

stump (stump). The distal end of the part of the limb left in amputation. conical s., a coneshaped amputation stump due to undue retraction of the muscles; called also sugar-loaf stump.

stump-foot. Club-foot.

stump root. 1. See finger-and-toe disease, under disease. 2. See Plasmodiophora.

stun (stun). To knock senseless; to render unconscious by a blow or other force; to daze.

stupe (stup) [L. stu'pa tow]. A cloth, sponge, or the like, for external application, charged with hot water, wrung out nearly dry, and then made irritant or otherwise medicated.

stupefacient, stupefactive (stu-pe-fa'shent, stupe-fak'tiv) [L. stupefa'ciens]. Narcotic or soporific.

stupernania (stu-pe-ma'ne-ah) [L. stu'por stupor
 + Gr. μανία madness]. Stuporous insanity.

stupor (stu'por) [L.]. Partial or nearly complete unconsciousness. anergic s., a form of demen-tia in which the patient is quiet, listless, and nonresistant. delusional s., stuperous insanity or

acute dementia. epileptic s., stupor following an epileptic convulsion, called also postconvulsive s. lethargic s. Same as trance. postconvulsive s. See epileptu s.

stuporose (stu'por-os). Stuperous.

stuporous (stu'por-us). Affected with or characterized by stupor.

stupp (stup). A poisonous kind of soot which accumulates in the condensers of mercury smelters. It contains metallic mercury in a finely divided condition

sturdy (stur'de). Staggers in sheep.

sturin (stu'rin) [L. stu'rio sturgeon]. A protamin, from the spermatozoa of the sturgeon: it is an active bactericide.

Sturm's interval (sturmz) [Johann Christoph Sturm, 1635-1703] See focal interval, under interval.

stuttering (stut'er-ing). A variety of faltering and interrupted speech characterized by difficulty in enunciating and joining together syllables; partial alalia syllabars, or anarthria labio-choreic s. Same as labiochorea urinary s., interruption of the flow during urination.

Stuttgart disease. Typhus fever of dogs

sty, stye (sti) [L. horde'olum]. Inflammation of one or more of the sebaceous glands of the eyemeibomian s., inflammation of a meibomian gland at the posterior surface of the lid. zeissian s., inflammation of a zeissian gland occurring at the edge of the lids.

stycosis (sti-ko'sis). The presence of calcium sulphate in the organs of the body, especially the lymph-glands.

style, stylet (stil, sti'let) [L. sty'lus; Gr. στῦλος post] I. A wire run through a catheter or cannula to render it stiff or to clear it. 2. A slender probe: stilet.

styliform (sti'lif-orm) [L sty'lus bodkin + for'ma shapel. Resembling or shaped like a bodkin

styliscus (sti-lis'kus) [L.; Gr. στυλίσκος pillar]. A slender cylindric tent

stylo- [L. sty'lus pen]. A prefix implying some relation to the styloid process of the temporal bone.

stylo-auricularis (sti"lo-aw-rik-u-la'ris). See in table of muscles, under muscle.

styloglossus (sti-lo-glos'us) [styloid process + Gr. γλωσσα tongue]. See muscles, table of. stylohyal (sti-lo-hi'al). Pertaining to the

Pertaining to the styloid process and the hyoid bone.

stylohyoid (sti-lo-hi'oid) Pertaining to the styloid process and to the hyoid bone; also pertaining to the stylohyoid muscle

stylohyoideus (sti"lo-hi-oid'e-us). See muscles. table of. s. al'ter, an occasional muscular slip from the styloid process to the lesser cornu of the hyoid bone: it may replace the stylohyoid ligament.

styloid (sti'loid) [L. sty'lus pen + Gr. elòos form]. Resembling a pen, or stylus, long and pointed. s. process. See under process.

styloiditis (sti-loi-di'tis) Inflammation of tissues about the styloid process, especially an irritation of the nerve due to rubbing against the styloid process.

stylolaryngeus (sti"lo-lar-in'je-us). That portion of the stylopharyngeus muscle which is inserted into the thyroid cartilage and the epiglottis.

stylomandibular (sti"lo-man-dib'u-lar) Pertaining to the styloid process and the inferior maxillary bone.

stylomastoid (sti-lo-mas'toid). Pertaining to the styloid and mastoid processes.

stylomaxillary (sti-lo-maks'il-a-re). Pertaining to the styloid process and to the inferior maxilla.

stylomyloid (sti-lo-mi'loid) [L. sty/lus pen + Gr. μύλη mill + είδος form]. Pertaining to the styloid process and to the region of the molar teeth.

stylopharyngeus (sti"lo-far-in'je-us). See muscles, table of.

stylopin (sti'lo-pin). A crystalline alkaloid, C₁₉H₁₉-NO₅, from Stylophorum diphyllum.

Stylosanthes (sti-lo-san'thēz) [Gr. στῦλος pillar + άνθος flower]. A genus of leguminous herbs, chiefly South American. S. ela'tior, the pencil-flower of North America, is a uterine sedative. Dose of fluidextract, 10-20 min. (0.666-1.333 c.c.).

stylostaphyline (sti-lo-staf'ıl-īn). Pertaining to the styloid process of the temporal bone and the velum palati.

stylosteophyte (sti-los'te-o-fit) [Gr. στῦλος pillar + osteophyte]. A pillar-shaped exostosis.

stylostixis (sti-lo-stiks'is) [Gr. στῦλος style + στίξις pricking] See acupuncture.

stylus (sti'lus) [L. "pen"]. A stilet; also a pencil-shaped medicinal preparation, as a stick of caustic.

stymatosis (sti-mat-o'sis) [Gr. $\sigma\tau\hat{v}\mu\alpha$ priapism]. Priapism with a bloody discharge.

stypage (sti'pāj, ste-pahzh') [Fr.]. The application of a stype to produce local anesthesia.

stype (stip) [Gr. $\sigma \tau \dot{\nu} \pi \eta$ tow]. A tampon or pledget. stypsis (stip'sis) [Gr. $\sigma \tau \dot{\nu} \psi \iota s$] 1. Astringency; astringent action. 2. Treatment by astringents.

styptarnin (stip-tar'nin). A trade name for cotarnin hydrochlorid

styptase (stip'tās). A proprietary mixture of tannincalcium chlorate with hamamelis and fluorids used in checking kemorrhage.

styptic (stip'tik) [Gr. στυπτικόs]. 1. Astringent; arresting hemorrhage by means of an astringent quality. 2. A markedly astringent and hemostatic remedy. The chief styptics are alum, tannic acid, copper sulphate, iron chlorid and sulphate, and zinc chlorid. Binelli's s., a solution of creosote, used for arresting hemorrhage chemic s., one which arrests hemorrhage by causing coagulation through chemic action s. colloid, a substance prepared by saturating ether with tannin and gun-cotton: used as a dressing for wounds, and acting as a styptic, antiseptic, and air-excluder. Also called xylostyptic ether. mechanic s., one which acts by causing coagulation mechanically, as a pledget of cotton vascular s., one which acts by producing contraction of the wounded vessels. Warren's s., lotio adstringens: sulphuric acid (5 fl.dr.), oil of turpentine (4 fl.dr.), and alcohol (4 fl.dr.).

stypticin (stip'tis-in). Cotarnin hydrochlorid, C₁₂H₁₅NO₄ HCl.H₂O; a yellow, crystalline substance, soluble in water and alcohol, and having styptic, analgesic, and sedative properties. It is used especially in violent hemorrhages, particularly uterine hemorrhage. Dose, \(\frac{2}{3}\)-\frac{1}{2}\ gr. (0 025-0.05 gm.). It is often administered by the subcutaneous injection of a 10 per cent. solution in amounts of 1-2 min. (0.066-0.133 c.c.).

styptogan (stip'to-gan). A proprietary potassium permanganate paste for hemostasis.

styptol (stip'tol). A neutral phthalate of cotarnin, (C₁₂H₁₄NO₃)₂C₆H₄(COO)₂, in the form of a fine, crystalline powder. used for arresting uterine hemorrhage. Dose, ²/₄ gr. (0.05 gm.).

styracin (sti'ras-in). A crystalline principle, $C_{18}H_{16}O_2$, obtained from styrax.

Styracol (sti'rak-ol). Cinnamyl guaiacol, C₆H₅-(CH)₂.CO O.C₆H₄ OCH₃, an antiseptic substance in colorless needles, soluble in alcohol, but insoluble in water. It is used in intestinal catarrh and in tuberculosis. Dose, 15 gr. (1 gm.).

Styrax (sti'raks) [L.; Gr. στυραξ]. τ. A genus of styraceous trees and shrubs several species afford balsams. See benzoin. 2. Same as storax.

Styrol (sti'rol) [Gr. στυραξ]. A fragrant liquid or oily hydrocarbon vinyl benzol, C₆H₅.CH:CH₂, from storax. It is insoluble in water, but soluble in alcohol and ether. Called also cinnamene and phenylethene.

styron (sti'ron). Cinnamyl alcohol, phenyl allyl alcohol, C₆H₅.CH:CH.CH₂OH, a white, crystalline

substance prepared from styracin and forming an emulsion with water. It is used in microscopy and histology as a bleach as an antiseptic it is employed in a 1 per cent. solution.

Su., su. Abbreviation for L. su'met, let him take. sub-[L. sub under]. A prefix signifying under, near, almost, or moderately.

subabdominal (sub-ab-dom'in-al). Situated near or below the abdomen.

subabdominoperitoneal (sub-ab-dom''in-o-perit-o-ne'al). Situated below the abdominal perito-

subacetabular (sub-as-et-ab'u-lar). Below the acetabulum.

subacetal (sub-as'et-al). A mixture of lead subacetate and alum: used for the preparation of a solution of aluminium acetate.

subacetate (sub-as'et-āt). Any basic acetate.

subacid (sub-as'id). Somewhat acid.

subacidity (sub-as-id'it-e). Deficient acidity.

subacromial (sub-ak-ro'me-al). Situated below or beneath the acromion.

subacute (sub-ak-ūt'). Somewhat acute; between acute and chronic.

subalimentation (sub-al-im-en-ta'shun). Insufficient nourishment.

subanal (sub-a'nal). Situated below the anus.

subanconeus (sub-an-ko-ne'us). See muscles, table of.

subapical (sub-ap'ik-al). Situated below the apex.
subaponeurotic (sub"ap-on-u-rot'ik). Situated beneath the aponeurosis.

subarachnoid (sub-ar-ak'noid). Situated or occurring beneath the arachnoid. **s. space.** See *space*.

subarcuate (sub-ar'ku-āt) [L. sub under + arcu-a'tus arched]. Somewhat arched or bent.

subareolar (sub-ar-e'o-lar). Beneath the **areola**. **s. abscess**, a subcutaneous abscess of the **areola** of the nipple.

subastragalar (sub-as-trag'al-ar). Situated or occurring under the astragalus.

subastringent (sub-as-trin'jent). Moderately astringent.

subatom (sub-at'om). Λ hypothetical component of an atom.

subatomic (sub-at-om'ik). Pertaining to subatoms. Subatomic chemistry is the chemistry of the radioactive substances

subaural (sub-aw'ral). Situated beneath the ear.

subauricular (sub-aw-rik'u-lar). Below the auricle of the ear.

subaxial (sub-aks'e-al). Below an axis.

subaxillary (sub-ak'sil-a-re). Below the armpit.

subbasal (sub-ba'sal). Below the base. s. plexus. See stroma plexus.

subbrachial (sub-bra'ke-al). Beneath the brachium (in cerebral anatomy).

subbrachycephalic (sub-bra-ke-sef-al'ik). Somewhat brachycephalic; having the length-breadth index from 78 to 79.

subcain (sub-ka'in). A proprietary dental anesthetic made of cocain, suprarenin, salicylic acid, etc.

subcalcarine (sub-kal'kar-in). Beneath the calcarine fissure.

subcallosal convolution (sub-kal-o'sal). See

subcalorism (sub-ka'lor-izm). Same as frigorism. subcapsular (sub-kap'su-lar). Situated below a capsule, especially the capsule of the cerebrum.

subcapsuloperiosteal (sub-kap"su-lo-per-e-os'teal). Beneath the capsule and the periosteum of a joint.

- subcarbonate (sub-kar'bon-āt). Any basic carbonate.
- subcartilaginous (sub"kar-til-aj'in-us). 1. Situated beneath a cartilage. 2. Partly cartilaginous. subcecal fossa (sub-se'kal). See fossa.
- subcerebellar (sub-ser-e-bel'ar). Beneath the cerebellum.
- subchlorid (sub-klo'rid). That chlorid of any series which contains the least chlorin.
- subchondral (sub-kon'dral). Beneath a cartilage. subchordal (sub-kor'dal). Situated below or be-
- neath the notochord.

 subchorionic (sub-ko-re-on'ik). Situated beneath
- the chorion. subchoroidal (sub-ko-roi'dal). Beneath the cho-
- roid.
 subchronic (sub-kron'ik). Between chronic and
- subacute. subclavian (sub-kla've-an). Situated under the
- clavicle.

 subclavicular (sub"kla-vik'u-lar). Situated under
- the clavicle.

 subclavius (sub-kla've-us) [L.]. See muscles,
- table of.

 subcollateral convolution (sub-kol-at'er-al). See
- convolution.

 subconjunctival (sub-kon-junk-te'val). Situated
- or occurring beneath the conjunctiva.
- subconscious (sub-kon'shus). Imperfectly or partially conscious.
- subconsciousness (sub-kon'shus-nes). The state of being partially conscious the condition in which mental processes occur with the mind nearly or quite unconscious of the action. Cf. dissociation.
- subcontinuous (sub-kon-tin'u-us). Nearly continuous; remittent.
- subcoracoid (sub-kor'ak-oid). Situated beneath the coracoid process.
- subcortex (sub-kor'teks). That part of the brainsubstance which underlies the cortex.
- subcortical (sub-kor'tik-al). Situated beneath the cortex.
- subcostal (sub-kos'tal). Situated beneath a costa or rib.
- **subcostalgia** (sub-kos-tal'je-ah) [subcostal + Gr. $\delta\lambda\gamma$ os pain]. Pain over the subcostal nerve, *i. e*, in the region of the appendix, epigastrium, and kidney.
- subcranial (sub-kra'ne-al). Beneath the cranium.
 subcrepitant (sub-krep'it-ant). Nearly or indistinctly crepitant.
- subcrepitation (sub"krep-it-a'shun). An indistinctly crepitant sound.
- subcruralis (sub-kru-ra'lis). Same as subcrurans. subcruraus (sub-kru-ra'us). See muscles, table of.
- subculture (sub-kult'ūr). A culture of bacteria derived from another culture.
- subcuneus (sub-ku'ne-us). A group of convolutions under the cuneus, and continuous with the gyrus fornicatus.
- subcutaneous (sub-ku-ta'ne-us). Situated or occurring beneath the skin.
- subcutaneus colli (sub-ku-ta'ne-us col'i). The platysma myoides muscle.
- subcuticular (sub-ku-tik'u-lar). Situated beneath the epidermis.
- subcutin (sub-ku'tin). Paraphenolsulphonate of anesthesin used like anesthesin.
- **subcutis** (sub-ku'tis) [L. sub under + cu'tis skin]. The subcutaneous tissue.
- **subcutoyd** (sub-ku'toid). A proprietary name for a medicinal preparation for hypodermic use.
- subdalirium (sub-de-lir'e-um). Partial or mild delirium.
- subdeltoid (sub-del'toid). Beneath the deltoid muscle.

- subdental (sub-den'tal) [L. sub under + dens tooth]. Beneath the teeth.
- subdermal, subdermic (sub-der'mal, sub-der'mik). Hypodermic.
- subdiaphragmatic (sub"di-af-rag-mat'ik). Situated beneath the diaphragm.
- **subdorsal** (sub-dor'sal). Situated below the dorsal region.
- subduct (sub-dukt'). To depress or draw down.
- subduction (sub-duk'shun) [L. sub below + duction]. The duction of the eyeball exerted by the inferior rectus muscle.
- **subdural** (sub-du'ral). Situated beneath the dura. **subencephalon** (sub-en-sef'al-on). The oblongata, pons, crura, and corpora quadrigemina.
- subendocardial (sub"en-do-kar'de-al). Situated beneath the endocardium.
- **subendothelial** (sub"en-do-the'le-al). Situated beneath an endothelial membrane.
- subendothelium (sub"en-do-the'le-um). Débove's membrane (q. v.).
- subendymal (sub-en'dim-al). Situated beneath the endyma.
- **sub-epidermal, sub-epidermic** (sub-ep-id-er'mal, sub-ep-id-er'mik). Situated or occurring beneath the epidermis.
- subepiglottic (sub-ep-e-glot'ik). Below the epiglottis
- subepithelial (sub-ep-e-the'le-al) Situated beneath the epithelium.
 s. endothelium. Same as Débove's membrane.
- **suberin** (su'ber-in). An insoluble variety of cellulose derived from cork.
- **subeston** (sub-es'ton) Dibasic aluminum acetate: used as an astringent, antiseptic, and deodorizer.
- subexcite (sub-eks-īt'). To excite in a partial manner.
- **subextensibility** (sub-eks-ten-sib-il'it-e). Decreased extensibility.
- subfalcial (sub-fal'se-al). Beneath the falx cerebri.subfascial (sub-fas'e-al). Situated beneath a fascia.
- subfebrile (sub-feb'rīl). Somewhat febrile.
- Sub. fin. coct. Abbreviation for L. sub finem coction, toward the end of boiling.
- **subfissure** (sub-fish'ur). A fissure of the brain concealed by two overlapping convolutions.
- subflavous (sub-fla'vus) [L. sub under + fla'vus yellow] Yellowish.
- subfoliar (sub-fo'le-ar). Pertaining to a subfolium.
 subfolium (sub-fo'le-um) [L. sub under + fo'hum leaf] Any one of the elementary divisions of a cerebellar folium
- **subfrontal** (sub-frun'tal). Situated beneath a frontal lobe or convolution.
- subgallate (sub-gal'āt). A basic gallate. See bismuth subgallate.
- subgemmal (sub-jem'al) [L sub under + gem'-ma bud]. Situated under a taste-bud or other bud.
- subgerminal (sub-jer'min-al). Below or under the germ.
- **subglenoid** (sub-gle'noid). Situated under the glenoid fossa, as, *subglenoid* dislocation of the humerus.
- subglossal (sub-glos'al). Same as sublingual.
- subglossitis (sub-glos-i'tis) [L sub under + glos'sa tongue + Gr -1715 inflammation]. Inflammation of the lower surface of the tongue.
- subglottic (sub-glot'ik). Situated or occurring under the glottis.
- subgranular (sub gran-u'lar). Somewhat granular. subgrondation (sub-gron-da'shun) [Fr.]. The depression of one fragment of bone beneath another.
- subgyre (sub-jīr). Subgyrus.

subgyrus (sub-ji'rus). Any gyrus that is partly concealed or covered by another or by others.

subhepatic (sub-he-pat'ik). Situated beneath the liver.

subhumeral (sub-hu'mer-al). Below or beneath the humerus.

subhyaloid (sub-hi'al-oid). Occurring beneath the hyaloid membrane.

subhyoid (sub-hi'oid). Subhyoidean.

subhyoidean (sub-hi-oid'e-an). Situated or occurring under the hyoid.

subicteric (sub-ik-ter'ik). Somewhat jaundiced.

subicular (sub-ik'u-lar). Of or pertaining to the uncinate gyrus.

subiculum (sub-ik'u-lum) [L. "support"]. That part of the gyrus hippocampi which borders the fissura hippocampi. The term is sometimes applied to the whole of this gyrus. s. promonto'rii, a ridge of bone bounding the fenestra vestibuli behind

subiliac (sub-il'e-ak). Below the ilium.

subilium (sub-il'e-um). The lowest portion of the ilium.

subimbibitional (sub-im-bib-ish'on-al). Due to deficient intake of liquid.

subincision (sub-in-sizh'un) [L. sub under + in-cid'ere to cut]. The creation of an opening into the urethra on the under side of the penis; a custom common among various savage and barbarous races. It does not render coitus unfruitful.

subinfection (sub-in-fek'shun). 1. Autoinfection due to weakening of the resisting cells of the organism from constant effort in overcoming toxic cells. 2. A condition in which bacteria that have gained entrance to the system become destroyed, and with their destruction liberate toxins which poison the cells around them.

subinflammation (sub"in-flam-a'shun). Slight or mild inflammation.

subinflammatory (sub-in-flam'at-or-e). Characterized by a mild inflammation.

subintegumental (sub-in-teg-u-men'tal). Beneath the skin

subintimal (sub-in'tim-al). Beneath the intima. subintrance (sub-in'trans). Anticipating recurrence.

nubintrant (sub-in'trant) [L. subin'trans entering by stealth].
1. Beginning before the completion of a previous cycle or paroxysm; anticipating.
2. Characterized by anticipating recurrences.

subinvolution (sub"in-vo-lu'shun). Incomplete involution; failure of a part to return to its normal size and condition after enlargement from functional activity, as, subinvolution of the uterus.

subiodid (sub-i'o-did). That iodid of any series which contains the least iodin.

subjacent (sub-ja'sent) [L. sub under + ja'cere to lie]. Lying beneath or underneath.

rubject (sub'jekt) [L. subjec'tus cast under]. 1. A person or animal subjected to treatment, observation, or experiment. 2. A body for dissection.

Iubjective (sub-jek'tiv) [L. subjectivus]. Pertaining to or perceived only by the affected individual; not perceptible to the senses of another person, as, subjective symptoms, sensations, etc.

subjectoscope (sub-jek'to-skop) [subjective sensation + Gr. σκοπεῖν to view]. An instrument used in the study of subjective visual sensations.

"ubjee (sub'je) [Hind. sabzı, literally, "greenness"].

The capsules and larger leaves of Can'nabis indica. See bhang.

ubjugal (sub-ju'gal) [L. sub under + juga'le malar bone]. Situated below the malar bone.

ublamin (sub'lam-in). Ethylendiamin-mercury sulphate, HgSO_{4.2}C₂H₄(NH₂)_{2.2}H₂O, a white, crystalline compound. It is a disinfectant for the hands, and has been used in syphilis.

sublatio (sub-la'she-o) [L.]. Removal. s. ret'-ins, detachment of the retina.

sublation (sub-la'shun) [L. subla'tio removal]. The removal, detachment, or displacement of a part.

sublethal (sub-le'thal). Not quite fatal; as a dose.

sublimate (sub'lim-āt) [L. sublima'tum]. A substance obtained or prepared by sublimation. corrosive s., mercuric chlorid.

sublimation (sub-lim-a'shun) [L. sublima'tio]. r. The process of vaporizing and condensing a solid substance without melting it. 2. Freud's term for the process of deviating sexual motive powers from sexual aims or objects to new aims or objects other than sexual.

sublime (sub-lim') [L. sublima're]. To volatilize a solid body by heat and then to collect it in a purified form as a solid or powder.

subliminal (sub-lim'in-al) [L. sub under + li'men threshold]. Below the limen, or threshold of sensation.

sublimis (sub-li'mis) [L.]. High; superficial.

sublimophenol (sub-li-mo-ie'nol). A proprietary surgical antiseptic, mercury chlorophenolate.

sublingual (sub-lin'gwal) [L. sub under + lin'gua tongue]. 1. Situated under the tongue. 2. Supplying the parts beneath the tongue. See artery, gland. etc.

sublinguitis (sub-lin-gwi'tis). Inflammation of the sublingual gland.

sublobe (sub'lōb). A division of a lobule.

sublobular (sub-lob'u-lar). Situated beneath a lobule.

sublumbar (sub-lum'bar). Situated beneath the lumbar region.

subluxation (sub-luks-a'shun) [L. sub under + luxa'tio dislocation]. An incomplete or partial dislocation.

sublymphemia (sub-lim-fe'me-ah). Same as hypo-lymphemia.

submammary (sub-mam'ar-e). Situated or occurring beneath a mammary gland.

submarginal (sub-mar'jin-al). Situated beneath or near a margin.

submarine (sub-mar-ēn'). In dentistry, covered with the fluids of the mouth, as, submarine filling.

submaxilla (sub-mak 4-il'ah) [L sub under + max-il'la jaw]. The lower jaw or jaw-bone.

submaxillaritis (sub-maks"il-ar-i'tis). Mumps affecting the submaxillary gland.

submaxillary (sub-maks'il-a-re). Situated beneath a maxilla. See gland.

submaxillitis (sub"maks-il-i'tis). Inflammation of a submaxillary gland; a variety of mumps.

submedial, submedian (sub-me'de-al, -me'dean). Beneath or near the middle.

submembranous (sub-mem'bran-us). Partially membranous.

submental (sub-men'tal) [L. sub under + men'tum chin]. Situated below the chin.

submersion (sub-mer'shun) [L. sub under + mer'-gere to dip]. The act of putting or the condition of being under the surface of a liquid.

submicron (sub-mi'kron). A colloid particle varying in size from 10⁻⁵ cm. to 5 × 10⁻⁷ cm. They are invisible with a microscope, but can be recognized with an ultramicroscope. Called also hypomicron

submicroscopic (sub"mi-kro-skop'ik). Too small to be visible with the microscope.

submorphous (sub-mor'fus). Neither amorphous nor perfectly crystalline.

submucosa (sub-mu-ko'sah). The layer of areolar tissue situated beneath the mucous membrane.

submucosal (sub-mu-ko'sal). Beneath the mu-

submucous (sub-mu'kus). Situated beneath or under the mucous membrane.

subnarcotic (sub-nar-kot'ik). Moderately nar-cotic.

subnasal (sub-na'zal). Situated below the nose.
subneural (sub-nu'ral). Situated beneath a nerve or the neural axis.

subnitrate (sub-ni'trāt). A basic nitrate.

subnormal (sub-nor'mal). Below or less than normal. A feeble-minded person having a mental level somewhat above twelve years, but below average adult level.

subnotochordal (sub"no-to-kor'dal). Situated beneath the notochord.

subnucleus (sub-nu'kle-us). A partial or secondary nucleus into which a large nerve-nucleus may be split up.

subnutrition (sub-nu-trish'un). Defective nutrition.

suboccipital (sub-ok-sip'it-al). Situated below or under the occiput.

suboperculum (sub-o-per'ku-lum). The portion of the occipital gyrus that overlies the insula.

suboptimal (sub-op'tim-al). Below the optimum. See optimum.

suboptimum (sub-op'tim-um). A temperature lower than that which is optimal or best suited to the growth of an organism.

suborbital (sub-or'bit-al). Situated beneath the orbit.

suboxid (sub-oks'id). That oxid in any series which contains the least oxygen.

suboxidation (sub"oks-id-a'shun). Deficiency in the supply of oxygen; deficient oxidation.

subpapular (sub-pap'u-lar). Indistinctly papular. subparalytic (sub"par-al-it'ik). Partially paralytic.

subparietal (sub-par-i'et-al). Situated beneath or below a parietal bone, convolution, or fissure.

subpatellar (sub-pat-el'ar). Situated beneath or below the patella.

subpectoral (sub-pek'tor-al). Beneath the pectoral muscle.

subpeduncular (sub-pe-dung'ku-lar). Situated beneath a peduncle.

subpelviperitoneal (sub-pel"vip-er-it-o-ne'al). Beneath the pelvic peritoneum.

subpericardial (sub"per-ik-ar'de-al). Situated beneath the pericardium.

subperiosteal (sub"per-e-os'te-al). Situated beneath or under the periosteum.

subperiosteocapsular (sub"per-e-os-te-o-kap'sular). Same as subcapsuloperiosteal.

subperitoneal (sub"per-it-o-ne'al). Situated or occurring beneath the peritoneum.

subperitoneo-abdominal (sub"per-it-o-ne"o-abdom'in-al). Occurring beneath the abdominal peritoneum.

subperitoneopelvic (sub"per-it-o-ne-o-pel'vik).

Occurring beneath the peritoneum of the pelvis.

subpersonal (sub-per'sun-al). Having an abnormally slight individuality.

subpetrosal sinus (sub-pe-tro'sal). The inferior petrosal sinus.

subpharyngeal (sub-far-in'je-al). Situated beneath the pharynx.

subphrenic (sub-fren'ik). Situated beneath or under the diaphragm.

subpial (sub-pi'al). Situated beneath the pia mater.
subplacenta (sub-pla-sen'tah). The decidua vera.
subpleural (sub-plu'ral). Situated beneath the pleura.

subplexal (sub-plek'sal). Beneath the cerebral plexus.

subpontine (sub-pon'tin). Situated below the pops.

subpreputial (sub-pre-pu'shal). Situated below the prepuce.

subpubic (sub-pu'bik). Situated or performed below the pubic arch.

subpulmonary (sub-pul'mo-na-re). Situated or occurring below the lung.

subpulpal (sub-pul'pal). Situated below the dental pulp.

subpyramidal (sub-pir-am'id-al). Situated below a pyramid.

subrectal (sub-rek'tal). Below the rectum.

subretinal (sub-ret'in-al). Situated below the retina.

subrostral (sub-ros'tral). Beneath the rostrum.

subsalt (sub'sawlt). Any basic salt.
subsartorial plexus (sub-sar-to're-al). See plexus.
subscaphocephaly (sub'skaf-o-sef'al-e). The con-

subscaphocephaly (sub"skaf-o-sef'al-e). The condition of being moderately scaphocephalic.

subscapular (sub-skap'u-lar). 1. Situated below or under the scapula. 2. Supplying the subscapularis muscle.

subscapularis (sub"skap-u-la'ris). See muscles, table of.

subscleral (sub-skle'ral). Occurring beneath the sclera.

subsclerotic (sub-skle'rot-ik). Beneath the sclerotic.

subscription (sub-skrip'shun). That part of a prescription which gives the directions for compounding the ingredients. See *prescription*.

subserosa (sub-se-ro'sah) Subserous tissue.

subserous (sub-se'rus). Situated beneath a serous membrane.

subsibilant (sub-sib'il-ant). Having a muffled, whistling sound.

subspinous (sub-spi'nus). Dislocation of the head of the humerus into the space below the spine of the scapula.

subsplenial (sub-sple'ne-al). Beneath the splenium of the corpus callosum.

substage (sub'stāj). That part of the microscope which is situated beneath the stage.

substance (sub'stans) [L substan'tia]. terial of which an organ or body is made up. accessory food s. See vitamin agglutin-able s., a substance existing in red blood-corpuscles and bacteria, with which the agglutinin unites to produce specific agglutination. agglutinating s. Same as agglutinin. a-s., alpha 8. See reticular s. antacoid s. See antacoid. β-s., beta s. See Heinz bodies, under body. black s. See substantia mgra cement s., the intercellular substance of certain tissues, as endothelium. chromophilic s., the constituents of a cell which stain easily. See Nissl bodies, under body. colloid s., the jelly-like substance formed in colloid degeneration. cytostance strong stance in the control depressor s., a substance secreted by the pituitary, which produces a fall in blood-pressure. dotted s., a granular material which makes up a large part of the central nervous system of invertebrates. gray s., the gray matter, i e., the cellular or ganglionic portion of the brain and spinal cord. hemolytic s., the material in a serum which destroys the red bloodcells of a serum added to it; a cytase or alexin. interfibrillar s. of Flemming. Same as paraplasm. interfilar s. Same as enchylema. terspongioplastic s., cytochylema. medul-lary s. 1. The white matter of the central nervous system, consisting of axones and their myelin sheaths. 2. The soft, marrow-like substance of the interior of an organ. See substantia medullaris s. of Nissl. See Nissl bodies, under body. no-threshold s's, those substances in the blood which are excreted into the urine in proportion to their absolute amount in the blood. Cf. threshold s's. perforated s. See substantia

prelipoid s., degenerated nerve tissue which has not yet been converted into fat. pressor s., any one of several products of intestinal putrefaction found in normal urine which, when injected into animals, produces increased blood-pressure. reaction s., a substance formed in the body of an animal on immunization with cellular products from an animal of another species. Called also adaptation-product receptive s., a hypothetical substance supposed to exist in muscle tissue, especially near the motor end-plates of the nerves, and to conduct excitation reticular s. 1. The net-like mass of threads seen in red bloodcorpuscles after vital staining; called also alpha and fitar mass. 2. Same as formatio reticularis. Rolando's gelatinous s. See substantia gelatinosa. Rollett's secondary s., the transparent material lying in narrow zones on each side of Krause's disks. Rovida's hyaline s., a stringy mass formed by treating pus with a 10 per cent sodium chlorid solution. sarcous s., the substance composing the sarcous elements of muscle. s. sensibilis'atrice, sensibilizing s. (Bordet), sensitizing s. Same as amboceptor. Sommering's gray s. See substantia nigra. threshold s's, those substances in the blood, such as sodium chlorid, sugar, etc., which are excreted into the urine only as far as they excede a certain threshold value Cf. no-threshold c's. thromboplastic s. See zymoplastic s tigroid s. See Nissl bodies, under body. white s., the white matter, i e, the dendritic or conducting portion of the brain and spinal cord. white s. of Schwann, the material of which the medullary sheath of a nerve-fiber is composed, myelin. zymoplastic s., a substance in the tissues which hastens the coagulation of the blood (A Schmidt). Called also thromboplastic s., thromboplastin, thrombokinase, coagulin, and cytogen.

substandard (sub-stan'dard). Not up to the normal standard.

substantia (sub-stan'she-ah). Latin for substance. s. adamanti'na [B N A], the tooth-enamel. s. al'ha [B N A], the white matter of the brain and spinal cord. s. cine'rea, the gray substance of the brain and spinal cord s. compac'ta, the compact substance of bone. s. cortica'lis [B N A], the cortical substance of an organ, as the kidney, the cerebrum, a bone s. ebur'nea [B N A], the dentin of a tooth s. ferrugin'ea, the bodies which underlie the locus caruleus of the triangle of the floor of the fourth ventricle it is believed that the trophic fibers of the trigeminal nerve are derived thence. s. gelatino'sa, the substance which sheaths the posterior form of the spinal cord (s. gelatino's a Rolan'di [B N A]) and lines the central canal. s. gelatino'sa centra'lis [B N A], the zone of clear space surrounding the central canal of the myelospongium. s. gris'ea, gray matter, especially that of the spinal cord. s. gris'ea. centra'lis [B N A], substantia gelatinosa centralis. s. hyali'na, the more fluid interstitial part of the protoplasm of a cell s. innomina'ta, the nerve tissue immediately caudal to the anterior perforated space. s. len'tis [B N A], the substance of the crystalline lens. s. medulla'ris [B N A], the soft marrow-like substance of the interior of an organ. In the B N A terminology the following are recognized s. m glan'dula suprarena'lis of the suprarenal gland, s. m. lymphoglan'dulæ of lymph-nodes, s. m. re'nis of the kidney, s. m. os'sium or bone-marrow. s. metachromaticogranula'ris. See Heinz bodies, under body. s. ni'gra [B N A], an area of gray matter dorsal of the basis pedunculi Called also black substance, locus niger, intercalatum, and ganglion of Sommering. S. opa'ca, the reticulum of the protoplasm of a cell. S. Os'sea [B N A], the cementum of the teeth. s. perfora'ta ante'rior [B N A], an area on the ventral surface of the brain in front of the optic chiasm which is pierced by numerous small arteries; called also anterior perforated space, area perforata, and locus perforatus anticus. s. perfora'ta

poste'rior [B N A], an area on the ventral surface of the brain between the bases pedunculi pierced by numerous openings for branches of the posterior cerebral artery: called also posterior perforated space and locus perforatus posticus. S. propria, the essential tissue or substance of an organ or structure; especially the middle, or connective tissue, layer of the membrana tympani; also the connective tissue, or parenchyma, of the cornea. S. reticularis, formatio reticularis. S. reticularis al'ba [B N A], the network of white fibers covering the uncinate convolution. S. reticulo-filamento'sa. Same as reticular substance. See substance S. spongio'sa. 1. [B N A] The spongy substance of bone 2. The gray matter of the horns of the spinal cord, except that part which forms the substantia gelatinosa. S. vit'rea, the tooth enamel.

substernal (sub-ster'nal). Situated below the sternum.

substernomastoid (sub-ster-no-mas'toid). Beneath the sternomastoid muscle.

substitol (sub'stit-ol). A dried preparation of the fibrin of the blood of horses: used as a vulnerary.

substitution (sub-stit-u'shun) [L. substitu'tio, from sub under + statu'ere to place]. The act of putting one thing in the place of another; especially the chemic replacement of one substance by another; also the fraudulent use of one drug in place of another by an apothecary in compounding a prescription.

substitutive (sub'stit-u-tiv). Effecting a change or substitution of symptoms.

substrate (sub'strāt) [L. sub under + stra'tum layer]. A substratum, or lower stratum; the term is applied to the substance upon which a ferment or enzyme acts.

substratum (sub-stra'tum) [L]. A substance, or lower stratum. s. molecula're, s. pyramida'le lacrimo'sum, s. radia'tum, etc. See stratum.

subsulcus (sub-sul'kus). A sulcus concealed by another.

subsulphate (sub-sul'fāt). A basic sulphate.

subsultus tendinum (sub-sul'tus ten'din-um) [L.].
A twisting movement of the muscles and tendons in a typhoid state or condition.

subsylvian (sub-sil've-an). Situated beneath the fissure of Sylvius.

subtarsal (sub-tar'sal). Situated below the tarsus. subtegumental (sub"teg-u-men'tal). Subcutaneous.

subtemporal (sub-tem'por-al). Beneath the temple or any temporal structure or part. s. convolution, the inferior temporal convolution. s. fissure, an occasional fissure in the inferior and middle temporal convolutions

subtenial (sub-te'ne-al). Situated beneath the tenia.

subtentorial (sub-ten-to're-al). Beneath the tentorium.

subtetanic (sub-tet-an'ik). Mildly tetanic: said of convulsions less severe than those of tetanus.

subthalamic (sub-thal-am'ik). Situated below the thalamus.

subthalamus (sub-thal'am-us) [L.]. A portion of the hypothalamus situated between the thalamus and the tegmentum of the mesencephalon. It contains the hypothalamic nucleus. Cf. hypothalamus.

subthyroideus (sub-thi-roi'de-us) [L.]. A muscle formed by the junction of the superior and inferior portions of the thyro-arytenoid muscle.

subthyroidism (sub-thi roi-dizm). Hypothyroidism.

subtile (sub'til) [L. sub'tilis]. Keen and acute, as, a subtile pain.

subtle (sut'l) [L. sub'tilis]. 1. Very fine, as, a subtle powder. 2. Same as subtile.

subtotal (sub-to'tal). Nearly but not quite total.

subtrapezial (sub-tra-pe'ze-al). Beneath the trapezius muscle, as, subtrapezial plexus

subtrochanteric (sub"tro-kan-ter'ik). Situated below a trochanter.

subtrochlear (sub-trok'le-ar). Situated beneath the trochlea.

subtuberal (sub-tu'ber-al). Situated under a tuber.
 subtympanic (sub-tim-pan'ik). Having a somewhat tympanic quality.

sububeres (sub-u'ber-ēz). Latin for unweaned or suckling children.

subumbilical (sub-um-bil'ik-al) Situated beneath the umbilicus, as, subumbilical space.

subungual, subunguial (sub-ung'wal, sub-ung'we-al) [L. sub under + un'guis nail]. Situated beneath a nail.

suburethral (sub-u-re'thral). Situated or occurring beneath the urethra.

subvaginal (sub-vaj'in-al) [L. sub under + vagi'na sheath]. Situated under a sheath, or below the vagina.

subvertebral (sub-ver'te-bral). Situated on the ventral side of the vertebral column.

subvirile (sub-vir'îl). Having de cient virility.

subvitrinal (sub-vit'rin-al). Situated beneath the vitreous.

subvola (sub-vo'lah). The space between the second and third fingers.

subvolution (sub-vo-lu'shun) [L. sub under + vol'vere to turn]. The operation of turning over of a flap; especially the operation of dissecting and turning up a pterygium, so that the outer or cutaneous surface comes in contact with the raw surface of the dissection. It is done to prevent readhesion.

subwaking (sub-wa'king). Intermediate between waking and sleeping.

subzonal (sub-zo'nal). Situated beneath a zone, as the zona pellucida.

subzygomatic (sub"zi-go-mat'ik). Situated below the zygoma.

succagogue (suk'ag-og) [L. suc'cus juice + Gr. άγωγός leading]. Inducing glandular secretion; also an agent which stimulates glandular secretion

succedaneous (suk-se-da'ne-us). Of the nature of a succedaneum.

succedaneum (suk-se-da'ne-um) [L]. A medicine or material that may be substituted for another of like properties.

succenturiate (suk-sen-tu're-āt) [L. succenturia're]. Accessory; serving as a substitute.

succinate (suk'sin-āt). Any salt of succinic acid.

succinic acid (suk-sin'ik). See acid.

succinimid (suk-sin-i'mid). A colorless compound, (CH₂.CO)₂NH, formed by the action of gaseous ammonia on succinic anhydrid.

succinol (suk'sin-ol). Purified amber tar-oil, used in eczema, pruritus, and psoriasis.

succinoresinol (suk"sin-o-rez'in-ol). A resinol from amber, $C_{12}H_{10}O$.

succinous (suk'sin-us). Pertaining to amber.

succinum (suk'sin-um). Latin for amber.

succorrhea, succorrhea (suk-or-e'ah) [L. suc'cus juice + Gr. pola flow]. An excessive flow of a juice or secretion, as in ptyalism.

succuba (suk'u-bah) [L.; from succum'bere to lie under]. An imaginary female monster, or demon, formerly believed to copulate with and cause nightmare in men.

succubus (suk'u-bus) [L. from succum'bere to lie under]. An imaginary monster, or demon, formerly regarded as a cause of nightmare.

succus (suk'us). Latin for juice. s. al'terans, a proprietary alterative and antisyphilitic. s. cit'ri. lime juice. s. enter'icus, the enteric,

juice. **s. pomo'rum**, sweet cider or fresh apple juice. **s. prostat'icus**, prostatic fluid.

accussion (suk-ush'un) [L. succus'sio]. The act of shaking a patient, so as to detect the presence of a liquid in the cavities of the body. hippocratic s., that which is performed for the diagnosis of pyopneumothorax and seropneumothorax. s. sounds, splashing sounds heard on succussion over a distended stomach and in hydropneumothorax. See under sound.

sucholo-albumin (su"ko-lo-al-bu'min) [L. sus pig + Gr. χολή bile + albumin]. A poisonous protein characteristic of hog-cholera, and obtained from cultures of the bacillus. It is injected for the purpose of giving immunity to the disease.

sucholotoxin (su"ko-lo-tok'sin) [L. sus pig + Gr. χολή bile + toxin]. A toxin from cultures of the bacillus of hog-cholera.

suck (suk). To feed from the breast.

sucking-pad. See pad, sucking-.

sucking, wind- (suk'ing). See cribbing.

suckle (suk'l). To nourish from the breast.

sucramin (su'kram-in) The ammonium sait of saccharin.

sucrase (su'krās). Same as invertin.

sucrate (su'krāt). A compound of a substance with sucrose.

sucroclastic (su-kro-klas'tik) [Fr. sucre sugar + Gr. κλαστός destruction]. Splitting up sugar; as, a sucroclastic enzyme.

sucrol (su'krol). A sweet, crystalline substance, NH₂ CO NH.C₀H₄ OC₂H₅, or paraphenetolcarbamid, soluble in alcohol, sparingly in water, and used as a substitute for sugar in cases of diabetes. Called also dulcin and valcin.

sucrose (su'krōs). Same as saccharose.

suction (suk'shun) [L. su'gere to suck]. 1. The act or process of sucking or of aspirating. 2. In dentistry, a depression or chamber in an artificial denture which, through the action of suction, assists in the retention of the denture. postussive s., a sucking sound heard over a lung cavity just after a cough.

suctorial (suk-to're-al). Fitted for performing suction.

sucuuba (soo-koo-oo'bah). The Plume'ria phageden'ica, a medicinal plant of South America.

sudamen (su-da'men) [L]. See sudamina.

sudamina (su-dam'in-ah) [pl. of L. suda'men, from suda're to sweat]. Whitish vesicles caused by the retention of sweat in the sudorific ducts or the layers of the epidermis. The vesicles are about the size of millet-seeds, and the eruption occurs after profuse sweating, or in certain febrile diseases.

sudaminal (su-dam'in-al). Pertaining to or resembling sudamina.

sudan (su-dan'). A diazo-compound, C₂₀H₁₄N₁₂O, in the form of a brown powder, used as a stain for fat; called also pigment brown. S. G, S. III, a red fat-soluble azo dye, C₆H₅.N:N.C₇H₄.N:N.C₁₀-H₆.OH: used as a stain for tubercle bacillus. S. IV, scarlet red. S. yellow G, a brown powder, C₁₂H₁₀N₂O₂: used as a stain for fats.

sudanophil, sudanophilous (su-dan'o-fil, su-dan-of'il-us). Staining readily with sudan.

sudanophilia (su"dan-o-fil'e-ah) [sudan + Gr. φιλεῖν to love]. A condition in which the leukocytes contain particles that stain readily with sudan red. The condition is thought to be indicative of suppuration.

sudarshan shurna (soo-dar'shan choor'nah). A Hindu febrifuge containing fifty kinds of drugs.

sudation (su-da'shun) [L. suda'tio]. 1. The act or process of sweating. 2. Excessive sweating.

sudatorium (su-dat-o're-um) [L.]. 1. A hot-air 2. A room for the administration of hotbath. air baths.

sudokeratosis (su"do-ker-at-o'sis) [L. su'dor sweat + keratosis]. Keratosis of the sweat-ducts.

sudol (su'dol) [L. su'dor sweat]. A preparation of wool-fat and glycerin with 30 per cent. of formaldehyd and oil of wintergreen: used to check excessive sweating.

sudomotor (su-do-mo'tor) [L. su'dor sweat + mo'tor move]. Stimulating sweat secretion.

sudor (su'dor) [L.]. Sweat or perspiration.
 an'glicus, English sweat; miliary fever.
 cruen'tus; s. sanguin'eus, the sweating of blood; hematidrosis.
 urino'sus, the secretion of urinous sweat; uridrosis.

sudoral (su'dor-al) [L. sudor sweat]. 1. Pertaining to the sweat; characterized by sweating. 2. A proprietary remedy for sweating of the feet; it contains boric, benzoic, and tartaric acids, and

sudoresis (su-dor-e'sis). Profuse sweating.

sudoriceratosis (su-dor"ik-er-at-o'sis). Sudokeratosis.

sudoriferous (su-dor-if'er-us) [L. sudor'ifer; from su'dor sweat + fer're to bear]. Secreting or producing sweat.

sudorific (suzdor-if'ik) [L. sudorif'icus]. 1. Promoting the flow of sweat; diaphoretic. 2. An agent that causes sweating.

sudorikeratosis (su-dor-ik-er-at-o'sis). Sudoker-

sudoriparous (su-dor-ip'ar-us) [L. su'dor sweat + par'ere to produce]. Secreting or producing sweat.

Suedeck's point. See under point.

suet (su'et) [L. se'vum]. The fat from the abdominal cavity of a ruminant animal, especially the sheep or ox. It is used in the preparation of cerates and ointments and as an emollient. benzoinated s., prepared suct 1000, benzoin 30.
prepared s., the internal fat of the abdomen of
the sheep purified by melting and straining

suffocation (suf-o-ka'shun) [L. suffoca'tio]. The stoppage of respiration, or the asphyxia that results from it.

suffraginis (suf-raj'in-is) [L]. The large pastern bone or first phalanx of the horse.

suffumigation (suf"fu-mig-a'shun) [L. sub under + fumiga'tio smoking]. A fumigation; also a substance to be burned in fumigation.

suffusion (suf-fu'zhun) [L. suffu'sio]. The condition of being blood-shot or of being moistened.

sufragel (suf'raj-el). A sterile suspension of very finely divided sulphur in gelatin for intramuscular injection.

sugar (shūg'ar) [L. sac'charum; Gr. σάκχαρον]. sweet carbohydrate of various kinds, and of both animal and vegetable origin. The two principal groups of sugars are the disaccharids, having the formula $C_{12}H_{22}O_{11}$, and the monosaccharids, $C_6H_{12}O_6$; all are white, crystallizable solids, soluble in water and dilute alcohol. The disaccharids are beet-s., cane-s., maple-s., palm-s., malt-s. (maltose), milk-s. (lactose), and larch-s. (melizitose). The monosaccharids include ordinary glucose or dextrose (diabetic s., grape-s., liver-s., potato-s., starch-s.), levulose (fruit-s.), liver-s., polato-s., starch-s.), levulose (fruit-s.), invert inosite (heart-s., muscle-s.). Besides these, a very considerable number of artificial and actual other sugars are known to chemistry. 8. (sucré actuelle of Lépine), the free glucose in the blood. anhydrous s. See anhydrosugar. barley s., a clear hard form of sugar formed by heating ordinary granulated sugar (saccharose) to 160° F. beechwood s., xylose. beet s., saccharose derived from the root of the beet. brain s., cerebrose; a variety of glucose from the brain substance. burnt s., caramel. cane s., saccharose derived from sugar-cane (sac'charum officina'rum). collagen 8. Same as glycocoll. diabetic 8., the glucose which is found in the urine in diabetes mellitus. fruit-8. Same as levulose. gelatin s., glycocoll. grape-s., glucose. heart-s., inosite. invert s., a natural mixture of dextrose and levulose. s. of lead, levulose. lead acetate. Leo's s. See laiose. liver s., glucose from the liver. malt-s. See maltose. maple-s., saccharose from maple-sap. milk-s., lactose. muscle-s. See inosite. reducing s., a sugar which will reduce copper in an alkaline tartrate solution. virtual s. (suce virtuelle of Lépine), sugar in the blood in a colloidal state.

sugarin (shūg'ar-in). Methylbenzoylsulphinid; a crystalline substance said to be preferable to sac-charin as a sweetener, and to be 500 times as sweet as sugar.

suggestibility (sug"jes-tib-il'it-e) A condition of enfeebled will, with abnormal susceptibility of suggestions. Suggestibility is either normal or abnormal. Normal suggestibility is either afferent or efferent. Afferent and efferent suggestibility is either direct or indirect. A similar classification is made of abnormal suggestibility.

suggestible (sug-jes'tib-l). Liable to be so acted upon as to be made to act automatically.

suggestion (sug-jes'tchun) [L. sugges'tio]. production of a condition or state in a person by imparting to him an idea from without. hyp**notic s.**, a suggestion imparted to a person in the hypnotic state, by which he is led to believe certain things contrary to fact or induced to perform certain actions. posthypnotic s., a suggestion made to a person while in the hypnotic state and leading him to perform the action suggested after his return to his normal state. s.-therapy, the treatment of disease by hypnotic suggestion. traumatic s. See autosuggestion.

suggestionist (sug-jes'tchun-ist). One who treats disease by the method of suggestion.

suggestionize (sug-jes'tchun-iz). To treat a patient by suggestion.

suggillation (sug-jil-a'shun) [L. suggilla'tio]. 1. A bruise or ecchymosis. 2. A mark of postmortem lividity.

suint (swint). The fatty natural potash-soap derivable from sheep's wool landlin is prepared from it.

sukkla pakla (sook'lah pak'lah) [Hind. "dry suppuration ''l Same as ainhum.

sulcal artery (sul'kal). See table of arteries.

sulcate, sulcated (sul'kāt, sul'ka-ted) [L. sulca'-tus]. Furrowed or marked with sulci.

sulciform (sul'sif-orm). Formed like a groove.

sulculus (sul'ku-lus), pl. sul'culi [L.]. A small or minute sulcus.

sulcus (sul'kus), pl. sul'ci [L.]. A groove, trench, or furrow; especially, a fissure of the brain. The named sulci of the brain are not fewer than 200 in number. For sulci not given in this list, see under fissure. alveolabial s., the space between the gums and the lips. alveolingual s., the space between the gums and the tongue. s. ampulla'ris [B N A], a transverse groove on the membranous ampulla of the labyrinth, for the ampulla'ris partia. membranous ampulla of the labyrinth, for the ampullary nerve. s. anthel'icis transver'sus [B N A], the transverse groove of the anthelix. arcuate s., middle. Same as midgracile s. s. auric'ulse poste'rior [B N A], the posterior sulcus of the auricle. s. basila'ris [B N A], the median groove in the pons varolii for the basilar artery. s. bicipita'lis latera'lis [B N A], the external bicipital groove. s. bicipita'lis media'-lis [B N A], the internal bicipital groove. s. calca'noi [B N A], the interosseous groove. s. calca'noi [B N A], the corous callosum. encircles the convex aspect of the corpus callosum.

s. canalic'uli mastoi'dei, a groove in the petrous portion of the temporal bone for the mastoid canaliculus. **s. carot'icus** [B N A], the cavernous groove. See under groove. **s. car'pi** [B N A], a concavity in the anterior surface of the carpal bones. **s. centra'lis [rolan'di]** [B N A], the fissure of Rolando cerebellar s., the furrows between the convolutions of the cerebellum. cerebral s., the fissures between the convolutions of the cerebrum. s. chias'matis [B N A], s. of the chiasm, the optic groove. s. cin'guli [B N A], the callosomarginal fissure circular s., s. circula'ris [reili] [B N A]. See Reil's s. coronary s., the great transverse groove separating the auricles from the ventricles Called also auriculoventricular groove. cuneal s., a small sulcus in the cuneus parallel to the calcarine fissure. ethmoid s., the groove in the nasal bone for the nasal nerve. frontal s., the groove on the frontal bone that lodges the superior longitudinal sinus. frontal s., inferior, a sagittal sulcus on the external surface of the frontal lobe of the cerebrum. genual s., a small fissure near the genu of the corpus callosum. s. ham'uli ptery-goi'dei [B N A], the hamular groove Harrison's s. See Harrison's groove, under groove. hor-izontal s., lesser, one which subdivides the inferior semilunar lobe of the cerebellum. s. hypothalam'icus [monroi] [B N A] Sec s of Monro. s. infrapalpebra'lis [B N A], the furrow beneath the lower lid. intercalary s., a sulcus above and parallel to the corpus callosum. intermediate s., anterior, an occasional furrow between the anterior median fissure and the anterior lateral sulcus. intermediate s., posterior, a sulcus in the cervical part of the spinal cord be-tween the funiculus gracilis and the funiculus cuneatus. intertubercular s., the bicipital groove of the humerus. intragracile s., a fissure of the cerebellum between the lobulus gracilis minor and the lobulus gracilis posterior. intraparietal s. I That which follows the junction of the superior and inferior parietal bones 2 A fissure between the superior and inferior parietal lobes lateral s., a channel in the temporal and occipital bones which lodges the lateral sinus. limiting s., s. lim'itans [B N A], a longitudinal groove on the ventricular surface of the embryonic brain separating the dorsolateral sensory plates from the ventro-lateral motor plate. s. lim'itans in'sulse, Reil's sulcus. s. luna'tus, a small semilunar furrow sometimes seen on the lateral surface of the occipital lobe of the cerebrum. This sulcus is conspicuous in the brain of certain apes and was called by Reidinger the "Affenspalte" s. mento-labia'lis [B N A], the furrow between the lower lip and the chin. midgracile s., one which divides the slender lobe of the cerebellum into two subequal parts. s. of Monro, the fissure at the anterior lower part of the third ventricle, from which the foramina of Monro diverge. s. nasolabia'lis [B N A], the furrow between the nose and the upper lip. s. ner'vi radia'lis [B N A], the musculospiral groove. nymphocaruncular s., nymphohymeneal s., a groove hetween the hymen and the labium minus. occipital s., a groove on the mastoid process that lodges the mastoid artery. paramesial s., a fissure along the middle of the superior frontal gyrus (somewhat frequently wanting). periconchal s., the groove on the posterior surface of the auricle which corresponds to the antihelix. **polar s.**, any one of the small fissures which surround the posterior end of the calcarine fissure. **s. post-centra/lis**, the postcentral fissure of the cerebellum. **postclival s.**, a fissure of the cerebellum. bellum. postclival s., a assure of the cere-bellum between the lobus clivi and the lobus cacuminis. postgracile s., one which separates the slender lobe of the cerebellum from the inferior semilunar lobe. postnodular s., one on the under side of the cerebellum, between the nodule and the uvula. postpyramidal s., one on the lower side of the cerebellum, between the pyramid and the tuber valvulæ. presuricular s., a proove in front of the auricular surface of

the ilium for the anterior iliosacral ligament: found chiefly in the women of Java. precentral s., a sulcus in front of the fissure of Rolando. preclival s., a fissure of the cerebellum between the lobus culminis and the lobus clivi. pregracile s., one on the lower surface of the cerebellum, between the biventral and slender lobes. prepyramidal s., one on the under surface of the cerebellum, between the uvula and the pyramid. prerolandic s. Same as precentral s. s. promonto'rii [B N A], a groove in the surface of the promontory of the tympanum lodging the tympanic nerve. s. pulmona'lis, a groove on the back along each side of the vertebral column. Reil's s., a groove in the bottom of the sylvian fissure, partially bounding the insula. retrocentral s., a cerebral fissure behind and parallel to the fissure of Rolando. sagittal s., the sagittal groove. See groove. scleral s., sclerocorneal s., the groove at the junction of the sclera and cornea. sigmoid s., the more lateral part of the lateral sulcus. s. spira'lis, the grooved extremity of the lamina spiralis of the cochlea. **s. syl'vii**, the fissure of Sylvius. See *fissure*. **s. transver'sus** [B N A], the groove in the parietal bone for the lateral sinus. triradiate s., the orbital fissure. Turner's s., intraparietal sulcus (2d def). s. tympan'icus, the groove into which the membrana tympani fits. s. ventra/lis, the anterior median fissure of the spinal cord. vermicular s., a fissure between the vermis and the lateral hemisphere of the cerebellum vertical s., the pre-central sulcus Waldeyer's s., the sulcus spiralis.

sulfarsenol (sul-far'se-nol) Sulpharsphenamin.
sulfd, sulfonal, sulfur, etc. See sulphid, etc.
sulfoform (sul'fo-form). Triphenylestibinsulphid,
a preparation liberating sulphur easily and used in scalp diseases.

sulfosote (sul'fo-sōt). See sulphosot.

sulfuraria (sul-fu-ra're-ah). A yellow powder of the sulphurous mud deposited in the springs of San Filippo, in Italy. See sulphuraria.

sullacetin (sul-as'et in) A potassiosodium compound of pyrocatechinmonoacetic and guaiacol sulphonic acids used in tuberculosis. Dose, 8 gr. (05 gm).

sullage (sul'āj). Sewage.

sulphacid (sulf-as'id). A thio-acid.

sulphaldehyd (sul-fal'de-hīd). An ill-smelling, oily substance prepared from acetaldehyd and hydrogen sulphid. It has been used as a hypnotic.
sulphamin (sul-fam'in). The univalent radical—SO₂NH₂.

sulphaminol (sul-fam'in-ol). A pale-yellow powder, thio-oxydiphenylamin C₆H₄ S-S NH C₆H₃OH,

insoluble in water, but soluble in alcohol, glacial acetic acid, and alkaline solutions. It is absorbent and antiseptic, and is used externally as a wound-dressing, and internally for cystitis and diseases of the cerebrum and frontal sinus; also by insufflation in laryngeal tuberculosis. Dose, 4 gr. (0 25 gm).

sulphanilate (sulf-an'il-āt). A salt of sulphanilic acid.

sulphanilic acid (sul-fan-il'ik). See acid.

sulphaqua (sulf-ak'wah). A proprietary preparation used locally in skin diseases, gout, rheumatism, etc. sulpharsphenamin (sul-far-sfen'am-in). An organic arsenic preparation, the disodium salt of diamino-dihydroxy-arsenobenzene-normal-dimethylene-sulphonate, (NaO SO₂ CH₂.NH(OH) C₆H₃-As')₂4H₂O. It contains 18-20 per cent. of arsenic and is used in the treatment of syphilis. It differs from neo-arsphenamin in having two side chains instead of one and in that the sulphur has a valence of four instead of two. It is used by intramuscular, subcutaneous, or intravenous injection.

sulphate (sul'fāt) [L. sul'phas]. Any salt of sulphuric acid, acid s., one in which only one-half

of the hydrogen of the sulphuric acid is replaced: a bisulphate. basic s., a subsulphate; one in which the normal sulphate of the base is combined with a hydrate or oxid of the same base. conjugate s's, conjugated s's, aromatic substances, such as phenol, scatoxyl, and indoxyl, which occur in the urine combined with mineral sulphates; called also ethereal s's. normal s., neutral s., one in which all the hydrogen of the sulphuric acid is replaced.

sulphatid (sul'fat-id). One of a class of lipoid substances which are esters of sulphuric acid. They are found largely in the medullated nerve-fibers.

sulphatine (sul'fat-ēn). A proprietary insectpoison containing calcium oxid, copper oxid, sulphuric acid, and sulphur.

sulphemoglobin (sulf"em-o-glo'bin). See sulph-methemoglobin.

sulphemoglobinemia (sulf"hem-o-glo-bin-e'meah). The presence of sulphmethemoglobin in the blood.

sulphenthal (sul'fen-thal). Phenolsulphone-phthalein.

sulphichthyolic acid (sulf"ik-thi-ol'ik). See acid.
sulphid (sul'fid). Any binary compound of sulphur, a compound of sulphur with another element or base.

sulphindigotate (sul-fin'dig-o-tāt). Any salt of sulphindigotic acid.

sulphindigotic acid (sul"fin-dig-o'tik). A compound, C₈H₅NO SO₃, formed by the action of sulphuric acid on indigo

sulphinid (sul'fin-id). Same as saccharin.

sulphite (sul'fit) [L. sul'phis]. Any salt of sulphurous acid.

sulphmethemoglobin (sulf"meth-em-o-glo'bin). A greenish substance formed by treating blood with hydrogen sulphid. It is the cause of the greenish color seen in the abdominal walls and along the vessels of cadavers. Called also sulphemoglobin.

sulpho-acid (sul-fo-as'id). An acid in which sulphur displaces carbon or oxygen.

sulphocalcine (sul-fo-kal'sin). A preparation used in diphtheria.

sulphocarbol (sul-fo-kar'bol). Same as sulphocarbolic acid. See under acid.

sulphocarbolate (sul"fo-kar'bo-lāt). Any salt of sulphocarbolic acid.

sulphocarbolic acid (sul"fo-kar-bol'ik). See acid. sulphoconjugation (sul"fo-kon-ju-ga'shun). The formation of conjugated sulphates.

sulphocyanate (sul-fo-si'an-āt). Same as thio-cyanate.

sulphocyanic acid (sul"fo-si-an'ik). Same as thiocyanic acid.

sulphoform (sul'fo-form). Triphenyl antimony sulphid, $(C_0H_5)_3SbS$ used in skin diseases

sulphogel (sul'fo-gel). A gel in which sulphuric acid is the medium instead of water.

sulphogen (sul'fo-jen). A proprietary preparation of sulphur, magnesia, genista, etc. used as an antifermentative. Dose, r dr. (4 gm.).

sulphogenol (sul-fo'jen-ol). The ammonium salt of sulphonated crude mineral oil.

sulphohydrate (sul-fo-hi'drāt). Sulphydrate.

sulphoid (sul'foid). Colloidal sulphur: used in alopecia.

sulpholipin (sul-fo-li'pin). A lipin which on hydrolysis yields sulphuric acid.

sulpholysis (sul'fol'is-is) [sulph- + Gr. λύσις dissolution]. A double decomposition, similar to hydrolysis, but in which sulphuric acid takes the place of water.

sulphonal (sul'fo-nal). A white, crystalline compound, (CH₃)₂C(SO₂C₂H₅)₂, diethylsulphone-dimethylmethane, readily soluble in alcohol and

slowly in 100 parts of water. It has moderate hypnotic properties, and is used in insomnia of functional origin. Dose, 5-30 gr. (0.333-2 gm.).

sulphonalism (sul'fo-nal-izm). The ill effects of the injudicious use of sulphonal; also the habitual use of sulphonal as an intoxicant.

sulphonaphthol (sul-fo-naf'thol). A proprietary antiseptic substance: used like carbolic acid. Called also milk oil.

sulphone (sul'fon). 1. The radical SO₂. 2. Any sulphur alcohol or ether; any compound of SO₂ with one or two hydrocarbons. It is analogous to ketone.

sulphonethylmethane (sul-fo-neth-il-meth'ān). See trional.

sulphonic (sul-fon'ik). Indicating chemical compounds containing the sulphonic group.

sulphonmethane (sul-fon-meth'an). See sul-phonal.

sulphoparaldehyd (sul"fo-par-al'de-hid). A crystalline substance, (CH₈.CHS)₈, or trithioacetalde-hyd; insoluble in water, but soluble in alcohol, and used as a hypnotic.

sulphophenol (sul-fo-fe'nol). Sulphocarbolic acid.
sulphoprotein (sul-fo-pro'te-in). Any one of a series of albumins containing loosely combined sulphur.

sulphopyrin (sul-fo-pi'rin). A white, crystalline powder, antipyrin para-amino-benzene sulphonate.

sulphoricinate (sul-fo-ris'in-āt). See solvin and polysolvol.

sulphosalicylic acid (sul"fo-sal-is-il'ik). See acid. sulphosalt (sul'fo-salt). A salt of sulphonic acid.

sulphose (sul'fōs). A proprietary preparation of ammonium ichthyolsulphonate: used like ichthyol.

sulphoselene (sul'fo-se-lēn). A selenium compound which has been used in the treatment of cancer.

sulphosol (sul'fo-sol). A sol in which sulphuric acid is the dispersion medium.

sulphosot (sul'fo-sōt). Potassium creosote sulphonate used in treatment of tuberculosis. Dose, 5-20 gr. (0.333-1.33 gm).

sulphosteatite (sul-fo-ste'at-īt). A proprietary insect-powder.

sulpho-urea (sul-fo-u're-ah). Same as thio-urea. sulphoxid (sul-foks'id). Any member of a group of compounds intermediate between the alkyl sulphids and the sulphones.

sulphoxism (sul-foks'izm). Sulphuric-acid poisoning.

sulphugator (sul'fu-ga-tor). A roll of muslin charged with sulphur, to be burned in fumigation.

sulphume (sul'fūm). A proprietary preparation said to be a liquid form of pure sulphur: used internally and externally in various diseases.

sulphur (sul'fur) [L. gen. sulphu'ris]. A non-metallic element existing in many allotropic forms, and asserted by some to be a compound; symbol, S; atomic weight, 31.06. Sulphur is a laxative and diaphoretic, and is used in diseases of the skin and respiratory organs, and in hemorrhoids, habitual constipation, etc. Dose, ro-30 gr. (0.666-2 gm.). s. dioxid, a corrosive gas, SO₂; incorrectly called sulphurous acid. It is destructive to bacteria, and is important as a disinfecting agent. Inhalation of this gas may give rise to bronchitis. flower of s., sublimed sulphur. hepar-s., liver of s. See potassa sulphurata. s. hydrid, sulphureted hydrogen, SH₂; a gas having the smell of rotten eggs; sometimes used as a rectal injection. s. iodid, a binary compound, S₂I₂: used in ointments. lac-s., precipitated sulphur. s. lo'-tum, washed sulphur. milk of s. See precipitated s. precipitated s. [L. s. pracipita'-tum, lac sulphu'ris], milk of sulphur; sulphur precipitated from a solution of calcium penta-

sulphid and thiosulphate: it contains more or less calcium sulphid, etc. sublimed s. [L. sul'phur sublima'tum], sulphur in fine, yellow powder, obtained by cooling the heated vapor of ordinary sulphur. s.-vasogen, an ointment containing sulphur and vasogen, either semisolid or fluid: useful in seborrhea. vegetable s., lycopodium. washed s. [L. sul'phur lo'tum], sublimed sulphur purified by washing with water.

sulphuraria (sul-fu-ra're-ah). A sediment from certain springs: said to contain sulphur, calcium sulphid, strontium sulphate, silica, etc.: used in

skin diseases.

sulphurated, sulphureted (sul'fu-ra-ted, sul'fu-ret-ed). Combined or charged with sulphur.

sulphurator (sul'fu-ra-tor). An apparatus for applying sulphur fumes, as in disinfecting.

sulphuret (sul'fu-ret). Same as sulphid.

sulphuric acid (sul-fu'rik). See acid.

sulphurine (sul'fu-rin). A proprietary combination of certain of the higher sulphids of sodium and potassium with sulphur.

sulphurize (sul'fu-riz). To cause to combine with sulphur.

sulphurous acid (sul'fu-rus). See acid.

sulphuryl (sul'fu-ril). The radical SO₂.

sulphydral (sul-fi'dral). A proprietary antiseptic preparation.

sulphydrate (sul-fi'drāt). Any compound of a base with sulphydric acid or, more correctly, with the radical sulphydril, SH, or hydrogen sulphid.

sulphydryl (sulf-hi'dril). The univalent radical SH.

sultan 4 B. Same as benzopur purin 4 B.

sultar (sul'tar). A proprietary disinfectant.

Sum., **sum**. An abbreviation for L. su'mat, let him take; or sumen'dum, to be taken.

sumac, **sumach** (su'mak). A name of various species of *Rhus* (q. v), applied principally to the non-poisonous species. astringent.

sumbul (sum'bul) [Arabic]. The rhizome and root of *Fer'ula sum'bul*, an umbelliferous plant of Asia, of a musk-like odor, which is used in neurasthenia, delirium, and hysteria. Dose of fluidextract, 10-60 min. (0 666-4 c.c.); of tincture, 1-4 fl dr. (4-16 c.c.); of extract, 4 gr (0 25 gm).

summation (sum-a'shun) [L. sum'ma total]. The accumulative effects of a number of stimuli applied to a muscle.

summer cholera, complaint, diarrhea. See cholera morbus. s.-rash, lichen tropicus. s. wounds. See esponja and habronemiasss.

sunburn (sun'bern). Dermatitis with burning and redness, due to exposure to the rays of the sun.

sundew. See Drosera.

sunstroke (sun'strōk). Insolation, or thermic fever; a condition produced by exposure to the sun, and marked by convulsions, coma, and a high temperature of the skin.

super- [L. su'per above]. A prefix signifying above, or implying excess.

superabduction (su"per-ab-duk'shun). Extreme or excessive abduction.

superacid (su-per-as'id). Excessively acid.

superacidity (su"per-as-id'it-e). Increase of the normal acidity of the gastric secretion.

superacromial (su"per-ak-ro'me-al). Above or upon the acromion.

superactivity (su-per-ak-tiv'it-e). Activity greater than normal.

superacute (su"per-ak-ūt'). Very acute.

superalbal (su-per-al'bal) [L. su'per over + al'ba white]. Situated in the upper part of the white substance of the brain, as, superalbal veins.

superalbuminosis (su"per-al-bu-min-o'sis). Excessive formation of albumin.

superalimentation (su"per-al-im-en-ta'shun). Therapeutic treatment by excessive feeding beyond the requirements of the appetite. It is employed in wasting diseases. Called also gavage.

superalkalinity (su-per-al-kal-in'it-e). Excessive alkalinity.

supercallosal (su"per-kal-o'sal). Situated above the corpus callosum.

supercarbonate (su-per-kar'bo-nāt). See bicarbonate.

supercentral (su-per-sen'tral).1. Above a center.2. Above the central sulcus of the brain.

supercerebellar (su-per-ser-e-bel'ar). In the upper part of the cerebellum.

supercerebral (su-per-ser'e-bral). At the upper part of the cerebrum.

superciliary (su-per-sil'e-a-re) [L. supercilia'ris]. Pertaining to the region of the eyebrow.

supercilium (su-per-sil'e-um), pl. supercil'ia [L.]. The eyebrow.

superdicrotic (su-per-di-krot'ik). Hyperdicrotic.
superdistention (su"per-dis-ten'shun). Extreme or excessive distention.

superduct (su-per-dukt') [L. su'per over + du'cere to draw]. To carry up or elevate.

superdural (su-per-du'ral). Located in the upper part of the dura mater.

superexcitation (su"per-eks-i-ta'shun) [L. su'per over + excita'tio excitement]. Extreme or excessive excitement.

superextended (su-per-eks-ten'ded). Distended beyond the normal.

superextension (su"per-eks-ten'shun). Excessive or undue extension.

superfatted (su-per-fat'ed). Containing more fat than can be combined with the quantity of alkali present.

superfecundation (su'per-fe-kun-da'shun) [L. su'per over + fecunda're to fertilize]. The successive fecundation of two ova formed at the same menstrual period.

superfetation (su"per-fe-ta'shun) [L. su'per over + fetus]. The fertilization in the same uterus of two ova formed at different menstrual periods; the fecundation of a woman already pregnant.

superfibrination (su"per-fib-rin-a'shun). The formation of an excessive amount of fibrin in the blood.

superficial (su-per-fish'al) [L. superficia'lis]. Pertaining to or situated near the surface.

Superficialis (su"per-fish-e-a'lis) [L. superficial]. Situated on or near the surface. **s. col'li**, a nerve arising from the cervical plexus and supplying the surface of the neck on the side and in front. See nerves, table of. **s. vo'læ**, one of the branches of the radial artery.

superficies (su-per-fish'e-ēz) [L.]. The outer surface.

superfissure (su-per-fish'er). A fissure formed by the overlapping of two cerebral convolutions.

superflexion (su-per-flek'shun). Extreme or excessive flexion.

superfectation (su"per-fe-ta'shun). See super-fetation.

superfrontal (su-per-frun'tal). Situated at the upper or frontal part of a structure.

superfunction (su-per-funk'shun). Excessive activity of an organ or structure.

supergenual (su-per-jen'u-al). Above the knee.

supergyre (su'per-jir). A cerebral convolution which overlaps another.

superimpregnation (su"per-im-preg-na'shun) [L su'per over + impregnation]. 1. Superfecundation. 2. Superfetation.

superinduce (su-per-in-dūs'). To induce or bring on in addition to some already existing condition.

- superinfection (su-per-in-fek'shun). Reinfection by a new inoculation of the same organism with which the individual is already infected.
- superinvolution (su''per-in-vo-lu'shun) [L. su' per over + involution]. Hyperinvolution: excessive involution by which the uterus, after childbirth, is reduced to less than its normal size.
- **superior** (su-pe're-or) [L. neut. supe'rius]. Higher; having a higher situation.
- superlactation (su"per-lak-ta'shun) [L. su'per + lacta're to suckle]. Excessive secretion of milk.
- superlethal (su-per-le'thal). More than lethal; said of a dose of a drug that is likely to kill.
- superligamen (su"per-lig-a'men) [L. su'per over + liga'men bandage]. A bandage applied over a surgical dressing to keep it in place.
- supermaxilla (su-per-mak-sil'ah). The superior maxilla.
- **supermedial** (su-per-me'de-al). Situated above the middle.
- **supermoron** (su-per-mo'ron). A person who is above the grade of a moron, being only slightly deficient mentally.
- supermotility (su"per-mo-til'it-e) [L. su'per over + motility]. Excessive motility in any part or of any organ or structure.
- supernormal (su-per-nor'mal). More than normal. supernumerary (su-per-nu'mer-a-re) [L. supernumera'rius]. In excess of the regular or normal number.
- **supernutrition** (su"per-nu-trish'un). Excessive nutrition.
- **superoccipital** (su-per-ok-sip'it-al). At the upper part of the occiput.
- **superofrontal** (su"per-o-frun'tal). Same as superfrontal.
- superolateral (su"per-o-lat'er-al). Above and at the side.
- **superpalite** (su-per'pal-It). See trichloromethyl chloroformate.
- superparasite (su-per-par'as-it). Hyperparasite.
 superpetrosal (su"per-pe-tro'sal). Superior pe-trosal.
- **superphosphate** (su-per-fos'fāt). Any acid phosphate.
- **superpigmentation** (su"per-pig-men-ta'shun). Excessive pigmentation.
- supersalt (su'per-sawlt). Any salt with an excess of acid; a persalt or acid salt.
- **supersaturate** (su-per-sat'u-rāt) [L. su'per over + saturate]. To add more of an ingredient than the solvent can take up permanently.
- supersaturated solution (su-per-sat'u-ra-ted). See solution.
- superscription (su-per-skrip'shun) [L. superscrip'-tio]. The sign R before a prescription. See prescription.
- **supersecretion** (su"per-se-kre'shun) [L. su'per over + secre'tio secretion]. Excess of any secretory function.
- supersedent (su-per-se'dent). A remedy which cures or prevents a disease in a part.
- supersensitation, supersensitization (su"-per-sen-sit-a'shun, su"per-sen-sit-iz-a'shun). Hypersensitization.
- superseptal fissure (su-per-sep'tal). See fissure.
 supersphenoid (su-per-sfē'noid). Above the sphenoid bone.
- supersulcus (su-per-sul'kus). Superfissure.
- **supertemporal convolution** (su-per-tem'po-ral). The inframarginal convolution.
- supertension (su-per-ten'shun). Extreme tension.
 supervenosity (su-per-ve-nos'it-e). A condition of extreme venosity of the blood.
- supervention (su-per-ven'shun). The develop-

- ment of some condition in addition to an already existing one.
- supervirulent (su-per-vir'u-lent). Unusually virulent.
- supinate (su'pin-āt). To turn the arm or hand so that the palm faces to the front; also to rotate the leg outward.
- supination (su-pin-a'shun) [L. supina'tio].
 t. The turning of the palm of the hand upward.
 The casting up of food that has been eaten.
- supinator (su-pin-a'tor) [L.]. See muscles, table of.
- supine (su-pīn') [L. supi'nus]. Lying on the back or on the dorsum or with the dorsum turned downward.
- suplago-albumin, suplagalbumin (su-pla"go-al-bu'min, su-pla"gal-bu'min) [L. sus hog + pla'ga plague + albumin]. An albumose characteristic of swine-plague.
- **suplagotoxin** (su-pla-go-toks'in) [L. sus swine + pla'ga plague + toxin]. One of the ptomains of swine-plague.
- suppedania (sup-e-da'ne-ah) [L. sub under + pes foot]. Local applications to the soles of the feet.
- **supplemental** (sup-le-men'tal). Supplementary; serving as a supplement or addition. See air.
- supplementary air (sup-le-men'ta-re) [L. supple-manta'rius]. That part of the residual air of the lung which, after the tidal air is expelled, may be driven out by forced respiration. s. respiration, puerile respiration. See respiration.
- **support**, **Abée's**. An appliance for producing compression over the breast region to quiet an overacting heart.
- suppository (sup-oz'it-o-re), pl. suppos'itoria [L. supposito'rium]. An easily fusible medicated mass to be introduced into the vagina, rectum, or urethra. Suppositories are usually prepared from oil of theobroma, except those intended for the urethra, which are made with glycerin. glyc-erin s., glycerin solidified with 6 to 7 per cent. of sodium stearate.
- **suppression** (sup-resh'un) [L. suppres'sio]. The sudden stoppage of a secretion, excretion, or normal discharge.
- **suppurant** (sup'u-rant) [L. sup'purans]. 1. Suppurating. 2. An agent that causes suppuration.
- **suppurantia** (sup-u-ran'she-ah). Substances that cause suppuration.
- suppuration (sup-u-ra'shun) [L. sub under + bu'ris pus]. The formation of pus; the act of becoming converted into and discharging pus.
- **suppurative** (sup'u-ra-tiv). Producing pus, or associated with suppuration.
- supra- [L. su'pra above]. A prefix signifying above or over.
- supra-acromial (su"prah-ak-ro'me-al). Situated above or over the acromion.
- supra-acromiohumeralis (su"prah-ak-ro"meo-hu-mer-a'lis). The deltoid muscle.
- supra-anal (su-prah-a'nal). Situated above the anus.
- **supra-auricular** (su"prah-aw-rik'u-lar). Situated above or over an auricle.
- supra-axillary (su-prah-ak'sil-a-re) [L. su'pra above + axil'la armpit or axil]. Situated above the axilla.
- suprabuccal (su-prah-buk'al). Above the buccal region.
- supracapsulin (su-prah-kap'su-lin). A trade name for epinephrin.
- supracellar (su-prah-sel'ar). Situated over or above the sella turcica.
- supracerebellar (su''prah-ser-e-bel'ar). On the upper surface of the cerebellum.
- supracerebral (su-prah-ser'e-bral). Over or on the surface of the cerebrum.

- suprachoroid (su-prah-ko'roid). Situated above or upon the choroid.
- suprachoroidea (su''prah-ko-roid'e-ah). The outermost layer of the choroid coat; the loose tissue between the sclerotic and the choroid coat of the eye Called also ectochoroidea and suprachoroid lamina.
- supraciliary (su-prah-sil'e-a-re). Superciliary.
- supraclavicular (su"prah-klav-ik'u-lar). Situated above the clavicle.
- supraclavicularis (su"prah-klav-ik-u-la'ris) [L.]. An occasional muscle arising from the upper edge of the manubrium and running outward over the sternoclavicular joint, to be inserted into the clavicle.
- supraclusion (su-pra-klu'zhun). The condition in which a tooth projects above the normal occlusal plane.
- **supracommissure** (su-prah-kom'is-ūr) [L. su'pra above + commissure]. A cerebral commissure situated in front of the stalk of the pineal body.
- supracondylar, supracondyloid (su-prah-kon'dil-ar, su-prah-kon'dil-oid). Situated above a condyle or condyles.
- supracostal (su-prah-kos'tal). Situated above a costa, or rib, or outside of the ribs.
- **supracotyloid** (su-prah-kot'il-oid) [L. su'pra above + cotyloid]. Situated above the acetabulum.
- **supracranial** (su-prah-kra'ne-al). On the upper surface of the cranium.
- supradiaphragmatic (su"prah-di-af-rag-mat'ik). Above the diaphragm.
- supradin (su-prah'din). A patented dry preparation of the suprarenal capsules, containing 0.015 per cent. of iodin. It is used in diabetes insipidus, neurasthenia, melasma, and vasomotor disturbances.
- supradural (su-prah-du'ral). Above the dura mater.
- supra-epicondylar (su"prah-ep-ik-on'dil-ar). Situated or occurring above the epicondyle.
- supra-epitrochlear (su-prah-ep-e-trok'le-ar). Above the internal epicondyle of the humerus.
- supraglenoid (su-prah-gle'noid). Situated above the glenoid cavity.
- supraglottic (su-prah-glot'ik). Situated above the glottis
- **suprahepatic** (su"prah-he-pat'ik). Situated above the liver.
- **suprahyoid** (su-prah-hi'oid). Situated above the hyoid bone.
- **supra-inguinal** (su-prah-in'gwin-al). Situated above the groin.
- **supra-intestinal** (su-prah-in-tes'tin-al). Situated above the intestine.
- **supraliminal** (su-prah-lim'in-al). Above the limen of sensation; more than just perceptible.
- supralumbar (su-prah-lum'bar). Situated above the loin.
- **supramalleolar** (su"prah-mal-e'o-lar). Situated above a malleolus.
- **supramammary** (su-prah-mam'a-re). Situated above the mammary gland.
- supramandibular (su-prah-man-dib'u-lar). Located above the mandible.
- supramarginal (su-prah-mar'jin-al). Situated above a margin.
- supramastoid (su-prah-mas'toid). Situated above the mastoid portion of the temporal bone.
- supramaxilla (su"prah-maks-il'ah) [L. su'pra over + max'illa jaw]. The upper jaw bone.
- supramaxillary (su-prah-maks'il-a-re). r. Pertaining to the upper jaw. 2. Situated above the maxilla
- supramaximal (su-prah-mak'sim-al). Above the maximum temperature.

- supramental (su-prah-men'tal) [L. su'pra above + men'tum chin]. Situated above the chin.
- supranasal (su-prah-na'sal). Above the nose.
- supraneural (su-prah-nu'ral) [L. su'pra above + Gr. νεῦρον nerve]. Above a nerve, or above a neural axis.
- supranuclear (su-prah-nu'kle-ar). Situated or occurring above or on the cortical side or surface of a nucleus.
- **supra-obliquus** (su"prah-ob-li'kwus) The obliquus superior muscle of the eye.
- **supra-occipital** (su"prah-ok-sip'it-al). Situated above or in the upper portion of the occiput.
- **supra-occlusion** (su"prah-ok-lu'zhun). Same as *supraclusion*.
- supra-ocular (su-prah-ok'u-lar). Above the eye-ball.
- supra-optimal (su-prah-op'tim-al). Above the optimal.
- **supra-optimum** (su-prah-op'tim-um). A temperature higher than that best suited to the growth of an organism.
- **supra-orbital** (su-prah-or'bit-al) [L. su'pra above + or'bita orbit]. Situated above the orbit.
- **suprapatellar** (su"prah-pat-el'ar). Situated above the patella.
- **suprapelvic** (su-prah-pel'vik). Situated above the pelvis.
- **suprapineal** (su-prah-pi'ne-al). Situated above the pineal gland.
- **suprapontine** (su-prah-pon'tīn). Situated above or in the upper part of the pons.
- **suprapubic** (su-prah-pu'bik). Situated or performed above the pubic arch.
- suprarenaden (su-prah-ren'ad-en) [suprarenal + Gr. ἀδήν gland]. A therapeutic agent prepared from the suprarenal glands of animals used in neurasthenia, diabetes insipidus, and Addison's disease. Dose, 15-23 gr. (1-1.5 gm.).
- suprarenal (su-prah-re'nal) [L. su'pra above + ren kidney] Situated above a kidney. See suprarenal gland, under gland.
- **suprarenalectomy** (su-pra-re-nal-ck'to-me) [su-prarenal + Gr. ἐκτομή excision]. Excision of the suprarenal gland.
- suprarenalemia, suprarenalæmia (su-prahre-nal-e'me-ah) [suprarenal secretion + Gr alμa blood]. Increase of suprarenal secretion (adrenalin) in the blood.
- **suprarenalin** (su-prah-ren'al-in). The active principle of the suprarenal glands: used as a hemostatic. See adrenalin and epinephrin.
- suprarenalopathy (su''prah-re-nal-op'ath-e) [suprarenal gland + Gr. πάθος disease]. A disorder due to derangement of the suprarenal endocrine function.
- suprarene (su-prah-rēn') [L. su' pra above + ren kidney]. A suprarenal gland.
- **suprarenin** (su-prah-re'nin). Same as *epinephrin*. **levo s.**, a synthetic product similar to the natural epinephrin.
- **suprarenoma** (su-prah-re-no'mah). A tumor derived from the suprarenal tissue.
- suprascapular (su-prah-skap'u-lar). Situated upon or on the upper part of the scapula.
- suprascleral (su-prah-skle'ral). On the outer surface of the sclera.
- supraseptal (su-prah-sep'tal). Situated above a septum.
- **supraspinal** (su-prah-spi'nal). Situated upon or above a spine.
- supraspinalis (su"prah-spi-na'lis). See muscles, table of.
- supraspinatus (su"prah-spi-na'tus). See muscles, table of.

supraspinous (su-prah-spi'nus). Situated above a spinous process.

suprastapedial (su"prah-sta-pe'de-al). Above the stapes.

suprasternal (su-prah-ster'nal). Situated above the sternum.

suprasylvian (su-prah-sil've-an). Situated above the sylvian fissure.

supratemporal (su-prah-tem'po-ral). Situated above the temporal bone, fossa, or region.

suprathoracic (su"prah-tho-ras'ik). Situated above or cephalad of the thorax.

supratonsillar (su-prah-ton'sil-ar). Above the tonsil.

supratrochlear (su-prah-trok'le-ar) [L. su'pra above + troch'lea pulley]. Situated above the trochlea.

supraturbinal (su-prah-ter'bin-al). The superior turbinal bone.

supratympanic (su"prah-tim-pan'ik). Above the tympanum.

supra-umbilical (su"prah-um-bil'ik-al). Above the umbilicus

supravaginal (su-prah-vaj'in-al). Situated above or outside of a sheath.

supraversion (su-pra-ver'zhun). The condition of a tooth when it is too long as related to the plane of occlusion.

supraxiphoid (su-prah-zi'foid). Above the xiphoid process.

supsals (sūp'salz). Suppositories of "606."

sura (su'rah) Latin for calf of the leg.

sural (su'ral). Pertaining to the calf of the leg.

suralimentation (sur"al-im-en-ta'shun) [L. su'per over + alimen'tum food]. Overfeeding, or gavage; superalimentation.

surcingle (sur'sing-l) [L. su'per over + cin'gu-lum belt]. The cauda striati, or tail of the striatum.

surdimutism (ser-dim-u'tizm). Deaf-mutism.

surdity (sur'dit-e) [L. sur'ditas]. Deafness.

surdomute (sur'do-mūt) [L. sur'dus deaf + mu'tus mute]. 1. Both deaf and dumb. 2. A deaf-mute person.

surdomutitas (sur-do-mu'tit-as). Latin for deafmutism.

surexcitation (ser'ek-sīt-a'shun) [L. su'per over + excitation]. Overexcitation; excessive excitation.

surface (ser'fās) [L. fa'cres] The outer part of a solid body. buccal s., the surface of a molar or premolar tooth which adjoins the cheek. contact s., the surface of a tooth which lies in contact with the next tooth in the same row. distal s., the contact surface of a tooth which joins the succeeding tooth in the row facial s., the buccal or labial surface of a tooth. glenoid s., oral surface on the head of the scapula which, with the glenoid ligament, forms the glenoid cavity. labial s., the surface of an incisor or canine tooth which adjoins the lip. lingual s., the inner surface of a tooth, the surface which looks toward the tongue. masticatory s., occlusal surface. occlusal s., the surface of a bicuspid or a molar tooth which comes in contact with the similar tooth in the other jaw. proximal s., the contact surface of a tooth which joins the preceding tooth of the row.

surfeit (sur'fit). Urticaria in horses.

surgeon (sur'jun) [L. chirur'gio; Fr. chirurgien]. A practitioner of surgery. s.-apothecary, in Great Britain, a practitioner who has passed the examinations required of a surgeon and an apothecary. barber-s., formerly a barber who was authorized to practise surgery. s.-dentist, an authorized practitioner of dental surgery. s.-general, the chief surgeon of an army or navy. house-s., the chief surgical intern of a hospital. post-s., the surgeon of an established army post.

surgery (sur jer-e) [L. chirur gia, from Gr. χείρ hand + ἐργόν work]. 1. That branch of medicine which treats diseases, wholly or in part, by manual and operative procedures. 2. A place for the performance of surgical operations. abdominal s., the surgery of the abdominal viscera. antiseptic s., surgery conducted in accordance with antiseptic principles arthrosteopedic s., surgery of the extremities and skeleton. aseptic s., surgical practice which accords with the principles of asepticism. aural s., the surgical treatment of diseases of the ear. cerebral s., that which deals with operations upon the brain. clinical s., surgery as practised in the teaching clinic. conservative s., surgery which looks to the preservation or the restoration of disabled parts, rather than their removal contract s., in the U. S army a physician or dentist engaged for temporary service in the medical department; called also acting assistant surgeon. cosmetic s., that department of surgery which deals with procedures designed to improve the patient's appearance by plastic restorations, removal of blemishes, etc. **decorative s.** Same as cosmetic s **dental s.**, operative dentistry. **dentofacial s.**, surgery which deals with the teeth and mouth and their relation to facial symmetry. **featural s.**, plastic surgery of the face. **general s.**, that which deals with surgical cases of all kinds **ionic s.**, surgical ionization and electrolysis. majors., surgery which is concerned with the more important and dangerous operations. minor s., that which is concerned with the less formidable operations, such as bandaging and the application of splints and dressings. operative s., the operative or more mechanical part of surgery, that which deals with methods or with operative procedures. oral s., that branch of surgery and dentistry which deals with diseases and injuries of the mouth, teeth, and adjacent tissues. orificial s., the surgery of the orifices of the body, as the mouth, anus, vulva, etc. orthopedic s., that branch of surgery which deals with the correction of deformities; orthopedics. pel-vic s., the surgery of the pelvis; chiefly in gynecologic and obstetric cases. plastic s., the repair of defects, chiefly by the transfer of tissue railway s., the surgical treatment of railway injuries rectal s., the surgical treatment of diseases of the rectum. subcutaneous s., the performance of surgical operations through a very veterinary s., the small opening in the skin. surgery of domestic animals.

surgical (sur'jik-al). Of, or pertaining to, surgery.
surgiology (ser-je-ol'o-je). A term proposed to include research in physiology as connected with surgery, and experimental surgery, etc.

surinamin (su-rin'am-in) A methyl tyrosin, paraoxyphenyl-alphamethylamino-propionic acid, OH.CoH₂.CH(COOH).NH.CH₃, found in many plants.

surpalite (ser'pal-īt). Diphosgen.

surra (sur'ah). A disease of horses, camels, and other domestic animals in India, China, Africa, and the Philippine Islands, said to be caused by an animal microparasite, the Trypanoso'ma evan'si. It is marked by fever, petechia of mucous surfaces, edema, progressive anemia, and emaciation, ending in death. It is transmitted by the bite of gadflies or horseflies (Tabanidæ) and probably also by fleas.

surrenal (sur-e'nal). 1. Suprarenal. 2. A suprarenal body; an adrenal.

surrogate (sur'o-gāt) [L. surroga'tus substituted]. A substance used as a substitute for another.

Sursanure (sur-sān'ūr) [L. sur- over + sa'nus healthy]. An old name for a sore healed outwardly, but not inwardly.

sursumduction (sur-sum-duk'shun) [L. sur'sum up + du'cere to lead]. 1. The act of elevation of the visual axis of one eye above the other;

also the degree to which such elevation can be The ability to elevate the axis of one or of either eye above that of the other.

sursumvergence (sur-sum-ver'jens) [L. sur'sum upward + ver'gere to turn]. An associated upward disjunctive movement of the eyes.

sursumversion (sur-sum-ver'shun) [L. sur'sum upward + ver'tere to turn]. An act of turning or directing upward; used chiefly of a simultaneous and equal upward turning of both eyes.

suruçucu (soo-roo-ko'koo). The Lach'esis mu'tus, a venomous snake of South America. See lachesis. susceptibility (sus-sep-tib-il'it-e). The antonym of immunity. It may be acquired, familial, individual, inherited, racial, specific, etc., the same

suscitation (sus-sit-a'shun) [L. suscita'tio]. arousal or excitation.

as is immunity.

susotoxin (su-so-toks'in) [L. sus hog + toxin]. A ptomain or toxin, $C_{10}H_{26}N_2$, from cultures of the hog-cholera bacillus. It causes convulsions and death when injected into animals.

suspension (sus-pen'shun) [L. suspen'sio]. 1. A condition of temporary cessation, as of animation, of pain, or of any vital process. 2. Treatment, chiefly of spinal disorders, by suspending the patient by the chin and the shoulders. alic s., suspension of a patient by the head in order to make extension of the vertebral column. colloid s., a suspension in which the suspended particles are very small. s. of the uterus, the operation of suturing the uterus to the abdominal wall.

suspensoid (sus-pen'soid). See suspension colloid, under colloid.

suspensory (sus-pen'sor-e) [L. suspenso'rius]. I. Serving to hold up a part. 2. A ligament, bone, muscle, sling, or bandage which serves to hold up a part.

sustentacular (sus-ten-tak'u-lar) [L. sustenta're to support]. Sustaining or supporting. See cell.

sustentaculum (sus-ten-tak'u-lum), pl sustentac'-ula [L.]. A support. s. li'enis, the suspensory ligament of the spleen. s. ta'li, a process of the calcaneum which supports the astragalus.

sustoxin (sus-toks'in). Same as susotoxin.

susurrus (su-sur'us). Latin for murmur.

sutho (su'tho). A kind of leprosy occurring in Corea.

sutika (su'tik-ah). A disease of pregnant women of Bengal, marked by digestive troubles and fever during pregnancy, and after delivery by progressive pernicious anemia.

sutura (su-tu'rah). Latin for suture. s. denta'ta, the interlocking of bones by a saw-like process. s. harmo'nia, the simple apposition of bones. s. limbo'sa, an interlocking of bones by beveled surfaces. **s. mendo'sa**, a suture between the upper part of the occipital bone and the rest of that bone. s. no'tha, an apparent, but not true, suture of bones. s. ser'rata [B N A], Same as s. denta'ta. s. squamo'sa [B N A], the overlapping of the edges of bones. s. ve'ra, a true bony suture; one whose opposed edges inter-

Of or pertaining to a suture; sutural (su'tu-ral). as, sutural ligament.

suturation (su-tu-ra'shun). The act or process of suturing, sewing, or stitching.

suture (su'fūr) [L sutu'ra]. 1. A surgical stitch or seam. 2. The line of junction of adjacent cranial or facial bones. absorbable s., a suture which becomes dissolved in the body fluids and disappears, such as catgut and tendon. Albert's 8., a form of Czerny suture in which the first row of stitches is passed through the entire thickness of the intestine. antiseptic s., a suture made with material that has been rendered antiseptic. Appolito's s., a continued Gely's suture. antiseptic s., a suture made apposition s., a suture that includes only the skin: used for the exact approximation of the cutaneous edges of a wound. approximation s., a deep suture for securing apposition of the deep tissues of a wound. base-ball s., a form of continuous suture carried all around a wound. basilar s., one separating the basilar process of the occipital bone from the body of the sphenoid. bastard s. See sutura notha. Béclard's s., a through-and-through suture in which the needle is threaded with a white and a colored thread. When the suture is withdrawn, the white thread is pulled from one end and the colored one from the other. **Bell's s.**, a form of glovers' suture in which the needle is passed from within outward alternately on the two edges of the wound. Bertrandi's s., a continuous suture passing back and forth or to and fro Billroth's s., buttonhole suture. biparietal s. sagittal suture. bolster s., a suture the ends of which are passed over pads of gauze or rubber tubing in order to lessen the tension on the skin. **Bouisson's s.**, an intestinal suture made by passing pins in and out on each side of the wound and drawing it together by threads passed around the pins. Bozeman's s., a form of button-suture. buried s., a series of stitches concealed by the skin. button-s., one passed through button-like disks to prevent the thread from cutting. catgut s., one made with catgut chain s., a continuous suture in which each loop of thread catches the adjacent loop. circular s., one which is applied to the entire circumference of an organ. clavate s., a quilled suture. coaptation s. Same as apposition s. cobblers' s., one made with a thread armed with two needles. compound s., a quilled suture Connell's s., a suture for circular enterorrhaphy, in which onehalf of the lumen of the intestine is sutured by stitching through all the coats, and the other half is then closed by continuous suture. continuous s. See glovers' s. coronal s., that formed by the union of the frontal bones with the two parietal bones. **Cushing's s.**, a form of continuous Lembert suture. **Czerny's s.** 1. An intestinal suture in which the thread is passed through the mucous membrane alone. 2. A method of uniting a ruptured tendon by splitting one of the ends and suturing the other in the slit. Czerny-Lembert s., a combination of Czerny's and Lembert's sutures in circular enterorrhaphy. dentate s., one in which the opposed edges of the bones are toothed or jagged. dry s., one in which the stitches are made through two strips of adhesive plaster applied along either edge of a wound. **Dupuytren's s.**, a continuous Lembert suture. **Duvergier's s.**, the suturation of an intestine over a section of a calf's trachea. Emmert's s., a series of double Lembert sutures used in closing intestinal wounds. ethmoidofrontal s., the suture between the ethmoid and frontal bones. ethmoidolacrimal s., the junction of the ethmoid and lacrimal bones. moidomaxillary s., the line of union between the orbital surface of the body of the maxilla and the os planum of the ethmoid bone. moidosphenoid s., the suture between the eth-moid and sphenoid bones. false s., any suture in which there is no real interlocking of the bones, as in a harmonic or a squamous suture of-eight s., harelip suture. frontal s., a suture in children between the lateral halves of the frontal bone. It sometimes persists throughfronto-ethmoidal s., out life, ethmoidofrontal s frontolacrimal s., the line of junction between the upper edge of the lacrimal and the orbital plate of the frontal bones. frontomalar s., the suture between the frontal and malar bones. frontomaxillary s., the su-ture between the frontal bone and superior maxilla. frontonasal s., the suture between the frontal bone and the alæ of the sphenoid bone. frontoparietals., the coronoid suture. fronto-

Gussenbauer's suture. Les

Lembert's suture a, serous, b, muscular; c, mucous coat

Czerny-Lembert suture.

sphenoid s., extends between the frontal and sphenoid bones. **frontotemporal s.**, the suture between the frontal and temporal bones. Gély's s., a continuous suture for intestinal wounds, made by a thread with a needle at each end, and consisting of a series of cross-stitches closing the wound. **glovers' s.** r. A suture made by passing the needle through each lip of the wound from within outward. 2. A continuous suture in which each stitch is looped through the stitch is through the one preceding it. Gould's s., an intestinal suture of the mattress type. Gussenbauer's s., a figure-of-8 suture for a rent of the intestine. Halsted's s., a plain quilt-suture for suturing a wound in the intestine. harelip s., a suture in which the edges of the wound are approximated by a large pin thrust through them, the position of the edges being maintained by a thread twisted in a figure-of-8 position about the ends of the pin. Called also pin-s. and twisted s. Harris's s., a suture for uniting circular wounds of the intestine. The mucous membrane of the distal portion is denuded; the proximal end is then passed over the denuded distal end and sutured. implanted s., a suture made by passing pins into the flesh parallel to the wound. The pins are drawn together with threads, thus closing the lips of the wound. incisive s. Same as premaxulary s. india-rubber s., a harelip or twisted suture in which rubber rings are used instead of threads. infolding s., a running suture inserted at parallel intervals and then drawn up so as to infold and approximate broad areas. infra-orbital s., an occasional suture from the infra-orbital foramen to the infra-orbitral groove. intermaxillary s., the line of junction of the two halves of the superior maxillary bone below the anterior nasal spine. internasal s., one between the two nasal bones interparietal s., the sagittal suture. interrupted s., a series of stitches placed separately at short distances from each other to keep together the edges of a wound. intradermic s., a suture applied parallel with the edges of the wound, but below the surface of the skin, the needle being entered at opposite points of the deep portions of the skin. **Jobert's**., an interrupted suture of various kinds for a divided intestine, the upper end being invaginated into the lower. jugal s., sagittal suture. knotted s., an interrupted suture the stitches of which are tied with knots. lace s., a set of fine stitches closing a wound or fistula. lacrimoconchal s., the line of junction of the lacrimal with the inferior turbinated bone. lacrimomaxillary s., a suture on the inner wall of the orbit between the lacrimal bone and the maxilla. lambdoid s., a cranial suture between the occipital and parietal bones. lead-plate s., one the ends of which are fastened to plates of lead. Le Dentu's s., for a divided tendon: Two stitches are passed on either side, right and left, and are tied in front; a third is taken from right to left above and below the cut, and is tied on one side. Ledran's s. an intestinal suture in which single-threaded stitches about one inch apart are tied on each side of the wound separately, and the two bundles are then tied together. **Lefort's s.**, for a divided tendon: A single loop is passed above the cut, entering at one side, coming out and going in in front; it is then passed below the cut at each side, coming out in front, and is there tied. Lembert's s. 1. A form of seam for wounds of the intestine. A thread is taken through the peritoneal and mus-cular coats, crossing the wound in such a way that the lips of the wound are turned in and the two peritoneal surfaces come in contact. 2. A form of suture for lacerated perineum. Littrè's s., a form used in operations for intestinal gangrene: The lower end of the bowel is ligated, and the upper end is joined to the inguinal ring to form an artificial anus. Löffler's s., a suture mainly for intestinal wounds, in which interrupted wire loops are crossed and attached to the wound. loops are crossed and attached to the wound.

longitudinal s., sagittal suture. loop-s, an interrupted suture. mattress-s., a continuous suture applied back and forth through both edges of a wound. metopic s. Same as frontal s. nasofrontal s., a suture between the frontal and the two nasal bones. nasomaxillary s., a suture between the lateral edge of the nasal bone and the frontal process of the maxilla. nerve 8., one for uniting the ends of a divided nerve, catgut or fine silk being commonly used absorbable s., a suture which does not become absorbed, such as silk or silver wire noose s., an interrupted suture. occipitomastoid s., noose an extension of the lambdoid suture between the posterior edge of the mastoid portion of the temporal bone and the occipital. palatine s., the suture between the palate bone and the palatine processes. palato-ethmoidal s., the suture between the orbital process of the palate bone and the os planum of the ethmoid palatomaxillary s., the suture in the floor of the orbit between the orbital processes of the palate bone and the orbital position of the maxilla. Palfyn's s., loops of thread are passed through a wound of the intestine, and the ends are secured to the skin. Pancoast's s., a form of tongue-and-groove suture. See plastic s. Paré's s., the use of strips of cloth pasted along the edges of a wound, which are stitched together so as to approximate the wound margins. parietal s., sagittal suture. parieto-mastoid s., the junction of the posterior inferior angle of the parietal with the mastoid process of the temporal bone **Petit's s.**, a suture for wounds of the intestine, in which stitches are placed three lines apart, the ends on each side tied together, and then twisted into two bundles. **petro-occipital s.**, the suture between the petrous portion of the temporal bone and the occipital bone pin-s., a harelip suture. plastic s., a suture in which a tongue is cut in one lip of the wound and a groove in the other, the tongue and groove are stitched together, and the ends of the thread tied over a roll of adhesive plaster. plate s., a suture passed through a lead plate.

premaxillary s., an occasional suture between
the maxillary and premaxillary bones when the
latter is present. presection s., one applied
before cutting primary s., one which effects
an immediate closure of the wound. primary
delayed s., a wound suture applied at the end of a day or two after the infliction of the wound. primo-secondary s., one which in the wound is first sutured loosely, then tamponed for several hours, and then drawn together by the stitches and tied. purse-string s., a suture passed in and out around the edge of a circular opening, so that when the two ends are drawn tight the opening is closed quilled s., one in which a double thread is employed and tied over quills or a soft catheter, in order that the sutures may be relaxed when the tension becomes too great. quilt-s., quilted s., a continuous mattress-suture in which each stitch is tied as soon as formed, and the next stitch is passed in the opposite direction. Ramdohr's s., the invagination of the up-per part of the divided intestine into the lower, followed by its suturation. rat-tail s., one per-formed with a fiber taken from the tail of a rat. relaxation s., relief s., any suture which closes a wound temporarily, but is so formed that it may be relaxed, in order to relieve the tension it may be relaxed, in order to relieve the tension when it becomes too great. Reybard's s., an interrupted suture for the intestine in which oval wooden plates are employed. rhabdoid s., the sagittal suture. Richter's s., a form for intestinal wounds in which interrupted metallic loops are used, their ends being brought out of the external wound. Rigal's s., a twisted or harelip suture in which rubber rings are used instead of threads. Ritisch's s., for a divided intestine: The stitch is taken through the bowel from side to side, the ends twisted and brought from side to side, the ends twisted and brought out through the external wound. Robinson's

s., for a divided intestine: A piece of rubber tube is inserted in the proximal part, the mucous mem-brane of the proximal end is removed for half an inch, the other end is then inserted, and a row of stitches is carried around the place of union. rubber s., a harelip suture in which a rubber band is used instead of a thread. Saba-tier's s., a method in which approximation of the intestinal wound is effected by means of a piece of cardboard saturated with turpentine oil. sagittal s., the cranial suture between the parietal bones. Sänger's s., the closure of the uterine wound in cesarean section by eight or ten deep silver wire sutures, and the use of twenty or more superficial stitches taken through the peritoneum. **secondary s.**, the suturation of a wound at a considerable period after an operation, especially when the wound has been primarily sutured and tamponed. **seroserous s.**, the suturation of two serous surfaces to each other. shotted s., one in which the two ends of the wire are passed through a perforated shot, which is then compressed. silkworm-gut s., one made with a fiber prepared from the entrails of the silkworm. Simon's s., a method of closing the lacerated perincum and ruptured sphincter ani, in which the rectal mucosa, the vaginal mucosa, and the skin are separately sutured Sims's s., a shotted or clamp suture. sphenofrontal s., a long, horizontal suture between the orbital plates of the frontal bone and the orbitosphenoids, and between the external angular processes of the frontal and the alisphenoids. sphenomaxillary s., an occasional suture between the pterygoid process of the sphenoid bone and the maxilla spheno-occipital s., the suture between the basisphenoid and the basi-occipital bones spheno-orbital s., the suture between the orbital process of the palate bone and the body of the sphenoid. sphenoparietal s., the cranial suture between the great wing of the sphenoid and the parietal bone. sphenotemporal s., the line of union between the sphenoid and temporal bones. sphenozygomatic s., a suture between the malar bone and the great wing of the sphenoid. spiral s., a glovers' suture. spiroid s., a modified form of glovers' suture for intestinal wounds. squamomastoid s., a suture existing in early life between the squamous and mastoid portions of the temporal bone squamosphenoid s., the line of union between the anterior border of the squamosa and the great wing of the sphenoid.

squamous s., the line of junction between the squamosa and the parietal bone. staple s., one in which the wound is closed by U-shaped wires passed through both its lips. subcuticular s., a continuous buried suture concealed by the epidermis. sunk s., a buried suture. superficial s., one which is made through the skin only, or which does not include any deep tissue. symperitoneal s., one which unites two parts of the peritoneum. Taylor's s., approximation of the flaps by cobblers' stitches after amputation of the cervix uteri. tension s. Same as relaxation s. tobacco-bag s., a suture taken in and out around a circular patch which is drawn together by the thread and tied tongue-and-groove s. See plastic s. transverse s., the suture between the frontal bone above and the nasal, malar, and superior maxillary bones below. triangular s. See Simon's s. true s., a cranial suture in which the bones are interlocked. twisted s. See harelip s. uninterrupted s. See continuous s. uteroparietal s., the stitching of the uterus to the inner surface of the abdominal cut: chiefly employed after a cesarean section. **viscero- parietal s.**, the suturing of a viscus to the abdominal wall. **Wölfler's s.** I. For a divided intestine: The mucosa is united by a continuous suture, tied for a part of the circumference on the inside, and for a part on the outside, of the gut, the serous surfaces being united by Lembert sutures.

2. For a divided tendon: The stitch enters the

tendon from one side above the cut, comes out twice in front, both above and below, and is tied on the side where the stitch first entered. **zygo-maticofrontal s.**, a suture between the zygo-matic process of the frontal and the frontal process of the malar bone. **zygomaticomaxillary s.**, a suture between the malar bone and the zygomatic process of the maxilla. **zygomaticotemporal s.**, a suture between the zygomatic process of the temporal and the temporal process of the malar bone.

Suzanne's gland (soo-zanz') [Jean Georges Suzanne, French physician, born 1859]. See gland.

S. v., s. v. Abbreviation for L. spir'itus vi'ni, alcoholic spirit.

svapnia (svap'ne-ah). A denarcotized preparation of opium. Dose, ½-2 gr (0.033-0.133 gm.).

S. v. r. Abbreviation for L. spir'itus vi'ni rectifica'tus, rectified spirit of wine.

8. v. t. Abbreviation for L. spu'itus vi'ni ten'uis, proof spirit.

swab (swab). I. A device for moistening the lips of a helpless patient. 2. A wire with a tuft of sterilized cotton at the end. used in collecting material for bacteriologic study. **West s.** See West tube method, under method.

swage (swāj). 1. To shape metal by using a swage or the. 2. A tool or form, often one of a pair, for shaping metal by pressure.

swager (swa'jer). An apparatus fitted with dies and counterdies for shaping crown, inlays, etc., in dental work

swallowing (swahl'o-ing). See deglutition.

swallow's nest (swahl'oz). The nidus hirundinis.

swamp-fever (swahmp). See under fever.

swamp-itch (swahmp). Prairie-itch. See ilch.

swamp-sumac. See Rhus venenata.

Swart'zia tomento'sa. A tropical American tree with a resinous and sudorific bark.

sway-back (swa'bak). Abnormal downward curvature of the spinal column in the dorsal region in horses.

exuded from or excreted by the sudoriparous glands. It possesses a characteristic odor and a salty taste; its reaction is normally alkaline, but when mixed with sebum, it is acid. It contains sodium chlorid, cholesterin, fats and fatty acids, and traces of albumin, urea, and other compounds. bloody s., hematidrosis. s.-canal, the duct of a sweat-gland. s.-center, a center within the medulla which excites the excretion of sweat. s.-fever, s.-sickness, miliaria; anglicus sudor. s.-fiber, a nerve-fiber which stimulates a sweat-gland. s.-gland, one of the glands that secrete the sweat, consisting of a tube so coiled as to form a round mass, located in the subcutaneous tissue and opening by a duct upon the surface of the skin. green s., a greenish sweating seen among workers in copper. night-s., sweating during sleep: a symptom of phthisis. phosphorescent s., phosphorescent perspiration, sometimes observed in miliaria and after the eating of phosphorescent fish.

sweating (swet'ing). The act of perspiring. colliquative s., a copious clammy perspiration. s.-sickness, miliary fever or anglicus sudor.

Swediaur's disease (swa-de-aw'erz) [Austrian physician, 1748–1824]. See under disease.

Swedish gymnastics, movement (swe'dish). See kinesitherapy.

sweeny (swe'ne). Atrophy of the muscles in the shoulder of a horse

sweetbread (swet'bred). The popular designation—(1) of the thymus of young animals (necksweetbread); (2) of the pancreas (stomach-sweetbread); and (3) of the testes of animals when used as food.

swelled head (sweld). See roup.

swelling (swel'ing). An elevation or elevated area. albuminous s. Same as cloudy s. blennorrhagic s., swelling of the knee in gonorrheal synovitis. Calabar s's, elevations about one-half the size of an egg, appearing on various portions of the body, and due to infection with Filaria loa. cloudy s. 1. A degenerative change in various tissues characterized by swelling, a cloudy appearance, and albuminous infiltration, and often ending in fatty degeneration. Called also albuminous degeneration. 2. A change which takes place in the protoplasm during the process of glassy s., amyloid degeneration.

s. Same as Calabar s. Soemmernutrition Kamerun s. ing's crystalline s., annular edema of the lower portion of the lens-capsule after the removal of a cataractous lens. tympanic s. See intumescentia tympanica. white s., the swelling produced by tuberculous arthritis.

Swieten's solution (sve'tenz). See von Swieten. Swift's disease [W. Swift, Australian physician]. See erythredema.

Swift-Ellis treatment [Homer F. Swift, born 1881, and Arthur W. M. Ellis, New York physicians]. See under treatment.

swine-diphtheria (swin-dip-the're-ah). Hog-

swine-erysipelas (swin"er-is-ip'el-as). A contagious disease of young swine, attended with fever and the formation of red blotches on the neck and body. Called also rouget du porc.

swine-fever (swin-fe'ver). Hog-cholera, or pig typhoid, an infectious disease of swine, produced by the Bacil'lus suipes'tifer. It is marked by fever, loss of appetite, and unwillingness to move.

swine-pest (swin'pest). Hog-cholera.

swine-plague (swin'plag). An epidemic and contagious disease of swine, affecting the respiratory and alimentary tract, and produced by the bacillus of swine-plague.

swing (swing). A kind of suspensory cradle or sling for a broken leg.

swinny (swin'e). Sweeny.

swoon (swûn). See syncope.

sycephalus (si-sef'al-us). Same as syncephalus.

sycoma (si-ko'mah) [Gr. σύκωμα, from σῦκον fig]. A wart or condyloma.

sycose (si'kōs). Same as saccharin.

sycosiform (si-ko'sif-orm). Like or resembling sycosis.

sycosis (si-ko'sis) [Gr. σύκωσις, σῦκον fig]. 1. A disease marked by inflammation of the hair-follicles, especially of the beard, forming papules or pustules that are perforated by the hairs and are surrounded by infiltrated skin. The disease results from general debility and constitutional disturbances. 2. A kind of ulcer on the eyelids. bacillogenic s., sycosis said to be caused by the Bacil'lus sycosis ferus fæt'idus. **s. bar'bæ**, sycosis of the beard. **coccogenic s.**, sycosis of the hair-follicles of the beard from infection of the follicles by staphylococci. Called also non-parasitic s., s. barbæ, and s. vulgare. **s. contagio** sa, barbers' See tinea sycosis. s. frambœ'sia, s. frambœsiæfor'mis, dermatitis papillaris capillitii. lupoid s., ulerythema sycosiforme. non-parasitic s. See tinea sycosis. s. nu'che necroti'sans, folliculitis affecting the scalp at the neck and producing permanent scarring. parasitic s., tinea sycosis. s. staphylo'genes, s. vulga'ris, a form due to infection with pus cocci. s. tar'si, blepharitis.

Sydenham's chorea (sid'en-hamz) [Thomas Sydenham, a celebrated English physician, sometimes called the "English Hippocrates," 1624-1689]. See chorea.

sydrosin (sid-ro'sin). A preparation of eucalyptus leaves: used in pertussis.

syllabize (sil'ab-iz) [Gr. συλλαβίζειν]. Το divide speech-sounds into syllables.

SYMINGTON'S BODY

syllable-stumbling (sil'ab-l). Dysphasia in which there is difficulty in pronouncing certain syllables, resulting in a sort of stuttering.

syllabus (sil'ab-us) [Gr. $\sigma b \lambda \lambda a \beta os$ a collection] An outline of a course of lectures.

syllepsiology (sil"ep-se-ol'o-je) [Gr. σύλληψις conception + λόγος treatise]. The sum of knowledge regarding conception or pregnancy.

syllepsis (sil-ep'sis). Conception or pregnancy.

sylvan (sil'van). A liquid obtained along with tetrol from distillation of pine wood.

Sylvester's method. An incorrect spelling of Silvester's method.

Described by or named for sylvian (sil've-an). François de la Boe Sylvius, a French anatomist, 1614-1672. The name has been erroneously ascribed to Jacobus Sylvius (Jacques Dubois), a French anatomist, 1478-1555, the teacher of Vesalius. s. aqueduct, artery, fissure, etc. See aqueduct, artery, fissure, etc.

sylviduct (sil'vid-ukt). The aqueduct of Sylvius. Sym., sym. Abbreviation for symmetric.

symbion, symbiont (sim'be-on, sim'be-ont) [Gr. $\sigma b \nu$ together $+ \beta los$ life]. An organism which lives in a state of symbiosis. An organism which

symbiosis (sim-be-o'sis) [Gr. συμβίωσις]. The living together or close association of two dissimilar organisms (De Bary). Each of the organisms is known as a symbiont. antagonistic s., antipathetic s., an association between two organisms which is to the disadvantage of one of them; parasitism. **conjunctive s.**, association between two different organisms, with bodily union between them. constructive s., an association between two organisms which is of benefit to the physiologic processes of one of them. disjunctive s., symbiosis without actual union of the organisms

symbiote (sim'be-ot). Same as symbion.

symbiotic (sim-be-ot'ik). Associated in symbiosis.

symblepharon (sim-blef'ar-on) [Gr. σύν together + $\beta\lambda\epsilon\varphi\alpha\rho\sigma\nu$ eyelid]. Adhesion of the lids to the eyeball. anterior s., adherence of the edge of the eyelid. posterior s., adhesion at the fold of the conjunctiva. total s., adhesion of the entire lid.

symblepharopterygium (sim-blef"a-ro-ter-ij'eum). A combination of symblepharon and pterygium; a form of symblepharon in which the lid is joined to the eyeball by a cicatricial band resembling a pterygium.

symbol (sim'bul) [Gr. σύμβολον, from συμβάλλειν to compare]. A mark or character representing some quality or relation. In chemistry a symbol is a letter or combination of letters repre-senting an atom of an element or a molecule of a radical.

symbolia (sim-bo'le-ah). Ability to recognize the nature of objects by the sense of touch.

symbolism (sim'bol-izm). An abnormal mental condition in which every occurrence is conceived of as a symbol of the patient's own thoughts.

symbolophobia (sim''bol-o-fo'be-ah) [Gr. $\sigma t \mu$ - $\beta ο λ ο \nu$ symbol + $\varphi \delta \beta o s$ fear]. A morbid fear that one's acts may contain some symbolic meaning.

symbrachydactylia (sim-brak"e-dak-til'e-ah) [Gr. σύν together βραχύς short + δάκτυλος finger]. A condition in which the fingers or toes are short and adherent; webbed fingers or toes.

symelus (sim'el-us). See symmelus

Syme's operation (simz) [James Syme, Scotch surgeon, 1799-1870]. See operation.

Symington's body (si'ming-tonz) [Johnson Symington, Scotch anatomist, 1851-1924]. The anococcygeal body. See body.

- symmelia (sim-e'le-ah) [Gr. σύν together + μέλος limb]. Fusion of the feet and legs.
- **symmelus** (sim'el-us) [Gr. $\sigma \dot{\nu} \nu$ together + $\mu \dot{\epsilon} \lambda os$ limb]. A monster-fetus with the feet and legs more or less fused and imperfect development of the pelvis.
- **symmetric, symmetrical** (sim-et'rik, sim'et-rik-al) [Gr. συμμετρικόs]. Pertaining to or exhibiting symmetry. In chemistry, denoting compounds which contain atoms or groups at equal intervals in the molecule.
- symmetromania (sim'met-ro-ma'ne-ah) [symmetry + Gr. μανία madness]. An insane tendency to make symmetrical motions, as of both arms instead of one.
- symmetry (sim'et-re) [Gr. συμμετρία; σύν with + μέτρον measure]. The regular or reversed disposition of parts around a common axis, or on each side of any plane of the body. inverse s., correspondence of one side of an assymmetrical individual to the same side of another.
- sympathectomy, sympathetectomy, sympathicectomy (sim-path-ek'to-me, sim-path-et-ek'to-me, sim'path-is-ek'to-me) [sympathetic + Gr. ἐκτομή excision]. The surgical removal of a part of a sympathetic nerve, especially the superior cervical sympathetic ganglion. periarterial s., surgical removal of the sheath of an artery containing the sympathetic nerve-fibers. The operation produces temporary vasodilatation leading to improved nutrition of the part supplied by the vessel. It is indicated for trophic disorders (Leriche). Called also arterial decortication.
- **sympatheoneuritis** (sim-path"e-o-nu-ri'tis). Inflammation of the sympathetic nerve.
- sympathetic (sim-path-et'ik) [Gr. συμπαθητικόs].
 1. Pertaining to, caused by, or exhibiting, sympathy.
 2. The sympathetic nerve or system of nerves.
 See nerve and system.
- **sympatheticless** (sim-path-et'ik-les). Deprived of its abdominal sympathetic chain.
- sympatheticoparalytic (sim-path-et"ik-o-par-alit'ik). Due to or affected with paralysis of the sympathetic nervous system.
- **sympatheticotonia** (sim-path-et''ik-o-to'ne-ah). Sympathicotonia.
- sympatheticotonic (sim-path-et"ik-o-ton'ik) [sympathetic + Gr. τόνος tone]. Caused by a tonic contraction of the arteries that is due to overaction of the sympathetic.
- **sympathetoblast** (sim-path-et'o-blast). One of the embryonic nerve-cells from the sympathetic system which develops into a sympathetic cell.
- sympathic (sim-path'ik). Sympathetic.
- **sympathicoblast** (sim-path'ik-o-blast). An embryonic cell which develops into a sympathetic nerve-cell.
- **sympathiconeuritis** (sim-path"ik-o-nu-ri'tis). Inflammation of the sympathetic nerve.
- sympathicopathy (sim-path-e-kop'ath-e). Any disease due to disorder of the sympathetic nervous system.
- **sympathicotonia** (sim-path"ik-o-to'ne-ah). A stimulated condition of the vegetative autonomic nervous system characterized by vascular spasm and hightened blood-pressure.
- **sympathicotonic** (sim-path"ik-o-ton'ik). Sympatheticotonic.
- sympathicotripsy (sim-path-ik-o-trip'se) [sympathetic ganglion + Gr. τρίβειν to crush]. The surgical crushing of the superior cervical ganglion in the treatment of mental affections.
- **sympathicotrope** (sim-path'ik-o-trōp). Sympathicotropic.
- **sympathicotropic** (sim-path'ik-o-trop'ik) [sym-pathetic + Gr. τροπικός turning]. Having an affinity for the sympathetic nervous system.
- **sympathicus** (sim-path'ik-su). The sympathetic nervous system.

- **sympathism** (sim'path-izm). Susceptibility to hypnotic influence; suggestibility; the alleged transfer of feelings from one person to another.
- **sympathist** (sim'path-ist). One susceptible to sympathism.
- sympathizer (sim'path-i-zer). An eye which becomes inflamed through sympathy with disease of its fellow.
- sympathoblast (sim-path'o-blast) [sympathetic + Gr. βλάστος germ]. An embryonic cell which develops into a sympathetic ganglion cell.
- **sympathy** (sim'path-e) [Gr. $\sigma \nu \mu \pi \delta \theta \epsilon \iota a$]. 1. An influence produced in any organ by disease or disorder in another part. 2. A relation which exists between the mind and the body, causing the one to be affected by the other. 3. The influence exerted by one individual upon another, or received by one from another, and the effects thus produced, as seen in hypnotism, in yawning, and in the transfer of hysteric symptoms.
- **symperitoneal** (sim-per-it-o-ne'al). Uniting two or more parts of the peritoneum artificially.
- sympexis (sim-peks'is) [Gr. "concretion"]. The arrangement of erythrocytes according to the laws of surface tension.
- symphallangism (sim-fal'an-jism) [Gr. σύν together + phalanges]. Ankylosis of the proximal phalangeal joints.
- **symphoricarpus** (sim"for-ik-ar'pus) [Gr. συμφορεῖν to bear together + καρπόs fruit]. A homeopathic preparation of the fruit of Symphoricar-pos racemo'sus, or snowberry, a shruh of North America.
- symphorol (sim'for-ol). A generic name for the salts of caffein-sulphonic acid they are diuretics. The sodium salt is also sold under this name. Dose, 15 gr. (1 gm.). Called also nasrol. s. lithium (symphorol L). Same as lithium-caffein sulphonate. s. N. (sodium), caffein-sodium sulphate, C₀H₉N₄O₂.SO₃Na: used as a diuretic. s. strontium. Same as strontium caffein-sulphonate.
- **symphyocephalus** (sim"fe-o-sef'al-us) [Gr. $\sigma t \nu \nu$ together + $\varphi t \epsilon \nu \nu$ to grow + $\kappa \epsilon \varphi \alpha \lambda \dot{\eta}$ head]. A double monstrosity joined at the head.
- symphyseal, symphysial (sim-fiz'e-al). Pertaining to a symphysis.
- symphyseorrhaphy (sim-fiz-e-or'a-fe). See symphysiorrhaphy.
- **symphyseotome** (sim-fiz'e-o-tōm). A knife used in performing symphyseotomy.
- **symphyseotomy, symphysiotomy** (sim-fiz-e-ot'-o-me) [Gr. $\sigma b \mu \varphi \nu \sigma \iota s$ symphysis $+ \tau \ell \mu \nu \epsilon \iota \nu$ to cut] The division of the fibrocartilage of the symphysis pubis, in order to facilitate delivery, by increasing the anteroposterior diameter of the pelvis.
- **symphysic** (sim-fiz'ik). Characterized by abnormal fusion of adjacent parts.
- symphysiectomy (sim-fiz-e-ek'to-me)[Gr. σίμφυσις symphysis + ἐκτομή excision]. Resection of the symphysis pubis in order to facilitate impending and possible future deliveries.
- **symphysion** (sim-fiz'e-on) [Gr. σύμφυσις symphysis]. The middle point of the outer border of the alveolar process of the lower jaw.
- **symphysiorrhaphy** (sim-fiz-e-or'a-fe) [Gr. συμφυσις symphysis + ραφή suture]. Suture of a divided symphysis.
- symphysis (sim'fis-is) [Gr. σύμφυσις; σύν together + φύειν to grow]. The line of junction and fusion between bones originally distinct. cardiac s., adhesion of the parietal and visceral layers of the pericardium. s. mandib'ulæ, the central line of union of the two halves of the lower jaw. s. pubis, the junction of the pubic bones. s. sacrococcyge'a [B N A], the articulation between the coccyx and the sacrum.
- symphysodactylia (sim"fis-o-dak-til'e-ah) [Gr. σύμφυσις a growing together + δάκτυλος finger]. Union of the fingers or toes.

Symphytum (sim'fit-um) [L.; Gr. συμφυτον]. 1. A genus of boraginaceous plants; S. officina'le is the comfrey of Europe and North America. 2. A homeopathic preparation of S. officina'le.

Symplocarpus fœtidus (sim-plo-kar'pus fet'id-us). See Dracontium fætidum.

sympodia (sim-po'de-ah) [Gr. σύν together + πούς foot]. The condition of having the two feet fused into one. Cf. sympus.

symptom (simp'tum) [L. symp'toma; Gr. συμπ-τωμα]. Any evidence of disease or of a patient's condition; a change in a patient's condition indicative of some bodily or mental state. See also sign. abstinence s's, symptoms of excitement, collapse, etc., consequent on the sudden removal customary stimulant. accessory assident s., any symptom not pathognomonic. Bárány's s. 1. In disturbances of equilibrium of the vestibular apparatus the direction of the fall is influenced by changing the position of the patient's head. 2. If the normal ear is irrigated with hot water (110°-120° F.), a rotary nystagmus is developed toward the side of the irrigated ear; if the ear is irrigated with cold water, a rotary nystagmus is developed away from the irrigated side. There is no nystagmus if the labyrinth is diseased. Called also caloric test. Béhier-Hardy s., aphonia occurring as an early symptom of pulmonary gangrene Bernhardt's s. See under sign. Biernacki's s. See under sign. Bolognini's s., a sensation of crepitation felt on gradually increasing pressure on the abdomen in measles. Bonhoeffer's s., loss of normal muscle tonus in chorea. Brauch-Romberg s. See under sign. Broque's s., in children between four and seven years of age if the maxillary arch between the second deciduous molars measures less than 28 mm, there is incipient malocclusion. Burg-hart's s., fine rales over the anterior inferior edge of the lung; an early sign of pulmonary tuberculosis. **Castellani-Low s.**, a fine tremor of the tongue seen in sleeping sickness. characteristic s., a homeopathic term for a symp-Colliver's s., tom characteristic of any drug a peculiar twitching, tremulous, or convulsive movement of the limbs, face, jaw, and some-times of the entire body, seen in the preparalytic stage of poliomyelitis. complex of s's, a set of symptoms which occur together; the sum of signs of any morbid state; a syndrome. See syndrome. concomitant s., a symptom not essential to a disease, but which may have an accessory value in its diagnosis. consecutive s., a symptom appearing during convalescence from a disease, but having no connection with the disease. constitutional s., general s., a symptom indicative of or due to disorder of the whole body. delayed s's, deferred shock; severe shock or mental disturbance which does not appear for some time after the occurrence of the causes which produce it. direct s., one which is directly caused by the disease. dissociation s., anesthesia to pain and to heat and cold without loss of tactile sensibility; seen in syringomyelia. drug s., a homeopathic term for any symptom shown by a person who is proving a drug. **equiv-ocal s.**, a symptom which may be produced by several different diseases esophagosalivary

8., excessive flow of saliva in patients with cancer
of the esophagus. Francke's 8., red streaks near the border of the gums in influenza. Ganser's s., the giving of crooked or absurd answers to questions: seen in certain psychotic conditions. Gersuny's s., in fecal tumors, if the finger be pressed slowly into the mass so that the intestinal mucous membrane sticks to the mass and then the finger is withdrawn gradually, it is possible to perceive the loosening of the mucous membrane from the fecal mass. Called also sticky s. Goldthwait's s., pain referred to the sacro-iliac region or to the leg of the affected side when the thigh is flexed with the leg extended: seem in dislocation of

the sacro-iliac joint. **guiding s.**, characteristic symptom. **halo-s.**, the seeing of colored rings around a plane: a sign of approaching glaucoma. Huchard's s. See Huchard's sign, under sign. incarceration s., periodically recurring symptoms of displaced kidney, such as nephralgia, gastralgia, and severe collapse. Called also *Dictl's crisss*. indirect s., a symptom which points to a condition that may or may not be due to a particular disease or lesion. induced s., one produced intentionally. **Kerandel's s.**, the deep hyperesthesia characteristic of sleeping sickness **keynote s.**, characteristic symptom. **Kocher's s.**, a symptom of exophthalmic goiter: the examiner places his hand on a level with the patient's eyes and then lifts it higher, the patient's upper lid springs up more quickly than does his eyeball. Kussmaul's s., convulsions and coma due to absorprinthine s., a group of symptoms indicating disease of internal ear. Liebreich's s., a symptom of red-green color-blindness in which light effects appear red and shadows green local s., one due to local disease or to a particular lesion. localizing s's, symptoms that indicate the location of a Magnan's s., a sensation as of a round body beneath the skin: sometimes experienced in chronic cocainism. **Mannaberg's s.**, Mannaberg's sign. See sign. Mannkopf's under sign. nostril s., dilatation of the nostrils during expiration and dropping during inspiration. objective s., one that is obvious to the senses of the observer. See sign. Oehler's s., coldness and pallor of the feet in intermittent claudication. passive s. See static s. pathogenic s., a homeopathic term for a drug symptom. pathognomonic s., one that surely establishes the diagnosis of the disease. Pel-Ebstein s., the chronic relapsing pyrexia of Hodgkin's disease; called also *Pel-Ebstein pyrexia* physical s. See sign. **Prat's s.**, rigidity of the muscles of a limb preceding the development of gangrene. precursory s., premonitory s. Same as signals. pressure-s., a nervous symptom due to pressure upon the brain or spinal cord. Pressure-symptoms consist of spasms, increased muscular tonicity. pain, hyperesthesia, and, in severe cases, paralysis. rainbow s., the halo of glaucoma. rational s. Same as subjective s. reflex s., a symptom occurring in a part remote from that which is affected by the disease. **Remak's s.**, polyesthesia; also a prolongation of the lapse of time before a painful impression is perceived; both are noted in tabes dorsalis. Roger's s., a temperature below the normal in the third stage of tuberculous meningitis. Rumpf's s. See Rumpf's sign, under sign. Séguin's signal-s., the involuntary contraction of the muscles just before an epileptic attack. signal-s., a sensation, aura, or other subjective experience that gives warning of the approach of an epileptic or other seizure. Skeer's s. a small circle in the iris surrounding the pupil: it is regarded as pathognomonic of tuberculous meningitis. static s., a condition indicative of the state of some particular organ independent of the rest of the body. Called also passive s. Stellwag's s. See under sign. sticky s. See Gersuny's s. subjective s., one that is per-ceptible to the patient only sympathetic s., one due to sympathy, as when pain or other disorder affects a part when some other part is the seat of the disease proper. Trendelen-burg's s., a waddling gait due to paralysis of the gluteal muscles. Weber's s. See under sign. Wernicke's s. See under sign. Westphal's absence of the knee-jerk in tabes dorsalis. Winterbottom's s., cervical polyadenitis oc-curring in sleeping sickness. withdrawal s's, abstinence symptoms.

symptomatic (simp-to-mat'ik) [Gr. συμπτωματικόs]. Pertaining to or of the nature of a symptom.
 symptomatology (simp"tom-at-ol'o-je) [Gr. σύμπ-

 $\tau\omega\mu a$ symptom $+\lambda\delta\gamma$ os treatise]. That branch of medicine which treats of symptoms; the systematic discussion of symptoms.

symptomatolytic (simp-to-mat-o-lit'ik) [symptom + Gr. λυτικόs dissolving]. Causing the disappearance of symptoms.

symptom-complex. Same as syndrome.

symptomes complices (samp-tom' kom-ples'). A group of roentgenographic symptoms characteristic of a certain condition.

symptomolytic (simp-tom-o-lit'ik). Symptomato-lytic

symptosis (simp-to'sis) [Gr. σύν together + πτῶσις fall] The gradual wasting of the whole body or of any organ.

sympus (sim'pus) [Gr. σύν together + πούς foot]. A monster-fetus with the feet and legs fused. Called also sirenomelus. **8. a'pus**, a variety in which the feet are wanting. **8. di'pus**, a form in which both feet are present. **8. mo'nopus**, a form in which one foot is present.

Syms's tractor (simz) [Parker Syms, contemporary surgeon in New York] See tractor.

syn- [Gr. σύν with, together]. A prefix signifying union or association.

synadelphus (sin-ad-el'fus) [Gr. $\sigma b \nu$ together + $\dot{a} \delta \epsilon \lambda \varphi \dot{o} s$ brother]. A monster with a single body and eight limbs.

synæsthesia (sın-es-the'ze-ah). See synesthesia.

synætion (sin-e'te-on) [Gr. σύν together + airia cause] The secondary or cooperative cause of a disease

synalgia (sin-al'je-ah) [Gr σύν together + ἄλγος pain] Pain experienced in one place, but caused by a lesion in another

synalgic (sin-al'jik). Affected with or of the nature of synalgia.

synanastomosis (sin"an-as-to-mo'sis) [Gr. σύν together + anastomosis]. The anastomosis of several vessels

synanche (sin-an'ke) Cynanche

synanthema (sin-an-the'mah) [Gr. σύν together + άνθεῖν to bloom] A local eruption consisting of a group of papules.

synanthrin (sin-an'thrin). Inulin.

synanthrose (sin-an'thros) See levulin.

synaphymenitis (sin-af''im-en-i'tis). Same as conjunctivitis

synapse, synapsis (sin'aps, sin-ap'sis) [Gr. σύν together + ἄπτειν to touch] I The anatomic relation of one nerve-cell to another, the contact or point of contact between dendrons, forming the place

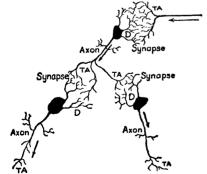

Diagram of three synapses. Nerve impulse is indicated by arrows, showing that the direction of passage is from terminal arborization (TA) of axon of one neuron to dentrites (D) of another neuron (Williams).

where a nervous impulse is transmitted from one neuron to another (Foster). Called also synaptic junction. 2. The pairing off and union of homologous chromosomes from the male and female pronuclei in the egg; called also syndesis.

synaptase (sin'ap-tās) [Gr. συναπτός joined]. Same as emulsin.

synaptene (sin-ap'ten). Same as amphitene.

synarthrodia (sin-ar-thro'de-ah) [Gr. $\sigma \ell \nu$ together $+ \delta \rho \theta \rho \omega \delta l \alpha$ joint]. An immovable joint whose adjacent surfaces are connected by no intervening tissue, and comprising synchondrosis, synostosis, and syndesmosis.

synarthrodial (sin-ar-thro'de-al). Pertaining to synarthrodia.

synarthrophysis (sin-ar-thro-fi'sis) [Gr. σύν together + ἄρθρον joint + φύσις growth]. Any ankylosing process, progressive ankylosis of joints.

synarthrosis (sin-ar-thro'sis) [Gr. $\sigma b \nu$ together + $\delta \rho \theta \rho \omega \sigma \iota s$ joint]. An immovable joint with no intervening tissue between the bones. It includes the varieties known as gomphosis, schindylesis, and sutura.

synathresis (sin-ath-re'sis). Synathroisis.

synathroisis (sin-ath-roi'sis) [Gr. σύν together + άθροισις collection]. Local hyperemia or congestion.

syncain (sin-ka'in). A synthetic substitute for cocain, resembling novocain.

syncanthus (sin-kan'thus) [Gr. σύν together + κανθός canthus]. Adhesion of the eyeball to the orbital structures.

syncaryon (sin-kar'e-on) [Gr. σύν together + κάρυον nucleus]. The nucleus formed by fusion of two pronuclei.

syncelom (sin-se'lom) [Gr. σύν together + celom]. The perivisceral cavities of the body considered as one structure, including the pleural, cardiac, and peritoneal cavities, and tunica vaginalis.

syncephalus (sin-sef'al-us) [Gr σύν together + κεφαλή head]. A twin fetus with fused heads.

synchilia (sin-ki'le-ah) [Gr. $\sigma b\nu$ together + $\chi \epsilon \hat{\imath} \lambda os$ lip]. Congenital adhesion of the lips.

synchiria (sin-ki're-ah) [Gr σύν together + χείρ hand] A condition in which a stimulus applied to one side of the body is referred to the opposite side.

synchondroseotomy (sin-kon-dro-se-ot'o-me) [synchondrosis + Gr δστέον bone]. An operation for exstrophy of the bladder done by cutting through the sacro-iliac ligaments and closing the arch of the pubes.

synchondrosis (sin-kon-dro'sis) [Gr. σύν together + χόνδρος cartulage] The union of bones by means of a fibrous or elastic cartilage. S. arycornicula'ta [B N A], the union of the cartilage of Santorini with the arytenoid s. epiphy'seos, an epiphyseal line sphenopetrous s., the fibrocartilage in the sphenopetrosal fissure. sternal s., the cartilaginous union between the sternum and the manubrium

synchondrotomy (sin-kon-drot'o-me) [Gr. $\sigma \ell \nu$ together $+\chi \delta \nu \delta \rho \sigma$ cartilage $+\tau \ell \mu \nu \epsilon \nu$ to cut]. The division of the symphysis pubis or of any other synchondrosis.

synchopexia (sin-ko-pek'se-ah). Same as tachy-

synchronism (sin'kro-nizm). Occurrence at the same time; the quality of being synchronous.

synchronous (sin'kro-nus) [Gr. σύν together + χρόνος time]. Occurring at the same time.

synchysis (sin'kis-is) [Gr. συγχεῖν to pour together]. A softening or fluid condition of the vitreous body of the eye. s. scin'tillans, an abnormally soft condition of the vitreous, with the presence of floating particles of cholesterol

syncinesis (sin-sin-e'sis). Same as synkinesis.

synciput (sin'sip-ut). Same as sinciput.

synclinal (sin-kli'nal) [Gr. σύν together + κλίνων to bend]. Bent or inclined toward each other.

synclitic (sin-klit'ik). Pertaining to or marked by synclitism. synclitism, syncliticism (sin'klit-izm, sin-klit'isizm) [Gr. συγκλίνειν to lean together]. Parallelism between the planes of the fetal head and those of the pelvis.

syncionus (sin'klo-nus) [Gr. σύν with + κλόνος clonus]. 1. Muscular tremor, or the successive clonic contraction of various muscles together. 2. Any disease characterized by muscular tremors. s. beriber'ica, beriberica

syncopal (sin'ko-pal). Pertaining to or characterized by syncope.

syncope (sin'ko-pe) [L.; Gr, συγκοπή fainting]. A swoon; fainting, or a faint; a temporary suspension of consciousness due to cerebral anemia. It is treated by lowering of the head, maintenance of the recumbent posture, elevation of the extremities, and the use of diffusible stimulants, such as alcohol, ether, and ammonia. s. angino'sa, cardiac spasm caused by closure of the coronary arteries. cat s., ailurophobia. laryngeal s., laryngeal vertigo. See vertigo. local s., local asphyxia. See Raynaud's disease, under disease.

syncopic (sin-kop'ik). See syncopal.

syncyanin (sin-si'an-in). The blue pigment produced by the Bacillus syncyanus.

syncytial (sin-sish'al). Of, pertaining to, or producing, a syncytium.

syncytiolysin (sin-sit-e-ol'is-in). A lysin destructive to the syncytium; formed in the blood of an animal into which matter from the placenta of another animal has been injected.

syncytioma malignum (sin-sit-e-o'mah mal-ig'num). A form of tumor, epithelial in nature, originating at the placental site during pregnancy or the puerperium. It is composed of large cells derived from the syncytium and smaller ones from the epithelium of the chorionic villi (Langhans' cells). Called also deciduoma malignum, sarcoma deciduocellulare, and chorio-epithelioma.

syncytiotoxin (sin-sit-e-o-toks'in). A toxin that has a specific action on the placenta.

syncytium (sin-sit'e-um) [Gr. σ bν together + κ b τ os cell]. 1. A multinucleate mass of protoplasm. 2. A structure composed of epithelial cells, forming the outermost fetal layer of the placenta, and lying between the decidua and chorionic villi, over the layer of Langhans.

syncytotoxin (sin-sit-o-toks'in). A cytolytic serum produced by immunizing animals with placental cells.

syndactyl, syndactylous (sin-dak'til, sin-dak'tilus) [Gr. σύν with + δάκτυλος finger]. Having united or webbed fingers or toes.

syndactylia, syndactylism (sin-dak-til'e-ah, sin-dak'til-izm) [Gr. $\sigma i \nu$ together $+ \delta i \kappa r \nu \lambda \sigma s$ finger]. The condition in which two or more fingers or toes are more or less completely grown together or adherent; webbed fingers or toes.

syndactylus (sin-dak'til-us) [Gr. συν together + δάκτυλος digit]. A fetus or person with the fingers or toes fused or connected.

syndactyly (sin-dak'til-e). Syndactylia.

syndectomy (sin-dek'to-me) [Gr. σύν together + δη̂ιν to bind + ἐκτομή excision]. Excision of a circular strip of the conjunctiva for the cure of pannus. Called also circumcision of the cornea and beritamy.

syndelphus (sin-del'fus) [Gr. συν together + άδελφοs brother]. A twin monster with a single head and pelvis and eight limbs.

syndesis (sin'de-sis) [Gr. σύν together + δέσις binding]. r. Artificial ankylosis; arthrodesis. 2. See synapsis (2d def.).

syndesmectopia (sin"des-mek-to'pe-ah) [Gr. συνδεσμος ligament + ἔκτοπος out of place]. Unusual situation of a ligament.

syndesmitis (sin-des-mi'tis) [Gr. συνδεσμος band + - [gr.ς inflammation]. r. Inflammation of a liga-

ment or ligaments. 2. Conjunctivitis. s. metatar'sea, inflammation of the metatarsal ligaments.

syndesmography (sin-des-mog'ra-fe) [Gr. σύνδεσ-μος band + γράφειν to write]. A description of the ligaments.

syndesmology (sin-des-mol'o-je) [Gr. συνδεσμος ligament + λόγος discourse]. That branch of anatomy which treats of the ligaments.

syndesmoma (sin-des-mo'mah) [Gr. σύν together + δεσμός band + -ωμα tumor]. A neoplasm or tumor composed of connective tissue.

syndesmo-odontoid (sin-des'mo-o-don'toid). The posterior of the two atlo-axoid articulations formed between the anterior surface of the transverse ligament and the back of the odontoid process.

syndesmoplasty (sin-des'mo-plas-te) [Gr. συνδεσμος band + πλάσσειν to form]. Plastic operation on a ligament.

syndesmorrhaphy (sin-des-mor'af-e) [Gr. συνδέσμος band + βάφη suture]. Suture or repair of ligaments

syndesmosis (sin-des-mo'sis) [Gr. σύνδεσμος band]. The union of bones by a ligament or by a membrane. **tibiofibular s.**, the inferior tibiofibular articulation. **tympanostapedial s.**, the connection of the base of the stapes with the oval window.

syndesmotomy (sin-des-mot'o-me) [Gr. σύνδεσμος ligament + τέμνειν to cut]. The dissection or cutting of a ligament.

syndeticon (sin-det'ik-on). A proprietary varnish of fish-glue (100 parts), glacial acetic acid (125 parts), gelatin (20 parts), and water (125 parts).

syndrome (sin'drom) [Gr. συνδρομή concurrence]. A complex of symptoms; a set of symptoms which occur together; the sum of signs of any morbid state. Adams-Stokes s., bradycardia and transient vertigo as signs of fatty or fibrous myocarditis. addisonian s., the complex of symptoms resulting from suprarenal insufficiency. Addison's disease, under disease. adiposogenital s. See Frohlich's s. anterior cornual s., muscular atrophy due to lesions of the anterior cornua of the spinal column. anterolateral s., a parietospasmodic condition characterized by contractures and tremors derived from lesions of the anterolateral portions of the spinal cord. Apert's s. See acrocephalosyndactylia. apical 8., a syndrome evincing lesions of the upper extremity of the spinal cord. Avellis's s., recurrent paralysis of one side, accompanied by a paralysis of the same side, of the soft palate and laryny **Babinski's s.**, the association of cardiac and arterial disorders with chronic syphilitic meningitis, tabes dorsalis, general paralysis, and other late syphilitic manifestations. 8. of Babinski-Nageotte, contralateral hemiplegia; contralateral hemianesthesia of discriminative sensibility of arm, leg, trunk, neck, and scalp; ipsilateral lateropulsion, hemiasynergia, and hemiataxia; myosis, enophthalmus, and ptosis; due to multiple lesions affecting the pyramid and fillet, the cerebellar peduncle, and the reticular formation. Beau's s., asystolia. s. of Benedikt, paralysis of the parts supplied by the oculomotor nerve of one side, with paresis and tremor of the upper extremity on the other.

Bernard's s. Same as Bernard-Sergent s., Horner's s. diarrhea, vomiting, and collapse characteristic of Addison's disease. Bernhardt-Roth's s., numbness and paresthesia, with pain on movement in that part of the thigh supplied by the external cutaneous nerve. Bertolotti's s., sacralization of the fifth lumbar vertebra. Bianchi's s., a sensory aphasic syndrome. Blatin's s., hydatid thrill. See under thrill. Block's s., a syndrome in women, occurring between puberty and the menopause, marked by sleeplessness, melancholic tendency, attacks of crying, nervous irritability,

sexual sensitiveness, and pigmentary areas in the skin. Bonnier's s., a series of symptoms due to lesion of Deiters's nucleus or of the vestibular tracts related thereto; it consists of vertigo, pallor, and various aural and ocular disturbances. Bouillaud's s., the coincidence of pericarditis and endocarditis is the rule in acute articular rheumatism, and their non-coincidence is the rule in chronic articular rheumatism. Briquet's s., shortness of breath and aphonia dependent on hysteric paralysis of the diaphragm. **Brissaud-Marie s.**, hysteric glossolabial hemispasm. **Bristowe's s.**, a series of symptoms characan ingravescent character; (2) gradual onset of hemiplegia; (3) association of hemiplegia on one side, vague hemiplegic symptoms on the other; (4) stupidity and drowsiness, difficulty of swallowing, and speechlessness; (5) absence of direct implication of the cranial nerves; (6) death from coma. Brown - Séquard s., hemipara-plegic s., crossed hemiparaplegia, evincing a lesion of one-half of the spinal cord. Bruns's s., association of vertigo with sudden movements of the head, assumed to be characteristic of cysticercous infection of the fourth ventricle. cap-sulothalamic s., a syndrome of lesions of the thalamus and internal capsule consisting of elevation of the affective tone and instability of the emotions, hemianesthesia, and hemiplegia of the affected side. centroposterior s., syringomyelic dissociation of sensibility and vasomotor disorders, due to lesions of the centroposterior por-tion of the gray matter of the spinal cord. cerebellar s. See Nonne's s. s. of Cestan-Chenais, contralateral hemiplegia; contralateral hemianesthesia of leg, trunk, arm, neck, and scalp; ipsilateral lateropulsion and hemiasynergia; miosis, enophthalmos, and ptosis; ipsilateral palatoggia and laryngoplegia: due to scattered lesions of the pyramid, fillet, inferior cerebellar peduncle, nucleus ambiguus, and oculopupillary center. Charcot's s., intermittent claudication. Chauffard's s., polyarthritis with fever and enclaudication. largement of the spleen and lymph-nodes in persons infected with non-human tuberculosis. chiasmatic s. Same as Frohlich's s. Chorea s. See Hunt's striatal s's., 2d def. Christian's s., diabetes insipidus, exophthalmos, and defects in the membranous bones. Claude-Bernard-Horner s. Same as Horner's s. s. of corpus striatum. See Vogt's s. Cotard's s., paranoia with delusions of negation, a suicidal tendency, and sensory disturbances. Courtendency, and sensory disturbances. Courvoisier-Terrier s., dilatation of the gall-bladder, retention jaundice, and discoloration of the feces, indicating obstruction due to a tumor of the ampulla of Vater. Cushing's s., dystrophia adiposogenitalis. Déjerine's s., a syndrome resembling tabes dorsalis, with deep sensibility depressed, but tactile sense normal. It is due to lesion of the long root fibers of the posterior column. s. of Déjerine-Roussy. See thalamic s. Dubreuil-Chambardel s., caries of the upper incisor teeth in persons between the ages of fourteen and seventeen, followed after an interval by caries in the other teeth. **Duchenne's s.**, the collective signs of labioglossopharyngeal paralysis. Dupré's s., meningism. dysglandular s., the series of symptoms caused by an abnormality of the internal secretions. effort s. See neurocirculatory asthenia, under asthenia. Eisenlohr's s., weakness and numbness of the extremities, dysarthria
and paralysis of the lips, tongue, and palate.
epiphyseal s., precocious development of external genitalia and sexual function, precocious abnormal growth of long bones, appearance of signs of in-ternal hydrocephalus, absence of all other motor and sensory symptoms, indicating lesion of the pineal body. Called also Pellezzi's s. and s. of macrogenito-somia pracox. Erb's 8., the totality of signs of asthenic bulber paralysis. Fitz's 8., a series of symptoms indicative of acute pancreatitis,

consisting of epigastric pain, vomiting, collapse, followed within twenty-four hours by a circumscribed swelling in the epigastrium or by tympanites. Foville's s., crossed paralysis of the limbs on one side of the body and of the face on the opposite side, together with loss of power to rotate the eyes to that side. Friedmann's vasomotor s., a train or cycle of symptoms due to a progressive subacute encephalitis of traumatic origin. It comprises fulness in the head, headorigin. It comprises ruiness in the head, headache, vertigo, irritability, insomnia, casy fatigability, and defect of memory. Fröhlich's s.,
adiposity, genital atrophies, changes in the secondary sexual characters, and development of
the feminine type: a syndrome seen in lesions of
the pituitary body. Called also adiposogenital s.,
hypophyseal s., and dystrophia adiposogenitalis.
Froin's s., a condition of the lumbar spinal fluid
consisting of a transparent clear vellow color consisting of a transparent clear yellow color (xanthochromia), the presence of large amounts of globulin, rapid coagulation, and the presence of an increased number of lymphocytes. It is seen in certain organic nervous diseases in which the lumbar fluid is cut off from communication with the fluid in the ventricles. Called locula-tion s. Galliard's s., dextrocardia from re-traction of lungs and pleura to the right (1908– 1909). Ganser's s., amnesia, disturbance of consciousness, hallucinations, generally of hysteric origin. Called also acute hallucinatory mania. s. of globus pallidus. See paralysis agitans, juvenile. Gradenigo's s., acute otitis media, followed after a period of from ten to fifty days by violent temporoparietal pain and abductor paralysis. gray spinal s., muscular atrophy, syringo-myelic disturbances of sensation, and vasomotor troubles, due to lesions of the gray matter of the spinal cord. Gunn's s., association of movements of the upper eyelid with those of the jaw. Hanot's s., Hanot's disease. See under disease. Haudek's s., spots seen in the radiograph of the stomach filled with bismuth, due to the filling with bismuth of the ulceration cavities of gastric ulcer. Hayem-Weil s. See hemolytic jaundice, under jaundice, hemopleuropneumonic s., dyspnea, hemoptysis, tachycardia and fever, with dulness at the base of the chest and tubular respiration over the middle zone of the chest: indicative of pneumonia and hydrothorax in punctured wounds of the chest. **Hoffmann-Werdnig s.**, pre-cocious hereditary spinal muscular atrophy, marked by hypotonia, paralysis, contracture, and atrophy. Homén's s., giddiness, a drunken gait, indistinct speech, impairment of memory, and gradually increasing dementia, with rigidity of the body, especially the legs: due to lesion of the lenticular nucleus. Horner's s., mitosis, ptosis, exophthalmos, and anhidrosis caused by paralysis of the cervical sympathetic. Hunt'ss. 1. Herpetic inflammation of the geniculate ganglion, marked by herpes zoster of the auricular region, with or without facial palsy. 2. See paralysis agitans, juvenile. Hunt's striatal s's. 1. Paleostriatal or pallidal syndrome characterized by paralysis of automatic associated movements, muscular rigidity, and rhythmic tremor of the paralysis agitans type, produced by atrophy or degeneration of the pallidal system of the corpus striatum. Called also paralysis agitans syndrome. 2. Neostriatal syndrome characterized by spontaneous choreiform movements of automatic associated type, produced by atrophy or degeneration of the neo-striatal or striopallidal system of the corpus striatum. Called also chorea syndrome. 3. Mixed striatal syndromes from involvement of both systems; characterized by symptoms of chorea and paralysis agitans in various combinations. Athetosis, dystonia musculorum, and progressive lenticular degeneration. Hutchinson's s., adrenal sarcoma of infants with metastases to the orbit. hypophyseal s., hypophysis s. Same as Fröhlich's s. Jackson's s., paralysis of the soft palate, larynx, and one-half of the tongue,

joined to that of the sternomastoid and trapezius muscles. Jacquet's S. See Jacquet's disease, under disease. Klipple-Feil s., shortness of the neck, limitation of head movements, and growth of hair low down on the neck. König's s., constipation alternating with diarrhea and attended with abdominal pain, meteorism, and gurgling sounds in the right iliac fossa; indicative of tuberculosis of the cecum. Korsakoff's s. Same as Korsakoff's psychosis. See under psychosis. Lasegue's s., the patient moves normally when his eyes are open, but cannot move his anesthetic arm when his eyes are shut. lateral cord and associated anterior cornual s., spastic muscular atrophy due to lesion of the lateral elements of the spinal cord and of its anterior cornua. Launois's s., gigantism due to excessive pituitary secretion. Laurenceto excessive pituitary secretion. Laurence-Biedl s., dystrophia adiposogenitalis with retinal atrophy and mental deficiency. Leredde's s., severe dyspnea on exertion dating from early life, combined with advanced emphysema, recurrent attacks of acute febrile bronchitis; a remote sequel of syphilis, usually congenital. **Lermoyez's s.**, a sudden attack of dizziness coming on after ina sudden attack of dizziness coming on after increasing deafness, the dizziness being followed by improvement of the hearing. loculation s. See Froin's s. Marie's s., acromegaly caused by disorder of the pituitary secretion. Marie-Robinson s., melancholia, insomnia, and impotence in a form of levulosuria. Ménière's s., Ménière's disease. See disease. metameric s. Same as segmentary s. Millard-Gubler s., hemiplegia alterans. Minkowski-Chauffard See hemolytic jaundice, under jaundice. Möbius's s., akinesia algera. Morvan's s., recurring painless whitlows, usually symmetrically placed on the hands, though sometimes on the lower extremities, seen in cases of syringomyelia and occasionally in leprosy. Nonne's s., a syndrome consisting of the various disturbances of synergic motor control, asynergia, dysmetria, speech disturbances, incoordination, etc. pointing to disease of the cerebellum. Called also cerebellar s. and s. of cerebellar agenesis. Nothnagel's s., unilateral oculomotor paralysis combined with cerebellar ataxia, in lesions of the compined with cerebellar ataxia, in lesions of the cerebral peduncles. paleostriatal s. See Hunt's striatal s. pallidal s. See Hunt's striatal s. (1st def.), paralysis agitans s. See Hunt's striatal s. Parkinson's s., parkinsonian s., muscular rigidity, immobile facies, tremor, which tends to disappear on volitional movement, abolition of associated and automatic movements salivation, and cramps due to being movements, salivation, and cramps, due to lesion of the globus pallidus. This syndrome is characteristic of paralysis agitans (Parkinson's disease), and is seen as a frequent sequel of lethargic encephalitis. Called also parkinsonism. Pellizzi's s., epiphyseal syndrome. Picchini's s., inflammation of the three serous membranes connected with the diaphragm, sometimes involving the meninges, synovial sheaths, and tunica vaginalis of the testicle; caused by a trypanosome.

Pick's s. 1. Enlargement of the liver with obstinately recurring ascites, but without jaundice and without signs of cardiac abnormality in a patient with a previous history of pericarditis; pericarditic pseudocirrhosis of the liver. 2. Palpitation of the heart: a feeling of oppression on the chest, dyspnea, cyanosis, and dropsical phenomena: seen in certain heart diseases. Pins's s. See Pins's sign, under sign. pluriglandular s., polyglandular syndrome. polyglandular s., a series of symptoms believed to be due to pathologic action of several ductless glands. posterior cord s., sensory and ataxic phenomena derived from a lesion of the posterior columns, as in locomotor ataxia. posterolateral s., an ataxic and spasmodic condition due to lesion of the posterolateral elements of the spinal cord. Potain's s., dyspepsia with dilatation of the right ventricle and increase of the pulmonary sound: observed in

gastrectasis. Pozzi's s., leukorrhea and backache without enlargement of the uterus: characteristic of endometritis. Profichet's s., a gradual growth of calcareous nodules in the subcutaneous tissues (skin-stones), especially about the larger joints, with a tendency to ulceration or cicatrization, and attended by atrophic and nervous symptoms. Putnam-Dana s., a sclerosis of the lateral and dorsal columns of the spinal cord. radicular s., a syndrome evincing lesion of the roots of the spinal nerves. Ridley's s., tachycardia associated with troubles resembling asthma. Roger's s., a continuous excessive secretion of saliva as the result of cancer in the esophagus, or other esophageal irritation. Romberg-Paessler s., low bloodpressure, rapid heart action, tympanites, and shock: symptoms caused by dilatation of the blood-vessels in the splanchnic area. Rosenbach's s., paroxysmal tachycardia with gastric and respiratory complications. Roth's s., neuralgia paræsthetica; painful paresthesia of that part of the thigh supplied by the external cutaneous nerve.

Rust's s., stiff neck, stiff carriage of the head, with the necessity of grasping the head with both hands in lying down or rising up from a horizontal posture, occurring in phthisis, cancer, fracture of the spine, rheumatic or arthritic processes, or symphilitic periostitis. **Schauz's s.**, a series of symptom indicating spinal weakness, consisting of a sense of fatigue, pain on pressure over the spinous processes, pain on lying prone, and indications of spinal curvature. Schmidt's s., paralysis on one side, affecting the vocal cord, the velum palati, the trapezius muscle, and the sternocleidomastoid muscle, due to a lesion of the external branch of the spinal accessory nerve. **segmentary s.**, a syndrome evincing lesion of the gray matter of the spinal cord. Called also *meta*gray matter of the spinal cord. Called also metameric s. Simon's s., primary cancer of the female breast with metastasis to the hypophysis
and consequent polyuria. Spens's s. Same as
Stokes's s. Still-Chauffard s., Chauffard's syndrome. Stokes's s., bradycardia with epileptoid
or syncopal attacks, mainly dependent on sclerosis of the basilar and vertebral arteries. Called
also Adams-Stokes s. Tapia's s., unilateral
paralysis of the tongue and larynx, the velum
palati being unaffected. tegmental s., hemiplegia alternating with disordered eye movements. indicative of lesions of the tegmentum. ments, indicative of lesions of the tegmentum. thalamic s., a combination of the following symptoms: (1) Superficial persistent hemianesthesia; (2) mild hemiplegia; (3) mild hemiataxia and more or less complete astereognosis; (4) severe and persistent pains in the hemiplegic side; (5) choreo-athetoid movements in the members of the paralyzed side. Called also s. of Dejerine-Roussy. **Vernet's s.**, paralysis of the ninth, tenth, and eleventh cerebral nerves, marked by paralysis of the superior constriction of the pharynx and difficulty in swallowing solids; paralysis of the soft palate and fauces with anesthesia of these parts and of the pharynx, and loss of taste in the posterior third of the tongue; paralysis of the vocal cords and anesthesia of the larynx; paralysis of the sternocleidomastoid and trapezius muscles Vogt's s., athetosis, rhythmic oscillation of the limbs, spasmodic outbursts of laughing and crying, absence of paralysis, no disturbance of sensa-tion, no mental disturbance; a syndrome due to lesion of the corpus striatum. Called also syndrome of double athetosis and syndrome of corpus striatum. s. of Weber, paralysis of the limbs and of the hypoglossal nerve on one side, and of the oculomotor nerves on the other; caused by an injury or disease of the lower and inner part of a cerebral peduncle Weber-Gubler s., complete hemiplegia on the side opposite the lesion with oculomotor paralysis on the side of the lesion in disease of the cerebral peduncles. Weil's s., various derangements of antral and peripheral sensibility seen in tuber-culosis. Wernicke's s. See presbyophrenia. Widal s. See ictero-anemia.

syndromic (sin-dro'mik). Occurring as a syndrome.

Adhesion of the parts; especially, adhesion of the iris to the cornea or to the lens. annular s., circular s., adhesion of the whole rim of the iris to the lens. anterior s., adhesion of the iris to the lens. anterior s., adhesion of the iris to the cornea. posterior s., adhesion of the iris to the capsule of the lens. total s., adhesion of the whole surface of the iris to the lens.

synechotome (sin-ek'o-tōm) [Gr. συνέχεια synechia + τέμνειν to cut]. A cutting instrument for use in synechotomy.

synechotomy (sin-ek-ot'o-me) [Gr. συνέχεια synechia + τέμνειν to cut]. The operation of cutting a synechia.

synechtenterotomy (sin"ek-ten-ter-ot'o-me) [Gr. συνέχειν to hold together + ἔντερον bowel + τομή cut]. The division of an intestinal adhesion.

synecology (sin-e-kol'o-je) [Gr. σύν together + ecology]. The study of the environment of organisms in the mass, as distinguished from auto-ecology.

synencephalia (sin"en-sef-a'le-ah) [Gr. σύν together + ἐγκέφαλος brain]. A state in which there are two bodies and one head.

synencephalocele (sin-en-sef'al-o-sēl) [Gr. σίν to-gether + ἐγκέφαλος brain + κήλη tumor]. Encephalocele with adhesions to the adjoining parts.

synencephalus (sin-en-sef'al-us) [Gr. σύν together + ἐγκέφαλος brain]. A monster affected with synencephalia.

syneresis (sin-er'es-is). The contraction of a gel with the separation of some of its liquid, which liquid is a saturated solution of one of the materials of one of the phases (usually the solid phase) of the gel. This process is observed in the clotting of blood.

synergetic (sin-er-jet'ik). Working together: said of muscles which cooperate in performing an action.

synergia (sin-er'je-ah). 1. See synergy. 2. A proprietary preparation of digestive ferments.

synergic (sin-er'jik). Acting together or in harmony. See synergy.

synergist (sin'er-jist). 1. A medicine which aids or cooperates with another; an adjuvant. 2. An organ which acts in concert with another.

synergistic (sin-er-jist'ik). Acting with another medicine or agent.

synergy (sin'er-je) [L. syner'gia; Gr. σύν together + ἐργόν work]. Correlated action or coöperation on the part of two or more structures or drugs. In neurology, the faculty by which movements are properly grouped for the performance of acts requiring special adjustments.

synesthesia (sin-es-the'ze-ah) [Gr. σὑν together + αἴσθησις sensation]. The experience of a sensation in one place, due to stimulation applied to another place. s. al'gica, a painful synesthesia.

synesthesialgia (sin"es-the-ze-al'je-ah). A painful synesthesia.

synezesis (sin-ez-e'sis) [Gr. συνίζησις]. Contraction of the pupil of the eye.

syngamous (sin'gam-us) [Gr. συν with + γάμος marriage]. Having the sex of the individual determined at the time when the ovum is fertilized.

Syngamus (sin'gam-us). A genus of nematode worms. **3. kin'gi** has been found in human sputum. **3. trachea'lis**, the branch-worm, gapeworm, or red-worm which causes the gapes of chickens.

Syngamy (sin'gam-e) [Gr. $\sigma b \nu$ together + $\gamma \dot{a} \mu o s$ marriage]. 1. Sexual reproduction. 2. The union of the gametes in fertilization.

syngenesioplastic (sin-jen-e"se-o-plas'tik) [Gr.
σύν together + γένεσις origin + πλάσσειν to form].
A term applied to transplantation of tissue from
one individual to another related individual of the

same species, as from a mother into her child, or from a brother into a sister.

syngenesis (sin-jen'es-is) [Gr. σίν together + γένεσις origin]. The hypothetic principle that each germ contains in itself the germs of every generation that may be derived from it.

syngenetic (sin-jen-et'ik). Pertaining to syngenesis.
syngenic (sin-jen'ik) [Gr. σύν together + γεννᾶν to produce]. Same as congenital.

syngignoscism (sin-jig'no-sizm) [Gr. σύν together + γιγνώσκειν to know]. Hypnotism or hypnotic influence.

synizesis (sin-iz-e'sis) [Gr. σύν together + ζζειν to sit]. Closure. s. pupil'læ, closure of the pupils.

synkaryon (sin-kar'e-on) [Gr. σύν together + κάρυον nucleus]. The nucleus produced by the fusion of two pronuclei; the fertilization nucleus.

synkinesia (sin-kin-e'ze-ah). Synkinesis.

synkinesis (sin-kin-e'sis) [Gr. σύν with + κίνησιs movement]. An associated movement; an unintentional movement accompanying a volitional movement.

synkinetic (sin-kin-et'ik). Pertaining to or of the nature of synkinesis.

synneurosis (sin-nu-ro'sis) [Gr. σbν with + νεῦρον nerve]. The union of bodies in a ligament.

synocha, synochus (sin'o-kah, sin'o-kus) [L.; Gr. σύνοχος]. A continued fever.

synochal (sin'o-kal). Of or pertaining to synocha.
synococcus (si-no-kok'us) [Gr. σύν with + coccus].
A coccus said to occur along with the gonococcus in gonorrhea.

synocytotoxin (sin-o-si-to-tok'sin). Syncytotoxin. **synol** (si'nol). A proprietary liquid antiseptic soap.

synonym (sin'o-nim) [Gr. σύν with + ὅνομα name]. A word which has the same, or nearly the same, meaning as another word.

synophrys (sin-of'ris) [Gr. σύν together + δφρυs eyebrow]. The condition in which the eyebrows grow together.

synophthalmia (sin-of-thal'me-ah). Same as cyclopia.

synophthalmus (sin-of-thal'mus) [Gr. συν together + οφθαλμος eye]. Same as cyclops.

synopsy (sin'op-se) [Gr. $\sigma \dot{\nu} \nu$ together $+ \dot{\delta} \psi \iota s$ vision]. The abnormal suggestion of types of the human face or figure by the various numerals.

synorchidism (sin-or'kid-izm). Synorchism.

synorchism (sin'or-kizm) [Gr. σύν together + δρχις testicle]. Union or fusion of the testes.

synoscheos (sin-os'ke-os) [Gr. σbν together + δσχεον scrotum]. Adhesion between the penis and scrotum.

synosteology (sin"os-te-ol'o-je) [Gr. $\sigma b \nu$ together $+ \delta \sigma \tau \delta o \nu$ bone $+ \lambda \delta \gamma o s$ treatise]. The sum of knowledge regarding the joints and articulations.

synosteosis, synostosis (sin"os-te-o'sis, sin-osto'sis) [Gr. σύν together + ὁστέον bone]. The union of adjacent bones by means of osseous matter, such as ossification of their connecting cartilage (in such cases it is a normal condition and a form of synarthrodia); also of osseous union of bones that are normally separate. radio-ulnar s., bony fusion of the proximal ends of the radius and ulna. tribasilar s., fusion in infancy of the three bones at the base of the skull, producing idiocy.

synosteotomy (sin"os-te-ot'o-me) [Gr. $\sigma t \nu$ together $+ \delta \sigma \tau t \delta \nu$ bone $+ \tau o \mu \eta$ cut]. The dissection of the joints.

synostotic (sin-os-tot'ik). Pertaining to or marked by synostosis.

synotia (sin-o'she-ah) [Gr. σύν together + οῦς ear]. Teratic fusion of the ears.

synotus (sin-o'tus) [Gr. \(\sigma b\nu\) together + \(\sigma b\sigma \) ear].

A monster-fetus with fused ears.

synovectomy (sin-o-vek'to-me) [synovia + Gr. ἐκτομή excision]. Excision of a synovial membrane.

synovia (sin-o've-ah) [L.; Gr. σον with + φον egg]. The viscid fluid of a joint cavity, containing synovia, or mucin, and a small proportion of min-eral salts. It is a transparent, alkaline secretion resembling the white of an egg, and is contained in a joint cavity, bursa, or tendon-sheath.

synovial (sin-o've-al) [L. synovia'lis]. Of, or pertaining to, or secreting, synovia.

synovin (sin'o-vin). The mucin found in synovia. synoviparous (sin-o-vip'ar-us) [synovia par ere to produce]. Producing synovia.

synovitis (sin-o-vi'tis). Inflammation of a synovial membrane. It is usually painful, particularly on motion, and is characterized by a fluctuating swelling, due to effusion within a synovial sac. It may be caused by septic poisoning, an exanthematous disease, tuberculosis, syphilis, rheumatism, or other causes. It is treated by rest and counterirritation, and sometimes by drainage or bursal s., bursitis. dendritic s., that in which villous growths are developed within the sac. purulent s., that in which there is an effusion of pus in a synovial sac. simple s, that in which the effusion is clear or but slightly turbid. Synovitis is further qualified as dry, fibrinous, fungous, gonorrheal, hyperplastic, lipomatous, metritic, puerperal, rheumalic, scarlatinal, serous, syphilice, lendinous, luberculous, urethral, etc. vibration 8., synovitis produced by the passage of a missile through the tissues near a joint, but without actually wounding the joint.

syntaxis (sin-taks'is). Same as articulation.

syntenosis (sin-ten-o'sis) [Gr. σύν together + τένων tendon]. A hinge-joint surrounded by tendons.

synteresis (sin-ter-e'sis) [Gr. $\sigma b \nu$ together $+ \tau \eta \rho \epsilon \hat{\iota} \nu$ to watch over]. Preventive treatment; prophylaxis. syntexis (sin-teks'is) [Gr]. Wasting or emaciation.

synthaline (sin'thal-in) A proprietary derivative of guanidin used orally in diabetes to produce hyperglycemia.

synthermal (sin-ther mal) [Gr. σύν together + θέρμη heat]. Having the same temperature.

synthescope (sin'thes-kop) [Gr. σύνθησις placing together $+\sigma\kappa \delta\pi\epsilon\nu$ to view]. An instrument for observing the visible effect of placing two liquids in contact.

synthesis (\sin' thes-is) [Gr. $\sigma b \nu$ together $+ \tau \iota \theta \dot{e} \nu a \iota$ to put]. 1. The artificial building up of a chemic compound by the union of its elements. 2. The process of bringing back into consciousness activities or experiences that have become split off or disassociated. Cf. dissociation (3), and subcondisassociated. Cf. dissociation (3), and subconscious. 8. of continuity, union of the lips of a wound or the ends of a fractured bone.

synthetic (sin-thet'ik) [L. synthet'icus; Gr. συν-θετικόs]. Pertaining to, of the nature of, or produced by, synthesis; artificial.

synthetism (sin'thet-izm) [Gr. σύνθετος put together]. The complete treatment of a fracture.

synthol (sin'thol). A synthetic preparation proposed as a substitute for absolute alcohol.

syntonin (sin'to-nin). An acid metaprotein which precipitates from a gastric digestion mixture at or near the neutral point.

syntopie, syntopy (sin'to-pe) [Gr. οῦν together + τόπος place]. The position of an organ in relation to neighboring organs.

syntoxoid (sin-toks'oid). rntoxoid (sin-toks'oid). Any toxoid having exactly the same affinity for an antitoxin as that possessed by the associated toxin. See toxoid.

syntripsis (sin-trip'sis) [Gr. σύν together + τρίβειν to rub]. The comminution or crushing of a bone; comminuted fracture.

syntrophus (sin'tro-fus) [Gr. σύντροφος congenital]. Any congenital or inherited disease.

syntropic (sin-trop'ik) [Gr. σύν together + τρέπειν to turn]. 1. Turning or pointing in the same direction, as the ribs or the vertebral spines. 2. Pertaining to syntropy.

syntropy (sin'tro-pe) [Gr. συν together + τρόπος a turning]. The correlation of several factors, as the relation of certain physical characteristics or diseases to the development or incidence of other diseases.

synulosis (sin-u-lo'sis) [Gr. σύν together + ούλή scar]. Cicatrization.

symulotic (sin-u-lot'ik) [Gr. $\sigma \ell \nu$ with $+ o \ell \lambda \eta$ scar]. 1. Favoring cicatrization. 2. An agent that favors cicatrization.

Synura (sin-u'rah). A genus of flagellates which sometimes imparts an unpleasant taste to drinkingwater.

Syphacia (si-fa'se-ah). A genus of pinworms, species of which have been found in children in the Philippine Islands.

syphilelcosis (sif"el-el-ko'sis) [syphilis + Gr. έλκος ulcer]. Syphilitic ulceration,

syphilelcus (sif-el-el'kus) [syphilis + Gr. ελκος

ulcer]. A syphilitic ulcer,

syphilid, syphilide (sif'il-id, -īd) [Fr.]. Any skin affection of syphilitic origin. accuminate papular s., follicular syphilid, acneiform s., pustular syphilid. annular s., a syphilitic origin in ring-shaped patches. bullous s., a syphilitic eruption in the form of enlarged pustules. corymbose s., a form of syphilid consisting of large papules, each surrounded by a circle of small papules. ecthymatous s., pustular syphilid. erythematous s., syphilitic roseola; an eruption of reddish macules in the secondary stage. Called also macular s. flat papular s., lenticular syphilid. follicular s., a papular syphilid of the hair-follicles. Called also miliary syphilid and syphilide liches frambadoid syphilide liches and syphilitic lichen. frambesioid s., vegetating syphilid. **gummatous s.**, a gumma. **herpetiform s.**, vesicular syphilid in which the lesions are massed in irregular serpiginous forms. impetiginous s., a syphilid consisting of small pustules covered by yellowish or brownish crusts on the scalp. Called also syphilitic impetigo. lenticular s., a secondary eruption with condy-lomata, or moist, flat papules. miliary s., fol-licular syphilid. nodular s., tuberculous syphiloderm. nummular s. See papulosquamous s. palmar s., a syphilid on the hands. papular s., lichen syphiliticus. papulosquamous s., a cutaneous manifestation of tertiary syphilis consisting of scaly papules, pemphigoid s., syphilitic pemphigus. pigmentary s., syphilitic leukoderma. plantar s., a syphilid on the soles of the feet. pustular s., an ulcerating syphilid of the feet. **pustular s.**, an ulcerating syphilid, usually resulting in a pigmented scar or depression. rupial s., syphilitic rupia. secondary s., any syphilid peculiar to the secondary stage of syphilis. serpiginous s., a syphilid which spreads on one side while healing on the other. tertiary s., a syphilid occurring in the tertiary stage of syphilis. tubercular s., tuberculous syphiloderm. varicelliform s., a variety of vesicular syphilid in which the vesicles are situated on a raised surface, of a dull-red color, contain a cloudy fluid, and dry into thick, greenish crusts. varioliform s., pustular syphilid. vegetating s., a syphilid in the form of warty growths. vesicular s., a cutaneous manifestation of second-ary syphilid consisting of vesicles.

syphilidography (sif"il-id-og'raf-e). Same as syphilography.

syphilidologist (sif-il-id-ol'o-jist). Syphilologist. syphilimetry (sif-il-im'et-re) [syphilis + Gr. ultrosev to measure]. 1. The measurement of the intensity of the syphilitic infection at a given time. 2. See Vernes' lest, under lests.

syphilin (sif'il-in). 1. The contagious principle of syphilis. 2. Same as syphiline.

syphiline (sif'il-In). A concentrated glycerinated extract of the liver of a syphilitic fetus, used in testing for syphilis.

syphilinum (sif-il-i'num). A homeopathic preparation of the virus of syphilis.

syphilionthus (sif"il-e-on'thus) [syphilis + Gr lor00s cruption]. Any copper-colored scaly syphilid. syphiliphobia (sif"il-if-o'be-ah). Same as syphilophobia.

syphilis (sif'il-is). [Syphilus, the name of a shep-herd infected with the disease in the poem of Fracatorius (1530), in which the term first appears. According to some the word is derived from $\sigma b \nu$ together $+\varphi_i\lambda\epsilon\hat{\imath}\nu$ to love]. A contagious venereal disease leading to many structural and cutaneous lesions, due to a microorganism, the Spirochæ'ia pal'lida or Trepone'ma pal'lidum. It is generally propagated by direct venereal contact or by in-heritance. Its primary local seat is a hard or true chancre, whence it extends by means of the lymphatics to the skin, mucosa, and to nearly all the tissues of the body, even to the bones and periosteum. congenital s., hereditary s., syphilis existing at birth, whether derived from the male reproductive element or due to infection from the mother. It is characterized by coryza, cutaneous eruptions, wasting of the tissues, parenchymatous keratitis, malformed teeth, and craniotabes. constitutional s., syphilis after it has ceased to be a mere local manifestation, and has more or less com-pletely affected the whole organism. s. d'emblée (daw-bla'), syphilis which develops without the formation of an initial sore. equine s. Same as dourine. s. heredita'ria tar'da, syphilis believed to be hereditary, but not manifesting itself until some years after birth. s. innocen'tum, s. inson'tium, syphilis not acquired by coitus. s. oeconom'ica, syphilis acquired from some article of household use. primary s., syphilis in its first stage, the primary lesion (chancre) usually appears between ten and forty days after infection, and is painless; the nearby lymph-glands become hard and swollen, are painless, do not ulcerate, and slowly return to their normal condition. quaternary s., parasyphilis secondary s., syphilis in the second of its three stages. it begins after six weeks and usually within three months. It is attended with fever, copper-hued and multiform skin eruptions, with no itching, iritis, alopecia, mucous patches, and severe pains in the head, joints, and periosteum. tertiary s., the stage characterized by a set of peculiar skin affections, including rupia, gumma, syphilitic pemphigus, and ecthyma. The mucosa syphilitic pemphigus, and ecthyma. The mucosa is often deeply ulcerated. There is often a profound cachexia, with anemia, etc. Bone lesions are often present, and the internal viscera may become extensively diseased. Syphilis is principally treated by mercurials, hot baths, inunctions of mercury, and iodoform fumigations, etc. The iodids are serviceable chiefly in the tertiary stage. Sarsaparilla, stillingia, and other vegetable remedies are useful adjuvants. Iron and cod-liver oil are often valuable in cachectic conditions.

syphilitic (sif-il-it'ik) [L. syphilit'cus]. Affected with, caused by, or pertaining to, syphilis.

syphilization (sii''il-iz-a'shun). Inoculation with syphilis; attempted immunization against syphilis by implanting the disease in a mild form: it has also been tried as a cure for the disease.

syphiloderm (sif'il-o-derm) [syphilis + Gr. δέρμα skin]. Any syphilitic affection of the skin. Same as syphilid.

syphiloderma (sif-il-o-der'mah). Syphiloderm.
syphilodermatous (sif''il-o-der-mat'us). Of c

relating to a syphilid.

syphilodol (sif'il-o-dol). A proprietary preparation of silver, arsenic, and antimony, for the treatment of syphilis and other protozoal diseases.

syphilogenesis, syphilogeny (sif"il-o-jen'es-is, sif-il-oj'en-e) [syphilis + genesis]. The development of syphilis.

syphilographer (sif-il-og'ra-fer). One who writes, or has written, upon the subject of syphilis.

syphilography (sif-il-og'ra-fe) [syphilis + Gr. γράφειν to write].
 1. A treatise upon or description of syphilis.
 2. The bibliography of syphilis.

syphiloid (sif'il-oid). 1. Resembling syphilis. 2. Any disease resembling syphilis occurring as an epidemic at various times in certain countries.

syphilologist (sif-il-ol'o-jist). An expert in the theory or treatment of syphilis.

syphilology (sif-il-ol'o-je) [syphilis + Gr. λόγος treatise]. The sum of what is known regarding syphilis.

syphiloma (sif-il-o'mah), pl syphilo'mata. A tumor of syphilitic origin, a gumma.

syphilomania (sif''il-o-ma'ne-ah) [syphilis Gr. µavla madness]. Same as syphilophobia.

syphilopathy (sif-il-op'ath-e) [syphilis + Gr. πάθος disease]. Any syphilitic manifestation.

syphilophobia (sif"il-o-fo'be-ah) [syphilis + Gr. φ6βος fear]. Morbid fear of syphilis, or the unwarranted belief of a patient that he is suffering from syphilis.

syphilophobic (sif"il-o-fo'bik). Affected with syphilophobia.

syphilophyma (sif"il-o-fi'mah) [syphilis + Gr. φῦμα growth] Any syphilitic growth or excrescence.

syphilopsychosis (sif''il-o-si-ko'sis). Any syphilitic mental disease.

syphilosis (sif-il-o'sis). Generalized syphilitic disease.

syphilotropic (sif''il-o-trop'ik) [syphilis + Gr. $\tau \rho o \pi \dot{\eta}$ a turning]. Specially vulnerable to syphilis.

syphilous (sif'il-us). Syphilitic. syphionthus (sif-e-on'thus). Same as syphilionthus.

syphita (sif'it-ah). Same as somnambulism.

syphitoxin (sif-it-oks'in) [syphilis + toxin]. An antisyphilitic serum.

Syr. An abbreviation for syrupus.

syrgol (sir'gol). A brownish-black substance containing 20 per cent. silver in the form of a colloidal oxid; for local use in gonorrhea.

Syriac ulcer (sir'e-ak). Diphtheria.

syrigmophonia (sir-ig-mo-fo'ne-ah) [Gr. συριγμός whistle + φωνή voice]. A high, whistling sound of the voice.

syrigmus (sir-ig'mus) [Gr. συριγμός]. A ringing in the ears.

syringadenoma (sir-ing"ad-en-o'mah) [Gr. σῦριγξ pipe + adenoma]. Adenoma of the ducts of the sweat-glands

syringadenous (si-ring-ad'en-us) [Gr $\sigma \hat{v} \rho \nu \gamma \xi$ tube $+ \dot{a} \delta \hat{\eta} \nu$ gland]. Pertaining to the sweat-glands.

syringe (sir'ini) [L. sy'rinx; Gr σῦριγξ]. An instrument for injecting liquids into any vessel or cavity. Anel's s., a delicate syringe for the treatment of the lacrimal passages. Chip-s., a small, fine-nozled syringe for blowing away the cuttings while excavating a tooth cavity. David-son's s., one which is operated by the alternate compression and expansion of a soft bulb of indiarubber dental s., a small syringe with a curved point for use in dental work. fountain-s., an apparatus which injects a liquid by the action of gravity. hypodermic s., one by means of which liquids are injected through a hollow needle into the subcutaneous tissues. Luer's s., a glass syringe for intravenous and hypodermic use. Pravaz's s., a hypodermic needle fitted to a long, slender cannula and trocar. probe-s., a syringe whose point may be used also as a probe: used mostly in treating the lacrimal passages. pyorrhea s., a syringe having a fine nozzle for reaching pyorrhea pockets. tooth s., a dental syringe.

syringin (sir-in'jin). A white, crystalline glucosid, C₁₇H₂₄O₉, soluble in hot water and in hot alcohol, from the bark of lilac, Syrin'ga vulga'ris. It is used as an antiperiodic in malaria.

syringitis (sir-in-ji'tis) [Gr. σῦριγξ tube + -ιτις inflammation]. Inflammation of the eustachian tube. syringobulbia (si-rin-go-bul'be-ah) [Gr. σῦριγξ tube + βολβός bulb]. The presence of cavities in the medulla oblongata.

syringocele, syringocele (sir-in'go-sēl, sir'in-go-se'le) [Gr. σῦριγξ tube + κοιλία hollow]. The central canal of the myelon, or spinal cord

syringocystadenoma (sir-in"go-sis"tad-en-o'-mah) [Gr. σῦριγξ tube + cystadenoma]. Adenoma of the sweat-glands; a skin disease marked by an eruption of small, hard papules.

syringocystoma (si-rin"go-sis-to'mah) [Gr. σῦριγξ pipe + κύστις cyst + -ομα tumor]. A cystic tumor of the sweat-glands.

syringo-encephalia (si-ring"o-en-sef-a'le-ah) [Gr. σῦριγξ tube + ἐγκέφαλος brain]. The formation of abnormal cavities in the brain substance.

syringo-encephalomyelia (si-ring"o-en-sef"al-o-mi-e'le-ah) [Gr. σῦριγξ tube + ἐγκέφαλος brain + μύελος marrow]. The existence of cavities in the substance of the brain and spinal cord.

syringoid (sir-ing'oid) [L. syringoi'des, from Gr. σῦριγξ pipe + εἰδος form]. Resembling a pipe or tube; fistulous.

syringoma (sir-ing-o'mah). Adenoma of the sweat-glands.

syringomeningocele (sir-in"go-men-in'go-sēl) [Gr. σῦριγξ pipe + μῆνιγξ membrane + κήλη tumor]. A meningocele resembling a syringomyelocele.

syringomyelia (sir-in''go-mi-e'le-ah) [Gr. σῦριγξ tube + μυελός marrow]. The existence of abnormal cavities filled with liquid in the substance of the spinal cord. These cavities are surrounded by an abnormal tissue resembling that which is found normally surrounding the central canal. The disease is due to hemorrhage and consequent softening and necrosis, and is believed to be dependent on some defect of development. It occurs in adults between the ages of twenty and thirty years, and is marked by muscular atrophy, loss of the sense of temperature and pressure, and by various vasomotor and trophic disturbances. The hydromyelia of children is a similar condition. Syringomyelia is sometimes associated with true leprosy. **s. atroph'ica**, cavitary myelitis.

syringomyelitis (sir-in"go-mi-el-i'tis) [Gr. σῦριγξ tube + μυελός marrow + -ιτις inflammation]. Inflammation of the spinal cord, with the formation of cavities in its substance.

syringomyelocele (sir-in"go-mi'el-o-sēl) [Gr. $\sigma \hat{v} \rho$ - $\iota \gamma \xi$ tube $+ \mu \nu \epsilon \lambda \delta s$ marrow $+ \kappa \dot{\eta} \lambda \eta$ tumor]. Spina bifida in which the cavity of the protruding sac is connected with the central canal of the spinal cord.

syringomyelus (sir-in"go-mi'el-us) [Gr. σῦριγξ tube + μυελός marrow]. Dilatation of the central canal of the spinal cord, the gray matter being converted into connective tissue.

syringotome (sir-in'go-tōm) [Gr. σῦριγξ tube + τέμνειν to cut]. A knife for cutting a fistula.

syringotomy (sir-in-got'o-me) [Gr. σῦριγξ tube + τέμνειν to cut]. The operation of incising a fistula, particularly an anal fistula.

syrinx (sir inks) [Gr. σῦριγξ a pipe]. r. A tube or pipe; also a fistula. 2. That one of the two larynges of birds in which the voice is produced.

syrup (sir'up) [L. syru'pus, siru'pus; Arabic sharāb]. A concentrated aqueous solution of sugar, often medicated. The official syrups are described under the drug with which they are medicated, as rhubarh, squill, etc. brown s. (L. s. commu'nis, s. fus'cus), molasses or treacle. s. of calcium lactophosphate is made from calcium carbonate, lactic acid, and phosphoric acid. Dose, 2 fl.dr. (8 c.c.). s. of citric acid contains 1 per cent. of citric acid croup s., compound syrup of squill. s. of Dover's powder, syrup of ipecac and opium. Easton's s., syrup of phosphate of iron, quinin, and strychnin. hive s., compound syrup of squills. s. of hypophosphites, compound, contains in addition the hy-

pophosphites of iron and manganese, and also some strychnin. Jackson's pectoral s. See pectoral s. pectoral s., syrup of acacia flavored with sassafras and containing 3t gr. of morphin sulphate in every dram. s. of the phosphates of iron, quinin, and strychnin is made by mixing the corresponding glycerite with 3 volumes of syrup. Dose, I fl.dr. (4 c.c.). simple s., white s. (L. syru'pus or s. sim'plex), a solution of white sucrose (cane- or beet-sugar) in water.

syrupy (sir'u-pe). Resembling syrup; having the consistency of syrup.

sysomus (sis-o'mus). Syssomus.

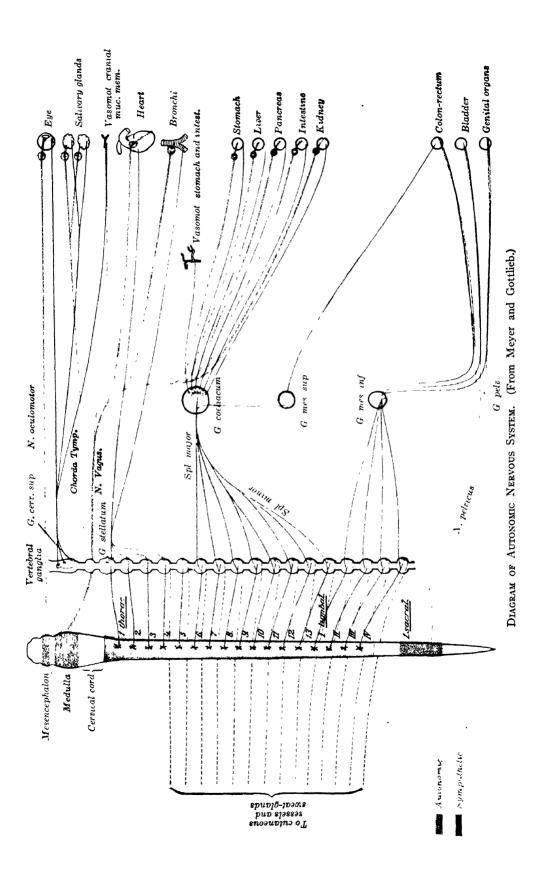

syssarcosic, syssarcotic (sis-sar-ko'sik, sis-sar-kot'ik). Pertaining to or of the nature of a syssarcosis.

Syssarcosis (sis-sar-ko'sis) [Gr. σύν together + σάρκωσις fleshy growth]. The union or connection of bones by means of muscle. An example is the connection between the hyoid bone and the lower jaw, the scapula, and the breast bone.

syssomus (sis-so'mus) [Gr. $\sigma \dot{\nu} \nu$ with $+ \sigma \hat{\omega} \mu \alpha$ body]. A twin monster with two heads and with the bodies united.

systaltic (sis-tal'tik) [Gr. συσταλτικός drawing together]. Alternately contracting and expanding. systatic (sis-tat'ik). Affecting several of the sensory faculties at the same time; also a disease so acting.

system (sis'tem) [L. syste'ma; Gr. σbστημα]. 1.
The whole bodily organism. 2. A set or series of parts or organs which unite in a common function. 3. A school or method of practice, as the Brunonian, Galenic, Eclectic, or Paracelsian system. absorbent s., the lymphatic system. accessory portal s. of Sapper a set of small cessory portal s. of Sappey, a set of small compensatory blood-vessels which are formed around the liver and gall-bladder in cases of cirrhosis. action s., the definite series of characteristic movements which an organism makes in adipose s. response to external stimulation. the adipose or fatty tissues of the body. alimentary s., the alimentary tract, together with the organs concerned in the digestion and absorption of food, as the salivary gland, liver, lacteals, etc. antagonistic s. See under autoreals, etc. antagonistic s. See under autonomic nervous s. association s., the set of tracts of fibers in the brain by means of which perceptions are associated and thought rendered possible. autonomic nervous s. (Langley), that portion of the nervous system which is inde-pendent of the cerebrospinal or central nervous system in that its nerve-fibers do not proceed directly from the nerve center to the organ controlled, but pass as neurons from the gray substance to a ganglion in which they encounter a break or "synapse," on the other side of which a postganglionic neuron proceeds to the organ controlled. The autonomic fibers regulate the action of the ductless glands, the viscera, blood-vessels, and all organs containing involuntary muscle. The autonomic system includes all of the sympathetic nervous system (called sympathetic autonomic) and fibers of the vagus nerve (called vagal autonomic). The action of the vagal autonomic is the opposite of that of the sympathetic, and the vagal autonomic is, therefore, known as the antagonistic system. Bertillon s., a system of identification based on various measurements of the body, color of the eyes, etc. blood-vascular s., the blood-vessels collectively. Borstal s., a system of treating criminals, especially juvenile ones, by removing them from evil environment and placing them under wholesome influences. case s., a system of teaching based on the logical analysis of and deductions formed from, reported cases. central nervous s., the brain and spinal cord. cerebellorubral s., a system of motor-fibers joining the dentate nucleus of the cerebellum with the red nucleus of the opposite side. cerebello-rubrospinal s., the cerebellorubral and rubrospinal systems considered together. cerebro-spinal s., the brain, spinal cord, and their

branches. chromaffin s. See chromaffin. circulatory s., the blood- and lymph-vessels and organs together; the vascular system. dentinal s., all the tubules radiating from a single pulp-cavity. dermal s., dermoid s., the skin and its appendages, including both the hair and the and its appendages, including both the nair and the nails. digestive s., the entire gastro-intestinal tract with its associated organs and glands, dioptric s., a system of lenses or of different diffractive media for refracting light. disperse s., dispersion s., a colloid solution. dosimetric s., a regular and determinate system of descriptions. dosage. endocrine s., the system of glands which elaborate internal secretions, including the thymus, thyroid, adrenals, pituitary, testicles, ovaries, etc. See endocrine. endothelial s. See reticulo-endothelial s. erythistic s., the excitory cells (Golgi Type I) of the central nervous system. esthesiodic s., the sensory apparatus of the spinal cord. glandular s., the glandular structures of the body considered together. haversian s., a set of canaliculi connected with each haversian canal; also the canaliculi of a bone collectively considered. hematopoletic s., the blood-making system, the spleen, and bone-marrow. hemolytopoietic s. See hemolytopoietic. heterogeneous s., any system or structure made up of mechanically separable parts, as an emulsion. homogeneous s., a system or structure the parts of which cannot be mechanically separate, as a solution. hormonopoietic s., the endocrine organs linked together in a reciprocally dependent system. intermediary s., the bony tissue in the spaces between the haversian system. interrenal s., the cortex of the suprarenal gland. kinesodic s., the motor elements of the spinal cord. kinetic s. 1. Crile's term for the system of organs through which latent energy is converted into heat and motion these organs are the brain, thyroid, liver, adrenals, pancreas, and the muscles. 2. Hunt's term for the motion systems of the efferent nervous mechanism, which subserve the various reflex, automatic-associated, and isolated synergetic types of movement. Cf. static s. kolytic s., the inhibiting cells (Golgi Type II) of the central nervous system. lymphatic s., a collective name for the lymphatic glands, vessels, sinuses and spaces, the lacteals, and the serous membranes. muscular s., all the muscles of the body considered together. neokinetic s. See neokinetic. nervous s., all the nerves and nerve-centers, nervous tissues, and ganglia considered together. paleokinetic s. See paleokinetic. palladal s., an efferent motor system of the corpus striatum, originating in the globus pallidus cells of the caudate and lenticular nuclei, the axones of which traverse the ansa lenticularis to the hypothalamic region. parasympathetic s., the autonomic nervous system. pedal s., the pyramidal tract, or caudate nucleus, and the anterior and posterior caudate fibers. Pinel's s., management of the insane without the use of forcible restraint. **plenum s.**, a system of ventilation based on the mechanical propulsion of air into the room. **portal s.**, the capillaries of the liver which convey venous blood from the portal vein into the hepatic vein. **posture s.** See *static* s. projection s., the system of tracts of nerve-fibers in the brain by means of which external objects are brought into consciousness. reticulo-endothelial s., Aschoff's name for a cell group with endothelial and reticular attributes and showing a common phagocytic behavior toward dye-stuffs. This group includes endothe-This group includes endothelial and reticular cells of the spleen, lymph, and hemolymph glands, the Kupfter cells of the liver, the reticulo-endothelium of bone-marrow, and the clasmatocytes. This system is concerned in phagocytic destruction of blood-cells and in the metabolism of iron and pigment, such as the formation of bile pigments from hemoglobin. rubrospinal s., the red nucleus, together with Monakow's bundle, by which the
former is connected with the opposite side of the

spinal cord. static s., Hunt's term for the various posture systems of motility which subserve the static or postural functions of the efferent nervous system, viz., tonus, posture, atti-tude, and equilibrium: distinguished from kinetic s. Called also posture s. sympathetic ner-vous s., the chain of nerve ganglia extending on each side of the spinal column, connected with each other and connected also with the spinal nerves. The sympathetic system supplies the involuntary muscles and has an intimate relation with vasomotion, secretion, and various tro-phic processes. The sympathetic system is phic processes. The sympathetic system is also known as the visceral or vegetative nervous system because the organs controlled by it functionate unconsciously. The sympathetic system shows an independence of action of the central nervous system and forms one of the autonomic systems, and is thus spoken of as the sympathetic autonomic system as contrasted with the vagal autonomic system. Cf. autonomic nervous system. transition s., a solution intermediate in character between a dispersoid and an emulsoid. urogential s., the organs of generation together with the kidneys, ureters, and bladder. uropoietic s., the kidneys, ureters, bladder, and urethra. vagal autonomic s. See autonomic nervous s. vascular s., the system of vessels of the body, especially the blood-vessels of the body. vasomotor s., that part of the nervous system which controls the blood-vessels. vegetative s., the sympathetic nervous system.

systema (sis-te'mah) [L.]. System.

systematic (sis-tem-at'ik) [Gr. συστηματικόs]. Pertaining or according to a system.

systematization (sis-tem-at-iz-a'shun). Arrangement according to a system. The term is used in psychiatry to indicate the arrangement of ideas into a logical sequence.

systematized (sis'tem-at-Izd). Made systematic or according to a system.

systematology (sis"tem-at-ol'o-je) [Gr. σύστημα system + λόγος discourse]. The doctrine or bibliography of systematic arrangements.

systemic (sis-tem'ik).
the body as a whole.

1. Pertaining to or affecting
2. Same as systematic.

systemoid (sis'tem-oid) [Gr. σύστημα system + είδος form]. I. Resembling a system. 2. Noting tumors made up of various kinds of tissue.

systogene (sis'to-jēn). Paraoxyphenylethylamin, OH C₆H₄(CH₂)₂NH₂.HCl, the aporrhegma, tyramin, derived from tyrosin by the loss of CO₂. The hydrochlorid of which is used like ergot and adrenalin. Dose, 0.25-1 c.c. of a 2 per cent. solution subcutaneously.

systole (sis'to-le) [Gr. συστολή contraction]. The period of the heart's contraction; also the contraction itself (cf. diastole). The term systole especially designates the contraction of the ventricles as distinguished from that of the auricles. It occurs synchronously with the first heart-sound, and by it the blood is driven into the aorta and pulmonary artery. aborted s., a systole not appreciable through the pulse on account of mitral regurgitation. s. alter'ans, hemisystole. anticipated s., a ventricular systole which occurs before the ventricle is filled. arterial s., the rhythmic contraction of an artery. auricular s., the contraction of the auricles by which the blood is forced from them into the ventricles: it precedes the true or ventricular systole. catalectic s., an aborted or imperfect systole. extra-s., a premature contraction of an auricle or ventricle, or of both, while the fundamental rhythm is maintained at the sinus. ventricular s., the contraction of the ventricles of the heart by which the blood is forced into the aorta and pulmonary artery.

systolic (sis-tol'ik). Pertaining to or produced by the systole; also occurring along with the ventricular systole. systolometer (sis-to-lom'et-er) [Gr. συστολή systole + μέτρον measure]. An instrument for determining the quality of the heart sounds.

systremma (sis-trem'ah) [Gr. σύστρεμμα twist, ball]. A cramp in the muscles of the calf of the leg. sysygial (siz-ij'e-al). Pertaining to syzygy.

syzygiology (siz-ij-e-ol'o-je) [Gr. συζυγιός bound together]. The study of the relationship of parts and functions as contrasted to that of isolated parts and functions.

Syzygium (siz-ij'e-um) [Gr. συζυγία yoke]. A genus of tropical myrtaceous trees. S. jambola'-num, the jambul-tree of India, is astringent. The seeds, which afford the glucosid antimellin, are used in diabetes. See jambul.

Symygy (siz'ij-e) [Gr. συζυγία conjunction]. 1. The conjunction and fusion of organs without loss of identity. 2. An animal microorganism supposed to be formed by the fusion of several larval parasites.

Szabo's test (sah'boz). See under tests.

T

T. An abbreviation for temperature and intraocular tension. Normal intra-ocular tension is
indicated by the symbol Tn, while T + 1, T + 2,
etc., indicate stages of increased tension, and T - 1,
T - 2, etc., stages of decreased tension. Tbandage. See bandage T-bar, an orthodontic
bar, shaped like the letter T, the leg being pushed
interproximally to the teeth and the cross-piece
resting on the surface of two adjoining teeth.
T-fiber, a fiber that grows at right angles from
the axis-cylinder process of a nerve-cell.

t. Abbreviation for temporal.

TA. Abbreviation for alkaline tuberculin.

Ta. The chemical symbol of tantalum.

T. A. B. Abbreviation for a vaccine which protects against typhoid, paratyphoid A, and paratyphoid B.

tabacism (tab'as-izm). Tabacosis.

tabacosis (tab-ak-o'sis) Poisoning by tobacco, and chiefly by the inhalation of tobacco dust; also a form of pneumonocomosis caused by tobacco dust.

tabacum (tab'ak-um). Latin for tobacco.

tabagism (tab'aj-izm). The condition produced by excessive use of tobacco; nicotinism.

tabanid (tab'an-id). Any gadily of the family *Taban'ida*, of which the genus *Taba'nus* is the type. Many of the species inflict painful bites upon men and animals.

Tabanus (tab-a'nus) [L. "gadfly"]. A genus of biting flies of the order Diptera. They transmit trypanosomes to the lower animals and may

transmit Filaria loa to
man. T. atra'tus is
the common black
"horse fly" of North
America. T. bovi'nus is the "gadfly" of
cattle in Asia, Africa,
and South America.
T. ditamia'tus, T.
fascia'tus, and T.
gra'tus are the "serut

Tabanus bovinus.

flies" of the Sudan which are very troublesome to man and beast.

tabardillo (tab-ar-dēl'yo) [Sp]. A form of typhus fever occurring in certain sections of Mexico.

tabasheer (tab-ash-ēr'). An abnormal substance obtained from the points of certain kinds of bamboo. It is used as a tonic, astringent, pectoral, etc.

tabatière anatomique (tah-bah-te-ār' ah-nah-to-meek') [Fr.]. The hollow on the back of the hand and at the base of the thumb, between the tendons of the extensor secundi and extensor primi internodii pollicis. Called also analomic snuff-box.

tabaxir (tab'aks-ēr). Tabasheer.

tabby-cat striation (tab'e). See striation.
tabefaction (tab-e-fak'shun) [L. tabefac'tio]. The
wasting of the body; tabes.

tabella (tab-el'ah), pl. tabel'læ [L.]. A medicated tablet or troche.

tabes (ta'bēz) [L.]. abes (ta'bez) [L.]. 1. Any wasting of the body; progressive atrophy of the body or a part of it. 2. Locomotor ataxia abortive t., rudimentary tabes correbral t. See general paresis, under paresis. cervical t., tabes dorsalis in which the upper extremities are first affected diabetic t., a peripheral neuritis occurring in diabetic patients with symptoms of locomotor ataxia; called also diabetic neurotabes. t. dorsa'lis, locomotor ataxia See ataxia. t. ergot'ica, a condition resembling tabes dorsalis, due to ergotism. het. inferior, tabes dorsalis affecting the lower extremities. interstitial t., tabes marked by a primary proliferation of the neuroglia, due to chronic thickening of the blood-vessels of the posterior columns. marantic t., tabes dorsalis marked by extreme emaciation. t. mesenter'ica, t. mesara'ica, tuberculosis of the mesenteric glands in children, resulting in digestive derangement and wasting of the body. monosymptomatic t., tabes dorsalis exhibiting a single symptom. nerve-t., tabes resulting from parenchymatous degeneration of the posterior columns of the spinal cord **peripheral t**. See pseudotabes **rudimentary t**., tabes dorsalis which shows only a few symptoms, the condition remaining stationary for a long time; called also abortive t. **spasmodic t**., Little's disease; lateral sclerosis of the spinal cord. See sclerosis.
spina/lis, locomotor ataxia. t. supe/ri t. supe'rior, cervical tabes. **vessel-t.**, tabes due to an obliterative endarteritis within a principal vessel supplying the posterior column.

tabescent (tab-es'ent) [L. tabes'cere to waste]. Wasting away; shriveling.

tabetic (tab-et'ik). Pertaining to or affected with tabes. t. foot, a foot that is distorted by tabes dorsalis.

tabetiform (tab-et'if-orm). Resembling tabes.

tabic (tab'ik). Same as tabetic.

tabid (tab'id) [L. tab'idus]. Tabetic; wasting away.

tabification (tab-if-ik-a'shun). Emaciation.

tablature (tab'lāt-ūr). The separation of the chief cranial bones into inner and outer tables, which are separated by a diploë.

table (ta'bl) [L. tab'ula]. A flat, bony plate or lamina; especially one of the lamellæ of the cranial bones. inner t., vitreous t., the inner layer of compact bony tissue of the principal bones of the skull, divided by the diploe from the outer table, or superficial layer. operating-t., a piece of furniture upon which a patient is laid during an operation. water t. See ground water, under water.

tablespoon (ta'bl-spoon). A large-sized spoon, containing about 4 fluidrams, or 15 cubic centimeters.

tablet (tab'let). A medicated troche or disk. poison t's, tablets stamped with the word poison

and a skull and cross-bones. t. saturates, tablets made of sugar of milk, acacia, and alcohol, which can be medicated by dropping upon them a definite quantity of liquid medicine. t. trturrates, tablets containing a triturated medicine.

tablier (tab'le-er). Hottentot apron. See under apron.

tablogestin (tab-lo-jes'tin). A solid form of chologestin put up in tablets.

tabloid (tab'loid). A form of medicinal tablet or lozenge. A proprietary word.

taboparalysis, taboparesis (tab-o-par-al'is-is, ta-bo-par-es'is). General paresis occurring concomitantly with tabes dorsalis.

tabophobia (ta-bo-fo'be-ah) [L. tabes + Gr. φόβοs fear]. A merbid fear of tabes.

tabular (tab'u-lar) [L. tab'ula a board or table]. Resembling or shaped like a table.

tabule (tab'ūl). A form of medicated tablet.

tacahout (tak-ah-hoot') [Arabic]. A kind of gall from tamarisk trees: a source of gallic acid.

tacamahac (tak'ah-ma-hak). A resin from various species of caulophyllum, Bursera, Icica, Fragara, and Populus.

tache (tahsh). French for spot. t. blanche (blawsh) [Fr. "white spot"], a white spot on the liver in certain infectious diseases. t. bleu-atre (bleu-ahtr') [Fr. "bluish spot"], a kind of bluish spot on the skin: said to occur in certain cases of typhoid fever; they are sometimes caused by lice. t. c6rébrale (sa-r-brahl') [Fr. "cerebral spot"], the meningeal streak; a congested streak produced by drawing the nail across the skin: a concomitant of various nervous or cerebral diseases. Ca led also t. méningéale. t. laiteuses. 1. Small spots, of a milky appearance, seen in the omentum of a newborn rabbit, made up of groups of vasoformative cells. 2. Lymphangeal nodules. t. méningéale. See t. cérébrale. t. motrice (mot-rēs') [Fr. "motor spot"], a kind of motor nerve-ending in which the nerve-fibril passes to a muscle-cell, where it ends in a slight enlargement. t. spinale (spe-hahl') [Fr. "spinal spot"], a bulla resembling a burn, and due to spinal-cord disease.

tacheometer (tak-e-om'et-er). Tachometer.

tachetée (tahsh-a-ta') [Fr]. Tachetic.

tachetic (tak-et'ik). Marked by spots or blotches. tachiol (tak'e-ol). Silver fluorid, AgF, a salt that has been highly recommended as an antiseptic.

tachistoscope (tak-is'to-skōp) [Gr. ταχύs swift + σκοπείν to view]. A kind of stereoscope in which vision is interrupted by a movable diaphragm.

tachogram (tak'o-gram) [Gr. τάχος speed + γράμμα mark]. A graphic record of the movement and velocity of the blood-current.

tachography (tak-og'raf-e) [Gr τάχος speed + γράφειν to write]. The recording of the speed of the blood-current.

tachometer (tak-om'et-er) [Gr. τάχος speed + μέτρον measure]. Same as hemotachometer.

tachycardia (tak-ik-ar'de-ah) [Gr. ταχίν swift + καρδία heart]. Excessive rapidity in the action of the heart. The term is usually applied to a pulse-rate above 130 per minute. auricular t., auricular flutter. See under flutter essential t., that which is paroxysmal and is due to a cardiac neurosis. paroxysmal t., a condition marked by attacks of excessively rapid heart action which come on abruptly and terminate just as abruptly. reflex t., rapid action of the heart caused by disturbances somewhere else than in the circulatory apparatus. t. strumo'sa exophthal'mica, exophthalmic goiter.

tachycardiae (tak-ik-ar'de-ak). Pertaining to or affected with tachycardia.

tachymeter (tak-im'et-er) [Gr. ταχύς swift + μέτρον measure]. Any instrument for measuring rapidity of motion of any body.

tachyphagia (tak-e-fa'je-ah) [Gr. ταχύς swift + φαγεῖν to eat]. Rapid eating.

tachyphasia (tak-e-fa'ze-ah) [Gr. ταχύς swift + φάσις speech]. Tachyphrasia.

tachyphemia (tak-e-fe'me-ah) [Gr. ταχύς swift + φημη speech]. Tachyphrasia.

tachyphrasia (tak-if-ra'ze-ah) [Gr. ταχύs swift + φράσιs speech]. Extreme volubility of speech: sometimes a sign of mental disorder.

tachyphrenia (tak-if-re'ne-ah) [Gr. ταχύς swift + φρήν mind]. Morbid mental activity.

tachyphylaxis (tak"e-fi-lak'sis) [Gr. τάχις swift + phylaxis]. Rapid immunization from the effect of toxic doses of an extract by previous injection of small doses of the same (Gley, 1911).

tachypnea, tachypnœa (tak-ip-ne'ah) [Gr. ταχύs swift + πνοῖα breath]. Excessive rapidity of respiration; a respiratory neurosis marked by quick, shallow breathing.

tachyrhythmia (tak-e-rith'me-ah) [Gr. ταχύς swift + ρυθμός rhythm]. Tachycardia.

tachysan (tak'e-san). A mercury containing dye used by intravenous injection in syphilis and septicemia.

tachysystole (tak-e-sis'to-le) [Gr. ταχίς swift + systole]. Abnormally rapid systole; extrasystole. auricular t., auricular flutter. See under flutter.

tacosis (ta-ko'sis). See takosis.
tactile (tak'tīl) [L. tac'tulss]. Pertaining to the touch. t. colls, t. corpuscles. See corpuscle. t. irritability, a condition of cells that repels foreign matters; negative chemotaxis.

tactilogical (tak-til-oj'ik-al). Pertaining to touch; tactual.

taction (tak'shun) [L. tac'tio]. 1. A touch; an act of touching. 2. The sense of touch; perception by the touch.

tactometer (tak-tom'et-er) [L. tac'tus touch + me'trum measure]. An instrument for measuring the acuteness of the sense of touch; an esthesiometer.

tactor (tak'tor). A tactile end-organ.

tactual (takt'u-al) [L. tac'tus touch]. Pertaining to or accomplished by the touch.

tactus eruditus (tak'tus er-u-di'tus) [L. "skilled touch"]. Delicacy of touch acquired by practice. Called also tactus expertus.

tendium vita (te'de-um vi'ta) [L. "weariness of life"]. Morbid disgust with life, leading to a suicidal tendency.

Tenia, tenia (te'ne-ah), pl. tan'ıa [L. "a flat band," "bandage," "tape"]. 1. A flat strip, especially of nerve-substance. 2. A genus of tapeworms. See tapeworm. t. acus'tice, a number of white lines running across the auditory eminence of the fourth ventricle of the brain. Known also as stria medullares. T. africa'na, a tapeworm resembling T. sagina'ta, found twice in negroes of German East Africa. T. bru'nerri, a species found in Algeria. t. choroi'dea [B N A], the line of attachment of the lateral choroid plexus to the medial wall of the cerebral hemisphere. t. cine'rea [L. "little gray ribbon"]. A band of gray matter on the floor of the fourth ventricle outside the stria medullares. t. co'li [B N A], any of the three bands formed by the longitudinal muscular fibers of the large intestine: these are the t. mesocol'ica, corresponding to the insertion of the mesentery; the t. lib'era, opposite to the previous one; and the t. omenta'lis, corresponding to the place of adhesion of the omentum to the transverse colon. T. confu'sa, a species found in Lincoln, Nebraska. T. crassicol'lis, a species found in cats which passes its encysted stage in the liver of rats, where it produces sarcomas. T. cucur'bitum. Same as T. saginala. T. demararien'sis, a South American tapeworm, rarely observed in man. T. echinococ'ous, the dog tapeworm; a species about 4 or 5 mm. long, found in the adult form in

the intestine of dogs, and in the larval form (echinococcus) in the tissues of man and certain animals. It is the cause of the echinococcus cyst, which is the structure in which the larval form is embedded. See echinococcus. T. ellip'tica, a species measuring from 6 to 12 inches, lip'tica, a species measuring from 0 to 12 ments, occurring in the intestines of dogs and cats. T. fenestra'ta, a tapeworm the segments of which have burst and have discharged their eggs, leaving a ring of tissue only. t. fim'brise [B N A], the edge of the fimbria hippocampi after the chemical planus is removed to for nicis the choroid plexus is removed. t. for nicis [B N A], the line of attachment of the lateral choroid plexus to the fimbria of the fornix. fus'ca, a tapeworm of which the segments are more or less fused or consolidated. t. hippocam'pi [B N A], the corpus fimbriatum. T. hom'inis, a tapeworm found once in Aschabad in a girl. t. lib'era [B N A]. See under t. coli. T. madagascarien'sis, a tapeworm discovered in madagascarien'sis, a tapeworm discovered in Madagascar. T. margina'ta, a small cestode, 1.5-4 meters in length, found in dogs. T. mediocanella'ta. See T. saginata. t. mesocol'ica. See under t. coli. T. na'na. Same as Hymenolepis nana. t. omenta'lis [B N A]. See under t. coli. T. philippi'na, a species found in the Philippines. T. pisifor'mis, a tapeworm of dogs, reported to have been found in man. t. pon'tis, a bundle of fibers extending from the furrow between the superior and middle peduncles of the cerebellum. outward and middle peduncles of the cerebellum, outward and downward in front of the pons, on the surface of the crusta, into the sulcus pedunculi medialis. t. pylo'ri, any of the bands composed of muscle tissue extending longitudinally on the pylorus. T. sagina'ta, the common tapeworm of man, a species from 12 to 25 feet long, found in the adult form in the human intestine, and in the larval state (Cysticercus bovis) in the muscles and other organs of the ox. It is known as the beef-tapeworm and fat-tapeworm, and is also called T. mediocanel-lata. t. semicircula'ris. See stria termina'lis. T. so'lium, the pork-tapeworm, or armed tapeworm, a species 3 to 6 feet long, found in the intestine of man, and in the larval state in the muscles of the hog. Its head is armed with a double row of hooklets. It gains access to the human intestine through the eating inadequately cooked or measly pork. It is rare in America, but common in certain parts of Europe. Called also T. cellulo'sa. T. tæniafor'mis, a tapeworm of cats, which may possibly be present in man. t. tec'tse, bundles of fibers passing over the upper surface of the corpus callosum, under cover of the gyrus fornicatus, and running backward over the splenium to the isthmus of the gyrus fornicatus and uncinate convolution. Called also striæ tectæ t. termina'lis, a muscular band forming part of the musculature of the auricle of the heart. t. thal'ami [B N A], the line of attachment of the tela choroidea of the third ventricle to the dorsal margin of the thalamus. t. tu'bs, the thickened band of the perioneum along the upper border of the oviduct. t. ventric'uli quar'ti [B N A], a line marking the junction of the epithelial part of the roof with the nerve substance in the fourth ventricle. t. ventric'uli ter'tli, stria medul-laris. t. viola'cea, a bluish stripe running longitudinally in the floor of the fourth ventricle on either side.

teniacide, teniafuge. See teniacide, teniafuge. Tæniarhynchus (te"ne-ah-ring kus). A genus of tapeworms resembling Tænia, but with a rudimentary and unarmed rostellum. For species see under Tænia.

tæniasis (te-ni'as-is). See teniasis.

tæniola (te-ni'o-lah). A slender band-like structure.

Abbreviation for German Tuberculin Albumose Frei, or albumose-free tuberculin.

tag, diagnosis. A tag attached to the dead and

wounded after an engagement, identifying them and the nature of their injuries.

tagatose (tag'at-ōs). A ketohexose, CH (CHOH)₃.CO.CH₂OH, isomeric with levulose.

Tagetes (taj-e'tēz) [L.]. A genus of composite-flowered plants. T. erec'ta, African marigold, and T. pat'ula, French marigold, have the properties of calendula.

tagliacotian (tah"le-ak-o'she-an). Named in honor of Gasparo Tagliacozzi, professor in Bologna, 1546-1599. t. operation. See under rhinoplasty.

tagma (tag'mah), pl. tag'mata [Gr. τάγμα a thing arranged]. An aggregate of molecules; the ultimate molecular mass of protoplasm. See micelle.

tagulawaya (tag"oo-lah-wa'yah). A yellowish oil prepared by boiling the bark of Parame'ria vulnera'ria in cocoanut oil; a vulnerary for external

tahaga (tah-hah'gah). A disease of camels in Algeria caused by Trypanosoma evansi. It is very similar to surra.

tail (tail) [L. cau'da]. A cauda, or slender appendage. See cauda. t.-fold, a fold in the early embryo ensheathing the hind-gut. t.-gut, a prolongation of the archenteron into the tail of the early embryo. t. of an incision, the beginning and end of a surgical incision which does not go through the whole skin. t. of a muscle, the tapering, attached end of a muscle. t. of the pancreas, the splenic end of the pancreas.

tailors' spasm (ta'lerz). See spasm.

Tait's knot, law, operation (tats) [Lawson Tait, English surgeon, 1845-1899]. See knot, law, and operation.

taka-diastase (tah-kah-di'as-täs) [Jokichi Takamine, Japanese chemist in New York, 1859-1922] A diastatic ferment formed by the action of the spores of the fungus Aspergil'lus ory'zæ on the bran of wheat. It is a yellowish powder, used as a digestant, especially in cases dependent upon gastric hyperacidity or deficiency of saliva. Dose, \(\frac{1}{2}-5\) gr. (0.03-0.333 gm.).

taka-koji (tah-kah-ko'je). A diastatic substance used in the preparation of taka-diastase. It is developed in cultures of taka-moashi.

taka-moashi (tah"kah-mo-ah'she). A Japanese rice fungus, Aspergil'lus ory'zæ: used in the preparation of diastase as a digestant.

takosis (ta-ko'sis) [Gr. τήκειν to cause wasting]. A contagious disease of goats caused by the Micrococ'cus capri'nus.

Tal. Abbreviation for L. tal'is, such a one.

talalgia (tal-al'je-ah) [L. tal'us ankle + Gr. αλγος pain]. Pain in the heel or ankle.

Talauma elegans (tal-aw'mah el'e-ganz). A plant of Java, valued as a stomachic, antispasmodic, and antihysteric remedy.

talc, talcum (talk, tal'kum) [L. tal'cum]. Powdered soapstone; a soft unctuous mineral used as a dusting-powder and as a filtering agent. It is native hydrous magnesium silicate, 3MgO 4SiO2.-

taliacotian (tal"e-ak-o'shan). Tagliacotian.

taliped (tal'ip-ed). Club-footed; also a club-footed person.

talipedic (tal-ip-e'dik). Club-footed. talipes (tal'ip-ez) [L. for club-foot]. a deformity of the foot in which it is twisted out of shape or position. t. arcua'tus, a foot with an abnormally high arch. t. calcaneoval'gus, a form of talipes combining talipes calcaneus and talipes valgus. t. calcaneova'rus, a combination of talipes calcaneus and talipes varus. t. calca'neus, club-foot in which the patient walks on the heel, the toes being elevated. It is frequently caused by infantile paralysis of the muscles of the tendo achillis. t. ca'vus, exaggeration of the plantar arch of the foot, due to contraction of the plantar

fascia. t. equinoval'gus, combined talipes equinus and talipes valgus. t. equinova'rus, a variety combining the features of talipes varus and talipes equinus. t. equi'nus, that in which the patient walks on the toes or the anterior part of one or both of his feet. It is due to elevation of the heel by contraction of the tendo Achillis. t. perca'-vus, extreme plantar curvature. t. planoval'-gus, valgus combined with flattening of the plantar arch and of the instep. t. pla'nus, flat-foot or splay-foot: a condition in which the arch of the

instep is decreased or wanting. It is due to long-continued standing. **spasmodic** t., talipes produced by sprain of the muscles. t. val'gus, club-foot in which the patient walks on the inner border of the foot, the sole being turned outward. t. va'rus, that in which the patient walks on the outer border of the foot, the sole being turned inward.

talipomanus (tal-ip-om'an-us) [I. tal'ipes club-foot + ma'nus hand]. Club-hand; a deformity of the hand in which it is twisted out of shape or position. It usually consists of strong flexion and adduction of the hand.

Tallerman's apparatus (tal'er-manz) [Lewis A. Tallerman, contemporary English inventor]. See apparatus.

tallianine (tal-i'an-In). A proprietary preparation for veterinary use in infections of various sorts.

tallow (tal'o). See suet. bayberry t., a fat obtained from the berries of the wax myrtle (Myrica cerifera).

Tallqvist's scale (tahl'kvists) [Theodor Waldemar Tallqvist, Finnish physician, born 1871]. See under scale.

Talma's disease, operation (tal'mahz) [Sape Talma, physician in Utrecht, 1847-1918]. See disease, etc.

talocalcanean (ta"lo-kal-ka'ne-an) [L. ta'lus ankle + calca'neum heel-bone]. Pertaining to the astragalus and the calcaneum.

talocrural (ta-lo-kru'ral) [L. ta'lus ankle + crus legl. Pertaining to the astragalus and the legbones. t.-joint, the joint between the leg-bones and the astragalus.

talofibular (ta-lo-fib'u-lar). Pertaining to the astragalus and the fibula.

talon (tal'on) [L. "bird's claw"]. A low cusp or posterior prolongation of a molar tooth.

talonavicular (ta"lo-nav-ik'u-lar). Pertaining to the astragalus and the navicular or scaphoid bone.

talonid (tal'o-nid). The posterior part of a lower molar tooth.

taloscaphoid (ta-lo-ska'foid). Pertaining to the astragalus and the scaphoid bone.

talose (ta'lōs). An aldehyd hexose, CH₂OH-(CHOH)₄CHO, isomeric with dextrose.

talotibial (ta-lo-tib'e-al). Pertaining to the astragalus and the tibia.

talus (ta'lus) [L. "ankle"]. 1. [B N A] The astragalus, or ankle-bone. 2. The ankle.

tama (ta'mah) [L.]. Swelling of the feet and legs.

tamaquare (tam-ak-wa're). A preparation used for clearing opacities of the cornea.

tamar indien (tah-mar' ahn-de-aw') [Fr. "Indian palm"]. A proprietary laxative confection.

tamarack (tam'ar-ak). The hackmatack, a larch tree of North America: its bark is astringent and stimulant to the mucous membranes. Dose of fluidextract, 30-80 min. (2-5.333 c.c.).

tamarind (tam'ar-ind) [L. tamarin'dus, from Arabic tamr Hindi Indian date]. The leguminous tropical tree, Tamarin'dus in'dica, and its laxative and cooling fruit or seed-pod. The tamarind of commerce and pharmacy is the pulp of these pods, either alone or preserved in syrup or sugar. An infusion of this pulp in cold water is a refrigerant drink useful in fevers. The pulp is also an ingredient of the confection of senna. Dose, freely.

tamarindus (tam-ar-in'dus). 1. Latin for tamarind.
2. The preserved pulp of the fruit of the tamarind: refrigerant and laxative.

tambour (tam-boor') [Fr. for "drum"]. A drumshaped appliance used in transmitting movements in a recording instrument. It consists of a cylinder having an elastic membrane stretched over it, and to which passes a tube that transmits the air. It is connected with a recording apparatus.

tambours à repulsion [Fr.]. A system of recording tambours.

tampan (tam'pan). See Argas persicus and Ornithodorus moubata.

tampicin (tam'pis-in). An amorphous resin, C₃₄H₅₄O₁₄, from Tampico jalap, *Ipoma'a sim'-ulans*.

tampon (tam'pon) [Fr.]. A plug made of cotton, sponge, or oakum. variously used in surgery to plug the nose, vagina, etc., for the control of hemorrhage or the absorption of secretions. t. action. See buffer action. Dührssen's t., tamponade of the vagina with iodoform gauze in uterine hemorrhage. kite-tail t., a tampon made up of several pledgets tied to a string at intervals. t.-screw, an instrument with a screwpoint for removing a tampon. tracheal t., an inflatable rubber bag surrounding a tracheotomy tube: used to prevent the entrance of blood into the trachea in operations on the mouth and nose. Trendelenburg's t., an inflatable bag of rubber surrounding a tracheotomy tube: used for preventing the escape of blood down the sides of the tube

tamponade (tam-pon-ād') [Fr. lamponnade]. The surgical use of the tampon. heart t., acute compression of the heart due to the collection of blood in the pericardium from rupture of the heart.

tamponage (tam'pon-āg). Tamponade.

tamponing (tam'pon-ing). Tamponade.

tamponment (tam-pon'ment). The act of plugging with a tampon.

Tamus (ta'mus) [L.]. A genus of dioscoreaceous plants. *T. commu'nis* is an old-world plant called black bryony: used homeopathically.

tan (tan). 1. To color or become of a brownish color from exposure to sun and wind. 2. The brownish

color of the skin and hands acquired by exposure to the sun and air.

TANACETUM

tanacetum (tan-as-e'tum). Latin for tansy.

tanaka (tan-ak'ah). The plant Dige'nia sim'plex of Japan: used as a vermifuge.

tanalum (tan-al'um). Aluminum tannotartrate: used in diseases of the nose and throat.

tanformal (tan-for'mal). A proprietary intestinal astringent and disinfectant claimed to be a chemical combination of tannin, phenol, and formaldehyd.

tang (tang). A projecting shank on a dental appliance

tanghin (tan'gen). The apocynaceous tree, Cer'-bera tang'hin, of Madagascar, and its exceedingly poisonous seed also an extract prepared from it.

tanghinin (tan'gin-in). An alkaloid, C₁₀H₁₀, occurring in colorless crystals, from Tanghin'ia venenif'era. It is soluble in alcohol and ether, and sparingly soluble in water. It is an extremely poisonous cardiant: used like strophanthin.

tangle (tang'l). See Laminaria.

nk. An artificial receptacle for liquids. acti-vated sludge t., a tank through which sewage flows slowly or intermittently while compressed air is allowed to bubble up through it. anaërobic t. See septic t. biologic t., a modified septic tank. digestion or Emsher or Imhoff t., a deep septic tank in which the sludge is separated and submitted to septic action without making the rest of the sewage offensive Dortmund t., a deep vertical flow settling tank for removing sludge from sewage. hydrolytic t. See septic t septic t., a tank for the receipt of sewage, there to remain for a time in order that the solid matter may settle out and a certain amount of putrefaction occur from the action of the anaerobic bacteria present in the sewage. Called also anaerobic t. and hydrolytic t. settling t., a basin in which the rate of flow of the sewage is reduced and the sludge allowed to settle out.

tannal (tan'al). Aluminum tannate. insoluble t., basic aluminum tannate; a brown-yellow powder, Al₂(OH)₄(C₁₄H₉O₉)₂+10H₂O; an astringent useful in catarrhal affections of the eye and soluble t., aluminum respiratory organs. tannotartrate; a yellowish-brown powder, Al₂- $(C_4H_6O_6)_2(C_{14}H_9O_9)_2+6H_2O$: an astringent.

tannalbin (tan-al'bin). Exsiccated tannin albuminate; a patented reddish-brown powder prepared from tannin and albumin. an intestinal astringent in catarrh of the bowels, diarrheas, etc. 15-30 gr. (1-2 gm.). veterinary t., a form of tannalbin adapted to veterinary practice.

tannalin (tan'al-in). A formaldehyd solution.

tannaphthol (tan-naf'thol). A proprietary condensation product of tannin albuminate and benzonaphthol. used in dysentery and diarrhea, and externally as a dusting-powder for wounds. Dose, 10-20 gr. (0.6-1.2 gm.).

A compound of tannin, tannargan (tan-ar'gan). silver, and albumin, used in diarrhea, dysentery, and gastro-enteritis.

tannase (tan'ās). A zymase found in various tannin-bearing plants and produced in cultures by Aspergil'lus ni'ger and Penscil'lium glau'cum.

tannate (tan'āt) [L. tan'nas]. Any salt of tannic acid: all the tannates are astringent.

tannic acid (tan'ik). See acid and tannin.

tannigen (tan'ij-en). Tannin diacetylate, or diacetyl-tannin; an acetic ester of tannic acid, C₁₄H₅(COCH₃)₂O₉ a patented yellowish-gray, tasteless powder, insoluble in water, but soluble in alco-hol and slightly in ether. It is used as an intestinal astringent in chronic diarrhea, and locally in rhinitis, pharyngitis, etc. Dose, 2-8 gr. (0.125-0.5 gm).

tannin (tan'in). 1. A glucosid which on hydrolysis yields glucose and tannic acid. 2. Tannic acid;

any one of a series of acids having mostly the formula C14H10O9; especially the variety known as gallotannic acid, and derived from galls. It is used externally as an astringent styptic and hemostatic; internally as an astringent in atonic diartheas. Dose, 1-10 gr. (0.066-0.066 gm.). t. albuminate exsiccata. Same as albutannin. buminate exsiccata. diacetyl-t., t. diacetylate. Same as tannigen. pathologic t., any tannin derived from galls, or vegetable excrescences due to a local disease of the physiologic t., any tannin normally plant. produced by a healthy plant.

tannin-aleuronat (tan"in-al-u'ro-nat). An astringent combination of albumin and tannic acid.

tannisan (tan'is-an). A proprietary form of tannin albuminate.

tannismuth (tan'iz-muth). A proprietary prepara-tion of bismuth ditannate. It is a light yellow powder containing 17 to 21 per cent. of bismuth.

tannisol (tan'is-ol). A brownish powder, methyleneditannic acid used as an astringent. Dose, 2-8 gr. (0.125-0.5 gm).

tannivital (tan-iv-i'tal). A proprietary form of methylene ditannin.

tannocasum (tan-o-ka'sum). A light-gray, solid casein tannate: an antisoptic internal astringent.

tannochloral (tan-o-klo'ral). Captol; a preparation of tannin and chloral hydrate: antiparasitic and astringent.

tannochrom (tan'o-krōm). A preparation containing 50 per cent. of resorcin-chromium bitannate. used as a dusting-powder.

tannocol (tan'o-kol). A combination of equal parts of tannin and gelatin: used as an intestinal astringent.

tannoform (tan'o-form). Methylene-ditannin, CH₂(C₁₄H₉O₉)₂, a bulky, pinkish, insoluble powder prepared from formaldehyd and gallotannic acid. It is insoluble in water, but soluble in alkaline solutions. It is used as an astringent and antiseptic for external or internal use—externally in skin diseases, burns, hyperhidrosis, pruritus, hemorrholds, ozena, etc.; internally in chronic diarrhea. Dose, 3½-8 gr. (0.25-0.5 gm). patented.

tannogelatin (tan-o-jel'at-in). A precipitate formed in testing urine for tannin by means of gelatin.

tannoguaiaform (tan-no-gwi'af-orm). A preparation of guaiacol, tannin, and formaldehyd used as an astringent and antiseptic in intestinal tuberculosis.

tannokresoform (tan-o-kre'so-form). A compound of tannin and cresoform, used as an antiseptic internally and externally.

tannon (tan'on). Tannopin; a derivative of tannin and urotropin; a light-brown, tasteless powder, $(CH_2)_6N_4$, $(C_{14}H_{10}O_9)_3$, nearly insoluble in water, alcohol, and ether, but soluble in alkaline solutions. It is an intestinal astringent: used in enteritis and typhoid fever. Dose, 3-15 gr. (0.2-1 gm.).

tannopin (tan'o-pin). Same as tannon.

tannopumilin (tan-o-pu'mil-in). A proprietary preparation containing oil of Pi'mus pumil'io (templin oil) and digallic acid used in skin diseases.

tannopumilio (tan"o-pu-mil'e-o). A compound of digallic acid with the terpene of Pi'nus pumil'10: used in skin diseases.

tannosal (tan'o-sal). Same as creosal.

tannothymal (tan-o-thi'mal). An intestinal astringent; a product of formaldehyd, tannic acid, and thymol. Dose, 5-15 gr. (0.33-1 gm.).

tannyl (tan'il). A grayish-brown powder, a tannin compound of oxychlorcasein, used as an intestinal astringent. Dose, 15-45 gr. (1-3 gm). t. acetate, acetyltannic acid.

tanphenyform (tan-fen 'if-orm). A proprietary preparation of tannin albuminate, hexamethylenamin, and salol.

tanret (tahn-ra'). Tanret's reagent; potassium iodohydrargyrate: used as a test for albumin.

Tanret's test (tahn-rāz') [Charles Tanret, French physician, 19th century]. See under tests.

tansan (tan'san). A natural mineral water from a spring near Kobe, in Japan: used in nutritional disorders.

Tansini's operation, sign (tan-se'nēz) [Iginio Tansini, Italian surgeon, born 1855]. See under operation and sign.

tansy (tan'ze) [L. tanace'tum] The herb Tanace'tum vulga're, a composite plant of the United States. Its leaves and tops (tanace'tum) contain tanacetin, tannic acid, and an essential oil, and are diuretic, emmenagogue, and anthelmintic. Its bitter, volatile oil is a poisonous agent, paralyzing the muscles of respiration and deglutition, and causing vomiting, pain in the abdomen, convulsions, and death. Dose of oil, 1-3 min. (0.066-0.2 c.c.); of fluidext act, 20-60 min. (1.3-4 c.c.).

tantalum (tan'tal-um). A rare metallic element; symbol, Ta; atomic weight, 181.5.

taon (tah-on'). Infantile beriberi occurring in the Philippine Islands.

tap (tap). 1. A quick, light blow. 2. To empty by paracentesis. front t.; a tap on the muscles of the front of the leg, producing contraction of the muscles of the calf in spinal irritability.

tap (tahp). A variety of East Indian jungle-fever.

tapeinocephalic (tap' 'in-o-sef-al'ik). Characterized by tapeinocephals.

tapeinocephaly (tap'in-o-sef'al-e) [Gr. ταπεινόs low-lying + κεφαλή head]. A low form of the skull, which is also flattened at the front.

tapetum (tap-e'tum) [L. "carpet"]. I. See t. lucidum. 2. A band of fibers passing from the callosum to the temporal lobe. t. alve'oli, the alveolar periosteum. t. cellulo'sum, the iridescent layer in the choriocapillary layer of the choroid of carnivorous animals, giving the peculiar luster seen in the eyes of those animals. t. choroid'ess. See t. lucidum. t. cor'poris callo'si, a bunch of fibers extending from the corpus callosum to the temporal lobe. t. fibro'sum, the intermediate part of the stroma layer of the choroid of certain animals, as the cow, sheep, and horse, containing wavy bundles of connective tissue, which cause the metallic glow sometimes seen in such eyes t. lu'cidum, the iridescent pigment epithelium of the choroid of cats and certain other animals, which give their eyes the properties of shining in the dark. Called also t. choroideæ. t. ni'grum, the external, or pigmentary, layer of the retina. t. ventric'uli, a system of white fibers which connects the cortex of the occipital lobe.

tapeworm (tāp'werm). A parasitic intestinal cestode worm, or species of a flattened, tape-like form, and composed of separate joints. Those infesting man are principally of the genera Ta'nıa, Bolhriocephalus, and Hymenolepts. The ova of tapeworms are taken into the alimentary canal of the host, whence they make their way into the tissues, where they form small, cyst-like masses, called scolices or cysticerci See hydatid. When the flesh of the original host is eaten, the scolices develop within the alimentary canal of the new host into a strobilus, or adult tapeworm, which consists of a head, neck, and a various (often very great) number of oblong joints, or segments, called proglottides, each of which is hermaphroditic and produces ova. See Tania. African t., Tania africana. armed t., the pork tapeworm, Ta'nia so'lium, the commonest species of tapeworm. beet-t., Ta'nia sagina'la, a common tapeworm of man. Its cysticercus is found in beef. Called also unarmed t. broad t., Dibothrioceph'alus la'lus, the largest tapeworm of man.

It is three-fourths of an inch broad, and often reaches a length of 20 feet. Its larvæ are found in fish. It frequently produces profound anemia. dog-t., Tæ'nia echinococ'cus: its scolices give rise to hydatid cysts. double-pored dog t., Dypilidium caninum. dwarf t. See Hymenolepsis nana. fat t., Tænia saginata. fish t. See Dibothriocephalus. heart-headed t., Dibothriocephalus cordatus. hydatid t. Same as Tænia echinococcus. Japanese double-cord t., Diplogonoporus grandis. Madagascar t. See Davainea modagascariensis. Manson's larval t., Bothriocephalus mansoni. measly t., Tænia solium. pork t., Tænia solium. rat t., Hymenolepsis dim'nuta. Swiss t., the Dibothriocephalus latus unarmed t. See beef-t. Ward's Nebraskan t., Tænia confusa.

taphephobia, taphiphobia, taphophobia (taf-e-fo'be ah, taf-o-fo'be ah) [Gr. τάφος grave + φόβος fear]. Insane fear of being buried alive.

taphosote (taf'o-sōt). Tannophosphate of creosote: used in tuberculosis.

tapinocephalic (tap"in-o-sef-al'ik) [Gr. ταπεινόs low + κεφαλή head]. Characterized by tapinocephaly.

tapinocephaly (tap"in-o-sef'al-e) [Gr. ταπεινός low + κεφαλή head]. The condition of having a skull flattened or depressed on the top.

tapioca (tap-e-o'kah) A fecula, or starch, derived from the root of Jat'ropha man'ihot, or manioc: used as a food.

tapir (ta'per). A mammal of various species of the genus Tapi'rus: the fat is locally used as a medicine. t.-mouth, a condition in which the mouth has something of the appearance of a tapir's mouth, the orbicularis oris muscle being atrophied, while the lips are thickened and separated. It is seen in facioscapulohumeral muscular atrophy.

tapiroid (ta'per-oid). Resembling the snout of a tapir.

tapotage (tah-po-tahzh') Coughing and expectoration following percussion in the supraclavicular region: a sign sometimes obtained in pulmonary tuberculosis.

tapotement (tah-pōt-maw') [Fr.]. A tapping or percussing movement in massage. It includes clapping, beating, and punctation.

tapping (tap'ing). See paracentesis.

tar (tahr) [U. S. P. pix pi'ni]. Pine tar; wood tar; a dark brown or black, viscid liquid, obtained mainly by roasting the wood of various species of pine. It is a mixture of complex composition, and is the source of a number of substances, as cresol, creosol, guaiacol, naphthalene, paraffin, phenol, toluene, xylol, etc. When repeatedly applied to the skin of mice it causes cancers to develop. It is given in chronic bronchitis, diarrhea, and diseases of the urinary organs, and externally in certain skin diseases. Dose of tar water, freely; of syrup, 1-2 floz. (30-60 c c). The ointment is used for external application. coal-t., a thick, black, viscid substance obtained from bituminous coal, or as a residue in the distillation of petroleum. Its distillation product (coal-t. oil) is the source of many valuable organic compounds, including anilin, benzene, naphthalene, quinolin, toluene, etc. gas-t., a coal-tar derived from the coal, rosin, petroleum, and other material used in gas-works.

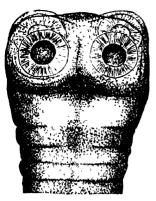

tara (tah'rah). A kind of palmus, or jumping disease, prevailing in Siberia.

tarabagan (tar-ab-a'gan). Same as marmot.

tarabagania tchuma (tar-ab-ag-ah'ne-ah tchu'-mah). A fatal contagious disease of Siberia: said to be contracted primarily from contact with a diseased tarabagan, or marmot, Arctomys bobæ.

Taraktog'enos kur'zii. The tropical tree from the seeds of which chaulmoogra oil is obtained.

tarantism (tar'an-tizm). A variety of dancing mania, popularly believed to be caused by the bite of a tarantula, and to be cured by dancing.

Head of Tænia saginata

Head of Tænia solium.

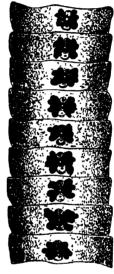

Head of Bothriocephalus latus

Segments of Tænia saginata.

Segments of Tænia (Hymenolepis) sonium Segments of Bothriocephalus latus.

Tænia elliptica.

Tænia echinococcus, enlarged.

Tænia (Hymenolepis) nana, much enlarged.

Tænia (Hymenolepis) nana, about natural size.

arantula (tar-an'tu-lah). A venomous spider of Europe, Lyco'sa taran'tula; also its homeopathic preparations. American t., a large dark, tarantula (tar-an'tu-lah). ferocious looking spider, Gurypel'ma hent'zii, having a severe and poisonous bite. T. cuben'sis, a Cuban spider; also a homeopathic preparation said to be a toxemic agent: useful in malignant ulcers and anthrax. T. his pana, a spider found in Spain and South America; also its homeopathic preparation: said to be of high value in treating chorea, hysteria, etc.

tarassis (tar-as'is) [Gr. τάραξις confusion]. A term proposed by Sanoaville de Lachèse (1886) for hysteria in the male.

taraxacerin (tar"aks-as-e'rin). A crystalline and

soluble principle, C₈H₁₀O, from dandelion root. taraxacin (tar-aks'as-in). A bitter principle from the root of the common dandelion.

Taraxacum (tar-aks'ak-um) [L.]. A genus of composite-flowered plants. The dried root of T. officina'le, the common dandelion, contains the principle taraxacin, and is diuretic, stomachic, and somewhat cholagogue, and is used in the hepatic congestion of acid atonic dyspepsia. Dose of extract, 5-15 gr. (0.333-1 gm.); of fluidextract, 1-2 dr. (2-8 c.c.); of juice (suc'cus tarax'aci), 2-4 dr. (8-16 c.c.).

taraxigen (tar-ak'sij-en). See under taraxy.

taraxin (tar-ak'sin). See under taraxy.

taraxis (tar-ak'sis). An obsolete name for conjunctivitis.

taraxy (tar-ak'se) [Gr. τάραξις disturbance]. Novy's name for anaphylaxis, on the theory that the condition is due to a poisonous substance (taraxin) which is formed in the blood on the injection of an alien substance, as the result of a reaction with a substance which already exists in the blood-serum and which he terms taraxigen.

tarbadillo (tar-bah-deel'yo) [Sp.]. See tabardillo. tarbagan (tar'bag-an). See marmot.

tarbisol (tar'biz-ol). A 5 per cent. solution of tartrobismuthate of diethylamin with the addition A 5 per cent. solution of of guaiacol. Intramuscular dose in the treatment of syphilis, o.1 gm.

Tardieu's spots (tar-dyuz') [Auguste François Tardieu, French physician, 1818-1879]. See spot.

tare (tar). 1. The weight of the vessel in which a substance is weighed. 2. To take the weight of a vessel which is to contain a substance, in order to allow for it when the vessel and the substance are weighed together.

tarentism (tar'en-tizm). See tarantism.

tarentula (tar-en'tu-lah). Same as tarantula.

targesin (tar'je-sin) A diacetyl-tannin-silver protein product, non-irritating, and used in 1 to 2 per cent. solution in the treatment of gonorrhea.

target (tar'get). 1. That portion of an x-ray tube on which the electrons impinge and from which the x-rays are sent out. 2. Same as mire.

Tarin, Tarinus, band of, valve of, etc. (tah'rin, tah-ri'nus) [Pierre Tarin, French anatomist, 1700-1761]. See under band, valve, etc.

Tarnier's forceps, sign (tahr-ne-āz') [Etienne Stéphene *Tarnier*, French obstetrician, 1828-1897]. See under forceps and sign.

tarropetrolin (tar-o-pet'ro-lin). A proprietary salve containing wood-tar and petroleum: used for skin diseases.

tarsadenitis (tar-sad-en-i'tis). An inflammation of the tarsus of the eyelid and of the meibomian

tarsal (tahr'sal) [L. tarsa'lis]. Pertaining to the tarsus of an eyelid or to the instep.

tarsale (tahr-sa'le), pl. tarsa'lia [L.]. Any bone of the tarsus, especially one belonging to the distal row.

tarsalgia (tahr-sal'je-ah) [Gr. $\tau a \rho \sigma \delta s$ foot $+ \delta \lambda \gamma \sigma s$

pain]. Neuralgia of the foot, with flattening of its arch.

tarsalia (tahr-sa'le-ah) [L. pl.]. The tarsal bones tarsalis (tahr-sa'lis) [L.]. A tarsal muscle. t. inferior, a muscle arising from the lower lic and inserted into the tarsus of the lower lid. It depresses the lower lid. t. supe'rior, a muscle of the upper eyelid serving to raise the lid and the skin of the lid.

tarsectomy (tahr-sek'to-me) [Gr. ταρσός foot + ἐκτομή excision]. 1. Excision of the tarsus, or a part of it. 2. Excision of a tarsal cartilage.

tarsectopia (tahr-sek-to'pe-ah) [tarsus + Gr ξκτοπος out of place]. Dislocation of the tarsus.

tarsen (tahr'sen) [Gr. ταρσός foot]. Pertaining to the tarsus in itself.

tarsitis (tahr-si'tis) [Gr. rapoos eyelid + -1715 inflammation]. Inflammation of the tarsus, or mar gin of an evelid.

tarsocheiloplasty (tahr-so-ki'lo-plas-te) [Gr. ταρσός eyelid $+ \chi \epsilon \hat{\imath}$ λος lip $+ \pi \lambda \dot{\alpha} \sigma \sigma \epsilon i \nu$ to mold] A plastic operation upon the edge of the eyelid, as in trichiasis.

tarsoclasis (tahr-sok'las-is) [Gr. ταρσός foot + κλάσις breaking]. The operation of fracturing the tarsus of the foot.

tarsomalacia (tahr"so-mal-a'she-ah) [Gr. ταρσό: tarsus + µahakla softening]. Softening of the tarsus of an eyelid.

tarsometatarsal (tahr"so-met-ah-tar'sal). taining to the tarsus and the metatarsus.

tarso-orbital (tahr-so-or'bit-al). Pertaining to the tarsus and the walls of the orbit.

tarsophalangeal (tahr"so-fa-lan'je-al). Pertain. ing to the tarsus and the phalanges.

tarsophyma (tahr-so-fi'mah) [Gr. ταρσός tarsus + φῦμα growth]. Any tarsal tumor.

tarsoplasia (tahr-so-pla'se-ah). Same as tarsoplasty. tarsoplasty (tahr'so-plas-te) [Gr. ταρσός tarsus + πλάσσειν to form]. Plastic surgery of the tarsus or of an eyelid; blepharoplasty.

tarsoptosis (tar-sop-to'sis) [Gr. ταρσός tarsus + πτῶσις falling]. Falling of the tarsus; flat-foot.

tarsorrhaphy (tahr-sor'a-fe) [Gr. ταρσός tarsus + ραφή suture]. The operation of suturing together ραφή suture]. a portion of (partial t) or the entire (total t.) upper and lower eyelids for the purpose of shortening or closing entirely the palpebral fissure. The terms external t., median t., and internal t. are used to indicate the portion of the lids brought together in partial tarsorrhaphy. Called also blepharorrhaphy.

tarsotarsal (tahr-so-tahr'sal). Between two rows of tarsal bones.

tarsotibial (tahr-so-tib'e-al). Pertaining to the tarsus and the tibia.

tarsotomy (tahr-sot'o-me) [Gr. ταρσός tarsus + τέμνειν to cut]. The operation of incising the tarsus, or an eyelid.

tarsus (tahr'sus) [L.; Gr. ταρσόs]. 1. The instep proper with its seven bones; the proximal segment of the foot; the bones are the astragalus (or knuckle-bone), the calcaneum (or heel-bone), and the scaphoid, forming the proximal row; and the cuboid and the internal, middle, and external cuneiform bones, forming the distal row, or tarsalis. The astragalus articulates with the tibia and fibula; the four distal bones, with the metatarsals. 2. The firm framework of connective tissue which gives shape to the eyelid.

tartar (tahr'tahr) [L. tar'tarum; Gr. τάρταρον]. 1.
The lees, or sediment, of a wine-cask; crude potassium bitartrate. 2. The incrustation that forms on neglected teeth. borated t., a white powder prepared by evaporating a solution of 2 parts of borax and 5 parts of potassium bitartrate. cream of t. (L. cre'mor lar'lari), potassium bitartrate.
t. emetic, the tartrate of antimony and potassium.
serumal t., the greenish or brownish secretions 1184

of calcareous matter seen on the roots of the teeth in cases of pyorrhea. It is formed from the blood-serum. Called also hematogenic calculus. vitriolated t., potassium tartrate.

tartarated (tahr'tahr-a-ted) [L. tartara'tus]. Charged with tartaric acid.

tartaric acid (tar-tar'ik). See under acid.

tartarization (tahr"tar-iz-a'shun). The treatment of syphilis by inoculation with tartarized antimony.

tartarized (tahr'tar-īzd) [L. tartariza'tus]. Charged with tartaric acid.

tartarlithin (tahr-tar-lith'in). Lithium bitartrate, LiC,H₃O₆,H₂O₇, a white, acid powder: used for gout, rheumatism, and uricacidemia; also for suppurative gingivitis. Dose, 5-10 gr. (0.3-0.6) gm.). t. and sulphur, a preparation of equal parts of tartarlithin and precipitated sulphur in 5-grain tablets. It is used in bronchitis, chronic sore throat, and indigestion from liver disease.

tartrate (tahr'trāt) [L. tar'tras]. Any salt of tartaric acid acid t., a bitartrate; any salt of tartaric acid in which one atom only of hydrogen is replaced by a base anilin antimonyl t., a soluble crystalline substance, C4H5O6(SbO)C6H5-NH2.H2O used in the treatment of trypanosomiasis. normal t., one in which two hydrogen atoms are replaced, various tartrates are employed as remedial agents. potassium ammonium t., antiluctin.

tartrated (tahr'tra-ted) [L. tartra'tus]. Containing tartar or tartaric acid. t. antimony, antimony and potassium tartrate.

tartro bi. Same as trepol.

tartro-bismuthate (tar-tro-biz'mu-that). See bismuthotartrate.

tartrophen (tahr'tro-fen). A proprietary preparation of phenetidin and tartaric acid: used like citrophen.

Tashkend ulcer (tash'kend). See ulcer.

tasikinesia (ta-se-kin-e'ze-ah). A morbid inclination to get up and walk resulting in inability to remain seated.

taste (tāst) [L. gus'tus]. The peculiar sensation caused by the contact of soluble substances with the tongue; the sense effected by the tongue, the gustatory and other nerves, and the gustation center. after-t., a taste that continues after the substance producing it has been removed. t.-buds, t.-bulbs, certain end-organs of the tongue upon which the savors of substances tasted make upon which the savors of substances tasted make their direct impression. t.-cells, t.-corpuscles See cell. color t., pseudogeusesthesia. t.-end, a taste-cell forming the terminal end-organ of the gustatory nerve franklinic t., a sour taste produced by stimulating the tongue with static electricity. t.-goblets. Same as l.-buds. t.pore, a canal leading into the center of a taste-bud. t.-ridges, the foliate papillæ which contain numerous taste-buds.

tätté melk. A food article in Norway and Sweden, prepared by inoculating milk with leaves of Pinguicula vulgaris.

tattooing (tat-oo'ing). The insertion of permanent colors in the skin by introducing them through punctures. t. of the cornea, the permanent coloring of the cornea, chiefly to conceal leukomatous spots.

Tatu'sia novemcinc'ta. A trypanosome found in the armadillo, transmitted by the insect Triatoma geniculata (Chagas, 1912).

tauranga (taw-ran'gah). See bush disease, under disease.

taurin (taw'rin). A crystallizable acid, aminoethyl-sulphonic acid, NH₂(CH₂)₂SO₂OH, from the bile, produced from the decomposition of tauro-cholic acid. It is found also in small quantities in the tissues of the lungs and muscles. Its crystals are colorless and are readily soluble in water.

taurine (taw'rin). A nutrient jelly from beef.

taurocholate (taw-ro-ko'lāt). Any salt of taurocholic acid.

taurocholemia (taw-ro-kol-e'me-ah). The presence of taurocholic acid in the blood.

taurocholic acid (taw-ro-kol'ik). See acid.

tautomenial (taw-to-me'ne-al) [Gr. ταὐτό the same + μήν month]. Pertaining to the same menstrual period.

tautomeral, tautomeric (taw-tom'er-al, taw-tomer'ik) [Gr. ταὐτό the same + μέρος part]. Sending processes to help in the formation of the white matter in the same side of the spinal cord: used of certain neurons and neuroblasts. See tautomeral cells, under cell.

tautomerism (taw-tom'er-izm) [Gr. ταὐτό the same + $\mu \epsilon \rho \sigma s$ part]. Metamerism in which two formulas are possible, but only one stable substance is obtainable.

tautorotation (taw"to-ro-ta'shun) [Gr. ταύτο the same + rotation]. Same as mutarotation.

Tawara's node (tah-wah'rah) [S. Tawara, con-temporary Japanese pathologist]. See under node.

taxin (taks'in) [L. tax'us; Gr. τάξος yew]. An amorphous poisonous alkaloid, C₈₇H₅₁NO₁₀, from Taxus baccata: used in epilepsy.

taxis (taks'is) [Gr. "arrangement"]. 1. The replacement by hand of a displaced part, as of a hernial protrusion. 2. A suffix meaning order or arrangement, as chemotaxis, thermotaxis, etc. polar t., the manipulation of a retroverted uterus by upward pressure through the rectum, the cervix being pulled down in the vagina.

Taxodium distichum (taks-o'de-um dis-tik'um). The cypress, a timber tree of North America. The resin is useful in rheumatism.

Taxonomy taxology (taks-ol'o-je).

taxonomy (taks-on'o-me) [L taxino'mia; Gr. τάξις arrangement + νόμος law]. The theory and principles of classification.

Tax'us baca'ta. The yew tree.

taxy (taks'e). Same as taxis (3d def.).

Tay's disease, spot (taz) [Warren Tay, contemporary English physician]. See disease and spot.

Tay-Sachs' disease [Warren Tay, contemporary British physician; Bernard Sachs, contemporary neurologist in New York]. See disease.

Taylor's apparatus (ta'lerz) [Charles Fayette Taylor, surgeon in New York, 1827-1899]. See apparatus.

TB. See under tuberculin.

Tb. Chemic symbol of *Terbium*.

T. b. Abbreviation for tubercle bacillus: also a spoken abbreviation for tuberculosis.

T-bandage. See bandage.

TBN. Abbreviation for bacillus emulsion. See under tuberculin.

TC. See under tuberculin.

T. d. Abbreviation for L. ter in di'e, three times a

day.

e. The symbol of tellurium; also an abbreviation

tea (te) [L. the'a]. 1. The dried leaves of The'a chinen'sis. They contain thein (caffein) and tannic acid, and are used in infusion as a conservant, stimulant, and exhilarant. 2. A decoction of the above, used as a beverage. 3. Any decoction or infusion of a medicinal plant. breast t. Same as species pectorales. emollient t. See species emollientes. James' t., Labrador t., the plant Le'dum la ifo'lium, of the United States and Canada, used domestically as a tonic and pectoral. t.-mixture. See species. Paraguay t. See male St. Germain t. Same as species laxantes. teamsters' t., a decoction of Eph'edra anti-syphilit'ica: a popular remedy for venereal disorders. worm-t., compound infusion of spigelia and senna, containing also manna and fennel. Dose, 1-5 fl oz. (30-150 c.c.).

teaberry (te'ber-e). See Gaultheria.

teachers' nodule (tēch'erz). See chorditis tuberosa. teak (tēk). An important timber tree, Tecto'na gran'dis, of southern Asia. A medicinal oil and tar are obtained from its wood.

Teale's amputation (tēlz) [Thomas Pridgin Teale, English surgeon, 1801-1868]. See amputation.

tears (tērz) |L. lac'rima; Gr. δάκρυα]. 1. The watery secretion of the lacrimal glands which serves to moisten the conjunctiva. The secretion is slightly alkaline and saline. 2. Small, naturally formed, drop-like masses of a gum or resin.

tease (tez). To pull a tissue apart with needles for microscopic examination.

teaspoon (te'spoon). A spoon of small size, containing about I fluidram or 4 cubic centimeters.

teat (tet). The nipple of the mammary gland.

teatulation (tet-u-la'shun). The formation of a nipple-like elevation

tebean (te'be-an). A preparation made by shaking virulent human tubercle bacilli in 25 per cent. galactose and then concentrating in vacuo used in tuberculosis.

tebecin (te-be'sin). A tuberculosis vaccine obtained from pure culture of tubercle bacilli grown on media to which a saponin has been added

tebelon (te-be'lon). The isobutyl ester of oleic acid; a pyrogenic agent suggested for the treatment of tuberculosis and surgical infections.

tebeprotin (te-be-pro'tin). A protein derived from virulent human tubercle hacilli. Used for the specific treatment of tuberculosis

tebosapin (te-bo-sa'pin). A preparation made by macerating tubercle bacilli for twenty-four hours in sodium oleinate.

technic (tek'nēk) [Fr.]. The method of procedure and the details of any mechanic process or surgical operation. Kristeller t., expression of the child by the hands on the abdomen over the fundus uteri, the fingers of the hand being behind and the thumbs in front

technical (tek'nik-al) Pertaining to technic.

technique (tek'nik). Same as technic.

technocausis (tek-no-kaw'sis) [Gr. τέχνη art + καθσις burning]. The use of the actual cautery.

Tecoma radicans (te-ko'mah rad-i'kanz). The trumpet creeper; also its homeopathic preparation. tecosis (te-ko'sis). See takosis.

tectocephalic (tek"to-sef-al'ik). Characterized by tectocephaly.

tectocephaly (tek-to-sef'al-e) [L. tec'tum roof + Gr κεφαλή head]. Same as scaphocephalism.

tectology (tek-tol'o-je) [Gr. τέκτων builder + λόγος discourse]. The science which treats of the building up of organisms from organic elements, the doctrine of structure.

tectonic (tek-ton'ik) Pertaining to plastic surgery or to surgery for the restoration of lost parts.

tectorial (tek-to're-al) [L. lec'tum roof]. Of the nature of a roof or covering.

tectorium (tek-to're-um), pl. tecto'ria [L. "roof"].
The membrane of Corti.

tectospinal (tek-to-spi'nal). Pertaining to the tectum mesencephali and the spinal cord. See tract

tectum (tek'tum). Any roof-like structure. t. mesencep'hall, the roof of the midbrain comprising the colliculus superior and colliculus inferior.

tedious (te'de-us) [L. tadio'sus]. Protracted beyond the usual extent of time, as a labor.

teet oil (tel). The oil of sesame. See oil of benne. teeth (teth) [pl. of tooth]. The organs of mastication. See tooth. anterior t., the six front teeth in each jaw: called also oral t. artificial t., teeth made of porcelain in imitation of natural

teeth. auditory t., a set of tooth-like points in the cochlea. barred t., teeth with roots spread out so that their extraction is extremely difficult. bicuspid t., premolar t., the fourth and fifth teeth, counting from the center. buccal t., the bicuspids and molars. canine t., the four teeth which immediately join the incisors. cheoplastic t., artificial teeth attached to a cheoplastic base without pins. chiale t., teeth from which the enamel is eaten away by the action of subterranean gases; seen in those exposed to the emanations of the volcanoes or who drink water impregnated with such gases. corner t., the third or outer pair of incisor teeth of either jaw of the horse. cross-pin t., artificial teeth in which cuspid t., the pins are inserted horizontally. the four teeth, two in each jaw, which immediately adjoin the incisors. deciduous t., the teeth of the first dentition. Called also milk t. and temporary t. eye-t., the two upper canine teeth. hag-t., teeth having wide spaces between the upper incisors. hair-t. Same as auditory t. upper incisors. hair-t. Same as auditory t. Horner's t., incisor teeth horizontally grooved from a deficiency of enamel. **Hutchinson's t.**, notched and narrow-edged permanent incisors; regarded as a sign of congenital syphilis, but not always of such an origin. impacted t., teeth always of such an origin. Impactor to, techniconfined in the jaw so that they do not erupt. incisor t., the four front teeth of each jaw. labial t., the incisors and cuspids. lower t. See mandibular t. malacotic t., teeth which are soft in structure and which easily decay. mandibular t., the teeth of the mandible or lower jaw; the lower teeth. maxillary t., the upper teeth; the teeth of the upper jaw or maxilla. milk t., the deciduous teeth. molar t., the grinders, or double teeth situated in the back part of either jaw. Moon's t., the small, domed first pelar of graph littore in the back part of either jaw. first molars of syphilitic patients oral t. See anterior t peg-top t. Same as Hutchinson's t. permanent t., the teeth of the second dentition. rake t., teeth separated by intervals. sclerotic t., teeth which are hard in structure and are resistant to decay. screw-driver t. Same as Hutchinson's t. stomach-t., the two lower canine teeth. straight-pin t., artificial teeth in which the pins are inserted vertically succedaneous t., the permanent teeth which replace the deciduous teeth. superior t., the upper or maxillary teeth. supernumerary t., supplemental t., teeth in excess of the regular or normal number. temporary t., the deciduous teeth. upper t. See maxillary t. vital t., teeth the pulp of which is alive wisdom-t., the aftermost tooth on each side of each jaw; these four teeth are the last to appear.

teething (teth'ing). The cutting of the teeth; dentition. See under tooth.

tegmen (teg'men), pl. teg'mina [L. "cover"]. Any covering or shelter. t. cru'ris, the tegmentum. t. mastoideo-tympan'icum, the tegmen mastoideum and tegmen tympani, which together roof over the mastoid cells. t. mastoid'eum, the bony roof of the mastoid cells. t. tym'pani [B N A], the bony layer between the tympanum and the cranial cavity. t. ventric'-uli quar'ti [B N A], the roof of the fourth ventricle.

tegmental (teg-men'tal). Pertaining to or of the nature of a tegmentum or tegmen.

tegmentum (teg-men'tum) [L.]. 1. A tegmen or covering. 2. The grayish upper covering of the crura cerebri; the upper and larger of the two principal parts of either crus cerebri. t. au'ris, the membrana tympani. hypothalamic t., subthalamic t., the extension of the tegmentum of the crus cerebri beneath the thalamus.

tegmin (teg'min) [L. leg'men a cover]. A preparation of wax, gum arabic, and water: used as a surgical dressing and as a covering for vaccination sores. tegone (te'gōn). A preparation of agar-agar and glycerin used in making bandages.

tegument (teg'u-ment) [L. tegumen'tum]. The integument or skin.

tegumental (teg-u-men'tal). Of the nature of a tegument.

tegumentary (teg-u-men'ta-re). Pertaining to the skin or tegument.

Teichmann's crystals, test (tik'manz) [Ludwig T. Stawiarski Teichmann, German histologist, 1825-1895]. See under crystal and tests.

teichopsia (ti-kop'se-ah) [Gr. τεῖχος wall + δψις vision]. A luminous appearance before the eyes, with a zigzag, wall-like outline. Called also fortification-spectrum and scotoma scintillans.

teinodynia (ti-no-din'e-ah). Same as tenodynia.

tela (te'lah), pl. te'læ [L. "web"]. 1. Any weblike tissue. 2. Any prolongation of the pia found
within a brain cavity. t. ara'nea. See cobweb. t. cellulo'sa, connective tissue. t.
choroi'dea, the fold of pia mater forming the
membranous roof of the third (t. choroi'dea ventric'uli ter'tii) and fourth (t. choroi'dea ventric'uli
quar'ti) ventricles of the brain. t. submuco'sa,
the pharyngeal aponeurosis. t. vasculo'sa, the
choroid plexus.

telæsthesia (tel-es-the'ze-ah). See telesthesia.

telangiectasia, telangiectasis (tel-an"je-ek-ta'zhe-ah, tel"an-je-ek'tas-is) [Gr. τέλος end + άγγεῖον vessel + ἔκτασις dilatation]. Dilatation of the capillary vessels and minute arteries, forming a variety of angioma. t. lymphat'ica, lymphangioma formed by dilatation of the lymph-vessels.

telangiectatic (tel-an"je-ek-tat'ik). Pertaining to or of the nature of telangiectasis.

telangiectodes (tel-an-je-ek-to'dēz). Marked by telangiectasia.

telangiectoma (tel-an-je-ek-to'mah). Same as telangioma.

telangiitis (tel-an-je-i'tis) [Gr. τέλος end + άγγεῖον vessel + ιτις inflammation]. Inflammation of the capillaries.

telangioma (tel-an-je-o'mah) [Gr. τέλος end + άγγεῖον vessel + -ωμα tumor]. A tumor made up of dilated capillaries.

telangiosis (tel"an-je-o'sis) [Gr. τέλος end + άγγεῖον vessel]. Any disease of the capillary vessels.

telatuten (tel-ah-tu'ten). An extract of bloodvessel walls.

telecardiogram (te-le-kar'de-o-gram) [Gr. $\tau \hat{\eta} \lambda \epsilon$ far off + cardiogram]. A cardiogram which registers the tracings on a ribbon at a distance from the patient by means of an electric connection.

telecardiography (te"le-kar-de-og'raf-e). The use of the telecardiogram.

telecinesia (tel-e-sin-e'ze-ah) [Gr. τῆλε far off + κίνησις movement] Movement of an object produced without contact.

teledactyl (tel-e-dak'til) [Gr. τῆλε far off + δάκτυλος finger]. An appliance for picking up objects from the ground without stooping: used in spinal diseases

teledendrite, teledendron (tel-e-den'drīt, tel-e-den'dron). Same as telodendron.

telediastolic (tel"e-di-as-tol'ik) [Gr. τέλος end + diastole]. Pertaining to the last phase of the diastole.

telegony (tel-eg'o-ne) [Gr. τῆλε far off + γονή off-spring]. The reproduction in the offspring of one sire of characteristics derived from a previous sire to whom the mother has borne off-spring.

telegraphers' cramp (tel-eg'ra-ferz). See cramp, telekinesis (tel''e-kin-e'sis) [Gr. τῆλε afar + κίνεσις movement]. The power claimed by certain persons of moving objects without contact with

the object moved; also motion produced without contact with a moving body.

telekinetic (tel-e-kin-et'ik). Pertaining to tele-kinesis.

telelectrocardiogram (tel-e-lek"tro-kar'de-o-gram). Telecardiogram.

telemnemonike (tel"e-mne-mon'ik-e) [Gr. τῆλε afar + μνημονικός pertaining to memory]. The gaining of consciousness of things in the memory of another person.

telencephal (tel-en'sef-al). Same as telencephalon.

telencephalic (tel"en-sef-al'ik). Pertaining to the telencephalon.

telencephalization (tel-en-sef"al-iz-a'shun). The transfer to the telencephalon, during the process of evolution, of the direction of the more complex nerve reactions.

telencephalon (tel-en-sef'al-on) [Gr. τέλος end + ἐγκέφαλος brain]. [B N A] The anterior end of the embryonic neural tube and its adult derivatives, comprising chiefly the cerebral hemispheres and the lamina terminalis. Called also end-brain.

teleneurite (tel-e-nu'rīt). The end expansion of an axis-cylinder.

teleneuron (tel-e-nu'ron)[Gr.τέλος end + νεῦρον nerve]. A nerve-ending.

teleology (tel-e-ol'o-je) [Gr. τέλος completion + λόγος treatise]. The doctrine of final causes, or of adaption to a definite purpose.

teleomitosis (tel"e-o-mi-to'sis). Completed mitosis.

teleorganic (tel-e-or-gan'ik). Necessary to life.

teleoroentgenogram (tel"e-o-rent-gen'o-gram). An x-ray picture taken from a distance of 6 feet.

teleoroentgenography. See teleroentgenography. teleost (tel'e-ost). One of an order of fish known as the bony fish.

teleotherapeutics (tel"e-o-ther-ap-u'tiks) [Gr. τῆλε far + therapeutics]. Suggestive therapeutics.

telepathist (tel-ep'ath-ist). A professed mind-reader.

telepathize (tel'ep-ath-īz). To affect by sympathetic or other subtle means.

telepathy (tel-ep'ath-e) [Gr. $\tau \hat{\eta} \lambda \epsilon$ far $+ \pi \alpha \theta os$ feeling]. The alleged transfer of thought; mindreading.

telephium (tel-ef'e-um). An intractable ulcer.

teleradiography (tel" e-ra-de-og'raf-e) [Gr. $\tau \hat{\eta} \lambda \epsilon$ far off + radiography]. Radiography with the tube at a distance from the body in order more nearly to secure parallelism of the rays

telergic (tel-er'jik). Acting at a distance.

telergy (tel'er-je) [Gr. τῆλε far off + ἔργον work].
 1. Automatism. 2. A hypothetical action of one brain on another at a distance.

teleroentgenography (tel"e-rent-gen-og'raf-e). Teleragiography.

telesthesia, telæsthesia (tel-es-the'ze-ah) [Gr. τῆλε far off + αἴσθησις perception]. Telepathy; perception at a distance.

telesyphilis (te-le-sif'il-is) [Gr. $\tau \hat{\eta} \lambda \epsilon$ far away + syphilis]. Metasyphilis.

telesystolic (tel"e-sis-tol'ik) [Gr. τέλος end + systole]. Pertaining to the end of the systole.

teletherapy (tel-e-ther'ap-e) [Gr. τηλε far off + θεραπεῖα treatment]. Absent treatment.

tellurate (tel'u-rāt). Any salt of telluric acid.

telluric acid (tel-u'rik). See under acid.

tellurism (tel'u-rizm) [L. tel'lus earth]. The disease-producing influence of the earth or soil.

tellurium (tel-u're-um) [L. tel'lus earth]. A non-metallic or metalloid element; symbol, Te; specific gravity, 6.24; atomic weight, 127.5. Tellurium compounds possess germicidal properties.

Tellyesniczky's fluid (tel-yets-nits'kez) [Kálmár *Tellyesniczky*, contemporary Hungarian histologist]. See *fluid*.

teloblast (tel'o-blast) [Gr. $\tau \& \lambda$ os end + $\beta \lambda \alpha \sigma \tau \delta$ s germ]. A segmentation-sphere at the end of a germinal band.

teloblastic (tel-o-blas'tik). Pertaining to a teloblast.

telocinesia, telocinesis (tel-o-sin-e'se-ah, -sin-e'sis). Telophase.

telodendrion (tel-o-den'dre-on) [Gr. τέλος end + δένδρον tree]. A motor end-plate or other terminal part of a dendron.

telodendron (tel-o-den'dron) [Gr. τέλος end + δένδρον tree]. A brush-like expansion or arborization at the end of an axis-cylinder process or of a paraxon.

telokinesis (tel-o-kin-e'sis) [Gr. τέλος end + κlνησις motion]. Same as telophase.

telolecithal (tel-o-les'ith-al) [Gr. τέλος end + λέκιθος yolk] Having a yolk concentrated at one of the poles said of an ovum.

telolemma (tel-o-lem'ah) [Gr. τέλος end + λέμμα rind]. The twofold covering of a motorial endplate, made up of sarcolemma and an extension of Henle's sheath.

telophase (tel'o-fāz) [Gr. $\tau \dot{\epsilon} \lambda o s$ end $+ \varphi \dot{\alpha} \sigma \iota s$ phase]. The last of the four stages of mitosis. See *milosis*.

telophragma (tel-o-frag'mah) [Gr. τέλος end + φραγμός inclosure] Krause's membranes. See membrane.

Telosporidia (tel"o-spo-rid'e-ah) [Gr. τέλος end + σπόρα spore]. A class of Sporozoa including those forms wherein sporulation ends the life of the individual. The term includes Coccidium, Plasmodium, and Babesia.

telosynapsis (tel-o-sin-ap'sis) [Gr. τέλος end + συναψις conjunction]. The conjunction of chromosomes end to end. Cf. parasynapsis.

telotism (tel'o-tizm) [Gr $\tau \in \lambda_{0S}$ end]. The complete performance of a function.

telson (tel'son). A scorpion's sting.

temp. dext. Abbreviation for L. tem'pori dex'tro, to the right temple.

temperament (tem'per-am-ent) [L. temperamen'tum mixture]. The peculiar physical character and mental cast of an individual atrabilious t. Same as melaucholic t bilious t., that characterized by a dark or sallow complexion, black hair, and a slow or moderate circulation of the blood choleric t. Same as bilious t. lymphatic t., phlegmatic t., results, according to the old physiologists, from the predominance of lymph or phlegm in the system. It is characterized by a fair but not ruddy complexion, light hair, and a general softness or laxity of the tissues. melancholic t., one characterized by a predominance of black bile (which was supposed to be secreted by the spleen), rendering the disposition melancholy and morose, and, when in great excess, producing hypochondriasis. nervous t., one characterized by the predominance of the nervous element, and by great activity or susceptibility of the great nervous center, the brain. sanguineous t., sanguine t., one characterized by a fair and ruddy complexion, yellow, red, or light auburn hair, a full, muscular development, large, full veins, and an active pulse, all indicating an abundant supply of blood.

temperature (tem'per-at-ūr) [L. temperatu'ra]. The degree of sensible heat or cold. absolute t., that which is reckoned from the absolute zero of -273° C. body-t., the temperature of the body. critical t., a temperature below which a gas may be reduced to liquid form by pressure. t.-curve, a curved or broken line exhibiting the variations of the bodily temperature in a given period. maximum t., in bacteriology, the temperature above which growth does not take

place. **mean t.**, the average temperature in a locality for a given period of time. **minimum t.**, in bacteriology, temperature below which growth does not take place. **normal t.**, that of the human body in health, or 08.6° F. This is maintained in health by the thermotaxic nerve-mechanism, which keeps up a balance between the thermogenetic, or heat-dispelling, processes. **optimum t.**, the temperature most favorable to the development of cultures of a given species of microorganism. **room t.**, the ordinary temperature of a room, 65°-80° F. t.-sense. See sense. **subnormal t.**, temperature below the normal. **zero-t.**, that state in which there is in an end-organ no sensation of either warmth or cold.

temple (tem'pl) [L. tem'pus; pl. tem'pora]. The lateral region of the head above the zygoma.

Templin oil (tem'plin) [Templin in Prussia]. A yolatile oil distilled from the cones of Pi'nus pumil'io.

tempolabile (tem-po-la'bil) [L. tem'pus time + labilis unstable]. Becoming altered in course of time so as to lose hemolyzing power: said of sera.

tempora (tem'po-rah) [L]. The temples.

temporal (tem'por-al) [L. tempora'lis]. Pertaining to a temple.

temporalis (tem-por-a'lis) [L.]. See muscles, table of.

temporo-auricular (tem"po-ro-aw-rik'u-lar).
Pertaining to the temporal and auricular regions.

temporocentral tract (tem"po-ro-sen'tral). See tract.

temporocerebellar tract (tem"po-ro-ser-e-bel'ar) See tract.

temporofacial (tem"po-ro-fa'she-al). Pertaining to a temple and the face. See nerves, table of.

temporofrontal tract (tem"po-ro-fron'tal). See tract.

temporohyoid (tem"po-ro-hi'oid). Pertaining to the temporal and hyoid bones.

temporomalar (tem"po-ro-ma'lar). Pertaining to the temporal and malar bones

temporomandibular (tem''po-ro-man-dib'u-lar).

Pertaining to the temporal bone and the mandible.

temporomaxillary (tem"po-ro-maks'il-a-re). Pertaining to the temporal bone, or region, and a maxilla (usually the upper).

temporo-occipital (tem"po-ro-ok-sip'it-al). Pertaining to the temporal and occipital bones or regions.

temporoparietal (tem"po-ro-par-i'et-al). Pertaining to the temporal and parietal bones or regions.

temporopontile (tem"po-ro-pon'tel). Pertaining to the temporal lobe and the pons.

temporosphenoid (tem"po-ro-sfe'noid). Pertaining to the temporal and sphenoid bones.

temporozygomatic (tem"po-ro-zi-go-mat'ik) Pertaining to a temple and a zygoma.

tempostabile (tem-po-sta'bil) [L. tem'pus time + sta'bilis stable]. Not changing chemically in the course of time.

Temp. sinist. Abbreviation for L. tem'pori sinis'-tro, to the left temple.

temulence (tem'u-lens) [L. temulen'tia]. Drunkenness; intoxication.

tenacious (te'na-shus) [L. te'nax]. Holding fast; adhesive.

tenacity (te-nas'it-e). Toughness; the condition of being tough. cellular t., the inherent tendency of all cells to persist in a given form or direction of activity.

tenaculum (ten-ak'u-lum) [L.]. r. A hook-like instrument for seizing and holding parts. 2. Any

fibrous band for holding parts in their places. ten'dinum. Same as vinculum tendinum.

Tenaculum (DaCosta).

tenalgia (ten-al'je-ah) [Gr. τένον tendon + ἄλγος pain]. Pain in a tendon.

tenalgin (ten-al'jin). A proprietary tapeworm remedy prepared from the areca-nut.

tenalin (ten'al-in). A powerful and highly toxic vermifuge derived from the areca-nut.

tenax (te'naks) [L. tena'cious]. An oakum specially prepared for surgical dressings.

tenderness (ten'der-nes). Abnormal cutaneous sensitiveness to the touch. pencil t., local tenderness on pressure with the rubber tip of a pencil.

tendinitis (ten-din-i'tis). Same as tenonitis. t. of horse, inflammation of the flexor tendons, due to strain or wrenching, and causing great tenderness and lameness.

tendinoplasty (ten'din-o-plas-te) [L. ten'do tendon + Gr. πλάσσειν to mold]. The plastic surgery of the tendons.

tendinosus (ten-din-o'sus) [L.]. The semitendinosus muscle.

tendinosuture (ten"din-o-su'tūr) [L. ten'do tendon + sutu'ra sewing]. The suturation of a tendon.

tendinotrochanteric ligament (ten"din-o-trokan-ter'ik). See ligament.

tendinous (ten'din-us) [L. tendino'sus]. Pertaining to, resembling, or of the nature of a tendon. t. spot. See milk-spot, under spot.

tendo (ten'do). Latin for tendon. t. achil'lis the tendon of the soleus and gastrocnemius mus Latin for tendon. t. achil'lis, cles, at the back of the heel. t. calca'neus [B N A]. Same as t. achillis. t. cordifor'mis. See cordiform tendon, under tendon. t. oc'uli, t. palpebra'rum, the internal palpebral ligament; a structure which gives origin to the orbicularis palpebrarum muscles.

tendolysis (ten-dol'is-is) [L. ten'do tendon + Gr. λύσις looseningl. The operation of freeing a tendon from adhesions.

tendomucin (ten-do-mu'sin). A mucin derivable from tendons and nearly related to submaxillary mucin and to the colloid of cancers.

tendomucoid (ten-do-mu'koid). Tendomucin. tendon (ten'dun) [L. ten'do]. The fibrous cord of connective tissue in which the fibers of a muscle end and by which a muscle is attached to a bone other structure. Achilles' t., the tendo nillis. back t. See back sinew, under sinew. achillis. t.-cartilage, the embryonic cartilage uniting tendons and bones. t.-cells, t.-corpuscles, flattened cells of connective tissue lying between the primary bundles of tendons. central t., conjoined t., the united tendons of the transversalis and internal oblique muscles going to the linea alba and pectineal line of the os pubis. Cooper's t., a semilunar extension of the anterior aponeurosis of the transversalis abdominis muscle, aponeurous of the transversans abdominis muscie, often extending to the deep crural arch. cordiform t. of the diaphragm, a thin, tendinous aponeurosis of trefoil shape at the center of the vault of the diaphragm, just below the pericardium, with which it is blended. coronary t.'s, the fibrous rings which surround the arterial orifices of the heart. t.-grafting. 1. The operation of supplying a defect in a tendon by grafting a piece taken from an-other tendon. 2. The operation of implanting a slip from the tendon of an unparalyzed muscle into that of a paralyzed muscle, so that the for-mer may serve to move the latter. hamstring t. See hamstring. heel-t., the tendo achil-

t.-jerk. See 1.-reaction. kangalis. roo-t., the prepared tendon from the tail of certain species of kangaroo: employed in surgery for a thread in suturing and ligating parts.

t.-ligature, a ligature consisting of strips of tendon of various animals.

t.-reaction, t.reflex, reflex contraction of a muscle induced by percussing its tendon. Called also tendon-yerk. riders' t., rupture of the adductor tendons of the thigh. t.-spindle, a variety of nerve-ending in tendons, consisting of an elongated, elliptic mass in the region of the junction of tendon and muscle, and pierced by two or more medullated nerve-fibers. Called also Golgi's corpuscle. superior t., a structure which gives origin to the superior rectus, external rectus, and the upper part of the internal rectus of the eye. t.-suture, the suturing together of divided ends of tendons. trefoil t., cordiform tendon. t. of Zinn. Same as zonule of Zinn.

tendophony (ten-dof'o-ne). See tenophony.

tendoplasty (ten'do-plas-te) [L. ten'do tendon + Plastic surgery of the Gr. πλάσσειν to mold

tendosynovitis (ten"do-sin-o-vi'tis). Same as tendovaginitis

tendotome (ten'do-tōm). Same as tenotome.

tendotomy (ten-dot'o-me). Same as tenotomy.

tendovaginal (ten-do-vaj'ın-al) [L. ten'do tendon + vagi'na sheath]. Pertaining to a tendon and its sheath.

tendovaginitis (ten"do-vaj-in-i'tis). 1. Inflammation of a tendon and its sheath. 2 Inflammation of a tendon sheath t. acu'ta purulen'ta, tendovaginitis with pus formation. t. crep' itans, a form accompanied by a crackling sound or movement t. granulo'sa, tuberculosis of tendon-sheaths, which become filled with granulation tissue t. hypertroph'ica, a condition marked by swellings along the tendons and their sheaths. t. sero'sa chron'ica, tendovaginitis with scrous effusion t. sten'osans, a painful condition of the wrist, marked by thickening and narrowing of the tendon sheath of the extensor brevis and abductor longus pollicis (De Quervain).

tenectomy (ten-ek'to-me). Same as tenonectomy. tenesmic (ten-ez'mik). Pertaining to or of the nature of tenesmus

tenesmus (ten-es'mus) [L; Gr τεινεσμός]. Straining; especially ineffectual and painful straining at stool or in urination. rectal t., painful, longcontinued, and ineffective straining at stool. vesical t., that which sometimes accompanies urination.

Ten Horn's sign (ten-hornz'). See under sign. tenia (te'ne-ah) See Tania.

teniacide (te'ne-as-īd) [L. ta'nia tapeworm + cæ'dere to kill]. 1. An agent that destroys tapeworms. 2. Destructive to tapeworms.

teniafuge (te'ne-af-ūj) [L. ta'nia tapeworm + fuga're to expell. 1. Expelling tapeworms. 2. An agent that expels tapeworms.

tenial (te'ne-al). Pertaining to a tenia.

teniasis, tæniasis (te-ni'as-is). The presence of tapeworms in the body intestinal t., presence of tapeworms in the intestine. somatic t., the presence of the larvæ of tapeworms in the muscles or organs of the body.

tenicide (ten'is-īd). Destructive to tapeworms.

tenide (ten'id). A proprietary remedy for diabetes.

teniform (ten'if-orm). Tenioid.

tenifugal (te-nif'u-gal). Expelling tapeworms.

tenifuge (ten'if-ūj). Teniafuge. tenioid (te'ne-oid). Resembling a tenia, or tapeworm.

teniol (te'ne-ol). A proprietary vernifuge and parasiticide containing sebirol, dithymol salicylate, oil of turpentine, and castor oil. teniola (te-ne'o-lah) [L. tæni'ola ribbon]. A thin, grayish ridge which separates the striæ of the floor of the fourth ventricle from the cochlear part of the acoustic nerve. Called also tæni'ola cine'rea.

teniotoxin (te"ne-o-toks'in). A poisonous principle occurring in tapeworms.

tennis-elbow (ten"is-el'bo). Lameness of the elbow due to a strain incurred in playing lawntennis.

tennysin (ten'is-in). An alkaloid or leukomain derivable from the brain substance.

teno- [Gr. τένων tendon]. A prefix denoting some relation to a tendon.

tenodesis (ten-od'e-sis) [Gr τένων tendon + δέσις fixation]. Tendon fixation; suturing of the proximal end of a tendon to the bone.

tenodynia (ten-o-din'e-ah) [Gr. τένων tendon + δδύνη pain]. Pain in a tendon.

tenomyoplasty (ten"o-mi'o-plas-te) [Gr. $\tau \epsilon \nu \omega \nu$ tendon + $\mu \hat{v}s$ muscle + $\pi \lambda \dot{a} \sigma \sigma \epsilon \iota \nu$ to form]. A plastic operation involving tendon and muscle-applied especially to an operation for inguinal hernia.

tenomyotomy (ten"o-mi-ot'o-me) [Gr. $\tau \acute{e}\nu \omega \nu$ tendon + $\mu \hat{v}s$ muscle + $\tau o\mu \acute{\eta}$ a cut]. Excision of a portion of tendon and muscle.

Tenon's capsule, space, etc. (te'nonz) [Jacques René Tenon, French surgeon, 1724-1816]. See capsule, space, etc.

tenonectomy (ten-qn-ek'to-me) [Gr. τένων tendon + ἐκτομή excision]. Excision of a part of a tendon for the purpose of shortening it.

tenonitis (ten-on-i'tis). 1. Same as tenonitis. 2. Inflammation of Tenon's capsule.

tenonometer (ten-o-nom'et-er) [Gr. $\tau \dot{\epsilon} \iota \nu \epsilon \iota \nu$ to stretch + $\mu \dot{\epsilon} \tau \rho o \nu$ measure]. An apparatus for measuring intra-ocular tension.

tenonostosis (ten"on-os-to'sis). Same as tenos-

tenontagra (ten-on-ta'grah, ten-on'tag-rah) [Gr. τένων tendon + ἄγρα seizure]. A gouty affection of the tendons.

tenontitis (ten-on-ti'tis) [Gr. τένων tendon + -ιτις inflammation] Inflammation of a tendon. t. prolif'era calca'rea, inflammation of a tendon, with degeneration and the formation of calcareous matter.

tenontodynia (ten"on-to-din'e-ah) [Gr. τένων tendon + ὀδύνη pain]. Pain in the tendons.

tenontography (ten-on-tog'ra-fe) [Gr. τένων tendon + γράφειν to record]. A written description or delineation of the tendons.

tenontolemmitis (ten-on"to-lem-i'tis) [Gr. τένων tendon $+ \lambda \dot{\epsilon} \mu \mu a$ rind]. Same as tendosynovitis.

tenontology (ten-on-tol'o-je) [Gr. τένων tendon + λόγος discourse]. The sum of what is known regarding the tendons.

tenontomyoplasty (ten-on"to-mi'o-plas-te). Tenomyoplasty.

tenontomyotomy (ten-on"to-mi-ot'o-me). Tenomyotomy.

tenontophyma (ten-on-to-fi'mah) [Gr. $\tau \in \nu \omega \nu$ tendon $+ \varphi \hat{\nu} \mu \alpha$ growth]. A tumorous growth in a tendon.

tenontoplasty (ten-on'to-plas-te). Same as teno-plasty.

tenontothecitis (ten-on"to-the-si'tis) [Gr. τένων tendon + θήκη sheath + -ιτιs inflammation]. Inflammation of a tendon-sheath.

tenontotomy (ten-on-tot'o-me). Same as tenotomy.

tenophony (ten-of'o-ne) [Gr. τένων tendon + φωνή sound]. An auscultatory sound supposed to be produced by the chordæ tendineæ.

tenophyte (ten'o-fit) [Gr. τένων tendon + φυτόν growth]. A growth or concretion in a tendon.

tenoplastic (ten-o-plas'tik). Of or relating to tenoplasty.

tenoplasty (ten'o-plas-te) [Gr. τένων tendon + πλάσσειν to shape]. Plastic surgery of the tendons; operative repair of a defect in a tendon.

tenorrhaphy (ten-or'a-fe) [Gr. τένων tendon + ραφή suture]. The union of a divided tendon by a suture.

tenositis (ten-o-si'tis) [Gr. τένων tendon + -ιτιs inflammation]. Inflammation of a tendon.

tenostosis (ten-os-to'sis) [Gr. τένων tendon + δστέον bone]. Ossification of a tendon.

tenosuture (ten-o-su'tūr) [Gr τένων tendon + L. sutu'ra suture]. Same as tenorrhaphy.

tenosynitis (ten"o-sin-i'tis). Same as lenosyno-

tenosynovitis (ten"o-sin-o-vi'tis) [Gr. τένων tendon + synovia + Gr. -ιτις inflammation]. Same as tendovaginitis.

tenotomania (ten"ot-o-ma'ne-ah) [tenotomy + Gr. μανία mania]. An unreasonable propensity to perform tenotomy.

tenotome (ten'o-tōm) [Gr. τένων tendon + τέμνειν to cut]. A cutting instrument used in performing tenotomy.

tenotomist (ten-ot'o-mist). An expert in performing tenotomy.

tenotomize (ten-ot'o-mīz). To perform tenotomy. tenotomy (ten-ot'o-me) [Gr. τένων tendon + τέμνειν to cut]. The cutting of a tendon as for strabismus or club-foot. curb t., the operation of cutting the muscle in squint and insertion of it further back on the globe of the eye. graduated t., the incomplete division of a tendon.

tenovaginitis (ten"o-vaj-in-i'tis). Inflammation of a tendon-sheath.

tense (tentz). Drawn tight; rigid.

tensiometer (ten-se-om'et-er) [tension + Gr. μέτρον measure]. An apparatus for measuring the surface tension of liquids

tension (ten'shun) [L. ten'sio]. 1. The act of stretching. 2. The condition of being stretched or strained; the amount to which anything is stretched or strained. arterial t., the strain on an artery at full pulse. electric t., electromotive force; that property of a gas by which it is enabled to overcome resistance. gaseous t., the elasticity of a gas, or its tendency to expand. intra-ocular t., the pressure of the fluids of the eye against the tunics It is produced by the continual renewal of the fluids within the interior of the eye. Normal tension is indicated by the symbol Tn; and the signs T + 1, T + 2, T - 1, T - 2, etc., indicate degrees of increased or diminished resistance. intravenous t., the strain of the blood-current upon the coats of a vein. muscular t., the condition of moderate contraction produced by stretching a muscle. normal t., the intra-ocular tension in a state of health and normal exercise. **surface t.**, the tension of strain upon the surface of a substance in contact with another substance with which it does not mix; the tension or resistance to rupture possessed by the surface film of a liquid t.-suture. See under suture. tissue-t., a state of equilibrium between tissues and cells which prevents overaction of any part.

tensor (ten'sor) [L., stretcher or puller]. Any muscle that stretches or makes tense. See muscles, table of.

tent (tent) [L. ten'ta, tenta're to test or probe]. A conic and expansible plug of soft material, as lint, gauze, etc., for dilating an orifice or for keeping a wound open, so as to prevent its healing except at the bottom. laminaria t., a tent made of sea-tangle, or laminaria. sponge t., a slender, conc-shaped piece of compressed sponge used for dilating the os uten. tupelo-t., one made of the wood of the root of the water-tupelo, a tree (Nys'sa unillo'ra) of North America.

tentacle (ten'tak-el). A slender whip-like organ in invertebrates for feeling or motion.

tentative (ten'tat-iv). Experimental and subject to change. See under diagnosis.

tenth-meter (tenth-me'ter). One ten-millionth of a millimeter.

tenth nerve (tenth). The vagus, or pneumogastric, nerve. See nerves, table of.

tentiginous (ten-tij'in-us). Characterized by maniacal lust.

tentigo (ten-ti'go) [L.]. Morbid or insane lasciviousness.

tentorial (ten-to're-al). Pertaining to the tentorium. t. sinus, the straight sinus.

tentorium (ten-to're-um) [L. tent]. The process of dura mater forming a partition between the cerebrum and cerebellum, and covering the upper surface of the cerebellum. Called also t. cerebelli [B N A]. t. of the hypophysis, the double fold of dura mater covering the hypophysis.

tentum (ten'tum). The penis.

tephromalacia (tef"ro-mal-a'sc-ah) [Gr. τεφρόs gray + μαλακία softening]. Softening of the gray matter of the brain or cord.

tephromyelitis (tef"ro-mi-el-i'tis) [Gr. τεφρός gray + μυελός marrow + -ιτις inflammation]. Inflammation of the gray substance of the spinal cord.

tephrosis (tef-ro'sis) [Gr. τέφρωσις]. Incineration or incremation.

tephrylometer (tef-ril-om'et-er) [Gr. τέφρα ashes + ὕλη matter + μέτρον measure]. A graduated glass tube for measuring the thickness of the gray matter of the brain.

tepidarium (tep-id-a're-um) [L., from tep'idus lukewarm]. A warm bath: more correctly, a place for a warm bath.

tepid bath (tep'id). See bath.

tepopote (tep-o-po'ta) [Amer. Ind.]. See teamster's tea, under tea.

tepor (te'por) [L]. Gentle heat.

ter- [L. ter thrice]. A prefix meaning thrice, or threefold.

terabdella (ter-ab-del'ah) [Gr. τερεῖν to bore + βδέλλα leech]. A form of mechanic leech.

teras (ter'as), pl. ter'ata [L.; Gr. τέραs]. A monster; a congenitally malformed fetus.

terata (ter'at-ah). Plural of teras.

teratic (ter-at'ik) [Gr. τερατικόs]. Monstrous; having the characters of a monster.

teratism (ter'at-izm) [Gr. τεράτισμα]. 1. A monstrosity; any anomaly of formation. 2. A fetal monstrosity. acquired t., deformity resulting from accident or disease (not usually classed among true teratisms). anacatadidymous t., teratic union of two fetuses at or near the waists and hips, there being two heads, four legs, and two sets of genital organs. anadidymous t., teratic fusion of two fetuses in such a manner that the monstrosity is single above and double in the lower parts. atresic t., a closed or imperforate state of one or more natural openings. catadidymous t., teratic union of two fetuses in the lower parts of the body, there being two heads, four arms, and two legs. ceasmic t., the persistence after birth of embryonic fissures. ectogenic t., congenital absence or defect of parts. ectopic t., the abnormal placement of parts or organs. hypergenetic t., congenitally excessive size of particular organisms or parts. symphysic t., the abnormal fusion of adjacent or contiguous parts.

teratoblastoma (ter"at-o-blas-to'mah). A neoplasm containing embryonic elements and differing from a teratoma in that its tissue does not represent all the germinal layers.

teratogenesis (ter'at-o-jen'is-is) [Gr. τέραs monster + γένεσις production]. The development of a fetal monstrosity.

teratogenic (ter"at-o-jen'ik). Tending to produce fetal monstrosity.

teratogenous (ter-at-oj'en-us). Developed from fetal remains.

teratogeny (ter-at-oj'en-e). Same as teratogenesis. teratoid (ter'at-oid) [Gr. τέρας monster + είδος form]. Resembling a monster.

teratologic, teratological (ter'at-o-loj'ik, ter'at-o-loj'ik-al). Pertaining to teratology.

teratology (ter-at-ol'o-je) [Gr. τέρας monster + λόγος discourse]. The sum of what is known regarding monsters; the science of monsters.

teratoma (ter-at-o'mah), pl. terato'mata [Gr. τέραs monster + -ωμα tumor]. A tumor containing fetal remains congenitally derived, such as teeth, hair, etc. It is supposed to be due to the inclusion of an abortive fetus within one which develops normally. autochthonous t., a teratoma whose tissues do not necessarily imply that they were formed by the inclusion of another individual.

teratomatous (ter-at'o-mat-us). Pertaining to, or of the nature of, teratoma.

teratophobia (ter"at-o-fo'be-ah) [Gr. $\tau \epsilon \rho as$ monster $+ \varphi \delta \beta os$ fear]. Morbid fear or aversion to monsters; a morbid expectation of giving birth to a teratism.

teratosis (ter-at-o'sis) [Gr. τέρας monster]. Same as teratism.

terbium (ter'be-um). A rare metallic element; symbol, Tb; atomic weight, 159.2.

terchlorid (ter-klo'rid). A trichlorid; a compound containing three atoms of chlorin with one of another element.

tere (te're). Latin for rub.

terebene (ter'ch-ēn) [L. terebe'num, from terebin'-thus turpentine]. A thin, yellowish, fragrant, liquid hydrocarbon, C₁₀II₁₈, soluble in alcohol, ether, etc., but only slightly soluble in water, obtained from oil of turpentine by the action of sulphuric acid It is antiseptic and expectorant, and is used in catarrh, bronchitis, cystitis, fermentative dyspepsia, genito-urinary disease, and as an application to gangrenous wounds, etc. Dose, 5-20 min. (0 33-1.33 c.c). t.-glycerin, a mixture of 4 parts of terebene, 7 parts of glycerin, and 1 part of water. used as an application for purulent wounds.

terebenthene (ter-e-ben'thēn). Oil of turpentine.

terebinth (ter'e-binth) [L. terebin'thus]. 1. The tree Pista'cia terebin'thus, which affords Chian turpentine. 2. Same as terebinthina.

terebinthina (ter-e-bin'thin-ah). Latin for turpentine.

terebinthinate (ter-e-bin'thin-āt). Resembling or containing turpentine.

terebinthinism (ter-e-bin'thin-izm). Poisoning with oil of turpentine.

terebrachesis (ter-e-bra-ke'sis). The operation of shortening the round ligament.

terebrant, terebrating (ter'e-brant, ter'e-brating) [L. ter'ebrans boring]. Of a boring or piercing quality.

terebration (ter-e-bra'shun) [L. terebra'tio]. An act of boring or trephining.

teres (te'rēz) [L. for "long and round"]. 1. Round. 2. A cylindric muscle. t. ma'jor, t. mi'nor. See muscles, table of.

teretipronator (te"re-te-pro-na'tor). The pronator radii teres muscle.

teretiscapularis (te"re-te-skap-u-la'ris). The teres major muscle.

tergal (ter'gal) [L. ter'gum back]. Pertaining to the back or the dorsal surface.

ter in die (ter in de'a). Latin for thrice in a day.

tergolateral (ter-go-lat'er-al) [L. ter'gum back + la'tus side]. Dorsolateral.

term (term) [L. ter'minus, from Gr. τέρμα]. 1. A

limit or boundary. 2. A definite period. 3. Gestation at nine months.

terma (ter'mah) [Gr. τέρμα limit]. The lamina terminalis of the cerebrum.

termatic (ter-mat'ik). Pertaining to the terma. See arteries, table of.

terminad (ter'min-ad) [Gr. τέρμα limit + L. ad to]. In or toward a terminal situation.

terminal (ter'min-al) [L. termina'lis]. Forming or pertaining to an end; placed at the end.

Terminalia (ter-min-a'le-ah). See myrobalan.

termination (ter-min-a'shun) [L. termina'tio]. A limit; a terminus; a distal end; a cessation.

terminol (ter'min-ol). A 5 per cent. copper citrate ointment. used in trachoma and other eye diseases.

terminology (ter-min-ol'o-je) [L. ter'minus term + Gr. λόγος discourse]. Nomenclature; a system of scientific or technic appellations; the science which deals with the investigation, arrangement, and construction of terms.

terminus (ter'min-us). The end.

terms (termz). An old name for menses.

ternary (ter'na-re) [L terna'rius]. 1. Third in order. 2. Made up of three distinct elements or radicals.

Terni and Bandi's vaccine [Terni; I. Bandi, Naples pathologist, 1867-1926]. See under vaccine

Ter'nidens diminu'tus. A nematode worm found in the large intestine of man in Africa.

ternitrate (ter-ni'trāt). A trinitrate.

teroxid (ter-oks'id) [L. ter thrice + oxid]. Same as trioxid.

terpene (ter'pēn). Any hydrocarbon of the formula C₁₀H₁₆ They are chiefly derivable from essential oils and resins, and differ somewhat in their physical properties.

terpenism (ter'pen-izm). Poisoning with terpene. terpestrol (ter-pes'trol). An ointment containing the active constituent of turpentine and hexamethylenetetramin, for use on ulcers.

terpichin (ter'pi-kin) A purified turpentine free from rosins and oxids and combined with quinin. It is injected intramuscularly as a non-specific stimulant.

terpin (ter'pin) [L. terpi'num]. A product, C₁₀H₁₈-(OH)₂, obtained by the action of nitric acid on oil of turpentine and alcohol; turpentine camphor. t. hydrate, a bitter, colorless, crystalline compound, C₁₀H₁₈(HO)₂ + H₂O, soluble in 32 parts of hot or 250 parts of cold water, and in 10 parts of cold or 2 parts of boiling alcohol. It is used in hay-fever and whooping-cough. Dose, 20-30 gr. (o 13-2 gm) t. iodohydrate, chroatol. t. resorcinate. See odylis.

terpineol (ter-pin'e-ol). A menthene alcohol, C₁₀-H₁₇OH, derived from terpin hydrate

terpinol (ter'pin-ol). An oily, fragrant liquid, (C₁₀H₁₆)₂H₂O, prepared by distilling terpene hydrate with dilute sulphuric acid. It is soluble in ether and alcohol, but insoluble in water. Used in bronchial affections and as a perfume. Dose, 3-5 gr. (0.194-0.333 gm.).

gr. (0.194-0.333 gm.).

terra (ter'ah). Latin for earth. t. al'ba, white clay: used as an absorbent. t. japon'ica [L. for "Japanese earth"], pale catechu, or gambir. t. lem'nia, Lemnian bole; a yellowish, ferruginous clay. t. mer'ita, an old name for turmeric. t. pondero'sa, barium sulphate, or baryta. t. sigilla'ta [L. for "sealed earth" of ancient Lemnos]. Armenian bole, sold in masses stamped with a seal. t. silic'oa purifica'ta, purified silicious or infusorial earth; silicious earth, boiled, washed, and calcined. It is a fine gray powder and is used in certain pharmaceutical operations.

terracing (ter'as-ing). Suturing in several rows or layers.

terrain-cure (ter-ahn'kùr). Treatment by mountain-climbing, regulation of diet, etc., for corpulence, neurasthenia, anemia, etc.

terraline (ter'al-In). A proprietary preparation of petroleum: used like vaselin, and a proposed substitute for cod-liver oil.

Terrillon's operation (ter-e-yawnz') [Octave Roch Terrillon, French surgeon, born 1844]. See operation.

terrol (ter'ol). A petroleum-like substance, consisting of a mixture of hydrocarbons, derived from the residue of petroleum distillation. It is used like cod-liver oil.

terrole (ter'ol). A proprietary mineral-oil preparation for use in eye, ear, nose, and throat diseases.

tersul (ter'sul). A preparation of salicic acid with soluble calcium salts for the treatment of pulmonary tuberculosis, rickets, etc.

tersulphate (ter-sul'fāt) [L. ter thrice + sulphate].

A sulphate that contains three molecules of sulphuric acid.

tersulphid (ter-sul'fid). See trisulphid.

tertian (cer'shun) [L. tertia'nus]. Recurring every second (third, fifth, seventh, etc) day; noting a form of intermittent fever. Special forms of the malarial parasite characterize this fever. double t., an intermittent fever in which there are two sets of recurrences, each tertian, but differing somewhat in character.

tertiarism (ter'she-a-rizm). The combined symptoms of tertiary syphilis

tertiary (ter'she-a-re) [L. tertia'rius]. Third in order. t. syphilis. See syphilis.

tertipara (ter-tip'ar-ah) [L. ler'tus third + par'-ere to bear]. A woman who has borne three children.

teslaization (tes-la-iz-a'shun) [Nikola *Tesla*, a Servian electrician in New York, born 1857]. Treatment by Tesla's currents: arsonvalization.

tessellated (tes'el-a-ted) [L. tessella'tus; tessel'la a square]. Divided into squares like a checker-board.

test (test) [L. tes'tum crucible]. 1. An examination or trial. 2. A significant chemical reaction. t.-glass, a small vessel of glass 3. A reagent. resembling a beaker used in the chemic laboratory. t.-meal, a meal given for the purpose of testing the digestive powers. Leube's l-meal consists of 12 ounces of soup, 3 to 6 ounces of minced steak, 2 ounces of white bread, and 6 ounces of water. Riegel's l-meal consists of a plate of soup, 200 gm. of beefsteak, 50 gm. of mashed potatoes, and one roll. Salzer's t.-meals are two meals given four hours apart, the stomach contents being removed one hour after the last meal, when, if the stomach is normal, no remains of the first meal should be found. The first meal consists of soft-boiled eggs, cold roast beef, rice, and milk; the second, of stale bread and water. t.-object, a minute object for testing the power of a microscope. t.-paper, paper impregnated with litmus or other indicator, which is used to determine the presence or absence of certain substances in solutions. t.-solution, a standard solution of some chemic substance used in testing. t.-spoon, a small spoon with a spatula-like handle for taking up small quantities of a powder, etc., in chemic experiments. t.-tube, a tube of thin glass closed at one end: used for performing reactions in chemistry with a small quantity of the reagent. t.-types, printed words or letters in types of various sizes, employed by oculists to ascertain the acuteness of a person's vision.

A TABLE OF TESTS

(For quantitative tests see under method.)

- Abderhalden's t. See Abderhalden's reaction, under reaction.
- Abelen's t. (for salvarsan). See Abelen's reaction, under reaction.
- **abortin t.:** A reaction marked by rise of temperature, loss of appetite, and diarrhea on the injection into animals infected with Bang's disease of abortin, an extract of *Bacterum abortum*.
- Abrams's t. (for lead in the urine): Add ammonium oxalate to urine (1:150) and introduce metallic magnesium (wire or rod). Lead is precipitated on the magnesium, and can be identified by warming with a fragment of iodin (yellow lead iodid), or dissolving in nitric acid and applying other reagents.

acetanilid t. See Yvon's t.

- acetic acid t. (for albumin in urine): A few drops of acetic acid are added to the boiled urine, when a white precipitate is formed.
- acetic acid and potassium ferrocyanid t.

 (for proteins): Acidify the unknown with acetic acid and add a few drops of potassium ferrocyanid Protein produces a white flocculent precipitate.

aceto-acetic t. See Arnold's t., Harding and Ruttan's t., Hurtley's t., Lindeman's t., and Nobel's t.

- acetone t.: A test for the presence of acetone in the urine made by adding a few drops of sodium nitroprussid, shaking, and pouring over the mixture stronger ammonia-water a magenta-colored line is formed over the area of contact if acetone is present. See Bayer's t, Braun's t, Chautard's t., Deniges's t., Frommer's t, Gerhardt's t. Gunning's t, Gunning-Lieben t, vodoform t., Lange's t., Legal's t., Lieben's t, Lieben-Ralfe t, Malerba's t, Nobel's t., Penzoldt's t., Ralfe's t, Reynold's t., Rothera's t, salicylaldchyd t, Stock's t.
- acetonitril t. (for hyperthyroidism): The blood of such patients increases the resistance of mice to poisoning by acetonitril and morphin.
- Achard and Castaigne's t. See methylene-blue t.

 Acree-Rosenheim t. (for proteins): A few drops of formaldehyd solution (f 5000) are placed in a solution of the suspected matter. A little concentrated sulphuric acid is slowly placed in the test-tube so that the solutions do not mix. At the line of contact a violet color appears if proteins are present.
- **acrolein t.** (for glycerol and fats): Heat the substance with an equal quantity of potassium acid sulphate and note the peculiar penetrating odor of acrolein.
- Adamkiewicz's t. (for proteins): Add the substance to a mixture of 1 volume of strong sulphuric acid and 2 volumes of glacial acetic acid and heat it. A reddish-violet color shows the presence of proteins.
- Adams's t. (for fat in milk): Dry a known quantity of milk on filter-paper, extract in Soxhlet's apparatus, dry to constant weight, and weigh.

Adler's benzidin t. See benzidin t.

- adrenalin t. See Comessati's t., Meyer's t., Vulpeau's t.
- agglutination t.: A test based on the fact that specific agglutinins are formed in the blood-serum of infected individuals, which will produce agglutination of the specific bacteria of the infection. Cf. Widal's test, under tests, and serum-diagnosis, under diagnosis.
- Agostini's t. (for glucose): Mix 5 drops of the urine with 5 drops of a c.5 per cent. solution of gold chlorid and 3 drops of a 20 per cent. solution of potassa, and warm the mixture; glucose will give a red tint.
- Albarran's t. (for renal inadequacy): A test for the renal function based upon the principle that the greater the destruction of epithelium in the kidney,

the less likely is that organ to respond by an increase in secretion after the administration of quantities of water. Called also polyuria t.

- albumin t. See acetic acid t., Almén's t., Alper's t., Axenseld's t., Barrel's t., Blum's t., Boedeker's t., Boston's t., Carrez's t., Cohen's t., Esbach's t., Exton's t., Furbringer's t., Geissler's t., Heller's t., Heynsius's t., Hindenlang's t., Ilimow's t., Johnson's t., Lessilur-Prirey t., MacWilliams's t., Méhu's t., Millard's t., nitric acid t., Oliver's t., Parnum's t., Polacci's t., Posner's t., protein t., Radbe's t., Rees's t., Reoch's t., Riegler's t., Roberts's t., Spiegler's t., Tanret's t., Tidy's t., Ulrich's t., Zouchlos's t.
- alcohol t. See Anstie's t, vodoform t., Woodbury's t. aldehyd t. See Tollen's t.
- Alfraise's t. (for iodin): A reagent consisting of I drop of hydrochloric acid in 100 parts of water, I of starch, and I of potassium nitrate. This is boiled, and I drop of the reagent is added to the liquid that Is being tested, when a blue color will be produced if iodin be present.
- alkali t. See Bachmeier's t., Degner's t.
- alkaloid t. See Arnold's t., Bouchardat's t., Erdman's t., Froehde's t., Frohn's t., Mayer's t., Bitali's t., Winckler's t
- Allen's t.: r. (For glucose in the urine.) Made by adding urine to boiling Fehling's solution, and allowing it to cool, when turbidity will be seen if glucose be present. 2. (For phenol.) To 2 drops of the suspected liquid add 5 drops of hydrochloric acid and 1 of nitric acid. Phenol, if present, will produce a cherry-red color. 3. (For strychnin.) Extract with ether, concentrate by letting fall drops into a warmed porcelian capsule, cool the residue, and treat with sulphuric acid and manganese peroxid. Strychningives a violet color. 4. (For tinea versicolor) Lugol's solution of iodin is applied to the suspected eruption a dark mahogany stain will be produced if the eruption is tinea.
- allergic t. See cutaneous reaction (2d def), under reaction.
- Allesandri-Guaceni t. (for nitric acid; nitrates):
 Dissolve a few drops of phenol in hydrochloric acid by heating twelve hours on a water-bath. Heat to drops of the reagent with the dry residue of suspected liquid on the water-bath. Nitric acid or nitrates give an intense violet color, changed by ammonia to green.
- Almén's t.: 1. (For albumin in urine.) One part of a reagent consisting of a 2 per cent. solution of tannın in dilute alcohol is added to 6 parts of the urine a cloudiness is produced when albumin is present. 2. (For blood or blood-pigment) Shake the suspected liquid with a mixture of equal parts of tincture of gualacum and oil of turpentine. blood-pigment, if present, will turn the mixture blue. 3. (For glucose.) Heat the liquid with bismuth subnitrate dissolved in caustic soda and Rochelle salt glucose will cause the mixture to become dark brown or nearly black, and to deposit a black precipitate.

aloin t. See Rossel's aloin t.

- Alper's t. (for albumin in the urine): Acidulate the urine with hydrochloric acid, and add equal volumes of a 1 per cent. mercury succinimid solution: a white cloudiness forms.
- alpha t.: A psychologic test designed to determine the mental capacity of persons able to read English.
- alphanaphthol t. See Molisch's t. (2).
- Amann's t. (for indican in urine). To 20 c.c. of urine are added a few drops of pure sulphuric acid, 5 c.c. of chloroform, and then 5 c.c. of a 10 per cent. solution of sodium pyrosulphate. They are mixed

gently for several minutes. The chloroform is then allowed to settle and will be colored blue by the indigo.

amino-acid nitrogen t. See Harding and McLean's t., ninhydrin t., triketohydridene hydrale t.

ammonia t. See Brown's t., Nessler's t., Ronchesi's t. amylase t. See Hawk's t.

Anderson's t. (to distinguish pyridin chloroplatinate from quinolin chloroplatinate): Boil the salt in water; the pyridin salt becomes an insoluble double salt, and gives off hydrogen chlorid; but the pyridin salt remains in solution.

Anderson and Goldberger's t. (for typhus fever):
The patient's blood is injected into the peritoneal cavity of guinea-pigs, when, if the disease be typhus, a typical temperature curve will be obtained.

André's t. (for quinin): Chlorin and ammonia produce a green color, changing to blue on saturation with acid. Excess of acid changes the color to violet or bright red, but ammonia again turns it green.

Andreasch's t. (for cystein): Dissolve the substance in hydrochloric acid, and add a few drops of a dilute solution of ferric chlorid and a little ammonia. Cystein causes the liquid to assume a dark purplish tint.

Anstie's t. (for alcohol in the urine): A reagent consisting of a solution of potassium dichromate, 1, in concentrated sulphuric acid, 300, is added by drops. An emgrald-green color signifies the presence of alcohol in toxic quantity.

antiformin t. See antiformin.

antimony t. See Marsch's t.

antipyrin t. See Fieux's t.

antitrypsin t.: A test based on the power of the blood-serum to inhibit the action of trypsin. The antitryptic power of the blood-serum is increased in carcinoma, nephritis, pregnancy, etc. Called Bergmann-Meyer t., Mueller-Jockmann t., and Fuld-Goss t.

apomorphin t. See Bedson's t.

Archetti's t. (for cassein). Heat a solution of potassioferric cyanid with half its volume of nitric acid to boiling, then dilute with water. The reagent gives a precipitate of Prussian blue with cassein (uric acid does also).

Arnold's t.: 1. (For aceto-acetic acid in urine.) a. Dissolve r gm of para-amido-acetophenone in 80 to 100 c.c. water by shaking and adding hydrochloric acid by drops, then add more concentrated acid until the solution is colorless. b. Dissolve 1 gm. sodium nitrite in 100 c c. distilled water. Tust before using mix 2 parts a with 1 part b, add an equal volume of urine, and 2 or 3 drops concentrated ammonia water. an intense brownish-red color develops. Now add I volume of this colored urine to 10 to 12 volumes of concentrated hydrochloric acid, 2 to 4 drops of ferric chlorid, and 3 c.c. of chloroform, a beautiful purplishviolet color develops in the chloroform if acetoacetic acid be present. Strongly colored urine should first be decolorized with animal charcoal. 2. (Alkaloidal tests.) a. Some alkaloids heated on the water-bath with syrupy phosphoric acid obtained by dissolving metaphosphoric acid or phosphoric acid anhydrid in phosphoric acid yield characteristic color reactions aconitin, violet; nicotin, yellow; coniin, green. b. Triturated with concentrated sulphuric acid, many alkaloids yield characteristic color reactions upon adding 30 to 40 per cent. alcoholic (in some instances aqueous) potassa solution.

arsonic t. See Bettendorff's t., Bettmann's t., Fleitmann's t., Gutzeit's t., Marsh's t., Reinsch's t.

Aschner's t. See Aschner's phenomenon, under phenomenon.

Ascoli's t. See miostagmin reaction, under reaction.

association t.: A test based on associative reaction. It is usually performed by mentioning words to a patient and noting what other words the patient will give as the ones called up in his mind. The reaction time consumed is also noted.

Atkinson and Kendall's t. (for blood): A modified form of Teichmann's test.

atropin t.: 1. See Dehio's t. and Reuss's t. 2. (For typhoid infections.) The patient is given atropin 30 gr. (0 002 gm.) hypodermically at least one hour after eating and while in the prone position. The pulse is counted minute by minute one-half hour after the injection. Normally there should be a rise of at least 15 beats per minute over the rate preceding the administration of the drug. This increased rate is absent in typhoid infection. Called also Norris's t.

auto-urine t. (for tuberculosis): Into the superficial layers of the patient's skin is injected 0.05 c.c. of the patient's own urine. If the patient is actively tuberculous a local reaction develops which consists of a palpable lump of infiltration. Called also Wildbolz's t.

Axenfeld's t. (for albumin in urine): Acidulate the urine with formic acid, and drop by drop add a o.r per cent. solution of gold chlorid. On warming, albumin, if present, will produce a red tint, which more of the gold chlorid will turn to a blue. Many other substances will produce the blue tint, but not the red.

azorubin t. (for liver function): 4 c.c. of a 1 per cent. solution of azorubin S are injected intravenously. In healthy subjects 95 per cent. of the dye is excreted by the liver and 5 per cent. by the urine. In liver disturbance the dye increases in the urine.

Babcock's t. (for fat in milk): To 10 c.c. of milk add 2 c.c. of a mixture of amyl alcohol 37 parts, methyl alcohol, 13 parts, and hydrocholric acid 50 parts; fill to the neck with concentrated sulphuric acid, centrifugalize, and read the amount of separated fat on the neck.

Babinski's t. See Babinski's sign, under sign.

Babinski-Weil t.: The patient is made to walk with his eyes shut forward and backward ten times in a clear space. A person with labyrinthine disease deviates from the straight path, bends to one side when walking forward and to the other side when walking backward.

Bachmeier's t. (for alkalis). Tannin solution produces a red to reddish-brown color, changing to dirty green.

bactericidal t. See Neisser and Wechberg's t. See Wright's method, under method

bacteriolytic t. See Pfeiffer's phenomenon, under phenomenon.

Baeyer's t.: 1. (For glucose) Boil the liquid with orthonitrophenylpropiolic acid and sodium carbonate. if glucose is present, indigo is formed; but an excess of glucose will destroy the blue tint by forming white indigo. 2. (For indol.) The suspected substance is dissolved in water, acidulated with 2 or 3 drops of fuming nitric acid, a 2 per cent. solution added drop by drop produces a red color and then a red deposit of nitrosoindol nitrate.

Balfour's t.: The ascertainment of whether the heart is still active in cases of apparent death by inserting pins bearing paper streamers into the skin over the heart. Movement of the heart muscles will be shown by movement of the papers.

Barany's t. See Barany's symptom, under symptom. **Barany's pointing t.**: "Barany believes that in the cerebellar cortex there exists definite centers, the functional preservation of which has to do with the individual's ability to move the various joints correctly in certain places without the aid of sight. For each joint there are separate centers exerting

stimuli in different directions. When one of these

centers is destroyed or its function suppressed, the joint involved falls under the control of the opposing intact center, and when the patient is blindfolded and the pointing accuracy tested, the affected limb deviates in the direction opposite to that of the tonus of the destroyed or suppressed center. This is called spontaneous deviation. Normally, irritation of either vestibular apparatus -for instance, by the caloric test—causes deviation of both arms in the direction opposite to the induced vestibular nystagmus. This is called the normal vestibular reaction. In the case of a cerebellar lesion giving rise to a spontaneous outward deviation, as of shoulder- or wrist-joint, appropriate vestibular irritation results in the normal deviation, or reaction, in the arm or wrist corresponding to the sound cerebellar hemisphere, but is without influence on the arm or wrist corresponding to the cerebellar lesion" (J. A. M. A.).

Barberio's t. (for semen): To a drop of seminal fluid on a glass slide \(\frac{1}{2} \) drop of saturated aqueous solution of picric acid is added, when a precipitate of yellow, strongly refractive, needle-shaped crystals is formed.

Bardach's t. (for protein): A test dependent on the fact that, in the presence of protein, acetone and iodopotassium iodid and alkali react to yield canary-yellow needles instead of the usual hexagonal crystals of iodoform.

Bareggi's t. (for typhoid fever): The clot formed in the blood of typhoid patients after twenty-four hours is watery and soft, with only a small amount of separated serum.

Barfoed's t. (for monosaccharids): Boil 5 c.c. of Barfoed's solution (dissolve 4.5 gm. of neutral crystallized copper acetate and 1.2 c.c. of 50 per cent. acetic acid in 100 c.c. of water) and add the unknown slowly and with boiling. Monosaccharids reduce this mixture (formation of a red precipitate), while disaccharids do so only very slowly if at all, and so can be distinguished from the former.

Barral's t. (for albumin and biliary pigments):
Overlay the urine with a 20 per cent. solution of sozolic acid. a white ring develops at the contact-point if albumin be present; a green ring if biliary pigments be present.

Basham's t. (for bile-pigment): The liquid is shaken with chloroform, evaporated, and a drop of nitric acid added, when a play of bright colors is produced, finally becoming a fine red.

Bass-Watkin t. (for agglutination): A form of the Widal test so modified that it can be performed at the bedside in about five minutes. Place the drop of the patient's blood on a glass slide, dissolve in 1 drop of water, add 1 drop of a rather heavy killed suspension of typhoid bacilli, and mix by tilting the slide from side to side. In a positive case small grayish clumps and a fine granular sediment form within two minutes.

Bauer's t.: 1. A modification of the Wassermann test by relying entirely on the antisheep amboceptor present in the patient's serum. 2. A test of carbohydrate tolerance of the liver, performed by administering 30 gm. of galactose, the urine being tested later for galactose by means of Fehling's solution. 3. (For milk.) To 2 c.c. of milk add 1 drop of 0.25 per cent. aqueous solution of Nile-blue sulphate. The blue color can be extracted from human milk, but not from cow's milk by means of ether.

Baumann's t. (for dextrose). To a watery solution of the substance add benzoyl chlorid and an excess of sodium hydroxid, and shake until the odor of benzoyl chlorid disappears and a precipitate of the benzoic-acid ester of dextrose is formed.

Baumann and Goldmann's t. (for cystin): A solution containing the cystin is shaken with caustic soda and benzoyl chlorid: a voluminous precipitate is formed, composed of benzoyl cystin.

Bayer's t. (for acetone in the urine): Equal volumes of urine and nitrobenzenaldehyd are mixed with alkaline water: acetone turns it to an indigo-blue tint.

Bayrac's t. (for uric acid in urine): Evaporate 50 c.c. urine to dryness on the water-bath, treat residue with hydrochloric acid (1:5), wash with alcohol, dissolve in 20 drops of sodium-hydroxid solution heated to 90° or 100° C. on water-bath, and decompose with sodium hypobromite in the apparatus for determining urea. Each 1 c.c. of nitrogen at ordinary temperature equals 0.00357 gm. uric acid.

bead t. (for digestive function): In a gelatinous capsule the patient is given beads with various food-substances attached. The feces are examined until all the beads are recovered, and the condition of the digestion is determined by the rapidity with which the beads are passed and by whether or not the attached food has been properly digested.

Becker's t.: 1. (For picrotoxin) Fehling's solution is added and the mixture is warmed: if the alkaloid be present, the solution is reduced 2. (For astignatism) The patient looks at a test card containing lines radiating in sets of three and points out which seem blurred.

Bedson's t. (for apomorphin): On boiling morphin solution containing apomorphin with potassium hydroxid a brown color develops.

Bell's t.: 1. (For percentage of free hydrochloric acid in stomach contents.) Filter the contents, and to 4 c.c. add drop by drop a solution of dimethylamido-azobenzol until the pink color ceases to grow darker. Compare with Bell's color scale for percentage. 2. (For alum in flour or bread) Fresh 5 per cent. logwood tincture in methylated spirit. Moisten 10 gm. flour with water, then add 1 c c. tincture and an equal quantity saturated ammonium-carbonate solution. Sample, if pure, gives pinkish color, gradually fading to buff or brown. If alum is present, a lavender or bluish tint is formed, becoming more marked on drying.

belt t. (for enteroptosis). The lower abdomen of the patient is encircled by both hands and lifted up. The patient will experience a sensation of relief if enteroptosis is present.

Benedict's t.: 1. (For glucose) 173 gr of sodium or potassium citrate and 100 gr. crystallized sodium carbonate are dissolved in 800 c.c of boiling water. This is cooled and filtered and 17.3 gr. copper sulphate dissolved in 100 c.c. of water are added and the whole diluted to make 1 liter. To 5 c.c. of this reagent, in a test-tube, 8 or 10 drops of the solution to be tested are added. Boil for one or two minutes and allow to cool slowly. If glucose is present the solution will be filled with a precipitate red, yellow, or green in color. 2. (For urea) The urea is hydrolyzed to ammonium carbonate by KHSO4 and ZnSO4, made alkaline and distilled as usual.

Benedict and Denis's t. (for total sulphur in urine). See Benedict and Denis's method, under method.

Benedict and Murlin's t. (for amino-acid nitrogen in urine). See Benedict and Murlin's method, under method.

benzidin t. (for blood): To a saturated solution of benzidin in glacial acetic acid add an equal volume of 3 per cent. hydrogen peroxid and 1 c.c. of the unknown. A blue color indicates blood.

benzidin peroxidase t. (for raw milk): To 10 c.c. of the milk add 2 c.c. of a 4 per cent. alcoholic solution of benzidin and sufficient acetic acid to coagulate the milk. Mix and allow 2 c.c. of a 3 per cent. solution of hydrogen peroxid to flow slowly down the wall of the tube. An immediate blue color indicates raw milk (not heated to 78° C.).

benzoin t. (for cerebrospinal syphilis): When a colloidal solution of benzoin resin is added to syphilitic cerebrospinal fluid, flocculation or precipitation occurs

Bergmann-Meyer t. Same as antitrypsin t.

Berthelot's t. (for phenol): An ammoniacal solution of phenol treated with sodium hypochlorite takes on a fine blue color.

Bertoni-Raymondi t. (for nitrous acid in blood): Dialyze, evaporate the dialysate to dryness, take up with hot alcohol, and add starch paste and potassium iodid: a blue color develops.

Bertrand's t. (for glucose): Boil the unknown with an excess of Fehling's solution, filter out the cuprous oxid, dissolve in an acid solution of ferric sulphate, and titrate with potassium permanganate.

beta t.: A psychologic test for intelligence to be used instead of the alpha test on foreigners unacquainted with English.

beta-hydroxybutyric acid t. See Black's t., Hart's t., Kultz's t.

Bettendorff's t. (for arsenic): The liquid to be tested is mixed with hydrochloric acid; a freshly prepared solution of stannous chlorid is added, and a bit of tinfoil is put into it, when a brown color or precipitate is formed.

Bettmann's t. Same as Bettendorff's t.

Bial's t. (for pentose in urine): Make a reagent consisting of 500 c.c. of 30 per cent. hydrochloric acid, 1 gm. of orcin, and 25 drops liquor ferri sesquichloratis (G. Ph). Five c.c. of this reagent are boiled in a test-tube, and after removal from the flame, several drops of urine are added. A green color appearing at once indicates pentose.

bicarbonate tolerance t. See Sellards's t.

bile acid t. See Bischoff's t., Preschsel's t., Francis's t., Hay's t., Mylius's l., Neukomm's t., Oliver's t. (4), Pettenkoffer's t., Strassburg's t., Tyson's t., Udransky's t.

bile pigment t. See Barral's t., Basham's t., Bonanno's t., Capranica's t., Cunissel's t., Dragendorff's t., Dumontpallier's t., Fleischl's t., Gerhardt's t., Gluzinski's t., Gmelin's t., Hammarstein's t., Huppert's t., Huppert-Cole t., Jolles's t., Kapsinow's t., Krokiewicz's t., Le Noble's t., Marechal's t., Massel's t., Nobel's t., Quinlan's t., Rosenbach-Gmelin t., Salkowski and Schipper's t., Schmidt's t., sand t., Smith's t., Stokvis's t., Trousseau's t., Ultzmann's t., Vitali's t.

bilirubin t. See Schmidt's t.

Binet's t.: A method of testing the mental capacity of children and youth by asking a series of questions adapted to the capacity of normal children at various ages. According to the answers given the mental capacity of the subject is ascertained.

Binet-Simon t. Same as Binet's i

Bing's entotic t.: When words are not audible through an ear trumpet as ordinarily applied, but may be heard when spoken into a trumpet joined to a catheter in the eustachian tube, it is probable that there is a lesion of the incus or malleus.

Binz's t. (for quinin in urine): The reagent consists of 2 parts iodin, 1 part potassium iodid, and 40 parts water.

biologic t. See serum t.

Bischoff's t. (for biliary acids): Heated with diluted sulphuric acid and cane-sugar these yield a red color.

bismuth t. See Nylander's t.

biuret t.: 1. (For proteins.) To the unknown solution add strong potassium hydroxid solution and then a few drops of very dilute copper sulphate solution. A pinkish-violet color indicates proteins.

2. (For urea.) Melt the substance in a dry test-tube and heat it, then cool, and dissolve in water; add caustic soda, and mix drop by drop a dilute solution of copper sulphate: a pink and finally a bluish color is produced.

Black's t. (for beta-oxybutyric acid): Evaporate 50 c.c of urine in a small dish to about one-fourth; acidify with a few drops of hydrochloric acid and add plaster of Paris to a thick paste. When the mass begins to harden, break it up into a meal;

add 30 c.c. of ether and mix. Draw the clear ether into an evaporating dish; evaporate over a water-bath and dissolve the residue in 10 c.c. of water. Neutralize with an excess of dry barium carbonate; pour into a test-tube, add a few drops of hydrogen peroxid and 5 drops of 10 per cent. ferric chlorid. A red color indicates beta-oxybutyric acid.

blister t. (for infectious disease): A blister is raised on the skin and its contents examined. If the proportion of eosinophils present is less than 25 per cent., infectious disease is probable. Called also Roger-Josue t.

Block-Steiger t.: A test for simulated deafness based on the fact that if two tuning-forks, vibrating in unison, but one struck stronger than the other, be held before the two ears of a person with normal hearing, the louder fork only will be heard.

blood t. See Adler's t., Almén's t, aloin t., aloin-turpenline t, Alkinson and Kendall's t., benzidin t., Bremer's t., Cowie's t., Day's t., Deen's t, Donogany's t., Einhorn's t., Fleig's t., Gregerson and Boas's t., Heller's t, hemalcin t., hydrogen dioxid t., Koberl's t, Ladendorff's t., Lyle and Curtman's t., Meyer's t., Nappe's t., orthololidin t, phenolphthalein t., pineapple t, Rose's t., Rosenthal's t., Rossel's t, Rutlan and Hardisty's t., sand t., Schalfijew's t., Schoenbein's t., Schumm's t., serum t., Stake's t., Strive's t., Taylor's t., Teichman's t., Weber's t., Williamson's t., Valenta's t., von Zeynek and Nencki's t.

blood-cholesterol t.: Increase of the cholesterol content of the blood indicates deficiency of the cholaligenic power of the liver.

Bloor's t. (for fat): The protein is precipitated, the fat is saponified, and the amount determined nephelometrically.

Bloxham's t. (for urea): If a nitrate is present, add a few drops of an ammonium-chlorid solution; if absent, acidulate with hydrochloric acid. Evaporate to dryness in a watch-glass, and heat cautiously as long as thick, white fumes evolve. Dissolve the residue in a drop or two of ammonia, add a drop of barium-chlorid solution, and stir. If urea is present, a crystalline streak of barium cyanurate will form in the track of the rod.

Blum's t. (for albumin): Dissolve 0.03 to 0.05 gm. manganous chlorid in a little water; acidulate with hydrochloric acid, and treat with 100 c.c. 10 per cent. solution sodium metaphosphate. Then add lead oxid a little at a time; let the liquid settle, and filter. Resulting pink solution of manganic metaphosphate detects albumin in urine. Place reagent in a test-tube and filter urine into it.

Blythe's t. (for lead in drinking-water): A little alcoholic tincture of cochineal makes a precipitate with it.

Boas's t.: 1. (For atony of the bowels.) The colon is unloaded and injected with water; the quantity of water necessary to elicit a spl shing sound on succussion is noted as a measure of the degree of atony. 2. (For hydrochloric acid in the stomach contents.) Dissolve 5 gm. of resorcinol and 5 gm. of sugar in 100 c.c. of dilute alcohol. A thin layer of this reagent is warmed upon a porcelain dish. If a glass rod is dipped in this layer and touched to a drop of the filtered stomach-liquid, a scarlet streak is formed. Called also resorcinol t. 3. (For free hydrochloric acid in the stomach contents.) Resublimed resorcinol, 5 parts; cane-sugar, 3 parts; 94 per cent. alcohol, to make 100 parts; boil the fluid with the reagent: free hydrochloric acid will give a transient rose-red mirror.
4. (For lactic acid.) Test for lactic acid in gastric juice depends on oxidation of the acid to aldehyd and formic acid by action of sulphuric acid and manganese. The aldehyd is detected by addition of Nessler's reagent or by formation of iodoform when iodin solution is added. 5. Same as chlorophyl t.

- Bodal's t.: Test of color perception by the use of colored blocks.
- Boedeker's t. (for albumin): The liquid is treated with acetic acid, and potassium ferrocyanid in solution is added drop by drop: albumin will form a white precipitate.
- Bohmansson's t. (for glucose): To 10 c.c. of the urine add 2 c.c. of 25 per cent. hydrochloric acid and 5 c.c. of bone black Shake well, filter, and make Nylander's test on the filtrate.
- Bolte's t. (for diagnosis of general paralysis). Place r c.c. of fresh cerebrospinal fluid in a small glass test-tube and to it add 0.3 c c. of acetic anhydrid. Shake the mixture well and then add, drop by drop, 0.8 c.c. of concentrated sulphuric acid. Shake the mixture gently once more. Then hold the test-tube against a white background. The presence of a lilac tint indicates a positive reaction, a brown yellow, red yellow, or clear fluid is noted if the reaction is a negative one.
- Bonanno's t. (for bile pigments): To 5 c.c. of the unknown add a few drops of concentrated hydrochloric acid containing 2 per cent. of sodium nitrite. An emerald green color indicates bile pigments.
- borates and boric acid t.: Dry the milk and ash the residue 'Add 1 c c. of water and 2 drops of hydrochloric acid. Soak a strip of turmeric paper in the solution one minute and allow it to dry in the air. A deep red color which changes to green or blue on treatment with dilute alkali indicates boric acid.
- Borchardt's t. (for levulose in urine): A few cubic centimeters of a mixture of equal parts of water and concentrated hydrochloric acid are heated for one and one-half minutes with an equal amount of urine and a few crystals of resorcin. The mixture is allowed to cool and is made alkaline with sodium carbonate; then poured into a test-tube and shaken with acetic ether: a yellow color in the ether indicates the presence of levulose.
- Borden's t. (for typhoid fever). A modification of the Widal test. The patient's blood-serum is mixed with salt solution and then with a suspension of killed typhoid bacilli, so as to bring the dilution up to 1 to 50. The positive reaction consists in the sinking of the clump of bacteria to the bottom of the test-tube, leaving a clear fluid above a small white mass of agglutinated bacilli.
- Bordet's t. See serum t.
- **Boston's t.:** A method of performing the ring tests for albumin in which the fluids are brought into contact in a glass pipet.
- Botelho's t. (for cancer) To centrifugated suspect blood-serum dilute nitric acid and an iodin reagent are added in several small amounts at short intervals, the test-tube being shaken after each addition. Normal serum remains clear, that of cancer patients continues clouded.
- Böttger's t.: 1. (For glucose in the urine.) The urine is treated with sodium hydroxid and then boiled with a very small amount of bismuth subnitrate; if glucose is present the precipitate is black. 2. Paper moistened with palladium chlorid solution (0 0002 gm. in 100 c.c.) becomes darkened in the presence of carbon monoxid.
- Bottu's t. (for glucose): To 8 c c. of Bottu's reagent (3 5 gm. of orthontro-phenyl-propiolic acid and 5 c.c. of freshly prepared 10 per cent. solution of sodium hydroxid per liter) in a test-tube add 1 c c. of the urine and mix. Boil the upper portion, add one more c.c. of the mixture, and heat again. A blue color accompanied by the precipitation of small particles of indigo indicates glucose.
- **Bouchardat's t.** (for alkaloids): Potassium trilodid as a test for alkaloids gives a brown precipitate, soluble in alcohol.
- Bourdon's t. (for mental disease): A test based on the accuracy and time required for a patient to strike out certain recurring letters on a page.

- Bourget's t. (for iodids in urine and saliva): Impregnate a filter-paper with a 5 per cent. starch solution, dry, and cut into squares 5 cm. each. Then drop 2 or 3 drops of a 5 per cent. ammonium persulphate solution in the center of each square, and dry the pieces in the dark. Even with traces of iodin the prepared paper gives an intensely blue color.
- Boveri's t. (for excess of globulin in cerebrospinal fluid): Over 1 c.c. of cerebrospinal fluid in a test-tube is poured an equal quantity of a 1 · 1000 solution of potassium permanganate If there is excess of globulin a yellow ring will form at the line of junction, and on shaking, the entire contents of the tube will become bright yellow.
- **Boyksen's t.** (for cancer). Scrum from animals immunized with cancer material is injected intracutaneously. The resulting reaction is said to be more frequently positive in cancer patients than in controls.
- **Brahmachari's t.:** A test for leishmaniasis based on the degree of opacity produced on diluting the scrum with water, on the theory that the scrum is characterized by an excess of globulin.
- **Bram's t.:** Persons with exophthalmic goiter are more tolerant of quinin hydrobromid than normal persons.
- **Brande's t.** (for quinin) When a solution of quinin is treated with chlorin water and ammonia, a green color is produced.
- Braun's t. (for glucose in urine): The urine is alkalinized with sodium hydroxid and boiled with a solution of picric acid if glucose is present, a deep-red color is produced. Acetone gives the same reaction, though less decidedly; while creatin will give it even in a cold solution.
- Bremer's t. (for diabetic blood): The blood is prepared for staining, dried in a hot-air sterilizer, and stained with methylene-blue and cosin. The red corpuscles of normal blood become brownish; but those of diabetic blood take on a greenish-yellow tint.
- Brieger's t.: 1. (For pyrocatechin.) Add I drop of urine to I drop of very dilute ferric chlorid solution on a watch-glass—pyrocatechin causes an emerald-green color, on adding now a dilute solution of sodium bicarbonate or ammonium carbonate, the fluid becomes violet, changing back to green with acetic acid. 2. (For strychnin.) Pure chromic acid is added, and a violet color is produced. 3. See Brieger's reaction, under reaction.
- bromin t.: 1. (For melanin) See Zeller's t. 2. (For tryptophan) See tryptophan t.
- bromsulphthalein t. See bromsulphthalein.
- Brown's t. (for quantitative estimation of ammonia in urine): Heat 60 c.c. of urine with 3 gm. of basic lead acetate, stir well, let stand for a few minutes, and filter. This removes nitrogenous substances. Heat the filtrate with 2 gm. neutral potassium oxalate, stir well, and filter. Take 10 c.c. of the filtrate, add 50 c c. of water and 15 gm. of neutral potassium oxalate, and estimate the ammonia.
- Bruck's serochemical t. (for syphilis). Nitric acid when added to syphilitic blood-serum causes a precipitate to form. Bruck's technic is based on an acid containing, per hundred gm., 24.77 gm. of nitric acid, or, per hundred c.c., 28.48 c.c. of nitric acid with a specific gravity of 1.149. He uses 0 3 c.c. To 0.5 c.c. of clear serum 2 c.c. of distilled water are added. This is shaken, and then 0.3 c.c. of nitric acid is added with a standardized pipet. This is shaken and permitted to stand at room temperature for ten minutes. Then 16 c.c of distilled water at 15° C. are added and shaken slowly three or four times so as not to foam. This shaking is repeated ten minutes later, and then the tube is set aside for one-half hour. If the serum is syphillitic, it shows a distinct floculent turbidity. In twelve hours a precipitate is piled up on the floor of the test-tube. If the

serum is non-syphilitic, there is no precipitate at any time.

Brücke's t.: r. (For bile-pigments in urine.) It is made by shaking with nitric acid, and then slowly adding sulphuric acid, when color-reactions follow. 2. (For proleins.) The suspected liquid is acidulated with hydrochloric acid and treated with potassic iodid, when the proteins will be precipitated. 3. (For urea.) The suspected liquid is heated with an alcoholic solution of fusel oil, filtered, and treated with a solution of oxalic acid in fusel oil, when a crystalline deposit is formed.

Bryce's t.: The determination of a degree of immunity against small-pox conferred by vaccination by repeating the inoculation after the lapse of several days: if the first is successful, the second will rapidly overtake it.

Burchard-Liebermann t. See Liebermann's t. Burnam's t. (for formaldehyd in urine). To 10 c c. of urine in a test-tube is added 3 drops of a 5 per cent. solution of phenylhydrazin hydrochlorid, 3 drops of a 5 per cent. solution of sodium nitroprussid, and then a few drops of sodium hydrate are poured down the side of the test-tube. If formaldehyd is present, a deep purplish color is seen, changing to dark green, and then to pale yellow

Busacca's t.: One c.c. of sterilized gelatin is rendered fluid by heating and is then injected intracutaneously in syphilitic subjects this injection is followed within six hours by a reddened infiltrated area

butter t.: A test for pancreatic insufficiency based on the fact that in deficiency of the external secretion of the pancreas so much fat may be present in the stool after the ingestion of butter that the stool looks like butter

butyric-acid t. See Noguchi reaction, under reaction

Bychowski's t. (for albumin in urine). Two drops of urine are placed in a test-tube of hot water and shaken, the water becomes cloudy if albumin is present.

caffein t. See Archetti's t, Delff's t.

Caillan's t. (for glucose in urine) Shake 2 parts of urine with 1 part of chloroform. on settling, glucose will be present in the upper layer.

Callaway's t.: A test for dislocation of the humerus, consisting in the fact that the circumference of the affected shoulder, measured over the acromion and through the axilla, is greater than that on the unaffected side.

Calmette's t. See Calmette's reaction, under reaction.

caloric t. See Bárány's symptom, under symptom.
 Cammidge's t. See Cammidge's reaction, under reaction

Campani's t. (for glucose). A mixture of a concentrated solution of lead subacetate and a dilute solution of copper acetate is productive of a yellow or red color.

camphor t.: If $7\frac{1}{2}$ gr. of camphor are given by the mouth it should cause glycuronic acid to appear in the urine. This will not occur in liver disease.

the urine. This will not occur in liver disease.

cancer t. See edestin t, Friedman-Hamburger t., glycyl-tryptophan t., Neubauer and Fischer's t., trytophan t., Weinstein's t., Wolf and Junghans's t.

cane-sugar t. See Nickles' t.

Cappagnoli's t. (for glucose): A solution of copper hydroxid and potassium hydoxid is added, when a blue color is produced.

Capranica's t.: 1. (For bile-pigments.) Shake the liquid with chloroform containing bromin: it turns green, blue, violet, yellowish-red, and then becomes nearly colorless. 2. (For guanin.) A warm solution of guanin hydrochlorid gives a yellow precipitate in silky needles with a cold saturated solution of picric acid. 3. (For guanin.) Mix the solution with a concentrated solution of potassium ferrocyanid: a yellowish-brown precipitate in

prisms appears. 4. (For guanin.) Add to the suspected solution a concentrated solution of potassium dichromate: guanin will cause an orange-red precipitate in crystals.

carbohydrate t. See Moore's t., Schiff's t.

carbohydrate tolerance t. See Killian's t.

carbon monoxid t. See Boetger's t., Dejust's t., Hoppe-Seyler t., Katyama's t., Rubner's t., Salkowski's t., Wetzel's t, Zaleski's t.

carbon monoxid hemoglobin t. See tannin t.

Carnot's t. (for atonic dilatation of the stomach): The patient's stomach is emptied by the stomach-pump and 500 c.c. of water introduced. The patient remains in an erect posture for an hour, after which the water is withdrawn and measured. Then 500 c c of water are introduced and the patient placed on his right side for an hour. In this position the stomach should be nearly empty in an hour.

Carrez's t. (for albumin): One gram of resorcinol is dissolved in 2 c.c. of distilled water in a test-tube and the urine is poured upon the surface. A white ring shows albumin.

Casamajor's t. (for glucose). The suspected liquid is shaken with methyl alcohol; glucose makes the mixture cloudy.

casein t. See Leiner's t.

Castellani's t.: An agglutination test for ascertaining the existence of a mixed infection with allied species of organisms.

catoptric t.: A test for cataract made by observing the reflections from the cornea and from the surfaces of the crystalline lens.

cellulose t. See Schultz's t.

Chautard's t. (for acetone in the urine): A drop of aqueous solution of magenta is dissolved with sulphurous acid and added to the urine, when a violet color is produced.

chlorophyl t. (for gastric motility). On a fasting stomach the patient drinks 400 c c of water which has been colored green by the addition of 20 drops of chlorophyl solution. After half an hour the residue is aspirated from the stomach, and the amount that has passed out of the stomach in one-half hour is ascertained.

cholera red t. (for indole): To the unknown add one-tenth its volume of a 002 per cent solution of potassium nitrite and mix Underlay with sulphuric acid. The purple color will change to bluish green on neutralization with potassium hydroxid.

cholesterol t. See Lieberman and Burchardi's t., Obermuller's t, Salkowski's t, and Schultz's t.

cholin t. See Rosenheim's t.

Ciamician and Magnanini's t. (for skatol):
Warm the solution with sulphuric acid. skatol produces a purple-red tint.

Cipollina's t. (for dextrose or levulose in urine):
Four c c. of urine, 5 drops of pure phenylhydrazin, and 0.5 c.c. of glacial acetic acid are boiled for one minute. Four or 5 drops of potassium hydrate solution are added and the mixture boiled again for a few seconds. Cool and examine for crystals of phenyl-levulosazone or phenyldextrosozone.

coagulation t. (for proteins in urine). Acidify the urine with acetic acid and boil. A white coagulum or a white precipitate or a cloudiness indicates protein.

cobra-venom t. See Weil's t.

cockscomb t.: A test for the activity of the ergot preparations, based on the fact that ergot, when administered to a cock, produces a blue coloration of its comb.

Cohen's t. (for albumin). To the acidulated solution add a solution of potassium bismuthic iodid and potassium iodid: albumin is precipitated.

Cohn's t.: A test for color perception by the use of variously colored embroidery patterns.

coin-t.: A test for pneumothorax made by auscultating the chest while a silver coin laid against the chest is struck with another coin. A metallic, ringing sound is produced over a cavity containing air.

colchicin t. See Zeisel's t.

Cole's t.: 1. (For glucose.) Add acetic acid to the urine and filter through blood charcoal to remove other reducing substances. Then make a modified Felling's test. 2. (For lactose.) Absorb the lactose on to blood charcoal, extract it again with hot dilute acetic acid and make an osazone test. 3. (For uric acid.) Add 2 drops of ammonium hydroxid to 5 c c. of urine and then saturate with ammonium chlorid. Pour off the supernatant fluid, filter, evaporate residue, and make murexid test.

colloidal benzoin t. See benzoin t.

colloidal gold t. See Lange's t.

Comessatti's t. (for adrenalin): To 5 c.c of the unknown solution add an equal volume of 1 per cent. sodium acetate solution and 1 c.c. of 0.1 per cent. mercuric chlorid solution. A rose color indicates adrenalin.

Congo-red t. See Riegel's t. (2).

conjugate glycuronates t. See Tollens's t.

conjunctival t. See ophthalmic reaction, under reaction

connective-tissue t. See Schmidt's t. (5).

Cook's t. (for purin bodies in urine). In a centrifuge tube take 10 c.c. urine and add 1 gm. sodium carbonate and 1 or 2 c.c. strong ammonia. Shake until the soda is dissolved. The earthy phosphates will be precipitated. Centrifuge and pour off clear fluid. Add 2 c.c. ammonia and 2 c.c. ammoniated silver nitrate solution. Centrifuge again. Each to c.c. of sediment represents 0.001176 gm. of purin bodies.

copper soap t. (for lipase): Make up a hydrogel with 1 per cent. of agar-agar, 2½ per cent. of starch, and 2½ per cent. of a neutral fat; pour into Petri dishes, cool, and place drops of the unknown on its surface. Incubate at 38° C. one hour and pour over the surface a saturated solution of copper sulphate Bluish-green spots of copper soap where the drops were indicate lipase action.

cover t.: A test for imbalance of ocular muscles, made by covering one eye and noting its movement while uncovering it again.

Cowie's guaiac t. (for blood in feces): Add glacial acetic acid to the feces and extract with ether To the filtrate add an equal volume of water, some powdered guaiac resin, and old turpentine or hydrogen peroxid. A blue color indicates blood.

Craft's t.: In organic disease of the pyramidal tract, stroking with a blunt point upward over the dorsal surface of the ankle, the leg being extended and the muscles relaxed, produces dorsal extension of the great toe.

Craig's t.: 1 (For tuberculosis.) A complement-fixation test for tuberculosis in which the antigen is made by growing several strains of bacilli on an alkaline bouillon containing a teaspoonful of aseptically removed egg-white and egg-yolk for each 250 c c. of bouillon. 2. A modification of the Wassermann test using a human hemolytic serum instead of a sheep hemolytic serum

Cramer's t. (for glucose): Place 3 c.c. of Cramer's "2 5 reagent" (o 4 gm. of mercuric oxid and 6 gm. of potassium iodid dissolved in 100 c.c. of water and the reaction so adjusted that 10 c.c. will be neutralized to phenolphthalein by 2 5 c.c of N/10 acid) in a test-tube and boil. Add 3 c.c. of the urine and again boil. If positive the mixture becomes turbid, darkens, and a precipitate of finely divided mercury settles out

creatinin t. See Braun's t., Jaffé's t., Kerner's t., Maschke's t., Salkowski's t., Thudichum's t., Weyl's t.

Crismer's t. (for glucose): The solution is made alkaline, and is boiled with 1 part of safranin in

1000 parts of water: if glucose is present, the mixture is decolorized or turned to a pale yellow.

Cunisset's t. (for bile in the urine): The urine is shaken with chloroform: if biliary matter is present, a yellow color is produced.

currant t.: If, after a meal of currants, the seeds do not appear in the stools in twenty-four hours, there is defective motility of the stomach.

cystein t. See Andreasch's t., Baumann and Goldmann's t., Liebig's t., Sullivan's t.

cytosin t. See Wheeler and Johnson's t.

Davy's t. (for phenol): To a drop or two of the suspected solution add 3 or 4 drops of a solution of 1 part of molybdic acid in 10 or 15 parts of concentrated sulphuric acid: if phenol is present, a pale yellow-brown tint is produced, changing to a red-dish-brown and then to a fine purple.

Day's t. (for blood): The suspected substance is treated with fresh guaiacum tincture and then with hydrogen dioxid: if blood is present, a blue

tint is produced.

Dedichen's t. (for liver function): A test based on the assumption that urobilinuria is a sign of absolute liver insufficiency. Tincture of iodin is added to the urine, drop by drop, and then an equal amount of Schlesinger's reagent. The mixture is filtered. If urobilin is present, fluorescence takes place.

Deen's t. (for blood in gastric juice). To the gastric juice is added 1 c.c. of a fresh tincture of guaiac and 1 c.c. of Huhnerfeld's solution (2 c.c. of glacial acetic acid, 1 c.c. of distilled water, and 100 c.c. each of oil of turpentine and alcohol) On shaking, the fluid turns blue if blood is present Iron compounds give the same reaction as blood.

Degener's t. (for alkalis). Phenacetolin is turned red by alkalis.

Dehio's t.: If bradycardia is relieved by injections of atropin, the condition is caused by irritation of the vagus; but if the bradycardia is not relieved, the cause is some affection of the heart muscle.

Dejust's t. (for carbon monoxid). If air containing carbon monoxid is passed through an ammoniacal silver solution, metallic silver will be deposited and the solution will take on a brown or black color.

Delff's t. (for caffein) A solution of red mercuric oxid and potassium iodid used as a test for caffein, which it throws down as a crystalline precipitate.

Deniges's t.: 1. (For uric acid.) Add nitric acid, which changes uric acid into alloxan, heat gently so as to drive off free nitric acid; add a few drops of sulphuric acid and of commercial benzol, which contains thiophen. This gives a blue color if alloxan has been formed. 2 (For acetone in urine) About 1 inch of the distillate in a test-tube is mixed with an equal amount of a solution of the subsulphate of mercury (mercuric oxid 50, sulphuric acid 200, water up to 1000) and the mixture allowed to simmer in a stoppered flask for about five minutes. A white crystalline precipitate occurs on cooling, which is very distinctive in appearance. If acetone is present in excess, the test is less distinct. If but a trace is present, a trace of sodium chlorid will aid the precipitation. The precipitate is not soluble in dilute hydrochloric acid.

desmoid t. See desmoid reaction, under reaction. diacetic acid t. See aceto-acetic acid t.

Dick t. (for susceptibility or immunity to scarlet fever): The development of a local redness of the skin following the intracutaneous injection of o.t c.c. of a diluted filtrate of cultures of hemolytic streptococci from scarlet fever patients. The occurrence of such a skin reaction indicates susceptibility, its absence immunity, to scarlet fever.

digestive function t. See Einhorn's t.

digitalin t. See Grandeau's t.

dimethylamino-azobenzol t. (for free hydrochloric acid): To a little of the âltered gastric juice in a test-tube add a drop of 0.5 per cent. alcoholic solution of dimethylamido-azobenzol; in the presence of free hydrochloric acid there will at once appear a cherry-red color.

dirt t. (for milk): Filter a pint of milk through a little disk of absorbent cotton and note the stain produced.

Dold's t.: A flocculation test for syphilis.

Donaldson's t. (for sugar): Add to a suspected fluid a few drops of a solution of 5 parts of sodium carbonate, 5 of caustic potash, 6 of potassium bitartrate, 4 of copper sulphate, and 32 of water; heat it, and if sugar is present, a yellow-green color will be produced.

Donder's t.: A color-vision test performed by lanterns with sides of colored glass.

Donné's t. (for pus in the urine): Separate the pus from the urine, add to it a piece of solid potassium hydroxid, and stir. If pus be present the sediment will become slimy and tough, while mucus will pass into solution.

Donogany's t. (for blood in urine): One c.c. of ammonium sulphid solution and I c.c. of pyridin solution are added to 10 c.c. of urine: an orange color forms if blood is present.

Dragendorff's t. (for bile-pigments): Wet an unglazed porcelain plate with the suspected urine, which is soon absorbed; add a drop or more of nitric acid: if bile-pigments are present, colored rings are formed.

Drechsel's t.: 1. (For bile.) On heating the liquid on a water-bath with phosphoric acid and canesugar, a reddish-brown color will be produced if bile is present. 2. (For xanthin.) Made by adding copper chlorid to an ammoniacal solution of the substance xanthin, if present, causes a muddy precipitate

Dreyer's t.: An agglutination test for the differentiation of typhoid and paratyphoid infections from other infections in persons vaccinated against typhoid-paratyphoid infection.

Duane's t.: The employment of a candle-blaze and prisms to measure the degree of ocular heterophoria.

Dugas's t.: A test for the existence of dislocation of the shoulder, made by placing the hand of the affected side on the opposite shoulder and bringing the elbow to the side of the chest. If this cannot be accomplished, dislocation exists.

Dumontpallier's t. (for bile-pigments). Over the liquid to be tested pour carefully iodin tincture: if bile-pigment is present, a green ring is seen between the two liquids.

Dungern's t. See von Dungern's t.

Dupont's t. (for death): The action of a drop of atropin in the pupil is observed.

Dwight-Frost t.: Strain applied to the heart muscle by marked variation in intrathoracic pressure will cause the tonicity of the heart muscle to vary as recorded by the systolic pressure.

Ebbinghaus's t. (for mental disease): The examiner gives the patient sentences from which several words have been omitted, and asks him to complete them

edestin t. (for gastric cancer based on the presence of peptid-splitting ferment). The gastric juice is filtered, neutralized with normal Na₂CO₃, solution, using phenolphthalein as indicator, and then brought to an alkalinity equal to $\frac{N}{100}$ Na₂CO₃, in order to inactivate pepsin. Place 2 c.c. of a 0.1 per cent. solution of edestin in 0.1 per cent. Na₂CO₃ in each of four test-tubes. To three tubes add 2 c.c., 1 c.c., and 0.5 c.c of the faintly alkalinized gastric fluid, reserving the fourth tube as a control and adding to it only a drop of phenolphthalein solution. Place the four tubes in an incubator at 37° C. At the end of four hours exactly neutralize the contents of each of the tubes with 5 per cent. acetic acid.

When the neutral point is reached all the undigested edestin will be precipitated. The degree of digestion is indicated by the amount of turbidity compared with that in the control tube. Absence of turbidity indicates complete digestion.

Edlefsen's t. (for glucose). See Edlefsen's reagent, under reagent.

Ehrlich's t. See Ehrlich's reaction, under reaction, and para-dimethyl-amino-benzaldehyd t.

Ehrmann's t. (for mydriatic substances): The suspected substance is applied to an enucleated frog's eye, dilatation indicating the presence of a mydriatic substance.

Eijkman's t. (for phenol): Add to the suspected solution a few drops of an alcoholic solution of ethylic ether and nitrous acid, each, r part, and concentrated sulphuric acid, 2 parts. a red color is produced.

Einhorn's t. (for blood in stomach, feces, and urine):
The fluid is tested by paper sensitized with benzidin. The benzidin paper is immersed in the fluid to be examined, and a few drops of hydrogen dioxid are added, when a blue color is formed if blood is present: the color should appear in a few seconds.

Einhorn's bead t. (for digestive function). A sample of the food to be examined is wrapped in gauze to which a colored glass bead is attached, and the whole is placed in a gelatin capsule, which is swallowed. The bead serves to help find and identify the gauze in the feces, and the digestive function is judged by the time the bead is passed and by the digestion of the food sample.

Eiselt's t. (for melanin in the urine): Oxidizing agents like nitric and sulphuric acids or potassium dichromate render the urine dark colored if melanin is present.

Eitelberg's t.: A large tuning-fork is held near the ear, at intervals, for twenty to thirty minutes. If the ear is normal, the perception of the vibrations increases after each interval; but if there is a lesion of the conducting apparatus, the perception decreases.

Ellermann and Erlandsen's t. See tuberculin titer t.

Emanuel-Cutting t. See mastic t.

emulsoid-gelatin t. See gel t.

epinephrin t. See Goetsch's skin reaction, under reaction.

epiphanin t. See epiphanin reaction, under reaction.

Erdman's t. (for alkaloids) See Erdman's reagent, under reagent.

erythrocyte sedimentation t. See under reaction.

Esbach's t. (for albumin). See Esbach's reagent, under reagent.

Escherich's t.: A modification of the von Pirquet reaction in which the tuberculin is injected subcutaneously.

ethel butyrate t. (for pancreatic lipase) A neutral mixture of water, ethyl butyrate, and litmus turns red when acted on by lipase due to the liberation of butyric acid.

Ewald's t.: 1. (For hydrochloric acid in stomach contents.) Mix 2 c.c. of a 10 per cent. solution of potassium sulphocyanid, 0.5 c.c. of a neutral solution of iron acetate, and 7.5 c.c of water. This makes a ruby-red solution. A few drops are put into a porcelain dish and a drop or two of the suspected liquid are added If HCl is present, a slight violet is seen; but on mixing the color becomes brown. 2 (For motility of the stomach.) The injection of salol after a light meal. The salol passes into the intestine, where it is decomposed and salicyluric acid secreted in the urine. Normally the salicyluric acid should appear in from one to two hours, and may be detected by adding to the

urine a weak solution of ferric chlorid, when a purple color will appear. Called also Ewald and Silven's t. and salol t.

Exton's t. (for albumin in urine): Heat together equal volumes of Exton's reagent and urine. A precipitate indicates the presence of albumin.

Fahraeus's t.: A quantitative measure of the speed with which red blood-corpuscles settle. The results are important in the diagnosis of pregnancy and of some pathologic conditions.

Falk and Tedesco's t.: A test for bronchial disease based on the fact that if salicylates are given to a patient in whom the bronchial mucosa is injured, salicylic acid will appear in the sputum.

fat t. See acrolein t., Adams's t., Bloor's t., Meigs's t. fatigue t. See fatigue reaction, under reaction.

Pearon's t. (for vitamin A). Add 1 gm. of phosphorus pentoxid to 5 c c of oil. A purple color indicates vitamin A.

Pehling's t. (for glucose in the urine): Mix the suspected liquid with freshly prepared Fehling's solution (q. v. under solution) and boil. A red precipitate of cuprous oxid shows the presence of glucose.

fermentation t. (for glucose): Fill a graduated fermentation tube with the urine or unknown solution, add a small portion of compressed yeast, and incubate for twelve hours. The amount of gas that accumulates in the closed arm indicates the amount of glucose present

ferric chlorid t. (for thiocyanates in saliva) Add a few drops of dilute ferric chlorid to saliva and acidify with hydrochloric acid. Red ferric thocyanate forms, which is decolorized by adding mercury bichlorid.

fibrinogen t. (for liver function) Decrease in the amount of fibrinogen in the blood-plasma below the normal amount points to liver injury.

fibroderm bismuth-capsule t. See Schwarz's t.

Figur's t. (for antipyrin): To the suspected liquid add 12 drops of sulphuric acid and 2.5 gm. of sodium metaphosphate; filter, and to the filtrate add a few drops of a solution of sodium nitrate. If antipyrin is present, a green color will be produced.

film t. See Ross's t.

Finckh's t. (for mental disease): The patient is directed to explain the meaning of proverbs, such as "when the cat's away the mice will play," etc

finger-nose t. (for coordinated movements of the extrematies): The patient is directed to close his eyes and, with arm extended to one side, slowly to endeavor to touch the end of his nose with the point of his index-finger.
